FACE TO FACE PROGRAM

PARTICIPANT COUNTRIES (32):

Türkiye, Azerbaijan, Turkish Republic of Northern Cyprus, Poland, Portugal, Kosovo, Albania, Morocco, Hungary, Ireland, UK, Ghana, Bosnia and Herzegovina, Albania, Bulgaria, Iraq, North Macedonia, France, Lebanon, Spain, Vietnam, Romania, USA, Serbia, Georgia, India, Algeria, Pakistan, Russia, Israel, Bangladesh, Nigeria

Time	Title	Author/Presenter	Affiliation
SESSION-1	Moderator	Assoc. Prof. Dr.Ebru ÇOKAY	
09:05	REMOVAL OF OIL&GREASE BY A NEW GENERATION MICROBUBBLE PUMP DISSOLVED AIR FLOTATION SYSTEMS	Yasemin Ozdemir Deniz Dölgen M. Necdet Alpaslan	Dokuz Eylül University
09:15	ECO-FRIENDLY COLOR REMOVAL FROM SOAPSTOCK WASTEWATER	Ebru ÇOKAY Serkan EKER	Dokuz Eylül University
09:25	BIOGAS PRODUCTION: CURRENT TRENDS AND FUTURE PROSPECTS	Serkan EKER Ebru ÇOKAY	Dokuz Eylül University
09:35	INVESTIGATION OF NEW GENERATION ADOBE MATERIALS IN THE CONTEXT OF ENVIRONMENTAL SUSTAINABILITY	Betül ALANKUŞ Nilay COŞGUN	Gebze Technical University
9:45	POZZOLANIC MATERIALS IN CONCRETE: ADVANCING SUSTAINABILITY IN CONSTRUCTION	Zehra Funda AKBULUT Soner GÜLER	Van Yüzüncü Yıl University
09:55	Panel Discussion Refreshment Break		
SESSION-2	Moderator	Assoc. Prof. Dr. Adnan SÖYLEMEZ	
10:15	ACCESSIBILITY AS A CORNERSTONE OF CULTURAL ENGAGEMENT: LESSONS FROM THE ÇATALHÖYÜK MUSEUM	Duygu İLKHAN SÖYLEMEZ Adnan SÖYLEMEZ	Selçuk University
10:25	CREATING AN INCLUSIVE CITY: THE EXEMPLARY BARRIER-FREE PROJECT OF KONYA METROPOLITAN MUNICIPALITY	Adnan SÖYLEMEZ Duygu İLKHAN SÖYLEMEZ	Selçuk University
10:35	SOLID WASTE SERVICES IN CITIES IN THE CONTEXT OF MIGRATION AND ENVIRONMENTAL ISSUES: GAZIANTEP METROPOLITAN MUNICIPALITY	Ömer Faruk TEKİN	Selçuk University
10:45	Panel Discussion Refreshment Break		

SESSION-3	Moderator	Suheyla Kocaman	
11:00	NEW GAUSS SEQUENCES	Merve TAŞTAN TEKİN	Tokat Gaziosmanpaşa University
11:10	DEVELOPMENT OF A NOVEL BIO-DERIVED EPOXY RESIN AND ITS APPLICATION IN THE MANUFACTURING OF COMPOSITE MATERIALS	Suheyla Kocaman Nimet Özmeral Gülnare Ahmetli	Konya Technical University
11:20	EVALUATION OF MALWARE DETECTION METHODS AND EMERGING THREATS IN CYBERSECURITY	Nida Akdoğan Osman Akın	Ostim Technical University
11:30	DESIGNING MEDICAL EXPERT SYSTEM BASED ON LOGICAL REDUCED RULE FOR ASTHMA DIAGNOSIS	Fatih BAŞÇİFTÇİ Serkan ÖRÜCÜ	University of Selçuk Karamanoğlu Mehmetbey University
11:40	APPLICATION OF SIX SIGMA METHODOLOGY TO STABILIZE ENERGY CONSUMPTION MEASUREMENTS IN A DOMESTIC BUILT-IN OVEN	Ayberk Salim MAYIL Can UGURELLI Nurhan VATANSEVER	Haier Europe Research and Development Center
11:50	COMPUTER VISION AND IMAGE PROCESSING APPLICATIONS IN CONSTRUCTION INDUSTRY	İbrahim KARATAŞ Doğucan RESULOĞULLARI Emriye ÇINAR RESULOĞULLARI	University of Osmaniye Korkut Ata
12:00	Refreshment Break & Networking		
SESSION-4	Moderator	Lect. Şeyda KAYA	
13:30	DETERMINATION OF DNA DAMAGE PROTECTIVE ACTIVITIES OF WATER EXTRACTS OF DİFFERENT PART OF DANDELION (TARAXACUM OFFICINALE) PLANT	Ebru DOYMAZ Beyza Nur DOĞANYILMAZ Şeyda KAYA Taner Daştan	Gaziantep Islam Science and Technology University Sivas Cumhuriyet University
13:40	THE INHIBITORY EFFECTS OF SOME NOVEL BENZOTHIOPHENE DERIVATIVES ON BUTYRYLCHOLINESTERASE	Öznur YALMAÇ Ceylan FİDAN BABAT Muheb ALGSO Emrah KAVAK Arif KIVRAK Can YILMAZ	Van Yüzüncü Yıl University University of Duhok Necmettin Erbakan University Eskişehir Osmangazi University
13:50	Panel Discussion Networking Break	All Presenters	

SESSION-5	**Moderator**	**Prof. Dr. Yüksel GÖĞEBAKAN**	
14:10	**ARTISTIC POSTMODERN APPROACHES IN THE CONTEXT OF BIO-CELLULAR REALISM**	**Yüksel GÖĞEBAKAN Arif Esen BAYKURT**	**İnönü University**
14:20	**CONFLICT THEORY, SOCIETY, AND RELIGION**	**Ali AKSAÇ**	**Çukurova University**
14:30	**DIGITAL PREFERENCES IN POLITICAL PARTICIPATION: THE CASE OF PLATFORM X**	**Burak BALIK Merve KÜÇÜK**	**Çanakkale Onsekiz Mart University**
14:40	**Panel Discussion Networking Break**		
SESSION-6	**Moderator**	**Dr. Fatmagül Saklavcı**	
15:00	**EARLY CHILDHOOD TEACHERS' PERCEPTIONS ON THEIR USE OF ARTIFICIAL INTELLIGENCE IN PRESCHOOLS**	**Gizem Nur Şakar Nazmiye Temiz**	**Middle East Technical University Çukurova University**
15:10	**COMPARATIVE ANALYSIS OF THE METHODS OF SUZUKI VIOLIN SCHOOL 1 AND OMER CAN VIOLIN EDUCATION 1**	**Canan FİDAN ERTEN Musa ERTUŞ**	**Van Yüzüncü Yıl Üniversitesi**
15:20	**AN EVALUATION ON SIVAS YILDIZ RIVER BRIDGE AND STONE DECORATION WITH HUMAN FIGURES**	**Fatmagül Saklavcı**	**Cumhuriyet University**
15:30	**PSİKOLOJİK GÜÇLENDİRME ALGISININ DEMOGRAFİK ÖZELLİKLER BAKIMINDAN İNCELENMESİ: SAĞLIK ÇALIŞANLARI ÜZERİNE BİR ARAŞTIRMA**	**Duygu ÖZKAN**	**Karabük University**
15:40	**TRANSLANGUAGING AS A BILINGUAL EDUCATION PEDAGOGY IN THE EARLY YEARS: A META-SYNTHESIS APPROACH**	**Elif AYDIN YAZICI Kenan DİKİLİTAŞ**	**Trabzon University University of Bergen**
15:50	**Panel Discussion Refreshments Break**	**All presenters**	

SESSION-7	Moderator	Uz. Dr. Mehmet ÖZDİN	
16:30	ENHANCING SOCIAL INCLUSION FOR INDIVIDUALS WITH ASD AND/OR INTELLECTUAL DISABILITIES THROUGH ASSISTIVE TECHNOLOGY	Eglantina Dervishi Cecilia Sik-Lanyi Geraldine Leader Zeynep Şahin Timar Özge Mısırlı	University of Tirana University of Pannonia National University of Ireland Galway Karadeniz Technical University Eskişehir Osman Gazi University
16:40	THE EFFECT OF TACTILE STIMULUS OR SWIMMING EXERCISE AND THEIR COMBINATIONS ON FGF-2, BDNF, IRISIN, LAKTAT, AND OXIDATIVE STRESS IN AN ALZHEIMER'S MODEL	Deniz ASLAN Nuray ALACA Filiz ONAT	Acibadem University Yeditepe University
16:50	THE RELATIONSHIP BETWEEN NEUTROPHIL/LYMPHOCYTE RATIO AND PLATELET/LYMPHOCYTE RATIO IN PATIENTS WITH SMALL CELL LUNG CANCER	Mehmet ÖZDİN	Sakarya University
17:00	Panel Discussion Refreshments Break	All presenters	

SESSION-8	Moderator	Mustafa Latif EMEK	
18:10	ENERGY RESOURCES IN TURKEY AND ENVIRONMENTAL EFFECTS OF ENERGY SOURCES	Ebru ÇOKAY Serkan EKER	Dokuz Eylül University
18:20	TREATMENT OF URBAN WASTEWATER USING THE ELECTRO-FENTON PROCESS	Ebru ÇOKAY Serkan EKER	Dokuz Eylül University
18:30	THE ROLE OF BLOCKCHAIN TECHNOLOGY IN PUBLIC ADMINISTRATION	Adnan SÖYLEMEZ Duygu İLKHAN SÖYLEMEZ	Selçuk University
18:40	RESTORING HISTORICAL BUILDINGS FOR BARRIER-FREE ACCESS (KONYA ALAADDIN MOSQUE)	Duygu İLKHAN SÖYLEMEZ Adnan SÖYLEMEZ	Selçuk University
18:50	THE ROLE OF CITY ADMINISTRATIONS IN SOLVING GLOBAL CLIMATE CHANGE PROBLEMS	Ömer Faruk TEKİN	Selçuk University

SESSION-9	Moderator	Fatmagül SAKLAVCI	
19:10	GAUSS k-JACOBSTHAL and GAUSS k-JACOBSTHAL LUCAS SEQUENCE	Merve TAŞTAN TEKİN	Tokat Gaziosmanpaşa University
19:20	DETERMINATION OF ANTIMICROBIAL ACTIVITY OF LONGEVITY SPINACH (Gynura procumbens) PLANT	Şeyda KAYA Duygu KANSOY Serpil ATLI Eda SÖNMEZ GÜRER Taner Daştan	Gaziantep Islam Science and Technology University Sivas Cumhuriyet University
19:30	INVESTIGATION OF ANTI-OBESITY POTENTIAL OF TYRAMINE AND 2-PHENYLETHYLAMINE AS INHIBITORS OF PANCREATIC LIPASE	Semanur DURAN Ceylan FİDAN BABAT Can YILMAZ	Van Yüzüncü Yıl Üniversitesi
19:40	GROUP LESSONS IN SUZUKI METHOD	Canan FİDAN ERTEN	Van Yüzüncü Yıl Üniversitesi
SESSION-10	Moderator	Mustafa Latif EMEK	
20:00	AKADEMİSYEN BAKIŞ AÇISIYLA ÖRGÜTSEL DNA ÖZELLİKLERİ: KARABÜK ÜNİVERSİTESİ'NDE BİR ARAŞTIRMA	Duygu ÖZKAN Ozan BÜYÜKYILMAZ	Karabük University
20:10	CULTURAL AND TECHNICAL SIGNIFICANCE OF COLORED CONCRETE IN CONTEMPORARY CONSTRUCTION	Zehra Funda AKBULUT Soner GÜLER	Van Yüzüncü Yıl University
20:20	LEVENT VADİSİ JEOPARKI MİRAS ENVANTERİNİN ÇIKARILMASI VE KORUMA, SÜRDÜRÜLEBİLİRİLİK, TANITIM STRATEJİLERİ İLE JEOPARK YÖNETİM PLANI HAZIRLANMASI	Yüksel GÖĞEBAKAN Levent İSKENDEROĞLU	İnönü University
20:30	FUNCTIONAL THEORY, SOCIETY, AND RELIGION	Ali AKSAÇ	Çukurova University
20:40	ADVANTAGES OF USING CONCRETE RECYCLING PROCESS IN CIRCULAR ECONOMY	Emriye ÇINAR RESULOĞULLARI İbrahim KARATAŞ Doğucan RESULOĞULLARI	University of Osmaniye Korkut Ata

10. INTERNATIONAL EUROPEAN CONGRESS ON ADVANCED STUDIES IN BASIC SCIENCES

26-28 July 2024
Amsterdam, Netherlands

ONLINE PROGRAM

Meeting ID: 859 7119 7642
Passcode: 262728

https://us02web.zoom.us/j/85971197642?pwd=HbRDaQdVj1ziOZNbOaxBIFcCXay64b.1

PARTICIPANT COUNTRIES (32):

Türkiye, Azerbaijan, Turkish Republic of Northern Cyprus, Poland, Portugal, Kosovo, Albania, Morocco, Hungary, Ireland, UK, Ghana, Bosnia and Herzegovina, Albania, Bulgaria, Iraq, North Macedonia, France, Lebanon, Spain, Vietnam, Romania, USA, Serbia, Georgia, India, Algeria, Pakistan, Russia, Israel, Bangladesh, Nigeria

ÖNEMLİ, DİKKATLE OKUYUNUZ LÜTFEN / IMPORTANT, PLEASE READ CAREFULLY

Önemli, Dikkatle Okuyunuz Lütfen

- Kongremizde Yazım Kurallarına uygun gönderilmiş ve bilim kurulundan geçen bildiriler için online (video konferans sistemi üzerinden) sunum imkanı sağlanmıştır.
- Online sunum yapabilmek için **https://zoom.us/join** sitesi üzerinden giriş yaparak "Meeting ID or Personal Link Name" yerine ID numarasını girerek oturuma katılabilirsiniz.
- Zoom uygulaması ücretsizdir ve hesap oluşturmaya gerek yoktur.
- Zoom uygulaması kaydolmadan kullanılabilir.
- Uygulama tablet, telefon ve PC'lerde çalışıyor.
- Her oturumdaki sunucular, sunum saatinden 15 dk öncesinde oturuma bağlanmış olmaları gerekmektedir.
- Tüm kongre katılımcıları canlı bağlanarak tüm oturumları dinleyebilir.
- Moderatör – oturumdaki sunum ve bilimsel tartışma (soru-cevap) kısmından sorumludur.

Dikkat Edilmesi Gerekenler- TEKNİK BİLGİLER

- Bilgisayarınızda mikrofon olduğuna ve çalıştığına emin olun.
- Zoom'da ekran paylaşma özelliğine kullanabilmelisiniz.
- Kabul edilen bildiri sahiplerinin mail adreslerine Zoom uygulamasında oluşturduğumuz oturuma ait ID numarası gönderilecektir.
- Katılım belgeleri kongre sonunda tarafınıza pdf olarak gönderilecektir
- Kongre programında yer ve saat değişikliği gibi talepler dikkate alınmayacaktır

IMPORTANT, PLEASE READ CAREFULLY

- To be able to attend a meeting online, login via **https://zoom.us/join** site, enter ID "Meeting ID or Personal Link Name" and solidify the session.
- The Zoom application is free and no need to create an account.
- The Zoom application can be used without registration.
- The application works on tablets, phones and PCs.
- The participant must be connected to the session 15 minutes before the presentation time.
- All congress participants can connect live and listen to all sessions.
- Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

Points to Take into Consideration - TECHNICAL INFORMATION

- Make sure your computer has a microphone and is working.
- You should be able to use screen sharing feature in Zoom.
- Attendance certificates will be sent to you as pdf at the end of the congress.
- Requests such as change of place and time will not be taken into consideration in the congress program.

Session 1 / Hall-1
26.07.2024
Moderator: Assoc. Prof. Dr. Veysel LİDAR
Meeting ID: 859 7119 7642 / Passcode: 262728
Ankara Local Time: 10:00 – 12:00
Amsterdam Local Time: 09:00 – 11:00

TITLE	AUTHOR(S)	AFFILIATION
THE ATTRIBUTES OF GOD IN THE CONTEXT OF AHMAD IBN MUHAMMAD AL-ADAWIYA'S WORK TITLED SHARH AL-HARIDAT	Yakup KAYA	Dicle University, Türkiye

Session 2 / Hall-1

28.07.2024

Moderator: Besnik HAJDARI

Meeting ID: 859 7119 7642 / Passcode: 262728

Ankara Local Time: 12:30 – 14:30

Amsterdam Local Time: 11:30 – 13:30

TITLE	AUTHOR(S)	AFFILIATION
IMPROVING EFFICIENCY IN PLANT SPECIES MAPPING AND UAV IMAGE PROCESSING: CASE FROM MOROCCO'S HIGH ATLAS MOUNTAINS USING AN ENHANCED U-NET METHODOLOGY	Sara Badrouss, El Mostafa Bachaoui, Mohamed Jibril Daia Eddine, Hicham Mouncif, Mohamed Biniz	Sultan Moulay Slimane University, Beni Mellal, Morocco.
BENEFITS AND RISKS OF GENERATIVE AI IN CONTENT MARKETING	Khalil Israfilzade	ADA University, Baku, Azerbaijan
A SERIOUS GAME FOR DEAF CHILDREN BASED ON SIGN LANGUAGE	KINANE DAOUADJI Amina BENDELLA Fatima	Université des Sciences et de la Technologie d'Oran Mohamed Boudiaf
DIGITALIZATION OF FINANCE MANAGEMENT WITH THE APPLICATION OF INFORMATION SYSTEMS	Besnik HAJDARI Hasan MLINAKU	University "Isa Boletini" Mitrovica
INTERNET OF THINGS (IOT) ON THE DEVELOPMENT OF AGRICULTURE 5.0: PROSPECTS AND CHALLENGES	Sajjadur Rahman	University of Dhaka

All participants must join the conference 10 minutes before the session time.
Every presentation should last not longer than 10-12 minutes.
Kindly keep your cameras on till the end of the session.

Session 2 / Hall-2

28.07.2024

Moderator: Zohaib Hassan Sain

Meeting ID: 859 7119 7642 / Passcode: 262728

Ankara Local Time: 12:30 – 14:30

Amsterdam Local Time: 11:30 – 13:30

TITLE	AUTHOR(S)	AFFILIATION
ANALYSIS OF THE TRANSLATION OF THE ROMANTIC LETTERS OF "THE SORROWS OF THE YOUNG WERTHER" BY JOHANN WOLFGANG VON GOETHE FROM GERMAN INTO ALBANIAN	Fatbardha Kume, Prof.as.dr. Ema Kristo	University of Tirana, Albania

THE INVESTIGATION ON THE INHIBITION EFFECTS OF THE MAIN EFFECTIVE COMPOUNDS IN HONEY FOR "5p21" ONCOGENE RECEPTOR

Assoc. Dr. Faik Gökalp[1]
Kırıkkale University, Faculty of Education, Yahşihan/Kırıkkale, Türkiye

ABSTRACT
Honey is an important food source consumed by humans with its high-energy carbohydrate source and other compounds it contains. It has been an important product for the treatment of many diseases since Egyptian times. Honeybee products, especially honey, pollen, propolis, bee bread, royal jelly and bee venom can be used in the treatment of many diseases. With this treatment method, also known as apitherapy, progress is being made in drug development processes to prevent many diseases and in solving health problems. In addition to its high sugar content, honey is also rich in polyphenolic compounds. Although the ratios of these compounds vary depending on the environment in which the bee grows, they are valuable due to their antioxidant, antibacterial and anticancer effects. The studies are being carried out every day on the chemical properties of the compounds contained in honey and its use in traditional medicine as a subject of scientific research. In this study, the interaction of some of the active substances contained in honey with the cancer receptor (5p21), identified as ligands (Chlorogenic Acid), was investigated by chemical calculation method at the molecular level.
Keywords: Honey, chlorogenic acid, vanillic acid, 5p21, chemical calculation method

INTRODUCTION
Natural honey is widely consumed for its healing effects and contains nearly 200 components. Raw honey contains fructo-oligosaccharides, fructose and glucose; On the other hand, it contains vitamins, minerals, enzymes and many amino acids (Da Silva et all., 2016). The anticancer activity of honey has been tested against various tissue groups and cancer cell lines, including colorectal (Afrin et al.,2017), breast, endometrial, prostate, kidney, oral, and cervical cancer (Waheed et al.,2019).
Flavonoids and phenolic acids are the most important components of honey with known anti-cancer activity. Although a full consensus on the entire mechanism has not yet been reached, different studies have shown that honey provides its anticancer effect by interfering with complex cell signaling pathways by promoting anti-mutagenic, apoptosis, anti-inflammatory and anti-proliferative pathways (Waheed et al,2019).
The compounds in the honey obtained vary depending on the environment in which the honey bee lives. It has been reported that coumaric and ferulic acids are the main components in acacia and buckwheat honey, raspberry and polyfloral forest honey have the highest amount of chlorogenic acid content, and gallic acid and vanillin, the main phenolic acid found in eucalyptus honey, are in honey obtained in areas where buckwheat is grown (Ramanauskiene et al.,2012).
Chlorogenic acid is considered a common phenolic compound found in honey samples (Hajian-Tilaki et all.,2024). In a study, it was emphasized that honey is rich in phenolic acids and flavonoids, which exhibit a wide range of biological effects and act as natural antioxidants, and Vanillic acid was detected in honey analyzed. (Pyrzynska and Biesaga,2009). It has been stated that vanillic acid was found to be the richest ingredient in terms of phenolic content of nine Iranian honeys (Hajian-Tilaki et all.,2024).

FULL TEXTS BOOK

MATERIAL AND METHOD

The inhibition effect of the polyphenolic compounds in honey as ligands on the interaction with the oncogene receptor "5p21", the bonds that can be formed at the molecular level, and the interaction points have been investigated in many studies, especially with the chemical calculation method docking (Bikadi and Hazai, 2009; Huey et al.,2007; Bikadi et all.,2007; McDonald and Thornton,1994), whose accuracy and reliability gives results very close to experimental data.

RESULTS AND DISCUSSION

The docking scores and Ki values obtained as a result of the interaction of active active compounds in honey with the "5p21" oncogene receptor as ligands, determined by some studies in the literature, are given in Table 1(Bikadi and Hazai, 2009; Huey et al.,2007; Bikadi et all.,2007; McDonald and Thornton,1994).

Table 1. The interaction of Chlorogenic Acid, Ferulic acid, m-Coumaric acid, Gallic acid, Vanillic acid and Vanillin as ligands, for inhibiting 5p21 oncogene receptors

The docking scores of ligands with the reseptör (5p21**)**	**The free energy values of binding (kcal/mol)**	**The inhibition constant, K_i**
Chlorogenic Acid	-6.25	26.12 uM
Ferulic acid	-4.75	331.98 uM
m-Coumaric acid	-4.54	472.32 uM
Gallic acid	-4.84	281.23 uM
Vanillic acid	-4.53	481.10 uM
Vanillin	-3.68	2.00 mM

Looking at the values in Table 1; The inhibitory effects of the specified ligands on the 5p21 receptor, from largest to smallest, are as follows; Chlorogenic Acid > Gallic acid > Ferulic acid > m-Coumaric acid > Vanillic acid > Vanillin.

The bonds formed by the interaction of chlorogenic acid with the 5p21 oncogene receptor are given in Table 2 (Bikadi and Hazai, 2009; Huey et al.,2007; Bikadi et all.,2007; McDonald and Thornton,1994).

FULL TEXTS BOOK

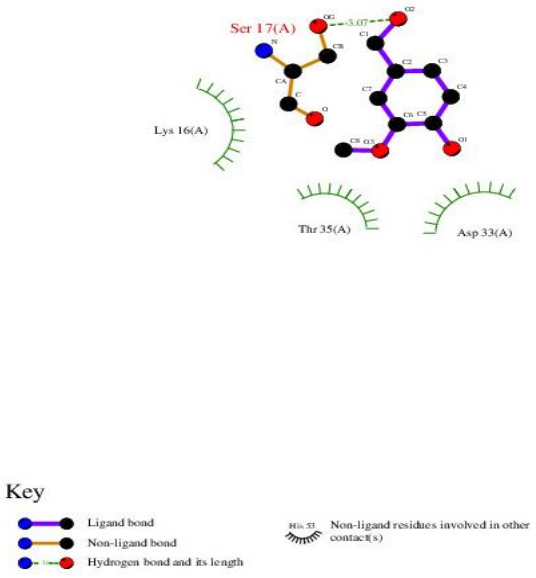

Figure 6. The hydrogen bond formation of Vanillin with 5p21 oncogene receptor

The interaction of the ligands selected as active ingredients in honey with the 5p21 oncogene receptor is important in terms of defining the mechanism of bonds and interaction points that may occur at the molecular level, and this is supported by the studies (Karakaya et al.,2013; Gökalp,2022;2023;2024).

CONCLUSION

In this study, the interaction of the main effective ligands in honey (Chlorogenic Acid, Ferulic acid, m-Coumaric acid, Gallic acid, Vanillic acid and Vanillin) with the 5p21 oncogene receptor was investigated at the molecular level by chemical calculation method docking. Docking scores shows that the ligands selected at the binding energy level have inhibitory properties on the interaction with the relevant receptor. The hydrogen bonds formed between Chlorogenic Acid and the 5p21 oncogene receptor are an indicator of its inhibitory capacity. The data obtained here is important in terms of preventing loss of time and material and being a reference for experimental and clinical studies.

ACKNOWLEDGEMENTS

This study was carried out by Kırıkkale University, Scientist Training and Infrastructure Establishment and Development Project; Supported by the Publications Incentive Support Project (2024/086).

ÖZET
Sınıf öğretmenlerinin harf gruplarına yönelik görüşlerinin incelendiği bu çalışmada durum çalışması deseniyle yürütülmüştür. Araştırmanın çalışma grubu Yozgat İl Milli Eğitim Müdürlüğü'ne bağlı ilkokullarda görev yapan 22 sınıf öğretmeninden oluşmaktadır. Çalışma grubu belirlenirken ölçüt örnekleme tekniğinden yararlanılmıştır. Bu çalışmada en az iki defa ilk okuma yazma öğretimi gerçekleştiren öğretmenlerin çalışmaya dâhil edilmesi ölçüt olarak belirlenmiştir. Araştırmanın verilerinin toplanması için öncelikle gerekli izinler alınmış ve veriler, araştırmacı tarafından hazırlanan yarı yapılandırılmış görüşme formuyla toplanmıştır. Toplanan verilerin analiz sürecinde betimsel analizden yararlanılmıştır. Araştırma sonucunda; sınıf öğretmenlerinin ilk okuma yazma sürecinde en çok "h", "f", "ğ", "l", "k", "j", g" harflerinin ses çıkarımından dolayı zorlandıkları görülmüştür. Öğretmenlerinin önemli bir kısmı "k" harfinin birinci grupta olmaması, "t" harfinin birinci grupta olması gerektiğini belirtmişlerdir. Ayrıca öğretmenlerin dikte çalışmalarında zorluk yaşadıkları, aile desteğinin yetersiz olması ve öğrenci seviyelerinin veya hazır bulunuşluklarının farklı olmasından dolayı da harf öğretiminde zorlandıkları görülmüştür.
Anahtar Kelimeler: Harf grupları, sınıf öğretmenleri, görüş, ilk okuma yazma

ABSTRACT
This study, which examined the opinions of primary school teachers about letter groups, was conducted with a case study design. The study group of the research consists of 22 primary school teachers working in primary schools affiliated with Yozgat Provincial Directorate of National Education. Criterion sampling technique was used when determining the study group. In this study, the inclusion of teachers who taught first reading and writing at least twice was determined as a criterion. To collect the data of the study, the necessary permissions were first obtained and the data were collected with a semi-structured interview form prepared by the researcher. Descriptive analysis was used in the analysis process of the collected data. As a result of the research, it was seen that primary school teachers had the most difficulty in the first reading and writing process due to the sound production of the letters "h", "f", "ğ", "l", "k", "j", g". A significant portion of their teachers stated that the letter "k" should not be in the first group, and the letter "t" should be in the first group. It has also been observed that teachers have difficulties in dictation studies, have difficulties in teaching letters due to insufficient family support and different student levels or readiness.
Key Words: Letter groups, primary school teachers, opinion, first reading and writing

GİRİŞ
Sosyal bir varlık olan insan için okuma yazma, yaşamını kolaylaştıran en önemli becerilerden birisidir. Okuma yazma becerisi bireylerin günlük hayatta birçok işi rahatlıkla yapabilmeleri ve yaşam kalitelerinin yükseltilmesine önemli katkılar sağlamaktadır (Durna, 2014; Kapur, 2019). Çünkü günümüz şartlarında, bireylerin iş hayatını ve yaşam şartlarını düzenleyebilmesi, kendini topluma ait hissedebilmesi ve katkı sağlayabilmesi, özgür ve katılımcı bir kişiliğe sahip olabilmesi, kendine ait bir

[2] Bu çalışma Sınıf Eğitimi Tezsiz Yüksek Lisans programında dönem projesi olarak sunulmuştur.

FULL TEXTS BOOK

dünya görüşü kazanabilmesinde okuryazar olmasının payı yüksektir (Çelenk, 2007). Aynı zamanda etkili bir iletişim aracı olarak kullanılan okuma yazma becerisi, bireylerin arasındaki sorunları da azalmaktadır (Öz, 1999). Okuma yazma becerisine sahip olan bireyler başkalarının yönlendirmeleriyle değil kendi üst bilişsel farkındalığına göre problemleri fark eder, varsa hatalarını düzeltir ve öz değerlendirmeler yaparak kendi öğrenme sürecini kendisi denetler (Collins, 1994). İlkokul döneminde, öğrencinin; okuduğunu anlama becerilerinin geliştirilmesi ve okuduğunu anlayan, eleştiren, tartışan, bilgiler arasında ilişki kuran ve okuduklarını yorumlayarak yeni anlamlar çıkaran bireyler olarak yetiştirilmesi hedeflenir (Çiftçi ve Temizyürek, 2008). Okuma birçok araştırmacı tarafından farklı yönleri ile ele alınarak ifade edilmiştir. Akyol (2005) okumayı, belli bir amaç doğrultusunda ön bilgilerden hareketle yazar ve okuyucu arasındaki etkileşime dayalı bir anlam kurma süreci olarak tanımlar. Güneş (2007), ön bilgilerden yola çıkarak metindeki bilgileri bütünleştirip yeni anlamlar ortaya çıkarma süreci; Kurudayıoğlu (2011) da, kulak ve ses ile algılanan işaretler ve sembolleri beyinde yorumlayıp değerlendirerek anlama ulaşılma süreci olarak tanımlamaktadır. Yazma; zihinde biriktirilen bilgi, duygu ve düşüncenin düzenlenerek bilişsel düzeye getirilme işi (Flower ve Hayes, 1980) olarak tanımlanır. Bireyler için yazma; hayal dünyası oluşturabilmek, öyküler anlatabilmek, bilgi paylaşımı yapabilmek, kendini keşfedebilmek, yalnızlıkla başa çıkabilmek ve yaşantılarını kayıt altına alabilmek için gerekli ve bir o kadar da önemlidir (Graham, Gillespie ve McKeown, 2013). İlkokulun ilk yıllarından itibaren doğru ve işlevsel yazma etkinlikleri yapılmalı ve yazmaya ağırlık verilerek bu beceri kazandırılmalıdır (Susar-Kırmızı ve Ünal, 2017). Eğitim hayatının temeli olarak nitelenen ilk okuma yazma süreci, kişinin hem akademik hem de sosyal hayatında önemli bir yer tutar (Akyol ve Temur, 2008; Güneş, Uysal ve Taç, 2016). İlk okuma ve yazma becerisi, kişinin kendini geliştirmesini, toplum ile iletişim kurabilmesini, görsel ve yazılı araçları anlamasını, kendini en iyi şekilde yazılı ve sözlü olarak ifade edebilmesini amaçlamaktadır (Bay, 2008). İlk okuma yazma öğretimi süreci yazma ve okuma becerisinin kazandırılmasıyla birlikte; bireylere düşünme, çözümleme, anlama, gruplandırma, sıralama, sorgulama, ilişki kurma, birleştirme ve değerlendirme gibi becerilerin kazandırılmasını da kapsamaktadır (Milli Eğitim Bakanlığı [MEB], 2019). Tüm bu becerilerin temelleri ilk okuma yazma öğretimiyle atılmaktadır. Nasıl ilkokul her şeyin temeli ise, ilk okuma yazma öğrenimi de ilkokulun temelidir (Kavcar, Oğuzhan ve Sever, 1998; Yiğit, 2009). Okuma yazmayı öğrenmek bireyin kendi ayaklarının üstünde durmasını sağlayan bir faaliyettir. Okuryazar olmadan en basit etkinliklerden karmaşık siyasal etkinliklerden, bilimsel teknolojiye, kadar çağdaşlığa ait ne varsa hiç birinden yararlanılamaz. Öyleyse okuma ve yazmada kazandırılacak bilgi, davranışlar ve beceri bireyin mutluluğunu önemli ölçüde belirler (Vural, 2007). Şahin'e (2005) göre ilk okuma yazma öğretiminin asıl amacı, dinleme ve konuşma gibi dil becerilerinden yola çıkarak insanların hayatları boyunca kullanacağı okuma yazma becerilerini öğrencilerin aktif şekilde kazanmalarını sağlamaktır. Diğer deyişle ilk okuma yazma öğretimi, öğrencinin okula başlamadan önce kazandığı konuşma, dinleme, izleme ve anlama becerilerinden hareket ederek sürekli kullanabilecekleri okuma ve yazma eğitimine ilişkin temel bilgi ve becerileri geliştirmeyi amaçlamaktadır (Bıçakçı, 2008; Cemaloğlu ve Yıldırım, 2008; Çelenk, 2007).

Türkiye'de eğitim sisteminin temelini oluşturan ilköğretimle ilgili temel anlayış 1921 yılındaki Maarif Kongresi'nde şekillenmiştir (Değirmenci, 2008). Türkiye'de ilk okuma yazma öğretim yöntemlerinden büyük bir kısmı kullanılmıştır. Bu yöntemlerden günümüzde en çok kullanılanı çözümleme yöntemidir. Buna karşılık ülkemizde kullanılan en eski okuma yazma öğretim yöntemi ses yöntemidir. Baymur (1939) da ülkemizde ilk okuma ve yazma öğretiminde yüzyıllarca "Elifba Cüzü" ve bunun çizdiği öğretim yolunun (harf yöntemi) hüküm sürdüğünü ifade etmekte, "Terkibi" (bireşim) yöntemlerin daha sonra yerini "Tahlili" yöntemlere bıraktığını açıklamaktadır. Nihayetinde 1924 yılında hazırlanan ilkokul programında harf yöntemi yasaklanmış ve kelime ya da ses yöntemleri kullanılmıştır. Bu iki yöntemden hangisinin kullanılacağı öğretmenin seçimine bırakılmıştır (Güleryüz, 2004). 1924 yılından günümüze kadar farklı uygulamalarla ilk okuma yazma süreci ilerlemiştir. 2004-2005 eğitim öğretim yılı Türkçe dersi kapsamında ses grupları altı grupta ele alınmış ve birinci ses grubu: "E, L, A, T", ikinci ses grubu; "İ, N, O, R, M", üçüncü ses grubu; "U, K, I, Y, S, D", dördüncü ses grubu; "Ö, B, Ü, Ş, Z, Ç", beşinci ses grubu; "G, C, P, H" ve altıncı ses grubu; "Ğ, V, F, J" şeklinde belirtilmiştir (MEB, 2005). 2016-2017 eğitim öğretim yılı Türkçe dersi öğretim programı ses grupları tablosunda güncellemelere gidilmiş ve birinci ses grubu: "E, L, A, N", ikinci ses grubu: "İ, T, O, B, U", üçüncü ses grubu: "K, I,

FULL TEXTS BOOK

R, Ö, S, Ü", dördüncü ses grubu: "M, D, Ş, Y, C, Z", beşinci ses grubu: "Ç, G, P, H" ve altıncı ses grubu: "F, V, Ğ, J" şeklinde ifade edilmiştir (MEB, 2017). Ancak 2017- 2018 eğitim-öğretim yılında dik temel harf öğretiminde kullanılan harf grupları ise birinci ses grubu: "E, L, A, K, İ, N", ikinci ses grubu: "O, M, U, T, Ü, Y", üçüncü ses grubu: "Ö, R, I, D, S, B", dördüncü ses grubu: "Z, Ç, G, Ş, C, P" ve beşinci ses grubu: "H, V, Ğ, F, J" şeklinde belirtilmiştir (MEB, 2019). Alanyazında ilk okuma yazma sürecine yönelik yapılan çalışmaların (Sağırlı ve Atik, 2022; Ekici-Calın, 2019; Ferah-Özcan ve Yıldız, 2018; Babayiğit ve Erkuş, 2017; Erbasan ve Erbasan, 2020; Ferah-Özcan ve Özcan, 2016; Çağlar, 2018) olduğu görülmüştür. Ancak ilk okuma yazma sürecindeki harf gruplarıyla doğrudan ilişkili bir çalışmanın yapılmış olması bu çalışmanın özgün değerini oluşturmaktadır. Ayrıca 2018 yılından itibaren uygulanan Türkçe dersi öğretim programının da değişeceğinin bahsedildiği bu dönemde yapılacak bu çalışmanın yayınlanacak programa katkı sunması açısından da önemli görülmektedir. Bu doğrultuda sınıf öğretmenleri perspektifinden harf gruplarına yönelik öğretmen görüşlerinin ele alındığı bu çalışmada aşağıdaki sorulara yanıt aranmıştır:

1. İlk okuma yazma sürecinde en çok zorlandığınız harf ya da harfler nelerdir? Neden?
2. İlk okuma yazma sürecinde birinci gruptaki harf veya harflerle ilgili görüşleriniz nelerdir?
3. İlk okuma yazma sürecinde sesli harflerin verilme sırasını doğru buluyor musunuz? (Cevabınız hayır ise bu sıra nasıl olmalıdır?)"
4. Harf gruplarında yer alan harflerde yer değişikliği yapmak isteseydiniz hangi harf veya harfler hangi grupta olurdu? Neden?
5. İlk okuma yazma sürecinde dikte çalışmaları yaparken zorluk yaşıyor musunuz? Neden?
6. İlk okuma yazma sürecinde harf öğretiminde zorlandığınız durumlar nelerdir?
7. İlk okuma yazma sürecinde harf öğretiminde velilere ve öğretmenlere yönelik önerileriniz nelerdir?

YÖNTEM

Araştırmanın Modeli

Sınıf öğretmenlerinin harf gruplarına yönelik görüşlerinin incelendiği bu çalışmada durum çalışması deseniyle yürütülmüştür. Durum çalışması, bir veya birkaç açıklayıcı durumun nitel olarak derinlemesine bir şekilde araştırılması olarak belirtilmektedir (Hagan, 2006). Bu çalışmada da sınıf öğretmenlerinin ilk okuma yazma sürecindeki harf gruplarına yönelik görüşleri derinlemesine bir şekilde araştırıldığı için durum çalışması deseninden yararlanılmıştır.

Çalışma grubu

Araştırmanın çalışma grubu Yozgat İl Milli Eğitim Müdürlüğü'ne bağlı ilkokullarda görev yapan 22 sınıf öğretmeninden oluşmaktadır. Çalışma grubu belirlenirken ölçüt örnekleme tekniğinden yararlanılmıştır. Ölçüt örnekleme, araştırmacı tarafından oluşturabilen ya da daha önceden belirlenebilen bir dizi ölçütün karşılandığı durumların çalışılması şeklinde belirtilmektedir (Yıldırım ve Şimşek, 2016). Bu çalışmada da en az iki defa ilk okuma yazma öğretimi gerçekleştiren öğretmenlerin çalışmaya dâhil edilmesi ölçüt olarak belirlenmiştir. Çalışma grubuna ait bilgiler Tablo 1'de gösterilmiştir.

Veri Toplama Araçları

Araştırmanın verileri araştırmacı tarafından hazırlanan yarı yapılandırılmış görüşme formuyla toplanmıştır. Daha sonra araştırmanın güvenirliğinin artırılması amacıyla üç öğretim üyesi ve iki sınıf öğretmeninden uzman görüşleri alınmıştır. Alınan görüşler doğrultusunda sorulardaki düzeltmeler yapılarak yarı yapılandırılmış görüşme formuna son hali verilmiştir. Son hali verilen yarı yapılandırılmış görüşme formundaki sorular kullanılarak araştırmanın çalışma grubu dışındaki iki sınıf öğretmeniyle pilot görüşmeler yapılmıştır. Pilot görüşme esnasında soruların anlaşılırlığı ve amacına ulaşılabilirliğiyle ilgili herhangi bir olumsuzluk yaşanmamıştır. Bu şekilde görüşme esnasında ortaya çıkabilecek olumsuzlukların önceden belirlenmesiyle araştırmanın güvenirliğinin artırılması amaçlanmıştır.

Verilerin Toplanması ve Analizi

Araştırmanın verilerinin toplanması için öncelikle gerekli izinler alınmıştır. Daha sonra katılımcılarla 22 Şubat ile 29 Mart 2024 tarihleri arasında ders saatleri dışında görüşmeler gerçekleştirilmiştir. Görüşmeler gerçekleştirilirken veri kayıplarının önlenmesi için ses kayıt cihazı kullanılmıştır. Ancak bazı sebeplerden dolayı öğretmenlerin bir kısmı tarafından ses kayıt cihazının kullanılması uygun görülmemiş olup bu görüşmelerde araştırmacı tarafından yazılı notlar tutulmuştur. Ayrıca yazı notlar görüşmeler sonucunda katılımcılarla paylaşılmış ve herhangi bir veri kaybının yaşanmaması için eklemek istedikleri başka görüşlerin olup olmadığı sorularak görüşme sonlandırılmıştır. Katılımcılarla gerçekleştirilen görüşmeler ortalama 15 dakika sürmüştür. Ses kayıt cihazıyla kayıt altına alınan görüşmeler transkript edilmiş ve yazılı notlarla ile tutulan birlikte analiz sürecine hazır hale getirilmiştir. Analiz sürecinde betimsel analizden yararlanılmıştır. Ekiz'e (2015) göre bu analiz, araştırma esnasında kullanılan görüşme, gözlem ya da belge vb. veri toplama araçlarındaki soru veya konu temelinde gerçekleştirilen analiz türüdür. Analiz esnasında veriler araştırmacılar tarafından ayrı ayrı analiz edilmiş, analiz sonucunda güvenirliği sağlamak için Miles ve Huberman'ın (1994) kodlama güvenirliği formülünden yararlanılmıştır. Analiz sonucundaki araştırmacılar arasındaki kodlama uyumunun % 94 olduğu görülmüştür. Elde edilen verilerden ortaya çıkan bulgular, katılımcıların görüşme formundaki sorulara verdikleri yanıtlardan gerçekleştirilen doğrudan alıntılarla desteklenmiştir. Katılımcılar $Ö_{1,2,}$….. şeklinde kodlanmıştır.

BULGULAR

Çalışmanın bu bölümünde, ilk okuma yazma sürecinde harf gruplarına yönelik sınıf öğretmenleriyle yapılan görüşmelerden elde edilen verilerin analiz edilmesiyle ortaya çıkan bulgular sunulmuştur.

Sınıf öğretmenlerine "İlk okuma yazma sürecinde en çok zorlandığınız harf ya da harfler nelerdir? Neden?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 2'de gösterilmiştir.

FULL TEXTS BOOK

Tablo 2. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde En Çok Zorlandığı Harf veya Harflere İlişkin Görüşleri

Zorluk yaşanılan harf/harfler?	**Neden?**	**Öğretmenler**	**f**
"h", "f", "ğ", "l", "k", "j", "g"	Ses çıkarımının zor olması	$Ö_{1,2,3,4,5,7,9,10,11,12,14,15,16,19,20,,21}$	16
"b"-"d"	Yazımının karıştırılması	$Ö_{1,2,6,13,15,16,17,18,19,21,22}$	11
"y", "g", "ğ", "j", "s", "ş"	Yazım biçiminin zor olması	$Ö_{6,11,17}$	3
"ğ"-"g", "n"-"m", "ı"-"i", "o"-"ö", "u"-"ü", "c"-"ç", "s"-"ş"	Yazım benzerliklerinin olması	$Ö_{5,21,22}$	3
"b", "d", "k"	Hece oluşturmanın zor olması	$Ö_{9,12}$	2
"y", "n", "l"	Ses çıkarımının diğer harflerle karışması	$Ö_{13,14}$	2
"r"	Dil yapısının ses çıkarımına uygun olmaması	$Ö_{16}$	1
"e", "l", "a", "k", "i", "n"	İlk okuma yazma mantığının kavranamamış olması	$Ö_{8}$	1

Tablo 2'ye göre, sınıf öğretmenlerinin ilk okuma yazma sürecinde en çok (f=16) "h", "f", "ğ", "l", "k", "j", "g" harflerinin ses çıkarımından dolayı zorlandıkları görülmüştür. Ayrıca öğretmenler; b-d harflerinin yazımının karıştırılmasından (f=11), "y", "g", "ğ", "j", "s", "ş" harflerinin yazım biçimlerinin zor olmasından (f=3), "ğ"-"g", "n"-"m", "ı"-"i", "o"-"ö", "u"-"ü", "c"-"ç", "s"-"ş" harflerinin yazım benzerliklerinin olmasından (f=3), "b", "d", "k" harfleriyle ilgili hece oluşturmanın zor olmasından (f=2), "y", "n", "l" harflerinin ses çıkarımının diğer harflerle karışmasından (f=2), "r" harfinin dil yapısının ses çıkarımına uygun olmamasından (f=1) ve "e", "l", "a", "k", "i", "n" harfleriyle ilk okuma yazma mantığının kavranamamış olmasından (f=1) dolayı ilk okuma yazma sürecinde zorluklarla karşılaştıklarını ifade etmişlerdir. Sınıf öğretmenlerinin ilk okuma yazma sürecinde en çok zorlandığı harf veya harflere ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

"ğ", "j", "b", "d" harflerinde zorlandım. İç Anadolu Bölgesinde görev yaptığımdan çocukların ağız özelliği "ğ" ve "j" harflerini çıkarmakta zorlandıklarını görüyorum. "b" ve "d" sesleri ise kapalı heceleri söylemesi zor olduğu için öğrenmeleri güçleşiyor." (Ö9)

"En çok zorlandığım harf "g" harfidir. Hem yazdırması hem de sesi çıkarması zor oldu." (Ö11)

Sınıf öğretmenlerine "İlk okuma yazma sürecinde birinci gruptaki harf veya harflerle ilgili görüşleriniz nelerdir?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 3'te gösterilmiştir.

Tablo 3. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Birinci Gruptaki Harf veya Harflerle İlişkin Görüşleri

Görüşler		**Öğretmenler**	**f**
"k" harfi olmamalı	Ses çıkarımının zor olması Harf yazımının zor olması Hece oluşturmanın zor olması	$Ö_{3,4,5,7,9,10,16,18,21}$	9
"l" ve "n" harfleri bir arada olmamalı	Ses çıkarımının karışması	$Ö_{6,13,14,16,17}$	5

FULL TEXTS BOOK

"k" ve "t" harfleri yer değişmeli	Ses çıkarımının zor olması Hece oluşturmanın zor olması	$Ö_{1,2,11,12}$	4
"t", "ç" veya "s" harf/harfleri olmalı	Ses çıkarımının kolay olması	$Ö_{9,15,19}$	3
"n" harfi olmamalı	Ses çıkarımının zor olması	$Ö_{7,8}$	2
"l" harfi olmamalı	Kelime oluşturmanın zor olması Ses çıkarımının zor olması	$Ö_{15,22}$	2
"n" ve "m" harflerinin yeri değişmeli	Ses çıkarımının zor olması Kelime oluşturmanın kolay olması	$Ö_{20}$	1
Bütün sesli harfler olmalı	İlk okuma yazmanın daha kolay olması	$Ö_{7}$	1

Tablo 3'e göre, sınıf öğretmenlerinin ilk okuma yazma sürecinde birinci gruptaki harf veya harflere ilişkin görüşleri incelendiğinde, en fazla (f=9) görüşün "k" harfi olmamalı şeklinde olduğu görülmüştür. Bunun nedeni olarak da öğretmenler; ses çıkarımının, harf yazımının ve hece oluşturmanın zor olduğunu belirtmişlerdir. Ayrıca öğretmenler ilk okuma yazma sürecinde birinci gruptaki harf veya harflere ilişkin; "l" ve "n" harfleri bir arada olmamalı (f=5), "k" ve "t" harfleri yer değişmeli (f=4), "t", "ç" veya "s" harf/harfleri olmalı (f=3), "n" harfi olmamalı (f=2), "l" harfi olmamalı (f=2), "n" ve "m" harflerinin yeri değişmeli (f=1) ve bütün sesli harfler olmalı (f=1) şeklinde görüşlerde bulunmuşlardır. Sınıf öğretmenlerinin ilk okuma yazma sürecinde birinci gruptaki harf veya harflerle ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

"Sesli harflerin hepsi ilk grupta olabilirdi. Çocuk sesli harfi öğrenip sonra diğer harflere geçilebilirdi. "k"nın yazımı zor bir harf olduğu için ilk gruptan çıkarılabilirdi. "n" harfi çıkabilirdi çünkü ses çıkarımının zorluğundan tam anlaşılmadığı için birleştirmesi zor oluyor."(Ö7)

"Birinci grupta öncelikle "l" ve "n" harfleri çok karışıyor. Yani harflerin seslerini çıkarırken öğrenciler zorlanıyor. Bundan dolayı bu harfler aynı grubun içinde olmamalı." (Ö13)

Sınıf öğretmenlerine "İlk okuma yazma sürecinde sesli harflerin verilme sırasını doğru buluyor musunuz? (Cevabınız hayır ise bu sıra nasıl olmalıdır?)" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 4'te gösterilmiştir.

Tablo 4. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Sesli Harflerin Verilme Sırasına İlişkin Görüşleri

Sesli harflerin verilme sırasını	**Olması gereken sıra**	**Öğretmenler**	**f**
Evet, doğru buluyorum	-	$(Ö_{1,2,3,5,6,8,9,10,11,12,14,16,17,18,19,20,21})$	17
Hayır, doğru bulmuyorum	"e", "a", "i", "o", "u", "ö", "ü", "ı"	$(Ö_{4})$	1
	"a", "e", "ı", "i", "o", "ö", "u", "ü"	$(Ö_{7,15})$	2
	"e", "a", "i", "o", "u", "ü", "ö", "ı"	$(Ö_{13})$	1
	"e", "a", "i", "ı", "o", "ö", "u", "ü"	$(Ö_{22})$	1

Tablo 4 'e göre, sınıf öğretmenlerinin ilk okuma yazma sürecinde sesli harflerin verilme sırasına ilişkin görüşleri incelendiğinde; öğretmenlerin büyük bir çoğunluğunun sesli harflerin verilme sırasını doğru

FULL TEXTS BOOK

bulduğunu (f=17) ifade ettikleri görülmüştür. Ancak beş öğretmenin ise sesli harflerin; "e", "a", "i", "o", "u", "ö", "ü", "ı" (f=1), "a", "e", "ı", "i", "o", "ö", "u", "ü" (f=2), "e", "a", "i", "o", "u", "ü", "ö", "ı" (f=1) ve "e", "a", "i", "ı", "o", "ö", "u", "ü" (f=1) şeklinde verilmesi gerektiğini vurgulamışlardır. Sınıf öğretmenlerinin ilk okuma yazma sürecinde sesli harflerin verilme sırasına ilişkin görüşlerinden yapılan alıntılarından bazıları şunlardır:

"Doğru buluyorum." (Ö19)

"Evet, sıralama uygundur."(Ö11)

Sınıf öğretmenlerine "Harf gruplarında yer alan harflerde yer değişikliği yapmak isteseydiniz hangi harf veya harfler hangi grupta olurdu? Neden?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 5'te gösterilmiştir.

Tablo 5. Sınıf öğretmenlerinin harf gruplarında yer alan harf veya harflerdeki yer değişikliğine ilişkin görüşleri

Görüşler		**Öğretmenler**	**f**
"t" harfi birinci grupta olmalı	Ses çıkarımının daha kolay olmasından dolayı	$Ö_{1,2,7,12,14,15,16}$	7
"k" harfi ikinci grupta olmalı	Ses çıkarımındaki zorluktan dolayı	$Ö_{2,3,4,7,10,12}$	6
"m" ile "n" ve/veya "b" ile "d" harfleri uzak gruplarda olmalı	Yazımının ve ses çıkarımının karışmasından dolayı Yazım benzerliklerinden dolayı	$Ö_{5,8,9,16,17,20}$	6
"n" harfi ikinci grupta olmalı	Ses çıkarımındaki karışıklıktan dolayı	$Ö_{6,14,16,20,21}$	5
"m" harfi birinci grupta olmalı	Ses çıkarımının daha kolay olmasından dolayı	$Ö_{3,10,20,21}$	4
"d" harfi ikinci grupta olmalı	Ses çıkarımındaki karışıklıktan dolayı	$Ö_{13,18,21}$	3
Birinci gruptaki k ve n harfleri yer değişmeli	Ses çıkarımındaki zorluktan dolayı	$Ö_{11}$	1
"ç" harfi ikinci grupta olmalı	Ses çıkarımının daha kolay olmasından dolayı	$Ö_{14}$	1
"z" harfi birinci grupta olmalı	Ses çıkarımının daha kolay olmasından dolayı	$Ö_{19}$	1
"b" harfi dördüncü grupta olmalı	Ses çıkarımındaki karışıklıktan dolayı	$Ö_{22}$	1

Tablo 5'e göre sınıf öğretmenlerinin ilk okuma yazma sürecinde harf gruplarında yer alan harf veya harflerdeki yer değişikliğine ilişkin görüşleri incelendiğinde, öğretmenlerin önemli bir kısmı (f=7) ses çıkarımının daha kolay olmasından dolayı "t" harfinin birinci grupta olması gerektiğini ifade etmiştir. Ayrıca öğretmenler harf gruplarında yer alan harflerdeki yer değişikliğine ilişkin; "k" harfi ikinci grupta olmalı (f=6), "m" ile "n" ve/veya "b" ile "d" harfleri uzak gruplarda olmalı (f=6), "m" harfi birinci grupta olmalı (f=4), "n" harfi ikinci grupta olmalı (f=5), "d" harfi ikinci grupta olmalı (f=3), birinci gruptaki "k" ve "n" harfleri yer değişmeli (f=1), "ç" harfi ikinci grupta olmalı (f=1), "z" harfi birinci grupta olmalı (f=1) ve "b" harfi dördüncü grupta olmalı (f=1) şeklinde görüşte bulunmuşlardır. Sınıf öğretmenlerinin harf gruplarında yer alan harf veya harflerdeki yer değişikliğine ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

FULL TEXTS BOOK

"Karıştırıldığını düşündüğüm "m" ile "n" ve "b" ile "d" harfleri yazımdan olsun ses çıkarımından olsun birbirinden uzaklaştırmak gerekir."(Ö17)
"d" ve "b" seslerini aynı gruba koymazdım. Çok karıştırıldığı için farklı gruplara koyardım. "t" harfini de çıkarımının kolay olmasından dolayı sesinin ilk grupta olsun isterdim. Ayrıca ilk gruptaki "n" harfi de "l" harfi ses çıkarımındaki karışıklıktan dolayı ikinci grupta olabilirdi. "(Ö16)

Sınıf öğretmenlerine "İlk okuma yazma sürecinde dikte çalışmaları yaparken zorluk yaşıyor musunuz? Neden?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 6'da gösterilmiştir.

Tablo 6. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Dikte Çalışmalarında Zorluk Yaşama Durumlarına İlişkin Görüşleri

Zorluk yaşama durumu		**Öğretmenler**	**f**
Evet yaşadım	Harf birleştirme mantığının oturmamış olması	$Ö_{1,2,3,6,7,8,9,10,11,13,17,20,21}$	17
	Harflerin tam öğrenilememiş olması	$Ö_{5}$	
	Sınıf mevcutlarının fazla olması	$Ö_{12}$	
	Aile desteğinin yetersiz olması	$Ö_{16}$	
	Öğrencilerin fazla devamsızlık yapması	$Ö_{19}$	
Hayır yaşamadım		$Ö_{4,14,15,18,22}$	5

Tablo 6'ya göre sınıf öğretmenlerinin ilk okuma yazma sürecinde dikte çalışmalarında zorluk yaşama durumları incelendiğinde, öğretmenlerin büyük çoğunluğunun (f=17), zorluk yaşadıklarını ifade ettikleri görülmüştür. Ancak beş öğretmen ise dikte çalışmalarında zorluk yaşamadıklarını ifade etmişlerdir. Dikte çalışmalarında zorluk yaşayan öğretmenlerinde, harf birleştirme mantığının oturmamış olması, harflerin tam öğrenilmemiş olması, aile desteğinin yetersiz olması, öğrencilerin fazla devamsızlık yapmaları ve sınıf mevcutlarının fazla olmasından dolayı zorluk yaşadıkları görülmüştür. Sınıf öğretmenlerinin ilk okuma yazma sürecinde dikte çalışmalarında zorluk yaşama durumlarına ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:
"Dikte çalışmasında zorluk yaşıyorum çünkü sınıfta her öğrenci aynı şekilde harfleri birleştirmeyi çözemiyor, aynı öğrenmeyi sağlayamıyor. Tam öğrenme gerçekleşmeyen öğrenciler süreci zorlaştırıyor."(Ö6)
"Dikte çalışmaları yaparken harflerin birleşme mantığının öğrencilerce anlaşılmaması durumunda zorlanıyorum, ancak mantık oturdukça dikte kolay gelmeye başlıyor."(Ö8)

Sınıf öğretmenlerine "İlk okuma yazma sürecinde harf öğretiminde zorlandığınız durumlar nelerdir?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 7'de gösterilmiştir.

Tablo 7. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Harf Öğretiminde Zorlandıkları Durumlara İlişkin Görüşleri

Harf öğretiminde zorlanılan durumlar	**Öğretmenler**	**f**
Aile desteğinin yetersiz olması	$Ö_{1,12,13,15,16,21}$	6
Öğrenci seviyelerinin veya hazır bulunuşluklarının farklı olması	$Ö_{1,9,15,16,21}$	5
Ailelerin yanlış okuma yazma öğretimi yapması	$Ö_{4,17,20,22}$	4

FULL TEXTS BOOK

Harf birleştirme mantığının oturmamış olması	$Ö_{3,8,10}$	3
Dikte çalışmasında	$Ö_{5,11}$	2
Seslerin çıkarılmasında zorluk yaşanması	$Ö_{2}$	1
Harf benzerliklerinin olması	$Ö_{6}$	1
Sesin çıkarılması ve harfin yazımının zor olması	$Ö_{7}$	1
Zorlandığı bir durum yok	$Ö_{14,18,19}$	3

Tablo 7'ye göre sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde en çok (f=6) aile desteğinin yetersiz olmasından dolayı zorlandıkları görülmüştür. Ayrıca öğrenci seviyelerinin veya hazır bulunuşluklarının farklı olması (f=5), ailelerin yanlış okuma yazma öğretimi yapması (f=4), harf birleştirme mantığının oturmamış olması (f=3), dikte çalışmasında (f=2), seslerin çıkarılmasında zorluk yaşanması (f=1), harf benzerliklerinin olması (f=1), sesin çıkarılması ve harfin yazımının zor olması (f=1) şeklinde görüşte bulundukları da görülmüştür. Ancak üç öğretmenin ise harf öğretiminde zorlandığı bir durumun olmadığını ifade ettikleri görülmüştür. Sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde zorlandıkları durumlara ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

"Aile desteği yoksa okuma yazma sürecinde zorluk yaşıyoruz. Ayrıca bazen çocuğun hazır bulunuşluğu da yetersizse o zaman da sıkıntı yaşıyoruz." (Ö1)

"Evde aile desteği olmadığında ya da okul öncesi eğitimi olmayan öğrencilerde harf öğretiminde zorlandım."(Ö15)

Sınıf öğretmenlerine "İlk okuma yazma sürecinde harf öğretiminde velilere ve öğretmenlere yönelik önerileriniz nelerdir?" sorusu sorulmuş olup öğretmenlerin verdikleri yanıtların analizinden ortaya çıkan bulgular Tablo 8 ve 9'da gösterilmiştir.

Tablo 8. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Harf Öğretiminde Velilere Yönelik Önerilerine İlişkin Görüşleri

Velilere yönelik öneriler	**Öğretmenler**	**f**
Öğretmene destek olmalı	$Ö_{1,5,6,7,9,10,12,13,14,15,16,17,18,19,20}$	15
Sabırlı olmalı	$Ö_{2,6,7,13,15,16}$	6
Öğrenciye destek olmalı	$Ö_{8,11,18,21,22}$	5
Yanlış okuma yazma öğretimi yapmamalı	$Ö_{3,4}$	2
Öğrencisinin yapabileceklerini iyi bilmeli	$Ö_{1}$	1

Tablo 8'e göre sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde velilere yönelik en çok (f=15) öğretmene destek olunması şeklinde öneride bulundukları görülmüştür. Ayrıca velilere yönelik; sabırlı olmalı (f=6), öğrenciye destek olmalı (f=5), yanlış okuma yazma öğretimi yapmamalı (f=2) ve öğrencisinin yapabileceklerini iyi bilmeli (f=1) şeklinde görüşte bulundukları ortaya çıkmıştır. Sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde velilere yönelik önerilerine ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

"Bolca sabır, acele etmemelerini önerebilirim. Ayrıca bu süreçte öğretmene gerekli destek sağlanmalı." (Ö7)

"Veliler, öğretmenle destek halinde olmalı." (Ö20)

FULL TEXTS BOOK

Tablo 9. Sınıf Öğretmenlerinin İlk Okuma Yazma Sürecinde Harf Öğretiminde Öğretmenlere Yönelik Önerilerine İlişkin Görüşleri

Öğretmenlere yönelik öneriler	Öğretmenler	f
İlk okuma yazma sürecinde acele edilmemeli	$Ö_{1,3,5,6,7,9,10,11,15,19}$	10
Farklı materyaller kullanmalı	$Ö_{14,15,20,21,22}$	5
Veli ile işbirliği yapmalı	$Ö_{3,4,8,17,18}$	5
Veliler okuma yazma öncesinde ve sürecinde bilgilendirilmeli	$Ö_{2,4,12,17}$	4
Öğrencilerin bireysel farklılıklarına dikkat etmeli	$Ö_{13,16}$	2
Teknolojik araçlardan faydalanılmalı	$Ö_{22}$	1

Tablo 9' a göre sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde öğretmenlere yönelik en çok (f=10) ilk okuma yazma sürecinde acele edilmemeli şeklinde öneride bulundukları görülmüştür. Ayrıca öğretmenlere; farklı materyaller kullanmalı (f=5), veli ile işbirliği yapmalı (f=5), veliler okuma yazma öncesinde ve sürecinde bilgilendirilmeli (f=4), öğrencilerin bireysel farklılıklarına dikkat etmeli (f=2) ve teknolojik araçlardan faydalanılmalı (f=1) şeklinde önerilerde bulunulmuştur. Sınıf öğretmenlerinin ilk okuma yazma sürecinde harf öğretiminde öğretmenlere yönelik önerilerine ilişkin görüşlerinden yapılan alıntılardan bazıları şunlardır:

"Öğretmen arkadaşlarıma tavsiyem bol materyalli ders etkinlikleri harf öğretimini kolaylaştırıyor. Bu şekilde yapabilirler."(Ö14)

"Öğretmenler, okuma ve yazma gibi çok yönlü bir öğretim işini acele etmeden, kaygılanmadan, sabırla yürütebilirler."(Ö9)

TARTIŞMA, SONUÇ VE ÖNERİLER

Sınıf öğretmenlerinin ilk okuma yazma sürecinde en çok "h, f, ğ, l, k, j, g" harflerinin ses çıkarımından dolayı zorlandıkları görülmüştür. Ayrıca öğretmenler; "b-d" harflerinin yazımının karıştırılmasından; "y, g, ğ, j, s, ş" harflerinin yazım biçimlerinin zor olmasından; "ğ-g, n-m, ı-i, o-ö, u-ü, c-ç, s-ş" harflerinin yazım benzerliklerinin olmasından; "b, d, k" harfleriyle ilgili hece oluşturmanın zor olmasından; "y, n, l" harflerinin ses çıkarımının diğer harflerle karışmasından; "r" harfinin dil yapısının ses çıkarımına uygun olmamasından ve "e, l, a, k, i, n" harfleriyle ilk okuma yazma mantığının kavranamamış olmasından dolayı ilk okuma yazma sürecinde zorluklarla karşılaştıklarını belirttikleri sonucuna ulaşılmıştır. Sağırlı ve Atik (2022) tarafından yapılan çalışmada, bazı öğretmenlerin "b-d, ç-ş" gibi söylenişleri benzer harflerin öğretim sırasının birbirine yakın olmasının zorluk yaşadıklarını ve öğrencilerde kafa karışıklığına neden olduğunu belirttikleri sonucuna ulaşılmıştır. Babayiğit (2012) tarafından yapılan çalışmada da bazı harflerin birbirine karıştırılarak yazıldığı sonucuna ulaşılmıştır. Çağlar (2018) da "l ve n" seslerinin aynı grupta yer almasının fonetik yakınlığından dolayı okuma yazma sürecinde karışıklığa neden olduğunu ve sesleri birbirine yakın olan harflerin de aynı grupta yer almamasına dikkat edilmesi gerektiğini belirtmiştir. Bayraktar'ın (2006) çalışmasında da öğretmenler, öğrencilerin en çok "k, s, ş ve z" harflerinin yazımında zorluk yaşadıklarını vurgulamışlardır. Ferah-Özcan ve Özcan (2016) tarafından yapılan çalışmada öğrencilerin bir kısmının "r" harfi gibi harflerin seslerinin tamamını çıkartamamasından kaynaklı sorunlar yaşadığını belirtmiştir. Alanyazında yapılan çalışmalara (Sağırlı ve Atik, 2022; Babayiğit, 2012; Çağlar, 2018; Bayraktar, 2006; Ferah-Özcan ve Özcan, 2016) bakıldığında çalışmanın sonucunu destekler nitelikte olduğu görülmektedir.

Sınıf öğretmenlerinin önemli bir kısmı ilk okuma yazma sürecinde ses çıkarımının, harf yazımının ve hece oluşturmanın zor olmasından dolayı "k" harfinin birinci grupta olmaması gerektiğini ifade ettikleri sonucuna ulaşılmıştır. Öğretmenler; ses çıkarımının karışmasından dolayı "l" ve "n" harflerinin bir arada

FULL TEXTS BOOK

olmaması, ses çıkarımının ve hece oluşturmanın zor olmasından dolayı "k ve t" harflerinin yer değiştirmesi, ses çıkarımının kolay olmasından dolayı "t, ç veya s" harf/harflerinin birinci grupta olması gerektiğini belirtmişlerdir. Ayrıca birinci gruptaki harflerle ilgili; "n ve l" harflerinin olmaması, "n ve m" harflerinin yerinin değişmesi ve bütün sesli harflerin olması gerektiği öğretmenler tarafından ifade edilmiştir. Sağırlı ve Atik (2022) tarafından yapılan çalışmada benzer şekilde ilk grupta yer alan "k" harfinin bazı öğrenciler için zorlayıcı olabildiği ve "t" harfinin ise daha kolay kavrandığı için ilk grupta yer alması gerektiği sonucuna ulaşılmıştır. Başar ve Tanış-Gürbüz'ün (2020) çalışmalarında ilk grupta yer alan "l ve n" harflerinin karıştırıldığı ve "n ve m" harflerinin birbirine yakın gruplarda olmasından dolayı öğrencilerin zorlandığı ortaya çıkmıştır. Bu karışıklık giderilmesi için harf gruplarının yeniden düzenlenmesi gerektiği vurgulanmıştır. Ferah-Özcan ve Yıldız'ın (2018) çalışmalarında da harflerin öğretim sırasının değiştirilmesi ve sesli harflerin sürecin başında verilmesi gerektiği belirtilmiştir.
Sınıf öğretmenlerinin büyük çoğunluğu, ilk okuma yazma sürecinde sesli harflerin verilme sırasını doğru bulduklarını belirtmişlerdir. Sesli harflerin verilme sırasını doğru bulmadıklarını belirten öğretmenler ise sıralamanın; "e, a, i, o, u, ö, ü, ı", "a, e, ı, i, o, ö, u, ü", "e, a, i, o, u, ü, ö, ı", "e, a, i, ı, o, ö, u, ü" şeklinde olması gerektiğini ifade etmişlerdir. Babayiğit (2012) tarafından yapılan çalışmada sesli harflerin verilme sırasının "a, e, ı, i, o, ö, u, ü" şeklinde olması gerektiği belirtilmiştir. Ayrıca harflerin öğretim sırasının esnek tutulması ve öğrencilerin kolay öğrendiği sesli harflerin öncelikle öğretilebileceği vurgulanmıştır. Çağlar'ın (2018) çalışmasında da harf öğretimi esnasında sesli harflerin öğretiminin öne alınmasıyla birlikte sesli harflerle oluşturulabilecek hece ile sözcük oluşturmanın kolaylaştığı sonucuna ulaşılmıştır.

İlk okuma yazma sürecinde sınıf öğretmenlerinin harf grupları veya harflerde ilgili yapmak istedikleri değişikliğin en fazla, ses çıkarımının daha kolay olmasından dolayı "t" harfinin birinci grupta olması değişikliğidir. Öğretmenler bu değişikliklerle ilgili; ses çıkarımındaki zorluktan dolayı "k" harfi ikinci grupta olmalı, yazımının ve ses çıkarımının karışmasından ve yazım benzerliklerinden dolayı "m ile n ve/veya b ile d harfleri" uzak gruplarda olmalı, ses çıkarımının daha kolay olmasından dolayı "m" harfi birinci grupta olmalı, ses çıkarımındaki karışıklıktan dolayı "n" ve "d" harfleri ikinci grupta olmalı şeklinde görüş belirtmişlerdir. Ayrıca öğretmenler birinci gruptaki "k" ve "n" harfleri yer değişmeli; ç harfi ikinci, z harfi birinci ve b harfi dördüncü grupta olmalı şeklinde görüşte bulundukları sonucuna ulaşılmıştır. Sağırlı ve Atik'in (2022) çalışmalarında seslendirmeleri birbirine yakın olan "b-d" ile "m-n" harflerinin okurken sıklıkla karıştırıldığını sonucuna ulaşılmıştır. Alanyazında yapılan çalışmalar (İflazoğlu-Saban ve Yiğit, 2011; Acat ve Özsoy, 2006; Ferah-Özcan ve Özcan, 2016; Başar ve Tanış-Gürbüz, 2020; Ferah-Özcan ve Yıldız, 2018; Ekici-Calın, 2019; Çağlar, 2018) çalışmanın bu bulgusunu destekler niteliktedir.

İlk okuma yazma sürecinde sınıf öğretmenlerinin büyük bir çoğunluğunun; harf birleştirme mantığının oturmamış olması, harflerin tam öğrenilememiş olması, sınıf mevcutlarının fazla olması, aile desteğinin yetersiz olması ve öğrencilerin fazla devamsızlık yapmasından dolayı dikte çalışmalarında zorluk yaşadıkları sonucuna ulaşılmıştır. Ayrıca öğretmenlerin bir kısmının da dikte çalışmalarında zorluk yaşamadıkları belirttikleri görülmüştür. Ferah-Özcan ve Özcan (2016) çalışmalarında öğretmenler, dikte sürecinde öğrencilerin sesletimi benzer olan ve ayırt edilmesi zor olan harfleri karıştırmalarından dolayı dikte sürecinin zorlaştırdığını ifade etmişlerdir. Ayrıca harfleri tam anlamıyla öğrenememiş öğrencilerin dikte sürecinde sesli harfleri yazmama eğiliminde oldukları sonucuna ulaşılmıştır. Babayiğit'in (2012) çalışmasında da öğrencilerin bir kısmının dikte çalışmasında bazı harfleri birbirine karıştırmalarından dolayı öğretmenlerin dikte çalışmalarında zorluk yaşadıklarını belirttikleri görülmüştür. Ayrıca sınıf mevcutlarının kalabalık olması (Sağırlı ve Atik, 2022; Ekici-Calın, 2019; Ferah-Özcan ve Yıldız, 2018; Babayiğit ve Erkuş, 2017), devamsızlıklarının fazla olması (Sağırlı ve Atik, 2022; Babayiğit ve Erkuş, 2017), ailenin ilgisiz olması veya destek sağlamaması (Erbasan ve Erbasan, 2020; Ekici-Calın, 2019;

Sağırlı ve Atik, 2022; Ferah-Özcan ve Yıldız, 2018; Babayiğit ve Erkuş, 2017; Ferah-Özcan ve Özcan, 2016; Çağlar, 2018) gibi durumların ilk okuma yazma sürecinde yaşanılan zorlukların nedenleri arasında olduğu görülmektedir.

İlk okuma yazma sürecinde sınıf öğretmenlerinin; aile desteğinin yetersiz olması, öğrenci seviyelerinin veya hazır bulunuşluklarının farklı olması, ailelerin yanlış okuma yazma öğretimi yapması, harf birleştirme mantığının oturmamış olması, dikte çalışması, seslerin çıkarılmasında zorluk yaşanması, harf benzerliklerinin olması, sesin çıkarılması ve harfin yazımının zor olmasından dolayı harf öğretiminde zorlandıkları görülmüştür. Ayrıca öğretmenlerin bir kısmı ise harf öğretiminde zorlandıkları bir durumun olmadığını belirtmişlerdir. Öğretmenlerin aile desteğinin yetersiz olduğu durumlarda ilk okuma yazma sürecinde zorlandıklarına yönelik alanyazında birçok çalışmanın (Erbasan ve Erbasan, 2020; Ekici-Calın, 2019; Sağırlı ve Atik, 2022; Ferah-Özcan ve Yıldız, 2018; Babayiğit ve Erkuş, 2017; Ferah-Özcan ve Özcan, 2016; Çağlar, 2018) olduğu görülmüştür. Yangın (2009) ise yaptığı çalışmada ilk okuma yazma sürecinde hazırbulunuşluğun, okuma ve yazma başarılarında belirleyici bir etken olduğu sonucuna ulaşılmıştır. Yapılan çalışmalarda (Sağırlı ve Atik, 2022; Başar ve Tanış-Gürbüz, 2020; Erbasan ve Erbasan, 2020; Ferah-Özcan ve Yıldız, 2018; Babayiğit ve Erkuş, 2017; Ferah-Özcan ve Özcan, 2016) da öğrencilerin hazırbulunuşluk düzeylerinin yetersiz olması, öğretmenlerin ilk okuma yazma sürecinde karşılaştıkları sorunlardan biri olarak görülmektedir. Ayrıca öğretmenler, ailelerin harfleri yanlış seslendirmeden kaynaklı sorunlarla da karşılaştıkları görülmüştür (Kılıç ve Geçit, 2022; Sağırlı ve Atik, 2022; Erbasan ve Erbasan, 2020; Ekici-Calın, 2019).

Sınıf öğretmenleri ilk okuma yazma süreci harf öğretiminde velilere; öğretmene destek olması, sabırlı olması, öğrenciye destek olması, yanlış okuma yazma öğretimi yapılmaması ve öğrencisinin yapabileceklerini iyi bilmesi önerilerinde bulundukları sonucuna ulaşılmıştır. Ayrıca sınıf öğretmenleri, meslektaşlarına da ilk okuma yazma sürecinde acele edilmemeli, farklı materyaller kullanılmalı, veli ile işbirliği yapılmalı, veliler okuma yazma öncesinde ve sürecinde bilgilendirilmeli, öğrencilerin bireysel farklılıklarına dikkat edilmeli ve teknolojik araçlardan faydalanılmalı önerilerinde bulundukları görülmüştür. Özbaş'ın (2013) yaptığı araştırmada, birinci sınıf velilerinin eğitime gereksinimleri olduğu, veli eğitiminin veli-çocuk arasında olumlu bağlar kurmasına katkı sağladığı sonucuna ulaşılmıştır. Çocuklar vakitlerinin büyük bir kısmını ailesiyle geçirdiği için, çocukların eğitiminde ebeveynlerin kilit bir rolü bulunmaktadır (Isaacs, 2012). Ailelerin kilit rolünün yanında çocuklarına verecekleri desteğin de doğru bir şekilde gerçekleşmesi son derece önemlidir. Ancak ailelerin ilk okuma yazma sürecinde yanlış öğretimde bulundukları birçok çalışma (Kılıç ve Geçit, 2022; Adıgüzel ve Karacabey, 2010; Yiğit, 2009) sonucunda ortaya çıkmıştır. Ayrıca bu çalışmanın sonuçları, alanyazındaki çalışmaların (İflazoğlu-Saban ve Yiğit, 2011; Babayiğit ve Erkuş, 2017; Yılar, 2004; Erbasan ve Erbasan, 2020; Ferah-Özcan ve Özcan, 2016; Demir ve Ersöz, 2016; Ferah-Özcan ve Yıldız, 2018; Babayiğit, 2012) sonuçlarıyla benzerlik göstermektedir.

Çalışmanın sonuçları doğrultusunda aşağıdaki önerilerde bulunulmuştur:

- "h", "f", "ğ", "l", "k", "j", "g" harflerinin ses çıkarımının zor olmasından dolayı bu harflerin son gruplarda yer almasına yönelik düzenleme yapılması önerilebilir.
- Seslendirmesi birbirine benzeyen "b-d" gibi harflerin yazımının karıştırılmasının önüne geçmek için bu harfler arasında daha uzun zaman aralığı olacak şekilde gruplarında yeniden düzenleme yapılmalıdır.
- Ses çıkarımının daha kolay olmasından dolayı "t" harfi birinci grupta olmasına yönelik düzenleme yapılması önerilebilir.

FULL TEXTS BOOK

- Ailelere ilk okuma yazma öğretimi hakkında bilgi vermek ve aileler tarafından yapılan yanlış müdahaleleri önlemek amacıyla eğitim öğretim yılı başında veli toplantısı yapılmalı ayrıca yıl içerisinde de sık sık veli toplantıları yapılarak aileler ilk okuma yazma süreci hakkında bilgilendirilmelidir.
- İlk okuma yazma sürecinde mümkün olduğunca fazla materyale yer verilmeli ve bu süreçte teknolojik araçlardan yararlanılması öğretmenlere önerilebilir.

EXTENDED ABSTRACT

INTRODUCTION

For humans, who are social beings, reading and writing is one of the most important skills that makes life easier. Reading and writing skills make important contributions to individuals' ability to do many tasks in daily life easily and to improving their quality of life (Durna, 2014; Kapur, 2019). Because in today's conditions, being literate has a high share in individuals' ability to organize their business life and living conditions, to feel like they belong to society and to contribute, to have a free and participatory personality, and to gain a worldview of their own (Çelenk, 2007). Early reading and writing skills aim to improve one's self, to be able to communicate with the society, to understand visual and written tools, and to express oneself in the best way, both written and verbal (Bay, 2008).

METHOD

This study, which examined the opinions of primary school teachers about letter groups, was conducted with a case study design. A case study is defined as an in-depth qualitative investigation of one or several explanatory cases (Hagan, 2006). The study group of the research consists of 22 primary school teachers working in primary schools affiliated with Yozgat Provincial Directorate of National Education. Criterion sampling technique was used when determining the study group. Criterion sampling is defined as studying situations in which a set of criteria that can be created by the researcher or determined in advance are met (Yıldırım and Şimşek, 2016). In this study, the inclusion of teachers who taught primary reading and writing at least twice was determined as a criterion. The data of the research were collected with a semi-structured interview form prepared by the researcher. Descriptive analysis was used in the analysis process of the collected data. According to Ekiz (2015), this analysis includes interviews, observations or documents, etc. used during the research. It is a type of analysis performed on the basis of questions or topics in data collection tools.

RESULT and DISCUSSION

It was observed that primary school teachers had the most difficulty in the first reading and writing process due to the sound production of the letters "h, f, ğ, l, k, j, g". In addition, teachers; Confusing the spelling of the letters “b-d”; Because the spelling of the letters "y, g, ğ, j, s, ş" is difficult; The letters "ğ-g, n-m, ı-i, o-ö, u-ü, c-ç, s-ş" have similarities in spelling; Because it is difficult to form syllables with the letters "b, d, k"; It was concluded that they stated that they encountered difficulties in the first reading and writing process because the sound production of the letters "y, n, l" was mixed with other letters. In the study conducted by Sağırlı and Atik (2022), it was concluded that some teachers stated that they had difficulties in the close teaching order of letters with similar pronunciations, such as "b-d, ç-ş", and that it caused confusion in students. Çağlar (2018) also stated that the sounds "l and n" being in the same

FULL TEXTS BOOK

group causes confusion in the reading and writing process due to their phonetic closeness, and care should be taken to ensure that letters with similar sounds are not included in the same group.

It was concluded that a significant part of the primary school teachers stated that the letter "k" should not be in the first group because it is difficult to produce sounds, write letters and form syllables in the first reading and writing process. Similarly, in the study conducted by Sağırlı and Atik (2022), it was concluded that the letter "k" in the first group may be challenging for some students, and the letter "t" should be included in the first group because it is easier to understand. In the studies of Başar and Tanış-Gürbüz (2020), it was revealed that the letters "l and n" in the first group were confused and the students had difficulty because the letters "n and m" were in groups close to each other. It was emphasized that the letter groups should be rearranged to eliminate this confusion.

The majority of primary school teachers stated that they found the order in which vowels were given in the first reading and writing process correct. Teachers stated that they did not find the order in which the vowels were given correctly; “e, a, i, o, u, ö, ü, ı”, “a, e, ı, i, o, ö, u, ü”, “e, a, i, o, u, ü, ö They stated that it should be in the form of ", ı", "e, a, i, ı, o, ö, u, ü". In the study conducted by Babayiğit (2012), it was stated that the order of giving the vowels should be "a, e, ı, i, o, ö, u, ü".

In the first reading and writing process, the most common change that primary school teachers want to make regarding letter groups or letters is to have the letter "t" in the first group because it is easier to make sounds. Teachers are concerned about these changes; It was concluded that they agreed that the letter "k" should be in the second group due to the difficulty in sound extraction, and the letters "m and n and/or b and d" should be in distant groups due to the confusion of spelling and sound extraction and the similarities in spelling. In the study of Sağırlı and Atik (2022), it was concluded that the letters "b-d" and "m-n", which have similar vocalizations, are often confused while reading. Studies in the literature (İflazoğlu-Saban and Yiğit, 2011; Acat and Özsoy, 2006; Ferah-Özcan and Özcan, 2016; Başar and Tanış-Gürbüz, 2020; Ferah-Özcan and Yıldız, 2018; Ekici-Calın, 2019; Çağlar, 2018) supports this finding of the study.

In the first reading and writing process, primary school teachers; It has been observed that they have difficulties in teaching letters due to insufficient family support, different student levels or readiness, incorrect reading and writing teaching by families, not having the logic of combining letters, practicing dictation, difficulty in making sounds, letter similarities, making sounds and writing letters are difficult. . There are many studies in the literature indicating that teachers have difficulty in the first reading and writing process when family support is insufficient (Erbasan and Erbasan, 2020; Ekici-Calın, 2019; Sağırlı and Atik, 2022; Ferah-Özcan and Yıldız, 2018; Babayiğit and Erkuş, 2017; Ferah- Özcan and Özcan, 2016; Çağlar, 2018).

ABSTRACT
The generally known definition of science, according to which science is a body of knowledge that is rationally explained and reliably applied, fully corresponds to the research conducted in this paper. The main purpose of this paper is to show how knowledge and education are fundamental elements of the creation and development of the world of technology and advanced technologies, modern science and modern reality in general. In this sense, the question of the source of the meaning of knowledge, which is found in the Greek term *techne*, and the application of modern education models, which are applied and developed in the UONEDU organization, are essential questions that define the modern world of science, education and technology. Therefore, the intention here is to show what are the philosophical premises of modern science and modern society, the world of technology and advanced technologies, and why the application and integration of different scientific fields in order to achieve the same goal is the key, with all the challenges of modern science, society and technology pose - what is the knowledge? Understanding the meaning of the Greek term techne - production of knowledge, which gives meaning to nowadays term technique, and the transfer of knowledge in a specific, sudden and non-standard conditions of education, show the importance of social sciences in modern science and the real world - the world of modern science and modern technology and truth.
Keywords: knowledge, techne, online education

Introduction

Knowledge, skills and coping in real situations are common strengths of education. Furthermore, knowledge and education are fundamental elements of the creation and development of the world of technique and advanced technologies, then modern science and modern reality in general, in such a way that knowledge has its original meaning in skill, skill, creation and production according to certain rules. So, on the basis of knowledge, it was produced, that is, technique was created, and the development of advanced technologies is the result of actions from the sphere of knowledge, rather than from the sphere of use. In this sense, the Greek term techne is the fundamental term of both technique and advanced technologies, as well as contemporary science and contemporary reality, because techne, with its multiple meanings, is closest to the term episteme-knowledge. Techne is understood and means practical knowledge created in the sphere of production, not in the sphere of what nature created. Therefore, concretely knowing how to produce technical means according to certain rules and regulations and practically use them in the development of technology, modern science and reality, to produce codes that we input when using technology, is a work of human knowledge, not a work of technique.
In this way, it is shown here that the source of the meaning of knowledge, which is found in the Greek term techne and its application in modern education, is the model that is applied and developed in the UONEDU organization. In our modern society and modern science, the concept of techniques and advanced technologies that influence our formation and participation in modern reality, the basic philosophical premises that enable us today are contained in the concept of knowledge as the Greeks understood and used that term - techne, as an expression that gives today's term knowledge the

FULL TEXTS BOOK

possibility of understanding and the meaning of the world of technology and the reality that we produce, and in this way we show the fundamental human trait - production, not use, so techne not technique. Returning therefore to the meaning of the term techne and its understanding is a key determinant of understanding, interpretation and critical review of today's issues, i.e., issues of contemporary science, contemporary reality, technique and advanced technologies, as integral parts of the life of contemporary man and contemporary society and its contemporary reality in general. Knowledge and its practical application are what influence human reality, science and the world of (technological) development, and by no means the technical use of the knowledge thus produced.

The meaning, perspectives and possibilities of application of the mentioned questions and activities of the UONEDU organization in this direction will be analyzed and discussed in this paper.

The source the meaning of knowledge and philosophical foundation of education

The original meaning of the Greek term *techne* is achieved only by returning to the meaning of this term as it was understood and used by the Greeks. Here, in this paper, it is especially important for us to deal, first of all, with the understanding of the meaning of the term techne, because it is the term that gives meaning to today's term technique and technology, and is inextricably linked to the terms knowledge (*episteme*) and production (*phronesis*). Furthermore, by understanding the meaning of techne, an understanding of construction, production and produced, as well as built and built reality is achieved. Understanding the Greek word techne, dealing with its original meaning as well as the changes that have occurred in its meaning is necessary and unquestionably an integral part of human everyday life.

What the Greeks meant when they say techne is today used synonymously with the word technique, which is absolutely wrong, but for education and the production of knowledge, in a certain sense is dangerous. Namely, today's term technique owes its meaning to the term techne, which primarily refers to art, craft, skill and art, in contrast to the term technique, which primarily refers to the use of means produced by skill and art. In the broadest sense, techne is *a set of certain procedures and the application of means to achieve some useful ends*. The understanding of techne is actually reflected in the resourcefulness and ability to produce. The meaning of techne is in what is a practical skill, which means that techne is knowledge, but also the application of principles that are involved in the production of objects and the achievement of goals, that is, techne is the application of principles in practical sciences and *a human skill that is based on principles and ability to learn*. Techne is skill, creation and art, craft, arrangement and education. Thus, techne is finding one's way in creativity and education, in the rules of production, creation, taking away in production in such a way that the taking away is determined by planning and rules, (for more details see: Rahimić Ramić, 2024.). Precisely because of these determinants, techne is not only one of the concepts of Greek philosophy, but, perhaps, it is also a fundamental concept of philosophy, but also of understanding man's reality and position in today's technical and technological world.

Understanding what the Greeks meant by the term techne refers to the ability of man, that is, to the ability of man to produce. In this way, techne does not mean exactly the same thing as art today. Techne implies production skills, knowledge for making an object. Thus, in understanding techne (a way to know, to know), a necessary understanding of the term's *episteme and phronesis* (as a type of knowledge) is required. Techne is a word that for the Greeks means both art and craft. Here techne should be understood as a way of knowledge, and in this sense techne is closest to the Greek term *episteme*. As techne means managing something according to certain rules and certain regulations. This definition specifically means that techne can be used as a word that refers to our practical ability. This is exactly the basic intention of this work, our practical ability in education, concrete innovative, practical knowledge for the production and use of new methods and techniques, especially online education. In ancient times, techne was understood as episteme, that is, both words, techne and episteme,

FULL TEXTS BOOK

are names for knowledge. Therefore, today it is necessary to understand and know the original meaning of the term techne if we want to successfully deal with knowledge, education, educational norms in any bio field, but also with the issue of technique and technological progress, which today occupies everyone on the planet. Techne is the kind of knowledge by which we know how to produce something according to certain production rules. For the Greeks, techne means having knowledge, and that kind of knowledge that allows us to navigate something according to certain rules, and this understanding, or the way the Greeks understood techne, refers to our overall practical ability, to all that what we can do on real things. Therefore, this production, in addition to being in accordance with rules and regulations, is also in accordance with correct reasoning. The necessity of interpreting these words to understand the meaning of techne is shown in defining what techne is, which is the skill, knowledge, skill that is based on the knowledge of the rules, and in this way, it is knowledge and it is action in creation which (action) deals with *phronesis*.

The common property of virtue and techne is the ability to learn. "Common characteristics of techne: 1. Techne means useful, 2. Each techne serves a specific purpose - medicine maintains health, agriculture provides food, etc., 3. techne is based on the knowledge of an expert who manages all the means necessary for the purpose, 4. every techne can be taught, only what can be taught has the right to be called techne. Taken together, these characteristics form a theory of science, a science understood as techne, whose ultimate goal is practical use, not theoretical knowledge". (Zhmud, 2006.)

When working on researching the meaning of the term techne, what should always be kept in mind is that it is the term that gives meaning to today's term technique. In understanding the meaning of the term techne, the essential fact is shown that philosophy's interest in technique did not arise with the emergence of the word technique itself and all that is implied by that term today. Philosophical interest in technique has its origin in the term techne, which has significantly different, broader, more comprehensive definitions than the term technique, which primarily refers to abilities in creation - skill, which certainly refers to its first term - production according to rules. However, the first definition of the term techne leads us to Aristotle's *Nicomachean Ethics*: “Let there be five ways by which the soul attains truth by means of sayings or negatives, and these are: art, science, prudence, wisdom, intelligence”. (Aristotle, 1958.). As it was immediately pointed out here, techne is fundamentally connected with the concept of episteme, and in that way, it is decisive both for science and education, as well as for technique and perfecting the development of new technologies. "Phronesis and techne are two ways of what we would call practical, different from theoretical, knowledge. Following Plato, Aristotle called the kind of knowledge that is theoretical - and therefore, for him, neither practical nor productive - episteme". (Dunne,1993.)

Since the time of the ancient thinkers, who determined and positioned techne alongside knowledge and practical ability, in a certain way, we are obliged to protect the meaning of the term techne and adapt its use to its meaning in the world of technology and life with technological progress, to which techne gave meaning. On this track, the horizon from which it is possible to understand Heidegger's point of view on the meaning of techne and technique is undoubtedly the understanding of the term techne among the Greeks. His point of view is determined and directed towards what is the correct understanding of techne, which includes and implies a return to the source of this concept. Heidegger's point of view on technique is, so to speak, "insurance" against the wrong understanding of technique, which is based on Heidegger's return to the meaning of the term techne. In this, it can be said, it is ensured that today's term technique is not confused with the meaning of the term techne, but also the possibility of researching the basic features of human reality is given. In Heidegger's understanding of technique, there is no place for the synonymous use of the terms techne and technique, because his understanding leads to an understanding of the exact opposite, that is, to the definition of techne as knowledge and skill, as art and as truth, as skill and familiarity with production. Technique is not meant the way techne is meant. Therefore, it is important to point out that the understanding of man's essence cannot be determined by

FULL TEXTS BOOK

technique, because his fundamental characteristic is the ability to produce and create, in which man's essence is recognized. Heidegger's understanding of techne as knowledge and as production, in the technical world of making, gives us back the possibility of thinking and defining human habitation as technical habitation and knowledge and not adoption, production and not making. Therefore, knowing his opinion on the issue of techne and the phenomenon of techniques proves to be necessary in our real world, where we can hardly imagine everyday life without the use of technical means. Furthermore, in the mentioned definitions of techne and technical, we see the way in which it is only possible to talk about the definition of human reality, without this reality being equated with what is making and without being deprived of the possibility of production. This did not deprive man of his fundamental characteristic, production, and at the same time his essence, which is in creation, was preserved.

It is precisely in this planetary role of technique and new technological achievements that the issue of battle and metaphysics is completely forgotten. In his opinion, the most prominent and original philosopher of the 20th century, who stood out for his contributions to phenomenology, hermeneutics, metaphysics and existentialism, is trying to save all this. It is important to note that in his opinion, it is not about any kind of opposition to technique and technological achievements, but rather a fight, so to speak, that will take the opinion on the path of distinguishing between the term techne and technique and show that today's term technique owes its meaning to the term techne. Therefore, technique can only be understood as a memory of techne, but it cannot mean production or knowledge, but only the use of something that is already finished, in which truth cannot occur. The issue that today concerns everyone on the planet, that is, the issue of technique and new technology, is never neutral, nor should it be understood as such. On the contrary, it strives to rule and absolutely determine our world of life, the way we behave towards the world and participate in our reality. The constant imposition of new challenges and expectations that we manage and master the technique, in everyday life and the performance of business tasks, shows that we are working on the accommodation of thinking, skill and production knowledge, which is equal to what it means to understand something and know how to navigate something , in the "second plan", and highlighting in the "first plan" what is technique, which is the use of what is produced by skill, knowledge, understanding, i.e. by techne. "Careful dealing with things, in which we recognize them as something that is special to us, (German: Zuhanden), is part of our understanding everyday life". (Zovko, 2009.)

The importance of techne for Heidegger is reflected in the understanding of the modern world and the origin of technology. In understanding the term technique, he reveals the key distinction between techne and technique. In this way, Heidegger's "starting point for understanding the question of technique is determined by the understanding of techne as that by means of which any art can be transmitted", and "modern technique as revealing disclosure", for him, is not a mere human work. (Heidegger, 1972). In this context of Heidegger's demanding and difficult philosophical thought, the possibility of understanding our reality and our participation in the construction of our real world opens up for us or during studies. For us, thinking is a mental activity that helps us solve problems, deal with situations, understand the circumstances and, in accordance with this understanding, take an action to move forward. For us, thinking also means having an opinion, having the impression that something is a certain way. Thinking means reasoning, the process of arriving at certain conclusions through a series of statements. Thinking is "a means of mastery". (Dalle Pezze, 2006). Therefore, we can conclude here: The negative meaning attached to the concept of technical and technology, which can be understood as the legacy of modernity, is neither a result nor the legacy to which Heidegger's thought is attached. On the contrary, Heidegger's thought is related to the meaning of techne as the skill of production and the ability to create something new.

FULL TEXTS BOOK

Online education

Online learning has evolved with technology. The availability of the Internet has made online education the largest distance learning sector (Evans and Haase, 2001), that to open space for development and improvement of skills of production and the ability to create something new. Clarke and Hermens (2001) singled out the factors that influenced the development of distance learning in general: the growing need for through lifelong learning and changes, platforms are formed, a more sophisticated communication system is developed, as well as the technological infrastructures necessary for online learning, which are firmly established through improvements in bandwidth, as well as the presence of computers in the household, the technological standard, computers in school and at work , and the adaptive nature of technology. Beaudoin (2000) believes that online education has gone through three phases: correspondence education, technologically assisted education and network education, which differ in how the teaching is designed and delivered in time and space. Taylor (2001), on the other hand, believes that online education can be traced through five different levels or generations:

1. Correspondence education - which is based on printing and postal delivery.
2. Multimedia model - which combines print, audio tapes, video tapes and CDs; here students bought material, listened, read and completed all activities (with support and feedback) independently, i.e., without a leader. E.g., learning a foreign language by listening to tapes in combination with a workbook.
3. Tele-learning model - synchronous communications using available technologies, such as video conferencing in order to provide educational programs.
4. Flexible learning model - which uses interactive media via the Internet; this includes communication by computer.
5. The current, fifth generation is the so-called model of intelligent flexible learning - the main difference between the fifth and fourth generations is that the fifth generation has "access to institutional processes and resources... [in the model of intelligent and flexible learning, an adaptive electronic interface is provided, through which students, staff and other actors can interact with the university]' (Taylor, 2001, p. 10). Each previous generation was not replaced by the next, but new models were developed. For example, correspondence has been influenced by forms of communication and tools. Forms of communication were developed along with educational institutions and organizations (schools, religious institutions, clubs, associations and associations), while tools were the main instruments supporting that communication, such as pen, pen, paper, typewriters and machines.

The earliest form of distance education is the correspondence education model. Correspondence education in developed countries is more than a hundred years old and was created under the influence of private initiatives and concern of individuals for their own education. Correspondence education referred to connections between national ministries and institutes on the one hand and universities and/or colleges on the other. Their correspondence was related to educational research projects, training, and delivery of results. Demiray and İşman (2002) believe that this model developed depending on various factors, the most influential of which were education level, geographical area, age and profession. Their correspondence was related to educational research projects, training, and delivery of results to ministries and institutes. That communication referred to only one type of media - correspondence, shipment.

The second generation is often referred to in the literature as a model of one-way communication (Demiray and İşman, 2002) and the so-called multimedia model (Taylor, 2001). This one the model is characterized by various innovations in the field of learning and teaching. The first innovation in teaching took place through the radio, when the capacity of formal schools could not accommodate all the applications of people, who lived in small villages and towns. The government did not have the money to establish formal schools in every village and town. For these purposes, educators came up with the idea of using radio for teaching and education. Thus, radio was used as support for the formal system in Great Britain (BBC radio, since 1920) and in China (since 1929). In the USA, it began to be

FULL TEXTS BOOK

used in the classroom since 1930, later also in other countries (Lawrence and Malachi, 1975). The limitations of this education were reflected in the absence of images and communication. In addition to radio, television was also used for the purpose of distance education. The first television experiment was in 1874, when Paul Nipkow invented and demonstrated a mechanical system for direct wire transmission (Lawrence and Malachi, 1975). In the same year, Viladamir Zworykin received the first patent for television.

From 1950, the production of educational programs and the use of TV in correspondence education began. What limited this education was the absence of interaction between the participants, as well as limitations related to the development of this media instrument. Just like with radio and TV, engineers put a lot of effort into perfecting the mechanical and technical part of these devices, and making them available to every household. After the Second World War, radio and television stations became an integral part of correspondence education, especially in developed countries, which ushered in a revolution in telecommunications technology.

Next was the innovation of Charles Wedemeyer, who as president of the corresponding center and a pioneer in the field of independent and distance learning, in 1960, demonstrated his Articulated and Instructional Media Project. This project was based on the deconstruction of the teacher specialization process, through the employment of specialists, who will work in teams with teachers, and connecting with different media to deliver a high-quality program, intended exclusively for individual work or a program, which is intended for only one medium (Wedemeyer and Childs, 1961). With this act, he called on the university administration to provide an opportunity for autonomous learning to its students.

Wedemeyer's vision was an idea what would be today called open and online teaching. His idea was later incorporated into the first, public, open teaching university of online teaching - the Open University of the United Kingdom. This university was the inspiration for the opening of similar universities in America, Japan and India.

The next generation is a model of flexible learning, which begins with the application of information and communication. The author uses the terms - articulation and connection

technology in teaching, i.e., the use of audio and video interactive systems. This is the beginning of the flexible learning model. Furthermore, the introduction of computers and the Internet at the end of the 20th century influenced the spread and use of online learning. This marks the beginning of the fifth generation of so-called learning. model of intelligent flexible learning.

UONEDU as a Social Innovation

The Association of Online Educators - UONEDU is a non-governmental organization that was founded in 2017 (UONEDU, 2017, 1) and is organized by the innovations of educators with the aim to develop online education from scratch in undeveloped society with limited recourses, and all in order to overcoming barriers and obstacles in conditions where education is disabled, limited or moved outside predefined spatial, classroom or campus spheres, to give a chance to improve human recourses in education, to reduce levels of power of experts and give the chance for citizens to take an active part in creation of educative programs (UONEDU, 2017, 2). In the literature, this initiative is found as social innovation, which is understood as new ideas or initiatives that make it possible to meet our society's challenges in areas such as the environment, education, employment, culture, health, economic development and to achieve social goals (Vinals & Rodriguez, 2013). Organization for Economic Co-operation and Development and Eurostat (2018), social innovation refers to new idea, new solution, or new design that makes a social impact in terms of conceptual, process, product, or organizational change, which aims to improve the lives of individuals and communities. Not, just that they bring change, these innovations are contributing to a new paradigm of learning and sharing knowledge as well as interactions and socio-psychological development of participants (Klimczuk, A., Butkeviciene, E., & Kerla, M. (2022). Active citizens can contribute to social problems solving through different initiatives

FULL TEXTS BOOK

and projects that serve education and social goals, but also opening an arena for the development of social innovations as production of new knowledge (*techne*) using all available modern technique and technology. In this manner, citizens are participating the modern world into which they *have been thrown.*

The UONEDU organization itself has 3 main anchors: 1) create a bridge from formal education to continuing education of all members; 2) train teachers to teach their teaching projects online (seminars, webinars, courses); 3) connect educators, encourage them to innovate, science and practical solutions, as well as involvement in academic contributions in the field of distance education and improvement of formal education.

UONEDU Models of education

The specificity of this organization is that it is an integrative model, in which, from formal education through the training model, members lead to independence, who then create their own courses, train other members and present their developed models at the annual conference, contributing both practically and academically. Thus, they constitute the social innovation of citizens by offering transnational cooperation and academic exchange of knowledge, socializing and networking, as well as

FULL TEXTS BOOK

bringing to the table models, representations, organization and the way in which small-scale organizations are thrown and could be recognized in the world.

The biggest challenge of such organizations is to secure their place in society in such a way that they are recognizable and have an influence on formal policy makers, considering that they are in the field of innovation and that they necessarily need to have their voice. The most obvious way is to make their evidence that policy makers can use for their actions and inclusions in the systems.

Wiseman (2005, 2010) and Rogers (2003) guiding educational policymakers to use evidence for educational policymaking for Global contexts and international context. They are bringing and pointing three fundamental macro theoretical approaches that explain why evidence either is or should be used to inform or guide educational policymaking: a) the technical-functional perspective – suggests that educational policymakers use evidence to find the most effective and successful ways to address important educational issues and problems, the goal most often being increased student learning and effective classroom teaching at the least possible expense, b) the sociopolitical perspective - shape policymakers' decisions and approaches to educational issues or problems and models for policymaking that exist and become slowly institutionalized as part of many organizational systems, c) the institutional or organizational perspective.

Types of certificates issued by UONEDU are the following:

Type of certificate	About certificate
CEFR Certificate	The certificate guarantees that the candidate has successfully completed the course in which the total result of the obtained test points is verified according to the CEFR (The Common European Framework of Reference for Languages) methodology for languages.
Certificate of presentation and participation in the conference	The certificate is issued to the presenters of topics at the conference
Training Certificate	The certificate guarantees that the participant has successfully completed 4 training courses on the partner platform Udemy, and thus acquires the right and license for online teaching on reference online platforms.

Source: Kerla & Rahimic Ramic (2024)

The importance of the UONEDU model in addressing challenges in online education and promoting social innovation is its specificity of this organization of citizens and experts in integrative model, in which, from formal education through the training model, members are led to independence, who then create their own courses, train other members and present their developed models at the annual conference, contributing both practically and academically. Thus, they constitute the social innovation of citizens by offering transnational cooperation and academic exchange of knowledge, socializing and networking, as well as bringing to the table models, representations, organization and the way in which small-scale organizations are thrown and could be recognized in the world, making their evidence as its own system, and possibility that policy makers can use for their actions and inclusions in the systems.

Conclusion

The main purpose of this paper is to show how knowledge and education are fundamental elements of the creation and development of the world of technology and advanced technologies, modern science and modern reality in general. In this sense, the question of the source of the meaning of knowledge,

which is found in the Greek term *techne*, and the application of modern education models, which are applied and developed in the UONEDU organization, are essential questions that define the modern world of science, education and technology. We tried to point out the following: that small-scale organizations even without university preparation and training and without an advanced level of technique use, without training in local lifelong learning centers, and only with a high level of openness, solidarity and interest in online training programs and with the skill that produces and does not use ready-made knowledge, they can overcome challenges in specific and sudden conditions of education and readily respond to challenging tasks, as well as make a great contribution in their local communities, and share and show solidarity with colleagues from all over the world , i.e. to build the world into which they were "thrown."

What are the philosophical premises of modern science and modern society, the world of technology and advanced technologies, and why the application and integration of different scientific fields in order to achieve the same goal is the key, with all the challenges of modern science, society and technology pose - what is the knowledge? So, the importance of the UONEDU model in addressing challenges in online education and promoting social innovation is its specificity of this organization of citizens and experts in integrative model, in which, from formal education through the training model, members are led to independence, who then create their own courses, train other members and present their developed models at the annual conference, contributing both practically and academically.

Understanding the meaning of the Greek term techne - production of knowledge, which gives meaning to nowadays term technique, and the transfer of knowledge in a specific, sudden and non-standard conditions of education, show the importance of social sciences in modern science and the real world - the world of modern science and modern technology and truth. It can be concluded that in UONEDU model, they constitute the social innovation of citizens by offering transnational cooperation and academic exchange of knowledge, socializing and networking, as well as bringing to the table models, representations, organization and the way in which small-scale organizations are thrown and could be recognized in the world, making their evidence as its own system, and possibility that policy makers can use for their actions and inclusions in the systems. In that manner the negative meaning attached to the concept of technical and technology, which can be understood as the legacy of modernity, is neither a result nor the legacy to which Heidegger's thought is attached. On the contrary, Heidegger's thought is related to the meaning of techne as the skill of production and the ability to create something new.

A CRITICAL OVERVIEW OF COMMUNITY-BASED SERVICES IN THE FIELD OF DISABILITY

Doç. Dr. Hande Albayrak
Kocaeli Üniversitesi, Sağlık Bilimleri Fakültesi
Doç. Dr. Aslıhan Aykara
Hacettepe Üniversitesi, İktisadi ve İdari Bilimler Fakültesi

ABSTRACT

In Turkey, it is difficult to state that a complete transition to community-based services in the field of disability can still be achieved and that these institutions can be used functionally enough. Community-based services for people with disabilities include care and rehabilitation, employment, personal assistance to support independent living and support services for daily living activities such as bathing, dressing and eating. In Turkey, institutions such as day care homes, community mental health centres, hope houses, rehabilitation centres, sheltered workplaces can be listed as community-based institutions. However, there are question marks about the functioning, prevalence, accessibility and effectiveness of these organisations in achieving their goals.

This study is basically structured in line with the following questions:

Why are community-based services for people with disabilities not sufficiently developed and widespread?

Why are large confinement-based care and rehabilitation institutions still prevalent?

It is important to discuss the answers to these questions with Foucault's concepts of power, biopolitics and confinement. Foucault considers 'power' as a way of directing the behaviour of individuals or groups, that is, as a problem of management, and emphasises that in an environment where there is no freedom and resistance, one cannot speak of power, but only of domination. According to Foucault, who first addressed the relationship between body and power in the context of 'being the other', the pressure exerted by power on the body of the other is explained by the concept of 'bio-politics'. Foucault describes all institutions established by the power in the name of healing bodies as the disciplining and normalising mechanisms of the state. According to him, there is no clear and precise explanation of the concepts of normal and abnormal, and the legal system and the medical system decide together who is normal and who is abnormal and who determines the standards for this. Faucault characterises institutions such as prisons, asylums, hospitals, schools, etc. as institutions of 'closure' in order to subject individuals to certain norms by controlling and classifying them.

In this study, firstly, information will be given about Turkey's transition to community-based services in the field of disability, and then community-based services will be evaluated within the framework of titles such as care, health, employment and rehabilitation. As a result, the above research questions will be discussed in terms of the concepts of power, biopolitics and confinement.

Keywords: Disability, Community-based Services, Power, Biopolitics, Confinement.

GİRİŞ

Engelli bireylerin ve ailelerinin engellilere yönelik hizmetlerinden yararlanma süreçleri açısından bakıldığında, tıpkı engelliliğe ilişkin modellerde görüldüğü üzere ahlaki modelden medikal modele ve sonrasında ise sosyal modele doğru bir ilerleme olduğu görülmektedir. Engelliliği bir günahın veya hatanın sonucu olarak gören ahlaki modelden, iyileştirilmesi gereken bir hastalık olarak gören medikal modelle ve sonrasında da toplumla bütünleşmesi gerektiğini savunan sosyal modelle uyumlu biçimde engelli bireylere yönelik hizmetler biçimlenmiştir. Örneğin Orta Çağ Avrupası'nda psikososyal engellilik şeytan girmesi olarak değerlendirilmekte, hastalar tedavi edilmek yerine toplumdan uzaklaştırılmakta ve tımarhane ismi verilen büyük hastanelerde tutulmaktaydılar. 17. yüzyılın sonlarına

FULL TEXTS BOOK

doğru Fransız bir doktor olan Phillippe Pinel, çalıştığı hastanede hastaların zincirlenmesini yasaklamış ve tımarhaneleri hastaneye dönüştürmüştür (Weiner, 2008). Dünyada ve Türkiye'de engellilik konusunda süreç içerisinde farklı bakış açıları ve değişimler meydana gelmiştir.

Bu nedenle çalışmada öncelikle tarihsel gelişim sürecinde engellilik alanında toplum temelli hizmetlerin nasıl olduğuna ilişkin bir çerçeve sunulmuş ardından Türkiye'de engellilik alanındaki toplum temelli hizmetlerin neler olduğu ve nasıl yapılandığına ilişkin bilgilere yer verilmiştir. Bu hizmetlerin gelişim sürecindeki zorluklar ise Foucault'nun iktidar, biyopolitika ve kapatılma kavramlarıyla tartışılmıştır.

TARİHSEL GELİŞİM SÜRECİNDE TÜRKİYE'DE ENGELLİLİK ALANINDAKİ TOPLUM TEMELLİ HİZMETLER

Engelli bireyler için toplumla bütünleşme onlarca yıldır savunulmaktadır. 1950'lerden başlayarak, Amerika Birleşik Devletleri ve Avrupa'daki kurumsuzlaştırma hareketi, yatarak tedavi gören engelli hastaların toplum içinde yaşama hakkına sahip olduğunu öne sürmüştür (Dumont & Dumaont, 2008). Engelli örgütü koalisyonları engellilik siyaseti, erişim ve temsille ilgili konularda kampanya yürüterek ve doğrudan eylem taktiklerinden yararlanarak ülkelerin dikkatini çekmiştir. Bu yıllarda engelli grup ve organizasyonları "biz olmadan bize dair hiçbir şey olmamalı" yaklaşımını benimsemişlerdir. Bu çalışmalarla birlikte engelli bireylerin oluşturduğu örgütler, toplum temelli bakım anlayışına geçilerek yerel yönetimlerin bağımsız yaşam hizmetleri sunmaya başlamasını sağlamıştır (Shakespeare & Watson, 2011: 392-393).

Örneğin 20. yüzyılın ortalarına doğru ruhsal hastalıkların biyopsikososyal doğası anlaşılmaya başlanmış ve ruh sağlığı hizmetlerindeki eksiklikler görülmeye başlanmıştır. 31 Ekim 1963'te ABD başkanı J. F. Kennedy tarafından Ruhsal Hastalığı Olanlar İçin Kurumlar ve Toplum Ruh Sağlığı Merkezleri Kuruluşu Yasası imzalanmış ve akıl hastanelerinin kapatılıp yerine ruh sağlığı merkezleri kurulması planlanmıştır (Cutler, Bevilacqua & McFarland, 2003; Doğan, 2016). Bu doğrultuda Ekim 1965'te Florida'da ilk ruh sağlığı merkezi kurulmuştur (Cutler, Bevilacqua & McFarland, 2003). Toplum temelli ruh sağlığı modeli, sağlık reformu ile birlikte kısa sürede başta İtalya olmak üzere hemen hemen tüm Avrupa ülkelerinde yaygınlaşmış ve uygulanmaya başlanmıştır (T. C. Sağlık Bakanlığı, 2011). 1970'li yılların sonunda ise özellikle gelişmekte olan ülkelerde rehabilitasyon hizmetlerini teşvik etmek amacıyla Toplum Temelli Rehabilitasyon (TTR) kavramı ele alınmaya başlamıştır (Baysal, 2019: 73).

2006 yılında Birleşmiş Milletler, engelli bireylerin toplum içinde yaşama ve toplum destek hizmetlerine erişim hakkını resmi olarak ilan etmiştir (United Nations, 2006). Ancak kurumsuzlaştırma ve toplum temelli hizmetler aradan geçen bu kadar yıl içinde henüz yeterince gelişmemiştir. Henman ve Foster (2015)'ın belirttiği gibi pek çok gelişmiş ülkede, engellilik hizmetlerinin sağlanması kurumsal bakımdan toplum temelli bakıma ve kurumsal finansmandan kişiselleştirilmiş finansmana doğru önemli dönüşümler geçirilmesine rağmen engelli desteği sağlamak hükümetler için bir zorluk olmaya devam etmektedir.

Toplum temelli hizmetler, "engelli bireyin, ailesi ve yaşadığı toplumun da katılımıyla toplum hayatına uyumu kolaylaştırmayı hedefleyen bir yaklaşım, bir stratejidir" (Aydın, 2005a: 2). Toplum temelli hizmetleri aracılığıyla toplumla bütünleşme ve yeterli desteği sağlanmasıyla toplum içinde yaşayan engelli bireylerin bağımsızlığı en üst düzeye çıkarılabilir. Toplum temelli hizmetler, engelli bireyler için taşıdığı önemin yanı sıra bakım verenler için de hayati önem taşımaktadır (Chan ve diğ., 2022). Engelli kişilerin kendi hayatlarının kontrolünü ele geçirmesi ve her türlü hizmette belirleyici bir rol oynaması toplum temelli hizmetlerin ana amaçlarındandır (Miles, 1996: 515). Hartley ve diğ., (2009) tarafından yapılan araştırmaya göre, toplum temelli hizmetler yoluyla engelli bireylerin bağımsızlıklarında artış, hareketliliklerinde gelişme ve iletişim becerilerinde iyileşme görülmüştür.

Toplum temelli hizmetlerde engelli kişilerin, engelli bireylere sahip aileler ve sivil toplum örgütlerinin birlikte hareket etmesi gerektiği gibi eğitim, sağlık, mesleki ve sosyal hizmet alanlarındaki hizmetlerin çoklu -disipliner ve çoklu-sektörel bir anlayışla sunulması gereklidir (Bölükbaşı, 2004:10).Toplum

FULL TEXTS BOOK

temelli destek hizmetleri arasında merkez tabanlı, ev tabanlı, geçici bakım, bakıcı yardımı ve mali sübvansiyon hizmetleri yer almaktadır (Chan ve diğ., 2022).

Türkiye'de hizmetlere bakıldığı zaman ev tabanlı hizmetleri umut evleri, aktif yaşam merkezleri adı altında gündüz bakım hizmetleri, geçici misafir bakım hizmetleri, evde bakım yardımı desteği olarak sıralayabiliriz. 2008 yılında ev tipi sosyal hizmet birimi sayılan Umut Evleri ile engelli kişilerin 4-6 kişilik evlerde toplumsal hayata aktif olarak katılmaları sağlanıp gerekli bakımlarının yapılması hedeflenmiştir (Engelli ve Yaşlı Hizmetleri Genel Müdürlüğü, 2019:18). Ancak Türkiye'de 152 tane umut evi bulunduğu ve 843 engelli bireyin bu hizmetten yararlandığı belirtilmektedir. Yine ev tabanlı hizmetlerden biri olan bakıma ihtiyacı olan ve ekonomik yoksunluk içinde bulunan ağır engelli ya da tam bağımlı bireylere yönelik evde bakım yardımı hizmeti 2006'da uygulamaya girmiştir. Yaklaşık 536 bin kişiye evde bakım yardımı hizmetinden yararlandığı belirtilmektedir (ASHB, 2 Aralık 2021).

Aktif yaşam merkezlerinde engelli bireylerden ailesi yanında bakımı sağlananların tam veya yarı zamanlı olarak gündüz hizmet verilmektedir. Bu merkezlerde engelli bireyin öz bakım ihtiyaçları ve eğitim, sosyal, kültürel ve sportif faaliyetlerle toplumsal hayata katılım ihtiyaçları giderilmektedir. Ayrıca engelli bireylerin ailelerine danışmanlık hizmeti verilmektedir Bu kapsamda; 2022 yılında toplam 134 aktif yaşam merkezinden 1.622 engelli birey hizmet almaktadır (ASHB, 2022).

Mali sübvansiyon hizmetleri kapsamında ASHB tarafından sunulan hizmetler 2022 sayılı Kanun Kapsamındaki Engelli Aylıkları ve Engelli Yakını Aylıkları, Engelli İhtiyaç Yardımları, Engelli Öğrencilerin Ücretsiz Taşınması gibi hizmetler sıralanabilir. Bu hizmetlerden 2022 sayılı engelli aylığı olarak bilinen yardım engel oranı en az % 40 olan engellilere ve özel gereksinim düzeyi en az hafif düzeyde olan çocukların yakınlarına aylık bağlanması olarak sunulmaktadır. 2022 yılında, Engelli (%70 Ve Üzeri) Aylığı kapsamında 279.816 kişi, Engelli (%40-%69) Aylığı kapsamında 348.289 kişi, Engelli Yakını Aylığı (18 Yaş Altı) kapsamında 100.812 kişiye ödeme yapıldığı belirtilmektedir. Engelli ihtiyaç yardımları yoksul ve engelli vatandaşların topluma uyumunu kolaylaştıracak her türlü araç gereç ihtiyaçlarının karşılanmasına yönelik bir programdır ve 2022 yılında 1.113 kişi bu hizmetten yararlanmıştır. Engelli öğrencilerin ücretsiz taşınması ise özel eğitime gereksinim duyan engelli öğrencilerin okullarına ücretsiz olarak ulaşımlarını içermektedir. Ücretsiz taşıma kapsamında 2022 yılında, 117.661 öğrenci yararlanmıştır.

Toplum temelli hizmetlerle ilgili olarak engelli bireylerin istihdamı konusunda Türkiye'de kota yönteminin yanı sıra diğer istihdam modellerinden ise korumalı iş yeri modeli uygulanmaktadır. Buna göre Türkiye'de 2022 yıl sonu itibarıyla 15 korumalı iş yerinde 132 engelli birey istihdam edildiği belirtilmektedir. Bunun yanı sıra kendi işini kurma hibe desteği verilen proje sayısı 67 olmuştur. (ASHB, 2022).

Kamunun yanı sıra yerel yönetimlerin çalışmaları merkez, ev tabanlı, bakım ve mali sübvansiyon konusundaki çalışmalarda büyük bir boşluğu tamamlamaktadır. Bu konuda çalışmalar engelli bireylerin ve ailelerinin sosyo-demografik özelliklerine ve gereksinimlerine ilişkin veri tabanı oluşturulabilmesi, sunulacak hizmetlerin belirlenmesi ve geliştirilmesi, gereksinimine göre tıbbi rehabilitasyon, fizyoterapi, ortez, protez, tekerlekli sandalye vb. araç-gereç gereksinimlerinin belirlenmesi, psikolojik destek, eğitim desteği, rekreasyon, ev içi erişilebilirlik açısından gerekli olanakların sağlanması, sosyal destek, ayni ve nakdi yardım, eğitsel rehabilitasyonu açısından eğitim desteği ve özel eğitim çalışmaları, grup çalışmaları, yasal haklar, engellinin ev yaşamının kolaylaştırılması konularına ağırlık veren küçük grup eğitimleri gibi sıralanabilir (Aydın, 2016:92).

FULL TEXTS BOOK

Merkez tabanlı toplum temelli hizmetler kapsamında özellikle toplum ruh sağlığı merkezleri öne çıkmaktadır. Dünya'da ve Türkiye'de engelli bireylere yönelik toplum temelli hizmetlerin odağına bakıldığında, özellikle ruh sağlığı konusunun ön plana çıktığı görülmektedir. Ruhsal hastalığı bulunan bireylere yönelik hizmetlerin ise ağırlıklı olarak kurum temelli olduğu, toplum temelli ruh sağlığı yaklaşımının oldukça yeni olduğu ve henüz yeterince gelişmediği görülmektedir.

Kurum temelli ruh sağlığı modeli/yaklaşımı, koruyucu önleyici çalışmaları ve rehabilitasyon hizmetlerini içermemekte, bu nedenle de bireylerin hastalığa yakalanmalarını önleme, sosyal işlevselliklerini ve iyilik hallerini artırma ve sürdürme gibi konularda yetersiz kalmaktadır (Bilge ve diğ., 2016). Toplum temelli ruh sağlığı modelinde ise temel hedef, hastalığı olan bireyin mümkün olduğunca ailesinin yanında yaşamını sürdürmesidir. Bunun mümkün olmadığı durumlarda da yine hastalığı olan birey toplumun bir parçası olarak yaşayabileceği bir yere yerleştirilmelidir (Alataş ve diğ., 2009).

Türkiye'de 2006 yılında yayınlanan Ulusal Ruh Sağlığı Politikası metni ile toplum temelli ruh sağlığı çalışmaları hız kazanmıştır. Bu metinde ruh sağlığı sisteminin toplum temelli olması, birinci basamak sağlık hizmetlerine dahil edilmesi, ruh sağlığı alanında yeni yasaların çıkarılması ve rehabilitasyon çalışmalarının yapılması gibi hedefler yer almıştır (Alataş, Karaoğlan, Arslan & Yanık, 2009; Karasu & Yelken, 2013).

Kurum/hastane temelli modelde hastanın yalnızca tedavi gereksinimi ön planda tutulmakta ve diğer sorun alanlarına ilişkin müdahale geliştirilememektedir. Bu nedenle Avrupa Birliği 2009 Türkiye İlerleme Raporu'nda ruh sağlığı konusundaki ilerlemenin sınırlı olduğundan söz edilmiş, kurumsallaşmaya alternatif olarak toplum temelli hizmetlerin oluşturulması ve ayrıca çocuk ve gençlerin sağlıklarının korunması için özel çaba gösterilmesi gerektiği üzerinde durulmuştur (Avrupa Toplulukları Komisyonu, 2009). Türk Psikiyatri Derneği ve Türk Psikologlar Derneği gibi meslek kuruluşları ve Ruh Sağlığında İnsan Hakları Girişimi Derneği gibi hak temelli sivil toplum örgütleri de yine aynı şekilde Türkiye'deki ruh sağlığı politikalarında değişikliğe gidilmesi gerektiğini ifade etmiştir. Bu fikirler doğrultusunda 2006'da Sağlık Bakanlığı tarafından yayınlanan T.C. Ulusal Ruh Sağlığı Politikası metninde "toplum temelli ruh sağlığı sistemine geçilmesi, bu sistemin genel ruh sağlığı sistemine ve birincil basamak sağlık hizmetlerine entegre edilmesi, toplum temelli rehabilitasyon çalışmalarının yapılması, ruh sağlığı hizmetlerinin kalitesinin artırılması, ruh sağlığı alanına ilişkin yasaların çıkarılması, hasta haklarının savunulması, ruh sağlığı alanında eğitim, araştırma ve insan gücünün artırılması" gibi konulara yer verilmiştir (Yılmaz, 2012).

2008 yılında Türkiye'de ilk Toplum Ruh Sağlığı Merkezi Bolu ilinde pilot uygulama olarak hizmet vermeye başlamıştır (Alataş, Karaoğlan, Arslan & Yanık, 2009; Karasu & Yelken, 2013). Ulusal Ruh Sağlığı Eylem Planı 2011-2023'te de belirtildiği üzere, Türkiye ruhsal hastalığı olan bireylerin için bütüncül bir ruh sağlığı sistemi kurmak amacıyla toplum temelli ruh sağlığı sistemine geçmeyi hedeflemiştir. Ancak toplum temelli ruh sağlığı modeline tamamen geçilmeden önce, olanakların henüz yetersiz olması nedeniyle kısa vadede "toplum-hastane denge modeli"nin uygulanacağı belirtilmiştir. 2009'da Sağlık Bakanlığı toplum-hastane denge modeli kapsamında Toplum Ruh Sağlığı Merkezleri açma kararı almıştır. Toplum Ruh Sağlığı Merkezleri projesi oluşturulurken Finlandiya, İtalya, İngiltere, Almanya ve Hollanda'nın sistemleri yerinde incelenmiştir (Alataş ve diğ., 2009). Bu merkezlerle yapılan pilot çalışmalar sonucunda 2011'de yayınlanan Toplum Ruh Sağlığı Merkezlerinin Kurulması ve Çalıştırılmasına Dair Yönerge ile Toplum Ruh Sağlığı Merkezlerinin amacı ve kapsamı belirlenmiş, kurulacak merkezler standardize edilmiş, merkezin çalışma esasları ve çalışacak olan personelin görev tanımı yapılmıştır (T. C. Sağlık Bakanlığı, 2014).

Toplum temelli ruh sağlığı sistemi İngiltere'de psikiyatri hemşireleri üzerine kurulmuştur. Almanya sisteminde görev ve sayı bakımından sosyal hizmet uzmanı ön plandadır. Türkiye'de ise sistem psikiyatristler üzerine kurulu olup daha sonra psikiyatri hemşireleri ve son olarak psikologlar ile sosyal hizmet uzmanları gelmektedir (Bahar ve Savaş, 2013). Toplum Ruh Sağlığı Merkezlerinde çalışan ruh

FULL TEXTS BOOK

sağlığı ekibi psikiyatri uzmanı, psikolog, psikiyatri hemşiresi, sosyal çalışmacı, ergoterapist, uğraş terapisti ve diğer yardımcı personelden oluşmaktadır (Mitchell & Patience, 2002). Bu ekip, gerektiğinde hizmetleri hastanın yaşadığı alana götürmektedir. Amaç, bu bireylerin yaşadıkları ortamda takip ve tedavilerinin yapılmasıdır. Bu şekilde hastalığı olan bireylerin toplumdan dışlanmadan, birlikte yaşamaları hedeflenmektedir (T.C. Sağlık Bakanlığı, 2011).Bu doğrultuda, toplum ruh sağlığı hizmetlerinin temel amacı psikososyal engellilerin işlevselliğini en üst seviyeye getirmek ve bunun devamlılığında kendilerine yardımcı olmaktır (Ayhan, 2016). Türkiye'de 2022 yılı itibarıyla 195 adet Toplum Ruh Sağlığı Merkezi (TRSM) bulunmaktadır (Sağlık Bakanlığı, 2021).

Toplum ruh sağlığı hizmetleri, ruh sağlığını geliştirici, ruhsal sorunları önleyici ve tedavi edici, hasta haklarını gözeten hizmetlerdir. Bu hizmetler açısından danışmanlık, sağlık eğitimi, vaka yönetimi gibi görevler önemlidir. Hastayı değerlendirme, bakım planı oluşturma, iyileştirme faaliyetlerini planlama ve uygulama, onu bu sürece dahil etme gibi çalışmalar yapılmaktadır (Bilgin & Özaslan, 2018; Eren, 2018; Hallaç ve diğ., 2014).

Literatüre bakıldığında, toplum temelli ruh sağlığı hizmetlerinin etkilerine ilişkin az sayıda da olsa bazı araştırma bulguları dikkat çekmektedir. Randomize kontrollü bir çalışmada; toplum ruh sağlığı merkezlerinde uygulanan kriz planının yatış sayılarını azalttığı bulunmuştur (Henderson & diğ. 2004). Ruchlewska ve arkadaşlarının yaptığı başka bir çalışma da bu çalışmayı destekler niteliktedir (Ruchlewska ve diğ., 2014). Toplum ruh sağlığı merkezlerinde verilen hizmetlerin, şizofreni hastalığı olan bireylerin yaşam kalitesini ve işlevselliğini belirgin oranda artırdığı, yeti yitimini büyük ölçüde azalttığı saptanmıştır. Bu nedenle toplum ruh sağlığı merkezlerinin Türkiye'de yaygınlaştırılması faydalı olacaktır (Ensari & diğ., 2013). Yapılan benzer çalışmalar da bu bulguları destekler niteliktedir (Özdemir, Şafak & Örsel, 2017; Şahin & Elboğa, 2019).

Toplum temelli hizmetlerin yanı sıra engellilere yönelik kurumsal bakım hizmetleri de yaygın bir şekilde devam etmektedir. 2022 yılında toplam 107 adet yatılı bakım ve rehabilitasyon merkezinde 7.387 engelli bireye hizmet sunulmaktadır. Ayrıca geçici bakım hizmeti kapsamında bu merkezlerde talep halinde yılda 30 güne kadar ücretsiz bakım hizmeti sunulmaktadır. Engelli bakımı ve rehabilitasyonu konusunda kamunun sunduğu hizmetlerdense özel bakım ve rehabilitasyon kuruluşlarının sayısı oldukça fazladır. 2022 yılında toplam 305 özel engelli bakım merkezinde 26.766 engelli bireye bakım hizmeti sunulduğu belirtilmektedir (ASHB, 2022).

Bu çalışmadaki hizmetlerin dağılımına ilişkin bilgilerde görüleceği üzere toplum temelli hizmetlerin sayısı ve dolayısıyla yararlanan bireylerin sayısı kurum temelli bakım kuruluşlarına göre çok azdır. Dünyadaki toplum temelli hizmetler değerlendirildiğinde, engelli bireylerin sosyal yaşamlarının gelişmesi, bağımsızlıklarının artırması, kültürel vb. etkinliklere erişimlerinin artması, ailelerinin desteklenmesi gibi konularda gelişmelerin olmasına katkı sunduğu görülmektedir. Ancak bu gelişmelere rağmen toplum temelli hizmetler yaygın değildir. Hali hazırda Türkiye'de toplum temelli hizmetlerin işlevselliğine dair bir bilgi de bulunmamaktadır. Bu yüzden toplum temelli hizmetlerin işleyişinin de değerlendirilmesi gereklidir.

Tüm bu hizmetlerin planlanmasında ve sunulmasında bedensel, görme, zihinsel, işitme ve konuşma engelli bireylerin ve ayrıca kesişimsellik açısından çocuk, kadın ve yaşlı engellilerin göz önünde bulundurulması önemlidir. Yine bu hizmetler açısından insan haklarının ve kapsayıcılığın, erişilebilirlik, bağımsız yaşam ve eşit ve tam katılım gibi temel kavramların gözetilmesi gerekmektedir.

ENGELLİLİK ALANINDA TOPLUM TEMELLİ HİZMETLERİN GELİŞİMİNE FOUCAULT'NUN İKTİDAR, BİYOPOLİTİKA VE HAPSETME/KAPATMA KAVRAMLARIYLA BAKMAK

Bir önceki başlıkta görüleceği üzere dünyada ve Türkiye'de toplum temelli hizmetlere geçiş çok geç sağlanmıştır. Engelli bireylere yönelik toplum temelli hizmetler hala yeterince gelişmemiş ve

FULL TEXTS BOOK

yaygınlaşmamıştır. Ayrıca hapsetmeye dayalı büyük bakım ve rehabilitasyon kurumları hala yaygındır. Bu iki konu çalışmad Foucault'nun iktidar, biyopolitika ve kapatılma kavramlarıyla tartışılmaktadır.

Modern toplumda insan akıl ile hareket eden ve "norm"lara uyarak devletin gelişimini sağlayan birey olarak ele alınmaktadır. Modern insan da işte bu yüzden çalışan, üreten, sağlıklı, akılcı, ilerlemeye açık, normlara tabi tutulan ve itaatkâr bireydir. Bu göstergeleri yerine getiremeyen bireyler "öteki"dir. Örneğin engelliler, bu göstergeleri sağlayamadıkları düşünüldüğü için toplumdan dışlanması, kapatılması gereken tehlikeli bireyler olarak algılanmaktadır (Şimşek, 2014). Bu çerçeveden engellilik konusu ele alındığında bireyin bedeninde ve aklında olan bozukluklara vurgu öne çıkmakta ve bu bozukluklar nedeniyle engelli bireyler toplumdan dışlanmaktadır. Bu dışlanmayı toplumdaki bireylerin davranışlarında görebileceğimiz gibi toplumun inşası olarak hizmetlerin yapılanmasında da görebilmekteyiz.

XX. yüzyılın ikinci çeyreğinde çeşitli topluluklar, hareketler, düşünceler modernitenin düzeni ve çelişkilerini eleştirmeye başlamışlardır. Bunun ardından ortaya çıkan postmodernist anlayış çerçevesinde ise modernitede var olan politik, ekonomik ve sosyal alanlardaki uygulamaların tartışılmasının yanı sıra yenilikler yapılmaya başlanmıştır (Şimşek, 2014). Bu yüzden postmodern dönemde akıl ve beden üzerinden gerçekleştirilen düzenlemeleri tartışan sosyologlardan biri olarak Micheal Foucault'un çalışmalarına bakılmalıdır.

Foucault çalışmalarında modernitenin bireylerin ve toplumun üzerindeki etkisi ve yeni iktidar ilişkisini tıp, delilik, beden, iktidar, disiplin, cezalandırma, hapishane gibi konuları ele alarak açıklamaya çalışmıştır. Bu açıklamalarında iktidarın bedenleri ve dolayısıyla yaşam pratiklerini çeşitli araçlar, kurumlar ve kişiler aracılığıyla nasıl düzenlediğini ve disipline ettiğini görmemizi sağlar. Foucault iktidarın her yerde olduğunu ve modern toplumda beden üzerinde çeşitli uygulamalarla üretiminin gerçekleştirildiğini belirtir.

Foucault, 'iktidar'ı bireylerin ya da grupların davranışlarını yönlendirmenin bir yolu, yani bir yönetim sorunu olarak ele alır ve özgürlüğün ve direnişin olmadığı bir ortamda iktidardan değil, ancak tahakkümden söz edilebileceğini vurgular (Saraçoğlu, 2022). Foucault'a göre devletten kaynaklanan iktidarın yanı sıra iktidar, ailedeki, okuldaki ve/veya iş yerindeki ilişkiler olarak mikro düzeydeki ilişkiler içinde de vardır (Foucault, 2015:44). İktidarın işlemesi konusunda devletin etkisi görünmeksizin, mikro ilişkilerin içine yerleşik bir biçimde aşağıdan yukarıya doğru bir ilerleme görülür (Karakurt Acar, 2023).

Foucault hükümranlık, disipliner ve yönetimsellik modeli olmak üzere üç iktidar modeli tanımlamıştır. Karakurt Acar (2023) hükümranlık modelinin Klasik Çağ olan XVII. yüzyılın ortasından XVIII. yüzyılın sonuna kadar, disipliner modelin XVIII. yüzyılın sonlarında, yönetimsellik modelinin ise XIX. yüzyılın ortasından itibaren görülebileceğini belirtir. Engellilik ve hastalıklar konusunda kullanılan tekniklerden yola çıkarak bu iktidar modellerinin nasıl işlediği anlaşılabilir. Örneğin Foucault'nun çalışmalarında ele aldığı cüzzam, veba ve çiçek hastalıklarına karşı üretilen çözümlerde bu görülebilir. Orta Çağ'da cüzzamlıların toplumdan dışlanması hükümranlık modeline örnek gösteribilir. XVI. ve XVII.yüzyılda vebaya karşı insanları kapatan, sınırlayan karantina uygulamaları disipliner modele bir örnektir. XVIII.yüzyılda çiçek hastalığının nüfusta ölüm ve bulaş riskinin, hastalığın etki ve yayılımının hesaplanması ve bu hastalığa yönelik müdahaleler ve aşılama pratikleri ise yönetimsellik modelinin toplumsal düzene nasıl etki ettiğini gösteren bir örnektir (Karakurt Acar, 2023). Foucault, cüzzamın kademeli olarak ortadan kalkmasının ardından serseriler, yoksullar, suçlular, deli ve zührevi hastaların da aynı süreçlerden geçtiğini belirtmiştir. Buna göre de örneğin psikososyal engellilerin Orta Çağ ve Rönesans boyunca hükümranlık modeli kapsamında cüzzamlılar gibi dışlanarak sürgüne ve hapse maruz bırakıldığını vurgulamıştır. Bunun tarihteki en önemli görünümü "deli gemileri"dir. Daha sonra ise XVII. yüzyılda "deli gemileri"nin yerini tımarhane, hastane, hapishane gibi özel kurumsallaşmış kurumlar almıştır ve deliler bu kurumlarda hapsedilmiş/kapatılmış/izole edilmişlerdir. Ancak Foucault bu kapatmanın amacının disipliner model kapsamında kamu düzenini sağlamak olduğunu belirtmiştir.

FULL TEXTS BOOK

XVIII. yüzyılın sonunda ise yönetimsellik bağlamında tıp bilimi delilik kavramını açıklığa kavuşturmuş ve XIV. yüzyılda "deli" kavramı zihinsel hastalık tanısı olan bireye dair bir kavram olarak kullanılmaya başlanmıştır. Ancak deli bedenler yine de yönetimsellik kapsamında toplumun düzenini bozan anormal sayılan insanlar olarak aynı normalleştirme, iyileştirme, ıslah yöntemlerine maruz bırakılmıştır (Foucault, 2006; Pangaliyeva, 2023).

Yukarıda ifade edilen bu iktidar modellerinin amaçları, yöntem veya tekniklerine dayanan devlet aygıtları olarak kurumlar ortaya çıkarmıştır. Engellilik açısından baktığımızda Foucault, iktidar tarafından bedenleri iyileştirme amacıyla kurulan tüm kurumları ve bu kurumların işleyiş düzenini, bu düzendeki iktidar sahiplerini devletin disipline etme ve normalleştirme mekanizmalarının bir parçası olarak nitelendirmektedir. Buna göre Foucault XVIII. Yüzyılda kurumlardaki üretken iktidar tekniklerinin norma göre işlediğini ve bu toplumsal işleyişte ise zorlama ile değil doğallaştırarak uygulanan iktidar bulunduğunu belirtmiştir. Buna göre normun işlevi, dışlamak ve reddetmek yerine olumlu bir müdahale ve dönüşüm tekniğinin kullanıldığı bir tür normatif proje çerçevesinde ilerler (Foucault, 2003; Karakurt Acar, 2023). Dolayısıyla normun işlevi artık dışlamaya engel olmak için müdahalelerle dönüşümü sağlamak olarak ifade edilebilir. Bu noktada engellilik alanındaki tıbbi modelin bireyleri çeşitli tedavi yöntemleriyle "norm"a uygun hale getirme girişimleri öne çıkmaktadır. Revel'in (2012) ifade ettiği gibi norm, ıslah ve terbiye amacıyla sağlık, beslenme, hijyen, gündelik yaşam pratikleri, çalışma hayatı gibi alanlarda sağlıklı olanı olmayanı, normal olanı olmayanı ya da bir başka değişle anormal olanı belirler ve bu ayrım sonucunda sağlıklı ve normal bir toplumun empoze edilmesini sağlar. Bu noktada öne çıkan "biyopolitika" kavramı ise modernleşen toplumlarda nüfusun yaşam süreçlerinde etkili olan "sağlık, hijyen, doğum oranı, yaşam süresi gibi karakteristik fenomenlerin" nasıl bir şekilde mantığa dayandırılarak topluma empoze edildiğini ifade eder (Foucault, 2015).

Foucault iktidarı ise "öteki" olarak modern toplumda dezavantajlı konuma yerleştirilen grupların bedenine yönelik her türlü baskı, eziyet etme, kontrol altına alma, gözlemleme, üzerinde çeşitli deneyimler yapma, izole ederek dışlama" faaliyetlerini içeren biyo-politika kavramıyla yani yönetimsellik modeliyle açıklar. Örneğin bedenleri terbiye ve disipline etme konusunda tımarhanelerdeki/akıl hastanelerindeki işleyiş, düzen ve disiplin ile hasta tedavi edilmeye çalışılır. Bu düzende "anormal" kişiler görünmeyecek şekilde çoğunlukla şehirlerin dışında bir konumda veya etrafı duvarlarla çevrili büyük, geniş kapalı kuruluşlarda doktorun hakimiyetinde normalleştirilmeye çalışılır. Doktor bedeni bu düzende iktidar sahibi olarak akıl hastanesinde ilişki ağlarının nasıl olacağını belirler, iş akışlarını ve çalışma düzenlemeleri yaparak diğer personel ve "üzerinde çalışılan deliler arasındaki ilişkiyi belirler. Buna göre akıl hastanelerine kapatılan deli bedenler, hapishaneye konulan bedenlerle aynı kaderleri paylaşmaktadırlar. Burada iktidar olan doktorlar tüm yetkileriyle deli bedenler üzerinde çeşitli uygulamalar, deneyler yapabilirler. İktidarın sınıflandırma sisteminde topluma uymayanların normalleştirilmesi için bireyler, tıbbın verdiği iyileştirme kararıyla modern iktidarın getirdiği akıl hastaneleri, rehabilitasyon merkezleri, özel okullar gibi kurumlara kapatılarak toplumdan izole edilmiştir. Modern yönetimin bu işlemlerini ise Foucault "Büyük Kapatma" olarak ifade etmektedir (Foucault, 2006). Bu perspektifle bazı engel türleri dikkate alındığında engelli bireyler üzerinde her ne kadar birçok tedavi ve rehabilitasyon yöntemi denense de sağlık, gündelik yaşam, çalışma hayatı gibi alanlarda modern toplumun "norm"larına göre bir düzenleme ve "normalleştirme, iyileştirme" uygulamasına yanıt alınamamaktadır. Buradan yola çıkarak şu soru gündeme gelmektedir:

- Toplum temelli hizmetlerin gelişmemesinin ve yaygınlaşmamasının sebebi tüm çabalara rağmen "normalleşmenin" sağlanamaması ve bu kişilerin görünürlüğünün kısıtlanmasının istenmesi midir?
- Hapsetmeye dayalı büyük bakım ve rehabilitasyon kurumlarının hala yaygın olmasının bir sebebi, normalleştirme konusundaki başarısızlığın sonucunda engelli bireylerin "toplumsal düzeni bozan" ve kapatılması/hapsedilmesi/izole edilmesi gerekenler kategorisine yerleştirilmeleri midir?

FULL TEXTS BOOK

Foucault biyopolitika kavramıyla iktidarın işleyişindeki değişime vurgu yaparak hükümranlık döneminde öldürerek icra edilen iktidarın yerine yaşam hareketlerini kontrol eden ve düzenleyen bir yerde konumlanan "ayarlama iktidarı" aldığını belirtir (Foucault, 2004: 252). Buna göre üretim için nüfus hareketlerinin ve bedenlerin uygunlaştırılması ve yaşam hareketlerinin tarihsel süreçlerle bütünleştirilmesi gereklidir. Bedenlerin denetimli bir biçimde üretim aygıtı içerisinde yer alması ve nüfus olaylarının ekonomik süreçlere göre ayarlanması amacında olan biyopolitika, liberal ekonominin ve kapitalizmin gelişmesine katkıda bulunmaktadır (Foucault, 2003). Dolayısıyla engelli bireyler bu yapı içerisinde topluma maliyeti olan kişilerdir ve yapılan her türlü müdahale bireylerin üretim aygıtı içerisine dahil olmalarını sağlamaya odaklanırken bu anlamda toplumsal maliyetinin de fazla olmaması gerekir.

Liberal ekonomik açıdan engellilik ile ilgili olarak biyopolitikaya bakıldığında özellikle "bir nüfusta hakim olan hastalıkların yapısı, doğası, yayılımı, süresi" gibi süreçler biyo-iktidarla birlikte "fiziksel anlamda güçlerin eksilmesi, çalışma süresinin azalması ve buna bağlı üretimdeki eksiklik ve tüm bunların yanı sıra mal olabileceği tedavilerin de yol açtığı ekonomik maliyetlerin süreğen faktörleri" (Foucault, 2004:249) gibi parametrelerle analiz edilir. Bu parametreler nüfus göstergelerinin dinamik alanı içerisinde anlamlandırılır ve buna yönelik politika ve hizmetlerin yapılandırılmasında bu parametreler dikkate alınmaktadır. Bu parametrelerin engellilik alanındaki politika ve hizmetlerin yapılandırılmasında temelde kullanıldığı ifade edilebilir.

- Bu parametrelerden yola çıkarak toplumda sağlamcı anlayışın baskın olmasından kaynaklı engelli bireylere yönelik politika ve hizmetlerin yapılanmasında da engelli bireylerin "güçsüz, çalışamayan, üretime katkı sağlayamayan, tedavi maliyeti yüksek olan kişiler olarak görülmesi" bu alana yeterince odaklanılmamasına mı neden olmaktadır?

Foucault'nun bir dersinde kullandığı "beden, biyopolitik bir gerçeklik; tıp, biyopolitik bir stratejidir" (Foucault, 2001: 137) ifadesi tıp ve siyaset buluşmasına dair önemli bir noktaya işaret etmektedir. Arpacı (2016) bu ifadeyle tıbbi bilgi ve pratiklerin modern siyaset içindeki kritik konumuna işaret eder. Ayrıca tüm toplumsallığı içinde bedenin inşasındaki stratejik rolün tartışılmasının ardından beden ve nüfus politikalarının bir tıbbileştirme sürecine işaret eder. Foucault tıbbileştirme ile normalleştirme arasında ilişkiye dikkat çeker ve tıbbi bilginin sürekli bir biçimde "normallik" nosyonlarına başvurduğunu belirtir (Foucault, 2006: 57). Bu sayede Tıbbın sunduğu normatif bilgi sonucunda tıbbın toplumsal normların inşası, iktidarın uygulanması ve bedenleri normalleştirme işlevi öne çıkar. Arpacı (2016) Foucault'un bu konudaki açıklamalarını, modern toplumların inşasında tıbbi söylemin devletleşmesi ile devlet pratiğinin tıbbileşmesinin de birbirinden ayrılamayacağını vurgulayarak ifade etmiştir. Modernleşen Batı'da biyolojik yaşamın siyasetin nesnesine dönüşmesi bu ilişki çerçevesinde anlaşılması gerektiğini öne çıkarmıştır (Arpacı, 2016). Dolayısıyla aslında bedenler üzerindeki bu çalışmaları tıp ve siyaset ilişkisi bağlamında da okumak gereklidir. Bu yüzden sağlık politikalarının nasıl yapılandırıldığına bakılmalıdır. Bu durum şu soruları gündeme getirmektedir:

- Engellilik alanında toplum temelli hizmetlerin gelişmemesi ve yaygınlaşmamasında tıp alanının iktidar öznesi doktorların siyasete ve sağlık politikalarına olan etkisi üzerinde ne kadar durulmaktadır?
- Tıp alanının iktidar öznesi doktorların ve karar vericilerin engellilik alanında toplum temelli hizmetlere yönelik bakış açısı nasıldır? Bu hizmetlerin gelişmesini gerekli bulmakta mıdırlar?

Bu ilişkiye ek olarak Foucault, "delilerin, anormallerin" akıl hastanelerine kapatılmasında, normal ve anormal olanın ve onun standartlarının belirlenmesinde iktidar sahibi olan hukuk ve tıp alanlarının iş birliğini öne çıkarır (Foucault, 2006). Ailenin deli ya da anormal bedenlere bakım sorumluluğu konusunda ise psikiyatri ve hukuk ailenin yükünü hafifleten konumundadır. Çünkü hastalık ve tedavi söylemiyle deliyi ailenin sorumluluğundan alır ve kapatmanın yasal olarak meşrulaştırılmasıyla aileyle psikiyatri arasında güçlü bir bağ ve doğal ortaklıklar oluşur. Psikiyatrist bu sayede hastalığın ailedeki etkilerine de müdahale eden konumuna geçmiştir (Karakurt Acar, 2023). Bu bilgiler ışığında, toplum temelli hizmetlerin artmasıyla birlikte "engellilerin" yanı sıra "aile üyelerinin" de bu hizmetlere

FULL TEXTS BOOK

erişilebilirliğinin artmasının sağlanacak olması, hizmet alan kitlesinin de artması demektir diyebiliriz. Bu perspektifle ele alındığında şu soru gündeme gelmektedir:

- Toplum temelli hizmetlerin gelişmemesinde "engelliler, aile üyeleri ve toplumdaki diğer bireyler"den oluşan hizmet alan kitlesinin genişlemesinin maliyeti mi düşünülmektedir?

SONUÇ ve ÖNERİLER

Bu çalışmada yapılan literatür taramasında dünyada ve Türkiye'de toplum temelli hizmetlere geçişin çok geç sağlandığı ortaya çık mıştır. Bunun yanı sıra engelli bireylere yönelik toplum temelli hizmetlerin hala yeterince gelişmemiş ve yaygınlaşmamış olmasına ve hapsetmeye dayalı büyük bakım ve rehabilitasyon kurumlarının hala yaygınlığına dikkat çekilmiştir. Toplum temelli hizmetlerin sayısı ve dolayısıyla yararlanan bireylerin sayısı kurum temelli bakım kuruluşlarına göre çok az olduğu, toplum temelli hizmetlerin işlevselliğine dair bir bilgi de bulunmadığı ortaya çıkmıştır. Bu yüzden toplum temelli hizmetlerin işleyişinin de değerlendirilmesi gerektiği vurgulanmıştır.

Çalışmada engellilik alanındaki toplum temelli hizmetlere dair bu tespitler Foucault'nun iktidar, biyopolitika ve kapatılma kavramlarıyla tartışılmıştır. Foucault'un iktidarın hükümranlık, disipliner ve yönetimsellik modellerinden yola çıkarak engellilik alanındaki çalışmaların gelişimi değerlendirilmiştir. Buna göre günümüzde engelli bireyler üzerinde her ne kadar birçok tedavi ve rehabilitasyon yöntemi denense de sağlık, gündelik yaşam, çalışma hayatı gibi alanlarda modern toplumun "norm"larına göre bir düzenleme ve "normalleştirme, iyileştirme" uygulamasına yanıt alınmadığı durumlar ve toplumdaki hakim sağlamcı anlayış dikkate alınarak engelli bireylere yönelik politika ve hizmetlerin yapılanmasının şekillendiği ortaya çıkmıştır. Buradan yola çıkarak toplum temelli hizmetlerin gelişmemesinin ve yaygınlaşmamasının sebebinde tüm çabalara rağmen "normalleşmenin" sağlanamamasının etkisi vurgulanmıştır. Hapsetmeye dayalı büyük bakım ve rehabilitasyon kurumlarının hala yaygın olmasının bir sebebi olarak ise normalleştirme konusundaki başarısızlığın sonucunda engelli bireylerin "toplumsal düzeni bozan" ve kapatılması/hapsedilmesi/izole edilmesi gerekenler kategorisine yerleştirilmelerine dair bir varsayım öne sürülmüştür. Bu noktada toplumdaki sağlamcı bakışın değişmesine ve engelli bireylerin "norm"a uymayan "anormal" kategorisinden çıkartılmasına ve çeşitlilik anlayışının yerleşmesine yönelik çalışmalara ağırlık verilmesi önemlidir.

Birçok ülkede toplum temelli rehabilitasyon uygulamalarının hayırseverlik yaklaşımının izlerini taşıdığı ve bu durumun da engelli bireylerin sosyal olarak içerilmesini engelleyen önemli bir etken olduğu düşünülmektedir (Ayalew ve diğ., 2020). Bu da yine engelliliğin normal dışı, anormal bir durum olarak görülmesiyle oldukça bağlantılıdır. Toplumsal normlara uymayan, bu normların dışında olan bireyler, acınası durumda olan bireyler olarak görülmektedir ve onlara iyilik yapma yoluyla 'sağlam' insanların görevlerini yerine getirmiş olacakları algısı hakimdir.

Çalışmada Foucault'un iktidarın yönetimsellik modelinde öne çıkan biyoiktidarın nüfus hareketlerinin ve bedenlerin üretim için elverişli hale getirilmesi amacındaki liberal ekonomi ve kapitalizm vurgusuna dikkat çekilmiştir. Buradan hareketle engelli bireylere yönelik her türlü müdahale bireylerin üretim aygıtı içerisine dahil olmalarını sağlamaya odaklanılması kapsamında değerlendirilirken, bunun bazı durumlarda ekonomik maliyetinin de fazla olması ise bir başka sorunu gündeme getirmektedir. Özellikle engellilik alanındaki toplum temelli hizmetlerin gelişimi ve yaygınlığı ile ilgili sorunlara ekonomik "maliyet/yük" açısından değerlendirmelerin üzerinde durulması gerektiği ortaya çıkmıştır. Bu "maliyet/yük" anlayışından yola çıkarak engelli bireylere yönelik politika ve hizmetlerin yapılanmasında da sağlamcı bakışın bir yansıması olarak engelli bireylerin "güçsüz, çalışamayan, üretime katkı sağlayamayan, tedavi maliyeti yüksek olan ve tüketici konumda olan kişiler olarak görülmesi"nin bu alana yeterince odaklanılmamasında etkisi sorgulanmıştır. Bu noktada Burcu (2007)'nun da belirttiği üzere, toplumsal yaşamda yalnızlık ve sosyal dışlanma riskleriyle karşılaşma olasılığı yüksek olan engelli bireyler açısından onların üretici, yaratıcı yanlarıyla toplum tarafından

FULL TEXTS BOOK

içselleştirilmelerini sağlayacak olanakların verilmesine ve düzenlemelerin yapılmasına yönelik kapsayıcı politikalar üretmek, geliştirmek ve bunların işlerlik kazanmasını sağlamak gerekmektedir.

Engellilik alanında iktidarın ana öznesi olarak tıp ve siyaset ilişkisi bağlamında sağlık politikalarının yapılandırıldığı vurgusu yapılmıştır. Bu vurgudan yola çıkarak engellilik alanında toplum temelli hizmetlerin gelişmemesi ve yaygınlaşmamasında tıp alanının iktidar öznesi doktorların siyasete ve sağlık politikalarına olan etkisi üzerinde durulması gerektiği düşünülmektedir. Bu yüzden tıp alanının iktidar öznesi doktorların engellilik alanında toplum temelli hizmetlere yönelik bakış açısının keşfedilmesi gereklidir. Bu bakış açısının toplum temelli hizmetlerin gerekliliği, verimliliği, toplumsal maliyeti azaltacak olması yönünde olması toplum temelli hizmetlerin gelişmesinde önemli bir konudur. Doktorların yanı sıra toplumun engellilik ve özellikle psikososyal engellilik hakkında bilgilendirilmesine ve bilinçlendirilmesine yönelik çalışmaların, ayrımcılığı önlemeye yönelik çalışmaların artırılması, yetersiz sosyal politikaların geliştirilmesi gerekmektedir (Gözen ve Buz, 2020). Toplum temelli hizmetlerin artmasıyla birlikte toplumda yer alan "engellilerin" yanı sıra "aile üyelerinin" de hizmetlere erişilebilirliğin artmasının sağlanacak olması hizmet alan kitlesinin de artması demektir. Buradan yola çıkarak çalışmada toplum temelli hizmetlerin gelişmemesinde "engelliler, aile üyeleri ve toplumdaki diğer bireyler"den oluşan hizmet alan kitlesinin genişlemesinin maliyetinin etkisi sorgulanmıştır. Burada toplum temelli hizmetlerin gelişmesi halinde engelli bireylerin hastaneye gereksiniminin azalması ve dolayısıyla bakım yükünün azalması, engelli bireylerin ve ailelerin biyo-psiko-sosyal açıdan sağlığı, ekonomik durumları gibi açılardan yaşamlarındaki iyileşmelerin maliyeti düşüren sonuçlar doğuracağı fikri öne çıkartılmalıdır.

ÖZET
Bu çalışmada 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının karşılaştırılmalı olarak analizinin yapılması amaçlanmıştır. Nitel araştırma yöntemlerinden biri olan doküman analizinin kullanıldığı bu çalışmada programlar öğrenme alanı-ünite, ders süresi, kazanım sayısı, değer, beceri ve okuryazarlıklar başlıkları altında incelenerek, programların benzerlikleri ve farklılıkları ortaya konmaya çalışılmıştır. Elde edilen veriler tablolaştırılmış ve betimsel analizleri yapılmıştır. Araştırma sonucunda 2024 Coğrafya Dersi Öğretim Programında önemli birçok yenilik gözlemlenirken, programlarda yer alan kazanım sayılarında önemli ölçüde düşme saptanmıştır. 2005 ve 2018 programlarında değer sayıları aynı kalırken, 2024 programına yeni değerler eklendiği, okuryazarlıklara değinildiği görülmektedir. Daha önceki programlarda olmayan mekânsal düşünme becerisinin 2024 programında yer alması, aynı zamanda coğrafi bilgi sistemlerine verilen önemin artması da gözlemlenen diğer yeniliklerdir. 2024 programıyla eğitimdeki değişen ihtiyaçlara ve teknolojik çağa uyum sağlama konusunda önemli adımlar atılmış olacaktır.
Anahtar Kelimeler: Coğrafya dersi öğretim programı, kazanım, değer, coğrafi beceri

ABSTRACT
This study aims to provide a comparative analysis of the 2005, 2018 and 2024 geography curricula. In this study, in which document analysis, one of the qualitative research methods, was used, the programmes were examined under the headings of learning area-unit, course duration, number of outcomes, values, skills and literacies, and an attempt was made to reveal the similarities and differences of the programmes. The data obtained were tabulated and descriptive analyses were carried out. As a result of the research, while many important innovations were observed in the 2024 Geography Curriculum, there was a significant decrease in the number of outcomes in the programmes. While the number of values remained the same in the 2005 and 2018 programmes, it can be seen that new values have been added to the 2024 programme and literacy has been mentioned. The inclusion of spatial thinking skills in the 2024 programme, which were not included in the previous programmes, and the increased importance given to geographical information systems are other innovations observed. The 2024 programme takes important steps to adapt to the changing needs of education and the technological age.
Keywords: Geography curriculum, achievement, value, geographical skills

FULL TEXTS BOOK

yanıt veremeyen mevcut öğretim programları, eğitim programlarının yenilenmesine yol açmıştır. Bu programlar, öğrenme ve öğretme süreçlerini yönlendiren temel kılavuzlardır. Demirel (2010), eğitim programını öğrenme deneyimlerini sağlamak için planlanmış etkinliklerin düzeneği; öğretim programını ise belirli bir ders veya konunun öğretimini içeren tüm etkinlikler şeklinde tanımlamıştır. Öğretim programları, öğrenme sürecinde belirlenen istendik davranışların hangi yöntemler ve araç-gereçler kullanılarak en etkili şekilde nasıl kazandırılabileceğini bulduğumuz kılavuzlardır (Gözütok, 2003). Öğrencilerin bilgiye daha hızlı erişmelerini, kritik düşünme becerilerini geliştirmelerini ve küresel sorunlara çözüm odaklı yaklaşabilmelerini sağlamak amacıyla tasarlanmışlardır.

Cumhuriyetin ilanından günümüze kadar ülkemizde birçok dersin öğretim programında görüldüğü gibi coğrafya dersi öğretim programında da önemli değişiklikler yaşanmıştır. Yaşanan bu değişiklikler bazen kapsamlı bir şekilde olmuş, bazen de sınıf bazında haftalık ders saatlerini düzenleme şeklinde kendini göstermiştir (Göcen, 2021). İlk uygulanan coğrafya öğretim programı 1924 yılında hazırlanmış, ders saatlerinde değişiklikler yapılarak 1934 ve 1938 yıllarında program güncellenmiştir (Geçit, 2008; Türker, 2019). Coğrafya dersi öğretim programında önemli bir dönüşüm 1941'de düzenlenen I. Türk Coğrafya Kongresi'nde yaşanmıştır. Kongrede alınan öneriler ve kararlar doğrultusunda 1942 Coğrafya Dersi Öğretim Programı (CDÖP) hazırlanarak, önceki programlardan daha detaylı bir yapıya sahip olmuştur. Bu tarihten sonra coğrafya dersi öğretim programı 1957, 1971, 1973, 1982, 1983, 1992 yıllarında yeniden düzenlenmiştir.

2005 yılında köklü değişiklikler yapılarak yapılandırmacı bir öğretim yaklaşımıyla hazırlanmıştır. Program uygulamaya konduktan sonra, 2010, 2011 ve 2014 yıllarında revize edilmiş ve 2017 yılına kadar geçerliliğini sürdürmüştür. 2014 revizyonunda 10. sınıf coğrafya dersinin 2+2 şeklinde olan ders saatinin seçmeli kısmı kaldırılmış ve öğretim programındaki toplam kazanım sayısı düşmüştür. 2017 ve 2018 yıllarında Millî Eğitim Bakanlığı, öğretim programlarını yeniden güncelleme kararı almıştır. 2018 yılında yapılan bu güncellemelerin ardından yenilenen coğrafya öğretim programı, 2018-2019 eğitim-öğretim yılında uygulanmaya başlanmıştır. Yapılan değişiklikle kazanım ifadeleri, sıralaması, açıklamaları değiştirilerek yeni kazanımlar programa eklenmiştir (Şahin, 2019). 2024 Coğrafya Dersi Öğretim Programında 2005 ve 2018 öğretim programlarına nazaran kazanım sayısında önemli ölçüde düşme olsa da haftalık ders süresinde değişikliğe gidilmemiştir. Bu kapsamlı değişikliklerin ışığında, 1924-2024 yılları arası coğrafya dersi öğretim programlarında coğrafya derslerinin isimleri ve haftalık ders saati dağılımı aşağıdaki gibidir.

Tablo 1. 1924-2024 Yılları Arası Coğrafya Dersi Öğretim Programlarında Coğrafya Derslerinin İsimleri ve Haftalık Ders Saatleri

Coğrafya Dersi	Ders	Sınıf	Haftalık Ders Saati
1924	Umumi Coğrafya	Lise 1	1
	Büyük ve Komşu Memleketler Coğrafyası	Lise 2	1

Tablo 1 incelendiğinde 1924'ten 2005 yılına kadar geçen sürede liselerde okutulan coğrafya derslerinin "Genel Coğrafya, Devletler/ Ülkeler Coğrafyası ve Türkiye Coğrafyası" isimleri altında okutulmuştur. Sadece 1971 taslak programında "Türkiye Coğrafyası" dersi kaldırılmıştır. 1992 yılında CDÖP'ün uygulanmaya başlamasından 4 ay sonra "Ders Geçme ve Kredili Sisteme" geçilmiş, genel liseler fen bilimleri alanı, sosyal bilimler alanı, Türkçe-Matematik alanı, yabancı dil alanı, spor ve sanat alanı olmak üzere altı alana ayrılmıştır (Kaya, 2012). 1992 "Ders Geçme ve Kredili Sisteme" göre lise coğrafya derslerinin haftalık ders çizelgesi Tablo 2'de gösterilmiştir.

Tablo 2. Ders Geçme ve Kredili Sisteme Göre Lise Coğrafya Derslerinin Haftalık Ders Çizelgesi

Alan	Ders Adı	Kredisi	Zorunlu / Seçmeli
Fen Bilimleri	Coğrafya 1-2	2-2	Zorunlu
Türkçe-Matematik	Coğrafya 1-2	2-2	Zorunlu
Sanat (Resim-Müzik)	Coğrafya 1-2	2-2	Zorunlu
Spor	Coğrafya 1-2	2-2	Zorunlu
Sosyal Bilimler	Coğrafya 1-2	2-2	Zorunlu
	Türkiye Coğrafyası 1—2	2-2	Seçmeli
	Türkiye Beşerî ve Ekonomik Coğrafyası 1-2	6	Seçmeli
	Ülkeler Coğrafyası 1-2	4-4	Seçmeli
Yabancı Dil	Coğrafya 1-2	2-2	Seçmeli
	Türkiye Coğrafyası 1	6	Seçmeli
	Ülkeler Coğrafyası 1	6	Seçmeli
Kaynak: Kaya (2012)			

2005 yılından itibaren "Coğrafya" adı altında derslerin okutulduğu görülmektedir. Yapılandırmacı öğretim anlayışıyla sarmal yapıda düzenlenen CDÖP, kendini tekrar eden kazanımlardan ve açıklamalardan meydana gelmektedir. Sınıflar arası ilişkilendirme oldukça önemlidir. Öğrencinin merkeze alındığı, bilgiyi ezber yoluyla değil yaparak yaşayarak yapılandırdığı bir program tasarlanmıştır. Çağın bilgi-iletişim teknolojilerinin coğrafya konularının öğretiminde kullanılmasını destekleyerek Coğrafi Bilgi Sistemleri'nin (CBS) uygulanması bazı kazanımlarda önerildiği görülmektedir (MEB, 2005).

2024 CDÖP ise sade, tekrardan uzak, dikey bağlantılı bir yaklaşımla öğrencilerin bütünsel gelişimini desteklemekte ve gerçek hayatla güçlü bağlar kurmayı hedeflemektedir. Beceri temelli yaklaşımıyla daha güçlü bir toplum oluşturmayı amaçlamaktadır. Değişen ihtiyaçlar ve bilimsel

FULL TEXTS BOOK

gelişmeler, coğrafya öğretim programının güncellenmesini zorunlu kılmıştır. Program, coğrafi alan becerilerini odak alırken, diğer bilimsel beceriler, kavramsal beceriler, sosyal ve duygusal öğrenme becerileri ve okuryazarlık becerilerini de içermektedir. Programda yer alan öğretme-öğrenme yaşantıları; öğrencilere bütüncül bir bakış açısı kazandıran, kalıcı öğrenmeyi destekleyen, farklı öğretim yöntem ve tekniklerini kullanan ve disiplinler arası ilişkileri görmeyi kolaylaştıran bir çerçevede sunulmaktadır (MEB, 2024).

Sonuç olarak, eğitim programları, hızla değişen bilim ve teknoloji çağında toplumsal ihtiyaçlara yanıt verebilmek için sürekli yenilenmek zorundadır. Türkiye'deki coğrafya öğretim programları da bu değişime uyum sağlayarak, 1924 yılından günümüze kadar önemli değişimler geçirmiştir. Özellikle 2005, 2018 ve son olarak 2024 yıllarında yapılan güncellemeler, coğrafya eğitiminde yapılandırmacı ve beceri temelli yaklaşımları ön plana çıkarmıştır. Bu programlar, öğrencilerin coğrafi bilgi ve becerileri günlük hayatta etkili bir şekilde kullanabilmelerini, eleştirel düşünme ve problem çözme yeteneklerini geliştirmelerini hedeflemektedir. 2024 Coğrafya Dersi Öğretim Programı, öğrencilerin bütünsel gelişimini destekleyerek onları geleceğe daha donanımlı bireyler olarak hazırlayacaktır.

Araştırmanın Amacı

Bu araştırmada 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının öğrenme alanı-ünite, ders süresi, kazanım sayısı, değer ve beceri başlıkları altında karşılaştırılmalı olarak analizinin yapılması amaçlanmıştır.

YÖNTEM

Araştırma nitel araştırma yöntemlerinden biri olan doküman analizi ile incelenmiştir. Belge tarama olarak da adlandırılan doküman incelemesi, mevcut kayıt ve belgelerden veri toplama tekniğidir (Karasar, 2022). Hem basılı hem de elektronik dokümanların elde edilmesi, gözden geçirilmesi, sorgulanması ve analiz edilmesini sağlayan sistematik bir işlemdir (Bowen, 2009). 2005, 2018 ve 2024 yıllarında Milli Eğitim Bakanlı Talim Terbiye Kurulu Başkanlığı tarafından hazırlanan coğrafya dersi öğretim programları araştırmanın veri kaynağını oluşturmaktadır. Ulaşılan veriler betimsel analiz tekniği ile analiz edilmiştir.

BULGULAR

2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının Öğrenme Alanı / Ünite Açısından Değerlendirilmesi

Coğrafya dersi öğretim programları sınıf düzeyine göre incelenerek aşağıdaki şekilde tablolaştırılmıştır.

Tablo 3. 2005 – 2018- 2024 Coğrafya Dersi Öğretim Programlarının Öğrenme Alanı / Ünite Karşılaştırması

	2005 Coğrafya Dersi Öğretim Programı Öğrenme Alanları	2018 Coğrafya Dersi Öğretim Programı Üniteleri	2024 Coğrafya Dersi Öğretim Programı Üniteleri

FULL TEXTS BOOK

6	Coğrafi Beceriler ve Uygulamalar		Afetler ve Sürdürülebilir Çevre
7			Bölgeler, Ülkeler ve Küresel Bağlantılar
Kaynak: MEB, Coğrafya Dersi Öğretim Programı, 2005-2018-2024			

2005 Coğrafya Dersi Öğretim Programı bütünsel yaklaşıma uygun olarak 6 öğrenme alanından meydana gelmektedir. Bu öğrenme alanlarından biri olan "Coğrafi Beceriler ve Uygulamalar" öğrenme alanı diğer öğrenme alanları ile ilişkilendirilmiş, bu öğrenme alanına yönelik herhangi bir kazanım yer almamıştır. 2018 CDÖP'nda ise 2005 programından farklı olarak kazanımlara "ünite başlığı" altında yer verilmiştir. "Doğal Sistemler, Beşerî Sistemler, Küresel Ortam: Bölgeler ve Ülkeler, Çevre ve Toplum" öğrenme alanları ünite olarak değiştirilerek 2018 CDÖP'nda yerini almıştır. "Mekânsal Bir Sentez: Türkiye" öğrenme alanına 2018 öğretim programında yer verilmemiştir.

2024 programında ise ünite sayısı yediye çıkmıştır. "Mekânsal Bilgi Teknolojileri" ünitesi eklenerek daha önceki programlarda (2005-2018) kazanımların içinde önerilen Coğrafi Bilgi Sistemlerinin 2024 programında kullanımı üzerine odaklanılmıştır. Bu durum coğrafya eğitiminin günümüz teknolojik gelişmelerine uyum sağlama çabasında olduğunu göstermektedir. Öğrencilerin coğrafya biliminin teknolojiyle entegrasyonunu anlamalarını ve bu teknolojileri kullanma becerilerini geliştirmelerini sağlayacaktır. Çevre ve Toplum ünitesi, 2005 ve 2018 programlarında yer almış, 2024 programında ise "Afetler ve Sürdürülebilir Çevre" olarak yeniden adlandırılmıştır. Bu değişiklik, çevresel sürdürülebilirlik ve afet yönetimi konularına verilen önemi vurgulamaktadır. Öğrencilerin çevresel sorunları anlama ve bu sorunlara çözüm bulma becerilerini geliştirmelerine olanak sağlayacaktır. 2005 ve 2018 programlarında "Küresel Ortam: Bölgeler ve Ülkeler" başlığı kullanılırken, 2024 programında "Bölgeler, Ülkeler ve Küresel Bağlantılar" başlığı kullanılmıştır. İsim değişikliği, küresel bağlantılara verilen önemi göstermektedir. Hem 2005-2018 programları hem de 2024 programı, bölgeler ve ülkeler arasındaki bağlantılara odaklanarak öğrencilerin küresel farkındalığını artırmayı hedeflemektedir. Bu üniteler, coğrafi, ekonomik, kültürel ve politik bağlantıları inceleyerek öğrencilerin küresel perspektif kazanmalarını sağlayacaktır. 2005 ve 2018 programlarında ekonomik faaliyetler "Beşerî Sistemler" ünitesinin bir parçası olarak işlenmiştir. 2024 programında ise "Ekonomik Faaliyetler ve Etkileri" isimli yeni bir ünitenin yer alması, bu konuların daha kapsamlı ve ayrıntılı bir şekilde işlenmesine olanak tanıyacaktır.

2005 Programı öğrenme alanlarına göre ayrılmış ve her sınıf düzeyinde belirli sayıda kazanım belirlenmiş ancak öğrenme alanlarına ne kadar süre ayrılacağı önerisinde bulunulmamıştır.

2018 Programında ünitelerin işlenmesi için ders saatlerinin önerildiği görülmektedir. Üniteler için önerilen ders saatlerine bakıldığında coğrafya dersinin zorunlu olduğu sınıf seviyelerinde (9. sınıflarda 47 ders saati; 10. sınıflarda 36 ders saati) "Doğal Sistemler" ünitesine daha fazla süre ayrıldığı, seçmeli ders olarak okutulan 11. sınıf (12 ders saati) ve 12. sınıfta (12 ders saati) ise ders sürelerinin azaldığı görülmektedir. "Beşerî Sistemler" ünitesine ayrılan ders süresinin en fazla olduğu sınıf seviyeleri 4 saat seçmeli ders olarak okutulan 12. sınıf (82 ders saati) ve 11. sınıf (76 ders saati) olarak göze çarpmaktadır. "Küresel Ortam: Bölgeler ve Ülkeler" ünitesine ayrılan süre 11. Sınıf (40 ders saati) ve 12. Sınıf (38 ders saati) seviyelerinde daha fazladır. "Çevre ve Toplum" ünitesine ayrılan süre incelendiğinde en fazla 4 saat seçmeli ders olarak okutulan 11. sınıflarda (16 ders saati) olduğu görülmektedir.

2024 programında yeni eklenen ünitelerle birlikte, öğrenme çıktı sayıları ve ders saatlerinde yeniden bir düzenleme yapılmıştır. İlk ünite olan "Coğrafyanın Doğası" ünitesine ayrılan süre 10. sınıf hariç (4 ders saati) diğer sınıf seviyelerinde (6 ders saati) eşittir. "Mekânsal Bilgi Teknolojileri" ünitesine

FULL TEXTS BOOK

seçmeli ders olarak okutulan 11. ve 12. sınıflarda ayrılan süre daha fazladır. "Doğal Sistemler ve Süreçler" ünitesine önerilen sürenin en fazla olduğu sınıf seviyesi zorunlu ders olarak okutulan 9. sınıf (20 ders saati) ve seçmeli ders olan 12. sınıftır (18 ders saati). "Beşerî Sistemler ve Süreçler" ünitesine ayrılan ders süresinin en çok 9. ve 12. sınıflarda (16 ders saati) olduğu görülmektedir. "Ekonomik Faaliyetler ve Etkileri" ünitesine önerilen ders saatinin en fazla olduğu sınıf seviyesinin 11. Sınıf (34 ders saati) olduğu dikkati çekmektedir.

Tablo 7. 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının Toplam Kazanım Sayıları Açısından İncelenmesi

	2005 CDÖP				2018 CDÖP				2024 CDÖP			
	9. Sınıf	10. Sınıf	11. Sınıf (4 saat)	12. Sınıf (4 saat)	9. Sınıf	10. Sınıf	11. Sınıf (4 saat)	12. Sınıf (4 saat)	9. Sınıf	10. Sınıf	11. Sınıf (4 saat)	12. Sınıf (4 saat)
Kazanım sayısı	31	36	41	39	22	34	40	34	19	18	19	20
Toplam	147				130				76			
Kaynak: MEB, Coğrafya Dersi Öğretim Programı, 2005-2018-2024												

9. ve 10. sınıflarda zorunlu, 11. ve 12. sınıflarda dört saat seçmeli ders olarak okutulan Coğrafya Dersi Öğretim Programlarını karşılaştırdığımızda; 2005 yılında programda 147 kazanım olduğu görülürken 2018 yılında kazanım sayısının 130'a düştüğü, 2024 yılı programında ise 76 kazanıma düştüğü görülmektedir. Millî Eğitim Bakanlığı'nın 2024 yılında bütün öğretim programlarında yaptığı gibi coğrafya dersi öğretim programında da sadeleştirme çalışmasına gittiği bu durumun sebebidir. Her sınıf seviyesinde kazanımlarda dengeli bir dağılımın olduğu görülmektedir. Kazanımların ünitelerdeki yerlerinde ve sınıf seviyelerinde de değişiklikler bulunmaktadır. Örneğin; coğrafya biliminin konusu ve bölümleri ile ilgili kazanım 2018 programında "Doğal Sistemler" ünitesi başlığı altında yer alırken, 2024 programında "Coğrafyanın Doğası" ünitesi altında yer almaktadır. 2018 programında 9. sınıflarda "Beşerî Sitemler" ünitesinde yer alan yerleşme coğrafyası ile ilgili kazanımlar 2024 programında 10. sınıf seviyesinde işlenecektir. 2005 ve 2018 öğretim programlarında "Doğal Sistemler" ünitesi altında verilen kazanımlar 2024 programında "Coğrafyanın Doğası, Mekânsal Bilgi Teknolojileri, Doğal Sistemler ve Süreçler" ünitelerine dağıtılmıştır.

Kaynak: MEB, Coğrafya Dersi Öğretim Programı, 2005-2018-2024

2005 programında toplam 10 değer varken, 2018 programında bu sayı aynı kalmıştır ancak bazı değerler değişmiştir. 2024 programında ise değerler listesi daha da genişlemiş ve 20 değere yer verilmiştir. Bu durum zaman içinde eğitim programlarının öğrencilere kazandırmak istediği değerlerin çeşitlendiğini ve arttığını göstermektedir. "Sevgi, Saygı, Sorumluluk ve Yardımseverlik" değerleri, her üç dönemde de vurgulanan ortak değerlerdir. Bu değerlerin sürekli olarak programlarda yer alması, bunların coğrafya eğitimi açısından önemli olduğunu göstermektedir. "Hoşgörü ve Estetik" değerleri 2005 ve 2024 programlarında bulunurken, 2018 programında yer almamaktadır. 2024 programına eklenen yeni değerler arasında "Aile Birliği, Çalışkanlık, Dürüstlük, Merhamet, Misafirperverlik, Mütevazılık, Özgüven, Sağlıklı Yaşam, Tasarruf ve Temizlik" bulunmaktadır. Bu değerler, öğrencilerin kişisel gelişimlerine ve toplumsal sorumluluklarına yönelik önemli katkılar sunacaktır. 2005 programında "Bilimsellik ve Duyarlılık" gibi değerler varken, bu değerler sonraki programlarda yer almamaktadır. 2018 programında eklenen "Doğa Sevgisi, Özdenetim, Vatana Sevgisi, Adalet ve Sabır" gibi değerler, çevre bilinci ve kişisel sorumlulukların önemini vurgulamaktadır. 2024 programında daha fazla kişisel ve toplumsal değerlerin eklenmesi, öğrencilerin hem birey olarak hem de toplumsal bir varlık olarak gelişmelerine önem verildiğini göstermektedir.

Tablo incelendiğinde 2005 ve 2018 programlarında coğrafi beceriler aynı kalırken, 2024 öğretim programında coğrafi becerilerde değişikliklere gidilmiştir. Coğrafi gözlem ve Arazide Çalışma becerileri 2024 programında tek bir başlık altında birleştirilerek "Coğrafi Gözlem ve Saha Çalışması" adını almıştır. Zamanı algılama becerisi 204 programında "Zamanı Algılama ve Kronolojik Düşünme" adını alarak beceriler arası ilişkiler başlığı altında önerilmiştir. Kanıt Kullanma becerisinin adı "Kanıta Dayalı Sorgulama ve Araştırma" şeklinde değiştirilmiş ve beceriler arası ilişkiler başlığı altında önerilmiştir. 2024 öğretim programında önerilen coğrafi beceriler arasına "Mekânsal Düşünme**"** becerisi eklenmiştir. Mekânsal düşünme becerisinin 2024 programına eklenmesi ile öğrenciler coğrafi bilgi ve becerilerini geliştirmelerine katkıda bulunabilir. Aynı zamanda onların mekânsal analiz ve problem çözme yeteneklerini güçlendirebilir. Eğitimde yapılan bu tür yenilikçi değişiklikler, öğrencilerin coğrafya alanında daha donanımlı bireyler olarak yetişmesine olanak tanıyacaktır.

FULL TEXTS BOOK

"Coğrafi Sorgulama" ve "Kanıt Kullanma" becerileri her üç yılda da en yüksek kazanım sayısına sahip beceriler olarak öne çıkmaktadır. Bu durum, coğrafya eğitiminde analitik düşünme ve veri kullanma becerilerine verilen önemi göstermektedir. Bu beceriler, öğrencilerin sadece coğrafi bilgiyi öğrenmekle kalmayıp, aynı zamanda bu bilgiyi analiz etmelerini ve yorumlamalarını sağlayacaktır. Kazanım başına düşen coğrafi becerilere baktığımız zaman genel bir azalma trendi görülmektedir. Kazanım sayılarındaki azalma, eğitim programlarının daha odaklı ve derinlemesine bilgi aktarımı yapmaya yönelik olduğu anlamına gelebilir. Belirli becerileri öğrencilerin daha iyi anlamalarına ve uygulamalarına olanak tanıyabilir. Aynı zamanda kazanım sayılarında görülen azalma da bu durumun sebeplerinden biri olabilir.

Tablo 10. 2024 Coğrafya Dersi Öğretim Programı Sosyal-Duygusal Öğrenme Becerileri
Kendini Tanıma (Öz Farkındalık), Kendini Düzenleme (Öz Düzenleme), Kendine Uyarlama (Öz Yansıtma), İletişim, İş Birliği, Sosyal Farkındalık Uyum, Esneklik, Sorumlu Karar Verme
Kaynak: MEB, Coğrafya Dersi Öğretim Programı, 2024

Coğrafya dersi öğretim programına eklenen sosyal-duygusal öğrenme becerileri, öğrencilere geniş bir perspektif kazandırmayı ve yaşamları boyunca kullanabilecekleri önemli yetiler geliştirmeyi amaçlamaktadır. Bu becerilerin coğrafya dersleriyle ilişkilendirilmesi, öğrencilerin sadece coğrafya bilgilerini ve anlayışlarını geliştirmekle kalmayacak, aynı zamanda kişisel gelişimlerine, toplumsal becerilerine ve küresel vatandaşlar olarak gelişmelerine yardımcı olabilecek sosyal-duygusal becerilerini de kazanmalarına katkıda bulunacaktır.

2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının Okuryazarlıklar Açısından Karşılaştırılması

Tablo 11. 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarının Okuryazarlıklar Açısından İncelenmesi		
2005	**2018**	**2024**
-	-	Bilgi Okuryazarlığı Görsel Okuryazarlık Dijital Okuryazarlık Kültür Okuryazarlığı Veri Okuryazarlığı Sürdürülebilirlik Okuryazarlığı Finansal Okuryazarlık Vatandaşlık Okuryazarlığı Sanat Okuryazarlığı

FULL TEXTS BOOK

2005 ve 2018 yılı öğretim programlarında okuryazarlıklara değinilmemişken, 2024 programında 9 farklı okuryazarlık ele alınmıştır. *"Bilgi okuryazarlığı, görsel okuryazarlık, veri okuryazarlığı, dijital okuryazarlık"* gibi çağın gerektirdiği becerilere odaklanıldığı görülmektedir. Bu okuryazarlıklar öğrencilerin bilgiye erişiminde, verileri yorumlamalarında, dijital araçları etkili bir şekilde kullanmalarında ve küresel sorunlara duyarlı bir şekilde yaklaşmalarında daha hazırlıklı olmalarını sağlayabilir. Program, sadece akademik bilgiye odaklanmak yerine kültürel, sürdürülebilirlik, finansal, vatandaşlık ve sanat gibi farklı okuryazarlık alanlarına da değinmektedir. Bu yaklaşım, öğrencilerin daha geniş bir perspektifle dünyayı anlamalarına ve çeşitli beceriler geliştirmelerine olanak tanıyacaktır.

SONUÇ

Araştırmada 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programlarında yer alan öğrenme alanları/üniteler, kazanım sayıları ve ders süreleri, coğrafi beceriler ve değerler karşılaştırmalı olarak incelenmiştir. 2005 Coğrafya Dersi Öğretim Programı, bütüncül bir yaklaşımla altı öğrenme alanından oluşmaktadır. Bu alanlardan biri olan "Coğrafi Beceriler ve Uygulamalar" diğer öğrenme alanlarıyla ilişkilendirildiği için bu alana özel kazanımlar belirlenmemiştir. 2018 Coğrafya Dersi Öğretim Programı'nda ise kazanımlar "ünite başlıkları" altında toplanmıştır. "Doğal Sistemler, Beşerî Sistemler, Küresel Ortam: Bölgeler ve Ülkeler, Çevre ve Toplum" öğrenme alanları ünite olarak yeniden düzenlenmiş ve 2018 programına eklenmiş, "Mekânsal Bir Sentez: Türkiye" öğrenme alanına ise yer verilmemiştir.

2024 programında, ünite sayısı yediye çıkartılmıştır. Coğrafi Bilgi Sistemlerinin kullanımına odaklanan "Mekânsal Bilgi Teknolojileri" ünitesi programa eklenmiştir. 2005 ve 2018 programlarında yer alan "Çevre ve Toplum" ünitesi, 2024 programında "Afetler ve Sürdürülebilir Çevre" olarak yeniden adlandırılmıştır. 2005 ve 2018 programlarında "Küresel Ortam: Bölgeler ve Ülkeler" başlığı kullanılırken, 2024 programında bu başlık "Bölgeler, Ülkeler ve Küresel Bağlantılar" olarak değiştirilmiştir. 2005 ve 2018 programlarında ekonomik faaliyetler "Beşerî Sistemler" ünitesinin bir parçası olarak ele alınırken, 2024 programında "Ekonomik Faaliyetler ve Etkileri" adında yeni bir ünite oluşturulmuştur. Modern dünyada ekonomik faaliyetlerin önemi ve etkileri giderek artmaktadır. 2024 programındaki bu değişiklik, öğrencilerin günümüz ekonomik sistemlerini ve bu sistemlerin çevre ve toplum üzerindeki etkilerini daha iyi anlamalarını sağlayacaktır. 2005 ve 2018 programları daha temel ve belirli öğrenme alanlarına odaklanırken, 2024 programı modern yaklaşımlar ve güncel konular ekleyerek daha kapsamlı bir eğitim hedeflemiştir. Bu değişiklikler, öğrencilerin hem temel coğrafi bilgi ve becerilerini geliştirmeyi hem de günümüz dünyasında karşılaşacakları karmaşık sorunları anlamalarını ve çözmelerini sağlayacaktır.

2005 programı, öğrenme alanlarına göre ayrılmış ve her sınıf düzeyinde belirli sayıda kazanım belirlenmiş ancak öğrenme alanlarına ne kadar süre ayrılması gerektiği konusunda bir öneri sunulmamıştır. 2018 programında ise üniteler için ders saatleri önerilmiştir. Bu ders saatlerine bakıldığında, "Beşerî Sistemler" ünitesine ayrılan sürenin diğerlerinden daha fazla olduğu görülmektedir. 2024 programında ise yeni ünitelerin eklenmesiyle birlikte, öğrenme çıktıları ve ders saatlerinde yeniden bir düzenleme yapılmıştır. Bu düzenlemede, "Bölgeler, Ülkeler ve Küresel Bağlantılar" ile "Ekonomik Faaliyetler ve Etkileri" ünitelerine ayrılan sürenin daha fazla olduğu dikkat çekmektedir.

2005 Coğrafya Dersi Öğretim Programında 147 kazanım bulunurken, 2018 yılında bu sayı 130'a düşmüş ve 2024 programında ise 76'ya kadar inmiştir. Millî Eğitim Bakanlığı'nın 2024 yılında tüm öğretim programlarında olduğu gibi coğrafya dersi öğretim programında da sadeleştirme çalışması yapması bu azalmanın sebebidir.

2005 programında toplam 10 değer bulunurken, 2018 programında bu sayı aynı kalmış ancak bazı değerler değiştirilmiştir. 2024 programında ise değerler listesi genişleyerek 20 değeri içermektedir. "Sevgi, Saygı, Sorumluluk ve Yardımseverlik" değerleri her üç programda da ortak vurgulanan

FULL TEXTS BOOK

değerlerdir. "Hoşgörü ve Estetik" değerleri 2005 ve 2024 programlarında yer alırken, 2018 programında bulunmamaktadır. 2024 programına eklenen yeni değerler arasında "*aile birliği, çalışkanlık, dürüstlük, merhamet, misafirperverlik, mütevazılık, özgüven, sağlıklı yaşam, tasarruf ve temizlik*" bulunmaktadır.
2005 ve 2018 programlarında coğrafi beceriler benzer kalırken, 2024 öğretim programında değişikliklere gidilmiştir. Coğrafi Gözlem ve Arazide Çalışma becerileri, 2024 programında tek bir başlık altında "Coğrafi Gözlem ve Saha Çalışması" olarak birleştirilmiştir. Zamanı Algılama becerisi, 2024 programında "Zamanı Algılama ve Kronolojik Düşünme" adını alarak, beceriler arası ilişkiler başlığı altında önerilmiştir. Kanıt Kullanma becerisinin adı "Kanıta Dayalı Sorgulama ve Araştırma" olarak değiştirilmiştir. 2024 programında önerilen coğrafi beceriler arasına "Mekânsal Düşünme" becerisi eklenmiştir. Kazanım başına düşen coğrafi becerilere baktığımızda genel bir azalma eğilimi görülmektedir. Kazanım sayılarındaki azalma, eğitim programlarının daha odaklı ve derinlemesine bilgi aktarımı yapmaya yönelik olduğunu gösterebilir.
2005, 2018 ve 2024 yıllarındaki coğrafya dersi öğretim programlarının karşılaştırmalı analizi, 2024 programının daha geniş bir yelpazede kişisel ve toplumsal gelişime vurgu yaparak önceki programlardan ayrıldığını ortaya koymaktadır. 2024 coğrafya dersi öğretim programı, öğrencilerin dijital okuryazarlıklarını ve analitik düşünme yeteneklerini artırarak, onları 21. yüzyılın gereksinimlerine daha iyi hazırlamayı hedeflemektedir. Bu program, aynı zamanda değerler eğitimine daha fazla önem vererek, öğrencilerin hem bireysel hem de toplumsal sorumluluklarının farkında bireyler olarak yetişmelerine katkıda bulunmaktadır. Böylece, eğitimdeki değişen ihtiyaçlara ve teknolojik çağa uyum sağlama konusunda önemli adımlar atılmış olacaktır.

ARTIFICIAL INTELLIGENCE CHATBOTS AWARENESS AND ACCESSIBILITY FOR LEARNING AMONG SCIENCE PRE-SERVICE TEACHERS IN MINNA, NIGER STATE.

[1]Mohammed, C.M., [2]Idris, U.S.B, [2]Babagana M. [3]Mohammed S., [4]Shuaeeb, A. I.
[123&4]Department of Science Education
Federal University of Technology Minna, Niger State, Nigeria.

ABSTRACT
The study is to examine artificial intelligence chatbots awareness and accessibility for learning among science pre-service teachers' in Minna, Niger state**.** The objectives were to determine the awareness level of pre-service teachers, determine the accessibility and availability of artificial intelligence chatbots, determine the difference in pre-service teachers' awareness and determine the difference in pre-service teachers' access towards artificial intelligence chatbots based on their gender. The study was guided by four research questions and two hypotheses were formulated to guide the study. The research adopted the descriptive survey research. Population of the study comprise of 197 500 level students from science education and educational technology. One hundred and twenty-seven (127) questionnaires were distributed base on Krejce and Morgan (1970) sample size determination. Data collected was analyzed using descriptive and inferential statistics. From the findings, pre-service teachers had high awareness and accessibility level toward artificial intelligence chatbots for learning. Analysis revealed that the male pre-service school teachers have a higher mean rank of 68.13 compared to the female pre-service school teachers having 55.93 and analysis revealed that the male pre-service school teachers have the highest accessibility mean rank of 70.32 compared to the female pre-service school teachers having 51.65. The result found awareness among pre-service school teachers was statistically not significant (U 1459.000, p = .076) and the difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning was statistically significant at U 1275.000 P = .007. Provide students with information about the benefits, functionalities, and ethical considerations associated with AI chatbot technologies, Integrate AI chatbots into the curriculum to expose students to their capabilities and encourage their usage and Ensure that students have access to clear and concise information about AI chatbots, including how they work, their limitations, and the data privacy measures in place.
Keyword: Artificial Intelligence Chatbots, Awareness, Accessibility & Pre-service Science Teachers

Introduction

Technology has altered the look and function of society as the world is becoming digitalized day by day. It can be stated that if one of the aims of science is to solve the problems encountered by human beings, the other is to offer a long and healthy life by raising the living standards (Moll, 2019). Technology has overtaken the world and all industries, wherever we go, we see technology is been used and as technologies became advanced so did many industries, slowly with time many industries adapted their work style with technology (madushan 2023). From healthcare, finance, food service to education technology usage gradually increased to the point where without the technology these industries could no longer operate. In aspect to education traditional on-class has been the most effective way of learning for a very long time.

Technology has been so helpful in making education easy due to it prompt advancement(Seufert et al., 2021). Technology has made teaching and learning activities easy for both the learners and the teachers through various diversity of innovations. Learners can acquire knowledge at distance through technology and the can get lots of information from it. Technology has been significant in opening up new possibilities for educational practices and improving the research and learning outcome of pre-service teachers.

FULL TEXTS BOOK

There are various kinds of teaching and learning technologies that are emerging and are changing the way of teaching and learning. These technologies include argmental reality (AR), and simulation, adaptive learning, virtual reality, video streaming, cloud computing and artificial intelligent (AI). Artificial intelligence has gained significant audience in recent years and has become an important factor in how different industries and services operate. Artificial intelligence (AI) has the potential to transform the field of education, and its applications are becoming increasingly prevalent (UNESCO, 2019). There various types of artificial intelligence such as robot machine, self-driven cars, drones, e-learning platforms, conversational software (AIchatbots) e.t.c. These has really made our daily life easy and also made mode of operating some mechanical activities easy.

In the field of education, AI-powered chatbots are emerging as a new and innovative way to interact with students and enhance their learning experience. (Lund & Wang, 2023), said AI chatbots are artificial intelligences system that are capable of maintaining a conversation with a user in natural language and simulating the way a human being will behave as a conversational partner. They are computer programming software that serve as a tutors or responding platforms in which they gives answers to questions asked. Artificial Intelligence (AI) has been significantly changing the structure of the educational system exponentially increasing the availability of cutting-edge tools utilized in learner's everyday lives (Hrastinski et al., 2019). They improve academic performance of students by providing additional study materials, recommend relevant resources and provide solution to assignments given through enhanced engagement and interaction.

There are various varieties of AI chatbots, which pre-service teachers need to have strong awareness and access too and can be used for research and learning purposes, such as Bing, ChatGPT, Google Bard and YouBot.This state-of-the-art technology has also considerably influenced educational practices, and efforts are constantly being made to incorporate AI chatbots into teaching and learning. For several decades, educators have utilized AI chatbots techniques to advance learning management systems, assessment instruments, and other learning support tools in various subjects (Hwang and Tu, 2021). In education, the concept of an intelligent computer program that acts as personal assistant, or a tutor, is not new. While industrial models of AIs are widely available, education lags behind in the adaptation of intelligent machines to support learning (Kurshan, 2016).

Awareness of AI systems varies according to their pedagogical belief, teaching experience, prior experience using educational technology, and the effectiveness and necessity of a particular technology, all of which can influence their willingness to adopt new educational technology (Gilakjani et al., 2013; Ryu and Han, 2018). Despite these educators' positive expectations of AI, pre-serve teachers first need to learn how to use technology and, most importantly, how to successfully integrate it into their curricula. They also need to understand the importance of AI and the affordances that it can bring to instruction so that they are open to integrating advanced technology into their lessons. Additionally, a great number of teachers and school officials have not yet experienced AI-based learning support and might simply recognize it as slightly more advanced educational technology, which can underestimate the AI's role in the classroom. Consequently, before a successful application of an AI support system into education, it becomes necessary for teachers to first utilize it themselves so that they can fully understand how it can scaffold learning (Cheng &Tsai, 2019). The utilization of the technology depends on how accessible the technologies are to them.

The accessibility of AI technology particularly chatbots has given the pre-service teachers access to large amount of information, engagement, communication, improved assessment, evaluation and efficient use of time (Bersin, 2023). This gives the students more opportunities to learn on their own and gain more access to varieties of information needed for adequate understanding of the subject matter concepts.Additionally, when students use technology in an exploratory/inquiry sense, they are actively engaged in their learning because they are interacting with their preferred medium of learning (Center for Educational Innovation, 2019). While technology enhances the learning environment, the

FULL TEXTS BOOK

technological advancements of the late 20th and early 21st centuries have created an environment in which technology has become increasingly intertwined with curriculum and pedagogy (Gilakjani et al., 2013; Ryu and Han, 2018).

Today, pre-serve teachers are in the midst of a pedagogical revolution: "pre-service teachers need to be explicitly taught how the unique affordances of technology can be used to enrich subject domains for specific learners and about interactions among pedagogy, content, and technology to develop their technological pedagogical content knowledge" (Clark, 2013). Easy access to the AI chatbots can make it easy for the pre-service teachers to write lesson plan, lesson note and gain more knowledge on teaching methodology. There are AI chatbot that requires subscription before gaining access to use it while there are free AI platforms that can be easily accessible to use.

Pre-serve teachers need to learn not only how to use technology but also how to successfully integrate it into their curricula. Also, in order to be open to integrating advanced technology into their lessons, teachers need to understand the importance of educational technology and the affordances that it can bring to instruction (Tallvid, 2016). Furthermore, when it comes to AI, a great number of teachers and school officials have not yet experienced AI-based learning support and might simply recognize it as slightly more advanced educational technology.

Statement of the problem

The education sector is constantly evolving to meet the changing needs of students, and one of the latest technological advancements is the emergence of Artificial Intelligence (AI)-powered chatbots. In recent years, AI chatbots have been increasingly deployed in education to provide personalized student support, quickly answer student inquiries, and streamline administrative tasks. However, teachers' difficulties in integrating AI technology into the classroom is still present today; a large number of educators neglect the effective integration of artificial intelligence in their classrooms and fail to prepare their students for success in a technology driven society (Clark, (2013). A longstanding problem is that many schools possess digital applications, yet their use is constrained by educators who use outdated teaching models that do not optimally embrace or utilize technology. Moreover, anxiety brought about by using new technologies can act as a burden and hinder teachers' efforts to introduce Artificial Intelligence (AI) on-site (Su & Yang, 2022). Despite all these AI potentials in education, teachers are yet to adopt and implement AI. Perhaps, this might be due to low level of awareness and accessibility of AI's relevance in education. A great number of pre-service teachers still view the implementation of technology in the classroom negatively due to the risk that AI Chatbots will produce texts with plausible-sounding but incorrect information (Anders, 2023). Multiple key challenges include copyright issues, biasness, fairness, excessive reliance on AI Chatbot by students and teachers, lack of expertise in integrating this technology in teaching and learning, the difficulty of distinguishing model-generated from student-generated answers, cost of training and maintenance, data privacy and security, and sustainable usage. Furthermore, AI Chatbot operates differently from search engines like Google as it doesn't scan the internet for up-to-date information, and its knowledge is limited to what it acquired before September 2021. Therefore, its inconsistent factual precision has been acknowledged as a notable drawback. Academic integrity is probably the most discussed challenge AI Chatbot will pose to education (Lund & Wang, 2023).

While the use of AI has been increasing exponentially in other fields, this has not been the case in education, little studies have been done to explore the awareness and accessibility about artificial intelligence such as Adebayo *et al*, (2021) who explored university Students' Awareness of, Access to, and use of Artificial Intelligence for Learning in Kwara State and Ukoh and Nicholas (2022) who examined AI Adoption for Teaching and Learning of Physics. However, none of these researches examined student's awareness and accessibility on the use of AI chatbots for learning and research. The absence of research on this subject creates a gap in the existing literature that needs to be filledwith the

FULL TEXTS BOOK

main objective is to assess the awareness and accessibility to artificial intelligence particularly among pre-service teacher for learning.

Research objectives

The general aim of the study is to examine science education pre-service teachers' awareness and accessibility to artificial intelligence chatbot for learning. The specific objectives were to:

1. determine the awareness level of pre-service teachers towards artificial intelligence chatbots.
2. determine the accessibility and availability of artificial intelligence chatbots learning tools to pre-service teachers.
3. determine the difference in pre-service teachers' awareness towards artificial intelligence chatbots based on their gender.
4. determine the difference in pre-service teachers' access towards artificial intelligence chatbots based on their gender.

Research questions

The following research questions would help in achieving the stated objectives of the study:

1. What is the level of awareness among pre-service teachers towards artificial intelligence chatbots for learning?
2. What is the level of accessibilityamong pre-service teachers toward artificial intelligence chatbots for learning?
3. What is the difference in the awareness of male and female pre-service teachers towards artificial intelligencechatbots for learning?
4. What is the difference in the accessibility of male and female pre-service teachers towards artificial intelligence chatbots for learning?

Research hypothesis

Ho1: there is no significant differencebetween male and female pre-service teacher awareness towards artificial intelligence chatbots for learning.

Ho2: There is no significant difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning.

Research methodology

Research design

The research adopted in this study is descriptive survey research. This involve the use of questionnaires to access pre-service teachers in the institution of study area concerning their awareness and accessibility toward artificial intelligence chatbotsfor learning, if there is differences in their awareness towards artificial intelligence chatbots based on their gender and if there is any differences in their accessibility to artificial intelligence chatbots based on their gender.

Population of the study

The population for this research work consists of 500l students of school of science and technology education, Federal University of Technology, Minna, Niger state. The school comprises of department of science education, department of educational technology, department of industrial technology education and the department of library and information technology. As at the period in which this research was carried out, the available targets are 500l students of department of science education and the 500l students of educational technology.

FULL TEXTS BOOK

The 500l of the department of science education consists of one hundred and seventeen (117) students while the 500l of the department of educational technology consist of eighty (80) students. So, the entire population used for this research study is one hundred and ninety-seven (197) students.

Sample and Sample Technique

The sample of the study were drawn from the entire population of the study using purposive sampling technique. For the purpose of this study, one hundred and twenty-seven (127) questionnaires were distributed. The sample used was adequate for the study base on Krejce and Morgan (1970) required sample computation, since the entire population of the study is one hundred and ninety-seven (197).

Research instrument

The instrument used for data collection in this research study is a structured research questionnaire. The questionnaire is titled "Pre-service teachers' awareness and accessibility to artificial intelligence chatbots for learning". This questionnaire was divided into two (2) sections. The first section examines the personal data of the students. The second section of the questionnaire examine the awareness and accessibility, each item is to be responded by preferred option using five (5) point-ranting scale of: SD (strongly disagreed) = 1, D (Disagreed)=2, U (Undecided)=3, A (Agreed)= 4 and SA (Strongly Agreed) = 5.

Validation of Instrument

In order to ascertain the validity of the instrument used for this research study, the questionnaire was validated by experts in the field of science education department. All observation raised on the instrument was corrected and approved by the researcher's supervisor before it was administered to the respondents.

Reliability of Instrument

To ascertain the reliability of the instrument of the research study, pilot test was carried out on students who were not part of the main study.
The reliability check showed a coefficient of 0.78 Cronbachalpha.

Method of Data Collection

The questionnaires for this research study were administered to the respondents in the selected institution area of study. The respondents were provided with instructions on how to complete the questionnaires. The questionnaire was distributed and were completed before returned immediately by the respondents. There is high return-rate of one hundred percent (100%) of the questionnaires.

Method of Data Analysis

Data collected was analyzed using descriptive (mean and standard deviation) and inferential (Mann whitney) statistics.The mean value of 3.0 was used as the decision rule, the mean value of 3.0 and above was accepted and values below were rejected. Hypothesis was tested at 0.05 level of significance using statistical package for social sciences (SPSS).

FULL TEXTS BOOK

Result and Analysis

Table 1: Analysis of result on level of awareness among pre-service teachers towards artificial intelligence chatbots for learning

S/NO.	Items	Mean	Std. Deviation	Decision
1	I am familiar with the AI software tools used in research and learning	4.43	.752	Accepted
2	I have a good knowledge of what Artificial intelligence (AI) is.	4.16	.995	Accepted
3	Phones, tablets and computers are part of AI tools used for the purpose of learning and research	4.46	.815	Accepted
4	AI is the next big thing to provide solutions to existing educational problems in learning and research	4.18	.955	Accepted
5	I have attended an AI training for research and learning several times	2.77	1.323	Rejected
6	I have a proper understanding of how AI chatbots works.	3.73	1.171	Accepted
7	There is privacy and data security when using AI chatbots in an educational context	3.78	1.007	Accepted
8	AI chatbots provide unique articles which is safe from plagiarism	3.76	1.074	Accepted
9	Students can have access to information by interacting with chatbots faster than interacting with lecturers	4.13	.873	Accepted
10	Chatbots could be used to assess and analyze students' level of understanding	3.87	1.101	Accepted
	Grand mean	3.93	1.00	

Table 1 shows the mean response of the level of awareness among pre-service teachers towards artificial intelligence chatbots for learning. From the findings in the table, majority of the respondents agreed to the statements.The grand mean response to all the statements is 3.93 with standard deviation of 1.00, considering the benchmark which is 3.00. This indicates a high awareness level among pre-service school teachers towards artificial intelligence chatbots for learning.

Table 2: Analysis of result on the level of accessibility among pre-service teachers toward artificial intelligence chatbots for learning

S/NO.	ITEMS	Mean	Std. Deviation	Decision
11	We have learning AI tools included in our school curriculum for teaching and research	2.99	1.400	Rejected
12	There is need to increase the number of available AI tools in my school	3.94	1.167	Accepted
13	We have AI tools in our classroom dedicated to research and learning	2.73	1.360	Rejected
14	I usually download AI tools for the smooth learning and research purpose in my school	3.73	1.269	Accepted
15	I believe the current AI resources in our school are sufficient enough for the purpose of teaching and research	2.99	1.366	Rejected
16	Full access to the department internet facility enables the usage of AI chatbots	3.56	1.239	Accepted
17	As students we are being provided individualized learning materials using chatbot	3.14	1.308	Accepted

FULL TEXTS BOOK

18	Students can obtain information about their tasks, deadlines and important events using chatbot in my school	3.59	1.237	Accepted
19	We interact our lecturers using chatbots in lecture halls	2.82	1.383	Rejected
20	We write assignments using chatbots in my school	2.97	1.408	Rejected
	Grand mean	3.25	1.31	

Table 2 shows the mean response of the level of accessibility among pre-service teachers toward artificial intelligence chatbots for learning. From the findings in the table, respondents showed agreement to five items (12, 14, 16, 17, 18) and they were not in agreement with five items (11, 13, 15, 19, 20). The grand mean response to all the statements is mean = 3.25 with standard deviation of 1.31, considering the benchmark which is 3.00. This indicates a moderate accessibility level among pre-service school teachers towards artificial intelligence chatbots for learning.

Table 3: analysis of on the difference in the awareness of male and female pre-service teachers towards artificial intelligence chatbots for learning?

	GENDER	N	Mean Rank
Awareness	Male	84	68.13
	Female	43	55.93
	Total	127	

Table 3 presents the result on Mann-Whitneyranking of the difference between male and female pre-service school teachers awareness. Analysis revealed that the male pre-service school teachers have the highest mean rank of 68.13 compared to the female pre-service school teachers having 55.93.

Table 4: analysis on the difference in the accessibility of male and female pre-service teachers towards artificial intelligence chatbots for learning?

	GENDER	N	Mean Rank
Accessibility	Male	84	70.32
	Female	43	51.65
	Total	127	

Table 4 presents the result on Mann-Whitneyranking of the difference between male and female pre-service school teachers accessibility. Analysis revealed that the male pre-service school teachers have the highest accessibility mean rank of 70.32 compared to the female pre-service school teachers having 51.65.

Testing of hypothesis

Hypotheses 1: there is no significant difference between male and female pre-service teacher awareness towards artificial intelligence chatbots for learning.

Table 5: Mann-Whitney Test

GENDER	N	Mean Rank	Sum of Ranks	Mann-Whitney U	Wilcoxon WZ	Sig.
Male	8468.13	5723.00				
			1459.000	2405.000	-1.773.076	
Female	4355.93	2405.00				

Significant at ≤ 0.05

FULL TEXTS BOOK

Table 5: presents the result on the difference between male and female pre-service school teachers awareness. Analysis revealed that the male pre-service school teachers have the highest mean rank of 68.13 compared to the female pre-service school teachers having 55.93. Mann Whitney U test analysis. From this data, it can be concluded that awareness among pre-service school teachers was statistically not significant (U 1459.000, p = .076). This result indicates that there is difference in awareness level between the male and female pre-service school teachers.

Hypotheses 2: There is no significant difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning.

Table 6: Mann-Whitney Test

GENDER	N	Mean Rank	Sum of Ranks	Mann-Whitney U	Wilcoxon W	Z	Sig.
Male	8470.32	5907.00					
				1275.000	2221.000	-2.708	.007
Female	4351.65	2221.00					

Significant at ≤ 0.05

Table 6 presents the result on the difference between male and female pre-service school teachers accessibility. Analysis revealed that the male pre-service school teachers have the highest accessibility mean rank of 70.32 compared to the female pre-service school teachers having 51.65. Mann-Whitney U analysis on difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning was statistically significant at U 1275.000 P = .007.

Discussion of Findings

The grand mean response to all the statements is 3.93 with standard deviation of 1.00, considering the benchmark which is 3.00. This indicates a high awareness level among pre-service school teachers towards artificial intelligence chatbots for learning. This finding is supported by the findings of Owolabi*et al*., (2021) who examined the awareness of academic about artificial intelligence and their perception of its relevance in managing university libraries in Nigeria. The findings revealed that high awareness level of AI technologies, particularly in library operations. The study participants see artificial intelligence technologies as tools to send them back to the labor market if the library managements adopt AI for library operations.

The grand mean response to all the statements is mean = 3.25 with standard deviation of 1.31, considering the benchmark which is 3.00. This indicates a moderate accessibility level among pre-service school teachers towards artificial intelligence chatbots for learning. This finding equally supports the findings of (Ikedinachi, et al., 2019) who stated that knowledge about and access to AI among students is one of the long-term consequences of increasing the emergence of AI technological devices for educational purposes.

Analysis revealed that the male pre-service school teachers have the highest mean rank of 68.13 compared to the female pre-service school teachers having 55.93. Mann Whitney U test analysis. From this data, it can be concluded that awareness among pre-service school teachers was statistically not significant (U 1459.000, p = .076). This result indicates that there is no difference in awareness level between the male and female pre-service school teachers. This finding is supported by the findings of Adebayo et al., (2021) who observed that gender does not influence university students' awareness of, access to, and competency in the use of AI for learning.

Analysis revealed that the male pre-service school teachers have the highest accessibility mean rank of 70.32 compared to the female pre-service school teachers having 51.65. Mann-Whitney U analysis on difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning was statistically significant at U 1275.000 P = .007. This finding negates the position of Zawacki-Richter et al., (2019) who reported that students' gender has a significant impact

FULL TEXTS BOOK

on all educational actors in general and in particular on artificial learning intelligence. The researcher stressed that innovation, incorporation, and implementation of emerging technologies are highly gender sensitive. In fact, the researcher reported that women and girls are poorly positioned to benefit from the use of AI because they have less access to specific scientific and technical education and education in general.

Conclusion

The study was under taken to examine science education pre-service teachers' awareness and accessibility to artificial intelligence chatbot for learning. The study found pre-service teachers had high awareness and accessibility level toward artificial intelligence chatbots for learning.The result found awareness among pre-service school teachers was statistically not significant (U 1459.000, p = .076) and the difference between male and female pre-service teacher accessibility towards artificial intelligence chatbots for learning was statistically significant at U 1275.000 P = .007.

Recommendation

1. Provide students with information about the benefits, functionalities, and ethical considerations associated with AI chatbot technologies. This will help students understand how AI chatbots can enhance their learning experience and empower them to utilize these tools effectively.
2. Integrate AI chatbots into the curriculum to expose students to their capabilities and encourage their usage.
3. Ensure that students have access to clear and concise information about AI chatbots, including how they work, their limitations, and the data privacy measures in place. This will address any concerns or misconceptions students may have and promote transparency in the use of AI chatbot.
4. Design learning activities that require students to interact with chatbots, solve problems, and engage in collaborative learning. This hands-on experience will enhance students' understanding of how AI chatbots can support their learning goals.

A CRİTİCAL ANALYSİS OF ARCHİTECTURAL IDENTİTY TRANSFORMATİONS ON EPİDAMN BOULEVARD İN DURRES, ALBANİA

PhD. Dorina Papa, University of New York Tirana

ABSTRACT

This study examines the architectural transformations of Epidamn Boulevard in Durres, Albania, built between the 1930s and 1940s. Originally called Castel Boulevard, and later known as Commerce Road and Mussolini Boulevard, today's Epidamn Boulevard has been a key urban axis that contributed to Durres' development as a modern city. It transformed and modernized the old organic Ottoman town, serving as the primary connection between the port and the new main city square.

This paper critically examines recent architectural changes on Epidamn Boulevard, interventions on the reinvention of 1930s Italian styles and contemporary interventions. It evaluates how modern additions interact with and influence the boulevard's urban identity. The methodology involves archival research, historical photographic evidence, literature review, and current observations to trace changes in design, usage, and cultural significance over time. The study highlights how political, social, and economic shifts have impacted the boulevard's architectural landscape, transforming urban identity, despite most buildings being protected as second-category monuments for they external architectonical value. The analysis extends to the boulevard's aesthetic evolution, considering artistic aspects such as form, decoration, and spatial dynamics introduced by new interventions. By offering a critical perspective on these interventions, the study assesses their impact on the boulevard's aesthetic and cultural landscape. This analysis contributes to the broader discourse on heritage preservation and the challenges of maintaining architectural integrity amid urban development pressures.

Keywords: Epidam Boulevard, Italian influenced architecture, modern interventions

Introduction

Epidamn Boulevard in Durrës is a central traditional axis within the city center. At the beginning of the 20th Century, Durrës, like many other Albanian cities, inherited a medieval appearance. The small ottoman city, build over the various historical layers, featured an organic layout surrounded by massive walls. The conception of Epidamn Boulevard's began in earnest after the independence and the Italian occupation in 1918 and particularly gained momentum after the 1926 earthquake, due to which were destroyed many old buildings in the central area. This period was marked also by agreements with the Italian government, which spurred socio-economic revitalization, the flourishing of sea routes, and the construction of a new port between 1928 and 1934 (Beja, 2012). This era of urban development in Durrës was further accelerated by the establishment of King Zog's monarchy from 1924 to 1939. Significant urban planning initiatives were undertaken to modernize the city, with the Italian administration introducing a comprehensive plan attributed to Italian architects Bosio and Carmigiani to transform the old Ottoman city.

Epidamn Boulevard was one of the key projects of this plan, intended to serve the newly constructed harbor and connect it with the Jalli Gate and the new main city square, while also presenting a modern image to visitors (Miho, 2003). The boulevard's construction began in 1927, prompted by the 1926 earthquake, and continued until 1929. The project led to the demolition of old houses and the creation of a typical fascist front for the city with 2-3 story neoclassical and modern monumental buildings. However, traditional Ottoman houses were preserved in the back parts. This transformation was not only an aesthetic endeavor but also a political and cultural one, reflecting the broader ambitions of the Italian regime to impose a new identity on Durrës.

In recent years, the boulevard has seen several changes, maintaining its morphological original character. However, recent architectural interventions have begun to alter its identity, posing challenges to heritage preservation and urban integrity. This paper aims to explore the architectural transformations of Epidamn Boulevard, focusing on the influence of Italian design between the 1920s and 1940s, and critically analyze the recent interventions that have reshaped its identity. By examining historical records, architectural blueprints, and contemporary interventions, this study seeks to contribute to the discourse on heritage preservation and urban development.

Literature Review: Restoration Theories on Interventions in Uniform Urban Contexts

In uniform and consolidated urban environments, the restoration of a single building must consider the integrity of the broader urban context. Key restoration theories applicable in this setting include stylistic restoration and contextual restoration.

A stylistic restoration approach, as advocated by Viollet-le-Duc, involves the reinvention of historical architectural styles to maintain the cultural and historical integrity of urban environments. Viollet-le-Duc argued for restoration that could recreate a building's completeness, even if it never historically existed in that form, while Ruskin favored conservation without significant alterations (Viollet-le-Duc, 1990; Ruskin, 1880). The 1964 Venice Charter emphasized maintaining the authenticity and integrity of heritage sites in restoration efforts. It advocates for respecting the historical and cultural significance of monuments and integrating historical elements with contemporary needs in a way that is sensitive to the surrounding environment and cultural context (ICOMOS, 1964).

More recent studies highlight the importance of "contextual restoration," which respects original architectural language and materials while incorporating modern techniques and functions. This approach ensures harmonious integration of new constructions or interventions with historical surroundings, preserving the aesthetic and cultural continuity of urban spaces (Jokilehto, 1999; Feilden, 2003). Such practices safeguard heritage while enhancing the urban fabric, making historical sites relevant and functional in contemporary settings (Ashworth, 2011). The contextual restoration approach emphasizes sensitivity to the surrounding environment and cultural context, balancing historical integrity with modern adaptability.

The Architectural Style of Epidamn Boulevard buildings

The architectural style along Epidamn Boulevard is predominantly modern architecture, influenced by the principles of Italian rationalism. However, there are also Neoclassical and Eclectic style buildings, constructed before 1926 (Capeli et al., 2014), that have been integrated into the boulevard, or modern

FULL TEXTS BOOK

buildings with only few decorative elements. Archival records, historical photographs, literature, and architectural blueprints provide valuable insights into the design of the boulevard's buildings. By analyzing these records, we can trace the characteristics of both types and understand the overall design strategy of the boulevard.

Modernist buildings on the boulevard are aligned and feature simple volumetric forms and symmetrical compositions and usually lack ornamentation. Some buildings consist of a stereometric volumes extending in 2-3 floors, while others have a more pronounced central volume that extends to a third level, or are scaled on one side to create a continuity with the other facades in the row. This character creates a sense of grandeur, reflecting the Fascist regime's ideals. Characteristic elements of the facades include large rectangular or round arched windows and doors, as well as balconies. They create repetition and rhythm in the façade (Fig. 4).

Ground floors are typically higher and present large windows or doors in support of commercial activities. The entrances to residential part on the upper levels is often symmetrically placed in the center or on both sides of the facade. For buildings situated at corners, the main entrances are often located symmetrically on the side facade. This symmetry extends to the placement of windows, doors, and balconies. In these buildings we find the use of modern materials such as concrete, glass, and steel. Steel is used for balusters in the balconies and for doors decorations. Bricks are used as decorative materials only in a few cases, to cover part of the façade. Some of this building present roofs while other are terraced.

Figure 4 Analyses of rationalist style buildings in Epidamn Boulevard, Durres

Neoclassical buildings or eclectic buildings in Epidam Boulevard are often symmetrical, with balanced proportions that create a sense of harmony and order and are more imposing. These structures frequently feature columns or pilasters, or various orders. In the basement, but also in the upper level of the façade

FULL TEXTS BOOK

are used intricate stone works such as ashlar stones to highlight the corners of the building, or arches or volumes. The entablature usually presents a flat pediment with a decorated balustrade or undulated shapes pediments in one case and cornice typically adorned with classical motifs such as dentils (Fig. 5).

Neoclassical buildings on Epidamn Boulevard are distinguished by their symmetry and balanced proportions, which create a sense of harmony and order. These structures are often imposing, with features that emphasize grandeur. The buildings frequently feature columns or pilasters, adding a classical element to the facade. Intricate stonework, such as ashlar stones, is commonly used in both the basement and upper levels of the facade. These stones often highlight the corners of the building, adding a sense of solidity and craftsmanship. The entablature typically presents a flat pediment adorned with classical motifs such as dentils. In some cases, the pediment might feature undulated shapes, providing visual interest. Decorated balustrades often crown the buildings, or surround balconies, adding a refined, ornamental touch. Neoclassical buildings sometimes have windows surmounted by triangular pediments or arches with keystones, which serve as strong visual focal points (Fig. 5).

Figure 5 Neoclassical building analyses of facade and decorative elements

Most of the buildings in the boulevard have shutters on the upper levels, as they serve residential functions.

The ornamentation of facades on Epidamn Boulevard varies significantly between modern and Neoclassical buildings. Modern buildings tend to have minimal decorative elements, with balconies typically featuring simple plastered walls and straightforward linear iron railings that emphasize clean lines and functionality. In contrast, Neoclassical buildings boast more intricate details (Fig. 6).

In neoclassical buildings the architectonic order is rarely used. Instead, are used pylons that decorate the spaces between openings with various ashlar construction techniques that imitate stone such as rusticate ashlar, with stonelike blocks with a roughened surface and deeply recessed joints, chamfered ashlar, with edges that are beveled or chamfered and smooth-faced ashlar with moldings around doors and windows, and covering a large part of the façade.

FULL TEXTS BOOK

Figure 6 Columns and pilaster in Epidam Boulevard buildings

Balconies, as the most prominent components of the façade, in neoclassical buildings often have classical balusters with spindle-shaped designs, adding a sense of elegance and historical reference. The railings frequently incorporate geometric patterns such as circles, repetitive small arches, and other classical motifs, reflecting the Neoclassical emphasis on order, repetition and symmetry. Additionally, these balconies are supported by corbels, which can be simple or intricately carved depending on the style, adding an extra layer of detail and craftsmanship to the overall design. Modern buildings present mostly balconies with simple iron rails, geometric patterns or lack any type of decorations (Fig. 7).

The buildings along Epidamn Boulevard feature two primary types of windows and doors: rectangular and round-arched. These elements are arranged either singularly or in pairs or triplets which is very rare, contributing to the facade's rhythm and harmony. In modern buildings, windows are large and well-defined, typically without frames, emphasizing clean lines and maximizing natural light. Neoclassical buildings, on the other hand, exhibit more decorative features surrounding their windows and doors. These include pilasters, ashlar, pediments, ornate keystones, and other classical motifs. The windows are often framed with detailed moldings and may include mullions, adding to the elegant and refined aesthetic typical of neoclassical architecture (Fig.8).

Recent Interventions: Discussion and Conclusions

Over the decades, the buildings along Epidamn Boulevard have undergone various transformations in response to changing political regimes, economic conditions, and cultural shifts. Following the 1990s, numerous commercial activities were renewed, and bars were opened on the upper levels or rooftops of these buildings. During this period, interventions had minimal impact on the facades, though some

proposals included additions to the rooftops. These interventions, while altering the façade proportions, were minimal and primarily executed using glass and steel/aluminum coverings.

Figure 9 Additions on Epidam boulevard Builidngs (Source: Authors)

In recent years, Epidamn Boulevard has experienced a wave of contemporary architectural interventions. After the 90, especially during the 2000, in the terraces of existing buildings were added new structure, for commercial use, mainly bars and restaurants. These interventions were usually set back from the plan of the facade and were implemented mainong with light structures in steel/ aluminum and glass, being transparent and indistinguishable, and allowing a change of proportions in building's façade perception. These interventions consist mainly in one floor plan and are implemented with a minimal style. However, in some cases due to the extended high of the added volume, these interventions result very pronounced.

Recently, the municipality has recently intervened in the facades, plastering and painting them as part of a project to renew the urban fronts of the city center. As a result, the facades of the buildings have been preserved in good condition, although many of the buildings themselves require restoration and, in some cases, complete reconstruction.

However, a series of private interventions, restorations, and new constructions have significantly transformed the character of the boulevard's architecture. These changes have often resulted in the replacement of existing buildings with larger structures characterized by an eclectic and exaggerated style. These new buildings are typically hotel structures. These changes have altered the boulevard's architectural landscape, impacting its historical integrity and cultural significance.

Some contemporary interventions have attempted to preserve and reinvent the Italian styles of the 1930s, blending historical elements with modern design principles. These reinvention raises questions about authenticity, heritage preservation, but on the other hand seem more appropriate and adapt well in this historically significant context.

To illustrate these dynamics, specific case studies of modern interventions along Epidamn Boulevard will be examined, such as the Anfitheater Hotel and Veliera Hotel. The Anfitheater Hotel has utilized existing architectural elements and proportions but added an additional level that is not fully visible from the boulevard due to its recessed design. This non-invasive technique of adding volumes to buildings has been employed in other previous interventions as well.In Veliera hotel was used mostly a conservative approach in the façade, reproposing the original façade. But still there are some orientations towards stylistic restoration, as there are some decorations in the façade which are totally reinvented or reinvention of elements inside the same style. Still, they are not so significant to change the whole image of the building (Fig.10).

FULL TEXTS BOOK

Figure 10 Conservative approach in restoration with small hints of stylistic restoration

Other interventions, primarily reconstructions, have radically reinvented both the architectural style of the buildings and the character of the boulevard through a pseudo-historicism approach (Fig.11). These interventions showcase a maximalist eclectic style, blending diverse influences that deviate from traditional boulevard architecture. Rather than adhering to historical accuracy, these designs imitate various historical styles, ultimately transforming the visual identity of the boulevard.

Figure 11 A pseudo-historicism approach in reconstruction of Boulevard Epidamn buildings.

Conclusions and critical perspective

Heritage preservation in rapidly developing urban areas presents numerous challenges. However, from a sustainable development perspective, it is crucial to preserve the urban identity and the city image of consolidated areas, as exemplified by Epidamn Boulevard in Durres. To maintain the historical integrity of Epidamn Boulevard, specific guidelines should be established for any modifications to facades.

In cases of new additions, it is important to use light and reversible materials such as steel, aluminum, and glass. These materials ensure that new additions do not obscure the existing architectural style. Recessed additions should be promoted to minimize the visual impact on the boulevard's skyline. This technique allows for the creation of new functional spaces without significantly altering the historical facade proportions. Additionally, the use of glass blends well with existing structures and maintains a minimalistic appearance, reducing visual intrusion on the historical facades.

As regarding the restoration of the existing façade, is important to preserve original façade, to ensure that the visual appeal of the boulevard is sustained over time. In case its necessary to replace elements in the façade such as windows and doors, they must be similar to the existing in visual terms. This will help maintain the historical identity of the buildings.

In case of new constructions due to the degradation and very bad conditions of the buildings, its important to use the stylistic approach in order to have a contextual architecture. So, it possible to reinvent the neoclassical or rational stile of the existing building, being faithful to its architecture and to the context of the boulevard style.

ABSTRACT
This work aims to create a serious game, which presents a new means of communication between the tutor and the hearing-impaired child. Behavioral problems in hearing-impaired children due to lack of communication constitute an embarrassing situation. The proposed solution is in the form of a serious game based on Arabic and French sign language. For the realization of this game we used two methods of communication and learning, the Picture Exchange Communication System "PECS" and the Applied Behavior Analysis "ABA" method, used especially for the education and learning of autistic children. This game consists of reinforcing learning in a simple and attractive way, so the deaf child does not get bored while learning. The knowledge to be taught to children are respectively; learning letters, words, numbers and arithmetic operations (addition and subtraction), we used a very familiar games like puzzle, hidden object and others.
This work was tested in a center for non-communicating children's, the tutors appreciated the behavioral improvement of deaf children, during work sessions.
Keywords : Serious games, Apprenticeship, hard of hearing, Applied Behavior Analysis, PECS, Arabic sign language (LSA), French sign language (LSF)

INTRODUCTION
Technology represents the most important and innovative revolution that has marked humanity over all these years. Relying on it has become necessary in many fields, such as the design of educational content which constitutes a primordial phase in the teaching process, according to Kanika Budhwar, technology plays a major role in all areas mainly in the education sector [1]. It intervenes for the transmission of knowledge, to convey messages in attractive and fun ways, such as serious games, according to Wong et al serious games encompass a wide range of content intended for education [2]. All these studies reinforce that the use of technology for disabled children is necessary and useful at the same time and sometimes it can be challenging, taking as an example children with hearing impairment according to the testimonies of people in the domain their education is difficult, and it requires a lot of effort and patience especially since they may sometimes suffer from visual-spatial cognitive deficits, [3]. So making games for these children represents a plus in the field of computer programming education. Therefore we decided to target this category of disabled children in our work wich aims to ensure the learning of Arabic and French sign language for deaf and mute children.

DEAFNESS AND NON-VERBAL MEANS OF COMMUNICATION
People with hearing disorders are encountered with a serious problem in their daily interactions due to their inability to communicate with others effectively and this prompted the use of new methods of communication, for example sign language wich is a visual-gestural language. According to fischer [4] sign language is communicated through a gestural/visual channel rather than vocal/auditory. It is used particularly by the deaf and available in several languages, French Sign Language (LSF), Arabic Sign

FULL TEXTS BOOK

Language (LSA) and American Sign Language (LSA)...etc. Manual communication (use of hands, orientation of fingers, arms or body), is the means used to convey meaning in sign language. We can also cite MAKATON which represents a communication and language assistance program which was developed in the 1970s by speech therapist Margaret Walker, this language is used by a large community of users of different ages and abilities. , The signs used are taken from British Sign Language (BSL). Another means used for communication and education is learning based on images such as the PECS method, created by Bondy & Frost, is a pictorial system, developed for children suffering from communicative impairment [5] it involves the physical exchange of images to communicate with another person for the purpose of asking or commenting.

RELATED WORKS

Several works have been carried out in the field of computer research intended for deaf children, Nahid Nasiri and his team have created a serious game in which deaf children can learn to pronounce specific words that they are supposed to know before the age of 7 years [6]. Cano and his team created a serious game for hearing-impaired children called MECONESIS designed for children between 7 and 11 years old by taking into consideration a set of aspects, such as challenges/learning, interaction, and rewards, [7]. The authors of this work presented a new serious game in sign language for deaf children aimed at raising their awareness in a fun way about the necessary precautions during the anti-covid-19 epidemic [8].

SYSTEM ARCHITECTURE

The system architecture is divided into two stages, the first is based on learning via an image-based course related to sign language, the aim of this stage is to familiarize deaf children with the different signs of language while learning, the second stage is an acquisition stage carried out in the form of exercises, it consists of reinforcing learning in a simple and attractive way so that the deaf children does not get bored while learning.

Our system is designed to teach deaf children; letters, words, numbers and arithmetic operations (addition and subtraction).

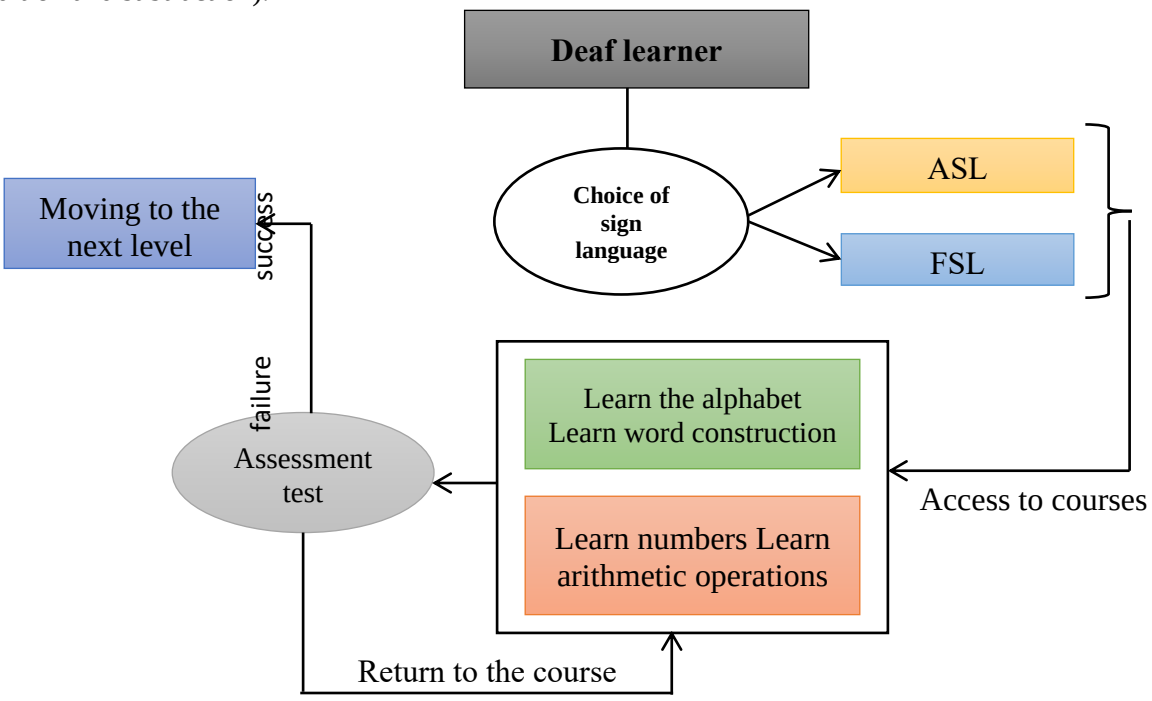

Fig 1. General system architecture

FULL TEXTS BOOK

GAMES DESCRIPTION

The type of games presented in this work are inspired by games previously designed for ordinary children, such as puzzles, hidden objects, car racing, etc., but in sign language version, therefore the Communication with the child is done through images and each activity includes a lesson and an evaluation test presented in the form of a mini game.

First the child must choose his learning language Arabic or French in sign language, then he must choose the desired learning activity, after that the child must choose between lessons and tests, the lessons are presented in different contexts (object, fruit, animals) so that the child does not get bored.

LEARNING SIGN LANGUAGE

This stage is about learning the language and is carried out in the form of lessons.

Category of games for the Arabic Sign language ASL

The puzzle game in our work is designed to teach Arabic letters. It consists of two levels. The player cannot move to the second level before he successfully completes the first one. It depends on presenting to the player a picture of a letter in sign language, in addition to three different written letters, where he must put together the parts of the picture and identify the correct written letter corresponding to it (Fig 2 and Fig 3).), The duration of the game is limited to 60 seconds.

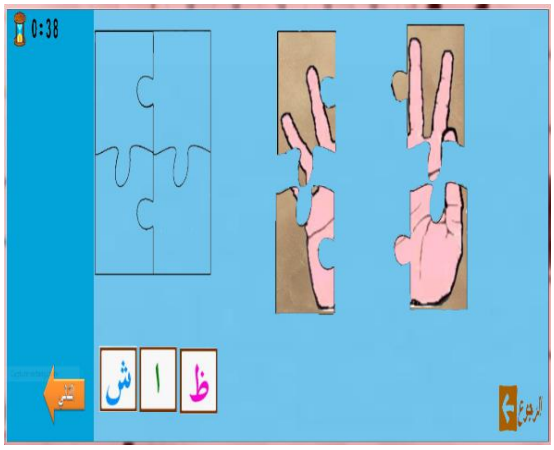

Fig 2. level 1 puzzle game

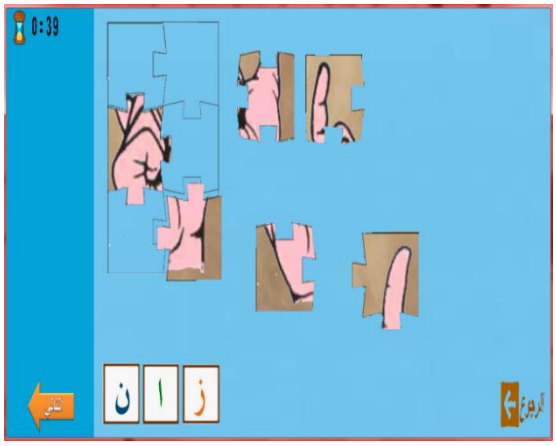

Fig 3. level 2 puzzle game

Category of games for the French Sign language FSL

In this game, the player must help the child find his missing puppy by identifying the correct written French letter corresponding to the image of the sign letter appearing in the game background (Fig 4)

Fig 4. Learning game for French Sign Language FSL

CONCLUSION AND PERSPECTIVES

Normal children gradually learn with their five senses, while deaf children live in a silent world where gestures are the only way for them to learn, develop, and interact with their surroundings and society in general.

Given the technological development we are experiencing today, it has become necessary to rely on it in teaching children with disabilities, for example serious games, which are considered one of the most promising solutions in terms of educating deaf children, because it enable them to communicate with others and obtain the appropriate education for them and also it facilitate their effective integration in their community.

We relied on two teaching methods, ABA "Applied Behavior Analysis" and PECS "Pictures Exchange Communication System", which ensured remarkable learning and education of deaf children. Collecting the different signs was the most crucial point for the creation of our game. This game was tested by deaf children in a specialized education center for deaf children, where the tutors appreciated and approved the game.

As a perspective we aim to add other educational activities, develop another version of the game in 3D and add the learning of other sign languages, as well as make the game multiplayer by adding collaborative scenarios.

THE ROLE OF BLOCKCHAIN TECHNOLOGY IN PUBLIC ADMINISTRATION

Doç. Dr. Adnan SÖYLEMEZ,
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu
Doç. Dr. Duygu İLKHAN SÖYLEMEZ
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu

ABSTRACT

Public administration is undergoing processes whereby blockchain technology is believed to be a breakthrough system that provides transparency, accountability, and efficiency. The present paper presents a few case studies from all over the world concerning the functionality and benefits of blockchain technology. Beginning with a brief introduction to blockchain technology, it underlines decentralized, immutable, and secure parameters as the main features.

It helps cage fraud, saves administrative costs, and makes procedures more efficient by providing transparent and secure records of transactions. Contrariwise, Estonia's e-Residency program is applying blockchain-based digital identity to avoid interacting with criminals.

This means that interoperability, easy scaling, and regulatory compliance should be the goals, especially when considering blockchain on a broad scale. Indeed, this will only be achieved through combined efforts of governments, technology providers, and regulators. The paper, thus, calls for standard protocols and comprehensive educational and training programs to make the application of blockchain technology smooth.

It simply means that despite the great opportunities blockchain technology offers toward making public administration better, solving the challenges occasioned by this technology is of essence. Therefore, strategic collaboration, backed by facilitative legal and regulatory frameworks and broad stakeholder education, would be required if the full transformational power of blockchain technology were to be realized in its entirety. In the final analysis, this would make government operations transparent, efficient, and reliable, hence a promising future of public administration.

Keywords: blockchain technology, public administration, transparency, digitalization

1. INTRODUCTION

Blockchain technology is generally a decentralized, immutable ledger that transparently and securely records and verifies transactions (Syedhasnaatabbas, 2024). It makes use of cryptographic methods, data decentralization, and the formation of immutable ledgers that assure the integrity and security of data (Ravikiran, 2024).

The fact that blockchain technology is capable of eliminating a central authority or entity makes this a potential avenue for enhancing the reliability and security level of concerned services on which people and societies depend. There is greater transparency in digital record tamper-proof ownership with no central controlling authority (Lykidis et al., 2021). This reduces the possibility of discrepancies or ulterior motives. Those applying for identification documents or requesting property records would not need to sweat over whether decisions provided the highest levels may have implications that made the lowest levels of information less trustworthy (Syedhasnaatabbas, 2024)(Lykidis et al., 2021).

The very concept of establishing transparency and security as the very foundations is a novelty, as it introduces life into the most accessible and transparent record, like a sunny day without clouds and clearly forever; this kind of idea opens up scope for a wide range of applications. It is the ability of people to trace the movement of goods across borders, check if the money in their pockets is authentic, and validate if each person in authority they meet is genuine that builds the bedrock of everyday trust in incremental fashion (What Is Blockchain on AWS?, n.d.). Blockchain technology has huge potential for transforming public administration with respect to radical improvements in transparency, accountability,

FULL TEXTS BOOK

and efficiency. In that regard, blockchain technology is in a position to reform the way public institutions collect, store, and process data, thus reducing problems associated with data integrity and security and eventually building trust between citizens and public institutions.

There are many potential use cases for blockchain in public management, most of which have a high impact on several aspects of government operations.

This case, which enabled the so-called overposting by the state government of South Tyrol in Northern Italy, in combination with a corporation from Germany—SAP—alone exemplifies how blockchain technology can be used to increase the efficiency of very complex administrative processes (Sillaber, 2020). The case study focused on cell tower construction, involving a large number of players: government agencies, telecommunication operators, and citizens. Traditionally, the process for constructing cell towers is cumbersome, usually associated with large volumes of documentation, manual authorization procedures, and a lack of transparency. This can lead to delays, inefficiencies, and corruption. The state government of South Tyrol and SAP used blockchain technology to develop a platform for all administrative procedures involved in the construction of cell towers. This tool is called "Blockchain for Tower Construction," and it was developed with the idea of digitalizing and automating the whole process, starting from the planning stages right through to the final approval stage (Icoadmin, 2023). The blockchain technology could significantly reduce public expenditure by providing a means of digitization, access, and efficiency to services towards citizens.

Privacy issues are, therefore, very critical in the context of e-government services since most of the services being rendered call for the processing of sensitive personal data, whose protection from unauthorized access is paramount (Bustamante et al., 2022). It is of essence to ensure the security of the data at all instances of its entire life cycle, from the time of collection to the time of storage and processing. Accordingly, proper measures should be taken to rule out any possibility of unauthorized access, theft, and misuse of the data, conditioned by Lykidis et al. (2021). There has to be a striking balance between transparency and privacy throughout every aspect of blockchain solution implementation in public administration.

The intrinsic nature of blockchain technology is that of transparency and integrity; sometimes, these principles are contradictory to the need to protect sensitive information and preserve individuals' privacy. On the other hand, blockchain technology can provide an immutable, transparent record of transactions and data that, without question, will help avoid fraud and corruption and boost accountability in public administration. Moreover, it can result in enhanced trust in the government and the involvement of people with more efficiency in the decision-making process. The potential of blockchain technologies for changing public administration is huge and diversified across a wide number of domains.

The role of blockchain in public administration will be aimed at being analyzed in this paper by going through the various aspects related to its applications, benefits, and challenges with the help of an in-depth study of available literature supported by case studies. This paper therefore contributes to this rapidly increasing production of literature on blockchain in public administration through the synthesization of existing knowledge and detection of research gaps. It also seeks to enlighten policymakers and public administrators in authorities considering block chain solution implementation with valuable insights in this area. Blockchain technology potentially has the capacity to bring in more transparent, effective, and trustworthy government operations.

Governments have to take seriously a blockchain-based system for improving public services and citizen participation. For instance, blockchain can be utilised in the development of secure and transparent voting systems to protect electoral processes. Blockchain-based supply chain management systems can, besides, be used by governments to set a trace on the distribution of commodities and services, hence decreasing the possibility of fraud and corruption. This would further enhance the efficiency of government activities. The automation of processes and the reduction in the need for intermediaries that

FULL TEXTS BOOK

blockchain makes possible will cause streamlining in various services offered by the government, accordingly reducing time consumption and cost quadrant involved with them. For example, blockchain-based land registration systems can help governments speed up the process of property ownership transfer, consequently reducing the requirement for intermediaries and increasing the speed of transactions.

Yet, there exist some major challenges to its successful implementation of blockchain technology in public administration.

The major challenge is regarding the need for an apt and rigorous legal and regulatory framework. The working of blockchain technology itself is not dependent upon any existing legal and regulatory frameworks; this tends to produce confusion and ambiguity. Clear guidelines and regulations from governments need to be issued on the usage of this technology to ensure blockchain, given how it will be deployed, runs in tandem with their goals and values as stated. In addition, it requires specialized skills. The successful implementation of blockchain technology requires special expertise that the government needs to cater to through training, and it will ensure that enough professionals are hired who have had training in implementing and managing blockchain solutions. Moreover, governments have to make sure that their IT infrastructure can support blockchain technology.

Taken together, blockchain technology can open many opportunities for transforming public administration in aspects concerning transparency, effectiveness, and reliability. However, to finally establish this, it requires a perfect plan backed by a legal and regulatory regime, which itself must have firsthand preceded a competent workforce. With applications, benefits, and challenges quantified, the paper elucidates insights for policymakers and public administrators eyeing blockchain solution adoption.

2. BENEFITS OF BLOCKCHAIN IN PUBLIC ADMINISTRATION

Blockchain technology holds the potential to change public administration with added transparency, accountability, and efficiency. It can also help governments and public institutions engender trust, protect data, and reduce costs. In addition, blockchain technology can help in reducing corruption, improving land and property registry systems, and protecting data with a robust use of encryption mechanisms. Not only that, blockchain can automate and secure transactions, cut down fraud, facilitate communication among the far-flung administrative bodies, and whatnot.

However, there exist a couple of challenges—legal and organisational—to the full implementation of blockchain in public administration. It is incumbent upon governments and organisations to provide requisite adjustments at these two levels of challenges for the full deployment of blockchain technology benefits.

In a nutshell, blockchain technology has the potential to make far-reaching changes in public sector operations across the globe, paving the way for much improvement in transparency, accountability, and efficiency. The immutability of blockchain records, the security of their transactions, and automatization itself can convey huge gains for the security, transparency, and efficiency of both public institutions and citizens.

3. CASE STUDIES

The case studies represent applications and impacts of blockchain technology in various domains of public administration: e-residency, food safety, healthcare, supply chain management, voting, and drug traceability. Case studies illustrate that blockchain technology has huge potential for making public services more efficient, secure, and transparent, and can solve many challenges governments and organizations face.

Estonia's e-Residency Program

FULL TEXTS BOOK

It is undeniable that when it comes to the digitization of public services or adoption of blockchain technology, Estonia stands at a highly pioneering position. The country has been able to make reasonable headway in integrating blockchain technology into several aspects of public administration, including the implementation of e-residency, identity verification, and voting systems (Bitton, 2022).

E-residency is a program designed to help non-citizens get a foothold in Estonia so that they can access a range of digital services pertaining to establishing and managing a business, filing taxes, or gaining access to healthcare services. It has had remarkable success, with more than 50,000 e-residents having been signed up since the program's launch in 2015 (Abaku et al., 2022).

Besides, Estonia has developed a blockchain-based identity verification system where citizens can verify their identities online at their own convenience and safety. It finds incorporation into various public services, including the tax authority, police, and healthcare system, among many others (Idefy.Admin, 2023).

State Government of South Tyrol, Italy

They partnered with SAP to overcome the cumbersome administrative process related to building and modifying cell towers. Quite often, mounds of paperwork dampen the spirit, and you end up holding back simply because that red tape will be exhausting to work through. Hence, the decision to implement the new-age technology provided by blockchain in the interest of more easily and effectively administered business was taken (Talapina, 2020).

The key goal of this action plan was to provide more accessible and open administrative governance, with the short-term goal to restore public confidence. The intention was to make a proof to the public that the public institution was capable of things that are brought to completion within the required time frame. This is a major step forward (Treiblmaier & Sillaber, 2020).

This case study, therefore, provides evidence that new ways of managing public services must be conceived of. The use of blockchain is not the goal, just a way for its potential to be completely realized and for our lives to be enriched. It is, therefore, encouraging to see how South Tyrol is taking the lead in exploring new paths to help improve its administrative process.

Denmark

The Danish Tax Administration has cooperated with a private company called Nets to establish a new digital solution: Vehicle Wallet. Via this innovative system, blockchain technology will ensure safe and decentralized storage of critical vehicle data in a decentralized, public ledger and further decentralized storage for the same (Nascimento et al., 2021).

What are the implications of this development, then? The system provides for a uniform and reliable way of tracking information related to vehicles. Irregularities or fraudulent activity can thus easily be identified. This will ensure that information provided is accurate and reliable.

This initiative is part of a much larger, more complex system. Denmark is working on applying blockchain technology to various processes with the goal of saving money on operations and eventually eradicating the use of repetitive manual labor. This would make the procedures more streamlined, so convenience improves for all stakeholders in these processes (Nascimento et al., 2021).

Probably the greatest kudos to Denmark has to be in embracing blockchain technology and implementing it in a bid to increase the efficiency and streamlining of its taxation apparatus. The objective is how innovative solutions can improve the quality of our daily lives.

Real Estate Management System

A blockchain-based real estate management system (REMS) has been developed. As a result, it has turned out to be feasible to implement this innovation and thus prove the possibility of its work in other fields of public administration. This is a very promising development (WEF Blockchain Toolkit, n.d.).

This then calls for the question of the exact nature of the REMS's role. The system makes it easy for the issuance of documents to the citizens in a more efficient manner. It is also widely acknowledged that paperwork may usually be quite annoying and wearisome to finalize. The system, therefore, makes that

FULL TEXTS BOOK

task easier, hence increasing the efficiency in the disbursement of services in the public arena. The purpose is to make the process easier for all parties involved and thus enhance efficiency in public service delivery (Block chain toolkit, WEF, n.d.).

However, it has other advantages conferred by the system. In addition, blockchain technology is in use in property and land registry systems. All these initiatives are meant for people to acquire their due rights and to minimize chances of corruption; all of it is done to strike a balance between efficiency and equity. In fact, case studies go on to enumerate hundreds of use scenarios of blockchain technology in the public administration stream. The purpose here is the same: to enhance transparency, efficiency, and government processes. Accordingly, the most important thing then becomes transparency in our systems and belief in the way they are operated by the public. Confidence in working systems, therefore, is paramount to the public (Abodei et al., 2019).

It is refreshing, therefore, to witness the actualization of blockchain technology in projects with aims of seeking efficiency and transparency in processes of public administration. Incremental changes are to be introduced to strive for optimal outcomes.

4. CONCLUSION

It has been shown that blockchain technology is able to solve some of the století-inherited problems of governmental activity—bringing more transparency, efficiency, and trust into the process. This overview enables case studies and research on the possible benefits resulting from the implementation of blockchain technology within a number of areas, starting from digital identity management and land registry flow to voting systems and aid distribution processes. On the other hand, one should not turn a blind eye to the challenges this may potentially pose. Any implementation of blockchain technology in public administration will have to take into consideration the technological, organizational, and institutional factors involved. To achieve broader diffusion, a number of key issues must be identified and addressed in the blockchain technology, related to scalability, interoperability, and regulatory compliance. Critical concerns of security and privacy, more so where sensitive data is kept—like voting systems—then become imperative. That is why rigorous testing and robust measures in security are the most important things to be implemented before large-scale application of blockchain tech.

Another important aspect to be taken into consideration when talking about blockchain is environmental: in particular, the energy use of this technology. Specifically, in relation to the imperatives that governments have to follow with respect to sustainability, it is of paramount importance to be able to measure and reduce as much as possible the energy use of blockchain systems. Therefore, examining more energy-efficient consensus mechanisms and using renewable energy sources for blockchain operations could, therefore, play an important role in attacking this challenge.

The potential for blockchain technology is huge, despite these challenges, within the context of public administration. It acts as the enablement factor for smart governments, focused on efficiency, transparency, and citizen-oriented services. The technology can create transparent, immutable records that have the potential to fight corruption and increase accountability within the government sector.

A number of key strategic objectives ought to be pursued to take the development of blockchain technology ahead in the final analysis within the context of public administration. These would seriously require detailed research and development, transparent regulatory frameworks, and enhanced institutional capacity in government organizations. It is very important that governments, technology providers, and academic institutions come together to facilitate innovation and knowledge.

In other words, even though blockchain technology has the potential to improve public administration, what is required is a cautious and strategic approach. Balancing innovation with risk assessment is very critical. If the intrinsic strengths of blockchain are harnessed and intrinsic weaknesses overcome in its implementation, then it should be possible to evolve public administration relevant to a digitized world. This will result, overall, in more open, effective, and reliable government operations.

FULL TEXTS BOOK

The application of blockchain technology in public administration is in its very infant stage, and there is so much yet to be observed. Future research should accordingly focus on the long-term implications, strategies for the surmounting of the barriers to adoption, and societal impacts while applying blockchain-enabled government services. Blockchain can reshape the relationship between governments and citizens into a new epoch of public administration, typified by increased trust, efficiency, and democratic participation in the process of evolution. A bright future is surely ahead.

CREATING AN INCLUSIVE CITY: THE EXEMPLARY BARRIER-FREE PROJECT OF KONYA METROPOLITAN MUNICIPALITY

Doç. Dr. Adnan SÖYLEMEZ,
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu
Doç. Dr. Duygu İLKHAN SÖYLEMEZ
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu

ABSTRACT

This "Exemplary Barrier-Free City Project" has been initiated by Metropolitan Municipality for making disabled persons a part of the city life in more ways than one. Under the scope of a protocol signed with the Prime Ministry's Disabled Persons Administration in 2008, this project forming a series of arrangements and investments enables the moving around the city much easier and safer for disabled people. Winning first prize at the 'Barrier-Free City Idea and Project Competition' by the Union of Municipalities of Turkey, the visions drawn by the project remain from this wide array toward the development of disabled individuals' living spaces. Acknowledged to be a best performing project by the Ministry of Family and Social Services in 2021—which, as long as a best performance is stated in funding and commendation decisions to be effective for its impacts—the initiative covers 17 districts of Konya. It includes connections of many hospitals and improvements related to key routes, like the Konya Station-Alaaddin Hill axis and the Mevlana Cultural Centre. Among them are the presence of public establishments' sidewalks and entrances to the premises having no barriers, the availability of more than 114 kilometers in length of barrier-free public roads, 210 acoustic signaling systems at busy pedestrian crossings, and 61 low-floor buses among the city transportation fleet used for servicing passengers with limited mobility. Efforts to support the visually impaired also ensure their independent and safe movement within the city. It is pioneering works for Turkey with the project, and Konya not only for prominent representative of love and tolerance but the life quality of the disabled people has been risen with sociocultural participation. This project being exemplary in other cities with accessible and well-designed social life has a potential for more expanded life quality levels for the disabled people, also increasing social contribution.

Keywords: Barrier-free city project, Konya Metropolitan Municipality, disabled transport, acoustic signalling, social cohesion.

1. INTRODUCTION

In this context, a barrier-free environment is not only planned for people with disabilities, but an exemplary city that will become a symbol for all the other cities to make everyone's life easier. The urban environment creates a great many restrictions for disabled people to involve themselves in social, economic, or cultural activities, and this inconceivably leads to negative implications. Realizing and detecting these problems for a long time, the Konya Metropolitan Municipality initiated the "Exemplary Barrier-Free City Project," which was supportive of enabling people with disabilities to move freely and safely within the city. This will be based on universal design and powered by inclusivity, which in the end allows everyone to have a principal access to any public space and service, regardless of their individual capability.

It all started in 2008 when a protocol was signed with the Prime Ministry's Disabled Persons' Administration. This basic protocol has paved the way for an overall series of arrangements and investments where the biggest target was to remove the physical and social barriers in the city, thus integrating this segment into the active urban life and creating a quality lifestyle for the impaired people.

FULL TEXTS BOOK

Among the remarkable successes of the project was the first-place award at the 'Barrier-Free City Idea and Project Competition' that the Union of Municipalities of Turkey organized. The award was presented in recognition of the project's originality and its potential to be used as a model for other cities. In 2021, it also received a further award by the Ministry of Family and Social Services for its tremendous impact and contribution to giving funding to further develop the project.

The "Sample Barrier-Free City Project" among the 17 districts in Konya includes a series of upgrading infrastructure and accessibility. High priority roots are Konya Station - Alaaddin Hill axis and Mevlana Cultural Centre. In those areas, there are barrier-free public roads, 114 kilometers of accessible roads, 210 acoustic signaling systems on the high roots of the pedestrians, 61 low floor buses that allow passenger carrying with restricted movements.

In addition to the physical changes, the project has been involved in provisions for the visually disabled with a view to allowing them to make independent movements within the city in a very secure manner. In particular, the sidewalks and public building entrances are changed to make sure that they have no barriers and can, therefore, be easily accessed by the disabled persons in search of services offered in the facility or just basic community participation.

It is unique to Konya and, for that matter, Turkey, in being physically accessible and in introducing the culture of sensitivity and empathy. The image of the city as one of the leading ones not only of love and tolerance but also of the lives of disabled people within is showcased by it. The quality of life of those residents has increased, which is a demonstration of how deep inclusive urban design can touch socio-cultural participation.

Projects like the Exemplary Barrier-Free City Project have, effectively, turned out to be a model of success elsewhere. Its success goes further to underline the essence of fully constituted and community-involved planning in developing a space that effectively accommodates the need of all citizens. Successes like those in Konya, as other cities catch on, bring the potential to make life that much better for people living with disabilities around the world. This project does not only increase social contribution but also helps in creating a healthy and interactive society where all individuals have the opportunity to perform.

2. THEORETICAL FRAMEWORK OF URBAN INCLUSIVITY AND ACCESSIBILITY

Urban inclusivity is replete with accessibility, as a multifaceted concept that is interlinked with the physical layout of the cities and the socioeconomic factors as well as the cultural dynamisms that shape urban life. The 'presidium' plays a fundamental role in this context: by 'presidium', one refers to the constants and active presence of such an economic activity in its facilities, acting like a landmark for a person to pass. This contains not necessarily deter micro-criminal activities, but it could positively impact on citizens' peripheral perceptions by making passersby feel safe (Caselli et al., 2024).

The level of urban inclusivity and accessibility goes beyond the drawing boards and the implementation of other different systems and infrastructures that will guarantee the citizens have access without fear into the city. For example, the development of a Geographic Information System (GIS) database will be functional in mapping and spatial analysis of key urban components: mobility, built-up spaces and open spaces, and morphological/functional and environmental aspects (Caselli et al., 2024). This all-inclusive data model will be important in understanding and improving transparency on how urban accessibility can further be improved.

The Middleware Data Acquisition Component for Accessibility will be to create interfaces for acquiring information from GPS devices and Smart Sensors Networks. This aspect should ensure scalability and availability of the system, reliability in data delivery, and interoperability with different kinds of sensors and technologies (Mora et al., 2017). Moreover, it enables us to realize a scalable system that can address increased computing needs due to the number of citizens interacting with the system and the size of the smart sensor network distributed (Mora et al., 2017).

FULL TEXTS BOOK

Accessibility theory is being operationalized through increased case studies across different geographic, governance, and economic contexts. Some examples are the online platform out of Chicago designed to visualize place-based accessibility in the city, evaluations in Bogota around the principle of affordability, and open tools used in Cairo and Kigali to gain new insights about accessibility (Tomer & Gutman, 2018). Sharing results across these case studies can then further spur new cross-disciplinary approaches in a bid to improve spatial access and rectify accessibility-based spatial injustices.

More pointedly, the design of streets and public spaces is highlighted as a key consideration in ensuring that all users, from pedestrians to cyclists, are properly accommodated. Urban designers and landscape architects can bring new ideas into the planning process for streets that are more sensitive to the needs of all users. For example, lowering city speed limits can significantly lessen the severity of accidents, leading to an even more humane and civil environment (Matz, 2022).

Essentially then, inclusivity in urban spaces will thus also cover extending an environment welcome to all age sets and capabilities. This has equally moved to the forefront among organizations, such as the World Bank, which insists on the need to make cities age-ready and universally accessible (Arai, 2024). Projects like Viet Nam Scaling Up Urban Upgrading Project insist that features and amenities of urban infrastructure should be made inclusive and accessible to persons with disabilities and the senior population (Arai, 2024).

3. THE KONYA EXEMPLARY BARRIER-FREE CITY PROJECT

The Konya Metropolitan Municipality has initiated what it calls the "Exemplary Barrier-Free City Project" in an attempt to really integrate the disabled comprehensively into urban life. This ambitious project, which is implemented within the framework of a protocol signed with the Prime Ministry's Disabled Persons Administration in 2008, includes a wide area of regulation and investments to let disability into the city be easy and safe. The project encompasses the adjustment of public infrastructure through various activities, like fixing lowered curbs, providing ramps, and improving the public transport system in the area to make it also accessible. These are augmented with the creation of an extensive networked barrier-free road and pathway, coupled with the introduction of acoustic signaling systems at busy intersections to assist the partially sighted pedestrians (Konya Büyükşehir Belediyesi, 2008a).

In addition to this, the project implements inclusive policies and practices in the diversification of public services, beyond the physical infrastructure improvements. For example, new constructions in public buildings are characterized by universal design features to ensure that such constructions create an environment that is appealing to all users. The existing buildings are retrofitted to rid off any barrier that hinders access to them. Public spaces, parks, and recreational areas have been redefined to set characteristics of features that have the capacity to cater to different abilities of people, thus facilitating them in using and fully enjoying these areas comfortably (Konya Büyükşehir Belediyesi, 2008a).

In addition, community mobilization is being done towards awareness creation for a culture of inclusivity. Educational programs, as well as workshops, sensitize the general public, municipal staff, and service providers on the needs of the disabled and their rights. The approach is all-inclusive, ensuring that the said city becomes accessible not only physically but also socially. The "Exemplary Barrier-Free City Project" refers to a comprehensive effort that addresses physical and social barriers for people with disabilities and that will insure a city built for all, enabling everyone to equally partake in urban life.

Konya Metropolitan Municipality speeds up its work and turns the city into a model of accessibility and inclusiveness. The mayor has repeatedly stated the existence of 12% of the disabled in the total population of 75 million in Turkey, hence the unflinching determination of the municipality to construct a barrier-free Konya. The Mayor explained that there was a need to change societal attitudes towards disability: the essence of inclusiveness actually should go beyond legal and institutional provisions and

FULL TEXTS BOOK

requires a mindset. He gave an argument that views of disabled individual citizens in name only reflect a much deeper societal impairment and such should be addressed (Konya Büyükşehir Belediyesi, 2008b).

For his part, the Mayor said that the government has taken a very big step lately, considering the considerable work done recently, especially since most of the problems faced earlier have been effectively addressed in light of the strong partnership between the state and the community. He explained that within the last eight years, the municipality has initiated actions that conform to international practices on having no curb or median in this city larger than 8-10 centimeters. The move fits into a larger strategy to transform Konya into a global city and a pioneer in the field of barrier-free urbanism. Stressing that the best approach is one marked by anticipatory disability empathy and sensitivity, the Mayor praised the government's work and pointed out Konya's pioneering work in instituting accessibility protocols with Istanbul. An ongoing promise is to make Konya one of the world's leading barrier-free cities by 2023. This shall represent the example of that kind of inclusive urban planning to be emulated globally (Konya Büyükşehir Belediyesi, 2008b).

Konya Metropolitan Municipality's 'Barrier-Free City Konya Accessibility Master Plan Project' came first in 'Barrier-Free City Idea and Project Competition' held by Union of Municipalities of Turkey. Speaking after the protocol signing ceremony at the Metropolitan Municipality Stone Building Culture and Art, Deputy Mayor Mustafa Uzbaş said that they aim for truly social inclusion of every citizen classified generally as disadvantaged in all areas of life. Uzbaş said this project represented the efforts for raising standards by the municipality toward better access networks in the most used public space, such as places of worship, government buildings, roads, social spaces, and parks, of special importance to the disadvantaged groups (Konya Büyükşehir Belediyesi, 2024).

In 2021, the Ministry of Family and Social Services found the project exemplary and rewarded it, funded it, and praised it. With facilities having numerous hospital connections in 17 districts of the city, from the Konya Station-Alaaddin Hill axis to the Mevlana Cultural Centre, the project is set to improve the life of disadvantaged groups within its scope. The detailed presentation also included representatives of local disability associations (Konya Büyükşehir Belediyesi, 2024).

5. CONCLUSION

The "Exemplary Barrier-Free City Project," undertaken by the Konya Metropolitan Municipality, represents a good example of the strength that inclusive urban planning harnesses and the transformative spiral of changing lives among disabled persons. It has handled the physical and social barriers that exclude people with a disability from the knowledge economy, making sources and opportunities fully available to every person. This initiative speaks to universal design and inclusivity, making sure that public and service places can be accessed by everyone, irrespective of their ability.

Its success is measured by the number of awards the project has already received, among them being the first place at the 'Barrier-Free City Idea and Project Competition' realized under the Union of Municipalities of Turkey. The project was rewarded by the Ministry of Family and Social Services in 2021 and assures its innovative approach alongside the possibility to serve as a model not only for other cities in Turkey but perhaps also in other parts of the world. Thanks to this refurbishment, almost 114 kilometers of accessible roadways were created, alongside 210 acoustic signaling systems and 61 low-level buses, raising the quality of life and safety for disabled people in Konya.

The project is also concerned with the support of the visually impaired and ensuring the free entrance in the public buildings and services. This really proves that the implementation of inclusivity is full. Sensitization as well as formation of an attitude of empathy and sensitivity in the communities further strengthens the impact tendencies that this project has on the community. The commitment made by the Mayor to change society's attitude toward disability and to make a social and physically accessible city can be now a benchmark for other municipalities.

FULL TEXTS BOOK

The example of the "Exemplary Barrier-Free City Project" in Konya ideally illustrates how positive changes in the lives of physically disabled people can result from inclusive urban design. This has helped lots to make Konya a better city for its disabled population, besides also serving as a precedent for other cities to build more inclusive and just urban spaces. Success of the project emphasizes the part where comprehensive planning is needed, community stakeholders are involved, and follow-through with commitments to design cities according to universal principles for all. Success in this matter means normalization for disabled people other than in a better world quality of life, thus creating an inclusive and cohesive society.

HARNESSING ART OF ORATORY AS A VIABLE TOOL FOR ENTREPRENEURSHIP EDUCATION AND IGR IN NIGERIAN TERTIARY INSTITUTIONS

[1]Ajayi, Olayemi T. and [2]Oginni, Yemi *PhD*
[1] Department of Art and Design, The Federal Polytechnic, Ilaro, Ogun State, Nigeria
[2]Department of Mass Communication, Lead City University, Ibadan, Oyo State, Nigeria

ABSTRACT
The salient need for innovation, job creation, technical skills, among others, propelled the conception of entrepreneurship education in Nigeria by the President Obasanjo-led administration in 2006; while it was mandatorily injected into all tertiary institutions in 2007/2008 session. Therefore, with the impacts of entrepreneurship trainings, though rated to be effective so far, yet with the few vocational skills being employed by governments, NGOs and stakeholders to expose the youths to entrepreneurship, this is already signaling danger of toxic competition. Hence, it beckons for immediate integration of more vocational skills to augment the existing ones which are already becoming congested by the available massive benefactors across the nation. In the wake of this, the study seeks to canvass public speaking otherwise known as oratory, as a viable vocational skill that can also be maximized to further achieve the aim and objectives of entrepreneurship education in Nigeria. This will materialize the reduction of the torrent of youths bombarding the existing few vocational skills amidst lethal rivalries. This study is moored on the dialogic theory of public speaking. It seeks to inform the feasibility of public speaking as a viable vocational skill through which entrepreneurship education can be made to be more effective. It recommends, among others, that asides training students, the art of public speaking could also be maximized from the perspective of having a hub for oratory which could serve as internally generated revenue for institutions; especially the poorly funded Nigerian tertiary institutions
Keywords: Oratory, Internally Generated Revenue, Entrepreneurship Education, Vocational Training

1.0 Introduction

Entrepreneurship education has become a critical component of the educational landscape in Nigeria, driven by the pressing need for innovation, job creation, and the development of technical skills (Emeritus, 2023). In response to these imperatives, the President Obasanjo-led administration introduced entrepreneurship education in 2006 (Ajayi, 2019), mandating its implementation in all tertiary institutions in the 2007/2008 academic session. Over the years, this educational initiative has demonstrated its effectiveness, equipping students with essential entrepreneurial skills. However, the approach to entrepreneurship education in Nigeria has predominantly revolved around the dissemination of vocational skills, which are critical but also somewhat limited in scope.

As Nigeria's population burgeons (United Nations, nd), the demand for entrepreneurship education has surged. Various stakeholders, including governments, non-governmental organizations (NGOs), and educational institutions, have intensified their efforts to provide this education to meet the growing demand. Yet, the continuous reliance on a narrow set of vocational skills raises concerns about an emerging threat of toxic competition among students. The existing vocational skills have become overcrowded, primarily due to the increasing number of beneficiaries across the nation. This presents a unique challenge, and it is essential to explore innovative approaches to supplement existing entrepreneurship education methods effectively.

This study aims to explore an alternative perspective, one that seeks to introduce a novel dimension to entrepreneurship education in Nigerian tertiary institutions. We propose to investigate the role of public speaking, or oratory, as a valuable vocational skill that can significantly contribute to the attainment of the goals and objectives of entrepreneurship education in Nigeria. By incorporating oratory into the

FULL TEXTS BOOK

curriculum, we hope to reduce the pressure on the limited array of vocational skills currently available, thereby alleviating the challenges of intense competition and broadening the scope of entrepreneurship education.

The foundation of this research is built upon the dialogic theory of public speaking, emphasizing the importance of effective communication and dialogue in education and society. Additionally, we draw from the theory to explore how the development of oratory skills can enhance students' personal attributes, such as confidence, leadership, and interpersonal skills, which are vital for entrepreneurship. The study seeks to evaluate the feasibility of integrating public speaking as a vocational skill that can enhance entrepreneurship education, thereby reducing the strain on existing offerings. In addition to its potential to alleviate competition among students, public speaking holds the promise of fostering well-rounded entrepreneurs capable of addressing various challenges and opportunities. Furthermore, this study suggests that public speaking can go beyond being merely a student training component and also serve as a source of internally generated revenue for institutions, particularly in the context of poorly funded Nigerian tertiary institutions.

This introduction sets the stage for a comprehensive exploration of the role of oratory as a tool for enhancing entrepreneurship education in Nigerian tertiary institutions. In the following sections, we will delve into the theoretical underpinnings of our research, the practical implications of integrating public speaking, and the potential benefits of this approach. The study also provides recommendations for the implementation of oratory training in the context of entrepreneurship education, aiming to contribute to the ongoing discourse on educational innovation and economic development in Nigeria.

1.2. Research Questions

The following are the research questions for this study on the role of oratory in entrepreneurship education in Nigerian tertiary institutions:

1. How does the integration of public speaking, oratory, impact the effectiveness of entrepreneurship education in Nigerian tertiary institutions, specifically in terms of students' communication and leadership skills development?

2. What are the potential benefits and challenges associated with incorporating oratory into the entrepreneurship curriculum, and how can these challenges be mitigated to enhance the overall educational experience?

3. To what extent can the development of oratory skills serve as a source of internally generated revenue for Nigerian tertiary institutions, and what are the strategies for implementing and sustaining oratory hubs within the educational system?

These research questions will guide the study and help to explore the impact and feasibility of incorporating oratory in entrepreneurship education while considering both the benefits and challenges.

2.0. Literature Review

Entrepreneurship education in Nigeria has been a subject of growing importance due to the nation's need for economic diversification, job creation, and the nurturing of young innovators (Omeje, et al 2020; Kamar, 2021; Mukhtar, et.al. 2018). In response to these imperatives, the introduction of entrepreneurship education in Nigerian tertiary institutions, mandated in the 2007/2008 academic session, was a significant step. However, the predominantly vocational approach to entrepreneurship education has become congested, and there is a pressing need to explore innovative methodologies. This

FULL TEXTS BOOK

literature review aims to shed light on the potential of integrating oratory, specifically public speaking, as a valuable tool in entrepreneurship education.

The emphasis on vocational skills in entrepreneurship education has been a dominant theme in the Nigerian context. Ramasamy, & Pilz, (2020) underscored the importance of equipping students with practical skills in their studies. The studies argued that a focus on vocational training has indeed yielded results, yet the surging demand and overcrowding of these skills indicate the necessity for diversification.

Oratory, particularly public speaking, is a skill recognized globally as crucial for effective communication, leadership, and confidence. It has also been theorized that students who excelled in public speaking demonstrated increased self-assuredness and effective communication, both vital attributes for budding entrepreneurs (Herachwati, et.al. 2023; Hidayah, & Puspitasari, 2023; Hidayanti, 2023). Their findings highlight the potential benefits of introducing oratory as a complementary skill set in entrepreneurship education.

Adebayo (2018) explored the impact of public speaking on entrepreneurial development within the Nigerian university context. His research found a strong positive correlation between public speaking proficiency and entrepreneurial success. Adebayo's work underscores the argument that oratory skills can have a direct impact on students' abilities to pitch their business ideas, network, and convey their vision effectively to potential investors and partners.

The literature reviewed here provides essential insights into the role of oratory, particularly public speaking, in enhancing entrepreneurship education within Nigerian tertiary institutions. Existing research highlights the potential benefits of introducing oratory as an additional skill set to alleviate the overcrowding of vocational skills, enhance students' personal attributes, and foster a conducive environment for entrepreneurial dialogues. Additionally, the concept of oratory as a source of internally generated revenue has far-reaching implications for the financial stability of educational institutions.

These findings lay the groundwork for the subsequent sections of this study, which will delve into the practical implications of integrating oratory within entrepreneurship education and provide recommendations for its effective implementation.

2.1. Theoretical Framework

The Dialogic Theory of public speaking, developed by Mikhail Bakhtin, emphasizes the importance of dialogue in public discourse. This theory suggests that the goal of public speaking is not just to convey information but to create a dynamic, interactive environment where both the speaker and the audience engage in a meaningful exchange of ideas. The speaker's role is to foster interaction and encourage audience participation, transforming the traditional monologue into a dialogic experience.

In entrepreneurship education, this theory enhances communication skills, crucial for pitching ideas and negotiating. It also promotes an interactive learning environment, preparing students for real-world scenarios where engaging with stakeholders is vital. Additionally, the theory fosters shared understanding and collaboration, essential for appreciating diverse viewpoints in entrepreneurship.

3.0. Methodology

The research adopted a qualitative research design to provide a nuanced and in-depth exploration of the research questions. This qualitative approach will involve conducting semi-structured interviews with a diverse range of participants, including students, faculty members, and key stakeholders within Nigerian tertiary institutions. The interviews will delve into their first-hand experiences, unique perspectives, and valuable insights related to the integration of oratory in entrepreneurship education. By using thematic analysis, the study will meticulously examine the interview data to uncover recurring themes, patterns, and rich qualitative data. This method is expected to offer a comprehensive and accurate understanding

FULL TEXTS BOOK

of the impact, feasibility, and benefits of incorporating oratory within the entrepreneurship education curriculum.

4.0. Results and Findings

Here are the results and findings of the study, aligning with the research questions and the methodology employed:

Research Question 1: How does the integration of oratory impact the effectiveness of entrepreneurship education in Nigerian tertiary institutions, particularly in terms of students' communication and leadership skills development?

The integration of oratory in entrepreneurship education has had a notable impact on students' communication and leadership skills. Through qualitative data analysis of interviews with students, it became evident that those who received oratory training reported significant improvements in their communication abilities. They expressed increased self-confidence in delivering pitches, presentations, and engaging in dialogues with potential stakeholders. Moreover, students recognized the value of oratory in enhancing their leadership attributes, emphasizing that it had helped them in leading group discussions, managing teams, and becoming more effective decision-makers. This aligns with the Dialogic Theory of public speaking, which underscores the importance of dialogue and interaction in public discourse, and its relevance to entrepreneurship education was confirmed through these findings.

Research Question 2: What are the potential benefits and challenges associated with incorporating oratory into the entrepreneurship curriculum, and how can these challenges be mitigated to enhance the overall educational experience?

The study revealed several benefits associated with incorporating oratory into the entrepreneurship curriculum. Students reported that oratory training led to improved presentation skills, better articulation of ideas, and increased self-assurance when pitching business concepts. Faculty members expressed that students who had undergone oratory training exhibited higher engagement levels during classroom discussions and group activities. However, some challenges were identified, primarily related to the resource-intensive nature of oratory training and the need for qualified trainers. To mitigate these challenges, the study suggests a phased implementation of oratory programs and collaboration with external experts in oratory to optimize resource utilization and address the skills gap.

Research Question 3: To what extent can the development of oratory skills serve as a source of internally generated revenue for Nigerian tertiary institutions, and what are the strategies for implementing and sustaining oratory hubs within the educational system?

The study found that the development of oratory skills has the potential to serve as a source of internally generated revenue for Nigerian tertiary institutions. The qualitative data indicated that when institutions established oratory hubs that were open to external participants, they could generate revenue through training programs, workshops, and hosting public speaking events. However, the successful implementation and sustainability of these oratory hubs depend on careful planning, investment in infrastructure, and marketing efforts to attract external participants. Furthermore, partnerships with organizations interested in public speaking skills could enhance the financial viability of such initiatives. The study's findings suggest that the integration of oratory in entrepreneurship education has had a positive impact on students' communication and leadership skills. The benefits are evident, but the challenges related to resource allocation and training quality need to be addressed. Additionally, oratory programs can indeed serve as a source of internally generated revenue for tertiary institutions, but successful implementation and sustainability require strategic planning and partnerships. These results emphasize the potential of oratory as a valuable tool in entrepreneurship education and highlight avenues

FULL TEXTS BOOK

for enhancing the educational experience while simultaneously contributing to institutional revenue generation.

5.0. Discussion

The study reveals important insights into using oratory as a tool in entrepreneurship education in Nigerian tertiary institutions. It finds that incorporating oratory significantly enhances students' communication and leadership skills. Students who received oratory training reported improved confidence and presentation abilities, aligning with the Dialogic Theory of public speaking, which emphasizes interaction and dialogue. These skills are crucial for entrepreneurship, helping students articulate ideas, engage with stakeholders, and lead effectively. The study also explores the benefits and challenges of integrating oratory into the curriculum. Benefits include better presentation skills, increased student engagement, and self-confidence. Challenges include the need for qualified trainers and infrastructure. The study recommends a phased implementation of oratory programs and collaboration with external experts to optimize benefits and address challenges. Furthermore, the study examines the potential of oratory hubs as a source of internally generated revenue for institutions. These hubs could offer training programs, workshops, and events, attracting external participants and generating revenue. However, successful implementation requires careful planning, investment, and marketing. Partnerships with organizations interested in public speaking can also enhance financial viability. The implications are significant for financially constrained Nigerian tertiary institutions. Establishing oratory hubs could enhance financial sustainability and contribute to developing oratory skills in society. This approach aligns with the government's emphasis on internally generated revenue for educational institutions. Overall, integrating oratory in entrepreneurship education can enhance students' skills and institutional sustainability, addressing broader societal needs for effective communication and leadership.

6.0. Conclusion and Recommendations

6.1. Conclusion:

The study highlights the potential of oratory as a tool for enhancing entrepreneurship education in Nigerian tertiary institutions. Integrating oratory into the curriculum improves students' communication and leadership skills, aligning with the Dialogic Theory of public speaking. Students reported enhanced abilities in effective communication, persuasive presentation, and meaningful dialogue. While the benefits include increased student engagement, challenges like the resource-intensive nature of oratory training were noted. A phased implementation and collaboration with external experts are recommended to optimize benefits and address these challenges. Additionally, oratory hubs can generate revenue through training programs and events, contributing to financial sustainability and the development of oratory skills in society, aligning with the government’s emphasis on internally generated revenue in educational institutions.

6.2. Recommendations

Firstly, Nigerian tertiary institutions should incorporate oratory training into entrepreneurship education to develop students’ communication and leadership skills. This inclusion ensures a balanced education that prepares students for entrepreneurial challenges by enhancing their ability to articulate ideas clearly and lead effectively.

Secondly, institutions should partner with external oratory experts to provide specialized training and improve program quality. These collaborations can offer valuable insights and enhance curriculum development by bringing in seasoned professionals with a wealth of experience and practical knowledge.

FULL TEXTS BOOK

Thirdly, adequate resources, including funding and infrastructure, should be allocated to support oratory programs. Specialized training spaces and qualified trainers are essential for delivering high-quality education, as they provide the necessary environment and expertise for effective learning.

Fourthly, effective marketing and outreach efforts are crucial for attracting external participants to oratory programs, optimizing revenue generation, and ensuring sustainability. By promoting these programs widely, institutions can draw interest from a broader audience, including professionals seeking to enhance their communication skills.

Fifthly, the government should support oratory integration in education through policies, incentives, and funding. This support helps address resource challenges and promotes program implementation by providing a supportive framework and necessary financial backing.

Lastly, ongoing research and evaluation are necessary to assess the impact and effectiveness of oratory programs, ensuring continuous improvement and relevance. By regularly reviewing these programs, institutions can adapt to changing educational needs and maintain high standards of quality in oratory education.

KNOWLEDGE OF WOMEN OF REPRODUCTİVE AGE ABOUT THE İMPACT OF TOBACCO USE ON FETAL HEALTH AND DEVELOPMENT

Ph.D.(c) Saemira Durmishi, Prof. As. Dr Shkëlqim Hidri, Dr. MitildaGugu, Msc Erlini Kokalla.

ABSTRACT

Introduction

Smoking is widespread in Albania, as well as in other countries, significantly affecting public health and economic and social well-being. Despite increased access to information about its negative effects, some individuals ignore the associated health risks.

Although smoking poses numerous threats to the developing fetus, it is the most common addiction among women of reproductive age (1). Smoking during pregnancy poses a significant risk to the health of the mother and child. Psychosocial interventions and nicotine replacement therapy appear to be effective in helping pregnant women quit smoking (2).

In addition to the health risks that maternal exposure to tobacco smoke in pregnancy poses to women, it is a cause of significant fetal morbidity and mortality. In pregnancy, maternal exposure to secondhand smoke can arise because women either smoke or are passively exposed to secondhand smoke (3). The level of knowledge in society about the harmful impact of smoking is systematically increasing. However, there are still many people who ignore warnings and prohibitions about smoking (4).

Smoking during pregnancy is causally linked to many adverse health outcomes. For pregnant women, these include an increased risk of obstetric complications, eg, higher rates of miscarriage, ectopic pregnancy, placental abruption, placenta previa, preterm labor, and preterm delivery, compared to nondrinkers—tobacco (2).

Smoking by women of reproductive age during pregnancy is the leading preventable cause of many adverse outcomes, including maternal, fetal, and infant morbidity and mortality (US Department of Health and Human Services 2014). In particular, maternal smoking during pregnancy increases the risk of birth complications, including preterm birth, low birth weight, and sudden infant death syndrome (Berlin 2017). It has long-term effects on the child, including problems with behavior and chronic health conditions in adulthood (5).

Tobacco use is widely recognized as one of the major threats to global health. While tobacco use is stable or declining in most high-income countries, it is increasing in many low- and middle-income countries (6). Smoking is the most important preventable cause of many adverse pregnancy outcomes. Some women continue to smoke during pregnancy even though the harmful effects are evident (7).

Healthcare professionals and the healthcare environment play a central role in protecting pregnant and postpartum women and their babies from tobacco-related harm. Therefore, quitting smoking, even late in pregnancy, can lead to improved outcomes for both mothers and babies. Most doctors who work with pregnant women (such as midwives, general practitioners, and obstetricians) perceive tobacco treatment as part of their role (8).

The aim of the study:

To assess the knowledge that women of reproductive age have about the impact of smoking on the development of the fetus.

Specific objectives of the study

1. Identification of smoking prevalence of the study population.
2. Measuring the knowledge of women about the smoking impact on fetal health and development.

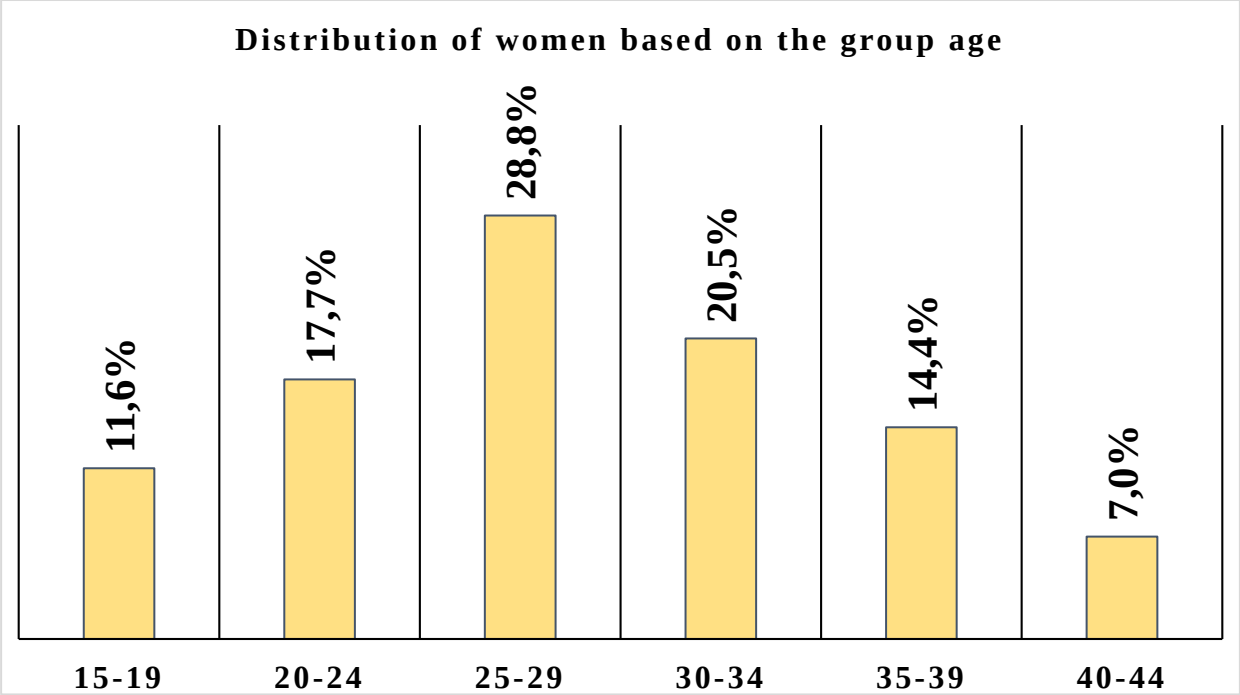
FULL TEXTS BOOK

3. Exploring the association between sociodemographic factors and knowledge levels.
4. Assessing women's motivation to quit smoking during pregnancy.

Study type: This is a cross-sectional study conducted in the city of Vlora over 1 year (March 2023 - March 2024).

Characteristics of the population: The study included 215 women of reproductive age. The population was reached at the primary healthcare centers.

Data collection: The data were collected by using a standardized questionnaire with 2 sections;

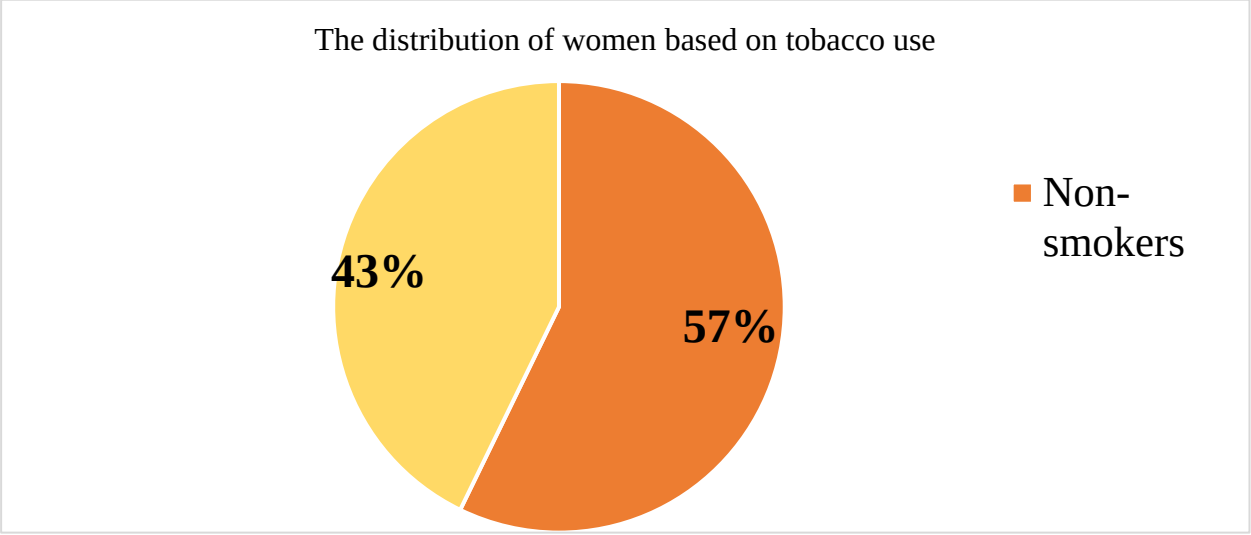


a) Socio-demographic characteristics and

b) Assessment of the knowledge including 8 questions.

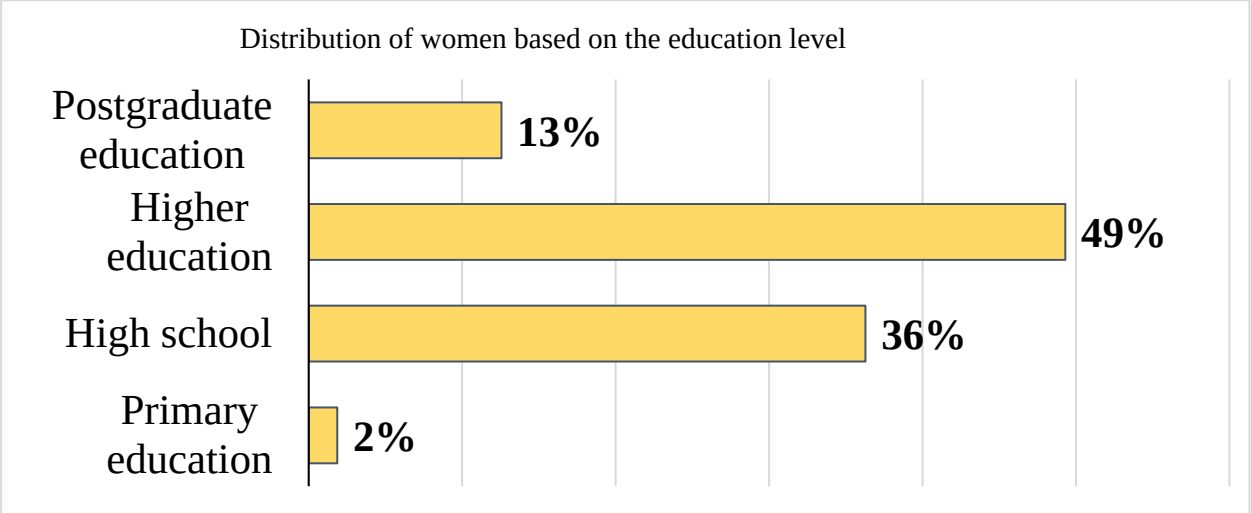
Data analysis: The final database was created in Excel, and the data were then exported and analyzed to SPSS version 22. The categorical data were presented as counts and percentages, and the results were visualized using graphs. The association between categorical variables was assessed using the Fisher and Chi-Square test.

Results:



Graphic 1

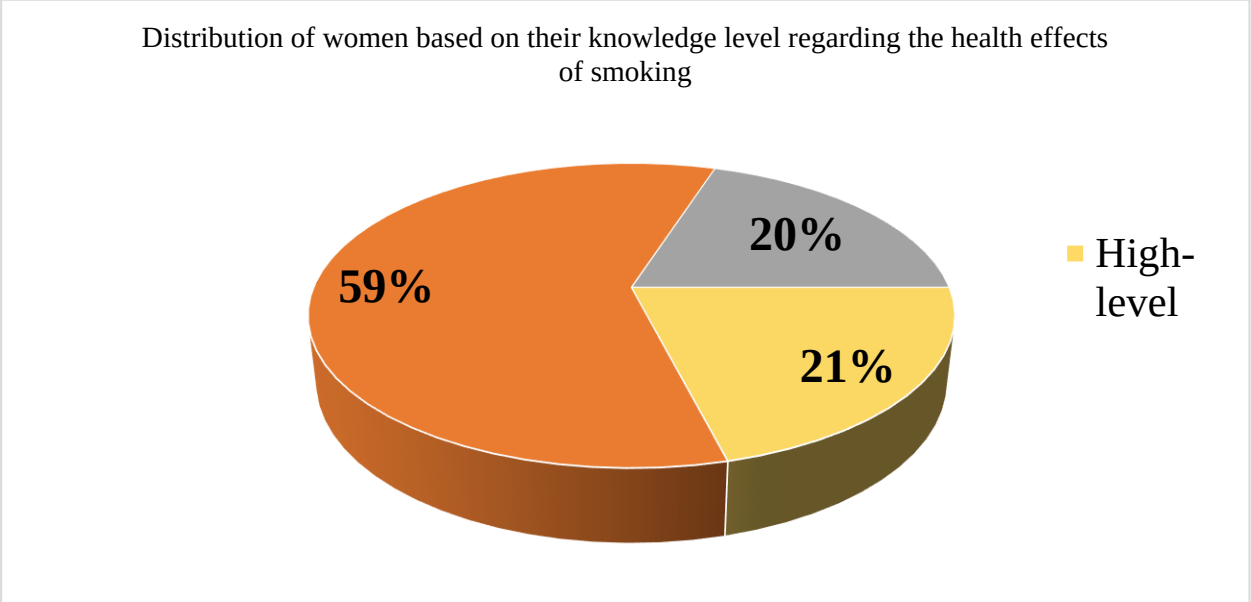
The study found that the majority of women were in the 25-29 age group at 28.8%, followed by the 30-34 age group at 20.5%, and the 20-24 age group at 17.7%.



FULL TEXTS BOOK

Graphic 2

Among 215 women, 43% (92) of them were smokers and 58% (123) did not smoke.

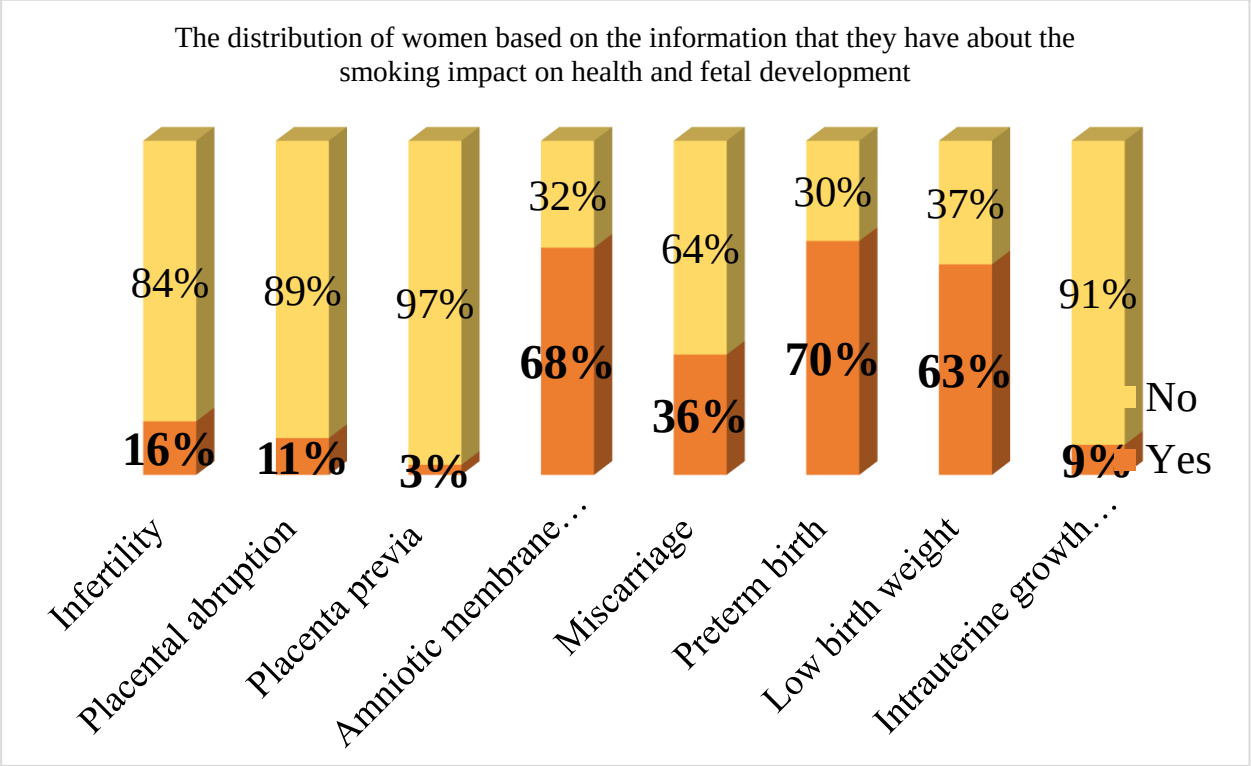


Graphic 3

In terms of education, the study showed that 49% of the women had higher education, 36% had a high school diploma, 13% had completed postgraduate education, and only 2% had finished only primary education.

FULL TEXTS BOOK

Graphic 4



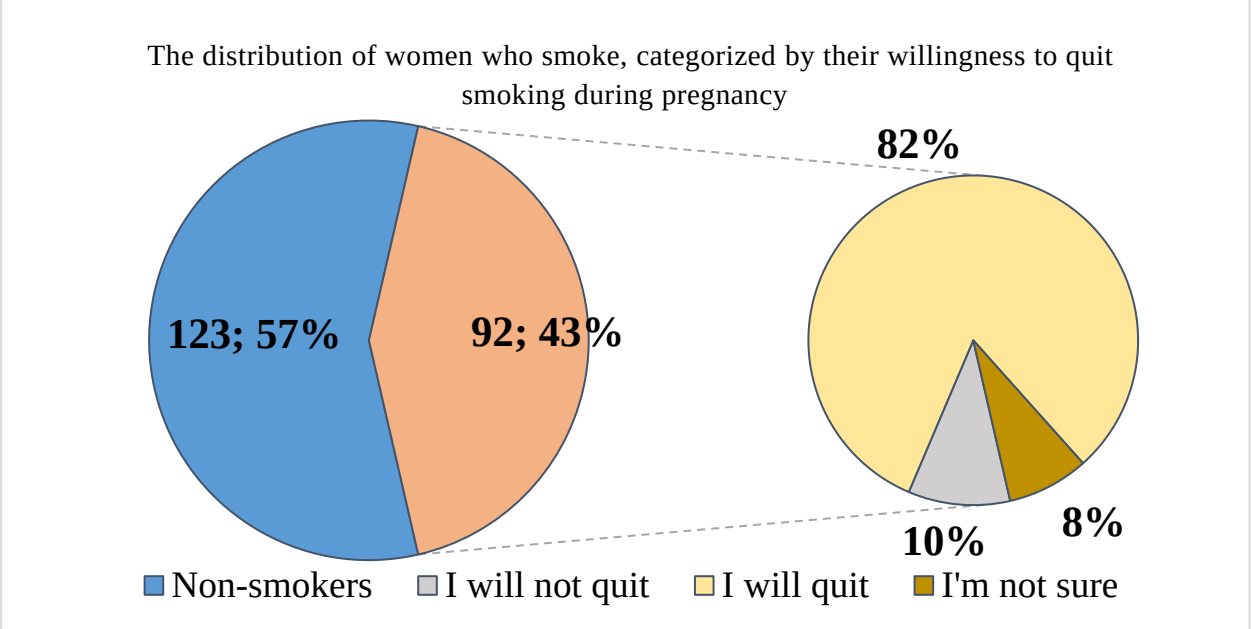
This chart illustrates the distribution of knowledge levels among the 215 women surveyed regarding the effects of smoking during pregnancy. Based on the study's findings it results that;

- 59% of the women (127 out of 215) have an average level of knowledge (5-6 correct answers).
- 21% of the women (45 out of 215) have a high level of knowledge (more than 6 correct answers).
- 20% of the women (43 out of 215) lack any information on this topic (fewer than 3 correct answers).

FULL TEXTS BOOK

Graphic 5

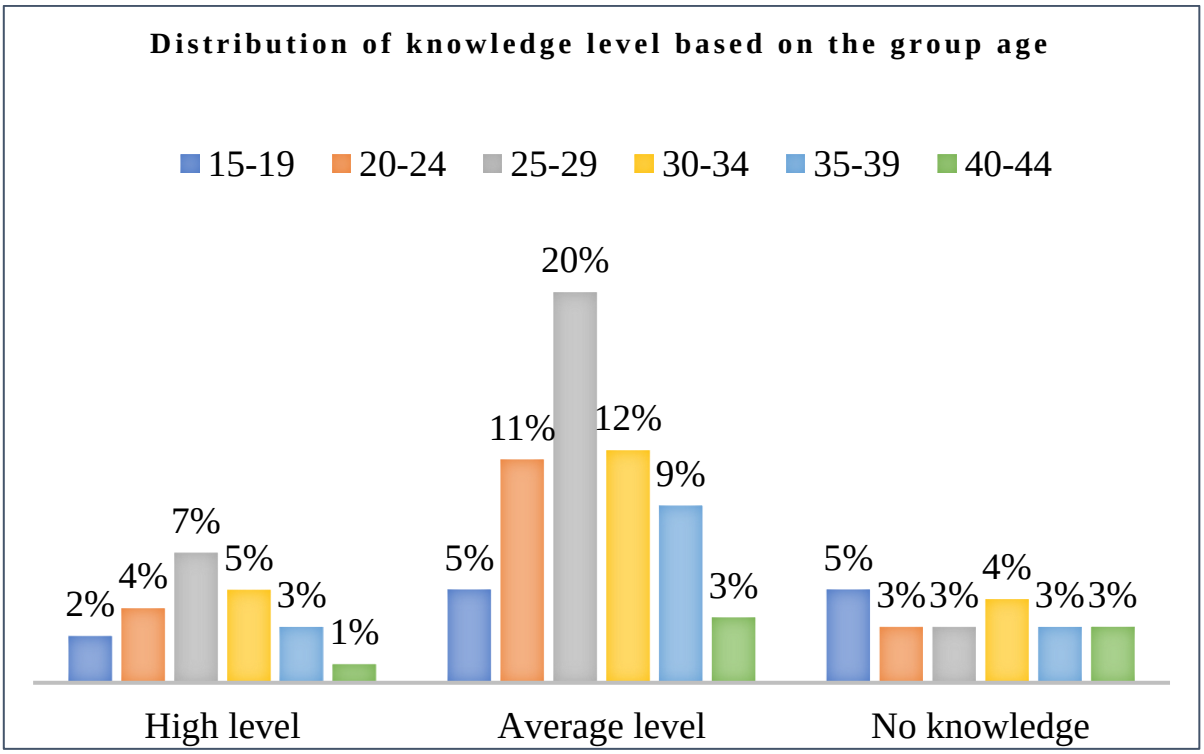
Based on the information provided:



- 16% of women are aware that smoking could cause infertility.
- 11% of women know that smoking could cause placental abruption.
- 3% of women are informed about the risk of placenta previa due to smoking.
- 9% of women are aware of the association between smoking and intrauterine growth restriction.

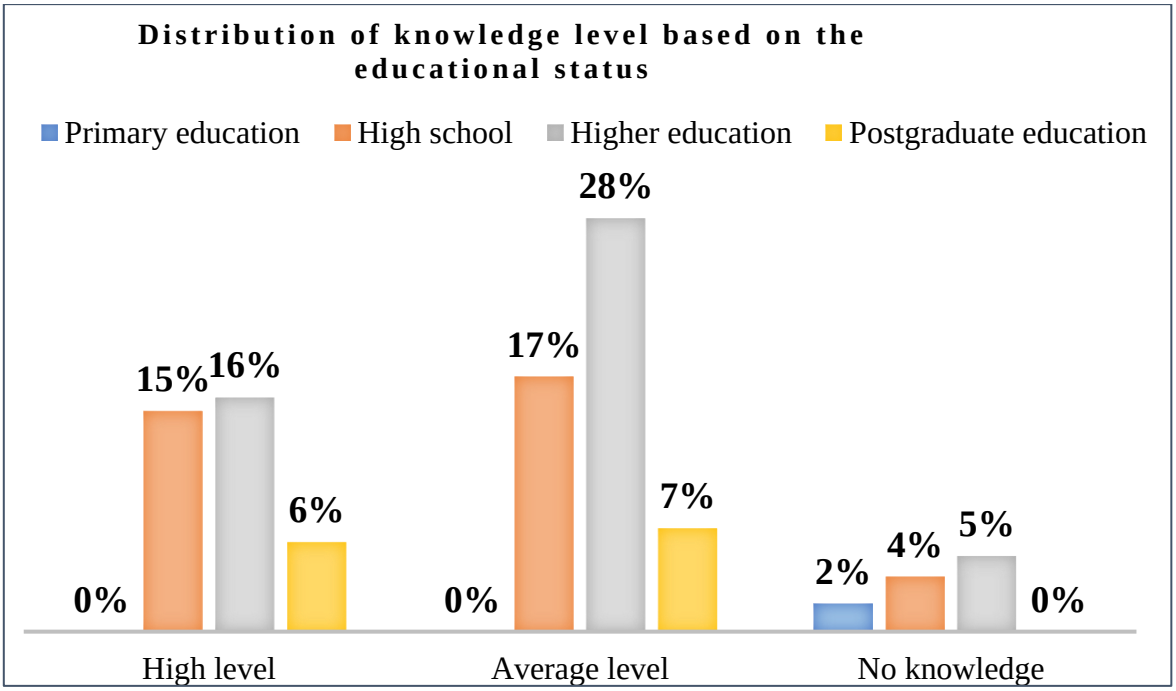
In contrast, awareness of other health issues related to smoking during pregnancy is higher:

- 70% of women know about the link between smoking and preterm birth.
- 68% of women are aware that smoking can lead to amniotic membrane rupture.
- 63% of women know about the risk of low birth weight associated with smoking.
- 36% of women are informed about the association between smoking and miscarriage.



These percentages reflect varying levels of awareness among women regarding the specific health risks that smoking can pose to both maternal health and fetal development during pregnancy.

Graphic 6



Among the 92 women who smoke, 82% have indicated that they plan to quit smoking during pregnancy, 10% intend to continue smoking, and 8% have not yet decided what they will do.

The association between age/educational level and knowledge level

FULL TEXTS BOOK

These charts demonstrate that the women who are most informed about the impact of smoking during pregnancy are those with a higher education diploma and those aged 25-29 years. Conversely, the women who are less educated and aged 15-19 years are less informed. These findings are statistically significant with a *p value= 0.049* for the age and *p=0.037* for the educational level.

Conclusions and Recommendations

Most women possess an average level of knowledge regarding the increased risks and adverse pregnancy outcomes associated with smoking during pregnancy. Additionally, age and educational level are significant factors that affect the level of knowledge women have about the impact of smoking during pregnancy.

- Healthcare providers should work to educate women comprehensively about the risks associated with smoking during pregnancy and the benefits of quitting for both maternal and fetal health.
- Healthcare providers should maintain a strong focus on encouraging women to quit smoking throughout the entire pregnancy, not just during the first trimester.
- Health professionals need to be more proactive in identifying smokers and providing support to quit smoking during pregnancy. Multidisciplinary smoking cessation interventions for pregnant smokers are warranted.

ABSTRACT

Replacing traditional Portland cement (PC) with supplementary cementitious materials (SCMs) is a smart move to cut down on carbon dioxide (CO_2) emissions from cement production. This switch is a big step towards making construction, especially concrete production, more sustainable. Concrete is a crucial material in building, with over 10 billion cubic meters produced yearly, making it the second most used substance worldwide after water. Concrete comprises cement, water, aggregate (gravel or sand), and other additives. It starts soft and gets stronger as it hardens over time. The challenge with regular concrete is that PC, the primary binding ingredient, produces a lot of CO_2 during its production, which harms the environment and health. To tackle this, we must start using SCMs instead of PCs in concrete. Materials like blast furnace slag (GBFS), silica fume (SF), and fly ash (FA) are examples of SCMs. They come from different industrial processes and are great at reducing the environmental impact of making PCs. Mixing these materials into concrete is a smart way to make the construction industry more eco-friendly.

Keywords: Green concrete, carbon emissions, sustainable construction, pozzolanic materials.

1. INTRODUCTION

In today's fast-paced industrial world, our increasing energy needs have raised severe environmental concerns due to our heavy reliance on fossil fuels. To tackle this, we're finding ways to use waste materials in different ways, aiming for sustainable development and a cleaner environment. Take concrete, for example – it's everywhere, from homes and malls to bridges and dams. But it's time for a change in how we make it, to make it more sustainable. With people focusing more on sustainable living, resources becoming scarcer, and the urgent need to cut carbon dioxide (CO2) emissions, the construction industry needs some fresh ideas. One primary culprit in CO2 emissions is the production of Portland cement (PC), which accounts for about 5% of the world's CO2 emissions [1-3]. The traditional way of making PC, using fossil fuels, releases about one ton of CO2 for every ton of clinker produced – that's a lot! But there's hope. We can reduce these emissions significantly by replacing some concrete cement with mineral additives like ground granulated blast furnace slag (GBFS) or silica fume (SF). These additives have unique properties that help reduce CO2 emissions from cement production, making our environment cleaner and more sustainable. These mineral additives, known as Supplementary Cementitious Materials (SCMs), are essential in making concrete [4-6]. Using fly ash (FA) instead of some of the PC affects how fresh and hardened concrete behaves, making it easier to work with, stronger, and more durable. FA reacts with the lime in cement, creating an extra binding agent that makes the concrete denser, less permeable, and longer lasting. SCMs also have a significant impact on other properties of concrete, like its strength, elasticity, and how it changes over time. They make concrete more resistant to things like acids, sulfates, and corrosion, depending on the type and activity level of the additive. As individuals, understanding the significance of these supplementary cementitious materials (SCMs) is crucial in realizing the potential for more sustainable construction practices. By choosing concrete formulations incorporating SCMs like fly ash (FA) [7-9], we can contribute to a greener environment and a more resilient infrastructure. Opting for concrete with FA enhances its

FULL TEXTS BOOK

mechanical properties and reduces its environmental footprint. When FA replaces some of the Portland cement (PC), it decreases the amount of CO2 emitted during production, helping combat climate change. This means that our choices as consumers directly impact the health of our planet.

Furthermore, the improved durability of concrete with SCMs means that structures built with these materials will require less maintenance and repair over time. This saves money and reduces the resources needed for upkeep, promoting a more sustainable lifecycle for our built environment. By being informed and deliberate in our choices, we can contribute to a more sustainable future, one concrete structure at a time.

2. The Vital Role of Supplementary Cementitious Materials (SCMs)

The construction industry is currently experiencing a profound transformation, placing a greater emphasis on sustainable practices. Central to this paradigm shift are supplementary cementitious materials (SCMs), which play a pivotal role in enhancing the environmental credentials and structural integrity of concrete. SCMs such as fly ash, slag, and silica fume are gaining popularity due to their ability to mitigate the environmental impact associated with traditional cement production [10-12]. Cement production is a notorious emitter of carbon dioxide (CO2), a major contributor to climate change. By incorporating SCMs into concrete mixes, significant reductions in CO2 emissions can be achieved, marking a substantial victory for environmental conservation efforts. Beyond their environmental benefits, SCMs offer remarkable improvements to concrete's performance characteristics. Concrete blended with SCMs exhibits enhanced strength, durability, and resistance to various environmental stresses. For instance, fly ash, derived from coal combustion, not only diverts waste from landfills but also enhances concrete's workability, reduces chemical reactivity, and increases resistance to specific types of damage. Another prominent SCM, ground granulated blast furnace slag (GGBFS), a byproduct of iron production, contributes to concrete's strength development, moderates heat generation during curing, and enhances resistance to chemical attack. Similarly, silica fume (SF), produced from silicon metal refining, enhances concrete's load-bearing capacity, impermeability to water ingress, and resistance to corrosion induced by saline environments [13-15]. The adoption of SCMs signifies a significant stride towards sustainability in the construction sector. By incorporating these materials into concrete formulations, the industry not only reduces its carbon footprint but also extends the service life of structures, thereby minimizing the need for premature replacements and reducing overall resource consumption.

Moreover, the application of SCMs aligns with global efforts to achieve sustainable development goals, particularly in addressing climate change and promoting responsible consumption and production practices. As stakeholders across the construction industry increasingly prioritize sustainability, SCMs are poised to play an indispensable role in shaping a greener and more resilient built environment. In practical terms, the widespread adoption of SCMs necessitates collaborative efforts among architects, engineers, contractors, and policymakers to integrate these materials effectively into building codes, specifications, and construction practices. Education and awareness initiatives are also crucial to fostering a comprehensive understanding of the benefits and proper utilization of SCMs among industry professionals. Furthermore, research and development continue to expand the repertoire of available SCMs and refine their properties to meet evolving performance standards and environmental benchmarks. Innovations in SCM technology aim to optimize material efficiency, improve compatibility with various cement types, and enhance the overall sustainability metrics of concrete construction. Looking ahead, the future of construction increasingly hinges on embracing sustainable innovations like SCMs to address pressing environmental challenges while meeting the growing global demand for infrastructure. As the construction sector navigates towards a more sustainable future, SCMs emerge not only as technical solutions but as catalysts for transformative change in how buildings and infrastructure are conceived, constructed, and maintained. In conclusion, SCMs represent a cornerstone

FULL TEXTS BOOK

of sustainable construction practices, offering multifaceted benefits ranging from environmental stewardship to enhanced structural performance. As awareness grows and technological advancements continue, SCMs will continue to shape the landscape of modern construction, paving the way for a more resilient and environmentally responsible built environment for generations to come [16-20].

3. CONCLUSION

Concrete stands as a cornerstone of modern construction, renowned for its robustness, versatility, and cost-efficiency. However, its heavy reliance on Portland cement (PC) presents profound environmental and economic challenges. The substantial carbon dioxide (CO2) emissions associated with PC production not only contribute significantly to global carbon footprints but also drive up costs within the construction sector. Addressing these challenges demands a concerted effort to reduce PC dependency in concrete mixes and explore alternative materials that offer both environmental sustainability and economic viability. In response to these imperatives, there is a burgeoning interest in integrating industrial waste materials such as ground granulated blast furnace slag (GBFS), fly ash (FA), and silica fume (SF) into concrete formulations. These materials hold promise as effective substitutes for PC, offering pathways to mitigate CO2 emissions and foster sustainable construction practices. As researchers, the construction industry, and end-users increasingly prioritize environmental stewardship, the adoption of these eco-conscious practices becomes paramount. Understanding the distinct properties, benefits, and challenges associated with GBFS, FA, and SF in concrete production is crucial for advancing environmentally responsible construction practices. Each material contributes unique characteristics to concrete mixes, enhancing durability, strength, and resilience against environmental stresses. Ground granulated blast furnace slag, derived from iron production processes, not only enhances concrete strength but also improves workability and reduces heat generation during curing. Fly ash, a byproduct of coal combustion, not only diverts waste from landfills but also enhances concrete's workability, reduces permeability to aggressive substances, and improves resistance to certain forms of deterioration. Silica fume, produced during silicon metal refining, significantly enhances concrete's mechanical properties, including compressive strength and durability, while also providing exceptional resistance to chemical attack and permeability. Beyond their technical advantages, incorporating GBFS, FA, and SF into concrete mixes represents a pivotal step towards achieving global sustainability goals. By reducing CO2 emissions and minimizing environmental degradation associated with traditional concrete production, these materials contribute to lower carbon footprints and improved overall environmental quality. Moreover, sustainable concrete practices extend their benefits beyond the construction phase, positively impacting long-term societal well-being and resource conservation efforts. The momentum towards sustainable concrete production is steadily gaining traction, driven by collaborative efforts among researchers, industry stakeholders, and end-users. Embracing these innovative practices requires a collective commitment to integrating eco-friendly materials into construction projects, adhering to stringent quality standards, and promoting responsible consumption and production patterns. As awareness of environmental issues grows and regulatory frameworks evolve, the imperative to transition towards sustainable concrete becomes increasingly urgent. This transition not only aligns with global sustainability agendas but also underscores the construction industry's role in mitigating climate change and fostering resilient infrastructure development. By embracing sustainable concrete practices, stakeholders can catalyze transformative change within the built environment, promoting economic prosperity, environmental stewardship, and societal well-being on a global scale. In conclusion, the shift towards reducing Portland cement in favor of alternative materials such as GBFS, FA, and SF marks a significant evolution in construction practices. This evolution not only addresses pressing environmental challenges but also enhances construction durability, performance, and affordability. By harnessing the potential of these materials and advancing

FULL TEXTS BOOK

sustainable concrete production methods, stakeholders can pave the way for a greener, more resilient future, ensuring that concrete remains a pillar of sustainable development for generations to come.

ABSTRACT

Colored concrete has become increasingly significant in modern construction due to its ability to combine structural integrity with aesthetic appeal through the incorporation of pigments into the concrete matrix. This versatile material offers robust wear resistance while providing visually appealing surfaces that can emulate the look of more expensive materials like stone or brick. Recent advancements have also expanded the range of colored cement varieties beyond traditional gray, offering architects and designers a broader palette to achieve specific design intentions. These colored cements incorporate pigments that provide a spectrum of hues, enhancing the aesthetic flexibility of concrete in various construction projects. In practice, the choice between these methods depends on factors such as project requirements, design preferences, and budget considerations. Colored concrete is widely used in driveways, patios, walkways, and architectural features where both functionality and visual appeal are important. Overall, colored concrete exemplifies the synergy of technical innovation and aesthetic enhancement in contemporary construction. By offering durable performance and creative design possibilities, colored concrete continues to play a pivotal role in shaping modern built environments.

Keywords: Colored concrete, Construction Practices, Aesthetic Appeal, integration of pigments, Architectural applications.

1. INTRODUCTION

Concrete has become the cornerstone of global construction, renowned for its unparalleled versatility and structural reliability [1-3]. Beyond its utilitarian role, concrete has evolved into a prominent architectural medium, celebrated for its aesthetic potential across various structures. As a fluid material, concrete lends itself to intricate molding processes, allowing for the creation of complex shapes and achieving smooth finishes that enhance architectural designs. While traditional concrete primarily utilizes gray cement, the integration of white cement and pigments has revolutionized its application, offering extensive opportunities for color customization. Colored concrete has found widespread use in sculptural artworks, decorative surface reliefs, exterior building facades, interior architectural elements, and the design of urban park furniture [4-6]. This versatility highlights concrete's transformation from a purely functional material to a visually expressive medium in modern construction practices. The concept of 'architectural concrete' underscores its transparency and structural integrity, often referred to as 'exposed concrete.' This type of concrete is prominently featured on building exteriors, where its natural aesthetic enhances architectural aesthetics without requiring additional cladding. Increasingly, architectural concrete is also employed within interior spaces, showcasing its adaptability and aesthetic appeal [7-8]. The introduction of pigments in architectural concrete plays a pivotal role in achieving desired colors and textures. Beyond aesthetic considerations, the incorporation of pigments influences various concrete properties, including setting time, color durability, resistance to environmental conditions, mechanical strength, and resilience to thermal fluctuations and freeze-thaw cycles. Attention

FULL TEXTS BOOK

to detail in formwork systems and the selection of mold release agents is essential to ensuring the quality and visual appeal of colored concrete applications in architectural contexts [9-10].

In conclusion, colored concrete exemplifies a harmonious blend of functionality and aesthetics in contemporary construction. Its ability to marry structural integrity with visual expression underscores its pivotal role in shaping modern architectural landscapes, offering architects and designers unparalleled opportunities for creative innovation and sustainable design solutions [11].

Fig.1. Exploring the Visual Impact and Versatility of Colored Concrete in Contemporary Construction [12]

2. Exploring Colored Concrete Applications: A Concise Overview

Colored concrete has emerged as a highly favored building material in contemporary architectural practices, captivating architects and investors alike with its exceptional aesthetic potential. By incorporating color pigments into the concrete mix, designers can extend the palette far beyond traditional gray tones, offering a diverse spectrum of colors that significantly enhance the visual appeal and artistic expression of architectural projects [13]. The color intensity of cured concrete is a result of a complex interplay of factors throughout the concrete production process. One of the primary influencers is the type and color of cement used. While gray cement remains foundational, the introduction of white cement and various pigments opens up possibilities for vibrant hues and subtle shades that cater to specific design requirements. This diversity allows architects to achieve nuanced color effects that harmonize with surrounding environments or make bold statements in urban landscapes. Several parameters during the mixing and pouring stages also impact the final color outcome. The quantity of aggregate, water-to-cement ratio, and the characteristics of molds and release agents all contribute to the color's consistency and appearance. In the case of colored concrete, the dosage and type of pigment are critical. Pigments are added based on the weight of the binder rather than volume to ensure precise control over coloration. Even slight deviations in pigment density or

FULL TEXTS BOOK

misjudgments in dosage can lead to undesired variations in color intensity, highlighting the importance of meticulous measurement and process control [14]. Beyond their aesthetic impact, pigments influence the chemical composition and hardening process of concrete. Certain pigments may interact with cement hydration differently, affecting not only the final color but also the material's durability and performance over time [15-16]. This chemical aspect underscores the need for a comprehensive understanding of pigment behavior and concrete chemistry to achieve both visual excellence and structural integrity in architectural applications. Architectural concrete, particularly when exposed on building facades or integrated into interior spaces, exemplifies the fusion of artistry and engineering. Its ability to reflect light, create texture, and convey a sense of place makes it a versatile medium for expressing architectural intent. Precise management of color variables ensures that concrete surfaces maintain their aesthetic appeal over the lifespan of the structure, resisting environmental stresses and maintaining color vibrancy. In conclusion, colored concrete represents a pivotal advancement in architectural materiality, offering unparalleled opportunities for creativity and design innovation. Through careful consideration of cement types, pigment selection, and manufacturing processes, architects can harness the full potential of colored concrete to realize their vision with precision and enduring beauty in architectural contexts. As the demand for sustainable and aesthetically distinctive building solutions grows, colored concrete stands poised to play an increasingly integral role in shaping the built environment of the future [17-23].

3. Conclusion

In contemporary construction practices, there has been a significant increase in the use of pigments to enhance the aesthetic appeal of concrete structural elements. These pigments, considered architectural design elements, are added to traditional concrete production alongside white cement. The resulting-colored concretes find diverse applications, notably in self-compacting concretes, repair mortars, and the paving and curbing of parks and gardens. This trend is particularly pronounced in Arab and Gulf countries, driven by rising living standards, a demand for innovative construction techniques, and a growing preference for intricate and decorative architectural features. Despite the evident advantages of colored concrete, scientific research in this field remains relatively limited compared to other engineering disciplines, a concern voiced by many researchers in the field. Structural-colored concrete offers unique aesthetic qualities that challenge the monotony of conventional building materials, often proving cost-effective as a finishing surface. The exploration of specialized concretes is inherently innovative, particularly in terms of enhancing durability through ongoing research efforts. The ability to introduce a spectrum of colors ranging from yellow and orange to red, blue, and green enhances the structural appeal of concrete and opens up exciting design possibilities. This study examines various case examples to illustrate the evolving use and development of colored concrete in construction applications. By highlighting both aesthetic and economic dimensions, it underscores how colored concrete has transformed architectural design paradigms, contributing to a visually dynamic built environment. In conclusion, the integration of pigments into concrete represents a significant advancement in modern construction, offering architects and designers powerful tools to create visually striking and durable structures. As research continues to expand in this area, colored concrete is poised to play an increasingly integral role in shaping future architectural landscapes worldwide.

ABSTRACT

In the digital age, the intersection of artificial intelligence (AI), social media, and the quest for authenticity has transformed the way we perceive reality. The movie “Her” (2013) by Spike Jonze and the recent controversy surrounding OpenAI’s chatbot Sky sounding like Scarlett Johansson’s voice, highlight the etchical implications of AI-driven imitation. ‘Authenticity’ defined by Theo Van Leeuwen is being fundamentally reshaped by AI technologies, which blur the lines between human and machine and challenge our understanding of the uncanny.

Scarlett Johansson’s lawsuit against OpenAI further exemplifies the ethical dilemmas associated with AI-generated content. Johansson’s voice was copied without her consent and without using her voice to train the chatbot. This raise questions about ownership, consent and the authenticity of digital likenesses.

“Last September, I received an offer from Sam Altman, who wanted to hire me to voice the current ChatGPT 4.0 system. He told me that he felt that by my voicing the system, I could bridge the gap between tech companies and creatives and help consumers to feel comfortable with the seismic shift concerning humans and AI. He said he felt that my voice would be comforting to people.

After much consideration and for personal reasons, I declined the offer. Nine months later, my friends, family and the general public all noted how much the newest system named "Sky" sounded like me.

When I heard the released demo, I was shocked, angered and in disbelief that Mr. Altman would pursue a voice that sounded so eerily similar to mine that my closest friends and news outlets could not tell the difference. Mr. Altman even insinuated that the similarity was intentional, tweeting a single word "her" - a reference to the film in which I voiced a chat system, Samantha, who forms an intimate relationship with a human.

Two days before the ChatGPT 4.0 demo was released, Mr. Altman contacted my agent, asking me to reconsider. Before we could connect, the system was out there.

As a result of their actions, I was forced to hire legal counsel, who wrote two letters to Mr. Altman and OpenAI, setting out what they had done and asking them to detail the exact process by which they created the "Sky" voice. Consequently, OpenAI reluctantly agreed to take down the "Sky" voice.

In a time when we are all grappling with deepfakes and the protection of our own likeness, our own work, our own identities, I believe these are questions that deserve absolute clarity. I look forward to resolution in the form of transparency and the passage of appropriate legislation to help ensure that individual rights are protected. ”

Figure 1.

FULL TEXTS BOOK

This paper examines these themes by analyzing key scenes from "Her", integrating insights from authors like Walter Benjamin, Theo Van Leeuwen and using real-world case studies. Through this exploration we aim to understand how AI technologies are transforming our perceptions of authenticity and the uncanny, and what this means for our future interactions with digital copies.
Key words: Uncanny, Authenticity, Artificial Intelligence

MANUFACTURING AUTHENTICITY

Leeuwen writes that the term 'authenticity' applies it to faithful reconstruction or presentation, as when baroque music is played on authentic instruments (paradoxically usually copies) in historically accurate ways.[1]

In "Her" the movie starts with handwritten "her" title and our protagonist Theodore played by Joanquin Phoenix reads out an emotionally filled letter, as audience we get our first clue with Theodore saying "we have been married for 50 years" that something is off then we see that everything he says is being written out in a digital letter in handwriting. Theodore's job is to write letters for people who don't have time, effort or creativity to write a letter for themselves to send to their loved ones.

In this scene we see faithful reconstruction of handwriting, but our protagonist, Theodore, doesn't convey his true feelings, he is manufacturing authenticity between people he doesn't personally knows. This process of creating authenticity by copying genuine moments has always been facilitated through different mediums.

In 2006 there was a YouTube channel that is called Lonelygirl15, then a 16-year-old girl Bree started a video blog. She was funny, friendly, had great eyebrows. Her videos focused on casual teen problems, and she complained about being lonely, hence the name Lonelygirl15.[2]

Bree had a growing following, her subscription numbers ballooned, and she became one of the most popular stars of YouTube. However, Bree was a fictional character written by multiple writers. YouTubers and the media were duped. That caused an outrage but now the channel is most reminded as the first web series of YouTube.[2]

In her video essay "Manufacturing Authenticity (For Fun and Profit!) and Lindsey Ellis reviews how copying authentic moments can create manufactured videos that profit from appearing genuine. She discusses the YouTube channel "How to Cake it!" where the host interacts with a producer behind the camera who is not wearing a microphone that can pick up her voice. The first such interaction seems accidental and adds a sense of genuineness to the video, which then became a staple of the channel's format.[3]

Similarly, "A Man About Cake" features a male host who bakes a cake while producers interject commentary during the video. Although this might initially seem spontaneous, Ellis reveals that the show's format is meticulously planned. The pitching materials indicate that the show is designed with one host and three producers behind the camera, all wearing microphones. This careful construction underscores how perceived authenticity can be deliberately manufactured for audience engagement.[3]

YouTube is not the first platform where copying became an issue. Walter Benjamin's seminal work, "The Work of Art in the Age of Mechanical Reproduction," provides a profound foundation for understanding these issues.

Benjamin discusses how the aura of an artwork diminishes with its mechanical reproduction. He writes, "Even the most perfect reproduction of a work of art is lacking in one element: its presence in time and space, its unique existence at the place where it happens to be" (Benjamin, 1936). This concept of aura, or the unique presence and authenticity of an original work, is central to the discussion of authenticity in the digital age.[4]

In the context of AI and digital technologies, this loss of aura can be observed in the way digital voices and avatars are created and perceived. The controversy surrounding Scarlett Johansson's voice likeness in OpenAI's chatbot exemplifies this issue. Despite not using her actual voice as a training model, the

FULL TEXTS BOOK

AI was able to produce a voice eerily similar to Johansson's, effectively reproducing her vocal aura without her consent. This raises significant questions about the authenticity and ownership of one's digital likeness.

Just as Benjamin described the loss of authenticity in mechanically reproduced art, we now face similar challenges with digitally reproduced voices and personas. The digital age exacerbated these issues, making it possible to replicate not just visual art but also personal attributes and identities. The example of Lonelygirl15, a fictional character who deceived viewers by presenting an inauthentic persona, parallels how AI technologies manufacture authenticity today. Both instances highlight how digital platforms can blur the lines between reality and fiction, creating believable yet artificial experiences.

Lindsey Ellis, in her video essay "Manufacturing Authenticity (For Fun and Profit!)," examines how YouTube channels like "How to Cake It!" and "A Man About Cake" create an illusion of spontaneity and authenticity through carefully crafted interactions. These manufactured moments resonate with audiences as genuine, despite being meticulously planned and executed. This phenomenon aligns with Benjamin's notion that the mechanical (or digital) reproduction of art affects its authenticity and perception.

Companies also needs to manufacture authenticity to ease the concerns of people on their behaviors. Technological companies usually orchestrate grand events for their major announcements, with Apple events being prime examples. These are eagerly anticipated and meticulously analyzed by enthusiasts. At their 2023 June 05th event, Apple unveiled the Apple Vision Pro. CEO Tim Cook took the stage, standing before a black screen with an Apple Logo on it. He addressed the camera as usual, though notably, there was no visible or audible audience.

The camera seemingly mounted on a drone, panned around as he spoke, transitioning to a 3D model of their product. When a woman wears the VR headset, the first noticeable feature is its screen that mirrors the user's eye movements, captured by internal cameras and projected onto the exterior screen.[5]

This strategy was done to make it seem like a VR headset would not diminish the social interactions of the user. However, the visual presentation elicited an uncanny sensation among observers. Tim Cook descriped the product as "Vision Pro augments reality by seamlessly blending real world with the digital world," with the screen for eye movement designed to reinforce this concept. This approach raised questions whether the methods used to achieve the intended effect.

Figure 2.

With each event Apple aims to emphasize that their company produces cutting edge technology, and their presentations are designed to reinforce that effect. In contrast, OpenAI's approach differs significantly in this regard. OpenAI's spring update opens with Chief Technology Officer Mira Murati taking the stage. The presentation opens with a wide-angle shot that includes the audience applauding and cheering her on, along with visible plants, warm lighting and the cameraman in the frame. Murati addresses to the viewers in the building instead of viewers at home, creating a sense of inclusivity and familiarity, akin to watching an online course.[6]

The camera work reenforce that effect by using subtle filming techniques instead of drone shots that are used in Apple events. Even the PowerPoint presentation used lacks templates or flashy backgrounds, relying instead on simple text against a plain backdrop. The difference between OpenAI's and Apple's approach to these events are staggering. Apple seeks to be seen as a leader in cutting-edge technology, while OpenAI aims to present itself as familiar and approachable.

In Scarlett Johansson's lawsuit against ChatGPT, Johansson reveled messages sent to her by OpenAI's CEO Sam Altman. "Last September, I received an offer from Sam Altman, who wanted to hire me to voice the current ChatGPT 4.0 system. He told me that he felt that by my voicing the system, I could bridge the gap between tech companies and creatives and help consumers to feel comfortable with the seismic shift concerning humans and AI. He said he felt that my voice would be comforting to people." OpenAI denied copying Johansson's voice but out of respcet to Johansson they paused using Sky's voice in their products.

This lawsuit showed why OpenAI reached out to Scarlett Johansson or design their presentation in a certain way, they wanted to avoid uncanny valley effect. AI technologies are so capable now that they might scare people away and open a door to a new unknown. With the way ChatGPT 4.0 presented and the voice chosen to resemble a familiar voice, OpenAI hopes to climb out of the valley to a new horizon.

However Scarlett Johansson's lawsuit didn't help OpenAI's aim to feel more familiar. Instead it created a similar feeling to Theodore noticing Samatha's breathing, it opened questions about etichs and individual rights. Is it okay to be able to create an exact copy of someone's voice without their consent or make them say things that they would never say?

Some people are not like Theodore and more open to test the ethical limits of this new technology and for them 'gap' between people, creators and AI is shortening. These early adapters maybe ready to look what is beyond uncanny valley.

AUTEUR THEORY

Leeuwen says; "another form of 'authenticity' is the style of the artist or the voice of the singer. Most artists and singers can credibly perform in many different styles, but if they seek distinction and are to be regarded as having their own authentic style or voice, they must adopt just one style and abandon the others."[7]

In 1940s cinematic theories of Andre Bazin and Alexandre Asrtuc layed the foundation of director-as-author cinema, and in 1962 critic Andrew Sarris came up with the term auteur theory. From then on, the term 'auteur' meant, a director who has a distinct style unique to themselves. In a way 'authentic'.[8]

Spike Jonze have distinct approach to movie making. He focuses on themes of loneliness, uses mashup of real vs. fictional people and things, he is not afraid to use different visual styles. In his movie 'her', he uses retro-futurism style, from the design of the phone Theodore uses to the computers and to wardrobe choices movie feels like it is set in 1960s instead of the near future.

His choices, sets the tone of the movie to feel warmer and makes it easier to feel a connection with the movie's main protagonist.

Being able to tell what makes a director vision 'unique', is to be able to prompt AI to create a copy of it. Wes Anderson has a unique approach to his movies and can be described as 'auteur'. However, his style is one of the most replicated ones in AI tools.

Figure 3. Succession in the style of Wes Anderson

AI, as if now don't have a unique voice and if prompted right, it abandons any other style to adopt the style that its prompted. So, are the images it created can be called authentic?

AI tools also capable of generating new artwork that mimics the style of renowned artists, musicians, even comedians. This ability to produces art in specific styles raises questions about authorship and authenticity, challenging traditional views on creative processes and the essence of originality. The ease with which AI can replicate artistic styles forces us to re-evaluate the significance of originality in an era where technology can effortlessly mimic the creative expressions of human artists.

Figure 4. AI generated painting and an original painting of Winslow Homer, Breezing up for (or A Fair Wind)

CONCLUSION

In the digital age, artificial intelligence, social media algorithms, and persuit of authenticity presents challenges for understanding human interaction and identity. Through the lens of the film "Her" and Scarlett Johansson's lawsuit against OpenAI on her voice likeness in their new chatbot, and other real-world examples, this paper has explored how AI tools are reshaping our perceptions of authenticity and uncanny.

Theodore's relationship with Samantha in "Her" exemplifies the emotional bonds that can be formed with AI tools, highlighting the complexities of manufactured authenticity. Scenes where Samantha mimics human breathing, flirtatious tone, illustrate how authenticity can be crafted.

Theodore, creating handwritten letters for clients using technology demonstrates how authenticity can be commodified.

The controversy surrounding Johansson's replicated voice further emphasizes the ethical implications of AI-driven imitation. This incident brings to light critical issues of ownership, consent, and the authenticity of digital likenesses.

Theoretical insights from Walter Benjamin's discussion on mechanical reproduction, Theo Leeuwen's description of authenticity, and Lindsey Ellis's exploration of manufactured authenticity provide both historical and critical context for these issues and maintaining authenticity in an era where creating AI-generated content is widely accessible.

By incorporating auteur theory, this paper has also highlighted the uniqueness of artists can be replicated. The comparison between auteur-driven content and AI-generated works reveals the ongoing tension between authentically human and seemingly authentically algorithmic replication.

In conclusion, as AI technologies become more prevalent in our daily lives, it is essential to critically examine their impact on our perceptions of authenticity and the uncanny. The evolving relationship between humans, AI and algorithmic generation, leads us to rethink what it means to be genuine and emotionally connected in a digital world. By addressing the ethical and philosophical questions raised by these technologies, we can navigate the complexities of this new era with greater awareness and responsibility, where we might have to redefine what we call 'authentic'.

ÖZET
Artan çevre kirliliği sebebiyle doğal yaşam alanları ve gıdalar çeşitli toksik kimyasallara maruz kalmaktadır ve bu durum insan sağlığını olumsuz etkilemektedir. Bu olumsuzlukların azaltılmasında antioksidanlar önemli bir role sahiptir ve bu bağlamda bitkilerdeki antioksidan bileşenlerin tespiti ve ürüne dönüştürülmesi önem kazanmaktadır. *Rosaceae* familyasının bir üyesi olan *Aronia melanocarpa* (Michx.) Elliott, güçlü antioksidan özellikleri ile öne çıkmaktadır. Genellikle aronia veya kuş kirazı (chokeberry) olarak anılan bu bitkinin meyveleri, farklı toplumlarda koruyucu ve önleyici sağlık uygulamalarında kullanılmaktadır. Bu çalışmada, Çanakkale/Lapseki bölgesinden toplanan aronia meyvelerinin hidroalkolik ekstraksiyon verimini belirlemek ve ardından ekstraktın antioksidan kapasitesinin CUPRAC yöntemi kullanılarak değerlendirilmesi amaçlamaktadır. Analizler sonucunda meyve ekstraktının antioksidan kapasitesi trolox eşdeğeri (TE) olarak hesaplanmıştır. Aronia meyvelerinin %16,3 ekstraktif içerdiği ve ekstraktiflerin 320 mg TE/gr antioksidan kapasitesi olduğu bulunmuştur. Bu sonuçlara dayanarak, aronia bitkisinin tıp ve eczacılık uygulamalarında kullanım potansiyelinin yüksek olduğu düşünülmektedir.
Anahtar Kelimeler: Aronia melanocarpa, antioksidan aktivite, CUPRAC metodu, hidroalkolik ekstraksiyon, fitokimya

ABSTRACT
Due to increasing environmental pollution, natural habitats and food are exposed to a variety of toxic chemicals, which adversely affect human health. Antioxidants play an important role in reducing these negative effects, and it is important to identify the antioxidant components in plants and convert them into products. Aronia melanocarpa (Michx.) Elliott is a member of the Rosaceae family and stands out for its high antioxidant properties. The fruits of this plant, commonly called as aronia or chokeberry, are used in preventive and preventive health practices in different societies. The aim of this study is to determine the hydroalcoholic extraction yield of berries collected from Çanakkale/Lapseki region and subsequently evaluate the antioxidant capacity of the extract using CUPRAC method. As a result of the analysis, the antioxidant capacity of the fruit extract was calculated as trolox equivalent (TE). It was found that the extraction yield was 16.3% and the extracts had an antioxidant capacity of 320 mg TE/gr. Based on these results, Aronia is considered to have a high potential for use in medical and pharmaceutical applications.
Keywords: *Aronia melanocarpa, antioxidant activity, CUPRAC method, hydroalcoholic extraction, phytochemistry*

GİRİŞ
Artan çevre kirliliği, kullanılan kimyasallar ve sentetik malzemeler sebebiyle doğal yaşam alanları ve gıdalar farklı oranlarda toksisiteye maruz kalmaktadır. Bu durum insan sağlığını ve canlı yaşamını olumsuz etkilemektedir. Bu olumsuzlukların azaltılmasında antioksidanlar önemli bir role sahiptir. Antioksidan maddeler, serbest radikallerin neden olduğu birçok oksidatif hasarı önlemede, serbest radikalleri yakalama ve stabilize etmede büyük öneme sahip olan maddelerdir. İnsan yaşamı boyunca

toksik kimyasallar ile karşılaşma sorunu artmakta ve bu bağlamda bitkilerdeki antioksidan bileşenlerin tespiti ve ürüne dönüştürülmesi önem kazanmaktadır

Aronia melanocarpa (Michx.) Elliot bitkisinin cins adı, "aria" kelimesinden gelir. Aria, *Sorbus* genusunun Yunanca adıdır ve *Rosacea* familyasının farklı iki cinsine ait bu bitkilerin meyveleri birbirlerine benzemektedir. Tür adı *melanocarpa* ise iki kelimenin birleşimidir. Latince melano siyah, carpa ise meyve anlamına gelir.(Anonim,)

Yaprak döken çalı formunda olan Rosacea familyasının 1,5-2,5 m boylanabilen bir üyesi olan Aronia bitkisinin ana vatanı Kuzey Amerika kıtasıdır (Ochmian vd., 2012). 1900'lü yılların başlarında Avrupa ve Rusya'ya getirilerek yetiştirilmeye başlanmıştır (Shahin vd., 2019). En yaygın 3 türü bilinmektedir: *Aronia melanocarpa* (Michx) Elliot (Black chokeberry), *Aronia prunifolia* (Marsh) (Purple chokeberry), *Aronia arbutifolia* (L.) Elliot (Red chokeberry) (King ve Bolling, 2020; Eskimez ve Polat, 2022). 1940'lı yıllardan bu yana Almanya başta olmak üzere Doğu Avrupa ülkelerinde, 1990'lardan sonra Çin'de 2012 yılından beri de Türkiye'de yetiştirilmeye başlanmıştır. (Ünal,2022; Shi vd.,2024) Türkiye'de en çok üretim alanları başında Kırklareli, Bursa, Yalova, Manisa gelmektedir (Poyraz Engin ve Boz 2019).

Aronia melanocarpa nın 'Nero' ve 'Viking' çeşitleri *A. melanocarpa* ve *Sorbus aucuparia* arasında melez türlerdir (King ve Bolling, 2020).

Sert iklim koşullarına dayanıklı olup optimum sıcaklık olan 5-10 °C'de gelişim göstermektedir. (Anonim-2, 2024). Maksimum -25C ye kadar dayanabilir. Her çeşit toprak özelliğinde yetiştiricilik yapılabilmektedir (Özder, 2021). İlkbaharın geç donlarından etkilenmez. Kışın yüksek soğuklama isteğine sahip olan bitki, nisanda çiçeklenme gösterip genellikle eylül ayı ortası hasat için salkımlı meyveleri olgunluğa ulaşır (Şahin ve Erdoğan, 2022). Aronia melanocarpa'nın çiçek ve meyve salkım görünümleri Şekil 1'de verilmiştir.

Amerikan yerlileri olan Kızılderililer bu meyveleri bir besin olarak tüketmişlerdir (Moerman, 1998). Potawatomi ve Abnaki kabileleri ayrıca bu bitkiyi soğuk algınlığını önlemede ve tedavi amaçlı çay yapımında kullanmışlardır (Kokotkiewicz vd., 2010).

Şekil 1. *Aronia melanocarpa'nın* çiçek ve meyve salkım görünümleri

Bazı enfeksiyonlarda, mide, bağırsak, karaciğer ve safra kesesi dahil olmak üzere gastrointestinal sistem hastalıklarında kullanımı, bağışıklık sistemi hastalıkları, dolaşım bozuklukları, hipertansiyon üzerine etkileri kayıtlara geçmiştir (Andryskowski,1998). Diyabet, obezite gibi metabolik hastalık riskini en aza indirebilir (Oszmianski ve Sabina Lachowicz, 2016). Meyve suyu şeklinde elde edilen özütün bir araştırmada hiperlipidemi oluşturulan deney hayvanlarında lipid düşürücü etki gösterdiği ve kalp ve dolaşım sağlığı açısından bu şekilde lipideminin azaltılmasının önemli olacağı ortaya konmuştur (Valcheva vd., 2007). Son araştırmalar, *Aronia melanocarpa* ve ekstaktiflerinin yalnızca bu gibi kronik metabolik hastalıklar değil ayrıca tromboemboli ve kanser gibi ciddi hastalıklar üzerinde de önemli bir iyileştirme etkisine sahip olduğu, aynı zamanda meme kanseri, pankreas kanseri ve bağırsak kanseri tümör hücrelerinin çoğalmasını engelleyebileceğini ortaya koymuştur (Doma vd., 2023). Antidiyabetik ilaçlar ve antikoagükanlar ile etkileşebilir/birlikte alınmaması kayıtlara geçmiştir (TİTCK, 2024; Anonim-3, 2024)

FULL TEXTS BOOK

Günümüzde *Aronia melanocarpa* fenolik biyoaktif maddelerin en zengin bitki kaynaklarından biri olarak kabul edilmektedir. *Aronia melanocarpa*'nın meyveleri kimyasal olarak diyet lifi, protein, şekerler, polifenoller içerir (Demircan, vd., 2024). Polifenolik bileşikler olarak antosyanidinler, proantosiyanidinler, flavonoidler ve fenolik asitler dahil olmak üzere çeşitli bileşenler sayılabilir (Szopa vd., 2017). Polifenoller, meyvelerin yüksek biyoaktivitesini belirleyen en önemli fitokimyasal bileşenlerdir (Sidor ve Michałowska, 2019). *Rosecea* familyasının diğer türlerine göre antioksidan bileşikleri daha yüksek oranda bulundurmaktadır (Shi vd.,2024).

Bu çalışma, *Aronia melanocarpa* meyvesindeki kimyasal bileşenler ve aktiviteler üzerine ilgili araştırmalara katkı sağlamak amacıyla Çanakkale-Lapseki bölgesinde yetiştirilen bitkinin antioksidan aktivitesinin incelenmesini içermektedir. *Aronia melanocarpa* meyvelerinin hidroalkolik ekstraksiyonunun antioksidan aktivitesi araştırılmıştır.

MATERYAL ve METOD:

Bitki materyali

Araştırmada Çanakkale-Lapseki Bölgesinde yetiştirilen Nero çeşidi *Aronia melanocarpa* (Michx) Elliot bitkisinin 2023 yılı ekim başı hasat edilen meyveleri kullanılmıştır.

Ekstraksiyon

A. melanocarpa meyvelerinin hidroalkolik ekstraktı hazırlanmıştır. Taze meyveler, %80 lik Metanol (MeOH) ile muamele edilmiştir. 100 gr meyvenin kullanılan ekstraksiyon işlemi için 1/1,5 (ağırlık/hacim) oranında MeOH çözücü olarak kullanılmıştır. Orbital çalkalayıcıda 48 saat tutularak maserasyon tamamlanmıştır. Filtrasyon işleminin ardından çözücü evaporator ile uzaklaştırılmıştır.

Antioksidan Kapasite Analizi- CUPRAC Metodu

Aronia meyve ekstresinde (MeOH), CUPRAC Metodu ile antioksidan kapasite analizi yapılmıştır (Apak vd., 2004). Troloks eşdeğer antioksidan kapasite (TEAC) yöntemi ile 3 tekrarlı ölçümler gerçekleşirilmiştir.

CUPRAC Antioksidan Kapasite ölçümü, yönteminin kromojenik oksidasyon aracı olan Cu(II)-Nc reaktifinin antioksidanlarla (Ar(OH)n) reaksiyonu sonucu Cu(I)-Nc renkli kelatının oluşumuna dayanmaktadır . Burada oluşan şelatın absorbans değeri ile indirgeme reaksiyonunda aktif olan antioksidan maddelerin aktiviteleri ölçülmüş olmaktadır.

BULGULAR VE TARTIŞMA:

Aronia meyvelerinde %25,38 kuru madde bulunmuştur.

Ekstraktif verim % 16,3 taze meyve (FW) ve %64,54 kuru meyve (DW) için hesaplanmıştır.

Aronia melanocarpa bitkisinde kurutulmuş meyvelerde 206,4 mg TE/gr olarak antioksidan kapasite hesaplanmıştır (Çizelge 1).

Çizelge 1: Aronia melanocarpa meyve kısımlarının CUPRAC yöntemine göre antioksidan aktivite Trolox Eşdeğer (TE) ölçümleri

Concentration (µg/mL)	Trolox Equivalent (µg/mL) Methanol extract	Dried matter
100 µg/mL	32,01 µg/mL	206,4 mg/TE/gr

Antioksidan kapasitesini ölçmek için oldukça farklı metodlar vardır. Ve bu yöntemler antioksidan analizinin reaksiyon ana prensiplerindeki farklılıklardan kaynaklanan birbirinden farklı sonuçlar vermektedir.

Aronia meyvelerinin antioksidan kapasitesi üzerine oksijen radikal emilim kapasitesi (ORAC) prosedürü (Shi vd., 2024) DPPH gibi farklı yöntemlerle yapılmış birçok çalışma vardır. Kapçı'nın 2013'teki çalışmasında CUPRAC metodu ile kuru meyvelerin antioksidan kapasitesinin diğer yöntemlerle ölçümünden daha yüksek olduğunu göstermiştir. Duysak ve arkadaşlarının 2024'teki bir araştırmasında metanolik ekstraktlarının 125 µg/mL konsantrasyonunda aynı yöntem ile antioksidan aktivite 10.72 Trolox Eşdeğer (µg/mL) olarak rapor edilmiştir.

Bununla birlikte *A. melanocarpa* meyvelerinin analiz edilen diğer meyvelerden daha yüksek seviyelerde antioksidan aktivite gösterdiğini rapor eden çalışmalar mevcuttur (Benvenuti vd., 2006; Shi vd., 2024).

SONUÇ

Son yıllarda gerçekleştirilen bilimsel araştırmalar beslenmede antioksidan içerikli besinlerin ve bileşiklerin tüketilmesinin sağlık açısından olumlu sonuçlara sebep olduğunu göstermektedir. Bununla birlikte bu tür bileşenlerin bazı kanser türlerinin hücre çoğalmasını azalttığı anlaşılmıştır. *Aronia melanocarpa* bitkisi, yüzyıllardır yerliler tarafından ilaç olarak kullanılmıştır. Meyvelerini kurutup yemeklere ilave olarak kullanmışlar ve yapraklarını kurutup çay yapmışlardır. Antioksidan açısından oldukça zengindir. Üzümsü meyveler içinde en çok antioksidan etki içeren meyvedir.

Türkiye'nin doğal florada bulunan üzümsü meyvelerin sağlık alanındaki olumlu etkilerini aydınlatan çalışmalar giderek artmaktadır. Aronia bitkisinin de bu yönde etkileri azımsanmayacak düzeydedir. Hatta antioksidan etkileri bu grup meyveler içinde önde geldiği anlaşılmıştır. Bununla birlikte *Aronia melanocarpa* meyvesinin bireylerin yaş, kilo ve klinik özelliklerine göre beslenme ve tıbbi değeri hakkında yeterli bilgi yoktur. Türkiye'de yetişen türlerin özellikle dozajlama ve farmakolojik aktiviteleri konusunda daha fazla çalışmalar ile kayıtlara geçilme beklentisi bulunmaktadır. Meyveler, fenolik bileşikleri kompleks- zengin yapıda bir antioksidan kaynağı ve fonksiyonel gıda kaynağıdır. Kayıtlara geçmiş güvenilir kullanım ile ekonomik yerel tüketim seçenekleri geliştirilme çalışmaları ilgi uyandırmaktadır.

Kültüre edilen Vaccinium türleri gibi *Aronia melanocarpa* bitkisinin yetiştiriciliği ve fonksiyonel gıda olarak kullanımı ile ilgili çalışmaların daha kapsamlı hali ile gündemde olduğu, özellikle de son 10 yıl içinde arttığı bildirilmiştir. Bilimsel çalışmalardaki olumlu sonuçların bu sektöre bir hız ve motivasyon kaynağı olacağı öngörülmektedir.

ANALYSIS OF THE TRANSLATION OF THE ROMANTIC LETTERS OF "THE SORROW OF THE YOUNG WERTHER: BY JOHANN WOLFGANG VON GOETHE FROM GERMAN INTO ALBANIAN

PhD candidate Fatbardha KUME
Prof.as.dr. Ema KRISTO
University of Tirana, Albania
Faculty of Foreign Languages
Department of German Language

ABSTRACT
"Die Leiden des jungen Werther "is an epistolary novel by Johann Wolfgang Goethe from 1774, which was published in a revised edition in 1787. It represents one of the fundamental works of the Sturm und Drang period in German literature and had a great influence on the later Romantic movement. This article presents and analyzes the translation of the romantic letters in "The Sorrows of the Young Werther", focusing on the Albanian translation by Petro Zheji. The focus of the analysis is on the letters that Werther writes in German in the first two chapters of the work. This study combines translation analysis by describing the translated elements in different and important fragments of the work, such as metaphors and epithets. Goethe has combined elements such as nature and spirit in a sophisticated way in this epistolary novel.
"The Sorrows of the Young Werther" is an important representation of the Sturm und Drang era, where Werther is a typical representative of that period, embodying the sensitivity and genius of his feelings. Translating such a work brings several challenges, including adapting the vocabulary used, the rhetorical questions addressed in each letter, the style and metaphors to make it attractive to new readers and to arouse curiosity about subsequent letters.
This study includes a comparative analysis of the original German text and its translation into Albanian, focusing on the translation of metaphors, epithets and other stylistic elements. It examines how the translator dealt with the nuances of the original text, especially the connection between Werther's nature and soul, a key aspect of Goethe's style. This approach allows for an investigation into how the semantic development of nature is presented differently by the author and the translator.
Werther's interweaving of nature and spirit is a distinctive feature of Goethe's writings and allows the reader to understand the connection between the protagonist's feelings and nature. The study sheds light on the strategies used, the preservation of romantic nuances on a semantic and linguistic level, and the overall effectiveness of the translation in capturing the essence of the original work.
Keywords: youth literature, strum und drang, metaphor, briefroman, nature, translation analysis

1. Introduction

In this article, a detailed translational analysis of elements from Goethe's work will be presented. This analysis demonstrates that Goethe's writing style is characteristic of the Sturm und Drang era and examines Petro Zheji's art of translating it into Albanian.
The Sorrows of Young Werther (Die Leiden des jungen Werthers), commonly known as Werther, is an epistolary novel written by Johann Wolfgang Goethe in 1774, with a revised edition published in 1787. It is one of the seminal novels of the Sturm und Drang period in German literature and significantly influenced the subsequent Romantic movement. The novel intertwines biographical and autobiographical elements, reflecting two triangular relationships involving Goethe, Christian Kestner, and Charlotte Buff.
The narrative of The Sorrows of Young Werther unfolds through a series of letters penned by Werther, a young artist with a sensitive and passionate temperament, addressed to his friend Wilhelm. Werther falls deeply in love with Charlotte, despite knowing she is engaged to Albert, who is eleven years her senior. Despite the emotional turmoil, Werther spends several months fostering a close friendship with both Charlotte and Albert. Each day becomes a tormenting reminder of Charlotte's unattainable love. Out of respect for her husband and compassion for her friend, Charlotte eventually decides that Werther must limit his visits.
Earlier in the story, Werther had insinuated that one member of the love triangle-Charlotte, Albert, or Werther himself—would need to die to resolve the situation. Unable to harm anyone else or contemplate

FULL TEXTS BOOK

murder, Werther sees no option but to end his own life. After writing a farewell letter to be found posthumously, he requests Albert's pistols under the pretense of going "on a journey." Charlotte, overwhelmed with emotion, sends the pistols. Werther then shoots himself in the head, but he survives for twelve agonizing hours before succumbing to his wounds. He is buried between two linden trees frequently mentioned in his letters, without any clergy or the attendance of Albert or Charlotte. The book concludes with a hint that Charlotte might die of a broken heart: "I shall say nothing of...Charlotte's grief. ... Charlotte's life was despaired of."1

Sturm und Drang, literally translated as "Storm and Stress," was a proto-Romantic German literary movement of the late 18th century that celebrated nature, individual subjectivity, and intense emotions. The primary aim of the movement was to rebel against the Enlightenment's emphasis on rationalism and the classical ideal of beauty upheld by Neoclassicism. Key figures of the Sturm und Drang movement, such as Johann Wolfgang von Goethe and Friedrich Schiller, profoundly influenced German literature with their romantic narratives, strong emotions, and evocative imagery.2

2. Translation Challenges in romanticue Letters

Translating literature with romantic elements presents significant complexities and challenges, particularly for young audiences. One of the primary difficulties lies in capturing the nuanced expressions of love and emotion that are often embedded in romantic letters. These expressions are not only linguistically diverse but also culturally specific, making it challenging to find equivalent translations that resonate with the target audience.

In the Albanian language, expressions of love are deeply rooted in cultural customs and regional dialects, which vary significantly across different parts of the country. As a result, a direct translation from German to Albanian may fail to convey the same emotional depth and cultural context. For instance, phrases that are poetic and profound in German might seem awkward or lose their romantic charm when translated literally into Albanian.

According to Newmark (1988), "translation is not just a matter of substituting words in one language for words in another; it involves the whole culture." This is particularly true for romantic literature, where the translator must navigate the subtleties of both languages and cultures to maintain the intended emotional impact.[3] Venuti (1995) also emphasizes the importance of the translator's role in bridging cultural gaps, arguing that "translation is a cultural act that necessitates a deep understanding of the socio-cultural contexts of both the source and target languages."[4]

Moreover, the German language has its unique way of expressing romantic sentiments, often utilizing compound words and specific grammatical structures that do not have direct equivalents in Albanian. This discrepancy requires the translator to employ creative strategies to adapt the content in a way that feels natural and authentic to Albanian readers while preserving the original meaning and emotional tone.

Susan Bassnett (2002) highlights that "the act of translation involves negotiating complex layers of meaning and finding ways to convey those layers in another language." This negotiation becomes even more intricate when dealing with romantic letters, where the subtleties of tone, context, and cultural implications must be carefully balanced.[5]

Additionally, Eugene Nida's concept of dynamic equivalence (1964) becomes relevant here, where the focus is on achieving a similar response from the target audience as the original text would have evoked. This approach suggests that translators should prioritize the overall impact and emotional resonance of the text over a word-for-word translation.[6]

In summary, translating romantic literature, particularly letters, involves more than linguistic conversion. It requires a deep understanding of cultural nuances and the ability to convey the same emotional and contextual richness in the target language. The translator must skillfully balance fidelity

to the source text with the cultural and linguistic expectations of the target audience, ensuring that the translated work retains its romantic essence and resonates meaningfully with readers.

3.2 Practical Text Analysis

Die Leiden des jungen Werthers by Johann Wolfgang von Goethe is a quintessential representation of the Sturm und Drang era. This epoch, known for its emphasis on individual subjectivity and emotional intensity, finds a profound expression in Werther's character. Throughout the novel, particularly in the letters penned by Werther, his sensitivity and profound sense of alienation from the societal norms of his time are vividly portrayed. Werther's letters consistently reflect his inner turmoil and his steadfast loyalty to his own ideals, despite the conflicts with the external world.

Werther often uses nature as a metaphor for his emotional state, mirroring the Romantic inclination towards using natural elements to symbolize inner feelings. His deep, unreciprocated love for Charlotte is a central theme in the novel, portrayed as both an all-encompassing force and the source of his intense suffering. The selected excerpts for this analysis highlight the impossibility of Werther's love for Charlotte, underscoring the emotional and psychological complexities that drive his despair.

The translation of such a work presents significant challenges. The translator must strive to preserve Goethe's original style and intent while making the text accessible and resonant for an Albanian audience. Petro Zheji, the translator of this work into Albanian, undertakes the task of maintaining the authenticity and richness of Goethe's narrative. Zheji's translation captures the multifaceted emotional landscape of the novel, ensuring that the Albanian reader can appreciate the depth and nuance of Werther's character and his unfulfilled love for Charlotte.

This analysis focuses on key excerpts from the letters that illustrate Werther's profound and unattainable love for Charlotte. These selections reveal the intensity and futility of Werther's emotions, which are pivotal to understanding his ultimate despair. The translator’s role is critical in conveying these intricate emotions and preserving the literary quality of the original text. Through Zheji's skillful translation, the Albanian rendition of Die Leiden des jungen Werthers stands out as an authentic and vibrant interpretation, faithfully reflecting Goethe's literary masterpiece.

First part of the book

- **Letter - 10 May**

German
... *— dann sehne ich mich o□ und denke: ach könntest du das wieder ausdrüc-ken,* ***könntest du dem Papiere das einhauchen, was so voll, so warm in dir lebt, daß eswürde der Spiegel deiner Seele, wie deine Seele ist der Spiegel des unendlichen Gottes!..***
Albanian Translation
...dhe them me vete : “Ah sikur te mundta shprehje ate qe ndjen,sikur te ishe i zoti ***te derdhje mbi karte tere kete jete qe rrjedh brenda teje kaq e plote dhe e ngrohte ,qe karta te behej pasqyre e shpirtit tend ,ashtu si shpirti yt eshte pasqyra e hyjnise se pafundme!..***

In the book "The Sorrows of the Boy Werther" there is an extensive use of literary figures such as metaphors, epithets, metaphorical epithets and similes that emphasize Werther's sensitivity in each paragraph.

In this case, the translation of the phrase ***"könntest du dem Papiere das einhauchen, was so voll, so warm in dir lebt, daß es würde der Spiegel deiner Seele, wie deine Seele ist der Spiegel des unendlichen Gottes!"*** in the Albanian language "to pour on the card this whole life that flows inside you so full and warm, so that the card becomes a mirror of your soul, just as your soul is a mirror of the infinite divinity!" shows the effort of Petro Zheji to preserve the same literary figures in Albanian.

FULL TEXTS BOOK

The Albanian translation preserves the sensibility and stylistic richness of the original by using words and structures that give the same emotional impact to the Albanian reader. An interesting adaptation is the word ***"Gottes",*** which ***in Albanian is "god***", but to give a greater stylistic force, the translator has used the term "goddess than infinity". This change not only better conveys the feelings of the protagonist, but also preserves the depth and philosophical dimensions of the original text.
This effort to keep alive the stylistic nuances and emotions of the original is a testament to Zhej's skill as a translator and the importance of preserving authenticity in the translation of classical literary works. Through this practical analysis, we better understand how translation not only conveys the content of the text, but also preserves and transmits the deep feelings and emotions of the original author to the new reader

- **Letter -13 Mai**

German
Wie oft lull ich mein empörtes Blut zur Ruhe, denn so ungleich, so unstet hast du nichts gesehen als dieses Herz... ... Auch halte ich mein Herzchen wie ein krankes Kind*; **jeder Wille wird ihm gestattet**.*
Albanian Translation
...Sa e sa here duhet ta perkund e ta ***ve ne gjume gjakun tim rebel***,sepse,ska gje me te cnjetrajtshme e te paqendrueshme se zemra ime e gjore . *...Pra dhe sillem me zemren time si me nje femije te semure, **duke ia permbushur pa fjale, te gjitha tekat** .*

In the case of translation from the German language, many linguistic elements are adapted based on the culture of a country. In this case, the phrase **"jeder Wille wird ihm gestatet**" is compensated with a sentence of the everyday language like " ***duke ia permbushur pa fjale, te gjitha tekat*** ". The word ***"tekat"*** in the Albanian language is used when a child or a person asks for something immediately, even when this is not possible at that moment.
The German phrase ***"Wie oft lull ich mein empörtes Blut zur Ruhe"*** translated into Albanian " Sa ***e sa here duhet ta perkund e ta ve ne gjume gjakun tim rebel*** " is a proof of the love that Werther felt for Charlotte.The translator uses the technique of linguistic amplification by adding metaphorical elements to emphasize the romantic nuances. This approach not only preserves the original meaning, but also deepens the feeling of the Albanian reader by bringing the character's emotions and experiences closer.
In this letter, Werther's feelings are vividly and powerfully reflected through the use of metaphors and similes. Zheji's translation preserves these stylistic elements, trying to capture the emotional essence of the original text. By comparing his heart to a sick child, Werther shows the fragility and instability of his feelings, and the translator skillfully conveys this in Albanian.

- **Letter - 26 May**

German
und sagte zu ihm: **Feiner jungerHerr**! lieben ist menschlich, nur müßt Ihr **menschlich lieben**!
Albanian Translation
... Te dashurosh **imzot i ri dhe i ndritur** eshte dicka njerezore vetm se duhet **dashuruar njerezisht**!

In this case, the translation from German to Albanian was carried out while maintaining the same literary figures and stylistic nuances. The phrase "**feiner junger Herr**" is translated as ***"young and bright sir"***, retaining the respectful and laudatory title. Also, the word **"menschlich**" is translated as "njerezore", keeping its original meaning.

The translator has faithfully preserved Goethe's style and tone, accurately conveying the emotions and messages expressed in the original text. This is a significant challenge in translating literature, especially when it comes to works from the "Sturm und Drang" era, which are characterized by the use of rich figurative language and intense emotional expressions.
In this phrase, the translator Petro Zheji manages to preserve the cultural sensitivity of the expressions. By translating "***lieben ist menschlich, nur müßt Ihr menschlich lieben***" as "to love is something human only to be loved humanly", Zheji maintains semantic and stylistic equivalence, ensuring that the Albanian reader experiences the same feeling and meaning as the German reader.
In addition, the translation of the literary figures as "***imzot i ri dhe I ndritur*** " shows the translator's care to preserve the reverence and respect expressed in the original, offering a translation that is faithful to the spirit of the work and that respects the cultural nuances of the Albanian language.

- **Letter -16 June**

German
... sie hat allen meinen Sinn gefangen genommen. *So viel Einfalt bei so viel Verstand, so viel Güte bei so viel Festigkeit, und die Ruheder Seele bei dem wahren Leben und der Tätigkeit.*
Albanian Translation
...Shkurt,me ka bere per vete,me ka marre mendte! Nje thjeshtesi kaq e plote bashke me nje mendjee kaq te ndritur ,nje miresi kaq e madhe bashke me nje force te jashtezakonshme karakteri ,dhe nje qetesi shpirterore kaq e persosur mes nje jete plot levizje.

The phrase ***"sie hat allen meinen Sinn gefangen genommen"*** in the Albanian language is translated as ***"Shkurt, me ka marre mendte***" which is an idiomatic way of expressing deep and complete love for him. It is important to note that the word "**Sinn**" in German means "**meaning, sense**", but the Albanian translation uses an everyday idiom that expresses the same emotion in a culturally appropriate way. This translation is understandable and makes sense in the Albanian cultural context, but it does not fully capture the meaning of the original German phrase. This shows that the translator has made a choice to adapt the phrase for Albanian readers, using an idiom that carries the same meaning, but in a different way.
The rest of the phrase "***So viel Einfalt bei so viel Verstand, so viel Güte bei so viel Festigkeit, und die Ruhe der Seele bei dem wahren Leben und der Tätigkeit***" is translated "***Një thjeshtësi kaq e plotë bashkë me një mendje kaq të ndritur, një mirësi kaq e madhe bashkë me një forcë të jashtëzakonshme karakteri, dhe një qetësi shpirtërore kaq e përsosur mes një jete plot lëvizje***". Here, the translator has preserved the structure and nuances of the original, using similar literary figures and ensuring that the translation is faithful to Goethe's style and tone.

German
Wie ich mich unter dem Gespäche in den schwarzen Augen weidete! wie die leben-digen Lippen und die □ischen, muntern Wangen meine ganze Seele anzogen! wie ich, **in den herrlichen Sinn ihrer Rede ganz versunken**, o□ gar die Worte nicht hörte, mit denen sie sich ausdrückte!
Albanian Translation
Me sa etje I perpija , gjate kesaj bisede, syte e saj te zinj! Sa shume e teresisht terhiqeh shpirti im nga buzet e saj kaq te purperta e nga faqet e saj kaq te fresketa e te gjalla! ***... e madherishme ne tufanin e ndjenjave qe ato me zgjonin*** *,nuk arrija dot te degjoja dot as fjalet me te cilat ajo perpiqej te shprehte mendimin e saj !*

In this pragraph from "The Sorrows of the Boy Werther" by Goethe, the translator Petro Zheji has made a careful translation that preserves the emotions and sensitivity of the original. He has used literary figures to convey the deep feelings of Werther in the Albanian language.
In the phrase "***Wie ich mich unter dem Gespäche in den schwarzen Augen weidete***!", the translator brought it into Albanian as "***How thirsty I was, during this conversation, her black eyes***!", using the word "thirst" for conveyed the intensity of Werther's feeling. This is an example of using metaphors to emphasize his desire and passion.
The rest "**wie die lebendigen Lippen und die frischen, muntern Wangen meine ganze Seele anzogen!**" is translated as " ***Sa shume e teresisht terhiqeh shpirti im nga buzet e saj kaq te purperta e nga faqet e saj kaq te fresketa e te gjalla".*** The translator has used epithets like "**purple" te purperta** and "**fresh and lively"** to convey the beauty and vivacity of Charlotte's portrait.
In the phrase "**wie ich, in den herrlichen Sinn ihrer Rede ganz versunken, oft gar die Worte nicht hörte, mit denen sie sich ausdrückte!",** the translator has added an emotional and metaphorical element in Albanian: " ***e madherishme ne tufanin e ndjenjave qe ato me zgjonin"*** **"magnificent in the storm of feelings that they they woke me up, I couldn't even hear the words with which she tried to express her opinion!**". This shows a higher level of emotional intensity and Werther's devotion to Charlotte.

German

Ich war kein Mensch mehr. Das liebenswürdigste Geschöpf in den Armen zuhaben und mit ihr herumzufliegen wie Wetter, daß alles rings umher verging, und ...

....tat ich aber doch den Schwur, daß ein Mädchen, das ich liebte, auf das ich Ansprüche hätte, mir nie mit einem andern walzen sollte als mit mir,und wenn ich drüber zugrunde gehen müßte.

Albanian Translation

...Jo s isha me njeri .Te mbash ne krahet e tu nje krijese te tille **te magjishme** ,te fluturosh me vertkun e nje tufani dhe cdo gje nderkaq rreth teje te venitet e te zhduket dhe ...

Ate /cast bera be e rrufe me veten time se vajzen, me te cilen do te dashurohesha dhe me te cilen do te kisha ndermend te lidhja fatin tim , une nuk do te lejoja kurre dhe sikur ta dija qe do ta paguaja kete me jeten time, nuk do ta lejoja kurre ,them , te kercente vals,pos meje ,me nje tjeter !

In this excerpt from "The Sorrows of the Boy Werther" by Goethe, the translator Petro Zheji has skillfully preserved the sensitivity and passion of the original. The Albanian translation successfully captures the emotional intensity and deep despair of Werther, faithfully conveying the essence and emotions of the work.
The phrase "**Ich war kein Mensch mehr. Das liebenswürdigste Geschöpf in den Armen zu haben und mit ihr herumzufliegen wie Wetter, dass alles rings umher verging**," is translated as ***"No, I was no longer human. To hold a creature in your arms so magical, to fly with the momentum of a storm and everything around you fades and disappears,"*** using powerful literary figures to describe the intensity of the protagonist's feelings. Here, Zheji uses the metaphors **"te magjishme" and "vertkun e nje tufani** " to convey the magic and power of Werther's feelings for Charlotte, giving the reader a vivid and emotional experience.
In the second phrase, **"tat ich aber doch den Schwur, dass ein Mädchen, das ich liebte, auf das ich austenze hätte, mir nie mit einem andern walzen sollte als mit mir, und wenn ich drüber zrunde gehen müsste,**" the Albanian translation " **Ate cast bera be e rrufe me veten time se vajzen, me te cilen do te dashurohesha dhe me te cilen do te kisha ndermend te lidhja fatin tim , une nuk do te lejoja kurre dhe sikur ta dija qe do ta paguaja kete me jeten time, nuk do ta lejoja kurre ,them , te kercente vals,pos meje ,me nje tjeter** ! " includes a precise and emotionally rich translation. Zheji maintains Werther's sense of oath and determination to protect his love, using powerful and determined language that reflects the intensity and drama of the protagonist's oath.

- **Letter -19 June**

German
... , und ich bin gekommen; und seit der Zeit können Sonne, Mond und Sterne geruhig ihre Wirtscha treiben, ich weiß weder, daß Tag noch daß Nacht ist, und die ganze Welt verliert sich um mich her.
Albanian Translation
...dhe keshtu e pashe perseri dhe qe atehere dielli,hena, yjet mund te vijne rrotull sa te duan e te bjen te qete punen e tyre, se une sdi me ne eshte dite apo eshte nate,sepse bota,tere bota rreth meje u zhduk e s eshte me

The translator has preserved the strong literary figures that Goethe uses to express Werther's emotional state. The use of the words **"the sun, the moon, the stars may come round as they please and do their work quietly"** shows Werther's indifference and total detachment from reality due to his deep and impossible love for Charlotte - n. The Albanian translation preserves the sense of loss and isolation that Werther experiences, making it clear how important this condition is to the entire story.

Letter -16 July

German
Ach wie mir das durch alle Adern läut, wenn mein Finger unversehens den ihrigen berührt, wenn unsere Füße sich unter dem Tische begegnen! Ich ziehe zurück wie vom Feuer, und eine geheime Kra zieht mich wieder vorwärts
Albanian Translation .
Ah cfare rrymash te zjarrta m'i pershkojne damaret kur gishtat e mi cikin padashur te sajet ,kur kembet tona ndeshen rastesisht nen tryeze .Brof prapthi si i perveluar por ja nje forxe e mistershme me shtyn perpara...

The Albanian translation preserves Goethe's literary figures and style, using words like " **rryma të zjarrta " and " i përvëluar** " to convey Werther's strong and contradictory feelings. The translator has brilliantly captured the sense of sudden and forbidden contact between Werther and Charlotte, emphasizing the physical and emotional effect this contact has on the protagonist. Also, the use of phrases like " **një forcë e mistershme më shtyn përpara** "a mysterious force drives me forward" shows the inevitable and powerful attraction that Werther feels towards Charlotte, despite the pain he experiences.

German
*Wilhelm, was ist unserem **H**erzen die Welt ohne **L**iebe! Was eine **Z**auberlaterne ist ohne **L**icht!*
Albanian Translation .
Si do te na dukej valle bota, Vilhelm, pa dashuri ? *Si nje fener magjik pa drite ?*

The Albanian translation preserves Goethe's style using the questions as a way of making the reader more interested in the history and the answer.The question "**Si do te na dukej valle bota, vilhelm, pa dashuri ?** it's a rhetoric question used to express that with no love how can we live in this world . *Was eine **Z**auberlaterne ist ohne **L**icht.*In german translation is used the *word **Zauberlaterne and ohne Licht*** to express that life and love are all together combined so together they exist. one cannot do without the other. A direct translation was made to write the same stylistic force of the word magic lantern and the rhetorical question in both languages.

FULL TEXTS BOOK

German
...da ich diesen ängstlichen Abschiedim Herzen hatte!
Albanian Translation .
...kur zemra ime rridhte gjak nga nje ndarje kaq mizore

Based on the style of Goethe and the translator PETRO Zheji, who always adapts without losing the similar value of the word, but also adding epithets that in the Albanian language are strong and emotional.The metaphor used "*...**kur zemra ime rridhte gjak nga nje ndarje kaq mizore***" to express that the heart was so hurt like something wounded with blood. bleeding is the most common metaphorical form used in the Albanian language when a lover is hurt by separation. The word "**angstlichen Abschied**" in albanian language is translated **"nje ndarje kaq mizore "** to to reinforce with this word the emotional importance of separation.

Letter 27 October, in the night

German
Ich habe so viel, und die Empfindung an ihr verschlingt alles; ich abe so viel, und ohnesie wird mir alles zu nichts.
Albanian Translation .
...kam shume gjera,por ndjenja qe ushqej per te i perpin te gjitha. Kam shume gjera, por pa te nuk do te kisha pasur asgje.

The letter written on the evening of October 27, is a letter that makes Werther a representative of the Strum und Drang era, he is sometimes emotional and hopeless. Being evening and the thoughts are deeper and not at all easy for him to analyze his feelings for Charlotte. To have everything but nothing without Charlotte, and the word "**perpin**" is used to show that everything disappears before the love you feel for her. The great power of the word "verschlingt -**perpin**" to express the power of love.

Letter 6 December

German
Wie mich die Gestalt verfolgt! Wachend und träumend □llt sie meine ganze Seele
Albanian Translation .
...Ah,fytyra e saj me ndjek kudo qe te shkoj!Shpirti im eshte mbushur, ne enderr e ne zhgjenderr, tejpertej me te ...

This phrase is also his last letter. The translator Zheji has adapted the translation of this part by creating new words such as "**zhgjenderr**" to show that it is a dream that is no longer feasible. Such a sensitive translation with the strength of a man who fights to win Charlotte now feels lost, expressing that he cannot escape from her. He feels weak in front of this great love precisely when he should be strong, greedy dreaming but defeated by reality.

Conclusion

The role of the translator in literary works involves many challenges. But to translate romantic letters from the German language into the Albanian language, a translator with a strategy of translation and adaptation has the same emotion as in the original language of the text without losing the style, manner of writing, stylistic force, etc.

In this work, the translator has used several techniques in translation directly translating the same word with an equivalent in the Albanian language. in some cases he presented idiomatic expressions based on the culture of a country from that of the original work to adapt it for the reader.

ABSTRACT
Background: Achilles's tendon rupture is a frequent injury with an increasing incidence. Treatment strategies for Achilles's tendon rupture vary considerably, and clinical outcome may depend on the magnitude of tendon elongation after surgical repair. Until now, there is no consensus regarding optimal treatment.
Purpose: To identify and analyze the clinical evidence regarding postoperative rehabilitation after the surgical repair of AT ruptures.
Methods: The studies were retrieved by searching the Medline, Embase, and Cochrane, Scopus databases. Critically reviewed the studies using preset inclusion and exclusion criteria. The quality of the eligible studies was assessed by the Cochrane 12-item scale. All included studies were summarized, and their data were extracted. Seven articles were found and they were all acceptable according to international quality assessment guidelines.
Conclusion: Postoperative early weightbearing combined with early ankle motion exercises is associated with a lower minor complication rate and achieves superior and more rapid functional recovery than conventional immobilization after surgical AT repair. Patient satisfaction and time to return to work were significantly different in favor of surgery in one study, and there was also better functional outcome after surgery in some studies.
Keywords: Achilles tendon rupture; tendon elongation; tendon healing; tendon strain; weightbearing.

INTRODUCTION
The Achilles tendon rupture is a frequent injury with an increasing incidence. Treatment strategies for Achilles tendon rupture (ATR) vary considerably, and clinical outcome may depend on the magnitude of tendon elongation after surgical repair. Until now, there is no consensus regarding optimal treatment. The Achilles tendon (AT) is one of the largest, thickest, and strongest tendons in the human body. The dynamic evolution of the Achilles tendon was strongly associated with the transition from apes' plant diet to humans' meat diet, where fast, shock-absorbing, and energy-saving locomotion was crucial for success. The AT is composed of three rotating subtendons originating from the three parts of the triceps surae muscle: the medial head of the gastrocnemius (MG), the lateral head of the gastrocnemius (LG), and the soleus muscle (SOL). The Achilles tendon (AT) is a common injury site with a wide range of overuse and acute presentations. These can include mid-portion tendinopathies, insertion tendinopathies, muscle injuries, and acute ruptures. It is believed that several factors contribute to AT injury, including poor vascularization, especially in the midportion of the tendon, exposure to high loads during locomotion, and an altered tendon cell response as described in the continuum model by Cook & Purdam, (Cook & Purdam, 2009; Łazarz et al., 2024). Tendon is a non-distensible fibrous cord that connects the muscle to the bone or other structures. The Achilles tendon, also known as the calcaneal tendon, is the largest and most biomechanically strong tendon in the human body. It is also one of the most frequently ruptured tendons in our body. A recent Danish study reported an occurrence of Achilles tendon rupture in 31.17/100,000 individuals. Conventional treatment for Achilles tendon injuries involves rest and immobilization using a brace if the injury is mild; severe injuries require surgical treatments such as suturing or reconstruction. Although surgical treatment can more reliably repair the injured tendon lesion, the return-to-sport rate of patients that undergo surgery is only 60%–80%, with an average return time of 7.6 months and a re-tear rate of 1.7%–5.4%. Therefore, the development of adjuvant therapies such as platelet-rich plasma (the proteinaceous fluid portion of the circulating blood) therapy, which can ensure a more reliable and faster return to sport, is underway in many fields (Shapiro et al., 2015; Veronesi et al., 2020). However, the effectiveness of such adjuvant therapies is

FULL TEXTS BOOK

controversial, (Nakazawa et al., 2024). The Achilles tendon (AT) is crucial to the athlete, as it is essential for explosive activities such as running and jumping. Athletes that sustain an ATR play in fewer games and perform at a lower level of play compared to age-matched controls. Recent studies also theorize that ATR occur due to elongation of the tendon with fatigue failure. Biomechanical studies have focused on comparing modes of fixation under dynamic loading to recreate this mechanism (Mansfield et al., 2022). Early tensile loading improves material properties of healing Achilles's tendon ruptures in animal models and in surgically treated human ruptures. However, the effect of such rehabilitation in patients who are non-surgically treated remains unknown. A variety of treatment options are available. Open surgical treatment with sutures is the first choice for many surgeons mainly because of a lower risk for re-ruptures. Other treatment alternatives include percutaneous suture fixation and various types of nonsurgical treatment. Traditional treatments, regardless of whether they are surgical or nonsurgical, entail several weeks of immobilization in a cast or orthosis. To overcome longstanding functional impairment, a modern physical therapy approach has been implemented and includes early functional rehabilitation with early weightbearing while wearing an ankle orthosis and unloaded ankle joint motion exercises. This shift in rehabilitation, away from extensive periods of immobilization and unloading toward early loading and motion, has been suggested to reduce the overall re-rupture rate and, in combination with the lack of surgery-associated risks, has made nonsurgical treatment more popular (Rendek et al., 2022). Outcomes, such as return to work and absenteeism days from work, are important dimensions in determining value-based healthcare. Determining the effect of orthopaedic trauma on the economic well-being of the patient is essential for designing value-based care programs. In addition, these data inform surgeon-patient communication on recovery expectations, support the prioritization of health policies, and inform the design of future therapeutic studies aimed at mitigating the socioeconomic consequences of injury. The findings suggest that orthopaedic trauma can have a substantial socio-economic impact on patients, and therefore also affect a person's psychological well-being and happiness (Talaski et al., 2024). However, the current techniques to measure socio-economic outcomes following orthopaedic trauma are widely varied in both design and implementation. Informative and accurate socio-economic outcome assessment requires a multifaceted approach and further standardization (O'Hara et al., 2020). The issue of loss to follow-up in orthopaedic trauma surgery persists despite a growing body of literature detailing its risk to both patients and clinical data. Furthermore, there is concern that these risks weigh more heavily on vulnerable populations given previous research identifying a high rate of loss to follow-up in such groups (Kirchner et al., 2022). Given the fact that a period of at least 2 weeks of immobilization is regularly applied clinically when treating ruptured tendons, the results may have a substantial clinical impact for the use of compression therapy during the period of immobilization. Thus, compression treatment may prove to accelerate healing during plaster/splint immobilization of patients, for example, in conservatively managed acute Achilles's tendon ruptures. The results warrant long-term follow up studies, also on suture repair, and clinical studies to confirm the observations in this experimental study (Schizas et al., 2010). Acute Achilles tendon rupture is a severe injury that leads to permanent functional deficits and sick leave. To prevent the injury, knowledge regarding the pathophysiology and risk factors for ATR is essential. Studies have shown that pathological changes occur in the tissue of the Achilles tendon before a rupture. These pathological changes weaken the tendon, which can result in a rupture during routine movements. It is not fully understood why these changes occur in some but not all Achilles tendons. Several risk factors for ATR have been discovered: male sex, genetics, treatment with quinolone antibiotics, treatment with systemic glucocorticoids, severe kidney disease, and type 2 diabetes. A recently study have demonstrated the presence of bacterial DNA in 25% of the samples from ruptured Achilles's tendons (Rolf et al., 2017). This finding has generated the hypothesis that the presence of bacteria plays a role in the pathological changes that occur in Achilles's tendons before a rupture (Cramer et al., 2022). The treatment of Achilles tendon injuries has seen many changes and innovations over the past several centuries. However, it was not until the early 20th century when surgical management of Achilles's tendon ruptures became the recommended treatment option. Surgeons such as Abrahamsen, Quenu, and Stoianovitch were among the earliest pioneers of surgical Achilles's tendon rupture repair and reported the first positive outcomes associated with surgical management (Miller & Chiodo, 2017). Currently, there is no universally accepted treatment for Achilles's tendon injuries; many options, both operative and nonoperative, exist. Additionally, the state of the Achilles tendon injury literature has rapidly advanced over the past several decades with new studies regarding rehabilitation

FULL TEXTS BOOK

protocols, surgical technique, stem cell treatment, platelet rich plasma potential, mechanisms of injury, and updated epidemiology being released daily. With this rapid expansion of the Achilles tendon pathology literature, it has become increasingly difficult for medical professionals and learners to stay up to date with the most impactful articles in this field (Moore et al., 2023). The purpose of this study is to identify and analyze the clinical evidence regarding postoperative rehabilitation after the surgical repair of AT ruptures.

METHODOLOGY

Search Methods for Identification of Studies:

The studies were retrieved by searching the Medline, Embase, and Cochrane, Scopus databases. Critically reviewed the studies using preset inclusion and exclusion criteria. The quality of the eligible studies was assessed by the Cochrane 12-item scale. All included studies were summarized, and their data were extracted. Seven articles were found and they were all acceptable according to international quality assessment guidelines.

DISCUSSION & RESULTS

The main finding of this study was that immediate postoperative EFM in patients with ATR resulted in significantly higher scores on general health and vitality at 6 months, compared with the control group. EFM did not seem to negatively affect heel-rise function, which indicates that muscle-tendon recovery might not be greatly influenced by differences in treatment protocols. The observed difference in health-related QoL was linked to differences in mobilization regimens between groups, independent of the occurrence of DVT. Patients suffering DVT during treatment, however, exhibited greater impairments in general health and disease-specific subjective outcomes at 6 and 12 months, independent of the postoperative treatment regimen. An essential finding of this study was the observation that the EFM group exhibited superior health-related QoL at 6 months, as measured with the RAND-36. A study has reported that earlier weightbearing resulted in greater health-related QoL at 6 weeks; however, at the 6-month follow-up, this difference no longer existed. In this earlier study, all patients were non-weightbearing for the first 2 weeks and then randomized to weightbearing or not (Suchak et al., 2005). In our study, however, patients in the EFM group were allowed weightbearing from day 1 postoperatively, which may explain the differences in outcomes at 6 months between the 2 studies. Additionally, a study on nonoperatively treated patients with an ATR reported better health-related QoL in patients allowed to bear weight compared with the non-weightbearing group during treatment.

The observed difference at 6 months between the EFM and control groups on the RAND-36 subscales of general health and vitality is suggested to depend mainly on the first 2 postoperative weeks in which patients in the EFM group were weightbearing while the controls were non-weightbearing. These findings seem to reflect that direct weightbearing after an injury has essential effects on patients' more global health conditions. A possible explanation might be that patients have a faster trajectory to recovery with early loading; however, the difference evens out in the long term. The effects of weightbearing on general health and vitality may additionally depend on other factors such as the fear of loading and the number of daily steps taken. Our finding at 6 months of no difference in kinesiophobia between the 2 groups suggests that fear of loading did not affect the difference in outcomes. The number of daily steps taken has been shown to be critical for overall health and is known to be positively correlated with increased loading. Thus, further studies need to assess whether it is the actual amount of loading or the number of steps taken that relates to improved health and vitality.

The difference in subjective outcomes at 6 months may also be related to the varying degree of ankle motion performed in the 2 groups. The EFM group was allowed partial ankle motion within the orthosis from day 1, which was continued for 6 weeks. The control group, however, received a plaster cast for 2 weeks, followed by 4 weeks of immobilization in an ankle-stable orthosis. Movements of the ankle have been speculated to activate the calf muscle and enhance tendon healing. The observation, however, of nonsignificant differences at 6 months on the heel-rise test between the EFM and control groups suggests that the ankle motion produced within the EFM group was too small to further improve calf muscle recovery.

CONCLUSIONS

This study demonstrated that an accelerated postoperative protocol with immediate loading and ankle

FULL TEXTS BOOK

motion resulted in better general health and vitality at 6 months. However, there were no differences between the groups in the recovery of heel-rise function. Future studies should place an additional focus on the means to reduce the risk of DVT to improve patient outcomes after ATR. In conclusion, the Achilles tendon plays an important role in sports performance due to its vital role in ankle stability and allowing athletes to perform explosive activities. While nonoperative management may be sufficient in some non-athletes, multiple studies support operative intervention in elite athletes. Recent studies have shown that operative intervention improves postoperative strength and functional outcomes as well as lowers re-rupture rates compared to nonoperative management with rehabilitation. The current literature supports operative intervention in elite athletes to improve performance and shorten their RTP. However, we acknowledge that surgical intervention does have inherent risks. Ultimately, most if not all athletes with an ATR benefit from surgical repair, but it is crucial to take a critical stepwise algorithmic approach and consider other factors, which may lead towards nonoperative intervention. These factors include age, chronicity of injury, gap of ATR, social factors, medical history, and other factors which are discussed in this review. The RTP rate for athletes that experience an ATR still remains to be 80%, with difficulty in achieving baseline performance until 2 to 3 years after surgery, impacting the overall career of an athlete.

OVERVIEW OF RISK FACTORS FOR ACHILLES TENDON RUPTURE

Assoc. Prof. Dr. Aida Bendo[1*], Msc. Anxhela Ahmataj[2]
*[*1]Sports University of Tirana, Faculty of Physical Activity and Recreation, Department of Health and Movement, Tirana, Albania*
[2]Sports University of Tirana, Faculty of Rehabilitation Sciences, Department of Rehabilitation, & University Trauma Hospital, Tirana, Albania

ABSTRACT
Background: Sports participation has undergone an increase in recent decades. Injury due to sporting activity has also recently risen. The Achilles tendon has been one of the most common sports-related injuries. A 2 in 100,000 individual Achilles's tendon injury rate increased to a 12 in 100,000 individual injury rate in less than 10 years. The injury is typically observed in men in the fourth to fifth decades of life. Male to female injury ratios range from 2:1 to 12:1. Achilles's tendon repair is associated with increased rates of complications and increased initial healthcare cost. However, data are currently lacking on the risk factors for these complications.
Purpose: This study aims to provide a comprehensive overview of the risk factors for Achilles's tendons rupture, with a keen focus on its key trends, for avoidance of degenerative changes to prevent rupture.
Methodology: A systematic review was carried out using PubMed, Cochrane, Scopus and ScienceDirect databases. All types of research studies (Randomized Control Trials - RCTs, Cohort studies, Case-control studies and Cross-sectional studies) that considered ATR, were eligible. The inclusion criteria for eligibility of the studies were to be written in the English language, and to include populations of men and/or women, both athletes, and non-athletes, healthy individuals, and patients.
Conclusions: Rupture typically occurs 2 to 6 cm proximal to the calcaneal insertion. Predisposing factors are grouped into 2 categories: intrinsic and extrinsic risk factors. Avoidance of degenerative changes within the tendon is the primary method to prevent rupture. Regular physical activity as athletes age also promotes tendon hypertrophy, increases nutrient delivery, and reduces collagen fiber fatigue. The role of biomechanical and psychological aspects in the ATR etiology may be of interest in future studies, as we could not extract relative data in our review.
Keywords: Achilles's tendon rupture; predictors; prevention; risk factors.

INTRODUCTION
Achilles tendon rupture (ATR) repair is one of the most common orthopaedic surgeries performed in the United States, however there is a paucity of literature on predisposing risk factors for hospital readmissions. The purpose of this study is to identify risk factors. The Achilles tendon is the largest, strongest, and most commonly injured tendon in the human body (Dams et al., 2019). The incidence of an Achilles tendon rupture (ATR) is increasing and currently stands at 11-37 cases per 100,000 persons per year (Tarazi et al., 2023). Although most ATR repairs are performed in an ambulatory setting, surgical repair of these injuries may result in complications requiring readmission to the hospital. The importance for physicians to identify which patients are at increased risk for post-operative complications can hopefully address unexpected readmissions after ATR repair. While previous studies have postulated that risk factors such as diabetes, hypertension, and drug abuse increase the risk of post-operative complications, the data is limited (Pean et al., 2018; Stavenuiter et al., 2019). The epidemiology and profile of the patients who commonly sustain this injury have been well documented in the literature in the past 15 to 20 years. Typically, these injuries occur most often in middle-aged males engaged in different weekend activities. Patients sustaining this type of injury are described as leading sedentary lives. The term "weekend warriors" portrays individuals being involved in activities that they are unaccustomed to. Reported male/female predominance is anywhere from 2:1 to 12:1 (Inglis & Sculco, 1981), and most injuries occur between the ages of 30 and 50 years. There are no studies that report the presence of a racial predominance for this injury. Most evidence supporting this view is anecdotal, based on observations made in the clinical setting. Mechanism of injury was stratified into basketball-related and non-basketball-related mechanisms. Relative risks were calculated using the method of Katz (Jefferson et al., 1999). Achilles tendon ruptures heal spontaneously, if immobilised; but operated on or not, it takes an annoyingly long time. Moreover, some sequelae usually remain. Research on stimulation of tendon repair is still at the stage of animal experimentation. Tendon repair

FULL TEXTS BOOK

can be described as going through different phases. Often, an inflammatory and a formative phase are described, followed by remodelling (Aspenberg, 2007). Except for the quadriceps tendon, the Achilles tendon is one the strongest in the human body (Uquillas et al., 2015). Despite its ability to withstand four times the force produced by the calf muscles, the Achilles tendon is also vulnerable to rupture (Claessen et al., 2014). Several intrinsic and extrinsic risk factors including local, biomechanical, histological, and genetic factors, as well as medication, can influence Achilles tendon rupture (ATR). However, the true etiology of ATR is not completely known and seems to be multifactorial (Morales et al., 2019). The diagnosis of ATR was based on the presented clinical criteria: a) palpable gap in the tendon; b) positive Thompson test result, (THOMPSON, 1962); and c) clinical signs of rupture (patient unable to raise on their toes or heel). In unclear cases such as regarding the extent and location of rupture, and in all cases of bilateral ATR, ultrasonography was performed to confirm the diagnosis. If doubt persisted in these cases, magnetic resonance imaging was routinely performed after the year 2000. Objective factors specific to repair of an ATR were also examined, with a special focus on differences in the end results of both procedures. Complications were divided into two groups: major and minor (Čretnik & Košir, 2023).

The mechanism for fluoroquinolone induced tendon rupture remains uncertain, but has been linked to changes in collagen fibrils following alterations in the regulation of matric metalloproteinases associated with non-traumatic rupture (Tsai et al, 2011). Although some risk factors for tendon rupture have been identified such as increasing age, male gender, obesity, diabetes, corticosteroid therapy and recreational sports (Spoendlin et al., 2016), a further understanding of risk factors is needed to identify at-risk individuals and minimize unintended harm. (Morales et al., 2019). This study aims to provide a comprehensive overview of the risk factors for Achilles's tendons rupture, with a keen focus on its key trends, for avoidance of degenerative changes to prevent rupture.

METHODOLOGY

Search Methods for Identification of Studies:

A systematic review was carried out using PubMed, Cochrane, Scopus and ScienceDirect databases. All types of research studies (Randomized Control Trials - RCTs, Cohort studies, Case-control studies and Cross-sectional studies) that considered ATR, were eligible. The inclusion criteria for eligibility of the studies were to be written in the English language, and to include populations of men and/or women, both athletes, and non-athletes, healthy individuals, and patients.

DISCUSSION & RESULTS

The data addressing predisposing risk factors for complications after ATR repairs is currently limited. The goal of this study was to explore the patient characteristics that increased the risk of hospital readmission within 30 days of an outpatient ATR and to define the causes for readmission (Tarazi et al., 2023) Race was found to be a predisposing factor for the development of Achilles tendon ruptures. This observation is not reported in the literature. It is currently believed that almost all Achilles tendon ruptures occur in tendons that have clinically silent degenerative tendinopathy." It is possible that both tendon degeneration and failure of muscle overload inhibition play a role in Achilles tendon ruptures and in tendon ruptures in general. Discovery of biochemical differences could lead to a better understanding of the pathology behind Achilles tendon ruptures. A large proportion of the Achilles tendon injuries were related to basketball activities. The game requires forced plantarflexion with frequent jumping and pivoting. Such biomechanical actions are known to be associated with Achilles tendon ruptures regardless of the activity. An association between race and basketball participation, however, cannot be made because the number of exposure hours to basketball activities in the cohort is unknown (Jefferson et al., 1999). Patient-specific characteristics—such as increasing age, greater BMI, female sex, retinacular involvement, and current smoking status—were found to be risk factors for poor outcomes after quadriceps tendon repair. Further studies are needed to identify potentially modifiable risk factors that can be used to set patient expectations and improve outcomes (Coladonato et al., 2024). The risk factors for ATR identified in our study differ from those in the general population. The risk of ATR was higher in women than men. This is in contrast to studies of the general population, which reported a higher risk in men (Suchak et al., 2005; Raikin et al., 2013), or no difference between the sexes (Erickson et al., 2014). ATR incidence was also higher in white patients than black patients. Studies of military personnel have shown a greater risk of ATR in black patients than in those of other

FULL TEXTS BOOK

races (White et al., 2007). Other studies have found an association of ATR with fluoroquinolone use and corticosteroid use (Claessen et al., 2014). The use of fluoroquinolones and corticosteroids in the ESRD population explains, at least in part, the higher incidence of ATR in this population. However, fluoroquinolone use did not seem to be responsible for the higher ATR rates in the waitlisted and transplant patients relative to the non-waitlisted patients (Humbyrd et al., 2018). Based on the results of this systematic review there is moderate evidence that decreased tendon fibril size increases the ATR risk. There is limited evidence for many other factors, some of which are modifiable, such as increased body weight, oral corticosteroid use and quinolone use and living in an urban area, and therefore may be of interest in future studies. Furthermore, these results showed that more high-quality studies are needed for evaluating the determinants influencing the ATR risk (Claessen et al., 2014). Findings revealed an upward trend in SES reporting over the decades studied, but no statistical analysis prevented conclusive statements from being made regarding the significance of this upward trend (Talaski et al., 2024). The prediction of ankle torques and Achilles forces during normal walking (without immobilisation) is inherently less accurate using this approach because the contractions are no longer isometric. Some cam-walkers can be adjusted to manipulate ankle angle thereby affecting the position of immobilisation. This is useful for treating Achilles tendon repairs because immobilisation in plantarflexion will decrease the mechanical stress on the repair (Akizuki et al., 2001).

CONCLUSIONS

Our study confirmed that, as in previous results, higher BMI, smoking, and total cholesterol are risk factors for ATR, Hyperuricemia may contribute to the development of ATR, and adjunctive tests for TC and UA in the blood biochemistry may be helpful in predicting the risk of ATR. This study supports the contention that Achilles tendon ruptures occur more frequently among blacks than among nonblacks. A significant number of these injuries occurred during participation in basketball-related activities. Blacks were at a significantly increased risk of sustaining Achilles ruptures even when controlling for age as a cause of injury. The reason(s) for this increased risk are unknown. Further studies could assess racial microbiological differences in discarded tendons from Achilles tendon repairs, hamstring harvesting for anterior cruciate ligament repair, etc. Achilles tendon repair is associated with a relatively low 30-day complication and 2-year revision surgery rate. Factors associated with postoperative complications include hyperlipidemia, hypertension, female sex, obesity, and diabetes. Factors associated with the need for revision surgery include female sex, hypertension, obesity, and the presence of any postoperative complication. Female sex, diabetes, the presence of any complication, and the need for revision surgery had the largest cost associated with them

WRİTİNG COMPETENCE IN DAF (GERMAN AS A FOREIGN LANGUAGE) İNSTRUCTİON IN ALBANIA: A COMPREHENSIVE OVERVİEW

Prof.as.dr. Ema Kristo/ MA. Nensi Gjetani

ABSTRACT
Writing competence holds a pivotal role in the instruction of German as a Foreign Language (DaF). In the Albanian context, there is a significant focus on enhancing the teaching of writing skills in DaF instruction. This involves examining various perspectives to develop a holistic teaching strategy.
Initially, the importance of writing didactics in DaF instruction is highlighted, exploring different approaches to teaching this skill. The focus is on how various didactic models can support the writing process and which phases of writing are particularly crucial.
Additionally, the integration of digital media into writing instruction is discussed. Modern technologies offer innovative opportunities to enrich writing lessons and provide students with new ways to engage in writing.
Another critical aspect is the correction of errors in written work. Effective methods for error correction are presented, providing teachers with tools to sustainably improve students' writing abilities.
This article aims to provide a comprehensive insight into the teaching of writing competence in German language instruction in Albania, contributing significantly to the advancement of writing didactics in DaF instruction. The goal is to equip teachers and students alike with effective strategies to enhance writing competence, thereby increasing overall success in learning the German language.
Keywords: Writing competence, DaF instruction, Albania, writing didactics, digital media, error correction, teaching strategies.

1. Introduction

In the context of didactic shifts within the communicative reform approach, the promotion of writing skills in German as a Foreign Language instruction has also receded into the background. It has often been overlooked that writing fulfills not only documentary but also very elementary communicative functions (cf. Krumm 1993). Writing supports foreign language acquisition in multifaceted ways. It serves as an aid in the fixation and structuring of mental actions and can contribute to problem-solving and gaining insights. Moreover, appropriate training of this skill can also help optimize other skills (speaking, reading, listening) and enable learners to achieve comprehensive communicative competence in the target language (cf. Kast 1999).
In Albanian DaF (German as a Foreign Language) instruction, writing is often neglected in favor of promoting oral skills. This led us to conduct a quantitative survey aimed at providing a more detailed description of the current state of writing promotion and forming a basis for didactic innovations.
In the survey of albanian teachers described in this paper, the following questions were fundamental:
– To what extent is writing taught in German instruction at Albanian schools?
– What position does writing hold compared to other skills?
– What difficulties do teachers perceive in acquiring/teaching writing skills?
– For what purposes is writing used in instruction? (Writing as a goal or a means; communicative vs. documentary function of writing)
– Are German writing conventions and text types taught?

2. Survey design and implementation

The survey was conducted anonymously using an online questionnaire in July 2005. A total of 32 teachers across Albania participated.
The questionnaire contained 20 mostly closed-ended questions aimed at quantifying the results. Five questions focused on the personal variables of the respondents (mother tongue, completed studies, research focus, current position, and duration of employment at an Albanian university). Two questions sought information about the focus of the German courses (elective/mandatory or major subject) and the framework within which they were taught.
Additional questions aimed to determine the position of writing skills relative to other skills (listening, reading, speaking), and the main learning objectives. The survey also explored how teachers perceive

FULL TEXTS BOOK

their own teaching of writing, the conditions under which they teach, and the difficulties faced by their learners.

Moreover, it examined the purpose and methods used for teaching writing, the German writing conventions and text types taught. The final question was qualitative, inviting suggestions and comments about the survey and the topic of promoting writing skills in Albanian DaF instruction.

Responses were given on a five-point scale, with '1' and '5' representing extremes such as 'never' and 'regularly' or 'unimportant' and 'very important'. This allowed respondents to express moderate positions, with '3' acting as a significant midpoint in data analysis. Two questions asked instructors to estimate the importance of each skill and the proportion of time students spent writing in and outside of class.

Of the 32 teachers, 12 had been teaching for over 15 years, 14 for 10 years, and 6 for less than 6 years. Research interests of the albanian colleagues included linguistics, German studies, literature and didactics, cultural studies and second language acquisition, history, sociology, and philosophy.

The Importance of Writing

To determine the importance of writing promotion in comparison to other skills, the teaching objectives of the instructors were first precisely defined, with the results recorded in Tables 1a and 1b in the form of a ranking. Differentiation between beginners and advanced learners was useful here, as it can be expected that the focus of learning objectives changes with the advancing language level of the learners.

Table 1a: Learning Objectives for Beginners

Objective	Teachers
Listening Comprehension	4.5
Oral Expression	4.5
Pronunciation	4.3
Reading Skills	4.3
Grammar Proficiency	3.7
Written Expression	3.7
Cultural Knowledge	3.7
Text Genre Competence	2.6
Knowledge of German Literature	2.4

Table 1b: Learning Objectives for Advanced Students

Objective	Teachers
Oral Expression	4.8
Reading Skills	4.5
Written Expression	4.5
Listening Comprehension	4.5
Grammar Proficiency	4.2
Cultural Knowledge	4.2
Pronunciation	3.8
Text Genre Competence	3.5
Knowledge of German Literature	2.9

When examining the results, it is initially apparent that for both beginners and advanced learners, oral expression and its receptive counterpart, listening comprehension, are at the top. At the beginner level, the first three positions are even occupied by oral skills, while written expression only appears in sixth place.

Undoubtedly, emphasizing oral skills has the advantage of quickly enabling learners to speak. However, albanian learners, in particular, have a need for strong syntactic orientation support to grasp the structural framework of the German language.

FULL TEXTS BOOK

In advanced instruction, however, written expression as well as reading and text type competence receive higher importance. The tendency to emphasize writing more in advanced instruction is also reflected in the weighting of the four skills. Tables 2a and 2b show the percentage of class time that instructors dedicate to each skill.

Table 2a: Distribution of Skills: Beginners

Skill	D (%)
Speaking	35.2
Reading	23.5
Listening	25.3
Writing	19.0

Table 2b: Distribution of Skills: Advanced

Skill	D (%)
Speaking	35.0
Reading	24.1
Listening	25.7
Writing	23.2

Overall, speaking was the most emphasized skill across all levels, followed by reading and listening, with writing receiving the least attention. Some teachers viewed writing as less relevant, especially in early stages, but acknowledged its role in supporting other skills and providing a deeper engagement with the language. Studies have also shown that promoting writing skills supports the development of other skills. The written form helps decode what is heard and promotes oral language production (cf. Müller 1997: 39–43). Reading ability is also trained since reading serves as a control mechanism in writing. Many people can retain what they have learned more easily if they have the opportunity to fix new information in writing (cf. Müller 1989: 35 and Krück 1982: 391).

2.1 Goals of Writing Activities

Although writing is emphasized less compared to other skills, the following tables show that 19% of beginner-level and 23.2% of advanced-level class time is devoted to writing activities. These activities aim to determine whether writing is practiced as a skill itself or used to support other skills like grammar.

Table 3: Goals of Writing Activities

Activity	Teachers
Practicing/Reviewing Grammar Structures	3.5
Practicing/Reviewing Vocabulary/Expressions	3.4
Recording Heard or Read Information	3.0
Writing Text Types (letters, essays, etc.)	3.4
Creative Writing, Writing Games	3.3
Text Revision (correction, rewriting, etc.)	2.6
Practicing/Reviewing Spelling	2.6
Communication (interactive writing tasks)	2.6
Teacher-Student Communication	2.7
Translating from the Foreign Language	2.1
Translating into the Foreign Language	1.6
Keeping Learning Diaries/Class Journals	2.0

FULL TEXTS BOOK

The following section will examine these writing activities in more detail. It is especially important to determine whether writing is practiced as a skill in itself, for example through the creation or revision of texts, or if it serves as an auxiliary skill, i.e., to support other sub-skills such as practicing grammatical structures, etc. Table 3 lists the writing activities provided in the survey in the order mentioned by the respondents.

The first three positions are occupied by activities where writing is mainly used as an auxiliary skill. The next two positions are dedicated to writing as a target skill, but the values here are already below the average value of 3.

- **Creative writing and student motivation**: Teachers encourage creativity and enjoyment in writing, which enhances student motivation.
- **Alternative teaching methods**: Innovative methods, such as letting students write freely and providing individual feedback, are preferred by teachers over traditional error correction.
- **Collaborative writing and error handling**: Methods like group or partner work can reduce fear of errors and improve confidence in writing skills.
- **Communicative writing**: Writing tasks that fulfill real communicative needs, such as emails, are underutilized but can significantly boost learning motivation.
- **Translation exercises**: Less common overall, with Albanian teachers finding them easier to evaluate than free writing.
- **Learning diaries**: Effective even at beginner levels for documenting progress and reinforcing learning, yet not widely adopted.

2.2 Text Types

The survey included a section dedicated to teaching text types and writing conventions. Table 4 provides insights into the extent to which various text types are addressed and whether they are taught by teachers.

Table 4: Text Types Covered

Text Type	Teachers
Personal Letter	74%
Curriculum Vitae	73%
Email	68%
Essay (Experience Reports)	65%
Postcard	65%
Summaries	65%
Advertisements	48%
Greeting Cards	53%
Picture Descriptions	32%
Diary	42%
Short Messages	30%
Invitations	30%
Official Letters	36%
Recipes	31%
Retellings	44%
Argumentative Texts	34%
Poems	28%
Semi-Official Letters	22%

In terms of ranking, text types with a personal connection, such as letters, resumes, emails, and postcards, are very popular and are taught by about three-quarters of the respondents, while factually oriented text types, such as recipes, retellings, or argumentative texts, are only addressed by about half of the respondents. In the middle range, we find text types such as advertisements, greeting cards, and picture descriptions, which are also frequently covered in textbooks. The same applies to the lower-

FULL TEXTS BOOK

ranked short messages and invitations. Diaries and official letters are also in the middle range but are likely reserved for instruction with more advanced students. Lower on the popularity scale are poems, retellings, and argumentative essays, as well as semi-official letters, likely because they require a relatively high language level.

2.3 Strengths and Weaknesses in Student Texts

The satisfaction level of the surveyed teachers with student text productions is relatively low,. Table 5 provides a detailed insight into the specific aspects of learner texts that teachers critique. High scores indicate satisfaction, while low scores indicate areas needing improvement.

Table 5: Evaluation of Student Texts

Aspect	Teachers
Originality	3.5
Spelling	3.3
Grammatical Correctness	3.2
Logic/Clarity	3.0
Thematic Development/Coherence	2.7
Reader Orientation/Engagement	2.6
Textuality/Linking Sentences	2.5
Word Choice/Idiomatic Use	2.5
Sentence Complexity	2.3
Style	2.3

Overall, teachers praise the originality of student texts and rate spelling and grammar relatively high, likely reflecting students' focus on formal accuracy. However, lower scores are given for textuality, sentence complexity, reader orientation, word choice, and style, which require advanced written language skills and nuanced understanding.

2.4 Difficulties in Writing Promotion

The survey also explored in detail the factors that hinder the promotion of writing in the Albanian DaF (German as a Foreign Language) classroom. Table 7 lists these hindering factors in order of their perceived impact according to the respondents.

Table 7: Hindering Factors in Writing Promotion

Factor	Teachers
Time required for writing in class	2.9
Curricular restrictions	2.7
Class sizes	2.9
Time required for correcting student texts	2.7
Lack of suitable teaching methods	2.6
Lack of suitable teaching materials	2.6
Lack of relevance for future (career) life	2.3
Low student motivation	2.2
Lack of writing opportunities	1.7

Key Observations:

-Time required for writing in class:

- Albanian students, who aim for linguistic accuracy, tend to spend a lot of time writing even a few sentences, consulting dictionaries, grammar books, and peers before writing.

- Curricular Restrictions:

FULL TEXTS BOOK

- The lack of a formal curriculum often leads teachers to heavily rely on textbooks without adapting them to specific teaching and learning conditions.

- Lack of Suitable Methods and Materials:

- teachers often create their own teaching materials

- Lack of Writing Opportunities:

- This points to the lack of pedagogical training for Albanian German teachers, who often rely heavily on textbooks that do not provide adequate guidance for teaching writing as a skill.
- The need for specific teaching materials adapted to the Albanian context was highlighted Albanian teachers

2. Summary

The data collected in this survey provide insights into the conditions and challenges of promoting writing skills in the Albanian DaF (German as a Foreign Language) classroom. The survey's broad scope only partially allows for uncovering backgrounds or explaining connections based on the comments. The diverse teaching contexts of the respondents, who teach various target groups with different focuses, made it difficult to make universal statements.

Despite these limitations, some overarching conclusions about the promotion of writing in the Albanian DaF classroom can be drawn. It was confirmed that writing is the least emphasized skill compared to listening, speaking, and reading. Writing is primarily used for practicing or testing grammatical structures and vocabulary knowledge. Activities that focus on writing itself, such as fulfilling communicative needs or keeping learning diaries, receive less attention.

In terms of text creation, the survey revealed that teachers cover a wide range of German text types, though Albanian teachers tend to approach these text types more receptively. The quality of learner texts was praised for their originality and grammatical and orthographic correctness, while weaknesses were noted in stylistic areas, word choice, and idiomatic expressions.

The main factors hindering the promotion of writing skills include the time required for writing in class, the time needed for correcting learner texts, and large class sizes. There is also a reported lack of teaching materials and methods tailored to the Albanian context.

PROFESSIONAL DEVELOPMENT NEEDS OF ASSISTANT TEACHERS IN PRE-UNIVERSITY EDUCATION

Prof. As. Dr. Florinda TARUSHA [1]
[1] *Faculty of Educational Sciences, "Aleksander Xhuvani" University, Elbasan,*
Dr. Aurela ZISI [2]
[2] *Quality Assurance Agency of Pre-university Education*

ABSTRACT
Recent developments and numerous social, political, and economic issues have continuously influenced our educational system in terms of its content, structure, and services. The educational system has undergone significant reforms as social, economic, and political relations. In response to these changes, educational institutions have created opportunities for all children to be educated according to their characteristics and capacities. A contemporary approach to work content, teaching methodology, environmental adaptation, and the organization and planning of various educational elements has always been essential to ensure the full participation of children with disabilities in the school community. In response to these changes, educational institutions have created opportunities for all children to be educated based on their unique characteristics and capacities. There has been a persistent need for a contemporary approach to work content, teaching methodology, environmental adaptation, and the organization and planning of educational elements. This approach ensures that children with disabilities fully participate in the school community as valuable members.
In recent decades, many effective practices for inclusive education have been developed worldwide. International documents, to which the Republic of Albania adheres, have harmonized and continue to align the policies and fundamental principles of inclusive education. Despite these positive developments, significant challenges remain. This study focuses on two critical questions: What are the difficulties and needs of assistant teachers in teaching students with disabilities (SWD)? What model of support for assistant teachers would be most suitable?
Keywords: Inclusive education, assistant teachers, professional training, students with disabilities (SWD)

Introduction

Albania's Context for Inclusive Education

The history of inclusive education in Albania, though brief, is marked by numerous significant events and processes. While inclusive education is now recognized as both a moral and legal right, and a progressive philosophy, its practical implementation must still navigate the obligations imposed by the prevailing realities of Albanian society.
Ensuring access to education and equal treatment is a foundational principle of the Albanian education system. This principle is embedded in the country's constitution, specifically Articles 18 and 57 of the "Constitution of the Republic of Albania." The entire legal framework is aligned with European legislation on education, which serves as the primary reference for any changes or reforms in the education system.
The Ministry of Education and Sports in Albania has developed a comprehensive Education Strategy for the period 2021-2026. The vision of the Education Strategy is to establish an inclusive education system based on equality and lifelong learning. The aim is to provide quality education to all individuals, contributing to their personal well-being. One of the specific objectives of the strategy is to ensure full inclusion in preschool and compulsory education, as well as increase access to preschool and upper secondary education. This will be achieved by providing appropriate infrastructural conditions and creating friendly school environments.

FULL TEXTS BOOK

Over the last decade, there has been significant progress in adopting a new approach to education, aiming to consolidate policy provisions, legal frameworks, and institutional capacity to facilitate inclusion.

National Legal Framework

- Law no. 8417, dated 21.10.1998, "Constitution of the Republic of Albania," as amended:
Based on the constitution, everyone has the right to education. Compulsory school education, as well as general secondary education in public schools, is free. General secondary education in public institutions is open to all, while secondary vocational education and higher vocational education is conditioned by skills criteria.

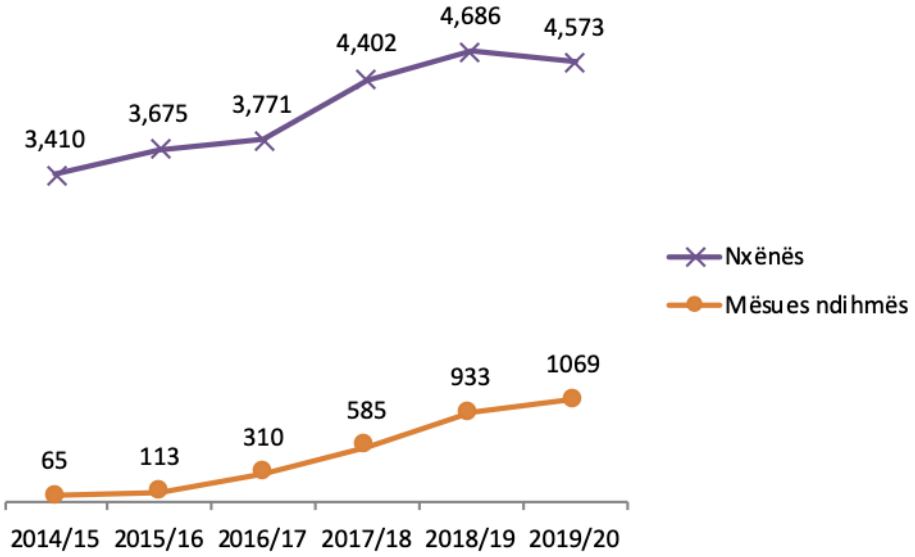
- Law no. 18/2017, "On the Rights and Protection of the Child," Article 18, "Right to Education":
Every child has the right to access and attend free and quality education, based on equal opportunities and non-discrimination, in accordance with the child's age and maturity. This right is also guaranteed to children who wish to pursue further education after completing compulsory education

- Law no. 69/2012, "On the Pre-University Education System in the Republic of Albania," as amended:
According to this law, Article 5, the right to education is guaranteed to Albanian and foreign citizens, as well as stateless persons, without discrimination based on gender, race, color, ethnicity, language, sexual orientation, political or religious beliefs, economic or social condition, age, place of residence, disability, or other reasons defined in Albanian legislation.
This law dedicates an entire chapter, chapter XI,"Education of the children with disabilities", ensuring their right to education is upheld and supported.

- Article 63 "Principles for education of children with disabilities"
- Article 64 "Attendance of educational institutions by children with disabilities"
- Article 65 "Organization of the education of children with disabilities".

International Legal framework for children with disability

Albania ratified the **Convention on the Rights of Persons with Disabilities (CRPD**) on February 11, 2013. In September 2016, the Committee on the Rights of Persons with Disabilities (CRPD) adopted and published General Comment No. 4 (2016) on Article 24: "Right to inclusive education." The General Comment provides a clear and detailed definition of inclusive education, and all States Parties are expected to progress in the implementation of Article 24. It clarifies that all children with disabilities must be educated in inclusive environments, and it is the government's responsibility to adapt the education system to accommodate the needs of all students, regardless of abilities and impairments, within inclusive environments.



Implementation & Enforcement – Children with disabilities in Albania

While progress has been noted in policies regarding the inclusion of children with disabilities in the public education system, still in Albania there exist a dual system which allows for inclusive mainstream schools and special schools to coexist. The "Law on Pre-University Education" states that Special Schools for children with disabilities should be transformed into Resource Centers and all children with disabilities should be included in mainstream schools. MOES issued Ministerial Order No. 148/2024, which outlines the process for converting special schools into resource centers. The number of children with disabilities attending public educational institutions has steadily increased year after year.

FULL TEXTS BOOK

Even though the Ministry of Education and Sport is committed to providing inclusive education for all children, there are still important foundations that need to be laid to ensure the full participation of children with disabilities in education. Schools still do not meet all-inclusiveness standards in several areas, including infrastructure and physical facilities, curriculum, assessment, and disability accommodations.[7]

MoES in cooperation with Local Offices has taken measures for the creation of development spaces/classes in the mainstreamed schools. Forthe students with hearing impairments, starting from the 2022-2023 school year, ICT in secondary education is offered in Albanian sign language. Albanian sign language was officially recognized by Albanian Government in 2014.Cooperation Agreement between line Ministries and the "Albanian National Association of Deaf Persons" has been signed and is being implemented.

Tab.1 Children with disabilities and assistant teacher in mainstream school, National Strategy of Pre-university Education 2021-2026.

The role of the assistant teacher is one of the innovations introduced by the Normative Provisions. Consequently, a number of important functions have been delegated to the assistant teacher within these provisions.

Starting from the 2014-2015 school year, assistant teachers have been appointed for children with disabilities in mainstream schools. By the 2019-2020 school year, there was a 17% increase in the number of assistant teachers compared to the 2014-2015 school year.

Currently, in public education, an assistant teacher typically works with no more than three students with disabilities. In many cases, an assistant teacher works with just one or two students, marking a significant improvement since 2014.

The role of the assistant teacher is defined as a regulated profession, requiring a Master's degree in Special Pedagogy. In 2016, the Ministry of Education and Sport (MoES) approved the document "Education and Training of Teachers on Inclusion - The Profile of an Inclusive Teacher," which aims to highlight the crucial skills, knowledge, attitudes, and values that every teacher should possess, regardless of their profile or subject area.

In 2019, the MoES approved the Administrative Instruction for Assistant Teachers working with students with special needs in public educational schools at the pre-university level. This document

[7]National Strategy of Pre-University Education 2021-2026.

FULL TEXTS BOOK

outlines the criteria and procedures for selecting assistant teachers, as well as their duties and responsibilities.

During 2019-2020, the Ministry of Education and Sport (MoES) focused on the professional development of assistant teachers for children with disabilities, aiming to establish a support system for their professional skills. Within this framework, 60 professional networks of assistant teachers were established and are now effectively functioning, encompassing all assistant teachers in pre-university education.

In 2023, MoES approved the "Professional Standards of Assistant Teachers in Pre-University Education" and made them available to professional networks and all assistant teachers. Additionally, in 2024, MoES approved a guide for the organization of multidisciplinary commissions to evaluate the needs of students with special needs.

The objective of this study is exploratory, aiming to investigate relatively under-researched issues. It focuses on assistant teachers, examining their roles as professionals, their current experiences, and their professional development needs.

The focus of the study is twofold:

1. **To explore the current professional practice of assistant teachers**:
   - *Identify the specific difficulties and challenges assistant teachers face in their daily work.*
   - *Examine the strategies and methodologies employed by assistant teachers to support students with disabilities.*
2. **To identify the professional development needs of assistant teachers**:
   - *Determine the gaps in their current training and knowledge that hinder their ability to support students with disabilities effectively.*
   - *Investigate the types of professional development opportunities that assistant teachers find most beneficial*.

By addressing these areas, the study aims to provide comprehensive insights into the professional experiences of assistant teachers and offer recommendations for enhancing their effectiveness and satisfaction in their roles.

Research Participants

The survey sample consists of teachers (n = 67) who work with children with various disabilities. The study sample includes assistant teachers (N = 67) from primary, secondary, and high school education from Elbasan city.

The quantitative component involved administering a structured questionnaire to assistant teachers. Most of the questionnaire (a total of 11 questions) utilized a Likert scale ranging from 1 to 5, where 1 = "not at all" and 5 = "very much." The questionnaires were completed by the assistant teachers between April and June 2024. The collected quantitative data were entered into a computer and analyzed using the statistical software SPSS version 20.0. The assistant teachers were informed about the study's objectives, the reporting of results, and the voluntary nature of participation. Personal data were kept confidential to ensure privacy.

FULL TEXTS BOOK

Research Question:

- What are the challenges faced by assistant teachers in their current professional practice?

Table 2. Difficulties Faced by Assistant Teachers with Students with Disabilities (SWD)

Categories of Difficulties	N	%	Illustrations
Lack of teaching and didactic materials	28	42.4	*Lack of didactic materials in school for effective work implementation*
Establishing collaboration with parents, teachers, and other students	18	27.2	*Limited parental cooperation* *Psychological abuse from parents* *Broader cooperation with some teachers, specialists, and collaboration with parents and students*
Working with students with disabilities	18	27.2	*Difficulties in socialization, speech problems, language development, and increasing concentration* *Since these students are part of a class, you need to be careful with the tone of voice used without disturbing the rest of the class*
Lack of information and training about disorders	13	19.6	*Lack of information about diseases and disorders, on how to behave and how to help*
Transportation for students with disabilities	3	4	
Lack of a speech therapist	1	1	

Among the difficulties faced by assistant teachers were: a) the lack of didactic materials (42.4% reported difficulties due to the absence of materials for effective teaching), and b) establishing collaboration with parents, teachers, and students.

Research Question: What are the professional development needs of assistant teachers?

The questionnaire reveals the nature of the professional development needs of assistant teachers through Section III, which contains six statements to be completed by the study participants and then evaluated on a Likert scale from 1 to 5, where 1 = not very necessary and 5 = very necessary. Section II of the questionnaire includes a designated blank space where assistant teachers, as study participants, can freely express their thoughts in a limited text format. Section II of the questionnaire includes questions on: a) training received during the past year, b) training agencies, c) topics of the training received, d) coverage of training costs, and e) the evaluation by assistant teachers of the contribution of the training to their work.

FULL TEXTS BOOK

Ranking of professional development needs of assistant teachersworking with children with disabilities

Table2. Ranking of professional development needs of assistant teachers

Rankings	Needs for the professional development
5	Individualized Education Program (IEP) development Collaboration with parents, the psychologist, and other professionals Identifying the student's needs Managing undesirable behaviors
4	Daily plan for students with disabilities Teaching methods for students with disabilities Preparation and management of the lesson Development and improvement of language and communication skills
3	Autism Hyperactivity
2	Use of the digital textbook
1	Evaluation by the multidisciplinary committee and of children with disabilities

The qualitative analysis of the text comments revealed the following categories of comments:

A) Need for Training
Assistant teachers largely report a need for training. For example, one assistant teacher states, "*Training for assistant teachers should be continuous for students with disabilities, provided by specific agencies to enhance our work experience as assistant teachers in schools*."

B) Presence of a Speech Therapist in School
For example, one teacher said, "*One of the main problems in school is the lack of a speech therapist. All these students have speech issues and need help with language and communication*."

C) Material Resources and Space in School for Working with Children with Disabilities
For example, didactic materials etc.
A detailed Study report of the needs for the professional development of assistant teachers has preceded the preparation of a professional development curriculum.

The most important needs emphasized by the assistant teachers are detailed below:

- Designing Individual Educational Plans (IEPs) for children with disabilities

FULL TEXTS BOOK

- Cooperating with parents of children with disabilities
- Managing the emotions and reactions of children with disabilities
- Implementing effective teaching methods for working with children with disabilities
- Understanding and supporting children with autism
- Utilizing digital books in teaching
- Understanding the evaluation process conducted by multidisciplinary commissions

Conclusions

Assistant teachers are present in pre-university educational institutions in both urban and rural areas. They are engaged in all educational institutions, regardless of the number of students or their location. The majority of assistant teachers support 1-2 children with disabilities, while about 25% work with more than three children with disabilities.

Nearly 50% of assistant teachers are new to this position, with up to three years of experience. Almost all assistant teachers work in compulsory education, and nearly all are female. Assistant teachers in the pre-university education system actively seek professional development opportunities. The most frequent forms of training are professional network meetings and exchanges with other teachers from the same school. They also show interest in and have attempted to attend accredited training offered by agencies accredited by the Ministry of Education, Sports, and Youth (MASR).

Assistant teachers view collaboration with classroom teachers as particularly important in designing Individualized Education Programs (IEPs) and assessing students' achievements across developmental areas. Additionally, they consider collaboration with the parents of children with disabilities to be a crucial factor in promoting the child's development and progress.

However, assistant teachers have had insufficient opportunities to collaborate with other specialized partners, such as social service centers, within their communities. This lack of collaboration has limited their ability to benefit professionally from the expertise of specialists working in these centers.

The need for training and professional development for assistant teachers is very high. They emphasize the importance of several topics, including methods and strategies for classroom support of children with disabilities, collaboration with other professionals to support children with special needs, necessary documentation maintained by assistant teachers, effective design of Individualized Education Programs (IEPs), and understanding the key characteristics and manifestation forms of different types of disabilities.

WOMEN MANAGERS OVER 50 IN BULGARIA – CAREER DEVELOPMENT AND DİSCRIMINATION

Katerina Katsarska, PhD

Senior Assistant professor
Institute of Philosophy and Sociology
Bulgarian Academy of Sciences
4 Serdika St., Sofia 1000, Bulgaria
Senior Assistant at the Bulgarian Academy of Sciences

ABSTRACT
The focus of this analysis is on women managers over 50 years old in Bulgaria. The article highlights the barriers related to career development of women, the stereotypes associated with age, and gender inequality among the group of working managers and entrepreneurs over 50 years old in Sofia. The research reveals practices of discrimination and exclusion based on age, education, and gender. The study analyzes strategies of exclusion based on age and digital skills of women managers over 50 years old.
Through the lens of the intersectional approach and with the help of qualitative methods – a focus group discussion conducted with men and women holding managerial positions over 50 years old in Sofia – discriminatory practices, career development patterns, and exclusion among women managers over 50 years old in Bulgaria are analyzed.
In conclusion, public policies and practices regarding the group of women over 50 in relation to age discrimination and digitalization are discussed.
Keywords: discrimination, age, intersectional approach, gender, inequalities, career development.

Introductions:
Overall, research in recent years shows that women continue to be underrepresented in executive and managerial positions within the European Union. According to Eurostat[8] data for the third quarter of 2020, out of 9.5 million people holding managerial positions, 6.2 million are men and 3.3 million are women. Eurostat data reveals that women make up nearly half of all employed individuals in the European Union—46%—yet only 35% of those in managerial positions are women.
The highest percentage of women in managerial positions is observed in Latvia at 45%, followed by Poland with 44%, and Bulgaria, Hungary, Slovenia, and Sweden—all with 42%. The lowest percentages of women managers are found in the Netherlands at 26% and Cyprus at 27%.
According to studies, the general profile of female managers tends to be younger, more educated, and less likely to be married compared to their male counterparts in managerial positions.[9] Women often face greater challenges regarding pay and career advancement compared to men. In the U.S., in 2021, 42% of managers are women, but they continue to be underrepresented compared to men and earn significantly less[10]. According to studies, there is a particularly low representation of female managers from ethnic minorities or diverse identities.
According to McKinsey (2023), a flexible working environment has significant benefits for women. They value and prefer hybrid and remote work as it helps them achieve a better work-life balance,

[8] https://ec.europa.eu/eurostat/web/products-eurostat-news/-/edn-20210305-2
[9] https://www.gao.gov/products/gao-22-105796
[10] https://www.gao.gov/products/gao-22-105796

especially for women who are caregivers. For instance, 38% of mothers with children indicate that without flexibility, they would either leave their jobs or reduce their working hours (McKinsey, 2023).
The group of female managers in Bulgaria is under-researched. Studies focusing on discrimination and career development of women in Bulgaria represent a very small portion of all research on discrimination. This article analyzes female managers over the age of 50 in Bulgaria. A review of the results on this topic shows that women over 50 in Bulgaria often face both gender and age discrimination.[11] This manifests as limited or non-existent career development opportunities, lower pay, and a reduced likelihood of being appointed to high-level executive positions. According to the data, women over 50 are perceived as less flexible and less adaptable to new work models and technologies. Due to these prejudices and stereotypes, they are marginalized in the workplace and face severely restricted career development opportunities.
This article aims to highlight the barriers related to the career development of women over the age of 50 in Bulgaria. To achieve this, in-depth interviews and group discussions were conducted and analyzed. Using an intersectional approach and qualitative methods, the study reveals the age-related stereotypes faced by women and brings to light gender inequality among managers and entrepreneurs over 50 in Bulgaria. It uncovers practices of discrimination and exclusion based on age, gender, and education. The study also analyzes exclusion strategies based on age, gender, and digital skills among women managers over 50 in Bulgaria.
The article seeks to answer three main questions. First, what are the barriers to career development and growth for women over the age of 50 in Bulgaria? Second, how does exclusion and discrimination occur for this target group? And third, what are the public policies and strategies to address the marginalization of female managers over 50 in Bulgaria in relation to age and gender discrimination?

Theoretical Model

According to researchers who thoroughly study the topic of inequalities and stratification, the intersectional approach is the most suitable for research on women (McCall, 2005; Stoilova, 2021) because women are a multi-layered and complex subject of study, encompassing various dimensions of inequality such as gender, ethnicity, age, and others. The intersectional approach is applicable to different situations (in the workplace, life circumstances, etc.) and diverse areas of social life (Stoilova, 2021).
The intersectional approach is a powerful analytical tool that enables a better and more in-depth understanding of the complexity of social phenomena and inequalities in society. This approach is used to explore and understand the relationship and interactions between social context, social inequalities, and identity (McCall, 2005).
This is an analytical framework that examines how different categories of social stratification (such as gender, race, ethnicity, age, education, and others) are interrelated, interact, and intersect to create complex patterns of privilege and oppression (McCall, 2005). This approach is crucial for understanding inequalities in society as well as the complexity of social identity. The intersectional approach is well-suited for analyzing exclusion and discrimination because there are multiple axes of identity—such as gender, race, ethnic affiliation, and others—that interact in complex ways and intersect.
The concept allows for the understanding and study of the relationships related to inequalities and different social categories—such as class, gender, ethnicity, and others (McCall, 2005). The complexity of the intersectional approach enables the examination of factors that simultaneously operate to explain

[11] https://www.cambridge.org/core/journals/social-policy-and-society/article/abs/womens-experiences-and-perceptions-of-age-discrimination-in-employment-implications-for-research-and-policy/0ED5DACFF6F551760305200C7F9AACD6

FULL TEXTS BOOK

various situations where inequality and discrimination are observed (Hancock, 2007). The strength of the approach lies in that it does not assume any particular social category as privileged over another but allows for the measurement of the impact of multiple categories (age, gender, class) in their interconnection. Each category is important on its own, but when combined, their influence becomes more pronounced and complex, allowing for the exploration of the multifaceted nature of the issue.
In this case, the combination of gender and age factors leads to a situation of exclusion (from work processes or the labor market), limited or no career opportunities, and discrimination for women in managerial positions over 50 years old in Bulgaria.

Discrimination

Discrimination and intersectionality are closely related concepts in research on social inequalities. Intersectionality provides a framework for understanding how different forms of discrimination intersect. Kimberlé Crenshaw emphasizes that discrimination is not experienced along a single axis but as an intersection of various forms of oppression (Crenshaw, K., 1991). Forms of discrimination are not separate or isolated but are interconnected and overlap. The role and impact of different forms of inequality vary depending on the context (McCall, 2005). In the study of discrimination and inequality in the workplace, several types of discrimination are distinguished—direct, indirect, and institutional (Merton, 1996).

Direct Discrimination – An overt and explicit attitude of marginalization and denial based on various forms of identity—such as gender, age, and others.

Indirect Discrimination – A situation where seemingly neutral rules, policies, or practices place certain groups at a disadvantage compared to others.

Institutional Discrimination – Inequalities embedded within the structures of society and systems that lead to unequal access to opportunities and resources for a particular group compared to another group. Intersectionality examines how different forms of discrimination are related, interwoven, interact, and create specific situations of privilege or oppression for some individuals compared to others. The concept of intersectionality includes multiple axes of identity, meaning that individuals can be discriminated against based on more than one factor simultaneously (Crenshaw, K., 1991). It is important to note that different forms of discrimination do not operate in isolation but are interconnected—they intersect, reinforce each other, and influence one another.

Age

Intersectionality and age are often analyzed together to understand how age interacts with other social categories (such as ethnicity, gender, sexuality, and others). Life events (such as entering the labor market or retirement) interact with social categories (gender, race, class, etc.), resulting in situations where some individuals are in a more privileged position compared to others.
Age is viewed not only as a biological factor but also as a socially constructed category. Social expectations and perceptions of age are often multi-layered and are connected with other social categories and phenomena (Cruikshank, M., 2013). For women, multiple discrimination is common—older individuals can be discriminated against not only because of their age but also due to other aspects of their identity, such as gender, sexuality, ethnicity, and more.

Gender

Gender and intersectionality theories examine how gender interacts with other social categories (such as age, race, ethnicity) to create complex forms of inequality and discrimination (Crenshaw, K., 1991). Gender is often one of the primary axes of discrimination and has a significant influence on situations and processes in the social world.

FULL TEXTS BOOK

Social and sociological problem

The social issue addressed by the article is discriminatory practices against women managers in the workplace, while the sociological problem is how practices of exclusion for female managers become possible.

Data and method

The analysis focuses on gender, age, and digital inequalities among women managers over 50 years old and their role in the accumulation and perpetuation of existing social inequalities. The analysis is based on qualitative data from a group discussion held in March 2023 with male and female managers over 50 in Sofia, regarding the role of digitalization in overcoming marginalization in society, and 10 semi-structured interviews on the topic (5 with female managers and 5 with male managers). In conclusion, public policies and practices concerning women managers over 50 in relation to age and gender discrimination are discussed.

Results analysis

The results of the study show that there is multiple discrimination against women managers over 50 years old. Their exclusion (either from the labor market or, if employed, from important tasks and responsibilities at work) is observed based on a combination of social categories such as age, gender, and education. In almost all examined cases, more than two categories act together, and their interaction leads to women managers over 50 in Bulgaria not being preferred for employment, having almost no career development, and being excluded from corporate educational initiatives.

Age discrimination

According to the results of the study, age proves to be one of the main barriers to career development for women managers over 50 in Bulgaria. Age has a dual role for women managers. On one hand, when seeking employment, women with managerial experience applying for managerial positions are perceived as overqualified and likely to demand higher salaries compared to younger women with similar experience.

"Regarding work in Bulgaria, I believe there is an issue for people over 50... These people have good digital literacy, know languages, and I think employers are afraid of older people because they know they will demand higher salaries. When I have applied for positions, I have been rejected with the argument that I am overqualified..."

(woman, 53, higher education, marketing manager in a bank)

On the other hand, age is perceived as an inability and unsuitability for learning, acquiring new skills, and practices, with a preference for younger employees who can more easily and quickly acquire new skills or knowledge.

"At all training sessions and seminars for various digital and educational courses, they send employees with lower positions than mine with all sorts of explanations. I feel discriminated against because of my age, with the most likely argument being that supposedly younger people learn and absorb faster..."

(woman, 56, higher education, senior manager in the marketing department of a mobile operator)

Age-related stereotypes are a major reason why women managers do not have career development opportunities after the age of 50. They are perceived either as overqualified and having financial and social demands that the employer cannot meet, or as being unable, due to their age, to handle new educational or digital challenges. In this case, both the positive and negative age-based stereotypes are obstacles to career advancement for women managers.

There is a social construction of age—the social attitudes towards age for women over 50 contribute to the formation of discriminatory practices. The combination of gender and age in women managers shows how the interaction of these categories leads to the creation of unequal opportunities for women,

placing them in a disadvantaged and unprivileged work situation compared to younger women and male managers.

In comparison, the stereotypes about male managers over 50 regarding their career development are positive and are associated with developing and advancing their careers, unlike those for women. Age in men is associated with greater experience and knowledge, regardless of the years. For men, the combination of gender and age works to develop their careers and skills, whereas for women, it is the opposite—their careers are either stagnant or there is a decline in their positions

"Male managers—the more they work, the better. Their experience is valued and they can demand higher pay. It doesn't matter how old they are—age doesn't apply to them. If they work and have proven themselves, there is no way they will be denied a promotion, unlike women. There is always an argument to refuse a woman—either their knowledge is outdated, or they lack soft skills—there is always something..."

(woman, 56, higher education, senior manager in the marketing department of a mobile operator)

"I am a marketing manager at an IT company. We work for Switzerland. You constantly need to learn. This is a field that evolves very quickly, and you need to keep up with the new developments. As long as you develop, you understand your work, and positions and pay will follow soon. It doesn't matter how old you are..."

(man, 54, higher education, marketing manager in an IT company for the external market)

Age is perceived as a positive attribute for men but a negative one for women. Based on these stereotypes, which operate independently, an attitude is formed towards women that places them within the framework of not having the ability to handle educational or managerial challenges in the workplace.

Educational discrimination

The study records educational exclusion of women managers over 50, primarily related to their non-inclusion in current or future educational courses and training initiatives within the company

"I wanted to enroll in training for working with new software that we use. I was refused with the argument that the training is funded by the company and there are already selected people to attend, even though my future work involves using that software..."

(woman, 52, higher education, manager in the sales department of a foreign company)

According to the results of the study, men managers over 50 are not denied training and have the freedom to enroll in and participate in training programs, provided they are willing to do so.

"Yes, there are trainings in the company for all sorts of things. Anyone who shows interest can enroll and complete them..."

(man, 58, higher education, manager at a logistics company)

"If someone needs training, they talk to the boss, and he sends them. For example, I wanted to attend training for media studies—I asked, and they sent me."

(man, 53, higher education, manager at a media agency)

The study identifies strategies for exclusion based on age and digital skills among women managers over 50 years old.

"Here, computer literacy is taken for granted. The issue is that they are looking for super-computer literacy..."

(man, 54, higher education, marketing manager at an IT company for the external market)

"The Office suite is clear. They are looking for more than that. High Excel proficiency is good, and it's preferable if you have basic programming language skills. When I applied for a managerial position a while ago, they required initial levels of programming languages. I hadn't taken any courses, so I wasn't hired..."

(woman, 57, higher education, marketing manager at a PR agency)

FULL TEXTS BOOK

"I dare say that I have a decent level of computer literacy. I'm not a programmer. I manage. If there's something I struggle with, I ask a colleague for help. If it's something more serious, the colleagues who understand more are available..."
(woman, 53, higher education, marketing manager at a bank)

Stereotypes regarding women's digital skills are associated with the belief that their digital competencies are weaker compared to those of men. In contemporary society, men are perceived as more knowledgeable and capable when it comes to positions that require higher levels of computer skills.

"I applied to an IT company a while ago. They didn't know what my computer skills were and told me they were looking for someone with high-level computer technology expertise. They didn't administer any tests or find out what I could do or know, but they never got back to me afterward…"
(woman, 57 years old, higher education, marketing manager at a PR agency)

According to the research results, there is discrimination against women managers over the age of 50 when applying for jobs concerning their presumed digital skills. Stereotypes about women's digital skills are linked to the belief that women learn more slowly and are less adaptable. Discrimination against women managers regarding computer and digital skills is based on a combination of gender and age traits. This clearly illustrates the application of the intersectional approach, where the interaction of digital skills, gender, and age contributes to the exclusion of women managers over 50 during job applications and problem-solving in the workplace. Women find themselves in an unfavorable position compared to men, with gender having a particularly strong influence on exclusion and marginalization in the context of digital skills.

Gender discrimination

Discrimination based on gender for women over 50 in the workplace (such as in job interviews, work tasks, and participation in educational initiatives) is highly pronounced. According to their accounts, a primary reason for this exclusion is the societal stereotypes that persist about women over 50, which significantly contribute to their marginalization in the professional sphere. The respondents describe various work situations where they feel disadvantaged compared to men and discuss the limited career opportunities available to them after the age of 50.

"Our company participates in 'Webit' every year. From our entire department, only men in managerial positions present at this forum. No woman has been selected to go, even though there are many women managers in our company who have valuable insights to share..."
(woman, 57 years old, higher education, marketing manager at a PR agency)

"We have an annual 'Employee of the Year' contest. The Employee of the Year receives a bonus and one month's salary. Since I've been with the company, only men from the department have been awarded 'Employee of the Year.'"
(woman, 53 years old, higher education, marketing manager at a bank)

The results of the study show that women managers over 50 perceive discrimination in the workplace due to their gender and age, particularly regarding the assignment of important tasks, receiving company awards, distinctions, and participation in prestigious events. According to their accounts, women over 50 most often retain their managerial positions but lack opportunities for further advancement within the company.

„I have been in the same position at the company for 13 years. My position is managerial, but I haven't had a promotion in over 10 years…"
(Woman, 52 years old, higher education, manager in the sales department of a foreign company)

There are also cases where women report that they have been demoted in their careers.

"From the position of 'Campaign Manager,' I was demoted to 'Senior Specialist' with the explanation that the budget was being optimized and the options were either to lay me off or accept the lower position..."

(woman, 57 years old, higher education, manager in the marketing department of a mobile operator)
The research also identifies discrimination concerning pay based on gender. Respondents report that, despite having equal education and experience, women receive lower salaries compared to men, and they attribute this discrepancy to gender discrimination.

"I know that in my company, women receive lower salaries compared to men. A man and a woman with the same education and experience— the woman has the lower salary, and it's not a small difference..." (woman, 53 years old, higher education, marketing manager at a bank)
Gender discrimination is strongly pronounced, manifesting as lower salaries, career demotions, assignment of more elementary tasks compared to men, and exclusion from educational courses. As a result, women find themselves in a disadvantaged position compared to men in the workplace, with little to no career development after the age of 50. Women over 50 are perceived as more difficult to train and less motivated for career advancement compared to their younger colleagues.

Public policies
Public policies aimed at women managers over 50 in Bulgaria are focused on creating supportive career development programs. These are specialized programs that offer training and counseling to effectively utilize and direct the skills of women over 50. Some companies provide flexible working conditions for women managers over 50, such as reduced working hours, the possibility to work from home, and flexible working hours.
An important step against age and gender discrimination for women over 50 is the adoption of laws and regulations that protect women in the workplace. Regulation through legislation and the introduction of quotas or guidelines for a minimum number of women managers over 50 in company management will reduce age discrimination among women and provide them with job security. Creating programs that offer assistance for children or elderly family members would enable a better work-life balance and support the career development of women over 50.
Financial incentives for companies could also help reduce age discrimination by providing financial or tax relief for companies that hire women managers over 50. Some banks in Bulgaria offer startup loans for women entrepreneurs over 50, providing flexible financing models tailored to their individual situations.
Mentorship programs are also a crucial step in supporting women managers professionally. Establishing connections between women managers and younger professionals, where they can share knowledge and experience, as well as receive feedback, would significantly aid in their professional development. This approach not only empowers experienced women managers but also fosters a culture of continuous learning and mutual support within the workplace.
By implementing public policies, companies and the government can reduce age and gender discrimination against women and create an inclusive and supportive work environment for women managers over 50 in Bulgaria. This would contribute to improved economic performance, benefiting both businesses and society.

Conclusion
The present study aimed to identify the barriers to career development for women over 50 in Bulgaria and to examine the potential discrimination faced by this target group.
The results reveal a combination of age and gender discrimination affecting many women managers over 50 in Bulgaria. Discrimination arises based on entrenched stereotypes regarding age and gender. These stereotypes are largely negative, depicting women as difficult and slow learners, struggling to keep up with new technologies and digitalization, which constitutes one of the primary barriers to their career advancement.

FULL TEXTS BOOK

The study indicates that male managers benefit from positive stereotypes based on gender and age, which facilitate their career development and higher salaries. Men are perceived as more experienced, knowledgeable, and quick learners, and are assigned more responsible and significant tasks. They represent the company in prestigious events and forums, whereas women's roles are more peripheral. Negative stereotypes place women managers over 50 at a disadvantage compared to men, relegating them to lower hierarchical positions and offering lower compensation for their work. The combination of gender and age categories strongly influences the multiple discrimination faced by women in the workplace.

In conclusion, the study demonstrates the complex interaction of social categories such as gender, age, and education, and how the intersection of these categories results in situations of discrimination and exclusion for women managers. It also shows the impact of social categories on career development for both men and women over 50. The question remains as to how to overcome discriminatory attitudes and how public policies can be applied to address exclusion and marginalization of women, which will be explored in future research.

BODY MASS INDEX AND LEVELS OF IRISIN IN SERUM AND URINE OF TURKISH MALE PATIENTS WITH ANDROGENETIC ALOPECIA : PRELIMINARY STUDY

[1]Ergul Belge Kurutas, [2]Perihan Ozturk, [1]Aslıhan Sağlam,
[1]Sutcuimam University, Faculty of Medicine, Department of Medical Biochemistry, Kahramanmaras, Turkey
[2]Sutcuimam University, Faculty of Medicine, Department of Dermatology, Kahramanmaras, Turkey

ABSTRACT

Objective: Male pattern androgenetic alopecia (MPAGA) is characterized by progressive hair loss from the scalp. Irisin is a myokine–like hormone which is first discovered as a potential mediator of obesity related energy homeostasis. Recent researches indicated that there is associated between irisin levels and abnormal metabolic conditions such as obesity and may possibility link to MPAGA. The aim of this study was to evaluate the levels of irisin in serum and urine samples of Turkish males with MPAGA and to compare with healthy controls.

Material and methods: 150 males (ranges of age 25-60 years; disease duration 5-10 years) with MPAGA and 130 males (ranges of age 27-63 years) without AGA as controls were involved in this study. Irisin levels in serum and urine samples were measured a commercial kit by ELISA.

Results: Levels of Irisin in serum were decreased significantly in the patients compared to control ($p<0.05$). However, irisin levels in urine were not different between patients and controls ($p>0.05$). Body mass index (BMI) of patients were higher than control group. In addition, while the serum irisin level was found to be significantly lower in those with a BMI of 25 and above ($p<0.05$), a slight decrease was detected in urine samples, but it was not statistically significant ($p>0.05$). BMI was negatively correlated with serum irisin levels
($r =-0,697$, $p<0.05$).

Conclusion: We thought that decreased irisin levels in serum may play a role in the etiology of MPAGA. Furthermore, obesity by making changes in the balance of the irisin in serum and urine may play a role in MPAGA. Therefore, assessing the levels of irisin in serum of MPAGA patients may be more valuable compared to urine for treatment planning.

Key words: MPAGA, Irisin, Serum, Urine

Introduction

Androgenetic alopecia (AGA) is the most common type of progressive hair loss. AGA is a polygenetic condition and accordingly, the severity of hair loss, age of onset and location of involvement vary (1). It is known that AGA has a polygenetic feature, but its pathophysiology and genetics are not fully understood. Studies have shown that AGA is associated with dysregulation in the expression of inflammatory cytokines, with AGA being closely related to androgen metabolism, and chronic microinflammation, which is slow and often asymptomatic, is an aggravating factor (2,3). The pathophysiology of AGA is explained as the exaggerated response of hair follicle cells to androgens triggered by scalp inflammation and external factors in people with genetic predisposition (4, 5).

Obesity is one of today's most important public health problems that affects the whole world. Obesity is defined as an increase in fat mass that impairs health; Its pathogenesis is a metabolic process that is too complex to be reduced to an increase in the amount of fat (6). The development of obesity is not only due to a quantitative increase in body mass, but is characterized by metabolic dysfunctions of muscle, liver and fat tissue, which are the 3 basic tissues that regulate energy metabolism (7).

Irisin is a myokine–like hormone which is first discovered as a potential mediator of obesity related energy homeostasis (8). Recent researches indicated that there is associated between irisin levels and abnormal metabolic conditions such as obesity and may possibility link to Male pattern androgenetic

FULL TEXTS BOOK

alopecia. The aim of this study was to evaluate the levels of irisin in serum and urine samples of Turkish males with male pattern androgenetic alopecia (MPAGA) and to compare with healthy controls. Furthermore, we aimed to investigate the relationship between BMI and irisin levels in MPAGA.

Materials and Methods

The study was approved by the local ethical committee of KSU Medical Faculty, Kahramanmaras, Turkey. Prior to the initiation of the study, each patient was informed about the aims of the study and signed an informed consent. In this study, the subjects were as randomly selected. The data collection of the study has been done at 15 months from February 2023 to April 2024.

Measurements of Body Mass Index (BMI)

BMI measurements were made by the same researcher to reduce the error rate. By removing the jacket, excess clothing and shoes; Their heights were measured with a wall-mounted height meter, and their weights were measured with a standard scale. BMI was calculated with the formula weight (kg)/height squared (m^2).

Classification of AGA

The diagnosis of AGA is based on the following considerations: progression of hair loss, family history of thinning and visual confirmation of a receding frontal hairline, and the presence of thin and short hairs in the frontal area and vertex. The diagnosis was confirmed by video dermatoscope. Assessment of the degree of hair loss was performed by a dermatologist. To classify the degree of AGA for each subject, the Norwood classification system, a standard classification scheme shown to have good test–retest reliability was used (9). The reliability and validity of hair status were assessed by a dermatologist. In addition to classifying the types of AGA, we collected information on possible risk factors by face-to-face questionnaire interviews. Subjects who had undergone significant physiologic stress (surgical trauma, high fever, and hemorrhage) prior to commencement of alopecia or had had history of or received treatment for medical conditions such as thyroid diseases, hepatic failure, chronic renal failure, inflammatory bowel disease, psoriasis, seborrheic dermatitis, and allergic contact dermatitis were excluded from the study. Other factors capable of inducing alopecia such as nutritional factors, e.g. starvation, malnutrition, malabsorption) as well as exposure to medication with the potential of causing alopecia (e.g. angiotensin converting enzyme inhibitors, anticonvulsants, antidepressants, and the anticoagulants such as heparin and warfarin) or altering trace element levels (e.g. mineral supplementations) were considered and affected subjects were excluded from the study. The subjects were not under a therapeutic shampoo (ketokonazol, zinc and selenium) for the past three months. The individuals who were used to smoking and taking alcohol were not included in this study. The people that a chemical process (such as dyes and perms) was applied to his hair in the last 3 months were excluded from the study. The following routine laboratory tests (complete blood count, liver enzymes, thyroid stimulating hormone, fasting glucose, ferritine, vitamin B_{12}, folic acid and antinuclear antibody) were performed. The patients with abnormal laboratory findings were excluded. Blood levels of testosterone and DHEA-SO_4 both in patient and control groups were in the limits of hospital reference values. The control group was healthy male volunteers without AGA. They were exposed to the same procedures with the patients. Both patient and control groups had used only baby shampoo for the last three weeks. One hundred seventy-two MPAGA and 130 healthy individuals were enrolled in this study. Patients were classified according to Norwood–Hamilton scale. Seborrheic dermatitis (9 patients), pitriasis capitis simplex (2 patient) and psoriasis (2 patients), a total of 15 patients were excluded. The people who had used cortisone, muscle building drugs, vitamins and minerals (3 patients) and those with asymptomatic infection (4 patients) in the last 3 months were excluded. 150 MPAGA and 130 healthy controls completed this study.

FULL TEXTS BOOK

Determination of irisin in serum and urine samples

Fasting venous blood samples (10 mL) from patients and healthy control individuals were drawn into tubes without anticoagulant. Samples were centrifuged (Hettich MICRO 220R) at 3000 g for 10 min at 4 ◦C. Serum was separated from clotted blood and serum samples were stored in acid-washed tubes at −20 ◦C until analyses (10).

The urine samples of subjects were collected into 75-mL sterile containers (Kayline Plastics, The Barton, South Australia, 5031). At the start of our study, all urine samples were diluted with 1:50 serum physiologic (0.9% NaCI) for irisin analysis (11).

Irisin levels in serum and urine samples were measured a commercial kit (catalog number:MBS706887, Mybiosource, USA) by ELISA. This assay has high sensitivity and excellent specificity for detection of human irisin. No significant cross-reactivity or interference between human irisin and analogues was observed.

Statistical Analysis

SPSS 22.0 (SPSS Inc., IL, USA) was used for all statistical analyses. One-sample Kolmogorov–Smirnov test was used to analyze the distribution of continuous variables. Results were expressed as mean ± standard deviations. Chi-square test was used for categorical variables and independentsample t test was used for analysis of parametric numerical data. Pearson corelation analysis was used between BMI and irisin levels. A two-tailed p <0.05 was accepted as statistically significant.

Results

As shown in Table 1, 150 men were enrolled with a mean age of 32.82 years. In MPAGA (n = 150), men with severe alopecia had higher BMI than those with mild to moderate alopecia . After multivariate adjustments, the risk for severe alopecia was higher in the overweight or obese (BMI>24 kg/m^2) subjects with MPAGA (odds ratio 3.41, P<0.01). In early-onset MPAGA (n = 54), the risk for having severe alopecia was also higher in the overweight or obese subjects (odds ratio 4.85, p<0.05).

Table 1. Sociodemographic values of patients and control groups.

	Patients (n =150)	Controls (n=100)
Age		
Age mean ± SD (min–max)	32.82 ± 5.31 (25-60)	31.67±6.02 (27- 63)
The duration of the disease (year) Mean ± SD (min–max)	6.89 ± 3.68 (5-10)	
The type of alopecia (Norwood–Hamilton)		
Type 2: n (%)	34 (%22.66)	
Type 3: n (%)	96 (%64.00)	
Type 4: n (%)	20 (%13.33)	
BMI (kg/m^2) mean ± SD	27.31 ± 4.25	22.85 ± 3.45

SD: standard deviation; min–max: minimum–maximum.

As shown in Figures 1 and 2, the levels of irisin in serum were decreased significantly in the patients compared to control (p<0.05). However, irisin levels in urine were not different between patients and controls (p>0.05). BMI of patients were higher than control group (p<0.05) (Table 1). In addition , while the serum irisin level was found to be significantly lower in those with a BMI of 25 and above (p<0.05), a slight decrease was detected in urine samples, but it was not statistically significant (p>0.05). BMI was negatively correlated with serum irisin levels (r = -0,697, p<0.05).

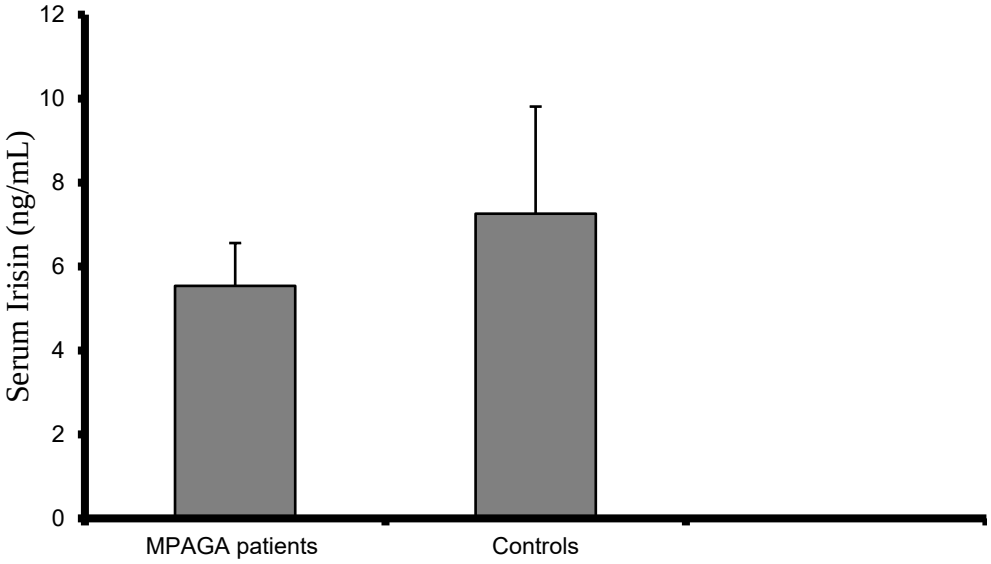

Figure 1.Serum irisin levels in patients with MPAGA and Control groups. *Significant differences serum irisin levels between MPAGA and control groups ($p<0.05$)

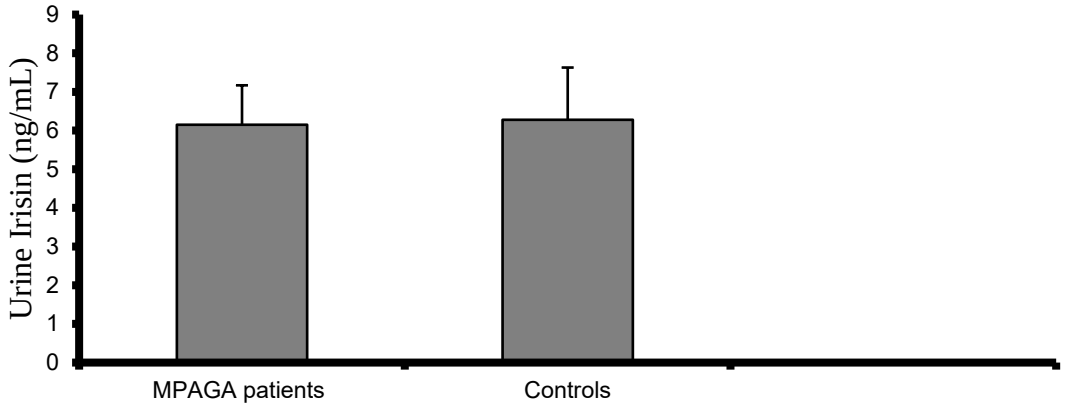

Figure 1.Urine irisin levels in patients with MPAGA and Control groups. *No significant differences in urine irisin levels between MPAGA and control groups ($p>0.05$).

Discussion

The present study showed a significantly decreased serum irisin level in MPAGA patients compared to controls, especially in severe alopecia grades irrespective of patients' age or disease duration. We thought that decreased irisin levels in serum may play a role in the etiology of MPAGA. Furthermore, obesity by making changes in the balance of the irisin in serum and urine may play a role in MPAGA. Therefore, assessing the levels of serum irisin may be more valuable for treatment planning in patients with MPAGA than urine irisin levels.

Irisin is a hormone with myokine properties that was discovered in recent years and is thought to play an active role in the prevention and treatment of many metabolic disorders, especially obesity. It is thought that irisin may mediate the transformation of white fat tissue, which is the main cause of obesity, into brown fat tissue, thus being effective in weight control by increasing heat production and energy expenditure. For this reason, it became very popular in a short time. In our study, we found that decreased irisin levels in serum samples in MPAGA. We thought that this may be related to obesity and the severity of the disease. We also measured irisin levels in urine samples, but there was no significant

FULL TEXTS BOOK

difference between MPAGA patients and controls, and there was a very small decrease. We thought that the disease duration in MPAGA patients should be longer for irisin levels in urine to decrease. Indeed, our results were in similar to some authors, who reported lower serum irisin levels in AGA than controls and showed progressive reduction with increasing disease duration (12).

Recently research has shown that a link between irisin and BMI is complex and not yet fully understood. Onat et al. reported that irisin levels are associated with exercise levels, and low irisin levels are associated with obesity and metabolic diseases (13). In our study, we found that there was a negative significant correlation between serum irisin and BMI. We thought that obesity and AGA findings in MPAGA negatively affected the secretion of the irisin and decreased it. Perhaps, it may include the presence of insulin resistance and up-regulation of insulin-like growth factor-1 in obese subjects. Insulin and insulin-like growth factor-1 are closely related peptide hormones that may induce 5a-reductase activity, leading to an increased conversion of testosterone to dihydrotestosterone, the principle androgen responsible for male-pattern baldness. However, such hypothesis is hindered by the fact that the circulating dihydrotestosterone level is usually normal in MPAGA subjects. Huh et. al. reported that a decrease in circulating Irisin levels and FNDC5 mRNA levels in skeletal muscle samples was detected (14). Stengel et al. studied 40 patients to examine the level of irisin in circulation and the BMI results of the patients were classified as obese, anorexic and normal. They were showed that correlation analyzes examining the relationship between BMI and irisin were performed and also higher serum irisin levels were observed in patients diagnosed as obese compared to normal weight and anorexic patients. A significantly positive relationship between irisin and BMI was detected (15). According to the results found by us and other researchers regarding irisin levels; serum irisin levels may vary according to BMI, disease severity and duration in different diseases, measurement techniques and patients' exclusion criteria.

In a conclusion, the patients with higher BMI (>25) were found to have significantly lower serum irisin levels than those with lower BMI ($p < 0.05$). Moreover, a negative correlation was found between BMI and irisin. In this study, our hypothesis is that: 1) Decreased serum irisin levels may play a role in the etiology of MPAGA. 2) Obesity that can cause an imbalance in the hair irisin levels may lead to MPAGA. 3) Also, irisin may be given in the treatment of MPAGA patients. Of course, in order to check these speculative interpretations, case-controlled studies should be done extensively on this subject.

Limitations of our study In this study, only the male population was studied. According to Hamilton scores, Type 5 and above were not included in the study.

Conflict of interest

The authors confirm that there is no conflict of interests.

MEB, Fen Bilimleri Öğretmeni

ÖZET

Bu çalışmada, Türkiye Yüzyılı Maarif Modeli 2024 ortaokul 8. Sınıf Fen Bilimleri dersi öğretim programı öğrenme çıktılarının Yenilenmiş Bloom Taksonomisine (YBT) göre incelenmesi amaçlanmıştır. Bu amaç doğrultusunda programda yer alan 131 öğrenme çıktısı YBT'nin bilişsel süreç boyutuna göre incelenmiştir. Çalışma nitel yönelimli bir döküman inceleme araştırmasıdır. Çalışmada Türkiye Yüzyılı Maarif Modeli 2024 ortaokul 8. Sınıf Fen Bilimleri dersi öğretim programı doküman olarak kullanılmıştır. Öncelikle öğretim programı öğrenme çıktılarını iki uzman birbirinden bağımsız olarak YBT'nin bilişsel süreç basamaklarına göre sınıflandırmıştır. Ardından yapılan sınıflandırmalar karşılaştırılmış, görüş ayrılıklarının olduğu öğrenme çıktıları üzerinde uzmanlar tartışmış, uzlaşıya varılamayan öğrenme çıktıları için üçüncü bir uzmana başvurulmuştur. Uzmanlar arasındaki uyum düzeyi Krippendorff's alfa katsayısı ile ölçülmüş ve .712 olarak bulunmuştur. Bu değer uyumun yüksek olduğunu ortaya koymaktadır. Bununla beraber uyumsuzluğun olduğu öğrenme çıktıları için üçüncü uzmanın görüşü nihai kararın verilmesinde belirleyici olmuştur. Analiz sonuçları 8. sınıf fen bilimleri öğrenme çıktılarının bilişsel süreç boyutunda dengeli bir şekilde dağıldığını göstermiştir. Öğrenme çıktılarının bilişsel süreç boyutu basamaklarına göre dağılımı şu şekildedir: Hatırlama (%17.9), anlama (%14.9), uygulama (%8.9), çözümleme (%26.1), değerlendirme (%14.9) ve yaratma (%14.9). Görüldüğü üzere çözümleme düzeyindeki öğrenme çıktıları diğer basamaklara kıyasla daha fazladır. Bu durum, programın öğrencilerin analitik düşünme ve problem çözme becerilerini geliştirmeyi önceliği şeklinde yorumlanabilir. Araştırma sonucunda yeni taslak programın öğrencilerin çok yönlü düşünme becerilerini geliştirmeyi hedeflediği söylenebilir.

Anahtar kelimeler: Türkiye Yüzyılı Maarif Modeli 2024 Ortaokul 8. Sınıf Fen Bilimleri Dersi Öğretim Programı, Yenilenmiş Bloom Taksonomisi, Bilişsel Süreç Boyutu, Öğrenme Çıktıları.

ABSTRACT

In this study, it was aimed to examine the learning outcomes of the Turkish Century Education Model 2024 secondary school 8th grade science curriculum according to the Revised Bloom's Taxonomy (RBT). For this purpose, 131 learning outcomes in the program were examined according to the cognitive process dimension of RBT. The study is a qualitative document review research. In this study, the Turkey Century Education Model 2024 secondary school 8th grade science curriculum was used as a document. First of all, two experts independently classified the learning outcomes of the curriculum according to the cognitive process level of RBT. Then, the classifications were compared, the experts discussed the learning outcomes on which there was disagreement, and a third expert was consulted for the learning outcomes on which there was no consensus. The level of agreement between the experts was measured by Krippendorff's alpha coefficient and found to be .712. This value reveals that the fit is high. However, for the learning outcomes where there was a disagreement, the third expert's opinion was decisive in making the final decision. The results of the analysis showed that 8th grade science

FULL TEXTS BOOK

curriculum learning outcomes were distributed in a balanced way in the cognitive process dimension. The distribution of learning outcomes according to the cognitive process dimension steps is as follows: Remember (17.9%), understand (14.9%), apply (8.9%), analyze (26.1%), evaluate (14.9%) and create (14.9%). As can be seen, the learning outcomes at the analyze level are more than the other levels. This can be interpreted as the program prioritizing the development of students' analytical thinking and problem solving skills. As a result of the research, it can be said that the new draft curriculum aims to develop students' multidimensional thinking skills.

Keywords: Turkey Century Education Model 2024 Secondary School 8th Grade Science Curriculum, Revised Bloom's Taxonomy, Cognitive process dimension, Learning outcomes.

GİRİŞ

Öğretim programları, eğitim sistemlerinin omurgası olarak nitelendirilmektedir. Bireyin yeteneklerinin gelişmesine olanak sağlayan ülkemiz öğretim programları öğrencinin duygusal, zihinsel ve sosyal yeteneklerini eşit ölçüde geliştirmesine imkan sağlayarak düşüncelerini özgür bir biçimde ifade edebilen, önerilerde bulunan bireyler olarak yetişmesine olanak sağlamıştır (Milli Eğitim Bakanlığı (MEB), 2017). MEB (2018) ise öğretim programlarında yaratıcı ve analitik düşünebilen, iletişim becerisi yüksek, sosyal ve ekonomik yönden aktif bireyler yetiştirmeyi hedeflemiştir. Öğretim programlarının ana iskeletini oluşturan programlardan biri olan Fen Bilimleri Dersi Öğretim Programı, Türk eğitim sisteminin temel hedefleri doğrultusunda bireylerin tüm yönleriyle gelişimini amaçlar ve bütüncül bir eğitim yaklaşımını temel alır. Bu hedef ve yaklaşımla geliştirilen "Türkiye Yüzyılı Maarif Modeli" ile alan becerileri, kavramsal beceriler, eğilimler ile sosyal-duygusal beceriler, değerler ve okuryazarlık bir bütün olarak ele alınarak, öğrencilerin çok yönlü gelişimini etkili bir şekilde desteklemek amaçlanmıştır. Fen Bilimleri Dersi Öğretim Programı'nda öğrenciyi merkeze alan bütüncül eğitim yaklaşımı benimsenmiştir. Bu yaklaşım, eğitsel süreçleri genişletir ve derinleştirir, bireysel sorumluluğu destekler, sosyal-duygusal becerileri geliştirir. Programın temel amaçları ise şu şekilde sıralanmıştır:

- Üst düzey düşünme ve bilimsel süreç becerilerini kullanabilen, etik ve ahlaki değerleri benimseyen bireyler yetiştirmek.
- Çağın gerektirdiği becerilere ve yaşam boyu öğrenme alışkanlığına sahip bireyler yetiştirmek.
- Dijital dönüşüme uyum sağlayan bireyler yetiştirmek.
- Öğrencilerin problem çözme ve bilinçli karar verme becerilerini geliştirmek.
- Bilimsel bilgiyi evrensel ahlak ve milli değerlerle bütünleştiren bireyler yetiştirmek.

Program uygulanırken ise *i)* öğrencilerin ön öğrenme eksikliklerinin tespit edilip giderilmesi, *ii)* öğrenme-öğretme yaşantılarının kalıcı öğrenmeyi destekleyecek şekilde sunulması, *iii)* Türkçenin doğru ve etkili kullanımına özen gösterilmesi, *iv)* öğrencilerin aktif katılımının sağlandığı bir sınıf iklimi oluşturulması ve *v)* öğretim materyallerinin hazırlanmasında zümre öğretmenleriyle iş birliği yapılması hususlarına dikkat edilmiştir (MEB, 2024). Programı oluşturan unsurlar ise şu şekilde ele alınmıştır: Programlar arası bileşenler (sosyal-duygusal öğrenme becerileri, sistem okuryazarlığı becerileri ve erdem değer ve eylem modeli), öğrenme kanıtları (beceri odaklı ölçme ve değerlendirme, öğrencilerin değerlendirme sürecinin bizzat içinde bulunması), öğrenme-öğretme süreç bileşenleri (kavramsal beceriler, eğilimler, öğrenme çıktıları), öğrenme-öğretme yaşantıları (ön değerlendirme, köprü kurma, öğretme-öğrenme uygulamaları), farklılaştırma uygulamaları (öğrencilerin farklı ihtiyaç ve yeteneklerine göre öğretimin uyarlaması), okul temelli planlama (her okulun kendi bünyesindeki ihtiyaçlarına ve öğrenci profiline uygun programlar geliştirmesi) şeklindedir.

Öğretim programlarının başarıya ulaşması için dört bileşenin planlanması esastır. Bu bileşenler hedef, içerik, öğrenme-öğretme etkinlikleri ve değerlendirme olarak sıralanmaktadır. (Bümen, 2006; Tanık ve Saraçoğlu, 2011). Hazırlanan program doğrultusunda hedef davranışlar belirlenirken bu doğrultuda uygun kazanımlar oluşturulur. Bu kazanımlar oluşturulurken bilim insanları bilgiyi daha anlaşılabilir,

FULL TEXTS BOOK

uygulanabilir ve daha etkin kılmak adına taksonomiler hazırlamışlardır. Hazırlanan bu taksonomilerden en fazla kullanılanı Bloom taksonomisidir. Bloom' a göre bireylerin öğrenme stilleri ve düzeyleri farklıdır bundan dolayı bu taksonomide bilgi basitten karmaşığa, somuttan soyuta doğru ve basamaklar birbirinin tamamlayıcısı şeklinde sıralanır. Taksonomi ilk kez 1956 yılında uygulanmaya başlanmış 2001 yılında ise Bloom' un arkadaşları tarafından revize edilerek yenilenmiş Bloom taksonomisi (YBT) olarak alan yazında kullanılmaya başlanmıştır (Tutkun ve Okay, 2012).

Tablo 1 : YBT' nin Bilişsel Süreç Boyutu (Krathwohl, 2002; Şimşek, 2019)

YBT'nin Bilişsel Süreç Boyutu	Alt Boyutlar
1. Hatırlama	1.1 Fark etme
	1.2 Geri çağırma
2. Anlama	2.1 Yorumlama
	2.2 Örneklendirme
	2.3 Sınıflandırma
	2.4 Özetleme
	2.5 Sonuç çıkarma
	2.6 Karşılaştırma
	2.7 Açıklama
3. Uygulama	3.1 Yapma
	3.2 Tamamlama
4. Çözümleme	4.1 Ayrıştırma
	4.2 Örgütleme
	4.3 İrdeleme
5. Değerlendirme	5.1 Kontrol etme
	5.2 Kritik etme
6. Yaratma	6.1 Oluşturma
	6.2 Planlama
	6.3 Üretme

YBT, öğretim programlarının tasarımı, öğretim yöntemlerinin geliştirilmesi ve değerlendirme süreçlerinde önemli bir rehber olarak kullanılmaktadır. Bu çalışmada, Türkiye Yüzyılı Maarif Modeli 2024 ortaokul 8. Sınıf Fen Bilimleri dersi öğretim programı öğrenme çıktılarının Yenilenmiş Bloom Taksonomisine (YBT) göre incelenmesi amaçlanmıştır.

YÖNTEM

Araştırma Deseni

Bu çalışma, 2024 ortaokul 8. Sınıf Fen Bilimleri dersi öğretim programındaki öğrenme çıktılarının YBT' ye göre analiz edilmesini amaçlayan nitel bir araştırmadır. Araştırma deseni olarak doküman analizi yöntemi kullanılmıştır. Doküman analizi, yazılı materyallerin sistematik bir şekilde incelenmesi ve değerlendirilmesi sürecidir (Creswell, 2014). Bu çalışmada, 2024 Fen Öğretim Programı'nda yer alan 131 öğrenme çıktısı YBT'nin bilişsel süreç boyutuna göre incelenmiştir.

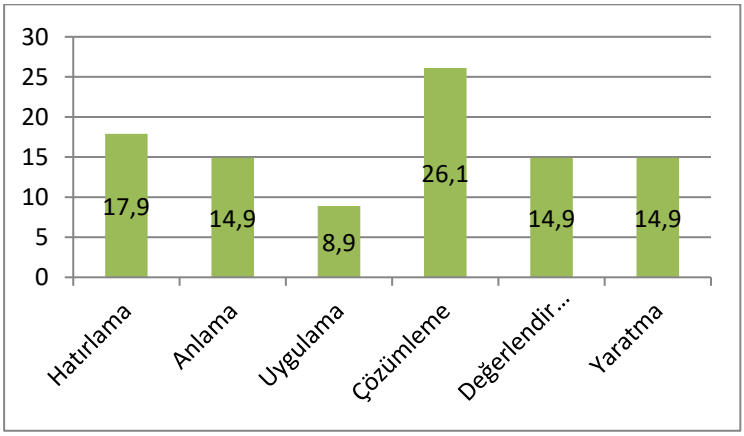
Veri Toplama Aracı

Araştırmanın veri kaynağını, 2024 Fen Öğretim Programı'ndaki 8. sınıf fen bilimleri öğrenme çıktıları oluşturmaktadır. Bu öğrenme çıktıları, Milli Eğitim Bakanlığı tarafından yayımlanan resmi dokümanlardan elde edilmiştir (MEB, 2024). Veri toplama sürecinde, bu dokümanlar incelenmiş ve ilgili öğrenme çıktıları belirlenmiştir.

FULL TEXTS BOOK

Veri Analizi

Veri analizi sürecinde, öncelikle 8. sınıf fen bilimleri dersi öğrenme çıktıları YBT'nin altı bilişsel düzeyi (hatırlama, anlama, uygulama, çözümleme, değerlendirme, yaratma) temel alınarak kategorize edilmiştir. Her bir öğrenme çıktısı, bu bilişsel düzeylerden hangisine uygun olduğuna bakılarak sınıflandırılmıştır. Öncelikle öğretim programı öğrenme çıktılarını iki uzman birbirinden bağımsız olarak YBT'nin bilişsel süreç basamaklarına göre kodlamışlardır. Kodlayıcılar arası güvenirliği sağlamak amacıyla, uzmanlar arasında anlaşma düzeyini ölçmek için Krippendorf Alfa katsayısı kullanılmıştır. Krippendorf Alfa, içerik analizinde güvenirliği ölçmek için kullanılan istatistiksel bir yöntemdir ve aynı veri setini farklı kodlayıcıların değerlendirdiği durumlarda bu kodlayıcılar arasındaki tutarlılığı değerlendirir. Alfa değeri 0 ile 1 arasında değişir; 1 tam anlaşmayı, 0 ise tesadüfi anlaşmayı ifade eder. Bu çalışmada, alfa değerinin 0.67'nin üzerinde olması, uzmanlar arasındaki yüksek düzeyde anlaşmayı gösterecektir (Stemler, 2004). Ancak, yapılan analiz sonucunda uzmanlar arasındaki uyum düzeyi .712 olarak bulunmuştur. Bu oran uyumun sağlandığını ancak düzeyin düşük olduğunu göstermektedir. Bu yüzden anlaşma sağlanamayan öğrenme çıktıları başka bir uzmana danışılmış ve bu öğrenme çıktıları için nihai karara varılmıştır. Bu süreçte, üçüncü bir uzmanın görüşleri dikkate alınarak, uzmanlar arasındaki görüş ayrılıkları giderilmiş ve öğrenme çıktıların doğru şekilde sınıflandırılması sağlanmıştır. Bu yöntem, çalışmanın güvenirliğini artırmış ve sonuçların doğruluğunu sağlamıştır.



BULGULAR

2024 Fen Öğretim Programı'ndaki 8. sınıf fen bilimleri öğrenme çıktıları YBT'nin altı bilişsel düzeyine göre sınıflandırılmış ve aşağıdaki tablo oluşturulmuştur. Öğrenme çıktılarının tamamının taksonominin bilişsel süreç boyutuna göre sınıflandırması Ek:1'de detaylı biçimde verilmiştir. Tablo 2'de öğrenme çıktılarının bilişsel süreç boyutuna göre nasıl dağıldığı sunulmuştur.

Tablo 2: Bilişsel Süreç Boyutlarına Göre Öğrenme Çıktıların Dağılımı

Bilişsel Süreç Boyutu	Öğrenme Çıktılarının Sayısı	Yüzde (%)
Hatırlama	24	17,9
Anlama	20	14,9
Uygulama	12	8,9
Çözümleme	35	26,1
Değerlendirme	20	14,9
Yaratma	20	14,9

Tablo 2'de görüldüğü üzere en fazla öğrenme çıktısı çözümleme düzeyinde iken en az kazanım uygulama basamağındadır. Öğrenme çıktılarının bilişsel süreç boyutuna göre nasıl bir dağılım gösterdiği ayrıca Şekil 1'de sunulmuştur.

Şekil 1: Öğrenme Çıktılarının Bilişsel Süreç Boyutuna Göre Dağılımı

FULL TEXTS BOOK

Şekil 1'de görüldüğü üzere 8. sınıf fen bilimleri öğrenme çıktılarının bilişsel süreç boyutunda dengeli bir şekilde dağılmaktadır. Öğrenme çıktılarının bilişsel süreç boyutu basamaklarına göre dağılımına bakıldığında çözümleme düzeyindeki öğrenme çıktıları diğer basamaklara kıyasla daha fazladır.

TARTIŞMA, SONUÇ ve ÖNERİLER

2024 Ortaokul 8. sınıf fen bilimleri dersi öğretim programında çözümleme düzeyindeki öğrenme çıktıları diğer basamaklara kıyasla daha fazladır. Bu durum, programın, öğrencilerin analitik düşünme ve problem çözme becerilerini geliştirmeyi önceliğini şeklinde yorumlanabilir. Ayrıca araştırma sonucunda yeni taslak programın öğrencilerin çok yönlü düşünme becerilerini geliştirmeyi hedeflediği söylenebilir. Yapılan araştırmalar ile 2018 fen bilimleri dersi öğretim programındaki kazanımların en çok «Anlama» düzeyinde; en az ise «Hatırlama» düzeyinde olduğu ortaya koyulmuştur yine 2018 programında «Çözümleme» düzeyindeki öğrenme çıktılarının sınırlı olduğu belirlenmiştir (Gündoğdu, 2018; Sağlamöz & Soysal, 2021). 2024 fen bilimleri dersi öğretim programında ise 2018 programına kıyasla «Çözümleme» düzeyindeki öğrenme çıktılarının artışı dikkat çekmektedir. Bu değişiklik, yeni programın öğrencilerin daha yüksek bilişsel süreçlerde aktif olmalarını hedeflediğini göstermektedir. Öğrenme çıktılarının bilişsel süreç boyutlarına göre dağılımı ayrıntılı incelendiğinde öğrenme çıktılarının %17.9'u «Hatırlama» ve %14.9'u «Anlama» düzeyinde yer almaktadır bu sonuç, programın temel bilgi ve kavramların öğretimine önem verdiğini göstermektedir. %8.9'luk bir oranla «Uygulama» düzeyindeki öğrenme çıktılarının diğer düzeylere göre daha az olduğu görülmektedir. Bu sonuç, teorik bilgilerin pratikte kullanımına daha fazla vurgu yapılması gerektiği şeklinde yorumlanabilir. Öğrenme çıktılarının %26.1'i «Çözümleme» düzeyinde yoğunlaşmıştır. Bu oranlar bize programda öğrencilerin analitik düşünme ve problem çözme becerilerini geliştirmeye yönelik önemli bir vurgu yapıldığını göstermektedir. «Değerlendirme» ve «Yaratma» düzeylerinde de %14.9 oranında öğrenme çıktısı bulunmakta, bu sonuç da öğrencilerde eleştirel düşünme ve yaratıcı düşünme becerilerinin kazandırılmasının hedeflendiğini göstermektedir. Araştırmadan elde edilen sonuçların neticesinde öğretim programlarında özellikle «Çözümleme», «Değerlendirme» ve «Yaratma» düzeylerindeki öğrenme çıktıların artırılması, öğrencilerin üst düzey düşünme becerilerini geliştirmelerine katkı sağlayacaktır şeklinde yorumlanabilir ayrıca, «Uygulama» düzeyindeki öğrenme çıktıların artırılması, öğrencilerin teorik bilgilerini pratikte kullanabilme becerilerini güçlendirecektir. Bu çalışmanın benzeri, farklı eğitim seviyelerindeki (ilkokul, ortaokul, lise) öğrenme çıktıların değerlendirilmesi için de yapılabilir.

ÖZET
Romanya, Tuna Nehri ile Karadeniz'in kıyısında yer alan Avrupa, Asya ve Ortadoğu'nun önemli kavşak noktalarının buluşmasını sağlayan stratejik bir konuma sahiptir. Büyük bir ekonomik potansiyele sahip olan ülke, zengin doğal kaynaklarının yanı sıra gelişmiş sanayi ve tarım alanları açısından da oldukça verimli bir coğrafyaya sahiptir. Hayvancılık sektöründe büyükbaş, küçükbaş ve kümes hayvancılığında yeterli üretim faaliyeti bulunmaktadır. Bunun dışında süt ve peynir ürünlerinde yerli ürünlerin yanı sıra piyasada AB ülkelerinden gelen ürünlerin de yaygın olduğu görülüyor. Bu kapsamda ülkenin Avrupa ülkeleriyle ticari ilişkilerinin yüksek oranda değiştiği görülmektedir. Romanya'da büyükbaş hayvancılık ve koyun yetiştiriciliği ülkenin en önemli ticaret kalemleri arasında yer alıyor.
Bu çalışmada Romanya'nın Avrupa ülkeleri ile 2019-2023 yılları arasındaki Canlı hayvan ithalat ve ihracat oranları; ticaret haritası verileri, yabancı kaynaklar ve bilimsel makaleler taranarak açıklanmaya çalışılacaktır. Ayrıca literatür taraması yapılarak konuyla ilgili makaleler, kitaplar, daha önce yapılmış diğer çalışmalar ve bilimsel çalışmalar incelenip değerlendirilecektir.
Anahtar Kelimeler: Romanya, Hayvancılık, Ekonomi, İthalat, İhracat

ABSTRACT
Romania, located on the banks of the Danube River and the Black Sea, has a strategic location that enables the important crossroads of Europe, Asia and the Middle East to meet. The country, which has a great economic potential, has a very productive geography in terms of developed industrial and agricultural areas as well as rich natural resources. In the livestock sector, there is sufficient production activity in cattle, sheep and poultry farming. Apart from this, it is seen that in addition to domestic products in milk and cheese products, products from EU countries are also common in the market. In this context, it is seen that the country's commercial relations with European countries have changed at a high rate. Cattle breeding and sheep breeding in Romania are among the country's most important trade items.
In this study, Romania's live animal import and export rates with European countries between 2019-2023; Trade map data will be explained by scanning foreign sources and scientific articles. In addition, a literature review will be conducted and articles, books, other previously conducted studies and scientific studies on the subject will be examined and evaluated.
Key Words: Romania, Livestock, Economy, Import, Export

GİRİŞ
Romanya, Tuna Nehri ile Karadeniz'in kıyısında yer alan Avrupa ,Asya ve Orta doğunun Önemli kavşak noktalarının buluşmasını sağlayan stratejik bir konuma sahiptir ,büyük bir ekonomik potansiyele sahip olan ülke, zengin doğal kaynaklarının yanı sıra ,gelişmiş sanayi ve tarım alanları açısından da oldukça verimli bir coğrafyaya sahiptir. Hayvancılık sektöründe büyükbaş küçükbaş ve kümes hayvancılığında

yeterli üretim faaliyeti bulunmaktadır. Bunun dışında süt ver peynir ürünlerinde yerli ürünlerin yanı sıra piyasada AB ülkelerinden gelen ürünlerinde yaygın olduğu görülmektedir. Bu kapsamda ülkenin Avrupa ülkeleriyle ticari ilişkilerinin yüksek oranda değiştiği görülmektedir. Romanya'da büyükbaş hayvancılık ve koyun yetiştiriciliği ülkenin önemli ticaret kalemleri arasında yer almaktadır.

Asya ,Ortadoğu ve Karadeniz'in stratejik konumunda yer alan Romanya'nın büyük bir ekonomik potansiyele sahip olduğu gözlenmekle birlikte zengin doğal kaynaklara sahip olan ülkenin aynı zamanda gelişmiş sanayi ve tarım alanları açısından da oldukça şanslı bir konumda olduğu söylenebilir. Romanya 19 milyonluk nüfusu ve 238.391 kilometrekarelik yüzölçümü ile 1990 yılından günümüze kadar dış göçler ve azalan doğum oranlarıyla azalma göstermiştir.1989 yılında 23,21 milyon olan ülke 2022 yılına gelindiğinde 19,04 milyon kişiye kadar düşmüştür. Bu azalmanın ana etkeni olarak göç önemli bir husus olarak dikkat çekmektedir. Göçün nedeni ise nüfusun önemli bir kısmının ülke dışına çalışma amaçlı çıktığı görülmektedir. Ülke nüfusunun büyük bir kısmını Romen vatandaşları oluştururken geriye kalan kısmın azınlık gruplardan oluştuğu görülmektedir, ülkede Macar ve Alman asıllı azınlık gruplarının olması nedeniyle heterojenik bir yapıya sahip olduğu söylenebilir Romanya, Batı Avrupa ülkelerine göre daha genç bir nüfusa sahiptir.

Aşağıda yer alan tablolar Romanya Tarafından İthal Edilen Bir Ürün İçin Tedarik Pazarlarını ve Romanya'nın ihraç ettiği bir ürünün ithalat pazarlarının listesi Canlı büyükbaş hayvan listesi Büyükbaş hayvan değerlerini göstermektedir.

Tablo 1. Romanya Tarafından İthal Edilen Bir Ürün İçin Tedarik Pazarlarının Listesi Ürün, Büyükbaş Hayvanlar

ÖZET
Günümüzde teknolojinin gelişmesine paralel olarak artan enerji ihtiyacını karşılayabilmek için farklı enerji kaynaklarının kullanılması yaygın hale gelmiştir. Bunlar arasından fotovoltaik (PV) enerji üretimi temiz, sürekli, ekonomik ve kurulumu kolay olduğu için enerji sağlama konusunda en çok dikkat çeken enerji türlerinden biri olup; konutlarda, endüstri alanlarında, ticari işletmelerde ve daha birçok alanda yaygın bir şekilde kullanılmaktadır. PV panelleri genellikle dış ortamlarda kurulu oldukları için çoğu zaman sert iklim koşullarına maruz kalarak kar, buz, toz, gölgelenme, böcek izleri vb. dış etkilerden etkilenerek zarar görebilirler. Enerji sisteminin sürekliliği ve verimliliği için arızalanmış panellerin arızalarının tespit edilmesi oldukça önemlidir. Bu çalışmada PV modülü arızalarını tespit edip türünü belirlemek için yeni ve etkili, derin öğrenme tabanlı bir sınıflandırma yöntemi önerilmiştir. Bu yöntemde, gerçek, büyük ölçekli PV çiftliklerinden elde edilen kızılötesi PV modül arıza görüntüleri kullanılmıştır. Kızılötesi PV modül görüntüleri arızasız ve arızalı olmak üzere iki sınıftan oluşmaktadır. Arızalı PV modül görüntü verileri, kendi içerisinde çatlama, diyot, sıcak nokta, kirlenme, bitki örtüsü gibi 11 farklı sınıftan oluşmaktadır. Sunulan çalışmada öncelikle kızılötesi görüntülere içerdiği bileşenlerin seviyesini ve görüntünün çözünürlüğünü artırmak için bikübik enterpolasyon yöntemi uygulanarak süper çözünürlük elde edilmiştir. Daha sonra elde edilen görüntüler derin öğrenme tabanlı ResNet-18 mimarisine girdi olarak verilerek önce arızalı ve arızasız sınıf tespiti gerçekleştirilmiştir. Sonrasında ise arızalı kızılötesi PV modül arıza görüntüleri kendi aralarında sınıflandırılmıştır. Sistemin performansını değerlendirmek için yapılan çalışmada süper çözünürlük yöntemi ile oldukça etkili sonuçlar elde edilmiştir. Ayrıca önerilen yöntem aynı veri setini kullanan benzer çalışmalarla karşılaştırılmış ve önerilen yöntemin performansının yüksek olduğu görülmüştür.
Keywords: Fotovoltaik Modül, Arıza Sınıflandırma, Bikübik Enterpolasyon, ResNet-18.

ABSTRACT
Nowadays, it has become common to use different energy sources to meet the increasing energy need in parallel with the development of technology. Among these, photovoltaic (PV) energy production is one of the most remarkable energy types in providing energy because it is clean, continuous, economical and easy to install; it is widely used in residences, industrial areas, commercial enterprises and many other areas. Since PV panels are generally installed in outdoor environments, they are often exposed to harsh climatic conditions, such as snow, ice, dust, shading, insect traces, etc. They may be damaged by external influences. It is very important to detect the faults of the damaged panels for the continuity and efficiency of the energy system. In this study, a new and effective deep learning-based classification method is proposed to detect PV module faults and determine their type. In this method, infrared PV module fault images obtained from real, large-scale PV farms are used. Infrared PV module fault images consist of two classes: non-faulty and faulty. PV module fault image data consists of 11 different classes such as cracking, diode, hot spot, contamination and vegetation. In the proposed study, super resolution has been achieved by applying the bicubic interpolation method to infrared images to increase the level

FULL TEXTS BOOK

of components they contain and the resolution of the image. Then, the obtained images have been given as input to the deep learning-based ResNet-18 architecture, and first faulty and non-fault class detection has been carried out. Afterwards, the faulty infrared PV module fault images have been classified among themselves. In the study conducted to evaluate the performance of the system, very effective results have been obtained with the super resolution method. In addition, the proposed method has been compared with similar studies using the same dataset and it has been seen that the performance of the proposed method has high.
Keywords: Photovoltaic Module, Fault Classification, Bicubic Interpolation, ResNet-18.

1. GİRİŞ

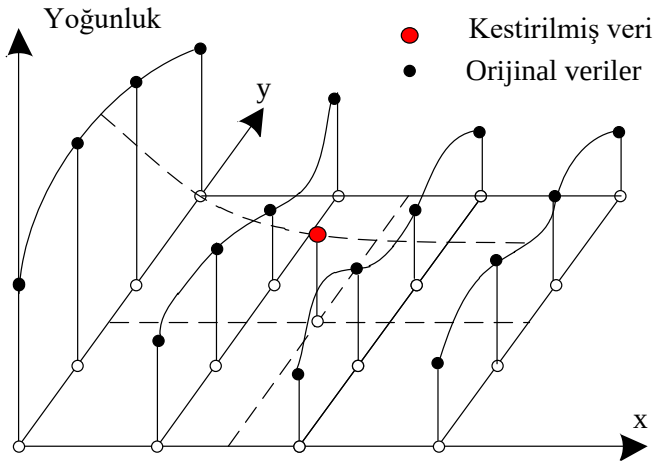
Teknolojinin gelişmesi, sanayileşme ve nüfus artışı gibi faktörler elektrik enerjisine olan talebin her geçen gün artmasına sebep olmaktadır. Arz-talep dengesinin sürdürülebilir olması, enerji üretiminin arttırılmasını gerektirmektedir. Bu bağlamda çevre dostu olmaları, tabiatta bol miktarda bulunmaları, dışa bağımlı olmamaları, güvenilir olmaları gibi özelliklerinden dolayı yenilenebilir enerji kaynaklarının kullanımı enerji üretiminde oldukça yaygınlaşmıştır (Acikgoz, 2022; Korkmaz, 2021; Korkmaz vd., 2021). Yenilenebilir enerji kaynaklarından biri olan fotovoltaik (PV) enerji üretimi, temiz ve sürdürülebilir enerji sağlama konusunda dikkat çeken enerji türlerinden biri olup; konutlarda, endüstri alanlarında, ticari işletmelerde ve daha birçok alanda yaygın bir şekilde kullanılmaktadır. PV panelleri genellikle dış ortamlarda kurulu oldukları için çoğu zaman sert iklim koşullarına maruz kalarak kar, buz, toz, gölgelenme, böcek izleri vb. dış etkilerden etkilenerek zarar görebilirler. Ayrıca kurulum aşamasında panelin kırılması, çatlaması, hatalı lehimleme gibi durumlar da panelin zarar görmesine sebep olarak üretim gücünün ve veriminin düşmesine sebep olabilir (Acikgoz & Korkmaz, 2022). Bu nedenle PV sistemin sürekliliğini sağlamak, ömrünü uzatmak ve verimliliğini artırmak için, bu sistemlerde meydana gelebilecek olası arızaların hızlı ve etkili bir şekilde tespit edilip çözülmesi gerekir (Gao & Wai, 2020). PV panel arızalarının tespiti ve sınıflandırılması için elektriksel ölçümler, termografik kızılötesi görüntüleme gibi çeşitli teknikler geliştirilmiştir (Ch, 2023). Elektriksel ölçümde, PV panellerinin çıkış gerilimi ve akımı ölçülerek bir grafik şeklinde ifade edilir. Elde edilen I–V eğrilerinde küçük arızalar zor algılanabileceği için bu durum, anormalliklerin sınıflandırılmasını zorlaştıracağı gibi zaman alıcı bir yöntem olarak görülmektedir (Fernández vd., 2020; Herraiz vd., 2020; Tang vd., 2020). Termografik kızılötesi görüntülemede, ani yüksek bir akım bir bölgede ısınmaya neden olurken, açık devre durumu o bölgenin düşük sıcaklıkta olmasına neden olur. Böylece bu yöntem paneldeki sıcak alanları ve panelin diğerlerinden daha sıcak olan kısımlarının gözlemlenebilmesini sağlayarak kısa devreler, sıcak noktalar ve etkin olmayan hücreler gibi arızaları tespit edebilir (Aghaei vd., 2015). Arızaların görsel olarak algılanıp sınıflandırılması, sistemlerin izlenmesini ve bakımını daha basit hale getirdiği gibi düşük işletme maliyeti de sağlamaktadır (Alves vd., 2021; Le vd., 2021). Literatürde PV panellerinde oluşabilecek arızaların otomatik olarak tespit edilip sınıflandırılmasına ilişkin çok sayıda çalışma yapılmıştır. (Ali vd., 2020)' de PV panellerin sıcak noktalarının tespiti ve sınıflandırılması için kızılötesi termografik görüntüler kullanılarak hibrit özelliklere dayalı bir destek vektör makinesi (DVM) yaklaşımı sunulurken (Venkatesh & Sugumaran, 2022)' de RGB görüntüleri kullanarak PV panellerde meydan gelen delaminasyon, böcek izi, yanık izi, kırılma ve renk bozulması gibi önemli arızaların tespiti gerçekleştirilmiştir. Yapılan çalışmada özellik çıkarımında J48 karar ağacı algoritması kullanılırken sınıflandırıcı olarak yerel ağırlıklı öğrenme, k-yıldız, en yakın komşu ve k-en yakın komşu algoritmaları kullanılmıştır. (Dunderdale vd., 2020) ' de kızıl ötesi termografik görüntüler kullanılarak derin sinir ağları ve SVM tabanlı bir sınıflandırma sistemi önerilmiştir. Evrişimli sinir ağları algoritmaları da PV arızalarının tespitinde yaygın olarak kullanılmaktadır (Manno vd., 2021; Le vd., 2023; KAYCI vd., 2023). Bu çalışmada PV modülü arızalarını sınıflandırmak için yeni ve etkili, CNN tabanlı bir PV arıza tespit yöntemi önerilmektedir. Bu yöntem, gerçek büyük ölçekli PV çiftliklerinden alınan termografik kızılötesi görüntü veri setini kullanarak PV modüllerindeki farklı hasar türlerini

FULL TEXTS BOOK

sınıflandırır. Veri seti, çatlama, diyot, sıcak nokta, kirlenme, bitki örtüsü ve diğer sınıflar gibi 11 tür anormalliği içeren, halka açık en büyük veri setlerinden biridir (Korkmaz & Acikgoz, 2022). Sunulan çalışmada kızılötesi görüntülere bikübik enterpolasyon yöntemi uygulanarak süper çözünürlük elde edilmiştir. Daha sonra elde edilen görüntüler derin öğrenme tabanlı ResNet-18 mimarisine uygulanarak önce arızalı ve arızasız sınıf tespiti gerçekleştirilmiştir. Son olarak arızalı kızılötesi PV modül arıza görüntüleri kendi aralarında sınıflandırılmıştır.

2. MATERYAL VE METOD

Solar PV sistemlerde enerji kaybını önlemek ve arızanın erken teşhisini sağlamak için derin öğrenme yaklaşımları kullanılarak akıllı bir karar verme mekanizması geliştirilebilir. Derin öğrenme tabanlı CNN mimarileri, geleneksel makine öğrenmesi algoritmalarının aksine kendi kendine güçlü öğrenme yetenekleri ile sınıflandırma problemlerine etkili çözümler sunmaktadır. Özellikle son yıllarda solar PV sistemlerde karşılaşılan arızaları tespit etmek ve türünü belirlemek için CNN mimarilerini kullanmak etkili bir yaklaşım olmuştur. Bu çalışmada ResNet-18 mimarisi kullanılarak solar PV modüllerde arızaların tespiti ve sınıflandırılması gerçekleştirilmiştir. Bu tespit işleminde daha etkili bir performans elde etmek için kızılötesi PV modül görüntülerine ResNet-18 sınıflandırıcısına girmeden önce bikübik enterpolasyon yaklaşımı uygulanarak çözünürlükleri arttırılmıştır. Aşağıdaki alt bölümler, bikübik enterpolasyon yöntemini, ResNet-18 mimarisini ve önerilen yöntemin çerçevesini ayrıntılı olarak sunmaktadır.



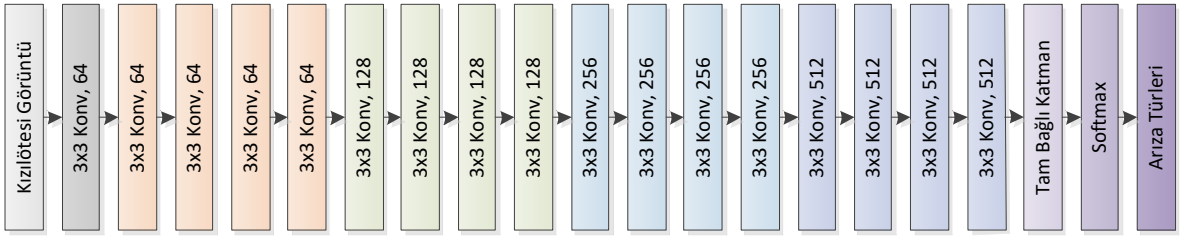
2.1. Bikübik Enterpolasyon

Görüntülerin çözünürlüğü ve detay kalitesi elde edilen bilgilerin doğruluğunda oldukça önemlidir. Bu nedenle görüntülerin çözünürlüğü ve kalitesini arttırmak için literatürde çeşitli görüntü zenginleştirme algoritmaları geliştirilmiştir. Bu algoritmalar düşük çözünürlüklü görüntüyü belli işlemlerden geçirerek içerdiği bileşenlerin seviyesini ve görüntünün çözünürlüğünü arttırmaya yönelik olup günümüzde süper çözünürlük olarak bilinmektedir. Fonksiyonel özelliklerine göre görüntü süper çözünürlük yöntemleri; enterpolasyon tabanlı, yeniden yapılandırma tabanlı, öğrenme tabanlı ve hibrit yöntemler olarak alt kategorilere ayrılmaktadır (Singh & Singh, 2020). Enterpolasyon tabanlı yöntemlerde temel olarak bir görüntünün içindeki belirli bir alandaki piksel sayısı yapay olarak arttırılarak görüntünün çözünürlüğü arttırılır. Bu tekniklerde görüntülerin içerdiği özellikler yerine pikseller işleme alınmaktadır. Enterpolasyon yöntemleri geleneksel süper çözünürlük yöntemleri olarak bilinirler. Görüntü enterpolasyon yöntemleri süper çözünürlük için en hızlı çözüm üreten yöntemlerdir (Deshpande & Patavardhan, 2019). Bilinen en iyi enterpolasyon yöntemleri En yakın komşu , Bilinear ve Bikübik yöntemleridir. Yapılan bu çalışmada görüntü çözünürlüğünü arttırmak amacıyla Bikübik Enterpolasyon yöntemi kullanılmıştır. Bu yöntemde her bir çıkış hücresinin piksel değerinin hesaplanması için en yakın 4x4 (16 piksel) piksellik giriş hücresi kullanılır. Yani bir f(x, y) fonksiyonunun tanım kümesindeki herhangi bir (x, y) noktasındaki değeri, en yakın 16 örnekleme noktasının ağırlıklı ortalamasından elde edilir. Üçüncü dereceden bir polinom olarak ele alınan bu fonksiyonla aşağıdaki denklem aracılığıyla dört köşe nokta arasında bir yüzey oluşturulmaktadır.

$$f(x,y) = \sum_{i=0}^{3}\sum_{j=0}^{3} a_{ij}\, x^i y^j \qquad (1)$$

Bikübik enterpolasyon yöntemi, en yakın komşu ve bilinear enterpolasyon yöntemine göre örtüşme ve bulanıklığı azaltmaktadır. Ayrıca bikübik enterpolasyon yöntemi, hesaplama süresinin önemli olmadığı durumlarda en iyi sonucu üreten enterpolasyon tekniğidir (Fritsch & Carlson, 1980).

FULL TEXTS BOOK

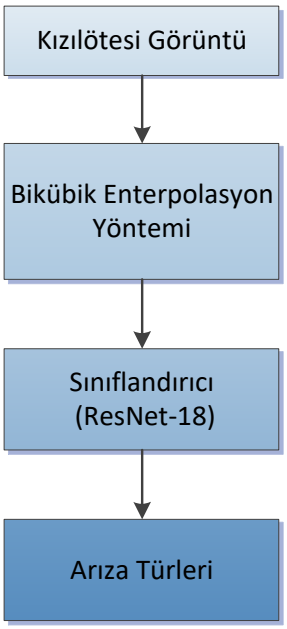


Şekil 1. Bikübik enterpolasyon yöntemi gösterimi.

2.2. ResNet-18 Mimarisi

Artık Ağlar olarak isimlendirilen ResNet mimarisi 2015 yılında Kaiming He ve arkadaşları tarafından geliştirilmiştir. ResNet mimarisi; katılmış olduğu ILSVRC ve COCO2015 yarışmalarında birçok alanda birincilik elde etmiştir (Yu & Wang, 2019).

ResNet, katman sayısı arttıkça eğitim başarısı artar yanılgısını ortadan kaldırmak için geliştirilmiş bir mimaridir. ResNet mimarisi, "resudial" (artık) olarak adlandırılan kısa yol bağlantılarının geliştirildiği bir modeldir. Geliştirilen kısa yol bağlantıları sayesinde bir veya birden fazla katman atlanarak eğitim gerçekleştirilmektedir. Bu sayede aşırı uyum problemlerinin giderilmesine olanak sağlanmaktadır (Yüzgeç & Talo, 2023). Gerçekleştirilen bu çalışmada ResNet-18 mimarisi kullanılmıştır. ResNet-18 mimarisinin yapısı Şekil 2' de gösterilmiştir.



Şekil 2. ResNet-18 Mimarisi.

2.3. Önerilen PV Modül Arıza Tespit Sistemi

Bu çalışmada sunulan PV modül arıza tespit sisteminin en temel özelliği, bikübik enterpolasyon ve ResNet-18 sınıflandırıcıya dayalı sade bir algoritmaya sahip olmasıdır. Şekil 3, sunulan PV modül arıza tespit sisteminin çalışma akışı adımlarını göstermektedir. Sunulan GKB tanıma sistemi birbirini takip eden üç aşamadan oluşur. Bu aşamalar, kızıl ötesi görüntü girişi, bikübik enterpolasyon yöntemi ve ResNet-18 tabanlı sınıflandırmadır. İlk aşama kızılötesi görüntüler için Matlab ortamında veri hazırlama ve etiketleme işlemidir. İkinci aşamada ise her bir kızılötesi görüntüye 2 aşamalı bikübik enterpolasyon işlemi yapılır. Böylece 24×40 piksel çözünürlüğe sahip olan her bir kızılötesi görüntü 48×80 piksel süper çözünürlüğe dönüştürülür. Son aşamada ise süper çözünürlüğe sahip kızılötesi görüntüler, ResNet-18 sınıflandırıcının girişine uygulanarak tanıma sonuçları elde edilir.

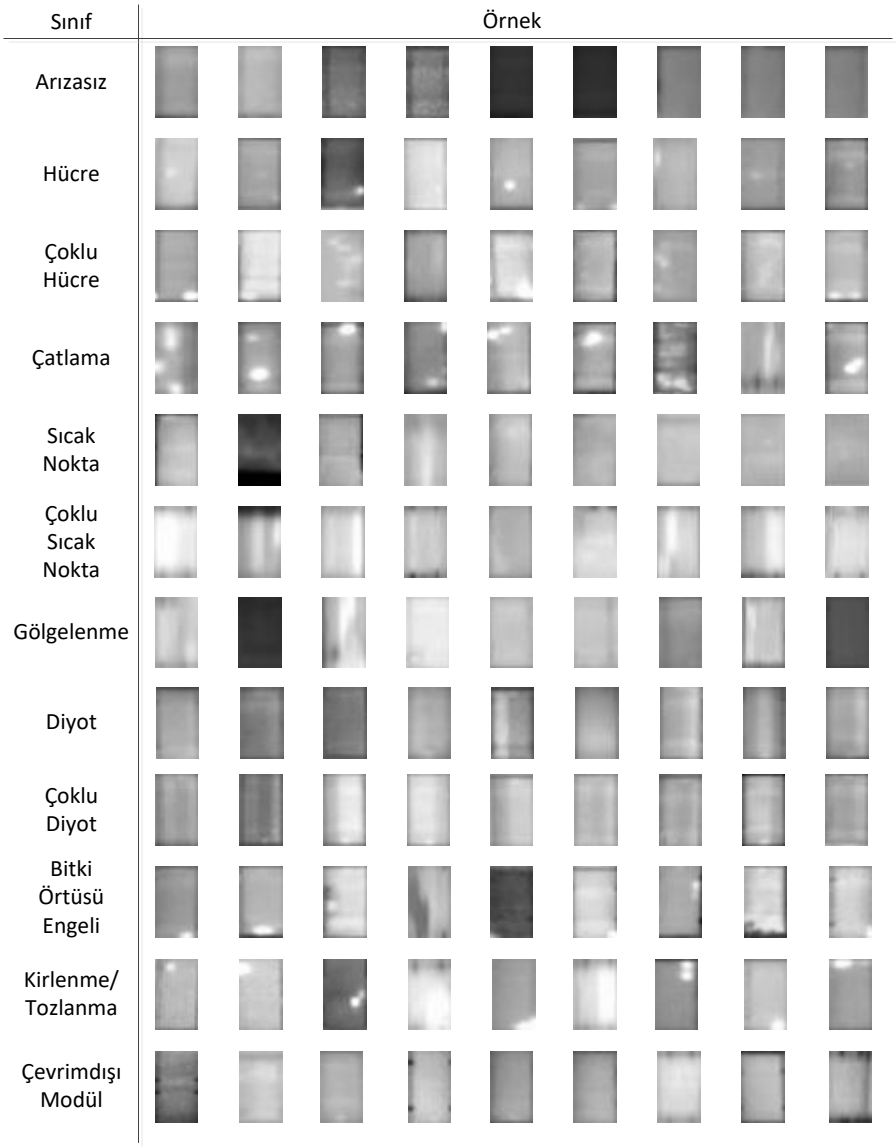
3. BULGULAR VE TARTIŞMA



Bu çalışmada sunulan PV modül arıza tespit sisteminin performansını test etmek için bir dizi performans analizleri yapılmıştır. Bu çalışmadaki tüm analizler Matlab(R) 2021 yazılım ortamında gerçekleştirilmiştir. Gerçekleştirilen analizlerde sunulan sistemi değerlendirmek için kamuya açık ve ücretsiz olarak paylaşılan kızılötesi güneş modülleri veri setinden görüntüler kullanılmıştır (Millendorf vd., 2020). Veriler, Raptor Maps Inc ekibi tarafından pilotlu uçaklar ve insansız hava araçlarıyla, orta dalga ve uzun dalga kızılötesi (3–13,5 µm) kameralar kullanılarak toplanmıştır (Alves vd., 2021). Veri seti tek kanalda 24×40 çözünürlükte ve 8 bit derinlikte 20.000 görüntü içermektedir. Bu görüntüler 11 farklı arıza sınıfı ve bir de normal (arızasız) sınıf olmak üzere toplam 12 sınıfa ait görüntülerdir. Veri setinde, arızalı sınıflar için toplam 10.000, arızasız sınıf için yine 10.000 adet görüntü bulunmaktadır. Tablo 1'de her bir sınıfın ismi ve veri sayısı verilmiştir (Millendorf vd., 2020).

Tablo 1. Arıza sınıfları ve açıklamaları.

Sınıf numarası	Sınıf ismi	Görüntü sayısı	Açıklama
1	Arıza yok	10.000	Normal modül
2	Hücre	1877	Tek hücrede kare geometriyle oluşan sıcak nokta
3	Çoklu hücre	1288	Çok hücrede kare geometriyle oluşan sıcak nokta
4	Çatlama	940	Modül yüzeyindeki çatlamadan kaynaklanan modül anormalliği
5	Sıcak nokta	249	İnce film modülü üzerinde sıcak nokta
6	Çoklu sıcak nokta	246	İnce film modülü üzerinde birden fazla sıcak nokta
7	Gölgeleme	1056	Güneş ışığının bitki örtüsü, insan yapımı yapılar veya bitişikteki yapılar nedeniyle engellenmesi
8	Diyot	1499	Aktif bypass diyotu, genellikle modülün 1/3'ü
9	Çoklu diyot	175	Aktif çoklu bypass diyotu, genellikle modülün 2/3'ü
10	Bitki örtüsü engeli	1639	Çevredeki bitki örtüsü tarafından engellenen paneller
11	Kirlenme/tozlanma	204	Modülün yüzeyinde kir, toz veya başka kalıntılar

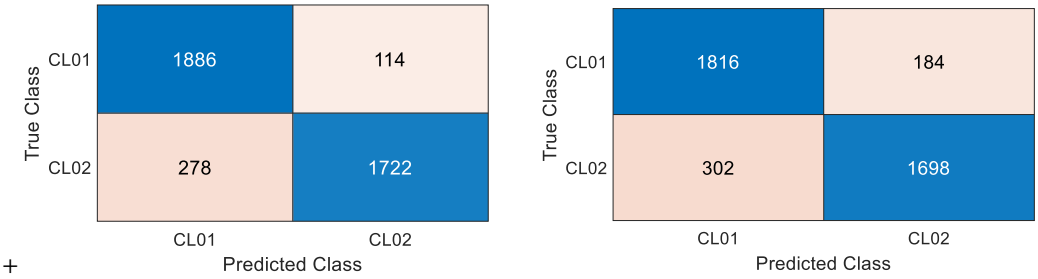
12	Çevrimdışı modül	827	Tamamen ısınan ve çalışmayan modül

Şekil 4. Veri setinden rastgele seçilen sınıf örnekleri.



Bu çalışmada sunulan tespit sisteminin performansını değerlendirmek için ilk olarak kızılötesi güneş modül verileri arızasız (CL01)-arızalı (CL02) olmak üzere iki sınıfa ayrılarak arıza tespit sonuçları elde edilmiştir. Bu ikili sınıfın her birinde eşit olarak 10000 adet olmak üzere toplam 20.000 veri bulunmaktadır. Bu verilerin %60'ı (12.000) eğitim, %20'si (4.000) değerlendirme ve %20'si (4.000) test aşamalarında kullanılmıştır. İkili sınıf için gerçekleştirilen sınıflandırma sonuçları Tablo 2'de verilmiştir. Şekil 5'de ise süper çözünürlüklü ve süper çözünürlüksüz durumlar için elde edilen karar matrisi verilmiştir. Bu sonuçlardan da görülebileceği gibi önerilen süper çözünürlüklü yaklaşım ile %90.20'lik bir test başarımı elde edilmiştir. Süper çözünürlüksüz sınıflandırma sonuçlarının ise bu orandan yaklaşık %2.5 daha düşük olduğu görülmektedir.

Tablo 2. Kızılötesi güneş modül verilerinin ikili sınıflandırma başarım oranları.

Yöntem	**Eğitim başarımı**	**Değerlendirme başarımı**	**Test başarımı**
Süper Çözünürlük+ResNet-18	%96.70	%89.43	%90.20

(a) (b)

Şekil 5. Kızılötesi güneş modül verilerinin ikili sınıflandırma sonuçları, (a) Süper çözünürlük+ResNet-18 yöntemi ve (b) ResNet-18 (Süper çözünürlüksüz) yöntemi.

Gerçekleştirilen ikinci sınıflandırma analizinde önerilen süper çözünürlüklü yaklaşım kullanılarak arızalı 11 kızılötesi güneş modül verileri kendi aralarında sınıflandırılmıştır. Tablo 1'de verilen her bir sınıfa ait görüntü sayılarının %60'ı eğitim, %20'si değerlendirme ve %20'si ise test aşamalarında kullanılmıştır. Elde edilen çoklu sınıflandırma sonuçları Tablo 3'de verilmiştir. Şekil 6'da ise süper çözünürlük yöntemi kullanılarak elde edilen karar matrisi verilmiştir. Bu sonuçlardan da görülebileceği gibi önerilen süper çözünürlüklü yaklaşım ile %73.00'lık bir test başarımı elde edilmiştir. Süper çözünürlüksüz sınıflandırma sonuçları ise bu orandan yaklaşık %2.5 daha düşük olduğu görülmektedir.

Tablo 3. Arızalı kızılötesi güneş modül verilerinin sınıflandırma başarım oranları.

Yöntem	**Eğitim başarımı**	**Değerlendirme başarımı**	**Test başarımı**
Süper Çözünürlük+ResNet-18	%87.43	%71.51	%73.00
ResNet-18 (Süper Çözünürlüksüz)	%78.56	%69.67	%70.45

Şekil 6. Arızalı kızılötesi güneş modül verilerinin sınıflandırma sonuçlarına ait karar matrisi (Süper çözünürlük+ResNet-18 yöntemi)

FULL TEXTS BOOK

Son analiz işleminde ise elde edilen bu sonuçlar literatürde aynı veri setini kullanan Alves vd. (2021)'in önermiş olduğu çalışmanın sonuçları ile karşılaştırılmış ve değerlendirmeler yapılmıştır. Alves vd. (2021) ikili sınıf için %92.5'lik sınıflandırma doğruluğu elde etmiştir. Çoklu sınıf için ise başarım oranı %66.43'tür. Bu sonuçlara önerilen yöntemin ikili sınıflandırma başarımı ile benzer bir sonuca sahip olduğu söylenebilir. Çoklu sınıflandırmada ise önerdiğimiz yöntemin başarımı yaklaşık %6 daha iyi bir performans sergilediği görülmektedir. Literatürde aynı veri setini kullanan bazı çalışmalarda çalışmamızdaki sonuçlardan daha iyi sonuçlar elde edildiği görülmektedir. Önerilen bu çalışmada sade bir yaklaşımdan oluşmaktadır. Önerdiğimiz yöntem, veri çoklama (data augmentation) yönteminin kullanımı, farklı derin öğrenme tabanlı sınıflandırıcıların kullanımı ve hatta derin öğrenme tabanlı süper çözünürlük yaklaşımı kullanımı ile geliştirilirse oldukça yüksek başarım elde edileceği söylenebilir. Bu durumları içeren yeni yöntemin geliştirilmesi ileriki çalışmalarda yapılması planlanmaktadır.

4. SONUÇ

Bu çalışmada termografik kızılötesi PV modül görüntüleri kullanılarak, arıza türlerinin derin öğrenme tabanlı ikili ve çoklu sınıflandırılması yapılmıştır. Elde edilen sınıflandırmanın başarısını artırmak için sınıflandırma öncesi her bir görüntüye çözünürlüğü artırmak için bikübik enterpolasyon yöntemi uygulayarak süper çözünürlük elde edilmiştir. Yapılan çalışmada hem ikili hem de çoklu sınıflandırma sonuçlarının süper çözünürlüklü durumda diğer durumdan (süper çözünürlüksüz) daha yüksek başarıma sahip olduğu tespit edilmiştir. Ayrıca yapılan çalışma literatürde aynı veri setini kullanan benzer çalışmalarla karşılaştırılmış ve yapılan çalışmanın oldukça etkili olduğu görülmüştür.

İLKÖĞRETİM ÖĞRENCİLERİNDE İKLİM DEĞİŞİKLİĞİ FARKINDALIĞI YARATMAK

RAISING CLIMATE CHANGE AWARENESS AMONG SECONDARY SCHOOL STUDENTS

Prof. Dr. Eti Akyüz Levi
Dokuz Eylül Üniversitesi, Mimarlık Fakültesi, Mimarlık Bölümü
ORCID ID: 0000-0003-3113-686X

ÖZET

Günümüzün en büyük evrensel sorunu niteliğini taşıyan iklim değişikliğinin etkileri gün geçtikçe hızla artmaktadır. Son yıllarda gözlemlenen olağandışı hava olayları (aşırı yağışlar, kuraklık, aşırı sıcaklar, buzulların erimesi, orman yangınları gibi) gelecek için bir uyarı niteliği yansıtmaktadır. Avustralya'da 240 gün süren orman yangınları, Antalya'da 10 gün süren yangınlar, Karadeniz'de seller, İzmir'de denizin taşması sonucu ortaya çıkan sel ve su baskınları son yıllarda dünyada ve ülkemizde görülen can ve mal kaybına neden olan çarpıcı olaylar bağlamında örneklenebilir.

Sayıları hızla artan benzeri olaylar bu bağlamdaki çalışmaların ivedilikle yoğunlaştırılmasını gerektirmektedir. İklim değişikliğinin etkilerini azaltmaya ve bu konudaki farkındalığı artırmaya yönelik olarak Dünyanın çeşitli ülkelerinde olduğu gibi ülkemizde de çeşitli çalışmalar yürütülmektedir. Çalışmanın etkisinin güçlendirilmesi açısından konunun öneminin giderek daha fazla farkında olunmasına bağlı olarak Çevre ve Şehircilik Bakanlığı'nın adına İklim Değişikliği yanı sıra ilköğretimde yer alan Çevre Eğitimi dersinin adına da iklim değişikliği ibaresinin eklenmesi, Ülkemizde konuya dikkat çekmek bağlamında gerçekleştirilen adımlardandır.

Yarının büyüklerine iklim değişikliği farkındalığı kazandırmak, iklim değişikliğini azaltım ve uyum konularında bilgilendirmek yanı sıra Ülkemizin zengin kültürel mirasını tanıtmak, bu eserlerin iklim değişikliği etkilerinden olumsuz şekilde etkilenmemesi açısından yapılabilecekler konusunda onları yönlendirmek üzere bir proje hazırlanmıştır. Dokuz Eylül Üniversitesi güdümlü bilimsel araştırma projesi olarak hazırlanan çalışma, disiplinlerarası bir nitelik yansıtmaktadır. Bu bildiri, 2022 yılından beri süren bu projemizi tanıtmaya yöneliktir. İlköğretim ikinci basamak (ortaokul) öğrencilerinin iklim değişikliği ve tarihi çevre konusundaki farkındalıklarını artırmaya yönelik "İlköğretim Öğrencilerinde İklim Değişikliği Farkındalığı Sağlamaya Yönelik Öğretim Programı ve Zenginleştirilmiş Dijital İçerik Geliştirme (11-14 yaş grubu)" başlıklı proje kapsamında kitap ve dijital içerik niteliğinde iki çıktı üretilmiş, ayrıca iklim değişikliği ile ilintili çeşitli uluslararası bildiriler sunularak yayımlanmıştır. Bu çalışmalar ile, ilgili eğitim düzeyindeki öğrencilerin örgün eğitimine katkı sağlanması, konuya yönelik bilgi ve farkındalığın artırılması düşünülmüştür.

Anahtar kelimeler: İklim Değişikliği, Kültürel Miras, Farkındalık, Azaltım-Uyum Çalışmaları, Öğretim Programı.

ABSTRACT

The effects of climate change, which is the biggest universal problem of our time, are increasing rapidly day by day. Unusual weather events observed in recent years (such as extreme rainfall, drought, extreme heat, melting of glaciers, forest fires) reflect a warning for the future. Forest fires that lasted for 240 days in Australia, fires that lasted for 10 days in Antalya, floods in the Black Sea, floods and inundations caused by the overflow of the sea in Izmir can be exemplified in the context of striking events that have caused loss of life and property in the world and in our country in recent years.

The rapidly increasing number of similar events necessitates the urgent intensification of efforts in this context. In order to reduce the effects of climate change and to raise awareness on this issue, various studies are being carried out in our country as well as in various countries of the world. In order to

FULL TEXTS BOOK

strengthen the impact of the study, the addition of the phrase Climate Change to the name of the Ministry of Environment and Urbanization, as well as the phrase climate change to the name of the Environmental Education course in secondary education, depending on the increasing awareness of the importance of the issue, is one of the steps taken in the context of drawing attention to the issue in our country.
A project has been prepared to raise awareness of climate change among the elders of tomorrow, to inform them about climate change mitigation and adaptation, as well as to introduce the rich cultural heritage of our country and to guide them on what can be done to prevent these artifacts from being adversely affected by the effects of climate change. The study, which was prepared as a dirigible scientific research project of Dokuz Eylül University, reflects an interdisciplinary feature. This paper aims to introduce this project, which has been ongoing since 2022. Within the scope of the project titled "Developing an Instructional Program and Enriched Digital Content for Raising Climate Change Awareness in Secondary School Students (11-14 age group)", two outputs in the form of a book and digital content were produced, and various international papers related to climate change were presented and published. With these studies, it was thought to contribute to the formal education of students at the relevant education level and to increase knowledge and awareness on the subject.
Keywords: Climate Change, Cultural Heritage, Awareness, Mitigation and Adaptation Works, Curriculum.

GİRİŞ

Günümüzde Dünya'nın en önemli sorunu olan ve gelecek açısından da daha büyük risk oluşturan iklim değişikliği, sıcaklık artışı, düzensiz yağışlar, şiddetli rüzgârlar, heyelan ve deniz seviyesinde yükselme gibi pek çok olumsuz etkiye neden olmaktadır. Söz konusu olağandışı hava olayları dünyadaki her canlının yaşamı yanı sıra tüm ekosistemleri giderek artan şiddette tehdit etmektedir. Bu olumsuz olaylar da tüm alanları farklı ölçekte de olsa etkilemektedir. Bildiri kapsamında, belirtilen olumsuz etkilere karşı azaltım ve uyum çalışmaları gerçekleştirmesi beklenen, yarının büyüklerinde farkındalık oluşturmaya yönelik olarak hazırlanan güdümlü bilimsel araştırma projesinin tanıtımına yer verilmektedir.
«İlköğretim Öğrencilerinde İklim Değişikliği Farkındalığı Sağlamaya Yönelik Öğretim Programı ve Dijital İçerik Geliştirme» başlıklı araştırma projesi Prof. Dr. Eti Akyüz Levi yürütücülüğünde 13 kişilik disiplinlerarası bir ekiple yürütülmüştür. Söz konusu ekipte meteoroloji mühendisi, koruma mimarı, eğitimci, sosyolog, bilgisayar ve öğretim teknolojileri eğitimi uzmanı gibi farklı alan uzmanları yer almaktadır. Projemiz, Dokuz Eylül Üniversitesi Bilimsel Araştırma Projeleri Koordinasyon Birimi'nce desteklenmektedir.
Projenin amacı, yarının büyüklerine iklim değişikliği farkındalığı kazandırmak, iklim değişikliğini azaltım ve uyum konularında bilgilendirmek yanı sıra Ülkemizin zengin kültürel mirasını tanıtmak, bu eserlerin iklim değişikliği etkilerinden olumsuz şekilde etkilenmemesi açısından yapılabilecekler konusunda onları yönlendirmektir. Proje ekibinde ağırlıklı olarak Dokuz Eylül Üniversitesi öğretim üyeleri yer almakla birlikte, İstanbul Teknik Üniversitesi, Yıldız Teknik Üniversitesi ve Ankara Üniversitesi'nden öğretim üyeleri de bulunmakta olup, çalışma üniversitelerarası iş birliği bağlamında da önem taşımaktadır.

KAVRAMSAL ÇERÇEVE

İklim değişikliğine ilişkin çeşitli tanımlar yapılmışsa da, Birleşmiş Milletler İklim Değişikliği Çerçeve Sözleşmesi'nde (İDÇS) kavram, *"Karşılaştırılabilir bir zaman periyodunda gözlenen doğal iklim değişikliğine ek olarak, doğrudan ya da dolaylı olarak küresel atmosferin bileşimini bozan insan etkinlikleri sonucunda iklimde oluşan bir değişiklik"* şeklinde tanımlanmıştır (Çevre ve Şehircilik Bakanlığı, 2002).

FULL TEXTS BOOK

Tarihsel süreçte çeşitli zamanlarda iklim değişikliği yaşanmışsa da, bunun özellikle Endüstri Devrimi sonrasında insan faktörü etkisi ile gerçekleştiği belirtilebilir. Atmosfere salınan sera gazlarının artması ile iklim değişikliği ve buna bağlı olarak küresel ısınma ortaya çıkmaktadır.

Son yıllarda hızla artan olağandışı iklim olaylarına bağlı afetler arasında Avustralya'nın birçok bölümünü etkileyen, *240 gün* süren (2019-2020) ülke tarihindeki *en büyük orman yangını,* 2021'de Antalya'da çıkan Cumhuriyet Dönemi'nin en büyük orman yangını, 2023 yılında İzmir'de (Türkiye) deniz taşması sonucu oluşan seller ve su baskınları, 2024 yılında Dubai'deki seller dikkat çekici örneklerdendir (Görsel 1).

Görsel 1 – İzmir'de denizin taşması sonucu ortaya çıkan görüntüler (Haber Türk, 26.11.2023)

Tüm dünyada etkileri görülen iklim değişikliği sonucu ortaya çıkan bu olağandışı hava olayları (orman yangınları, seller, kuraklık, buzulların erimesi gibi) gelecek açısından daha büyük bir endişe kaynağıdır. Bu açıdan proje yarının büyüklerinin beklenilen değişikliklere hazırlıklı olması açısından önem taşımaktadır. Söz konusu çalışma, bu bağlamda farkındalık geliştirmek yanı sıra ülkemizin eşsiz tarihi değerlerinin bu durumdan etkilenmemesi için gerekli çabayı gösterecek bireyler yetiştirmeyi hedeflemektedir.

Türkiye, doğal güzellikleri yanı sıra tarihi dokuları, arkeolojik alanları ile de son derece zengindir. Ülkemizin UNESCO Dünya Miras Listesi'nde 21 adet varlığı bulunmaktadır. Bunlar arasında Göbeklitepe, insanlık tarihini değiştirmesi açısından oldukça önemlidir (Görsel 2). Bu varlıkların yaşatılarak korunması, sürdürülebilirliğinin sağlanması, iklim değişikliğinin olumsuz etkilerinden zarar görmemesi bu konuda bilinç geliştirilmesi ile olanaklı olabilir.

FULL TEXTS BOOK

Görsel 2 – UNESCO Dünya Miras Listesi'ndeki varlıklarımızdan Göbeklitepe

İklim değişikliği ve küresel ısınma, insan-doğa etkileşiminin sonuçları arasında yer alan iki sorun olarak görülmektedir (Odabaş, 2018). İklim değişikliği konusunda afet yönetimi de başlangıçta azaltma odaklı iken, süreçte uyum olarak değişmiştir (Adger vd., 2009). Dolayısıyla günümüzdeki çabalar, hem karbon salımını azaltma yoluyla küresel ısınmayı kontrol etme hem de yeni oluşacak şartlara uyum sağlanmasına yöneliktir. Kültürel miras da, iklim değişikliği etkilerinden kıyılarda yer alan tarihi, arkeolojik alanlar ve geleneksel yerleşimlerin deniz suyu seviyesinin yükselmesi nedeni ile sular altında kalma riski, orman yangınları ve sellerle zarar gören ve yok olan tarihsel alanlar, yöresel mimari, iklim değişikliğine bağlı göçler sonucu yerin ruhunun zedelenmesi ve somut olmayan kültürel mirasın kaybı, aşırı ısı farklarının tarihi yapı malzemeleri üzerinde oluşturduğu yıpranma etkisi gibi pek çok açıdan etkilenmektedir. Bu bağlamda projede konu, tarihi çevre odaklı olarak ele alınmıştır.

Ülkemizin çok zengin tarihsel yerleşimleri, geleneksel dokuları, antik kentlerinin evrensel miras olarak önemi ve sürdürülebilirliğinin gerekliliği bu varlıkların iklim değişikliğinden nasıl etkileneceği konusunu düşündürmektedir. Dolayısı ile bu konuya daha fazla odaklanılıp farkındalık geliştirerek gelecek açısından çözüm üretme bağlamında çalışma önem taşımaktadır.

YÖNTEM

Çalışma kapsamında program analizi yöntemi kullanılmış, bu bağlamda tarihi çevre koruma konusunda öncü nitelik yansıtan İtalya, Fransa ve İngiltere'de ilgili yaş grubunun öğretim planlarında iklim değişikliğine ilişkin kavramlar belirlenmiştir. Ayrıca ülkemizde örgün eğitimde ilgili yaş grubuna yönelik öğretim programları ve ders içerikleri incelenerek analiz edilmiştir.

Çalışmanın aşamaları olarak öncelikle **ihtiyaç analizi** bağlamında:

- İklim değişikliğinin en önemli evrensel sorun niteliğini yansıtması,
- Ülkemizin kültürel mirasının yaşatılarak korunmasının ancak tanınması ve koruma bilincinin geliştirilmesi ile olabileceği,
- İklim değişikliği konusunda ülkeler ve kurumlar ölçeğinde yapılan çalışmaların yeterli olmadığı,
- Bireysel farkındalık kazandırmanın gerekliliği,
- Bu bağlamda en etkili yaş grubunun ilköğretim ikinci basamak düzeyi olduğu,
- Söz konusu yaş grubunun daha iyi ve etkili öğrenmesi açısından dijital eğitim malzemesi oluşturulmasının önemi belirtilebilir.

FULL TEXTS BOOK

Adımlar:

1
- İklim değişikliği ve tarihi çevre konusunun belirlenmesi
- Seçilen ülkelerde ilgili ilköğretim ikinci basamak öğretim programlarının incelenmesi

2
- Ülkemizdeki konu ile ilgili ilköğretim ikinci basamak öğretim programlarının ve ders kitaplarının incelenmesi
- Kavramların belirlenerek içerik oluşturulması

3
- Her bölümle ilgili öğrenme çıktılarının belirlenmesi
- Alan uzmanlarının bölümleri yazması

4
- Kitabın basımı
- Kitabın özet e-kitap niteliğinde dijital içeriğe dönüştürülmesi

5
- Konu ile ilintili uluslararası yayınların yapımı
- Dijital içeriğin açık erişimle yaygın etkisinin artırılması

6
- Üretilen çalışmaların ilgili yaş grubunun eğitimine katkı sağlaması, eğitim programında yer alması
- Yaygın etkiyi artırmaya yönelik tanıtım toplantıları

Çalışmanın çıktıları:

Öğretim planı

Basılı kitap

Zenginleştirilmiş dijital içerik

FULL TEXTS BOOK

Görsel 3 – Basılı kitabın kapak görüntüsü

Görsel 4 – Zenginleştirilmiş dijital içerikten görünüm

Çalışma her biri ilgili alan uzmanınca yazılan sekiz bölüm olarak düzenlenmiş; sonrasında özet e-kitap niteliğindeki zenginleştirilmiş dijital içerik hazırlanmıştır. Böylece, seslendirme ve videolarla daha etkileşimli ve etkili öğrenmeye olanak sunan dijital eğitim materyali oluşturulmuştur. Uluslararası yayınlarla da çalışmanın tanıtımı gerçekleştirilmektedir. E-kitabın açık erişime açılması ile yaygın etkisi artacaktır.

SONUÇ ve TARTIŞMA

Sonuç olarak, iklim değişikliği giderek etkileri artan evrensel bir gerçeklik durumundadır. Bu açıdan gerek azaltım, gerekse uyum çalışmaları ile söz konusu olumsuz etkileri azaltma konusunda yalnızca devlet ve kurumların değil, bireylerin çaba göstermeleri gerekmektedir. Bu açıdan çalışma, yarının büyüklerine gerekli farkındalığı kazandırmak ve konuya ilişkin öğrenmenin daha çarpıcı ve etkileyici şekilde gerçekleşmesine olanak sağlamak açısından zenginleştirilmiş dijital içerik oluşturmaya yöneliktir. Böylece ilgili yaş grubu öğretim planlarında yer alan dijital eğitim malzemesi oluşturulması önerilerine de yanıt sunmaktadır.

FULL TEXTS BOOK

Çalışmanın tarihi çevre odaklı olarak ele alınması da onu özgün kılan diğer unsurlardandır. İklim değişikliğinin olumsuz etkilerine karşı Türkiye'nin eşsiz tarihi güzelliklerinin yaşatılarak korunması ve sürdürülebilirliğine de katkı sağlayacaktır. Çalışma ile ilgili oluşturulan öğrenme araçlarının açık erişim ile geniş kitlelere ulaşması etki gücünü, dolayısıyla çalışmanın başarısını artıracak ve hedefin gerçekleşmesine yardımcı olacaktır.

BORAKS VE ÇEŞİTLİ BİTKİ ESKTRAKTLARININ AHŞAP MALZEMEDE YANMA DÜZEYİNE ETKİLERİ
EFFECTS OF BORAX AND VARIOUS PLANT EXTRACTS ON THE COMBUSTION LEVEL IN WOOD MATERIALS

Doç. Dr. Hatice ULUSOY,
Muğla Sıtkı Koçman Üniversitesi, Köyceğiz Meslek Yüksekokulu
Prof. Dr. Hüseyin PEKER
Artvin Çoruh Üniversitesi, Orman Fakültesi

ÖZET

Gerek ülkemiz ve gerekse ekosistemde (yeryüzü) orman yangınları hızla artmakta, tüm yaşanılan mekânlarda (iç/dış) yanma/yangın tehditleri devam etmektedir. Orman yangınları çok büyük alanlarda gerçekleşirken insanoğlunun yaşamış ve kullanmış olduğu tüm alanların çok çeşitli özelliklerde olması (banka, işyeri, tesisler vb.) yanma/yangın olaylarında kullanılması gereken materyal/yöntemler değişiklik gösterebilmektedir. Bu durum çok çeşitli yangın geciktirici materyal/yöntemler geliştirilmesine zorlamakta insan/çevre sağlığı bilinciyle yangın etkilerine karşı doğal/etkin koruyucular ön plana çıkmaktadır. Yanma parametreleri sadece materyal/yöntemle sınırlı olmayıp içinde bulunulan ortamın oksijen indeksi miktarı (LOI) önemli kısmı teşkil etmektedir. Çalışma kapsamında Karaçam odunu (*Pinus nigra Arnold*) türü tercih edilmiş ve çeşitli konsantrasyonlarda (% 3, % 5) tıbbi aromatik bitki türlerinden lavanta bitki ekstraktı ile boraks çözeltileri vakum yöntemiyle emprenye işlemine tabi tutulduktan sonra tutunma düzeyleri ve sonrasında piroliz işlemi uygulanıp, sınırlayıcı oksijen indeksi (LOI) test ölçümleri yapılarak yine piroliz işlemi uygulanmış kontrol gruplarıyla kıyaslanmıştır. Ahşap endüstrisinde kullanım düzeyi ve özellikle yangına karşı etkileri araştırılmıştır. Sonuçlar değerlendirildiğinde; piroliz işlemi uygulanmış emprenyesiz kontrol gruplarının LOI değerleri ile Piroliz işlemi uygulanmış emprenyeli örnekler üzerinde LOI değerleri kıyaslandığında; LOI değeri özellikle boraks emprenyesi ve borikasit+lavanta ekstraktı emprenyesinde en olumlu sonucu verdiği belirlenmiştir.

Gruplar kendi içinde kıyaslandığında; en yüksek LOI değeri %5'lik boraks ile emprenye edilmiş karaçam odunu üzerinde (% 46.42) olarak belirlenmiştir. En yüksek tutunma düzeyi boraks'ın tek başına kullanımında gerçekleşmiştir.

Anahtar Kelimeler: Ekoloji, Yanma, Bitki Ekstraktı, Bor, İnsan/Çevre Sağlığı

ABSTRACT

Forest fires are increasing rapidly both in our country and in the ecosystem (earth), and burning/fire threats continue in all living spaces (indoor/outdoor). While forest fires occur in very large areas, the materials/methods to be used in burning/fire events may vary due to the diverse characteristics of all areas where human beings have lived and used (banks, workplaces, facilities, etc.). This situation forces the development of a wide variety of fire retardant materials/methods, and with the awareness of human/environmental health, natural/effective protectors against the effects of fire come to the fore. Combustion parameters are not limited to the material/method, but the oxygen index (LOI) of the environment is an important part. Within the scope of the study, larch wood (Pinus nigra Arnold) type was preferred and after impregnation with lavender plant extract from medicinal aromatic plant species and borax solutions in various concentrations (3%, 5%) by vacuum method, adhesion levels were obtained and then pyrolysis process was applied and limiting oxygen index was determined. (LOI) test measurements were made and compared with the control groups that were also subjected to pyrolysis. The level of use in the wood industry and especially its effects against fire have been investigated. When the results are evaluated; When the LOI values of the unimpregnated control groups that were subjected

FULL TEXTS BOOK

to pyrolysis were compared with the LOI values of the impregnated samples that were subjected to the pyrolysis process; It was determined that the LOI value gave the most positive results, especially in borax impregnation and boric acid + lavender extract impregnation. When groups are compared within themselves; The highest LOI value was determined as (46.42) on larch wood impregnated with 5% borax. The highest adhesion level was achieved when borax was used alone.
Key Words: Ecology, Combustion, Plant Extract, Boron, Human/Environmental Health.

1. GİRİŞ

Odun ve selülozik materyallerde yanmayı önlemek için birçok yanmayı geciktirici kimyasal madde kullanılmaktadır. Yanmayı geciktirici kimyasal olarak bor bileşiğine dayalı ürünler, duman bastırıcı özelliklerinden dolayı yalnız veya birlikte kullanılmaktadır. Yanmayı geciktiriciler yapısal özelliklerinden dolayı yanmayı ya azaltırlar ya da önlerler. Kömürleşme oluşumunu sağlarlar. Ağaç malzemenin yüzeyinde meydana gelen kömürleşmeden dolayı iç kısımlara iletilen ısı miktarı, malzemenin içerisinde bulunan yanıcı gazların dışarı çıkmasına yeterli olmadığından yüzeydeki tutuşmayı durdurduğunu bildirmiştir (Baysal, 2002). Dubey ve ark. (2012) Ekosistemin canlılığı, ahşap endüstrisinde yeni organik koruyucu/üst yüzey işlem maddeleri elde edilmesi, geliştirilmesi ve yeni emprenye metotlarının belirlenmesi insanlığın geleceği açısından hayati önem taşımaktadır. Ahşap, doğru kullanım şartları altında birçok endüstride önemli hizmetler sağlayabilir. Ancak, elverişsiz kullanım ortamları ve yangın ahşaba kolayca zarar verebilir. Bu yüzden ahşabın yangın geciktiricilerle muamele edilmesi hayati öneme sahip bir işlemdir. Brunc ve ark. (2003) Odun gibi yenilenebilir enerji kaynaklarının kullanılmasındaki artış sera gazının etkisinin önemli nedenlerinden biri olan CO_2 problemini çözmek içindir. Bu avantajından dolayı günümüzde fosil yakıtlar biyokütle ile yer değiştirdiğini tespit etmişlerdir.

Wang ve ark (2010) Ağaç malzemenin hızlı pirolizi, yavaş pirolize oranla yanma ısısını arttırdığından daha az kömürleşmeye ve daha fazla yanıcı gaz çıkmasına yol açmaktadır. Yavaş piroliz de ise, daha fazla kömürleşme ve daha az yanıcı gaz çıkısı olmaktadır. Odunda, selülozun yanması ile çoğu tutuşucu özellikte gazların çıkısına ve ligninin yanmasıyla da kor halinde yanan maddelerin oluşmasına neden olmaktadır.

Onaran (2018) Reçine ve yaprak Özütlerinin(ekstrat) fungal adlı hastalık etmenlerine karşı kullanılmış olan her konsantrasyonda antifungal aktivite göstermiştir. Konsantrasyonun dozu arttıkça Miselyum gelişim engellemesi değerinin arttığı belirlenmiştir. Reçine ve yaprak ekstraktı karşılaştırıldığında reçine ekstratı yaprak ekstraktına kıyasla daha etkili bir sonuç bulunmuştur

Doğal bitkiler çok çeşitli amaçlarla (fitoperapi, baharat,çay, böcek ilacı, boya, yağlarında faydalanma, sanayi, kozmetik vb) kullanılmaktadır. Doğal (organik) bir yapıda olan ahşabın, antioksidan/antibakteriyel özelliği belirlenmiş lavanta bitkisinin çeşitli konsantrasyonlarından ekstrat (özüt) elde edilmesiyle emprenye edilebilme özelliği İnsan/çevre sağlığının sentetik ve kimyasal maddelerle tehdit edilmesi, orman kaynaklarının hızla azalması, küresel iklim değişikliği, yangınlar karşısında ekosistemde (doğada) bulunan materyalin mümkün olduğu kadar yine doğal yollarla hazır hale getirilerek ahşap malzemede kullanımı amaçlarıyla lavanta bitki ekstraktının çeşitli konsantrasyonlarda kullanımı ve akabinde boraks emprenye maddelerinin ayrı ayrı ve karışım halinde (boraks+ekstrakt) uygulanıp limit oksijen indeksi (LOİ) belirlenmesi suretiyle de kullanılabilirlik etkisinin belirlenmesi hedeflenmiştir.

2. MATERYAL ve YÖNTEM

Çalışma kapsamında lavanta (*Lavandula angustifolia Mill.*) bitkisinin ekstraktı çeşitli konsantrasyonlarda (%3, %5) hazırlanmıştır. Ahşap malzeme olarak karaçam (*Pinus nigra Arnold*) odunu tercih edilmiştir. Örnekler rastgele seçilen, çatlaksız, düzgün liflere sahip, ardaksız, budaksız,

FULL TEXTS BOOK

renk ve yoğunluk farkı olmayan özellikte olmasına dikkat edilmiştir. Daha sonra örnekler TS ISO 13061-1 standardına göre hazır hale getirilmiştir.

2.1. Deney Örneklerinin Hazırlanması ve Emprenye Yöntemi

Piroliz işlemi için 110x20x20 mm ebatlarında örnekler hazırlanmış olup alevli yakma işlemi sonrası örnek boyutları el planya makinesinde kömür kısmı kazınıp; 100x10x10 mm olarak LOI analizleri için odun örnekleri hazırlanmıştır. Sonrasında 103±2 °C sıcaklıktaki etüvde 24 saat bekletilmiştir (Yılgın ve ark.2005). Deney örneklerinin emprenyesinde ASTM D 1413-76 standardında öngörülen şekilde 70 cm Hg-1 basınca eşdeğer ön vakumun 30 dk süreyle uygulanmasının ardından 30 dk süreyle atmosferik basınçta örnekler çözelti içerisinde difüzyona bırakılmıştır

2.2. Çözelti Hazırlama

Lavanta yaprakları ayrıldıktan sonra damıtılmış su veya en az bu saflığa denk bir su içerisine konarak belli aralıklarla karıştırılmak suretiyle 1 saat süre geri soğutuculu düzenekte kaynama noktasının altında bir sıcaklıkta ısıtılmış, önceden hazırlanmış gözenekli kapsül içerisinde vakum eşliğinde süzüldükten sonra balon içerisinde numune kalmayacak şekilde birkaç kez damıtılmış su ile yıkanacak şekilde işleme devam edilmiş ve çözünmeyen kısım tamamıyla gözenekli kapsül içerisine konmuştur. Son olarak kalıntı 200 ml sıcak damıtılmış su ile yıkanmış ve kalıntının bir pompa veya emme vazifesi görecek bir başka cihaz yardımıyla suyu alındıktan sonra gözenekli kapsül ve içerenindekiler 103^{o}C'de ayarlı etüv içerisinde 16 saat tutulmak suretiyle kurutulduktan sonra desikatörde soğutulmuş ve 0.001 g hassasiyetle tartım işlemi yapılmıştır (Ceylan,2020).

2.3.Piroliz İşlemi

Piroliz işlemi ASTM D 1102-84 (2021) esaslarına göre gerçekleştirilmiştir. Çelik telden yapılmış kafes içerisine toleranslı boyutlarda (110x20x20 mm) hazırlanan odun örnekleri pürmüz kullanılarak 1300 °C açık mavi renkte alevli yanma uygulanmıştır. karaçam örnekleri için 5 dakika alevli yanma gerçekleştirilmiştir. Sonrasında yüzeylerdeki kömürleşmiş kısım planya makinesinde kazınıp 100x10x10 mm ebatlarında örnekler hazırlanmıştır.

2.2.5. Limit oksijen indeks Testi (LOI)

Tutuşma işlemi gerçekleşen yanıcı maddelerin yanıcılık özelliği oksijen indeks testi ile belirlenmektedir. Bu değer yanmanın devam edebilmesi için ortamda bulunması gereken oksijen miktarını ifade etmekte olup; yanma olayının tam olarak nasıl gerçekleştiği, yanma sonrası kalıntılarda, ayrışabilir organik maddelerde bulunan karbon miktarı tespit edilmektedir ASTM 2863-09 (2006).

3. BULGULAR VE TARTIŞMA

3.1. Çözelti Özelliği

Çözelti özelliğine ilişkin bulgular Tablo 1 'de verilmiştir.

Tablo 1. Çözelti Özellikleri

Bitki Ekstraktı/Boraks	**Çözücü Materyal**	**Sıcaklık (ºC)**	**pH**	**Yoğunluk**

FULL TEXTS BOOK

					k (g/ml)	
			EÖ	ES	EÖ	ES

% 3 (Boraks)+ % 3 (Lavanta)			8.05	8.05	0.996	0.996
% 5 (Boraks)+ % 5 (Lavanta)			7.67	7.68	0.890	0.890

EÖ: Emprenye öncesi **ES::**Emprenye sonrası

Çözeltinin emprenye öncesi ve sonrasında Ph ve yoğunluk değerlerinde değişim olmamamıştır. Lavanta bitki ekstraktının su ortamında konsantrasyonunun hazırlanması çözeltinin nötre yakın olmasını sağladığını söyleyebiliriz.

3.2. % Retensiyon

Tam kuru odun ağırlığına oranla tutunan katı madde miktarı (% retense) Tablo 2 ‘de verilmiştir.

Tablo 2. Tutunan Madde Miktarı (%)

Bitki Ekstraktı/Boraks	Çözücü Materyal	Sıcaklık (ºC)	% Tutunma)	
			Ortalama	HG
% 3 (Lavanta)	Su	22ºC	0.91	E
% 5 (Lavanta)			0.85	F
% 3 (Boraks)			2.56	A
% 5 (Boraks)			2.35	B
% 3 (Boraks)+ %3 Lavanta Bitki Ekstraktı			1.94	C
% 5 (Boraks)+ %5 Lavanta Bitki Ekstraktı			1.48	D

En yüksek tutunma değeri % 3 boraks çözeltisinde (% 2.35), en düşük tutunma değeri % 5 lavanta bitki ekstraktında (% 0.85) gerçekleşmiştir. Tutunma düzeyi odunun anatomik yapısı ve lavanta bitkisinin morfololjik yapısından kaynaklandığını söyleyebiliriz. Özellikle ekstrakt hazırlığında su veya etano/metanol’ün tutunmada etkili olduğu belirgindir.

3.3. Karaçam Odununda Limit Oksijen İndeks Testi (LOI)

Karaçam odununda limit oksijen indeks test (LOI) sonuçları Tablo 3’te verilmiştir.

Tablo 3. Karaçam Odununda Piroliz İşlemi Sonrası (LOI) Sonuçları (%)

FULL TEXTS BOOK

Bitki Ekstraktı/Boraks	Çözücü Materyal	Sıcaklık (ºC)	LOI (%)	
			Ortalama	HG
Karaçam Odunu (Kontrol)	-	-	32.58	E
% 3 (Lavanta)	Su	22ºC	21.45	G
% 5 (Lavanta)			26.10	F
% 3 (Boraks)			45.56	A
% 5 (Boraks)			46.42	B
% 3 (Boraks)+ %3 Lavanta Bitki Ekstraktı			37.29	C
% 5 (Boraks)+ %5 Lavanta Bitki Ekstraktı			35.46	D

Kontrol örneğine oranla karaçam odununda en yüksek LOI değeri % 5 Boraksta (% 46.42), en düşük % 3 lavanta bitki ekstraktında örneğinde (% 21.45) tespit edilmiştir. Bu durum emprenye maddesi, odunun anatomik yapısı, emprenye metodu ve konsantrasyondan kaynaklanmış olabilir. Lavanta bitki ekstraktı gerek %3 ve gerekse % 5 konsantrasyonda kontrol örneğine oranla ciddi bir performans gösterememiştir. Bu durum lavanta bitkisinin morfolojik özelliklerinden kaynaklanmış olabilir.
Yılgın ve ark. (2005) yaptıkları araştırmada meşe, çam ve kavak gibi odun türlerinin farklı sıcaklıklardaki flash pirolizi araştırıldı. Yenilenebilir bir enerji ve kimyasal hammadde kaynağı olan odunun flash pirolizi ile elde edilen sıvı ve diğer ürünlerin verimi üzerine sıcaklığın (400, 500 ve 600° C), tane boyutunun (8, 10 ve 12 mm) ve odun türünün etkisi incelemişler, sıvı ürün verimi, piroliz sıcaklığının artması ile artarken tane boyutunun artması ile azaldığını, odun türünün piroliz ürün verimleri üzerinde etkili olduğu bildirmişlerdir.

Uysal ve ark. (2011) yanma riski bulunan alanlarda emprenye yapılan ve vernik uygulanan ağaç malzemelerin, sıcaklığı arttırıcı ve yanma ürünü açığa çıkan gazları arttırıcı özelliği olduğu dikkate alınması gerektiğini ve yangın riski bulunan mekânlarda kullanılacak ağaç malzemelerin emprenye işlemi sonrası vernik uygulanmamış olmasının daha faydalı olacağı bildirmiş, aynı zamanda emprenye maddesi olarak boraks, vernik olarak ise su bazlı vernik uygulanmasını önermişlerdir.

Rowell ve ark.(1984) Ligninin yanma sırasında kömür oluşum oranı selüloz ve hemiselüloza göre yüksek olduğu böylece. lignin ısıya daha dayanıklı bir yapı sergilediği tespit edilmiş, ligninin kömür oluşturma oranının yüksek olması yanıcı gaz oluşumunu azaltmakta ve böylece odunda meydana gelecek daha ileriki ısısal bozulmaları engellediği bildirilmiştir

4. SONUÇ VE ÖNERİLER

Doğal ve organik lavanta bitki özütünün antibakteriyel/antioksidan yapısı insanlığın ve çevrenin geleceğinde bu tür yapılar önemli rol üstlenecektir. Salgın hastalıklar, pandemiler vb ciddi sıkıntılı ortamlar oluştukça özellikle tıbbi aromatik bitki kullanımı yüzyıllar boyu her alanda kullanımı öne çıkmaya devam edecektir. Özellikle iç/dış mekan mobilyaları, inşaat endüstrisi (ahşap yapılar) vb tüm alanlarda bu materyaller üst yüzey, boya, vernik türleri olarak kullanımı zorunlu hale gelmiştir. Emprenye işlemi ile ahşap materyalde tutunan madde miktarı bir miktar daha artış göstermektedir. Tüm kullanılan koruyucu materyallerin yanma, mekanik, piroliz, özgül ağırlık vb özelliklerine bakılarak kullanım alanları belirlenmektedir. Kullanılan yöntem ve kullanılan emprenye maddelerinin çevre dostu ve insan sağlığına zarar vermemesi yaşam alanlarında rahatça kullanılabileceği gerçeğini ön plana çıkarmaktadır. Kullanılan yöntem ve emprenye maddeleri ile elde edilen ahşap malzemelerin yapıda

FULL TEXTS BOOK

kullanılması açısından; inşaat. sigortacılık. peyzaj. tabakalı ağaç malzeme vb birçok orman ürününün iyileştirilmesi ve bahsi geçen sektörlerin daha rasyonel bir üretime yönelmeleri sağlanacaktır. Dolayısı ile her geçen gün daha da azalan orman kaynakları daha verimli kullanılmış olacaktır. Gerek dünyada ve gerekse Türkiye'de 2021 yılında orman yangınlarda 139.500 hektar alan yanmıştır. Üzerindeki yanan ağaçların bir kısmı söndürme faaliyetlerinde dış katmanı kömür olarak fakat enine kesitlerinde iç kısımlarının yanmadığı belirlenmiştir.

LAVANTA BİTKİ EKSTRAKTININ AHŞAP MALZEMEDE KULLANIMI VE YÜZEY PARLAKLIK DEĞİŞİMİ

USE OF LAVENDER PLANT EXTRACT ON WOOD MATERIALS AND SURFACE GLOSS CHANGE

Doç. Dr. Hatice ULUSOY,
Muğla Sıtkı Koçman Üniversitesi, Köyceğiz Meslek Yüksekokulu
Prof. Dr. Hüseyin PEKER,
Artvin Çoruh Üniversitesi, Orman Fakültesi

ÖZET

Dünyada çevre ve insan sağlığı bilinci ile doğal ve yenilenebilir enerji (Biyo endüstri) kaynaklarından yararlanarak, amaca uygun ve zararsız alternatif ürünler geliştirmenin önemi her geçen gün artmaktadır. Bu çalışmada; doğal bir ürün olan lavanta bitkisinden ekstrakt elde etmek suretiyle, çevre ve insan sağlığına zararsız, doğal ve su-bazlı ahşap koruyucu ve renklendiricilerin elde edilmesi ve geliştirilmesi, ahşap türlerinde uzun süreli koruyuculuk sağlanabilmesi amaçlarına yönelik olarak da tutunma oranları belirlenmiş; odun türüne bağlı olarak ta yüzey parlaklık değişimleri saptanmıştır..

Araştırmada, lavanta bitki ekstraktından elde edilen organik boyar maddenin odun koruma endüstrisinde kullanım olanakları araştırılmış, odunda toplam tutunma (retensiyon) miktarları ve % retensiyon oranları belirlenmiştir. Lavanta bitki ekstraktı ISO 1574 -TS 1563 standartlarına göre elde edilmiş olup, ASTM D 1413-76 (1976) standardına göre emprenye işlemi gerçekleştirilmiştir. Ahşap malzeme olarak; karaçam (*Pinus nigra*), Akçaağaç odunu (*Acer campestre*) odunları kullanılmıştır. Deney sonuçları göre; en yüksek % retensiyon oranı akçaağaç odununda (% 3.68), en düşük karaçam odununda (% 2.10) olurken; en yüksek toplam retensiyon değeri akçaağaç odununda (59.63 kg/m^3), en düşük karaçamda (36.45 kg/m^3) gerçekleşmiştir. En yüksek parlaklık değeri akçaağaç 'da (65 Gloss) tesbit edilmiştir. Lavanta bitki ekstraktından elde edilen organik maddenin, ahşap malzemede emprenye maddesi olarak kullanılabileceği tutunma düzeyi ile ortaya konmuştur.

Anahtar Kelimeler: Biyokütle, ekosistem, atık çay, ekstrakt, parlaklık, insan/çevre sağlığı**.**

ABSTRACT

The importance of developing suitable and harmless alternative products by taking advantage of natural and renewable energy (Bio industry) resources with environmental and human health awareness in the world is increasing day by day. In this study; Adhesion rates have also been determined for the purposes of obtaining and developing natural and water-based wood preservatives and colorants that are harmless to the environment and human health by obtaining extract from the lavender plant, which is a natural product, and providing long-term protection of wood species; Surface brightness changes were determined depending on the wood type.

In the research, the possibilities of using the organic dyestuff obtained from lavender plant extract in the wood preservation industry were investigated, and the total retention amounts and % retention rates in wood were determined. Lavender plant extract was obtained according to ISO 1574 -TS 1563 standards, and the impregnation process was carried out according to ASTM D 1413-76 (1976) standard. Wood as material; Black pine (Pinus nigra) and maple wood (*Acer campestre*) woods were used. According to the test results; The highest retention rate was in maple wood (3.68%) and the lowest in larch wood (2.10%); The highest total retention value was in maple wood (59.63 kg/m^3) and the lowest in larch wood (36.45 kg/m^3). The highest gloss value was determined in maple (65 Gloss). It has been demonstrated by its adhesion level that the organic matter obtained from lavender plant extract can be used as an impregnation agent in wood materials.

Key Words: Biomass, ecosystem, lavander extract, gloss, human/environmental health.

FULL TEXTS BOOK

1.GİRİŞ

Ahşap eski çağlardan günümüze kadar sıkça tercih edilen bir yapı malzemesi olmuştur. Fakat ahşabı besin maddesi olarak gören biyolojik canlılar ve çevresel faktörler nedeniyle mekanik ve fiziksel hasarlara uğrayabilmektedir. Ahşapta oluşan hasarları engellemek için birçok medeniyet farklı yöntemler kullanmıştır. Çinlilerin tuzlu suyla, Yunanlıların sedir ve zeytinyağıyla, Vikinglerin hayvansal yağlarla ve Osmanlınınsa zift ve halat parçalarıyla ahşabı korumaya çalıştıkları bilinmektedir. Geçmiş dönemlerde kullanılan ahşap koruyucuların çevresel etkileri her ne kadar az olsa da teknoloji ve sanayinin gelişmesiyle daha uzun ömürlü ahşap malzemeye olan talep ve ihtiyaç artmıştır. Özellikle, kullanılan kimyasal ürünler malzemenin hizmet ömrünü uzatmakta fakat çevresel zararlara ve hastalıklara neden olmaktadır. Arsenik kullanımının cilt kanserine neden olabileceği, bakırın ise sulak alanlarda akma yaparak deniz canlılarına zarar verdiği bilinmektedir. Bununla birlikte belli başlı kanserojen kimyasalların kullanımı yasaklansa da günümüze bakıldığında hala bu ahşap koruyucular kullanılmaktadır. Güncel olarak kullanılan ahşap koruyucular her ne kadar ekolojik olarak adlandırılsa da içeriğindeki maddeler incelendiğinde hedefte olmayan canlılara da zararlı olduğu görülmektedir (Hülagü ve ark. 2023).

Sığla ağacında elde edilen Reçine ve yapraklar oda koşullarında metanol ile ekstre edilip elde edilen ekstrelerin Alzheimer hastalığı ile ilişkisi olan asetilkolineteraz ve bütirilkolinesteraz enzimlerinin orta seviyede Alzheimer hastası olan kişilerin tedavisinde kullanılan galantaminin inhibisyonu ile kıyaslanmış ve sonuçta 200 ppm konsantrasyonda reçine ve yaprak ekstreleri sırasıyla, AChE enzimine karşı % 70,79-% 89,15 inhibisyon gösterirken, BChE enzimine karşı % 80,49-% 80,50 inhibisyon göstermiş. Reçine ve yaprak özütlerinin(ekstre) her iki enzimi de galantaminden daha iyi inhibe etmesi, sığla ağacının hem doğal hemde zararsız potansiyel antikolinesteraz ajanı olarak kullanılabileceğine göstermektedir (Gülsen vd. 2011).

Elma ve hıyar bitkilerinde soruna sebebiyet veren fungal adlı hastalık etkenleri Fusarium oxysporum f.sp. cucumerinum (FOC) ve Monilinia fructigena'ya karşı bitki ekstraklarının kontrol gurubu 5,10, ve 20 mg/ml olmak üzere farklı konsantrasyonları kullanılmış ve bu kontrasyonla ulaşılan verilerde, Letal Doz ve Miselyum değerleri belirlenmiş. Reçine ve yaprak Özütlerinin(ekstrat) fungal adlı hastalık etmenlerine karşı kullanılmış olan her konsantrasyonda antifungal aktivite göstermiştir. Konsantrasyonun dozu arttıkça Miselyum gelişim engellemesi değerinin arttığı belirlenmiştir. Reçine ve yaprak ekstratı karşılaştırıldığında reçine ekstratı yaprak ekstratına kıyasla daha etkili bir sonuç bulunmuştur (Onaran, 2018).

Atık yağlar ile emprenye işlemi yapılmış ve ağaç malzemenin emprenye sonrası fiziksel özelliklerine etkisini araştırılmış ve araştırma sonucunda fiziksel özelliklerinin olumlu sonuç verdiği gözlenmiştir (Arpacı vd. 2020).

Sarıçam odununda yapılan bir çalışmada bitkisel koruyucu olarak kullanılması umut edilen valeksin odunun fiziksel, mekanik ve biyolojik özelliklerini genellikle olumsuz etkilediği belirlenmiştir. CCA'nın ve CBA-A'nın ise biyolojik testlerdeki zehirlilik etkisi memnun edici bulunurken mekanik özelliklerde kısmi performans düşüklükleri gözlemlenmiştir (Şimşek, 2013).

Doğal bitkiler çok çeşitli amaçlarla (fitoperapi, baharat,çay, böcek ilacı, boya, yağlarında faydalanma, sanayi, kozmetik vb) kullanılmaktadır. Doğal (organik) bir yapıda olan ahşabın, antioksidan/antibakteriyel özelliği belirlenmiş lavanta bitkisinin çeşitli konsantrasyonlarından ekstrat (özüt) elde edilmesiyle emprenye edilebilme özelliği ve bazı üst yüzey (parlaklık) özelliklerinin belirlenmesinin yanı sıra ahşap malzemede doğal bir koruyucu yapı oluşturulmaya çalışılmıştır.

2. MATERYAL VE YÖNTEM

Çalışma kapsamında lavanta (*Lavandula angustifolia Mill.*) bitkisinin ekstraktı çeşitli konsantrasyonlarda (%1,%3) hazırlanmıştır. Ahşap malzeme olarak karaçam (*Pinus nigra*) ve akçaağaç odunu (*Acer campestre*) odunları tercih edilmiştir. Örnekler rastgele seçilen, çatlaksız, düzgün liflere

FULL TEXTS BOOK

sahip, ardaksız, budaksız, renk ve yoğunluk farkı olmayan özellikte olmasına dikkat edilmiştir. Daha sonra örnekler TS ISO 13061-1 standardına göre hazır hale getirilmiştir.

2.1. Deney Örneklerinin Hazırlanması ve Emprenye Yöntemi

Deney örnekleri, TS 2470'e göre ardak, budak, çatlak, düzgün lif yapısına sahip, mantar ve böcek tahribatına uğramamış, renk bozukluğu olmayan diri odun kısmından hazırlanmıştır [39]. Hava kurusu rutubetteki 100x100x10 mm (boyuna yön × radyal yön × teğet yön) net ölçülerindeki örnekler 20±2°C /%65±5 şartlarında klimatize edilerek örnek rutubetinin %12±2'ye getirilmiştir. Daha sonra, örnek yüzeyleri sırası ile 80 ve 120 no'lu zımparalarla zımparalanmış ve yüzeydeki tozlar basınçlı hava ile temizlenmiştir. Emprenye yöntemi vakum/difüzyon esaslı olarak ASTM D1413-76 standardına göre gerçekleştirilmiştir.

2.2. Parlaklık Ölçümü

Lavanta bitki ekstraktı ile işlem görmüş malzemenin ışığı yansıtma özelliği vasıtasıyla TS EN ISO 2813 esas alınmış "Konica Minolta Multi Gloss 268 Plus" parlaklık ölçüm aleti ile 60º±2º'de liflere paralel parlaklık ölçümü deney örmelerinde gerçekleştirilmiştir. Alet kalibresi ASTM-D-523'e göre yapılmıştır. Cihaz Şekil 1'de verilmiştir. Deneyde kullanılan cihaz, bir ışık kaynağı ve paralel veya birbirine yaklaşan ışık demetini deney alanına yönelten mercek sistemi, fotosel ve yansıyan ışık konisini alan alıcıdan meydana gelmiştir. Ölçümlerde 20/60/85o ' de ölçüm yapan, parlaklık ölçme cihazı her işlemde ve işlemlerden önce kalibre edilmiştir. Günlük kalibrasyonda iyi cilalanmış ve düzgün yüzeyli, kırılma indisi 1.567 olan ve parlaklığı her geometri için 100 olarak belirlenmiş siyah cam kullanılmıştır. Örnek yüzeylerinde, paralel yönde ölçüm yapılmış ve bu ölçümlerin aritmetik ortalamaları parlaklık değeri olarak kaydedilmiştir. 60°'de yapılan parlaklık ölçümlerine göre yüzeyler mat, yarı mat, yarı parlak, parlak ve çok parlak gibi sınıflandırılmaktadır. Parlaklık değerlerinin sınıflandırılması Tablo 1'de verilmiştir.

Şekil 1. Yüzey Parlaklık Ölçüm Cihazı

Tablo 1. Parlaklık değerlerinin sınıflandırılması

60°'de Ölçülen Parlaklık	Parlaklık Sınıf
20 Gloss'un altı	Mat
25-30 Gloss	Yarı Mat
35-45 Gloss	İpek Mat
55-65 Gloss	Yarı parlak
70-80 Gloss	Parlak
80 Gloss'un üzeri	Çok Parlak

FULL TEXTS BOOK

3. BULGULAR VE TARTIŞMA

3.1. Çözelti Özelliği

Çözelti özelliğine ilişkin bulgular Tablo 2 ‘de verilmiştir.

Tablo 2. Çözelti Özellikleri

Bitki Ekstraktı	Çözücü Materyal	Sıcaklık (ºC)	pH			
			EÖ	ES	EÖ	ES
1%	Etanol	22ºC	5.80	5.80	0.912	0.912
3%			5.11	5.11	0.915	0.915

EÖ: Emprenye öncesi ES::Emprenye sonrası

Çözeltinin emprenye öncesi ve sonrasında Ph ve yoğunluk değerlerinde değişim olmamamıştır.

3.2. % Retensiyon

Tam kuru odun ağırlığına oranla tutunan katı madde miktarı (% retense) Tablo 3 ‘de verilmiştir.

Tablo 3. Tutunan Madde Miktarı (%)

Odun Türü	Lavanta Bitki Konsantrasyon	Vakum/ Dıfuzyon	Çözücü	Sıcaklık (ºC)	Retensiyon (%)	
					Mean	HG
Karaçam	1%	30/30 Minute	Etanol	22ºC	1.56	D
	3%				2.10	B
Akçaağaç	1%				1.68	C
	3%				3.68	A

Lavanta bitki ekstraktı özellikle kendi morfolojik yapısı ve etanol ile ekstre elde edilmesi ve % konsantrasyonu itibari ile değerlendirildiğinde en yüksek tutunma değeri % 3 konsantrasyonda akçaağaç odununda (3.68) en düşük tutunma düzeyi karaçam odununda % 1 konsantrasyonda (%1.56) gerçekleşmiştir. Etanol ve odunun anatomik yapısının tutunma üzerinde etkili olduğunu söyleyebiliriz.

FULL TEXTS BOOK

3.3. Yüzey Parlaklık Ölçümü (Gloss)

Yüzey parlaklık ölçüm sonuçları Tablo 4'te verilmiştir.

Tablo 4. Parlaklık Değeri (Gloss/ 60°)

Odun Türü	Lavanta Bitki Konsantrasyon	Vakum/ Difuzyon	Çözücü	Sıcaklık (°C)	Parlaklık (Gloss)	
					Mean	HG
	Kontrol	30/30 Dakika	Etanol	22°C	61	D
Karaçam	1%				55	E
	3%				52	E
	Kontrol				67	A
Akçaağaç	1%				63	C
	3%				65	B

En yüksek parlaklık değeri (60°) % 3 konsantrasyonda akçaağaç 'da (65 Gloss) tesbit edilmiştir. En düşük parlaklık değeri %1 konsantrasyonda karaçam odununda (55 Gloss) belirlenmiştir. Parlaklık ölçüm değerleri kontrol örnekleriyle karşılaştırıldığından kısmen değerlerde düşmeler belirlenmiştir. Bu durum lavanta bitkisinin yapısından kaynaklanabilir. Lavanta bitki ekstraktından elde edilen organik maddenin, ahşap malzemede emprenye maddesi olarak kullanılabileceği tutunma düzeyi ile ortaya konmuş ve mobilya/ahşap endüstrisinde estetik düzeyde (renk/parlaklık) kullanılabilenini söylenebilir.

4. SONUÇLAR

İnsan/çevre sağlığının ön plana çıktığı içinde bulunduğumuz yüzyıl ve gelecek yüzyıllarda bitki, aromatic bitki, tıbbi aromatic bitkiler tüm yönleriyle gerek bitkilerin gövdeleri/yaprakları vb atık /artıkları her türlü ahşap koruyucu olarak kullanılabilir. Materyalin organik olması ve doğal koşulların yanında bazı türlerin kapalı mekanlarda yetiştirilmesi insanlığın geleceği için büyük önem taşımaktadır. Üst yüzey özelliği (parlaklık) itibariyle olumsuz bir durum belirlenmiştir.

POSTMODERN APPROACHES IN THE CONTEXT OF BİO-CELLULAR REALİSM
CANLI HÜCRE GERÇEKÇİLİĞİ BAĞLAMINDA POSTMODERN YAKLAŞIMLAR[12]

ÖZET

İnsanoğlu, tarihin başlangıcından bu yana sanatta; yansıma, mimesis, gerçekçilik ve soyut sanat arası bağlamları imgeler ve göstergelerle kültürüne yansıtmıştır. Bu nedenle "Gerçeklik ve Yansıma" sanat tarihinin diyalektiğini her zaman meşgul etmiştir. Modernizmle birlikte gerçeklik soyut sanata dönüşmüş ve Duchamp'ın "Çeşme" eseriyle kavramsal sanata evrilmiştir. Doğadan yansıtmayı terk eden sanatçılar, 21. yüzyılda Postmodernizm ile sanatta elit estetiği yani geleneksel estetik kurallarını ihlal ederek özgünlüğe ve deneyselliğe sırt çevirmiş; görelilik temelli, eklektik, evrensel olmayan, absürd unsurları kullanarak şımarmış, hatta daha da ileri giderek etik dışı bir dünyanın sonucu olan "Kitsch" eserler üretmişlerdir. Gelinen bu noktada artık geçmiş ve günümüz sanatının barışarak daha sağlam estetik üretilerle gelecek kuşaklara yön vermesi gerektiği mantıklı bir önerme olmuştur. Biyosellüler Realizm ve BC-R Kolajlar; takındığı terbiye ve disiplinle bunu sentezleme görevini üslenmiş ve bir Rembrand kadar gerçekçi, bir Monet kadar eklektik ve bir Duchamp kadar kıvrak düşünen bağlamları ortaya koymayı amaçlamıştır. Dolayısıyla Biyosellüler Realizm sanat tarihindeki tüm akımları sentezleyerek onları klasik eserlerdeki gibi duvarlara asabilmektedir. Bunu yaparken Rembrand'ın ulaşmak istediği gerçekçiliği Ready-Made bağlamıyla, doğadan aldığı canlı hücre taşıyan figürleri duvar yüzeylerine Post-Rönesans estetiğiyle kolajlamıştır. Ayrıca Postmodern estetiğin kullanılabilir stratejilerini alarak; taklit etmeden, çalmadan, bir İtalyan beyefendisi Raphael tavrıyla sergilemiştir. Biyosellüler figürler gerçeğin ta kendisi olduğundan doğayı birebir taklit kaygısı taşımaz. Çünkü aradığı gerçek zaten doğanın kendisidir. Doğayı taklit yerine direkt alarak yüzeylere eklerken onları kavramsal, performans, teknoloji, video sanat ve diğer akımlarla koordineli bir şekilde kullanır. BC-R kolajlar köklerini IS, Performans sanat, D. Spoerri ve Maciunas felsefesinden esinlenmiştir. Estetik bağlamda temel prensibi; başkasına ait şeyleri asla kendine mal etmez. Çünkü "Kopyanın bittiği yerde orijinalite başlar" ilkesiyle hareket eder. Fakat tüm akım ve estetiklerle işbirliği içinde ürünler sunmayı amaçlar. Araştırmanın amacı; Biyosellüler Realizm bağlamında gerçeği yansıtma odaklı kontekstlerle yeni Postmodern ötesi ürünler ortaya çıkarmaktır. İkincil amacı ise; Modernist ve Postmodernist estetiklerin derin kavrayışıyla sentezlenen üretileriyle günümüz realizmine alternatif üretiler sunmaktır. Araştırma nitel araştırma yöntemi kullanılarak yapılmış olup verilere ulaşmak için literatür ve online taramalar yapılmış ve eldeki sentezlemelerle tümel yorumlara gidilmiştir. Araştırma sanat tarihi diyalektiğindeki bilinen tüm eserleri irdeleyerek; kiç, çalıntı, etik olmayan tüm yaklaşımları, tasarımları dışında tutmuştur. Gelinen noktada estetik disiplin ışığında da sanat üretilebileceği ve sanatı bekleyen en büyük tehlikenin etik çizgiden ayrılmak olduğu yargısına varılmıştır. Araştırma evreni ve J. Kounellis, B. Nauman, R. Smithson, J. Beuys ve D. Hirst M. Abramović'in arşivlenmiş eserleri incelendiğinde, söylenmemiş estetik olan BC-Realizm'in artık görsel, kavramsal, teknolojik ve günümüzün ileri estetik uygulamalarının ışığında; ancak estetik disiplin etiği üzerinden ifade edilmesi gerektiği yargısına

[12] Bu çalışma İnönü Üniversitesi Bilimsel Araştırmalar Koordinasyon Birimi tarafından SSY-2023- 3115 nolu proje kapsamında desteklenmiştir.

varılmıştır. Ayrıca BC-R kolajların taşıdığı barışçıl estetik auranın, diğer tüm estetikler arası barışın tesisinde de rol oynayacağı düşünülmektedir.
Anahtar Kelimeler: **:** Biyosellüler Realizm, Biyosellüler Kolaj, Gerçeklik, Yansıma, Hologram, Performans Sanat, Ayna, BC-R, Kavramsal Sanat.

ABSTRACT

Human beings have been in art since the beginning of history; They reflected the contexts between reflection, mimesis, realism and abstract art into his culture with images and signs. For this reason, "Reality and Reflection" has always occupied the dialectic of art history. With modernism, reality turned to abstract art and evolved into conceptual art with Duchamp's artwork "Fountain." Artists who abandoned reflecting from nature turned their backs on originality and experimentation with Postmodernism in the 21st century, violating elite aesthetics, that is, traditional aesthetic rules, in art; Artists became spoiled by using relativity-based, eclectic, non-universal, absurd elements, and even went further, producing kitsch works that were the result of an unethical world. At this point, it has become a logical proposition that past and present art should reconcile and guide future generations with more solid aesthetic products. Biocellular Realism and BC-R Collages took on the task of synthesizing this with their upbringing and discipline, aiming to reveal contexts that were as realistic as a Rembrand, as eclectic as a Monet, and as agile as a Duchamp. Therefore, Biocellular realism can synthesize all movements in art history and hang them on the walls like classical works. During this process, he employed the Ready-Made technique, which embodies the realism that Rembrand aimed for, and collaged figures with living cells from nature onto wall surfaces, incorporating Post-Renaissance aesthetics. Additionally, by adopting the practical strategies of postmodern aesthetics, BC-R exhibited them with the attitude of an Italian gentleman, Raphael, without imitating or stealing. Since Biocellular figures are the real thing, they do not have to worry about imitating nature exactly. Because the truth it seeks is nature itself. While adding nature to surfaces directly rather than imitating it, BC-R uses them in coordination with conceptual, performance, technology, video art, and other movements. BC-R collages are rooted in IS, performance art, inspired by D. Spoerri, and Maciunas philosophy. Its basic principle in the aesthetic context is; it never takes someone else's work as his own. It adheres to the principle that "originality starts where copy ends." However, BC-R works aims to offer products in cooperation with all movements and aesthetics. Purpose of the research; In the context of Biocellular realism, it is to create new postmodern products with contexts focused on reflecting reality. Its secondary purpose is; It aims to present alternative productions to today's realism with its products synthesized with a deep understanding of modernist and postmodernist aesthetics. The research was conducted using the qualitative research method, literature and online searches were made to access the data, and universal interpretations were made with the available syntheses. The research examines all known works in the dialectic of art history; and excluded all kitsch, stolen and unethical approaches and designs. At this point, we've concluded that aesthetic discipline can guide the production of art, and that straying from the ethical line poses the biggest danger. When the archived works from the universe of the research and J. Kounellis, B. Nauman, R. Smithson, J. Beuys, and D. Hirst M. Abramović are examined, it is seen that BC-Realism, the unspoken aesthetic, is now in the light of visual, conceptual, technological, and today's advanced aesthetic practices; but it has been judged that it should be expressed through the ethics of the aesthetic discipline. The peaceful aesthetic aura of BC-R collages is believed to contribute to harmony among all other aesthetics.

TANIMLAR:

Biyosellüler: Biyolojik hücrelerden oluşan veya bu hücrelere sahip olan canlı yapıya denir (URL-1; URL-2). Dolayısıyla canlı hücresel öğelere sahip olan anlamına gelmektedir.

Biyosellüler Gerçekçilik (Biocellular Realism; BC-R): Terim Türkçeye "Canlı Hücre Gerçekçiliği" olarak çevrilir. Biyolojik canlı ya da figürlerin duvar gibi yüzeylere klasik tablolara gönderme yaparak adeta bir kolaj gibi asılması sanatıdır. Biyohücresel çalışmalarda aranan temel prensip figürün ya da figüre ait unsurun canlı hücre taşımasıdır. Terim Biyosellüler kolaj olarak ta adlandırılır (URL-3).

Jouissance: "zevk, orgazm" (URL-7), "Lacan'a göre psikanalitik teoride, Freudcu "haz ilkesi"nin ötesinde, "ölüm dürtüsü"ne benzeyen erotik bir coşku" (URL-8).

GİRİŞ

İnsanoğlunun görsel korteksleri varlığının ilk aşamalarında bu yana sanatta; yansıma, mimesis, gerçekçilik ve soyut sanat arası bağlamları imgeler ve göstergelerle kültürüne yansıtmıştır. Bu sebepten "Gerçeklik ve Yansıma" sanat tarihinde, sanatçı ve izleyicileri arasındaki diyaloğu sürekli meşgul etmiştir.

Modernizm; özgünlüğü, deneyciliği, estetik hazzı farklı bir gerçekçilikle ortaya koyarken Postmodernizm bu çabayı bir anda baş aşağı ederek popüler kültürün ya da sıradan bireyin estetik beğenisini yüksek kültür estetiğiyle bir tutmuştur.

Gerçeklik, Postmodern dönemde yerini simüle edilmiş şeylere bırakmıştır. Mektup yerini e-maile, doğada yürüyüş yerini bilgisayar oyunlarına ya da simülasyona uğramış ekrandaki müzikli doğa görüntülerine terk etmiştir. Bu bağlamda mimar Richard Neutra insanların sosyolojik ve psikolojik gereksinimleri düşünülmüş Bio-realistik ortamlarda yaşamalarını şart koşmuştur (Resim 1) (Morse, 2013: 4-6). Neutra'nın Biyorealizmi 1920'lerde mimariye girse de, 1954'de bastırdığı "*Survival Through Design*: Tasarım ile Hayatta Kalma" adlı kitabından sonra resmi olarak çalışmaları mimarinin klasikleri arasında yer almaya başladı (URL-9).

Resim 1. Mimar Richard Neutra'nın İnşa Ettiği Bio-Realistik Ev Tasarımları.

METODOLOJİ

Bu araştırmanın amacı; Biyosellüler Realizm bağlamında gerçeği yansıtma odaklı kontekstlerle yeni ve alterntif bir dil ya da Postmodern ötesi plastik söylemler ortaya çıkarmaktır. Biyosellüler kolajların sanat tarihi diyalektiğinde daha önceden, içerdiği bağlam ve felsefesinin kullanılmamış oluşu, bu yeni Realizm ile sanatçıları karşı karşıya bırakması açısından araştırmayı önemli ve gerekli kılmaktadır. Araştırma nitel araştırma yöntemi kullanılarak yürütülmüş olup, verilerin toplanmasında internet aramalarından, evrensel ya da avam sanat eserlerinden seçilen derleme çalışmalardan yararlanılmıştır. Eşdeyişle, araştırmanın evrenindeki; geçmişteki eski ustaların yaptığı eserler ve günümüz plastik eserleri taramasından sonra J. Kounellis, B. Nauman, R. Smithson, J. Beuys ve D. Hirst M. Abramović'in

FULL TEXTS BOOK

eserleri incelenmiş ve bu söylenmemiş estetik olan BC-Realizm'in varlığının dillendirilmesini zaruri hale gelmiştir.

Araştırmada Biyosellüler Realizm'e köprü olan kök eserler, analojik değerlendirildikten sonra Biyolsellüler sanat felsefesiyle üretilmiş 6 çalışma BC-R kolajlara örnek olarak verilmiş ve açıklanmıştır. BC-R kolajların tarihe katkısının değerlendirmesi sonucu denebilir ki, Biyosellüler Realizm; barışçıl, etik kurallara ve estetik kavrayışa aşırı derecede duyarlı bir üslup ve tekniktir. Varılan diğer bir yargı ise, günümüz eserlerinin estetik disiplin etiği üzerinden ifade edilmesi gerektiğidir. Böylece BC-R kolajların taşıdığı barışçıl estetik, tüm akımlar arası barışı tesis ederek toplum bireylerinde de hoşgörünün inşasına yapıcı rol oynayacağı önermesi mantıklıdır.

KAVRAMSAL ÇERÇEVE

Fotoğrafın icadıyla Modern sanat, doğadan kaçarak soyut figürlü bir dünyaya sığınmıştı. Düşünür Arthur Danto sanatın güzel olmasına, doğanın birebir taklidine, formların bir mekanda işlenmesine gerek olmadığını vurgulamıştı (Barrett, 1990: 35). Böylece Amerikan Expresyonizm'ine kadar boya/pigment, yüzeyleri kavrayarak düzleşti ve her şeyi düzleştirdi. (Barrett, 2011: 205).

Modernizmle birlikte gerçeklik soyut sanata dönüşmüş ve daha sonra Duchamp'ın "Çeşme" eseriyle kavramsal sanata evrilmiştir. Doğadan yansıtmayı terk eden sanatçılar, 21. yüzyılda Postmodernizm ile birlikte sanatta elit estetiği yani geleneksel estetik kurallarını dışlayarak özgünlüğe ve deneyselliğe sırt çevirmiş; görelilik yani rölativizm temeline dayanan, eklektik konstrüksiyonlarla biçimlenen, evrensel olmayan, absürd unsurları kullanarak şımaran, hatta daha da ileri giderek etik dışı bir dünyanın sonucu olan "Kitsch" eserler üretilmişlerdir.

Evrensel mesajların reddedilişiyle artık gündemi meşgul eden konularla yeni işler üretilmiştir. Sanatta evrensellik adına atılan adımların sekteye uğraması, Prof. Baymur'un gerileme (regression) tanımını akla getirmektedir. Böylece bu tanım, Postmodern dönemi sanatını açıklamamıza yardımcı olmaktadır. Baymur'a (2004: 104) göre; Birey kendi istekleri ve temel ihtiyaçlarının karşılanmasında yaşadığı doyumsuzluk ve kaygılarla, devreye giren ilkel bir doyumsuzluk hissederek davranışlarında da ilkel olgunluk psikolojisine gerileyecektir. Bunun sonucunda hareketlerinde; kekeleyen, kızaran hatta küçük bir çocuk gibi davranmaya başlayan dışavurumlar sergileyecektir. Dolayısıyla denebilirki; sanatçılar da bu ilkellikle sanatta eklektik üslupları çoğaltarak ve onları tekrarlayarak bir kekeleme dönemine geçirmiş, gösterdikleri şımarıklıklarla çocuklaşan kiç üretilerini rastgele söylemlemişlerdir. Bu bağlamıyla adeta mağara dönemi insanları gibi sadece kendini düşünen çocukluk kavrayışıyla, üretilen eserlere kodlanan lakayt ve keyfi felsefe adeta yazı öncesinde yaşayan insanın düşünme yapısına gerilemeye başlamıştır.

Gelinen bu noktada artık geçmiş ve günümüz sanatının bu gerilemeden kurtularak daha elit, seçici, barış taraftarı ve daha sağlam estetik üretilerle gelecek kuşaklara yön vermesi gerektiği mantıklı bir önerme olarak görülebilir.

SANAT TARİHİ DİYALEKTİĞİNDE BİYOSELLÜLER REALİZM'İN KÖKLERİ

Biyosellüler Realizm ya da BC-R kolajlar kullandıkları etik kurallar ve disiplinle, günümüz kaosa dönmüş üretilerini daha doğru ve evrensel yaklaşımlarla tekrar estetik ve etik bir alana doğru çekmeyi planlamaktadır. Bunu yaparken elindeki tüm akım ve üslupları kullanarak farklı sinerji ve sentezleri devreye sokmaktadır. Böylece bir Rembrand kadar gerçekçi, bir Monet kadar eklektik ve bir Duchamp kadar kıvrak düşünen bağlamları ortaya koymayı amaçlamaktadır. Dolayısıyla Biyosellüler Realizm, sanat tarihindeki tüm üretilerden kendine faydalı olanları farklı bağlamlardan, fakat kopyalamadan, çalmadan istifade etmektedir.

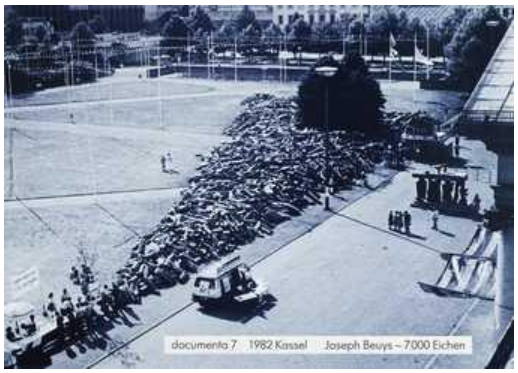
BC-R kolajlar ortaya koyduğu tasarımlarıyla tuvalden aldığı figürleri canlı hücresel işleme sokarak adeta klasik eserler gibi duvarlara asabilmektedir. Böylece Rembrand'ın ulaşmak istediği gerçekçiliği ready-made objeler kullanır gibi kullandığı insan, hayvan ve canlı bitkileri yani doğadan aldığı canlı

FULL TEXTS BOOK

hücre taşıyan figürleri duvar yüzeylerine Post-Rönesans estetiğiyle kolajlamaktadır. Ayrıca sunduğu bu alternatif estetikte, Postmodern eklektik estetiğinin kullanılabilir olanlarını alarak; çalmadan, taklit etmeden, ya da daha kibar tabirle temellük kullanmadan, adeta bir İtalyan beyefendisi Raphael tavrıyla devreye sokarak sergilemiştir.

Biyosellüler çalışmalar doğayı birebir taklit kaygısı taşımazlar; çünkü figürler gerçeğin ta kendisidir. Dolayısıyla kullandığı/aradığı gerçek zaten doğanın kullandığı gerçeğin ta kendisidir. BC-R kolajlar, doğayı taklit yerine onların gerçekleri olan figür ve canlı hücreli varlıkları direkt alarak yüzeylere ekler ve bunu yaparken de, onları performans sanatı, kavramsal düşünce, teknoloji, D. Spoerri'nin duvara asılı "EatArt" işlerinden (Resim 3) ve Maciunas'ın bir dönem ortaya attığı "Somutluğu Benimsemek" kuramında çürük domatesin sanat nesnesi olarak sergilenmesi felsefesinden esinlenmiştir. Bu felsefede Maciunas'ın "Somutluğu Benimseme Kuramı" kısaca irdelenirse: "Alımlayıcı çürük bir domatesi, onun gerçekliğini ve biçimini değiştirmeksizim algılar, yansıtır yani kullanır. Böylece form, ifade, içerik ve algı aynı kalır" (Erdem, 2012: 50-52) Böylece kullanılan kolaj ya da figürler doğadan alınark direkt kullanılır. Daha sonra seçilen bu somut sanat nesnesi, retina ve algıda dolaşarak yanılsamaya dayalı simge ve görüntüsü yerine çürük domatesin gerçekliğinin ta kendisini kullanmış olur (Resim 2).

Resim 2. **Resim 3.**



Resim 2. Maciunas'ın "Somutluğu Benimseme Kuramı" (AI Design by A. E. BAYKURT)
Resim 3. D. Spoerri "Eat Art" Çalışması, 1960.

Böylece Biyosellüler kolajlar, mesajın içeriğini sosyal yaşamdaki organik formlarla inşa etme eğilimiyle biçimlerini yüzeye çerçevelemeden veya aşırı pentürel yüzeylere boğmadan Maciunas'ın çürük domates bağlamlı felsefesini dikkate alarak tespit edilen mekanda "fluxus" tavrıyla akmasını ister.

BC-R kolajların estetik alımlama bağlamındaki temel prensibi; başkasına ait şeyleri asla kendine mal etmez. Çünkü "Kopyanın bittiği yerde orijinalite başlar" ilkesiyle hareket eder. Fakat tüm akım ve estetiklerle işbirliği içinde ürünler sunmayı evrensel barışa katkı olarak yorumlar.

BC-R kolajlar diğer en büyük etkileşimini, Joseph Beuys'un "sanatın hayata girişi" kuramından almaktadır. Bu kuramı 1970'li yıllarda "Sosyal Heykel" görüşüyle ortaya atan Beuys "Her şeyin sanat olduğu, hayatın her alanına yaratıcı bir şekilde yaklaşılabileceği ve bunun sonucunda herkesin sanatçı olma potansiyeline sahip olduğu" anlayışını savunmuştur. Beuys, Almanya'nın Kassel kentinde günüllü insanlarla yapılan ve beş yıl süren bir performans "Sosyal Heykel" eylemiyle bu teorisini destekledi. Fridericianum Müze'sinin dışına yığdırdığı bazalt siyah taşların her biri, her ağaç dikildiğinde birer ikişer kaldırıldı ve böylece 5 yılda 7.000 meşe ağacı bölgeye dikilmiş oldu (Resim 4), (URL-5). Bunun karşıtında BC-R kolajlar da figürlerini canlı ve normal bireylerden seçmektedir. Ayrıca, Bruce Nauman'ın eserlerinde kullanılan insan organ parçalarının konstrüksiyonlarıyla, kendi kullandığı kolajların benzerliğinin de farkındadır ve onları non-bio örnekler olarak sınıflandırmaktadır (Resim 7, 8).

SANAT TARİHİNDE UYGULANMIŞ BC-R BAĞLAMLI ÖRNEKLER

Biosellüler Realizm; Klasizm, Rönesans, Barok, Realizm, Hyper-realizm gerçekciliğini tuvalden kurtararak; mutlak ve canlı hücreleri taşıyan doğadaki bitki, insan ve hayvan uzuvlarını kolajlayarak onları tuvalden arınmış yüzeylere ya da uzamlara kolajlamıştır. Fakat bunu yaparken tüm akımları dışlamadan, bilakis onların kullandığı gerçeklik katmanlarının tümünden yeri geldiğince istifade ederek ereğine ulaşmaktadır. Bu da onun esnek ve üretici karakterinden kaynaklanmaktadır. Tıpkı Picasso'nun kullandığı mavi renk gibi. "Kırmızım yoksa mavi kullanırım" Picasso (URL-10).

Biosellüler Realizm; mimesis/yansımaya dayalı simge ve görüntüler yerine canlı hücreleri olan mutlak, somut ve asıl gerçekliği elde etme peşindedir. Fakat araştırmada kullandığı ayna aks/yansımaları da bu gerçekliği pekiştiren diğer bir önemli katmandır. Eşdeyişle, BC Realizmde, eserin mesajının vurgu/odak noktası; simge, ışık ya da yanılsamayla tercüme edilmez, bu öğeleri direkt BC-R kolajıyla sunar (Resim 6,7). Bu bağlamda Biosellüler kolajlar; yüksek sanat ve doğanın bio kolajlarıyla, yani; doğa/ilahi sanat kolajlarıyla sentezlenir. Dolayısıyla bu kolajlara en kusursuz realizmi verebilen gerçeğin kıdemli üst Hyper-Realizm'i de denebilir.

Resim 6. "Nefis-Ego/ BC-R 5" ve Sağ-Sol Cepheden Kesitler, 110 x 70 cm, d: 40 cm, KT, (BC-kolaj insan figürü, Hazır-Nesne: Heybe, Elbise, Ayna, Performans: Ahmet Soyad), 2024.

Sanat tarihinde Biosellüler Realizm'e yakın bağlamda çalışılan ama birebir örtüşmeyen ilk kök örneklerine bakılacak olursa bu çalışmalar üç ana gruba ayrılır. Bunlar:

a -Biyolojik olmayan Figürler (Non-Bio),

b - Biyolojik Figürler,

c - Uzamda/mekânda yer alan biyolojik figürler.

BİYOSELLÜLER BAĞLAMLI İLK MODEL UYGULAMALAR

Biosellüler çalışmalar genel olarak Postmern tutumlardan; figür kullanımı, tarihsel bağlama dönüş, metinler ve sözcüklerin kullanılması, sanat eserlerinin müze ve galerilere tekrar girişini öneren, elit estetik duyarlılığıyla üretmekte olup bu üretilere imza atarak onlarda prestij ve özgünlüğünü vurgulamaktadır. Bu vurgulamayla birklikte nesneleri Jouissance bakışla alımlamayı da reddetmektedir. BC-R kolajlar Postmodern stratejilerden; sanatçı ve zanaatkârlarla işbirliği yapmak, aynalarla gerçeği simule etmek, kültürel etkileri melezlemek, malzeme/teknikleri ve akımları harmanlamak, imgeleri katmanlamak, kodları harmanlamak, tanıdık olan isim, imge ve kavramı yeniden bağlamlamak, metinler arasılığı kullanmak, bakışla yüzleşmek, uyumsuzluktan yararlanmak, yeni kimlikler inşa etmek, edebi araçları görsel sanatlarla harmanlamak gibi stratejileri ihtiyacı olan bağlama göre kullanır; fakat appropriation yani kendine mal etme stratejisine şiddetle karşıdır. Bu bağlamda verilen örnekden BC-R 1 Modeli, prototip model olarak ilk sırada yer almaktadır:

Bc-r 1

Resim 23. " BC-R 1", 100 x 50 cm, d: 10 cm, TÜAB ve KT, (0.6 mm, Mika, Tuval Bezi, Yutong Taşı, Canlı Karınca Formikaryumu), 2023.

Biosellüler Realizm'in ilk örneklerinden olan bu çalışmada üst kısımdaki soyut formlar ve yüzey karınca kolonisinin imitasyonu olan karınca habitatı ve formikaryumuyla beraber hibritlenmektedir. Karıncalar, a, b, c, d, e formlarına açılan yollarda gezinerek soyut formların içinde dolaşmakta, soyut sanat ve BC-R realist sanat bağlamlarıyla adeta Dao felsefesinin zıt kutuplarını aynı yüzeyde sentezlenmektedir. Bu sentezle çalışma, mekân ve zaman içinde yaşayan gerçek bir koloni şehrine dönüştürülmüştür. 2. Modelde Ego konulu sürrealist biçemi ve evrensel mesajyla BCR-4 dikkat çekmektedir.

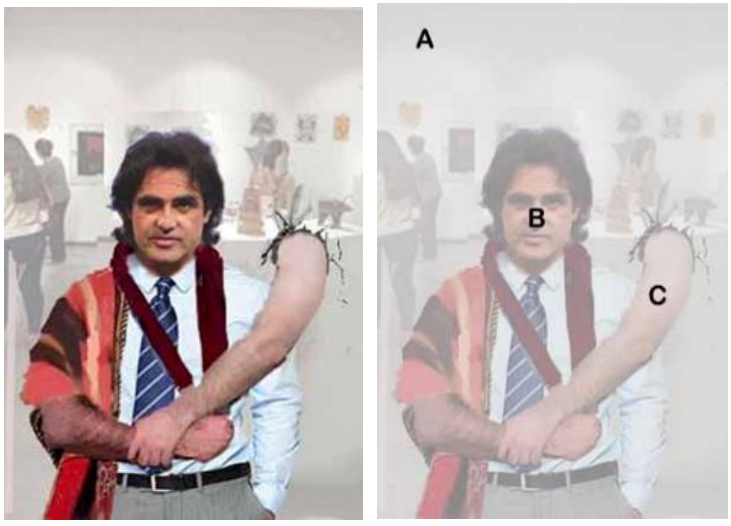
Bc-r 4

Resim 24. "Stalking Medusa-BC-R 4" ve Duvardaki Yandan Görünüşü, 70 x 50 cm, d: 80 cm, KT, (BC Kolaj; Yılan Balığı, Kil/Seramik, Cam Akvaryum, Ayna, Su), 2023.

Resim 25. Yılan Balıkları.

Yunan mitolojisinde Medusa mitinin devamı olan bu tasarım, saçları suya bırakılan Medusa'nın BC-R kolaj yılan balıklarıyla oluşturulması üzerine kurgulanmıştır. Tasarımda Medusa'nın başı ve sağ eli ayrı ayrı yerleştirilmiş ve akvaryum camının dışına çıkan yüz ve sağ el, tasarıma sürrealist bir dinamizm katmıştır.

Resim 26. Çalışmanın duvar arkasının yan kesitten görünüşü.



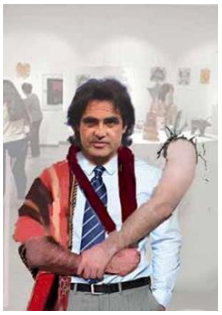
Bc-r 7

Resim 27. "Beyaz Adam, BC-R 7 ve Yüzey Dağılımı", 58 x 83 cm, KT, (YB, Ayna, Tablet, Tuval Bezi), 2023.

"Beyaz Adam" adlı çalışmada, geleneksel yağlıboya tekniğiyle üretilmiş yağlıboya portre, video art ve kliplerle kompoze edilmiştir. "Beyaz Adam" adı "Siyahi" lere yapılmış katliamların sorumlularına verilen isimle gönderme yapılmaktadır. Ayrıca kullandığı çoğul estetiğiyle Oryantalistlerin gizli emellerini, işlediği suçları ve ırkçılığı da eleştirmektedir.

Bc-r 5

a. **b.**



Resim 28. a. "Nefis-Ego/ BC-R 5", 110 x 70 cm, d: 40 cm, KT, (BC-kolaj insan figürü, Hazır-Nesne: Heybe, Elbise, Ayna, Performans: Ahmet Soyad), 2024.
b. Yüzey Tasarımı,

Çalışmada "İnsanlığın egosoyla, kibriyle, dünya hırsıyla hem kendine hem de başkalarına zulmetmektedir" mesajı verilmektedir. Kolaj C, insan egosunu sembolize ederken kolaj B bu egoya yenilen ya da onu güden efendiyi temsil etmektedir. Heybe tasavvufi bağlamda öğüt veren bir objedir ve heybe sahibi dervişin kendine yapılan iyilikleri heybenin ön bölmesine koyarak unutmadığı, kötülükleri ise arka bölmeye koyarak unuttuğu hikmetli bir davranışın aktarımını simgelemektedir.

FULL TEXTS BOOK

Böylece iyilikten iyiliğin, kötülükten kötülüğün filizlendiği bir bakış açısıyla derviş; sadece iyilikle meşgul olduğu evrensel mesajı sunmaktadır. Böylece heybe; "Dervişin hem fikri hemde zikri" olmaktadır (URL-6). Bu nedenle eğer iyilikle dolaşırsa insan; toplumda kötülüğe yer kalmaz, bağlamı çalışmanın mesajıdır.

Resim 29. Çalışma Ortaya Koyduğu Konstrüksiyonuyla, Klasik Sanatta Varılmak İstenen Ereği, Geleneksel Estetik ve Postmodern Dönemi Sanat Stratejilerini Senzetleyerek Ortaya Koymuştur.

Resim 30. Çalışma BC-R 5.

Bc-r 6

Resim 31. "Binici, BC-R 6" ve Duvar Yan Kesiti, 250 x 285 cm, KT, (BC Kolaj "İnsan Figürü", Ayna, Permanent Marker Deseni, Eyer), 2023.

Altı no'lu çalışma BC-R kolajı ve desen tekniğiyle yapılan bir biniciyi tasvir etmekte ve hazır nesne ayna ile simülasyona uğrayan seyircilerin görüntüleri; aynanın sunduğu Postmodern ilişkisel estetik tutumuyla farklı bir sinerjiye dönüşmüştür. Böylece geleneksel yansıtma, aynadan görülen yansıtma ve canlı hücreli figürün doğadan alınarak bu yüzeye kolajlanması ile sunulan konstrüksiyon; üç ayrı yansıtma biçimini aynı yüzeyde eklektik olarak tasarlamıştır.

FULL TEXTS BOOK

Bc-r 8

Resim 32. "Kesikbaş, BC-R 8", 240 x 185 cm, KT, (BC Kolaj, 3D Hologram h:100 cm, Hazır Nesne: Bitkiler, Natürel/Plastik Doğa İmitasyonları), 2024.

Model 6'daki çalışmanın ana konusu evliya ve şehit yeniçeri olan Deli Mehmet figürüdür. Zigetvar savaşında şehit edilen Deli Mehmet'in destandaki adı Kesikbaş olarak geçer ve çalışmada örnek BC-R kolajı olan figür ön planda yaklaşık 4.2 m²'lik bir toprak parçası üzerinde kurgulanmıştır. Arka planda Zigetvar kalesi ve etrafında günümüz popüler kültür nesnelerini (araba, apple amblemi, kahve fincanı, basketbol topu, Yankees şapkası gibi objeleri) yanyana koyarak katmanlama yapılmış; böylece, geçmiş ve günümüzle ilgili gerekli tüm popüler kültür nesneleri, canlı hücresel kolajlarla aynı konstrüksiyonda tepkimeye sokulmuştur. Kompozisyonda sağ üst köşede ise göklerden inen melek sehit askerin yanında gelerek bir dua ritüeli gerçekleştirerek onu ebediyete uğurlamaktadır.

BİOCELLULAR REALİSM MANİFESTOSU

a - Günümüz sanatındaki elit estetiği yıkmak isteyenlere cevap olarak sunulan Biyosellüler gerçekçilik, Modern sanatın labaratuarlarının kapılarını tekrar aralamakta ve dünya kültürlerinin yozlaşmaması için avam üretilere karşı temkinli davranmaktadır.

b - Biyo-hücresel kolajlar bir başka sanatçıdan alıntı yapmaz, kopyalamaz. Özellikle kendi döneminden kes-yapıştır yapmadan, mevcut bağlama kendi yenilikçi (innovative) yorumlarını aktararak mesajlar üretmeyi amaçlar. Çünkü o bir üreticidir; tüketici ya da hırsız değildir.

c -Biyosellüler Realizm'e, sunduğu estetikle Klasizm'in ereği olan gerçekciliğin Postmodern alternatifi ve Hyper-Realizmin bir üst koludur denebilir.

d - Biyosellüler Realizm sanatçısı eserlerini imzalayarak 1950'lerden sonra unutulan eserin özgünlüğünü teyit eden bu geleneği sürdürmektedir. Böylece çalışmasının avam estetikten kopuşunu kutlayarak eserin prestijini tescil etmektedir.

e - Biyosellüler Realizm avam sanata karşıdır. Çünkü avam sanatın toplumu yozlaştırdığını düşünmektedir.

FULL TEXTS BOOK

f - BC-R gerçekçiliğinin diğerlerinden farkı, canlı hücreleri taşıyan figürleri duvarlara kolaj olarak yapıştırıp onları geleneksel sanat eserleri gibi bazen bir yüzeyde, bazen de belirlenen uzamda sunarak klasik sanattan günümüze gelinen mesafeye işaret etmektedir.

g - BC-R üretilerin bu ilk prototiplerinde malzeme olarak aynaların kullanımının amacı; geleneksel tuvaldeki resimleme konseptlerini alarak onları tuvalsiz yüzeylere yeniden kolajlamak ve alımlayıcıları sanatının bir parçası haline getirerek bu kolajlamayla en kusursuz ve kinetik boyamayı ya da aktarımı yapmaktır.

h - BC-R kolajlar hiçbir akımı dışlamaz ve kendinden önceki akımların gerçekliklerini sunacakları estetiğin değerine göre seçerek faydalanır.

SONUÇLAR

Tarihte kendinden önceki İzm'lere alternatif olan Canlı Hücre Realizm'i (Biyosellüler Realizm) performans bağlamlı yüksek sanat ve doğa (ilahi) sanat kolajlarını sentezleyerek gelecekteki gerçekliğe köprü olma potansiyeli taşımaktadır. BC-R kolajlar, Hiper-Realizmin; balmumu ve rezin malzemeleriyle ortaya koyduğu hyper gerçekciliği, daha da ileri götürerek Roma Verizm'inin postmodernist katmanlarını yakalamıştır denebilir. Postmodern dönem artık bitmiştir. BC-R figürlerin sanat tarihi literatüründe yer alışıyla artık Postmodern dönemi sonrası üretilerinin BC-R olanlar ve olmayan diye ayrılarak gruplandırılabilir. Peki, neden daha önce BC-R kolajlar keşfedilemedi? Hukuk ve insan Hakları burada sanatçının daha ileri gitmesini engellemektedir. Dolayısıyla BC-Realizm bu engeli, çalışmalarındaki performans bağlamlı BC-R kolajlarıyla kırarak literatüre felsefik derinliği olan; kusursuz figür, kusursuz ışık, gölge, mekân ve renklerle yeni sinerjiler sunan potansiyellere sahip olduğu söylenebilir.

BC-R kolajlarla: evrensel mesajları olan tasarımlardaki gerçekler, yeni bağlamlarla ve canlı hücresel vurgularla yeni bir gramer oluşturmaya başlamıştır. Dolayısıyla, Klasizm'in ereği olan yüksek gerçekçilik, örneklenen model çalışmalarda aynalı yüzeylere kinetik ve canlı hücresel bağlamlarla eklenmiştir. Tasarlanan konstrüksiyonların bazılarında tarihten alıntılar, konu ve kültürel simge bazında kullanılmıştır. Sinemada; rol çalma, edebiyatta; cümle/dize çalma, sanatta; temellük/resim çalma, sosyal hayatta: hırsızlık olan başkalarının üretilerini kullanma reddedilmiştir. Böylece metinlerarası hırsızlık dışlanarak temellük tarzı yaklaşımlar dahi olsa başkasının üretilerinden uzak durulması gerektiği görsel ve felsefik bağlamlarla ikaz edilmiştir.

ÖZET
Coğrafi Bilgi Sistemleri (CBS) son 20–30 yıldır bilgi teknolojilerindeki gelişmelere bağlı olarak gelişen yeni bir teknolojidir. CBS verilerin depolandığı, düzenlendiği, analiz edildiği ve gösterildiği bir sistemdir. CBS birçok disiplin tarafından kullanılmaktadır ve sık kullanıldığı alanlardan birisi de Coğrafya bilimidir. Bu araştırmanın temel amacı, 2005, 2018 ve 2024 coğrafya öğretim programlarında Coğrafi Bilgi Sistemleri (CBS) kullanımının nasıl bir gelişim gösterdiğini ve bu programlar arasında CBS'nin eğitimdeki yerinin nasıl değiştiğini ortaya koymaktır. Bu çalışmada nitel araştırma yöntemlerinden biri olan doküman analizi uygulanmıştır. Araştırmanın verilerini 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programları oluşturmaktadır. Bu programlar coğrafi bilgi sistemleri ile ilişkilendirilerek incelenmiştir. Araştırmanın sonucunda 2005 ve 2018 yılları Coğrafya Dersi Öğretim Programlarında coğrafi bilgi sistemleri kazanımların içerisinde önerilirken, 2024 yılı öğretim programında her sınıf seviyesinde "Mekânsal Bilgi Teknolojileri" ünitesi içerisinde verilmiştir. Böylece öğrencilerin coğrafi bilgi sistemleri gibi gelişen teknolojilere uyum sağlamaları ve dijital okuryazarlıklarını artırmaları hedeflenmektedir. Bu araştırmada yeni coğrafya öğretim programında uygulanabilecek CBS uygulama örneğine de yer verilmiştir.
Anahtar Kelimeler: Coğrafya, coğrafya öğretim programı, coğrafi bilgi sistemleri

ABSTRACT
Geographic Information Systems (GIS) is a new technology that has developed over the last 20-30 years as a result of developments in information technology. GIS is a system for storing, organising, analysing and displaying data. GIS is used by many disciplines and one of the areas where it is frequently used is geography. The main purpose of this study is to show how the use of Geographic Information Systems (GIS) has developed in the 2005, 2018 and 2024 Geography curricula and how the place of GIS in education has changed between these programmes. Document analysis, one of the qualitative research methods, was used in this study. The data of the study consists of the geography curricula of 2005, 2018 and 2024. These programmes were examined in relation to geographical information systems. As a result of the research, geographical information systems are recommended within the outcomes of the 2005 and 2018 Geography Curricula, while in the 2024 Curriculum they are given within the 'Spatial Information Technologies' unit at each grade level. The aim is for students to adapt to developing technologies such as geographic information systems and to increase their digital literacy. This research also includes an example of a GIS application that can be used in the new geography curriculum.
Keywords: Geography, geography education program, geography information systems

FULL TEXTS BOOK

GİRİŞ

Coğrafi bilgi sistemleri (CBS) yeryüzüne ait verilerin elde edildiği, depolandığı, kontrol edildiği, işlendiği, analiz edildiği bir sistemler bütünüdür. CBS ilk olarak Kanada'da 1960'lı yıllarda doğal kaynakların analiz ve envanter çalışmalarının yapılması amacı ile geliştirilmiştir. Bilgisayar teknolojisindeki hızlı değişimler, uzaktan algılama, veri işleme, matematik ve istatistik gibi alanlarda yaşanan gelişmelerin ortak bir sonucu olarak CBS, günümüzde pek çok alanda hizmet vermeye başlamıştır.

Temelde çeşitli ölçeklerde haritalar içeren CBS, harita destekli uygulamalardan yararlanmayı ve en iyi şekilde analiz etmeyi sağlar. Harita üzerindeki bilgiler grafiksel olarak gösterilebilmektedir. CBS, mekâna ait olan grafik ve grafik olmayan verilerin toplandığı, analiz edildiği bir programdır. Elde edilen bilgilere hızlı ve güvenli bir erişim sağladığından sistemin verimliliği ve güvenliği oldukça fazladır (Öner ve Aydın, 2014). CBS, konusu ve kapsamı itibarı ile çalışma alanı bir şekilde yeryüzünün bir parçasını temsil eden doğal ortam, zaman değişkeni ve insan konularından biri veya tümünü içeren bütün bilim dalları ve meslek grupları tarafından kullanılma imkânı vardır. İdari ve hizmet yönetimi, sağlık, şehir yönetimi, afet bilgi sistemi, pazar paylaşım analizleri, askeri hizmetler, polis teşkilatı, nüfus ve diğer istatistik çalışmaları, madenlerin haritalanması, kirlilik kontrolü, çevresel etki değerlendirmesi vb. birçok alanda CBS kullanılmaktadır (Turoğlu, 2008).

Coğrafya Eğitiminde CBS Kullanımı

CBS'nin en etkili kullanıldığı alanlardan birisi eğitim sektörüdür. Özellikle bir mekân bilimi olan Coğrafya eğitimi CBS'nin yaygın olarak kullanıldığı alanlardan birisidir. Daniel Sui (1995)'ye göre "CBS Eğitimi" ve "CBS ile Eğitim" olmak üzere iki şekilde eğitim yapılmaktadır (Johansson, 2003). CBS eğitiminde amaç CBS'yi öğretmek, CBS'yi kullanarak veri toplama, veri depolama ve veri analizi yaparak mesleki anlamda kullanmaktır. Özellikle üniversitelerin coğrafya, şehir planlamacılığı, mühendislik gibi bölümleri ile askeri kuruluşlar ve yerel yönetimler CBS destekli eğitimi kullanmaktadırlar. CBS'nin eğitimde ikinci kullanımı olan CBS ile eğitimde ise CBS öğrenme sürecinde bir araç olarak kullanılmaktadır. Özellikle ilk ve orta öğretimde, CBS ile ders materyali yapıp ders esnasında modüller hâlinde kullanılır. Burada asıl amaç, CBS ile özellikle coğrafya derslerinde coğrafi veri girişi, depolama, veri analizi yapıp mekânsal analizler yapabilmektir. CBS eğitimi ve CBS ile eğitimin amaçları ve kullanım alanları farklı olmakla beraber, ders esnasında amaçtan kaymalar olmaması için öğrenmeye rehberlik eden öğretmenin süreci iyi kontrol etmesi gerekmektedir (Aladağ, 2007).

CBS temelli uygulamalar, öğrencilerin soyut bilgileri somut hale getirmesini, konuları görsel olarak öğrenmelerini sağlarken yaparak-yaşayarak öğrenmelerine de yardımcı olacaktır. Artvinli ve Martinha (2014), öğrencilerin ortaöğretimin ilk yılında CBS ile tanışmalarının büyük önem taşıdığını belirtmiştir. Schleicher ise, beşinci sınıftan itibaren CBS'nin derslerde yer alması gerektiğini savunmuş ve öğretmen merkezli eğitimden öğrenci merkezli eğitime geçişte CBS kullanımının aşamalarını tanımlamıştır (Schubert & Uphues, 2009).

Cbs ile Araştırma (öğrenci merkezli) Öğrenciler kendi veri setlerini oluşturur ve sonra onlarla çalışır. (10/11. Sınıftan itibaren)
CBS ile Öğrenme (öğrenci merkezli) Öğrenciler CBS'de verilen veri setlerini kullanarak coğrafi konular üzerinde çalışırlar. (8/9. Sınıftan itibaren)

FULL TEXTS BOOK

CBS ile Öğretim (öğretmen merkezli)
CBS, öğretmen merkezli bir derste, projeksiyon yardımıyla coğrafi bir konuyu anlatmada araç olarak kullanılır.
(6/7. Sınıftan itibaren)

CBS Hakkında Öğretim (öğretmen merkezli)
Öğretmen CBS'nin ne olduğunu, nasıl çalıştığını, nerelerde kullanıldığını açıklar.
(5. sınıftan itibaren)

Şekil 1: Derslerde CBS kullanım basamakları (Schleicher'den akt. Schubert & Uphues, 2009).

Öğrencilere coğrafi becerileri kazandırmak için yararlanılabilecek en önemli eğitim teknolojilerinden biri CBS'dir. Bilgi-iletişim teknolojilerinin coğrafya konularının öğretiminde kullanılmasını destekleyen CBS coğrafya dersi öğretim programına ilk kez 2005 yılında doğrudan etkinlik geliştirme olarak girmiştir (Demirci, 2006). CBS'nin coğrafya derslerinde kullanılması ile öğrenciler daha etkin bir öğretim sürecinin içerisinde yer alacaklardır. Öğrenciler CBS sayesinde veri tabanındaki bilgilerle kendi haritalarını oluşturabilecek, neden-sonuç ve dağılış prensibini esas alarak yeni bilgi oluşumunu sağlayabileceklerdir. CBS destekli öğretimde öğrenci kendi haritalarını analiz ettiği için araştıran, eleştirel düşünen, yorum yapan bireyler olarak yetişirler. Dolayısıyla öğrenmeleri anlamlı ve kalıcı olacaktır (Öner, 2011). CBS destekli bir coğrafya öğretimi ile öğrenciler; coğrafi özellikleri, coğrafi dağılımları ve coğrafi ilişkileri içeren coğrafi bilgiyi sunması için haritaları, diyagramları, tabloları, grafikleri düzenler ve çizerler. Haritaları kullanarak coğrafi ve mekânsal sorunları çözmek için gerekli verileri analiz ederler. Problem çözme sürecini kullanarak sorunu belirler, bilgiyi toplar, seçenekleri listeler, avantajları ve dezavantajları göz önünde bulundurur. Çözümü seçer, uygular, çözümün etkinliğini değerlendirirler (Aydın ve Güngördü, 2016). CBS'nin etkinlik odaklı öğrenmeyi desteklemesi ve uygulamaya yönelik olması hem coğrafya öğretimini daha kolay ve etkili hale getirmekte hem de öğrencilerin öğrenme motivasyonları üzerinde olumlu etki yaratabilmektedir. Ayrıca CBS öğrencilerin çok yönlü bir öğrenme gerçekleştirmesine ve öğrenilen kavramlar arasında nedensellik ilişkisi kurmasına olanak sağlamaktadır (Çepni, 2013).
CBS'nin eğitimdeki önemi ve kullanım alanları her geçen gün artmaktadır. 2005, 2018 ve 2024 coğrafya öğretim programları incelendiğinde, CBS'nin bu programlardaki yeri ve uygulama biçimleri üzerine yapılan çalışmalar, CBS'nin eğitimdeki etkinliğini ve öğrencilere sağladığı faydaları daha da net bir şekilde ortaya koymaktadır. Bu bağlamda, CBS'nin coğrafya öğretimindeki rolü ve gelişimi, modern eğitim teknolojilerinin entegrasyonunun başarılı bir örneği olarak değerlendirilebilir.
Bu araştırmanın temel problemi, 2005, 2018 ve 2024 coğrafya öğretim programlarında Coğrafi Bilgi Sistemleri (CBS) kullanımının nasıl bir gelişim gösterdiğini ve bu programlar arasında CBS'nin eğitimdeki yerinin nasıl değiştiğini ortaya koymaktır.

YÖNTEM

Bu çalışmada nitel araştırma yöntemlerinden biri olan doküman analizi yöntemi uygulanmıştır. Doküman analizi, araştırılan olgu veya konular hakkında hem basılı hem de dijital (bilgisayar tabanlı ve internet üzerinden sağlanan) materyallerin gözden geçirilmesi veya değerlendirilmesi amacıyla kullanılır. Diğer nitel araştırma yöntemlerinde olduğu gibi, doküman analizi de anlam oluşturma, anlayış geliştirme ve ampirik bilgi üretme amacıyla verilerin incelenmesi ve yorumlanmasını içerir (Bowen, 2009, s.27; Yıldırım ve Şimşek, 2016). Doküman analizi, eğitim araştırmalarında yaygın olarak kullanılan bir yöntemdir. Örneğin, müfredat değişikliklerinin incelenmesi, eğitim politikalarının değerlendirilmesi ve öğretim materyallerinin analiz edilmesi gibi konularda etkili sonuçlar sağlamaktadır. Araştırmanın verilerini 2005, 2018 ve 2024 Coğrafya Dersi Öğretim Programları oluşturmaktadır. Bu programlar coğrafi bilgi sistemleri ile ilişkilendirilerek incelenmiştir. Ulaşılan

FULL TEXTS BOOK

verilerin yorumlanmasında uygulanan betimsel analiz ile amaç, bulguları okuyucuya tamamen vermek yerine özetlenmiş ve yorumlanmış bir şekilde sunmaktır (Dawson, 2009).

BULGULAR

Coğrafya Dersi Öğretim Programında CBS

Bu bölümde 2005-2018 yılları arasında uygulanan Coğrafya Dersi Öğretim Programı (CDÖP), 2018 yılında uygulanmaya başlayan CDÖP ve 2024 yılında köklü değişiklikler yapılarak 2024-2025 eğitim öğretim yılından itibaren kademeli olarak uygulanmaya başlayacak olan CDÖP coğrafi bilgi sistemleri açısından ele alınmıştır.

2005 yılı Coğrafya Dersi Öğretim Programında CBS'nin Yeri

Türkiye'de CBS'nin eğitim alanında kullanılması henüz çok yenidir. İlk kez 2005 yılında ortaöğretim coğrafya dersi programında yapılan değişiklikler sonucunda Coğrafi Bilgi Sistemleri (CBS)'nin coğrafya derslerinin işlenişi sırasında bir araç olarak kullanılması önerilmiştir. 2005 yılı CDÖP'nda (2009 ve 2011 yıllarında güncellenmiştir) Müfredatta "*Okullardaki teknik donanım ve fiziki imkanlara bağlı olarak, öğretmen CBS uygulamaları geliştirebilir veya mevcut örnekleri inceleyebilir*" şeklinde ifade yer almaktadır. 4 yıllık eğitim öğretim süresi içinde 28 kazanımın öğretilmesinde CBS araç olarak gösterilmiştir (Tablo 1).

Tablo 1. Coğrafya öğretim programında (2005) önerilen CBS uygulamaları

Sıra	Sınıf	Önerilen Kazanım Numaraları	Önerilen Etkinlik Konusu
1	9	A.9.3	Haritalar (açıklamalar bölümünde)
2		A.9.4	Koordinat sistemi (açıklamalar bölümünde)
3		A.9.5 – A.9.6	Eş yükselti eğirileri
4		C.9.5 – C.9.6	Türkiye iklimi
5		C.9.7	Türkiye'de iklim elemanları
6	10	A.10.2 – A.10.3	Sıcak su kaynakları
7		B.10.2	Dünya nüfusu
8		B.10.3	Nüfus değişimi
9		B.10.4	Nüfus dinamiği
10		B.10.5	Nüfus piramitleri
11		B.10.9 – B.10.10	Ekonomik faaliyetlerin sınıflandırılması
12		C.10.10	Türkiye'nin şehirsel dokusu
13		C.10.11	Türkiye'de nüfus dağılışındaki farklılık
14		C.10.12	Nüfusumuzun dinamikliği
15	11	B.11.4 – B.11.5 – B.11.6	Üretimden tüketime
16		D.11.2	Türk kültürünün yayılış alanları
17	12	C.12.4 – C.12.5	Türkiye'nin ticari dokusu
18		C.12.8 – C.12.9	Türkiye nüfusunda geleceğe ait senaryolar
19		D.12.6	Ülkelerin konumu
20		D.12.8	Dünyanın bölgeselleşmesi

2018 Yılı Coğrafya Dersi Öğretim Programında CBS'nin Yeri

Programda CBS ile ilgili olarak şu şekilde bir ifade yer almaktadır: "*Coğrafya Dersi Öğretim Programı, günümüz bilgi-iletişim teknolojilerinin coğrafya konularının öğretiminde kullanılmasını destekler niteliktedir. Coğrafi Bilgi Sistemleri'nin (CBS) uygulanması bazı kazanımlarda önerilmiştir.*" Yeni öğretim programı incelendiğinde CBS sadece 2 yerde önerilmiştir. Bunlar:

9.1.7. Bilgileri haritalara aktarmada kullanılan yöntem ve teknikleri açıklar.

a) Haritacılık tarihinde önemli olan Türk ve Müslüman bilim insanları ve çalışmaları üzerinde durulur.

b) ***Coğrafi Bilgi Sistemlerine (CBS)*** *ve uzaktan algılama tekniklerine yer verilir.*

10.4.1. Afetlerin oluşum nedenlerini ve özelliklerini açıklar.

Coğrafi problemlerin çözümünde ***CBS*** *ve diğer mekânsal teknolojilerden yararlanıldığına dair örneklere yer verilir.*

Programda ayrıca *"Okullardaki teknik donanım ve fiziki imkânlara bağlı olarak öğretmen CBS uygulamaları geliştirebilir veya uygulayabilir" (CDÖP, 2018: 14)* şeklinde bir ifade yer almaktadır. Bundan hareketle program detaylı bir şekilde incelenmiş ve öneri niteliğinde CBS'nin uygulanabileceği kazanımlar belirlenmiştir (Tablo 3).

Tablo 3: Coğrafya öğretim programında (2018) CBS'nin uygulanabileceği kazanımlar ve konular

Sıra	**Sınıf**	**Kazanım Numaraları**	**Kazanımlar**
1	9	9.1.5	Koordinat sistemini kullanarak zaman ve yere ait özellikler hakkında çıkarımlarda bulunur.
2		9.1.6	Haritayı oluşturan unsurlardan yararlanarak harita kullanır.

FULL TEXTS BOOK

3		9.1.7	Bilgileri haritalara aktarmada kullanılan yöntem ve teknikleri açıklar.
4		9.1.8	Haritalarda yer şekillerinin gösteriminde kullanılan yöntem ve teknikleri açıklar.
5	10	10.1.5	Türkiye'deki yer şekillerinin oluşum sürecine iç kuvvetlerin etkisini açıklar.
6		10.1.10	Türkiye'deki su varlıklarının genel özelliklerini ve dağılışını açıklar.
7		10.2.3	Nüfusun dağılışı üzerinde etkili olan faktörler ile dünya nüfusunun dağılışını ilişkilendirir.
8		10.2.4	Nüfus piramitlerinden hareketle nüfusun yapısıyla ilgili çıkarımlarda bulunur.
9		10.2.6	Türkiye'de nüfusun dağılışını, nüfusun dağılışında etkili olan faktörler açısından değerlendirir.
10		10.2.11	Ekonomik faaliyetleri temel özelliklerine göre ayırt eder
11		10.2.12	Ekonomik faaliyet türlerinin oransal dağılımına ilişkin verileri, ülkelerin gelişmişlik düzeyleriyle ilişkilendirerek çıkarımda bulunur.
12		10.4.1	Afetlerin oluşum nedenlerini ve özelliklerini açıklar.
13		10.4.2	Afetlerin dağılışları ile etkilerini ilişkilendirir.
14		10.4.3	Türkiye'deki afetlerin dağılışları ile etkilerini ilişkilendirir.
15	11	11.2.4	Şehirleri fonksiyonel özellikleri açısından karşılaştırır.
16		11.2.6	Türkiye'deki şehirleri fonksiyonlarına göre ayırt eder.
17		11.2.16	Tarımın Türkiye ekonomisindeki yerini açıklar.
18		11.2.17	Türkiye'nin madenleri ve enerji kaynaklarının dağılışını açıklar.
19		11.2.19	Türkiye'de sanayi sektörünün özelliklerini açıklar.
20		11.3.1	İlk kültür merkezlerinin ortaya çıkışı, yayılışı ve dağılışlarını belirleyen faktörleri açıklar.
21		11.3.2	Farklı kültürel bölgelerin yeryüzünde yayılışına etki eden faktörleri açıklar.
22		11.3.3	Türk kültürünün yayılış alanlarını bölgesel özellikler açısından analiz eder.
23		11.3.9	Bölgesel ve küresel ölçekteki örgütleri etki alanları açısından değerlendirir.
24	12	12.2.8	Ulaşım ağları ile yerleşme ve ekonomik faaliyetler arasında ilişki kurar.
25		12.2.10	Dünya ticaret merkezleri ve ağlarını küresel ekonomideki yerleri açısından analiz eder.
26		12.2.12	Tarihî ticaret yollarını Türkiye'nin konumu açısından değerlendirir
27		12.2.14	Türkiye'deki doğal ve kültürel sembollerin mekânla ilişkisini açıklar.
28		12.2.15	Türkiye'nin turizm potansiyelini ve varlıklarını açıklar.
29		12.3.10	Dünyadaki başlıca enerji nakil hatlarının bölge ve ülkelere etkisini açıklar.

FULL TEXTS BOOK

Yeni CDÖP incelendiğinde toplamda 29 kazanımda CBS uygulamalarına yer verilebileceği tespit edilmiştir. 2005 yılı CDÖP'de kazanımların açıklamalarında CBS uygulama önerileri verilirken yeni programda verilmediği belirlenmiştir.

2024 Yılı Coğrafya Dersi Öğretim Programında CBS'nin yeri

Ünite temelli yaklaşımla hazırlanan Coğrafya Dersi Öğretim programı *"Coğrafyanın Doğası, Mekânsal Bilgi Teknolojileri, Doğal Sistemler ve Süreçler, Beşerî Sistemler ve Süreçler, Ekonomik Faaliyetler ve Etkileri, Afetler ve Sürdürülebilir Çevre; Bölgeler, Ülkeler ve Küresel Bağlantılar"* ünitelerinden oluşmaktadır. 2005 ve 2018 yılları Coğrafya Dersi Öğretim Programlarında coğrafi bilgi sistemleri kazanımların içerisinde önerilirken 2024 yılı öğretim programında her sınıf seviyesinde 2. ünite olan "Mekânsal Bilgi Teknolojileri" ile öğrencilerin coğrafi bilgi sistemleri gibi gelişen teknolojilere uyum sağlamaları ve dijital okuryazarlıklarını artırmaları hedeflenmektedir. Bu süreçte, öğretmenlerin teknolojik yetkinliklerinin hizmet içi eğitimlerle desteklenmesi ve okullarda gerekli donanımın sağlanması büyük önem taşımaktadır. Ayrıca, öğretmenlerden, öğrencilerin bu teknolojileri kullanabilecekleri öğrenme ortamlarını oluşturmaları beklenmektedir (CDÖP, 2024: 6).

9. sınıflarda "Mekânsal Bilgi Teknolojileri" ünitesinde üç kazanım yer almaktadır.

COĞ.9.2.1. Harita uygulamaları yapabilme

a) Haritaya ait bileşenlerden yararlanarak haritaları okur.

b) Haritaya ait bileşenlerden yararlanarak haritadaki olay, olgu ve mekânlar arası ilişkileri çözümler.

c) Haritada yer alan olay, olgu veya mekânların özellik, konum, dağılış ve ilişkileri ile değişim ve/veya harita türüne ilişkin çıkarım yapar.

ç) Harita yapım aşamalarını kullanarak harita oluşturur.

COĞ.9.2.2. Türkiye'nin konum özelliklerini algılayabilme

a) Türkiye'nin konum özelliklerini belirler.

b) Türkiye'nin konum özelliklerini görselleştirir.

c) Türkiye'nin konum özelliklerini özetler.

COĞ.9.2.3. Mekânsal bilgi teknolojilerini oluşturan bileşenleri çözümleyebilme

a) Mekânsal bilgi teknolojilerini oluşturan bileşenleri belirler.

b) Mekânsal bilgi teknolojilerini oluşturan bileşenler arasındaki ilişkileri belirler.

Bu kazanımların genel amacı, öğrencilerin coğrafi bilgi sistemleri (CBS) ve mekânsal bilgi teknolojilerini etkin bir şekilde kullanarak harita okuma, analiz etme, çıkarım yapma ve harita oluşturma becerilerini geliştirmektir. Ayrıca öğrencilerden CBS'ye ait bileşenleri (donanım, yazılım, veri, yöntem ve kullanıcı) öğrenmeleri ve bu bileşenlerle CBS'ye ait metodolojiyi (verileri elde etme, depolama, kontrol etme, işleme, analiz etme ve görüntüleme) ilişkilendirilmeleri beklenmektedir. Bu kazanımlar, öğrencilerin coğrafi bilgi sistemleri ve mekânsal bilgi teknolojilerini kullanarak mekânsal düşünme, problem çözme ve analitik yeteneklerini geliştirmeyi amaçlamaktadır. Bu beceriler, öğrencilerin coğrafi verileri etkili bir şekilde analiz edebilmelerini, yorumlayabilmelerini ve görselleştirebilmelerini sağlar.

10. sınıflarda ünite ile ilgili iki kazanım yer almaktadır.

COĞ.10.2.1. Örnek uygulamalar üzerinden CBS ve uzaktan algılamanın kullanım alanlarını özetleyebilme

a) Örnek uygulamalar üzerinden CBS ve uzaktan algılamanın kullanım alanlarını çözümler.

b) Örnek uygulamalar üzerinden CBS ve uzaktan algılamanın kullanım alanlarını sınıflandırır

c)Örnek uygulamalar üzerinden CBS ve uzaktan algılamanın kullanım alanlarını yorumlar.

COĞ.10.2.2. Mekânsal bilgi teknolojilerini kullanarak altlık haritalar üzerinde mekânsal veriler oluşturabilme

a) Oluşturacağı haritanın amacını belirler.

b) Oluşturacağı harita için gerekli olan yöntem ve araç gereçleri kullanır.

c) Oluşturacağı haritaya ekleyeceği verileri toplar.

FULL TEXTS BOOK

ç) Oluşturacağı haritanın türünü belirler.
d) Verileri haritaya işler ve haritanın bileşenlerini oluşturur.
e) Oluşturduğu haritayı amacına uygun biçimde kullanır.
f) Oluşturduğu haritayı ihtiyaç duyduğunda tekrar kullanır.

Bu kazanımlar, öğrencilerin coğrafi bilgi sistemleri (CBS) ve uzaktan algılama teknolojilerini etkili bir şekilde kullanabilmeleri, mekânsal düşünme becerilerini geliştirmeleri ve dijital okuryazarlıklarını artırmaları amacıyla belirlenmiştir. Ünitenin ilk kazanımıyla öğrencilerin CBS ve uzaktan algılama teknolojilerinin farklı kullanım alanlarını çözümleyebilme, sınıflandırabilme ve yorumlayabilme becerileri kazanmaları hedeflenmektedir. Bu sayede, öğrenciler bu teknolojilerin çeşitli sektörlerde nasıl kullanıldığını anlayarak, teorik bilgilerini pratik örneklerle pekiştirebileceklerdir. İkinci kazanımla öğrencilerin mekânsal bilgi teknolojilerini kullanarak altlık haritalar üzerinde mekânsal veriler oluşturabilme yetenekleri geliştirilmek istenmektedir. Bu süreçte, öğrenciler harita oluşturmanın amacını belirleme, gerekli yöntem ve araçları kullanma, verileri toplama, harita türünü belirleme, verileri haritaya işleme ve haritanın bileşenlerini oluşturma gibi adımları öğrenirler. Ayrıca, oluşturdukları haritayı amacına uygun şekilde kullanma ve gerektiğinde yeniden kullanma becerisi kazanmaları amaçlanmaktadır.

11. sınıflarda ünitede bir kazanım bulunmaktadır.

COĞ.11.2.1. Web tabanlı CBS aracılığı ile harita uygulamaları yapabilme
a) Web tabanlı CBS uygulamasını kullanarak harita okur.
b) Web tabanlı CBS uygulamasını kullanarak harita çözümler.
c) Web tabanlı CBS uygulamasını kullanarak haritadan çıkarım yapar.
ç) Web tabanlı CBS uygulamasını kullanarak harita oluşturur.

Bu kazanımın genel amacı, öğrencilerin dijital okuryazarlıklarını artırarak, gelişen CBS teknolojilerini etkin bir şekilde kullanmalarını sağlamaktır. Öğrenciler, web tabanlı CBS uygulamaları sayesinde teorik bilgilerini pratikte uygulayabileceklerdir. Öğrencilerin web tabanlı CBS uygulamaları kullanarak haritaları okuma, çözümleme, çıkarım yapma ve kendi haritalarını oluşturma yeteneklerini geliştirebileceklerdir. Bu sayede öğrenciler mekânsal verileri anlama, yorumlama, analiz etme ve görselleştirme becerilerini artırarak, haritalardan anlamlı bilgiler çıkarabileceklerdir.

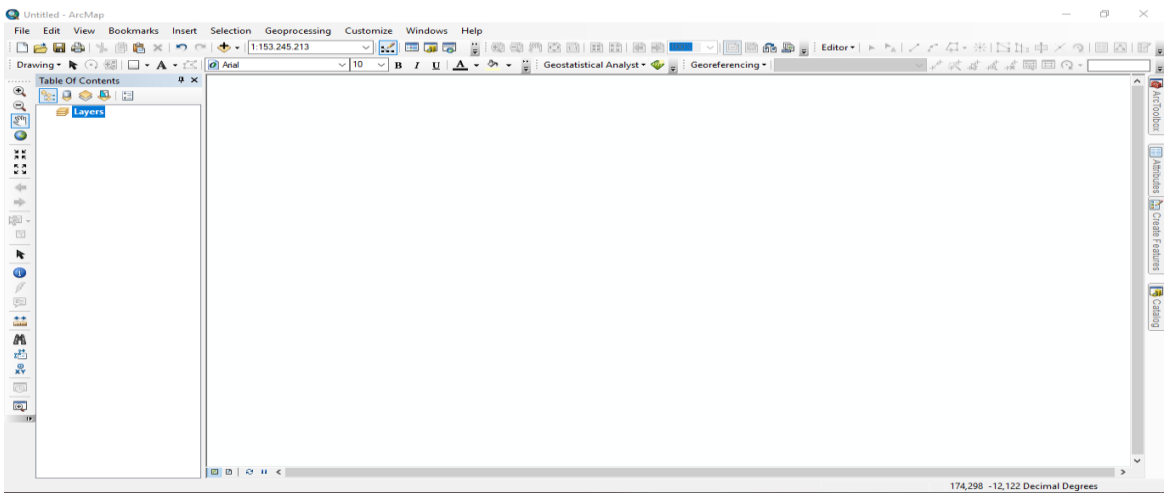
12. sınıflarda "Mekânsal Bilgi Teknolojileri" ünitesinde bir kazanım yer almaktadır.

COĞ.12.2.1. Mekânsal veriler kullanılarak CBS'de oluşturulan tematik haritalardan uygulamalar yapabilme
a) Mekânsal verileri kullanarak CBS'de oluşturulan tematik haritaları okur.
b) Mekânsal verileri kullanarak CBS'de oluşturulan tematik haritaları çözümler.
c) Mekânsal verileri kullanarak CBS'de oluşturulan tematik haritalardan çıkarım yapar.
ç) Mekânsal verileri kullanarak CBS'de tematik haritalar oluşturur.

Bu kazanım, öğrencilerin CBS teknolojilerini kullanarak tematik haritaları okuma, analiz etme, çıkarım yapma ve oluşturma becerilerini geliştirmeyi hedefler. Böylece, öğrenciler mekânsal düşünme, problem çözme ve analitik yeteneklerini güçlendirerek, haritalardan elde ettikleri verileri etkili bir şekilde kullanabilir hale gelirler.

FULL TEXTS BOOK

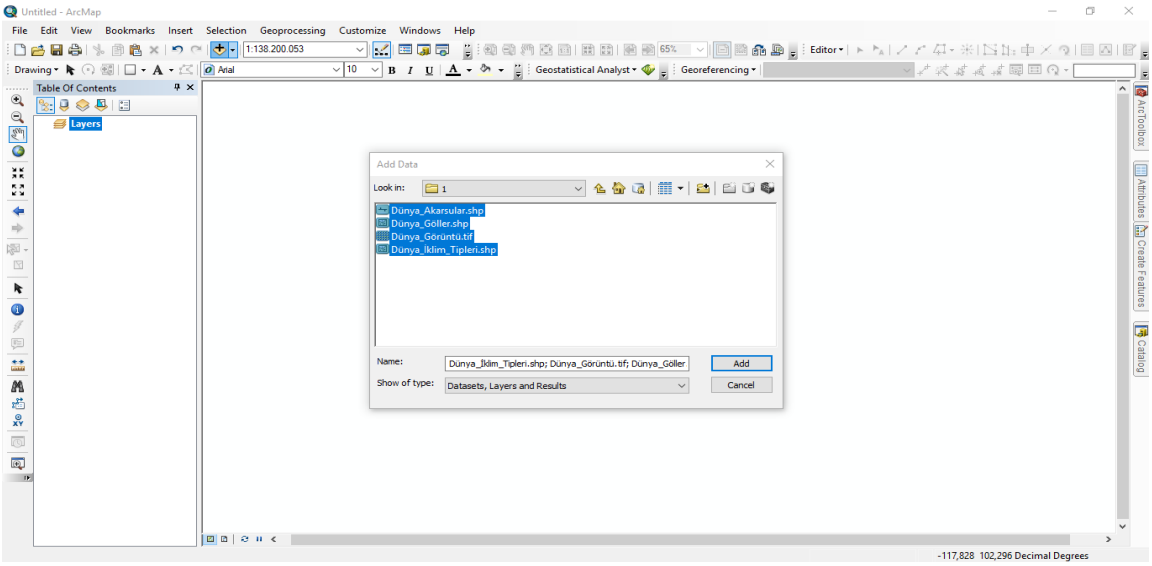
Program detaylı bir şekilde incelenmiş ve bu kazanımların dışında öneri niteliğinde CBS'nin uygulanabileceği kazanımlar belirlenmiştir (Tablo 3)



Tablo 4: Coğrafya öğretim programında (2024) CBS'nin uygulanabileceği kazanımlar ve konular

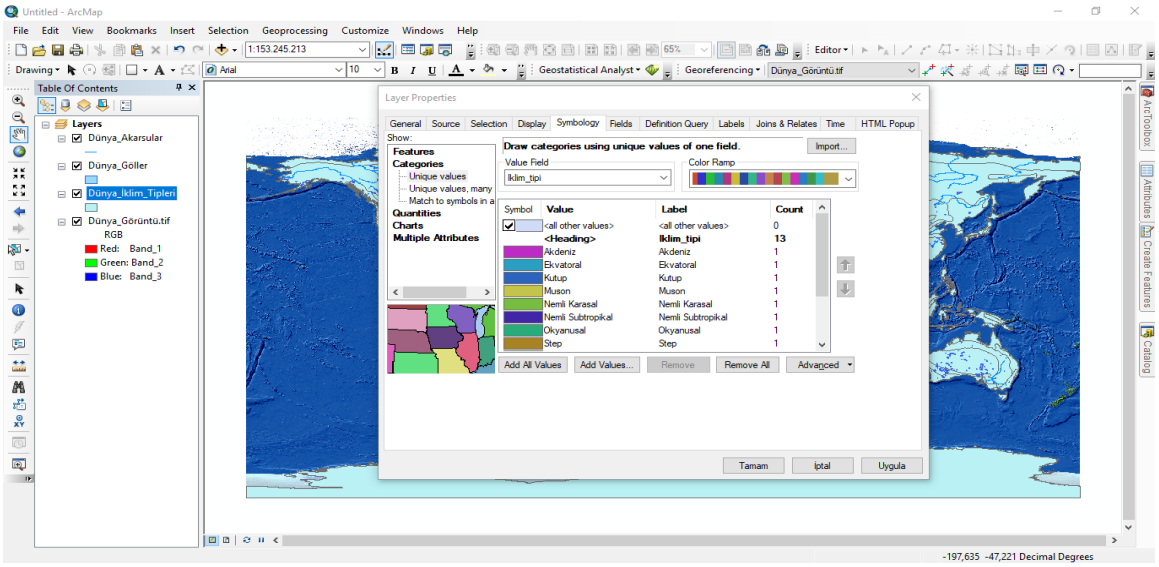
Sıra	Sınıf	Kazanım Numaraları	Kazanımlar
1	9	9.3.3.	Türkiye ve dünyadaki farklı iklim türlerine sahip yerlerin iklim verilerini kullanarak tablo, grafik, şekil ve/veya diyagram hazırlayabilme
2		9.4.1.	Nüfusun zaman içerisindeki değişimini tablo ve grafikler aracılığı ile yorumlayabilme
3		9.4.2.	Dünya ve Türkiye'deki nüfusun dağılışı ve hareketlerini etkileyen faktörler hakkında haritalar üzerinden çıkarımda bulunabilme
4		9.4.3.	Türkiye ve farklı ülkelerin nüfus piramitlerinden yararlanarak demografik dönüşüm sürecini yorumlayabilme.
5		9.6.3.	Bütüncül afet yönetimi uygulamalarını tablo, grafik, şekil ve/veya diyagramlar aracılığıyla yorumlayabilme
6		9.7.1.	Bölgelerin belirlenmesinde kullanılan kriterlere göre bölge hakkında çıkarım yapabilme
7	10	10.1.1.	Örnek olay, olgu ve/veya mekânı coğrafyanın temel kavramları ile ilişkilendirebilme
8		10.5.2.	Ekonomik sektörlerin dağılımını gösteren tablo, grafik, şekil ve/veya diyagramlar üzerinden farklı gelişmişlik seviyesine sahip ülkeleri karşılaştırabilme
9		10.5.3.	Ekonomik sektörlerin Türkiye ekonomisindeki yeri ve önemini gösteren tablo, grafik, şekil ve/veya diyagram hazırlayabilme
10		10.7.1.	Türk dünyasının ortak kültürel özellikleri hakkında çıkarım yapabilme
11	11	11.3.1.	Yeryüzündeki su kaynaklarını sınıflandırabilme
12		11.4.1.	Türkiye ve dünyadaki yerleşmelerin mekânsal organizasyonunu çözümleyebilme
13		11.5.2.	Dünya ve Türkiye'deki tarım uygulamalarını sürdürülebilirlik ölçütlerine göre değerlendirebilme
14		11.5.3.	Dünya ve Türkiye'de bulunan stratejik-kritik madenlerin ülke ekonomileri ve ülkeler arası ilişkilerdeki yerine yönelik çıkarım yapabilme
15		11.5.4.	Dünya ve Türkiye'deki enerji kaynaklarının kullanımında meydana gelen değişim ve sürekliliği algılayabilme
16		11.5.5.	Sanayi faaliyetlerinin mekânsal etkilerini sorgulayabilme
17		11.6.3.	Türkiye'de bulunan su kaynaklarının sürdürülebilir kullanımını sorgulayabilme
18		11.7.1.	Türkiye ile Türkiye'nin kültürel açıdan güçlü ve köklü bağlara sahip olduğu yerler arasındaki etkileşimi sorgulayabilme
19		11.7.4.	Örnek bir ülkede yürütülen madencilik faaliyetleriyle ilgili tablo, grafik, şekil ve/veya diyagram hazırlayabilme
		11.7.5.	Örnek ülkelerin enerji kaynaklarını coğrafi açıdan karşılaştırabilme

FULL TEXTS BOOK



20	12	12.3.3.	Coğrafi faktörlerin dünya ve Türkiye'deki bitki örtüsünün çeşitliliği ve dağılışı üzerindeki etkisi hakkında haritalardan çıkarım yapabilme
21		12.5.1.	Dünya ve Türkiye'deki ulaşım sistemlerinin gelişim sürecinde meydana gelen değişim ve sürekliliği algılayabilme
22		12.5.2.	Küresel ticaretin mekânsal bağlantılarını çözümleyebilme
23		12.6.2.	Türkiye'deki bitki topluluklarında görülen değişim ve sürekliliği algılayabilme
24		12.6.5.	Dünya veya Türkiye'den örnek bir çevre sorununa yönelik çözüm önerisi geliştirebilme
25		12.7.2.	Örnek ülkelerin ulaşım sistemlerini karşılaştırabilme
26		12.7.3.	Örnek bir ülkeyi ticari faaliyetleri açısından sentezleyebilme
27		12.7.4.	Örnek ülkelerin turizm faaliyetlerini karşılaştırabilme

Yeni Coğrafya Dersi Öğretim Programına Göre CBS Uygulama Örneği
Örnek 1
Sınıf: **9**
Ünite: **Doğal Sistemler ve Süreçler**
Kazanım: 9.3.3. Türkiye ve dünyadaki farklı iklim türlerine sahip yerlerin iklim verilerini kullanarak tablo, grafik, şekil ve/veya diyagram hazırlayabilme
Uygulama:
Bu kazanımı gerçekleştirmek için masaüstünde bulunan *ArcMap* uygulama ikonu üzerine çift tıklayarak program çalıştırılır **(Şekil 1)**. Program arayüzündeki menüde yer alan *Add Data* açılır ve gelen ekrandan *Masaüstü/Öğretim Uygulaması/1* klasöründe bulunan verilerin hepsi seçilip *Add* diyerek programa çağırılır **(Şekil 2)**. Açtığınız veriler büyükten küçüğe *(Poligon, Line, Point(varsa))* şeklinde aşağıdan yukarıya doğru sıralanır. Sol tarafta yer alan *Table Of Contents* kısmındaki *Dünya_İklim_Tipleri* verisi üzerine sağ tıklanır ve en altta yer alan *Properties* menüsü açılır, gelen ekrandan *Symbology/Categories/Unique values* seçilerek *Value Field* bölümüne *İklim_tipi* getirilir. Pencerenin alt kısmından *Add All Values*'e basılarak iklim tipleri menüye eklenir ve uygun renklendirmenin ardından *Tamam*'a bir kez tıklanır **(Şekil 3)**. Arayüzün alt kısmında yer alan *Layout View*'e basarak çalışma çıktı sayfasına getirilir ve üst kısımdaki *İnsert* menüsüne tıklanarak başlıca harita unsurları olan *Title(Başlık), Legend(Lejant), North Arrow(Kuzey Oku), Scale Bar(Ölçek), Coordinate System (Koordinat Sistemi)* ve *Kaynak* eklenir **(Şekil 4)**. Bu işlemlerin ardından *File* menüsünden *Export Map* seçeneği seçilir, açılan pencereden *Dosya Adı* ve *Kayıt Türü* belirlendikten sonra harita *Kaydet* butonu ile kaydedilir **(Şekil 5)**. Harita elemanları (Başlık, Lejant, Ölçek vb..) eklenir **(Şekil 6).**



Şekil 2: *ArcMap arayüzünün görünüşü*

Şekil 7: *Etkinlik sonucunda elde edilen harita*

SONUÇ VE TARTIŞMA

Teknolojik gelişmeler, yalnızca ticaret, sanayi ve idari alanlarda değil, eğitim alanında da büyük etkiler yaratmaktadır. Eğitimdeki bu teknolojik ilerlemeler, ülkelerin gelişmişlik düzeylerinde belirleyici bir rol oynamaktadır. 2005 yılından itibaren Coğrafya Dersi Öğretim Programı (CDÖP) kapsamında CBS'nin eğitimdeki rolü vurgulanmış ve çeşitli kazanımlar ile CBS'nin kullanımı teşvik edilmiştir. 2005 CDÖP'nda, CBS'nin derslerde bir araç olarak kullanılabileceği belirtilmiş ve 28 kazanımda CBS'nin rolü tanımlanmıştır. Ancak uygulamada, teknik donanım ve fiziki imkanlar göz önünde bulundurularak, öğretmenlerin CBS uygulamalarını geliştirmeleri veya mevcut örnekleri incelemeleri önerilmiştir. 2018 CDÖP'nda ise CBS'nin önemi vurgulanmaya devam edilmiştir, ancak uygulama alanı daralmış ve sadece iki kazanımda CBS'nin kullanımı önerilmiştir. Program, bilgi-iletişim teknolojilerinin coğrafya öğretiminde kullanılmasını desteklerken, CBS uygulamaları için yine okullardaki teknik donanım ve fiziki imkanların belirleyici olacağını belirtmiştir. Bu dönemde CBS uygulamalarının somut örneklerle zenginleştirilmemesi, programın etkililiğini sınırlamıştır.

2024 yılına gelindiğinde, CDÖP köklü değişiklikler geçirmiş ve ünite temelli bir yaklaşımla hazırlanmıştır. Bu programda, her sınıf seviyesinde "Mekânsal Bilgi Teknolojileri" ünitesi eklenmiş, öğrencilerin coğrafi bilgi sistemleri gibi gelişen teknolojilere uyum sağlamaları, mekânsal düşünme becerilerini geliştirmeleri ve CBS ile dijital okuryazarlıklarını artırmaları hedeflenmiştir. 2024 CDÖP, öğrencilere CBS'nin çeşitli bileşenlerini ve metodolojilerini öğretmeyi, bu teknolojilerle harita okuma, analiz etme, çıkarım yapma ve harita oluşturma becerilerini geliştirmeyi amaçlamaktadır. Ayrıca, öğretmenlerin teknolojik yetkinliklerinin hizmet içi eğitimlerle desteklenmesi ve okullarda gerekli donanımın sağlanması öngörülmüştür.

2005 yılından 2024 yılına kadar olan süreçte CDÖP'da CBS'nin yeri ve önemi artmış, ancak uygulama alanları ve kapsamı değişmiştir. 2005 yılında başlayan CBS entegrasyonu, 2018'de daralmış, ancak 2024 yılında kapsamlı ve sistematik bir yapıya kavuşmuştur. Bu değişim, CBS'nin coğrafya

FULL TEXTS BOOK

eğitimindeki rolünün giderek daha önemli hale geldiğini ve teknolojik gelişmelere uyum sağlama çabasını yansıtmaktadır.

Ancak okulların fiziki imkânları ve teknolojik donanımlarına bağlı olarak coğrafi bilgi sistemleri teknolojilerinin uygulanabilirliğinin sınırlı kalacağı düşünülmektedir. Araştırmalar, CBS'nin eğitimde uygulanmasının önünde birtakım engeller olduğunu göstermektedir. Bu engeller arasında okulların yetersiz fiziki ve teknik koşulları, CBS yazılımlarının yüksek maliyeti, ders saatlerinin kısıtlı olması, öğretmenlerin yeterli hizmet içi eğitim almaması ve CBS etkinliklerinin yapılabilmesi için gerekli olan planlamaların zaman alması sayılabilir (Aladağ, 2007; Artvinli, 2009; Cameron, 2005; Crabb, 2001; Demirci, 2006; Johansson, 2003; Kerski, 2000; Koçak, 2007; Pitts, 2005; Tiyekli, 2007; Yurdam, 2013). Sınıfta CBS kullanan öğretmenlere veri sunumu ile ilgili ön bilgi verilmediği takdirde, CBS'nin öğrencilerin öğrenme sürecine olumsuz etkisi olabileceği belirtilmiştir (Bednarz, 2004). CBS tabanlı ders modellerinin yetersiz olması, öğrencilerin bilgisayara yetersiz ulaşımı (Kerski & Kerski, 2003) göz önünde bulundurulmalıdır. Araştırmalar, öğrenci sayısının 20 ve altında olduğu sınıflarda CBS uygulamalarının daha kolay gerçekleştirilebildiğini göstermektedir (Artvinli, 2009).

Coğrafya derslerinin CBS ile işlenebilmesi için laboratuvarlar hazır hale getirilmelidir. Bunun için bilgisayar laboratuvarlarındaki bilgisayarlar iyileştirilmeli ve bu bilgisayarlara CBS yazılımları yüklenmelidir. Coğrafya ders kitapları hazırlanırken CBS ile ilgili örnek uygulamalara ve gerekli bilgilere yer verilmelidir. Öğretmenlerin CBS'yi nerede, nasıl ve ne ölçüde kullanacağını bilmeleri ve bu konuda istekli olmaları gerekmektedir (Demirci, 2006).

CBS'yi öğretim ortamında kullanacak öğretmenlerin olumlu bir tutuma sahip olmaları önemlidir. Öğretmenlerin CBS ile yapılacak uygulamaların sonuçlarını görmeleri, bu tutumu olumlu yönde etkileyecektir. Eğer öğretmen CBS'ye karşı olumsuz bir tutum geliştirmişse, bu durum öğretmenin teknolojik bilgi ve becerisi konusundaki yetersizliğinden kaynaklanabilir (Uğurlu, 2008).

Sonuç olarak, Coğrafya Dersi Öğretim Programı (CDÖP) kapsamında CBS'nin rolü ve önemi zaman içinde belirgin değişiklikler göstermiştir. Teknolojik gelişmelerin eğitimdeki etkileri göz önüne alındığında, 2005 yılında başlayan CBS entegrasyonu, 2018'de daralmış ancak 2024 yılında yeniden yapılandırılarak güçlü bir şekilde devam etmiştir. Bu süreçte, CBS'nin eğitimdeki uygulamaları ve etkileri konusunda ortaya çıkabilecek zorluklar da göz önünde bulundurulmalıdır. Okulların teknik altyapı ve fiziki koşullarının iyileştirilmesi, öğretmenlerin teknolojik yetkinliklerinin artırılması ve öğrencilerin CBS ile mekânsal düşünme becerilerinin geliştirilmesi, CBS'nin etkin kullanımı için önemli adımlardır. Gelecekte, CBS'nin eğitimdeki rolünü güçlendirmek ve bu teknolojiden maksimum fayda sağlamak için bu yönde yapılan çalışmaların sürdürülmesi gerekmektedir.

ÖNERİLER

- Okullarda CBS uygulamalarının daha etkin bir şekilde kullanılabilmesi için teknik altyapının güçlendirilmesi ve güncellenmesi önemlidir. Bu kapsamda, öğretmenlerin ihtiyaç duydukları donanım ve yazılımlara erişimlerinin sağlanması gerekmektedir.
- CBS teknolojilerini etkin bir şekilde kullanabilmeleri için öğretmenlere yönelik düzenli eğitimler düzenlenmelidir. Bu eğitimler hem CBS tekniklerini hem de pedagojik yaklaşımları kapsamalı ve öğretmenlerin profesyonel gelişimlerini desteklemelidir.
- CBS'nin öğrencilerin mekânsal düşünme ve analitik yeteneklerini geliştirmedeki potansiyelinden tam olarak faydalanabilmek için öğretim programlarında daha fazla öğrenci merkezli etkinlik ve projeler yer almalıdır. Öğrencilerin CBS teknolojilerini aktif olarak kullanarak problem çözme becerilerini geliştirebilecekleri ortamlar oluşturulmalıdır.
- CDÖP'te CBS'nin rolünün anlatılmasında daha fazla somut örnek ve uygulama senaryosu sunulması önemlidir. Bu sayede öğretmenlerin CBS uygulamalarını daha iyi anlayıp ders içeriklerine entegre etmeleri kolaylaşacaktır.

FULL TEXTS BOOK

- CBS'nin etkin kullanımının değerlendirilmesi ve öğrenci başarılarının izlenmesi için uygun değerlendirme araçları ve geri bildirim mekanizmaları oluşturulmalıdır. Bu süreçler, CBS'nin öğrenci başarıları üzerindeki etkisini değerlendirme ve geliştirme açısından kritik öneme sahiptir.
- CDÖP'te belirtilen CBS kullanımı ve hedefleri, düzenli olarak izlenmeli ve gerektiğinde revize edilmelidir. CBS'nin eğitim süreçlerine entegrasyonu sürdürülebilir bir şekilde desteklenmeli ve sürekli iyileştirme için çaba sarf edilmelidir.

ABSTRACT

Global population aging is a process that has social and economic impacts on society. The frequency of dementia, which is the common name of several diseases in which severe forgetfulness is observed, increases with advancing age. Alzheimer's Disease (AD) is the most common type of dementia. It is a progressive neurodegenerative disease characterized by memory loss and difficulties in problem solving, language and thinking skills. One of the most important developments within the scope of the cholinergic hypothesis is the discovery that cholinergic antagonists impair memory in AD, but cholinergic agonists have an ameliorating effect on memory loss. This hypothesis was confirmed by the fact that cholinesterase inhibitors used in the treatment of AD patients significantly increased symptomatic improvement. It has been demonstrated that aberrant β-amyloid (Aβ) deposition and BuChE have a strong correlation. According to a number of studies, BuChE inhibition may be used as a therapy tactic for advanced AD. Benzothiophene derivatives are heteroaromatic compounds with the chemical formula C8H6S having interesting biological properties such as anti-bacterial, anti-cancer, anti-oxidant and anti-fungal, are being studied and have become the pioneers of therapeutic substances used in various fields. In this study, the inhibitory effects of three novel benzothiophene derivatives on the butyrylcholinesterase (BChE) enzyme were investigated both in vitro and computationally. To determine the inhibition models, measurements were taken using the ELISA Plate Reader system at 7 different concentrations (0.83 - 80 mM) of the three tested benzothiophene derivatives, separately; and three different substrate concentrations (0.126-0.506 µM) for each of them. The calculated specific enzyme activity values were obtained and submitted to the licensed software SigmaPlot 13.0 Enzyme Kinetics Module, by which the inhibition model was found together with the kinetic parameters. A weak inhibitory effect on the BuChE enzyme was determined for the Q40 derivative; for the partial non-competitive inhibition model (R^2 = 0.96) V_{max} = 7.29 ± 0.25 µmol/min/mg, K_m = 0.61 ± 0.04 mM and K_i = 9.17± 8.37 µM. Kinetic tests for the Q41 derivative reported two distinct inhibition modes with close probabilities: Kinetic parameters for the partial mixed inhibition model (R^2: 0.96) V_{max} = 9.97 ± 1.10 µmol/min/mg, K_m = 1.06 ± 0.20 mM and K_i = 20.25 ± 21.21 µM. On the other hand, for the second

FULL TEXTS BOOK

proposed inhibition model, partial noncompetitive, the calculated parameters were V_{max} = 8.50 ± 0.36 µmol/min/mg, K_m = 0.80 ± 0.006 mM and K_i = 14.76 ± 17.80 µM. For the last tested benzothiophene derivative Q44, two separate inhibition models were reported with similar probabilities. Kinetic parameters for partial mixed inhibition (R^2: 0.95) and partial competitive inhibition (R^2: 0.94) exerted by Q44 reported as V_{max} = 8.49 ± 0.97 µmol/min/mg and K_m = 0.85 ± 0.18 mM, V_{max} = 6.96 ± 0.26 µmol/min/mg and K_m = 0.58 ± 0.00 mM, respectively. Because the range of inhibitors tested was high, extremely small K_i values were calculated for Q44; however, it was concluded that this part of the study should be repeated in a lower concentration range. In the second part of the study, molecular docking analyzes were performed with AutoDockTools-1.5.6 and CB-Dock2 software; and the regions where the substances settled on the enzyme were determined. Q40 has a hydrophobic interaction with TYR332, two hydrophobic interactions with PHE329, a hydrophobic interaction with VAL288, one pi-pi stacking with TRP82, and two pi-pi stackings with TRP231. Q41 has three hydrophobic interactions with PHE329, two hydrophobic interactions with TYR332, one hydrophobic interaction with ALA328, one hydrophobic interaction with VAL288, one hydrophobic interaction with PHE398, two pi-pi stackings with TRP82, and two pi-pi stackings with TRP231. Q44 has a hydrophobic interaction with TRP82, a hydrophobic interaction with PHE398, two hydrophobic interactions with LEU286, a weak hydrogen bond with GLY115, two pi-pi stackings with PHE329, and two pi-pi stackings with TRP231. Authors thank to Van Yüzüncü Yıl University Scientific Research Projects Department for supporting this work by project code FYL-2023-10496.
Keywords: Alzheimer's Disease, benzothiophen, butyrylcholinesterase, inhibition, molecular docking

INTRODUCTION

The ageing of the world's population affects society on both a social and economic level. According to Cankurtaran and Arıoğul (2005), dementia, a group of diseases characterised by severe forgetfulness, becomes more prevalent as people age. Alzheimer's disease (AD) is the most prevalent form of dementia. It is a progressive neurodegenerative disease that causes memory loss as well as difficulties with problem-solving, language, and thinking skills. The World Health Organisation recognises Alzheimer's disease as a global public health problem. Since Alois Alzheimer reported the first case in 1907, no method for changing the course of the disease or completely treating it has been discovered (Lane et al., 2018).

Acetylcholine, an alkaloid neurotransmitter, was first described by Henry Hallett Dale in 1914. Acetylcholine, whose formula is $CH_3COOCH_2CH_2N^+(CH_3)_3$, is the ester of acetic acid and choline. It functions in the parasympathetic nervous system of many organisms, including humans. It is also a chemical neurotransmitter located in the central nervous system. It is released from postganglionic parasympathetic nerve endings, causing contraction of respiratory tract smooth muscles and mucus secretion. There are also neurons containing acetylcholine in the brain, as it is linked to learning and memory. The choline acetyltransferase (CAT) enzyme found in these neurons synthesizes acetylcholine from choline and acetyl-CoA. Butyrylcholine is a choline-based ester that can function as a neurotransmitter. It is similar to acetylcholine, with activation of some of the same receptors as acetylcholine. Butyrylcholine is a synthetic compound and does not occur in the body naturally. It is used as a clinical laboratory tool to distinguish between the cholinesterases; acetylcholinesterase and butyrylcholinesterase preferentially lyse acetylcholine and butyrylcholine, respectively.

Acetylcholine is released from presynaptic neurons into the synaptic gap and carries out its function by binding to the receptors on postsynaptic neurons. It is then converted into choline and acetic acid by the acetylcholinesterase enzyme (Acetylcholinesterase-AChE) located in the synaptic gap. CAT level is one of the most common enzyme markers used to diagnose AD. In the study conducted by Perry et al. (1978), it was reported that the activity level of the CAT enzyme in subjects with dementia was much lower than normal. As the number of Aβ plaques formed in the brain increases, CAT enzyme levels decrease

FULL TEXTS BOOK

in proportion to memory impairment (Wilcock et al., 1982). The cholinergic hypothesis is based on three milestones: the first is the discovery of depleted presynaptic cholinergic biomarkers in the cerebral cortex, the second is the discovery of cholinergic neural networks that undergo severe neurodegeneration in AD, and the third is the discovery that cholinergic antagonists impair memory but cholinergic agonists have an ameliorating effect on memory loss (Francis et al., 1999). This hypothesis was confirmed by the fact that cholinesterase inhibitors used in the treatment of AD patients significantly increased symptomatic improvement. Although other pathophysiological mechanisms have attracted attention in recent years, cholinergic recovery is of critical importance in the treatment of AD (Hampel et al., 2018).

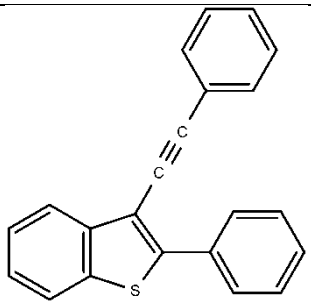
Although Alzheimer's disease has been studied for more than a hundred years, a fully therapeutic method has not yet been found due to its complex pathogenesis. Today, the drugs used for the treatment of AD are cholinesterase inhibitors (ChEI) and they provide long-term symptomatic treatment in patients. There are three drugs approved by the FDA; donepezil, rivastigmine and galantamine. It has been statistically proven that these drugs used in the treatment of AD have a curative effect on cognitive and behavioral activity (Hampel et al., 2018).

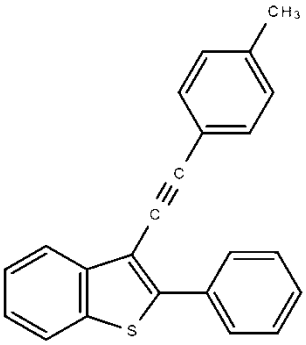
Butycholinesterase, which belongs to the serine hydrolase enzyme family, is an enzyme known as pseudocholinesterase or non-specific cholinesterase that hydrolyzes choline esters. It constitutes 10% of total cholinesterase activity. It is associated with butyrylcholine as a substrate, but it can also hydrolyze many choline esters such as succinylcholine, mivacurium, procaine, heroin and cocaine, including acetylcholine (Geula and Darvesh, 2004). While AChE is inhibited in the presence of excess substrate, BChE is activated when the substrate increases (Masson et al., 2001). BChE has high activity in the liver, blood, intestine, heart, kidney and lung. BChE is encoded by a gene on chromosome 3, synthesized in the liver and released into plasma. Although they are the products of two different genes, AChE and BChE have 65% amino acid sequence homology and have similar structures in terms of active site organization and molecular forms. BChE has attracted attention as a detoxification enzyme in recent years. It has pharmacological and toxicological importance as it can hydrolyze ester-containing drugs and scavenge organophosphorus nerve agents before they reach the brain (Çokuğraş, 2003).

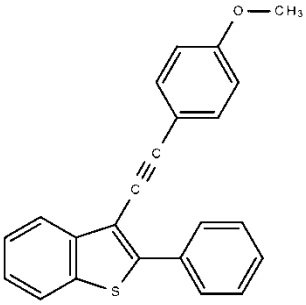
Butyrylcholinesterase is effective in areas where neurons responsible for cognition and behavior are located. However, in AD, it is found in association with pathologies such as β-amyloid (Aβ) plaques in the cerebral cortex, where it is not normally found. This indicates that increased BChE activity causes amyloid plaque formation in the brain. For this reason, BChE inhibitors are frequently used in the treatment of Alzheimer's disease (Darvesh, 2016).

Benzothiophene is an aromatic organic compound with the chemical formula C_8H_6S. It is a relatively stable compound that is used as a starting material in biosynthesis studies but also has reactive regions (Sarankar et al., 2010). Benzothiophene derivatives are heteroaromatic compounds with interesting biological properties. Many biological properties of these compounds have been studied and they have become pioneers of therapeutic agents used in various fields. Heteroaromatic compounds have played important roles in the discovery of new drug candidates for many years due to their biological and pharmacological properties (Algso et al., 2018).

Thiophene and benzothiophene derivatives have interesting biological properties. They have a special position among heteroaromatic compounds because they take their place as building blocks and reagents in organic synthesis (Skrzyńska et al., 2016). Benzothiophene scaffold has, already, a privileged place in the discovery of new drugs (Keri et al., 2017) because it exhibits various biological activities thanks to its structure that allows them to have anti-bacterial (Konus et al., 2019; 2020), anti-cancer (Konus et al., 2022; Yılmaz et al., 2022), anti-oxidant (Kavak et al., 2021; Konus et al., 2022), anti-fungal potential (Algso et al., 2018; Konus et al., 2020). Additionally, many benzothiophene-based compounds have been studied as clinical drugs and have been used to treat various diseases, such as histamine H3 antagonists (Santillan et al., 2010), histone deacetylase 6 inhibitors (De Vreese et al., 2015), DPS-2







FULL TEXTS BOOK

which show cytotoxicity in cancer cells (Theochari et al., 2018). In this study, the possible inhibitory effects of three benzothiophene derivatives on the butyrylcholinesterase enzyme were investigated and inferences were made regarding their potential use in the treatment of AD.

MATERIALS AND METHODS

Three new benzothiophene derivatives (Q40, Q41, Q44) used in the experiments were previously developed and synthesized and was used for other studies after purity tests and identification analyzes (Algso et al., 2018). Anticancer and antioxidant activities were studied. However, no studies have been conducted on the anti-cholinesterase capacities of these substances.

Table 1. General properties of the three benzothiophene derivatives used in the experiments

Derivatives	Molecular structure	Molecular weight (g/mol)	Chemical formula
Q40		310.41	$C_{22}H_{14}S$
Q41		324.44	$C_{23}H_{16}S$
Q44		340.44	$C_{23}H_{16}OS$

Butyrylcholinesterase enzyme shows homology among species because its active site is highly conserved. For this reason, equine serum butyrylcholinesterase (eqBChE) enzyme is the most used enzyme in the literature for studies on humans. As a matter of fact, this enzyme was used in this study. The modified Ellman's method was used to test the probable inhibitory effects of benzothiophene derivatives on BChE (Ellman et al., 1961). In this method, butyrylthiocholine iodide containing thioester is used as the substrate. This is because cholinesterases hydrolyze this substrate to thiocholine. Thus, DTNB, known as the Ellman's reagent, reacts with thiocholine and turns into nitrobenzoate, and this structure absorbs light at 412 nm. As a result of measuring the absorbance, enzyme activity was calculated with the following equation:

Specific activity = (dA/dt)/ε× DF/protein concentration

here, dA/dt ratio is the rate of change of absorbance measured at 412 nm over time; ε value is the extinction coefficient of the enzyme and its value is 13.6 mM-1cm-1; and, DF represents the dilution

FULL TEXTS BOOK

factor. When the enzyme breaks down the substrate into thiocholine and acetic acid, DTNB is reduced by the thiol groups in thiocholine and turns into yellow nitrobenzoate anion. The yellow color given by this anion is measured at 412 nm (Nieri et al., 2017).

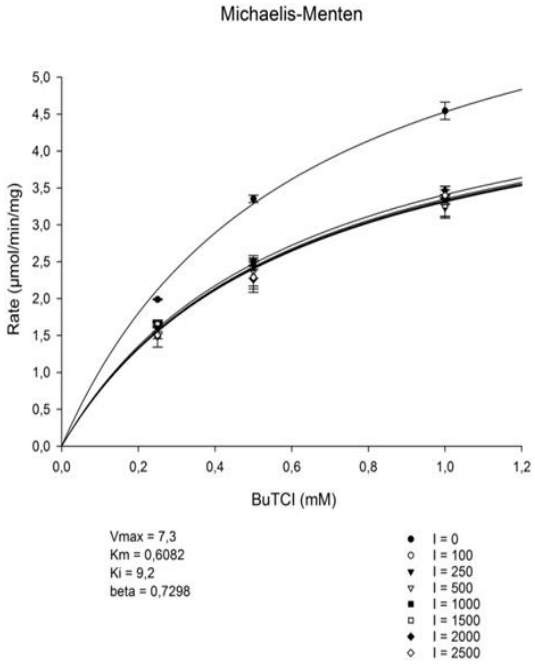
Enzyme activity measurements were made in 96-well microplates. The microplates were arranged so that the first three wells of a line were the control group and one blank for the control, then three wells of the other lines for each concentration of the substance (reaction wells) from low to high and one blank well for each concentration. Inhibitory substance, substrate (butyrylthiocholine iodide), DTNB and butyrylcholinesterase enzyme were added to the reaction wells. Pure ethanol, substrate, DTNB and butyrylcholinesterase enzyme were added to the control wells instead of the inhibitor substance, respectively. Pure ethanol instead of inhibitor substance, phosphate buffer instead of substrate, DTNB and butyrylcholinesterase enzyme were added to the blank wells, respectively. Seven different concentrations (0.83 – 83 µM) of inhibitory substances were prepared. Three different concentrations (123 µM, 246 µM, 492 µM) were prepared for the substrate butyrylthiocholine iodide. These concentrations were tested for each substance. The experiments were carried out in three repetitions on different dates.

The latest version of the .pdb extension file of the enzyme *Homo sapiens* butyrylcholinesterase (PDB ID: 5K5E) (Dighe et al., 2016) was obtained from the Protein Data Bank (PDB) site. The molecular structures of benzothiophene derivatives were drawn using the SwissADME (https://www.sib.swiss/) software offered by the Swiss Bioinformatics Institute and then presented by CADD Group Chemoinformatics Tools and User Services (https://cactus.nci.nih.gov/). It was converted to .pdb format using Online SMILES Translator and Structure File Generator software. Using Autodock Tools 1.5.6 open source software, the receptor (enzyme) and ligands (benzothiophene derivatives) were prepared by removing water molecules, adding charges, adding hydrogens, and atomic and rotatable bond applications. Ligands present on butyrylcholinesterase were removed using the same software before analysis. The files prepared for docking were uploaded to the free open source software CB-Dock2 (https://cadd.labshare.cn/cb-dock2/php/index.php), which runs on the AutoDock algorithm and is offered by Yang Cao Lab, and blind docking analysis was performed. Here, the bonds established between the ligand and the receptor, which amino acids the ligand interacted with, and in what position it was located on the receptor were determined.

Statistical analyzes were completed using the SigmaPlot 13.0 licensed software package. One-way ANOVA and Duncan multiplier post-hoc comparison test were used to analyze differences between groups. Results are expressed as mean ± standard deviation (±SD), and values of $p < 0.05$ were considered statistically significant.

RESULTS

The BChE enzyme inhibition tests yielded data that were uploaded to the licenced software SigmaPlot 13.0. The table below illustrates the effects of three benzothiophene derivatives on the BChE enzyme in terms of inhibition. The Enzyme Kinetics module of SigmaPlot 13.0 software was used to analyse the data derived from the enzyme activity tests. Using the data submited, the software generated inhibition models for every molecule with definitive scores.



Tablo 2. Inhibition effects of tested benzothiophene derivatives on pure horse serum

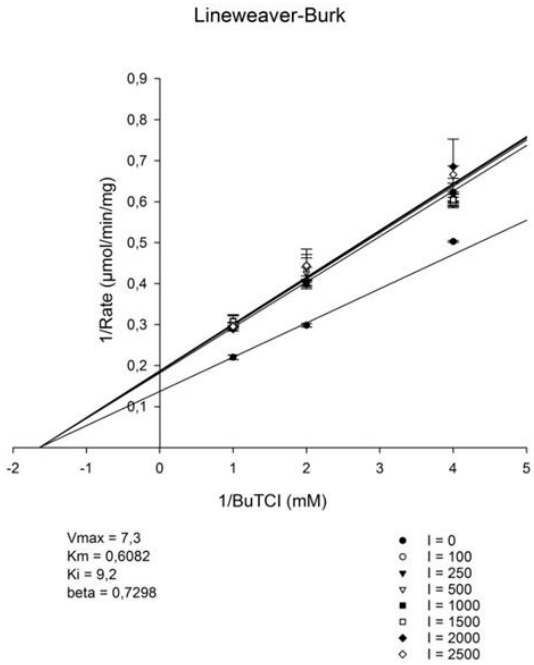
butyrylcholinesterase enzyme and determined possible inhibition models

Derivatives	Mode of inhibition	V_{max} ± SD (µmol/min/mg protein)	K_m ± SD (mM)	K_i ± SD (µM)	R^2
Q40	noncompetitive (partial)	7.29 ± 0.25	0.61 ± 0.04	9.17 ± 8.37	0.96
Q41	mixed (partial)	9.97 ± 1.10	1.06 ± 0.20	20.25 ±21.21	0.96
	noncompetitive (partial)	8.50 ± 0.36	0.80 ± 0.006	14.76 ± 17.80	0.96
Q44	mixed (partial)	8.49 ± 0.97	0.85 ± 0.18	1.06e-6 ± 38.14	0.95
	competitive (partial)	6.96 ± 0.26	0.58 ± 5.26e-2	1.17e-6 ± 69.19	0.94

The tested derivative Q40 was determined to have a K_i value of 9.2 µM and a K_m value of 0.60 mM. The graphs of Michealis-Menten (MM) and Lineweaver-Burk (LB) for the partial noncompetitive inhibition of butyrylcholinesterase by the Q40 coded derivative are shown below.

FULL TEXTS BOOK



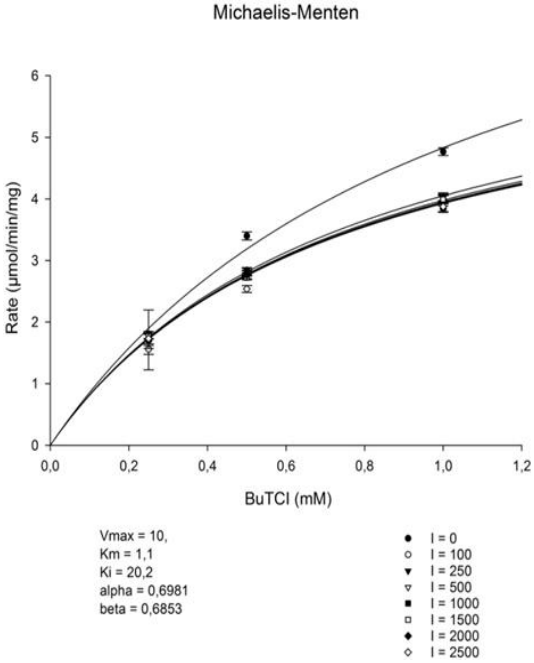


Figure 1. Michealis-Menten (MM) and Lineweaver Burk (LB) graphs drawn for the partial non-competitive inhibition of the Q40 coded derivative on butyrylcholinesterase

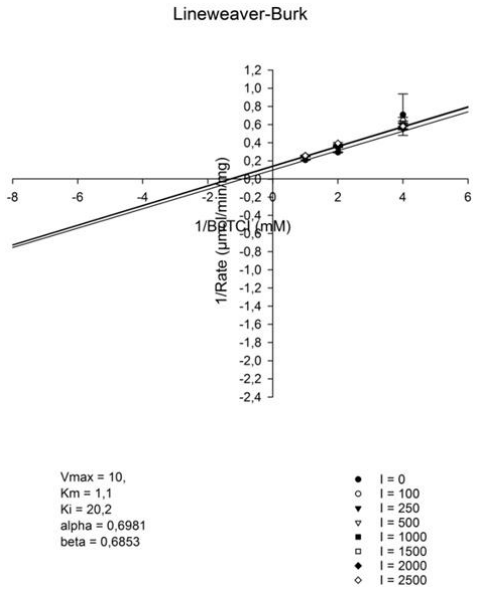
The results of the analysis demonstrated that the K_i value as 20.2 µM, while the K_m value was determined to be 1.1 mM, for Q41. The plots of MM and LB for the partial mixed inhibition of butyrylcholinesterase by the Q41 coded derivative are shown below.

FULL TEXTS BOOK



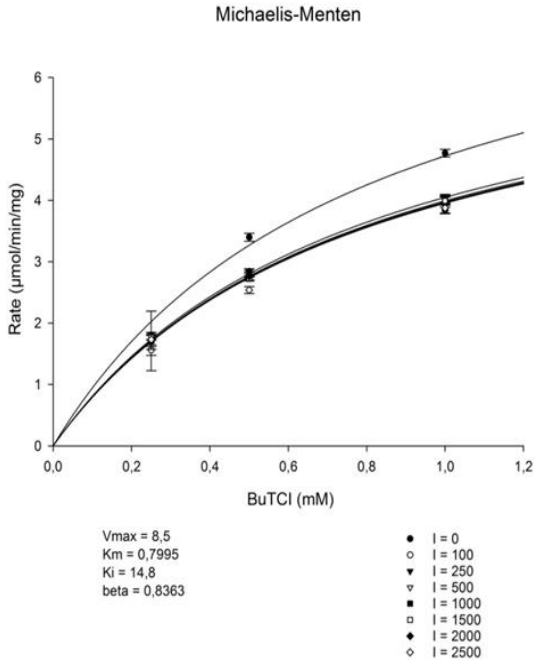


Figure 2. Michealis-Menten (MM) and Lineweaver-Burk (LB) graphs drawn for the partial mixed inhibition of the Q41 coded derivative on butyrylcholinesterase

The software proposed a second inhibition model with approximate scores for the derivative coded Q41. The inhibition resulting from Q41 in the second model had a K_i value of 14.8 µM and a K_m value of 0.79 mM. The partial noncompetitive inhibition that Q41 applied to butyrylcholinesterase is depicted in the MM and LB plots below.

FULL TEXTS BOOK

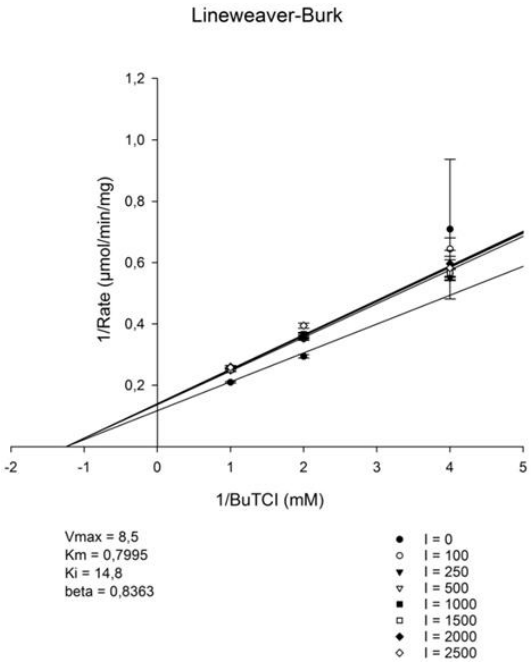

Figure 3. Michealis-Menten (MM) and Lineweaver-Burk (LB) graphs drawn for the partial non-competitive inhibition of the Q41 coded derivative on butyrylcholinesterase

Kinetic parameters for partial mixed inhibition (R^2: 0.95) and partial competitive inhibition (R^2: 0.94) exerted by Q44 reported as V_{max} = 8.49 ± 0.97 µmol/min/mg and K_m = 0.85 ± 0.18 mM, V_{max} = 6.96 ± 0.26 µmol/min/mg and K_m = 0.58 ± 0.00 mM, respectively. Because the range of inhibitors tested was high, extremely small K_i values were calculated for Q44; however, it was concluded that this part of the study should be repeated in a lower concentration range.

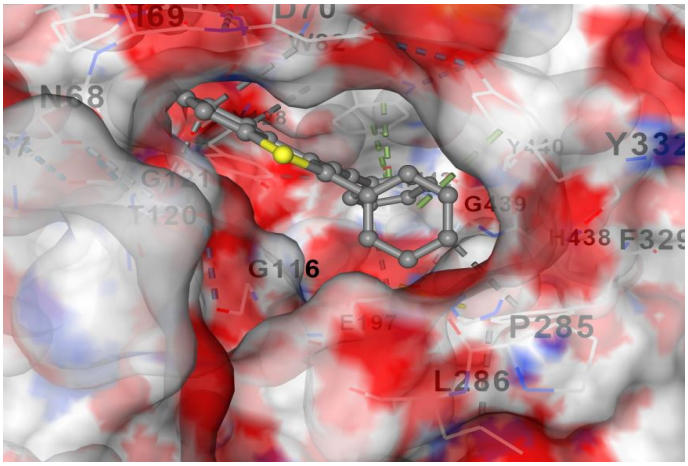

Figure 4. Location of the Q40-encoded derivative on the BChE enzyme

The Q40 coded derivative is located at the entrance of the narrow gorge on the BChE enzyme, as shown in the figure above. Amino acids reported to interact with this derivative are: TRP82, GLY115, GLY116, GLY117, TYR128, GLU197, SER198, TRP231, PRO285, LEU286, SER287, VAL288, ALA328, PHE329, TYR332, PHE398, HIS438. The bonds established in the highest scoring binding position are as follows: There is a hydrophobic interaction with TYR332, two hydrophobic interactions with PHE329, a hydrophobic interaction with VAL288, one pi-pi stacking with TRP82, and two pi-pi stackings with TRP231.

The Q41 coded derivative, like Q40, is located in the entrance/middle region of the narrow gorge on the BChE enzyme. At the bottom of this narrow gorge is the active site where the catalytic triad's main reaction takes place. Interacting amino acids reported as a result of molecular docking analysis: TRP82,

FULL TEXTS BOOK

GLY115, GLY116, GLY117, TYR128, GLU197, SER198, TRP231, PRO285, LEU286, SER287, VAL288, ALA328, PHE329, TYR332, PHE398, HIS438, ILE442. The bonds established between Q41e and the narrow gorge and surrounding amino acids are as follows: three hydrophobic interactions with PHE329, two hydrophobic interactions with TYR332, one hydrophobic interaction with ALA328, one hydrophobic interaction with VAL288, one hydrophobic interaction with PHE398, two pi-pi stackings with TRP82, and there are two pi-pi stackings with TRP231. The settlement of Q41 in the narrow gorge is depicted in the figure below.

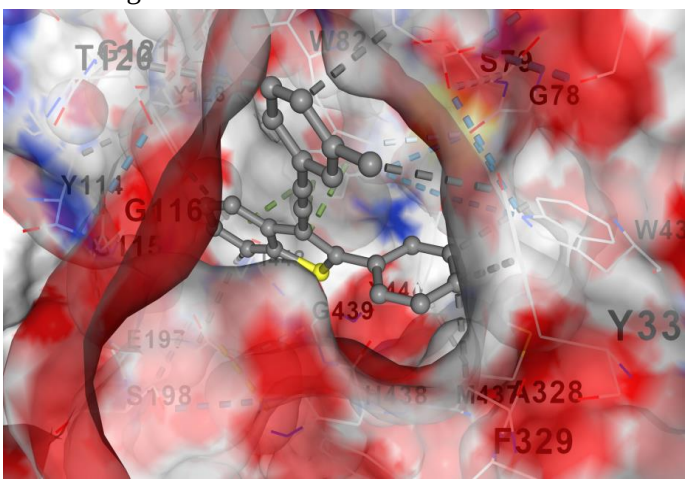

Figure 5. Location of the Q41-encoded derivative on the BChE enzyme

The highest scoring binding position of Q44 is presented in the figure below.

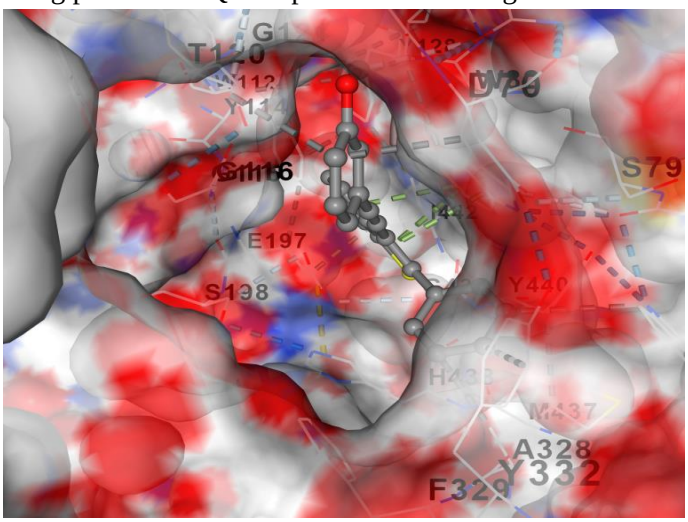

Figure 6. Location of the Q44-encoded derivative on the BChE enzyme

The following amino acids may interact with the derivative in and around the narrow gorge: ASP70, TRP82, GLY115, GLY116, GLY117, THR120, GLY121, TYR128, GLU197, SER198, TRP231, PRO285, LEU286, SER287, VAL288, PHE329, TYR332, PHE398, HIS438, GLY439, ILE442. The derivative has reportedly formed the following bonds: weak hydrogen bond with GLY115, two pi-pi stackings with PHE329, two pi-pi stackings with TRP82, two hydrophobic interactions with PHE398 and two hydrophobic interactions with LEU286.

DISCUSSION AND CONCLUSION

The increasing elderly population in the world brings with it many diseases. As health problems increase, the need to find new treatments also increases. For this reason, the design of molecules with

FULL TEXTS BOOK

pharmacological properties is becoming increasingly important. Molecules containing aromatic rings are compounds that are widely found in nature, are essential for life, and have promising properties for drug design (Mishra et al., 2011). In this study, three newly synthesized benzothiophene derivatives, whose various biological activities were studied, were evaluated in terms of their inhibition effects on BuChE. These substances were tested for their inhibitory effects on butyrylcholinesterase enzyme obtained from horse serum using the modified colorimetric Ellman method.

Cholinesterases show homology between species due to their conserved active site. In this study, this commercially obtained enzyme, which is frequently preferred in the literature and whose results are accepted in studies involving drug discovery and development, was chosen. No studies have been conducted on the anti-cholinesterase capacities of these substances. Compounds that can pass the blood-brain barrier (Blood-Brain-Barrier-BBB) from the synthesized benzothiophene derivatives were selected and used in this study.

The phenylacetylene group in the derivative coded Q40 provided the substance with a K_i value of 9.17±8.37 µM. In the study conducted by Gulcin et al. in 2022, the K_i value of compound number 13, which contains a phenylacetylene group, against the AChE enzyme is 8.04±1.20 µM. This value is very close to the value provided by the Q40 coded derivative against the BChE enzyme. One may argue that compounds with phenylacetylene groups inhibit the activity of cholinesterase enzymes. (Gulcin et al., 2022).

The 3-ethynyltoluene group found in the derivative coded Q41 provided a K_i value of 14.76±17.80 µM. In their study in 2021, Li and colleagues found that pyrazole derivatives containing 4-ethynyltoluene group have the potential to alleviate neurodegenerative symptoms. According to Li et al. (2021) there is reason to believe that cyclic compounds with an ethinyltoluene group hold promise for the treatment of neurodegenerative illnesses.

The ethinylanisole group in the Q44 coded derivative provided the substance with a K_i value of 1.06e-6±38.14 µM. In their study in 2005, Sheng et al. synthesized a series of indanone derivatives containing ethinylanisole. All of the compounds showed an inhibitory effect on cholinesterases. It is possible to state that cholinesterase activity is inhibited by heterocyclic compounds that contain an ethinylanisole group (Sheng et al., 2005).

The human butyrylcholinesterase enzyme's active site is shown below (PDB DOI: 1P0I-Bajda et al., 2013).

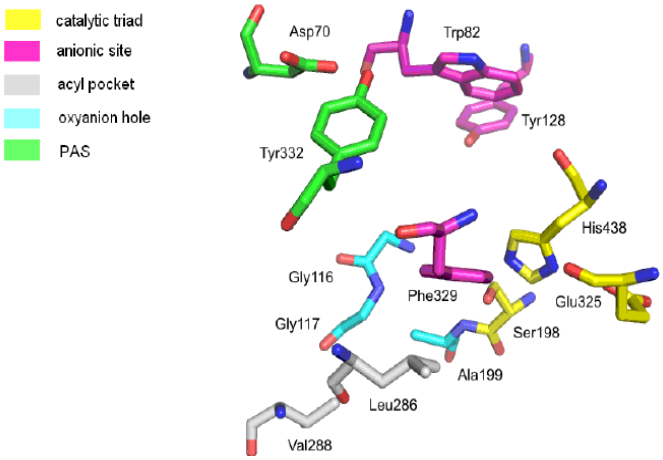

Figure 7. Active site of human butyrylcholinesterase enzyme

The derivative Q40 formed a hydrophobic interaction with PHE 329 and a pi-pi stacking with TRP 82 in the anionic region. It formed a hydrophobic interaction with TYR 332 in the peripheral anionic region and a hydrophobic interaction with VAL 288 in the acyl region. The derivative coded Q41 also formed a hydrophobic inteaction with PHE 329 and a pi-pi stacking with TRP 82 in the anionic region. It formed a hydrophobic interaction with TYR 332 in the peripheral anionic region and a hydrophobic interaction

FULL TEXTS BOOK

with VAL 288 in the acyl region. The derivative coded Q44 formed a hydrophobic interaction with TRP 82 and a pi-pi stacking with PHE 329 in the anionic region. It has a hydrophobic interaction with LEU 286 located in the acyl region, too. All these interactions support the inhibition models of the tested benzothiophene derivatives determined as a result of *in vitro* analyses. Inhibitors of cholinesterases achieve these effects by binding to different regions along the narrow channel. Supporting this, in the blind docking analyzes performed for bezothiophene derivatives, the most probable interactions always occurred with the amino acids forming or adjacent to this narrow gorge.

In this study, three different benzothiophene derivatives, whose possible inhibitory effects on butyrylcholinesterase were examined both with *in vitro* methods and *in silico* methods, were shown to have important drug potentials. Q40, Q41 and Q44 inhibited BChE with statistically significant scores. These substances should be further studied and derived as active pharmaceutical ingredients for use against AD. After the research, studies with these substances will continue in line with this purpose.

ABSTRACT
Biological and chemical treatment process are generally used together to reduce the load of organic pollutants for urban wastewater treatment. However, these conventional treatment processes cannot be achieved to treat or degrade refractory organic compounds to last products such as water and carbon dioxide. Advanced oxidation methods can easily treat both readily degradable and refractory organic substances in a shorter time. Therefore, it is aimed to meet discharge criteria with a single process by applying the electro-Fenton process as an advanced oxidation process. Within the scope of this study, the wastewater sample was taken from an organized industrial zone, and a treatability study with electro-Fenton was conducted on the inlet wastewater samples to examine its effect on wastewater treatment.
The Box-Behnken statistical method was applied to the electro-Fenton oxidation experiments. The reaction time, the dose of H_2O_2 and the applied voltage were considered as independent variables. Chemical oxygen demand (COD) removal efficiencies were selected as dependent variable, and the effectiveness of the electro-Fenton process was investigated through COD removal efficiencies. The optimum reaction conditions were observed when the reaction time was 30 minutes, the H_2O_2 dose was 1000 mg/L, and the voltage was 1 V. Under these conditions, COD removal efficiencies was determined to be approximately 99%. It was observed that a single treatment unit was sufficient for discharge limits and reaction time of electro-Fenton process was lower than its for other conventional treatment process.
Keywords: Conventional treatment process, Electro-Fenton Process, Urban wastewater, Box-Behnken

INTRODUCTION
Urban wastewater that includes industrial effluents has a high chemical oxygen demand and may contain toxic substances. The definition of urban wastewater is made as domestic wastewater or a combination of domestic wastewater with industrial wastewater or stormwater (Urban Wastewater Treatment Regulation, 2006). Urban wastewater can contain phosphorus from detergents of domestic origin, numerous pathogenic microorganisms from human waste, and toxic substances from various industries (Çakmakcı, 2012). In urban wastewater treatment, biological and chemical treatment units are typically used together to reduce the load of organic pollutants. Biological treatment is preferred for less complex and biologically degradable organic substances, while chemical treatment is preferred for the removal of toxic and hard-to-degrade organic substances. This combination is not very efficient in terms of space and cost. Existing wastewater treatment units may not be sufficient for treating wastewater. In recent times, advanced treatment methods have been applied for wastewater treatment (Topal & Arslan, 2014). The Fenton process is an advanced oxidation process based on the reaction of ferrous ion with hydrogen peroxide under acidic conditions, with different treatment functions depending on the hydrogen peroxide/ferrous ion ratio (Gürtekin & Şekerdağ, 2008). Electro-Fenton process which is a hybrid or modified Fenton oxidation process produces high amount of hydroxyl radicals to oxidize recalcitrant organic compounds and is especially useful process to degrade these organic compounds that are not easily treated with conventional wastewater treatment units.

FULL TEXTS BOOK

The organized industrial zone that is investigated in this study contains agricultural machinery, marble, cement, and ceramics industry, soap and detergent industry, food and packaging industry, rubber and rubber products industry, various machinery industry, feed industry and construction machinery industries. This zone had a wastewater treatment plant which includes a chemical treatment unit and a biological treatment unit. The aim of the treatment units is to meet the discharge standards for mixed industrial wastewaters into receiving environments specified in table 19 of the water pollution control regulation for organized industrial zones. According to these limitations, discharged COD value should be lower than 300 mg/L of COD. Therefore, it is aimed to meet discharge criteria with a single process by applying the electro-Fenton process to wastewater samples taken from the inlet of an urban wastewater treatment plant. The electro-Fenton method that is advanced oxidation process was chosen due to the higher content of metal industry wastewater in urban wastewater. Box-Behnken statically design to applied to Electro-Fenton process to evaluate optimum reaction conditions and to observe maximum removal efficiencies.

MATERIAL and METHOD

The characterization of wastewater taken from the Organized Industrial Zone (OSB) is presented in Table 1.

Table 1. The characterization of wastewater taken from the Organized Industrial Zone (OSB)

Parameter	Unit	Value
Flow rate	m^3/gün	1700
COD	mg/L	1000
BOD	mg/L	500
SS	mg/L	500
Oil-gress	mg/L	200
pH	6-9	6-9

Materials

In the experimental studies, hydrogen peroxide (H_2O_2) was used as the oxidant, iron (Fe^{2+}) as the catalyst, and 98% sulfuric acid (H_2SO_4) for pH adjustments. Stock solutions of 2500 g/L H_2O_2 and 25 g/L Fe^{2+} were prepared and used to obtain the desired concentrations. All materials used in the experimental studies were cleaned by washing with distilled water. Analyses were performed on the samples obtained from the experimental studies for pH value and dependent variables.

Experimental procedure

The experimental studies were conducted at room temperature in a square-shaped reactor made of PVC material with a volume of 5.25 liters. Stainless steel electrodes used in the experiments were placed parallel to each other in the reactor as an anode and cathode. The red cable from the power supply was connected to the anode, and the black cable to the cathode to provide voltage to the system. A schematic diagram of an experimental setup can be seen in Figure 1.

FULL TEXTS BOOK

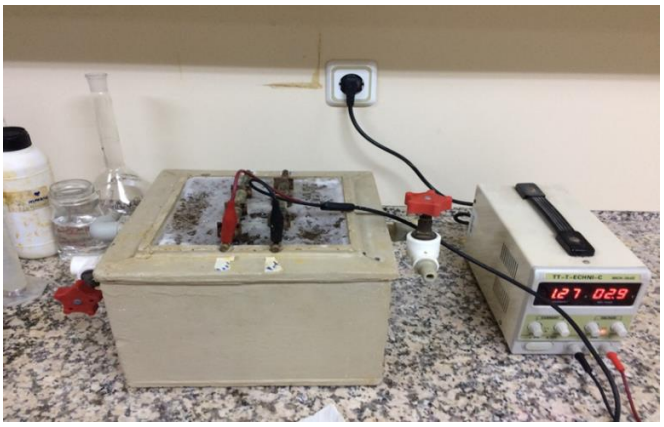

Figure 1. A schematic diagram of an experimental setup

In the Electro-Fenton method, sulfuric acid was added to adjust the pH value of the raw sample to the desired range (3-3.5). When the pH value of the sample was adjusted to this range, ferrous ion, as a catalyst that accelerates the chemical reaction, and then H_2O_2 as an oxidant were added in doses determined by the Box-Behnken statistical design. Then, the pre-adjusted power supply was turned on to start the reaction. At the beginning and end of the experiments, samples were taken to analyze COD and pH values.

Methods

Box-Behnken statistical experiment design as an response surface methodology were used to observe the effects of independent variables on response function as a COD removal efficiencies and also to evaluate the optimum reaction conditions maximizing the COD removals. Chemical oxygen demand removal efficiencies were selected as dependent variables, and the effectiveness of the electro-Fenton process was investigated through COD removal efficiencies. The reaction time (X_1), hydrogen peroxide concentration (X_2), and voltage (X_3) were selected as the independent variables. The response function was the COD (Y_1) removals.

The regression model

The application of RSM offers an empirical relationship between the response function (Y) and independent variables (X) as follows (Charles and Kennneth, 1999);

$Y = b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_{12}X_1X_2 + b_{13}X_1X_3 + b_{23}X_2X_3 + b_{11}X_1^2 + b_{22}X_2^2 + b_{33}X_3^2$ Eq (1)

This model includes one block term (b_o), three linear term (X_i), three quadratic term (X_i^2), and three interaction terms (X_iX_j). The coefficients of the response functions were determined using a Stat-Ease regression program.

RESULTS and DISCUSSION

The Box-Behnken statistical design was applied to the oxidation experiments. The independent variables were reaction time (X_1), H_2O_2 dosage (X_2), and voltage (X_3); the dependent variable was COD removal efficiency (Y_1). In the Box-Behnken design, the operating ranges for the independent variables were defined as follows: reaction time (X_1) 5-30 minutes, H_2O_2 dosage (X_2) 1000-5000 mg/L, and voltage (X_3) 1-5 V.

In Table 2, the minimum, medium, and maximum values are indicated as -1, 0, and +1, respectively. The removal efficiencies obtained from the experimental studies with response functions are given in Table 3.

The objective function for COD removal efficiencies with the determined coefficient is presented by Eq. (2).

$Y_1=95.68+0.26X_1-0.001X_2-3.9X_3-1.0E^{-05}X_1X_2-0.02X_1X_3-0.0003X_2X_3+0.001X_1^2+3.54E^{-07}X_2^2+0.79X_3^2$

$R^2 = 0.9703$ Eq (2)

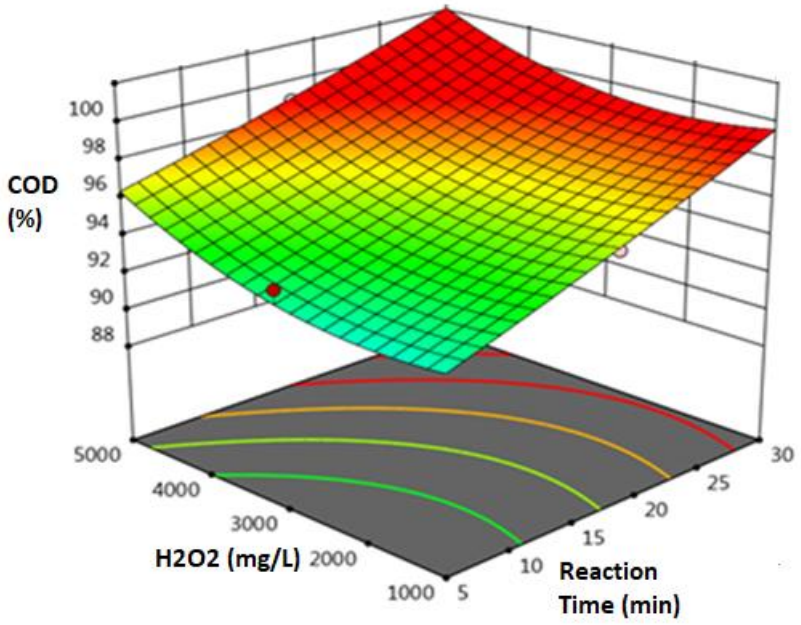

Figure 2. COD Removal efficiencies obtained from application of minimum voltage

COD removals results obtained from application of minimum voltage are given in Figure 2. Organic compounds resulted in COD in wastewater was completely treated with H_2O_2 concentration of 1000 mg/L and minimum voltage of 1 V during 30 min reaction time. COD removal efficiencies was affected by hydrogen peroxide concentration and reaction time. COD removal efficiencies were 96 and 88% when initial hydrogen peroxide concentration of 5000 mg/L and 1000 mg/L, respectively, at reaction time of 5 min. After evaluation of experiments, it can be concluded that the optimum reaction time/H_2O_2/voltage resulting the highest COD removal efficiency (100%) was 30 min/1000 mg/L/1 V. The analysis of variance showed that reaction time and voltage were significant. The electro-Fenton process is a highly advantageous choice for the treatment of urban wastewater containing toxic and persistent substances due to its ease of operation and high treatment efficiency.

FULL TEXTS BOOK

CONCLUSION

The aim is the study is to change conventional treatment process to advanced oxidation process. For that reason, classical chemical treatment unit was changed to advanced oxidation process as electro-Fenton process eliminating a biological treatment process. So, Box-Behnken statically design to applied to Electro-Fenton process to evaluate optimum reaction conditions and to observe maximum removal efficiencies.

According to the results of the experimental study, the optimum reaction conditions were observed when the reaction time was 30 minutes, the H_2O_2 dose was 1000 mg/L, and the voltage was 1 V. Under these conditions, COD removal efficiency was determined to be approximately 99%. It was observed that a single treatment unit was sufficient for discharge limits (300 mg/L COD value) and reaction time of electro-Fenton process was lower than its for other conventional treatment process. It has been demonstrated that instead of using classical treatment methods in multiple stages, the electro-Fenton method may be sufficient as only one treatment stage and can be used or preferred as a treatment unit in future facilities.

ABSTRACT
Energy is one of the fundamental sources of economic development for all countries worldwide. It can be obtained from various sources and is a fundamental factor affecting industrial production and technological development in many areas, from daily life to industrial processes. Therefore, energy can also represent a country's independence.
Environmental effects of the energy sources are very important issue. Effects of fossil fuel usages concern about energy supply security enhance the importance of renewable energy sources. Global warming is the one of the important effects of fossil fuels usage. Additionally, shortages in fossil fuel reserves, as well as international agreements such as the Kyoto Protocol, and the Paris Agreement, are steering countries towards renewable energy sources and helping them to move away from the negative impacts of fossil fuels. In this study, the impact of energy policies and energy resources on the environment in Turkey is evaluated.
Notably, among Turkey's goals is to increase the share of renewable energy sources in total energy production. This goal aims to promote the use of sustainable energy and increase environmentally friendly energy sources. Renewable energy can be considered more environmentally friendly compared to traditional energy. In addition, Turkey's energy policies should aim to support both environmental sustainability and create a more balanced structure in terms of energy supply security. At this point, increasing the use of renewable energy and enhancing energy efficiency will enable Turkey to take steps towards a more sustainable future in the energy sector.
Keywords: Turkey's energy sources, renewable energy, fossil fuels, environmental effect

INTRODUCTION
Energy is a concept that expresses the working capacity of a system. The reflection of energy in life is as important as its definition. Energy is one of the fundamental sources of economic development for all countries worldwide. The rapid increase in the world's population causes a continuous rise in energy demand. In this context, energy plays a key role in many areas such as economic development, social welfare, and quality of life. Therefore, energy can also represent a country's independence.
Environmental effects of the energy sources are very important issue. Effects of fossil fuel usages concern about energy consumption enhance the importance of renewable energy sources. Global warming is the one of the important effects of fossil fuels usage. Since the negative effects (air pollution, water pollution, radiation, etc.) of energy production can affect not just one country but the entire world, energy policies and practices must be conducted jointly. Therefore, within the scope of the United Nations' efforts to prevent climate change, the Framework Convention on Climate Change, the Kyoto Protocol, and the Paris Agreement are the most important energy policies and agreements, guiding energy and energy policies worldwide.

FULL TEXTS BOOK

The UN Framework Convention on Climate Change (UNFCCC) is an international agreement adopted at the United Nations Conference on Environment and Development held in Rio de Janeiro in 1992. The convention aims to foster global cooperation in combating climate change and adapting to its impacts. The UN Framework Convention on Climate Change has laid the foundation for more specific and detailed agreements such as the Kyoto Protocol and the Paris Agreement, marking a shift from encouragement to enforcement in addressing climate change.

The Kyoto Protocol, the first implementation agreement of the UN Framework Convention on Climate Change (UNFCCC), is an international treaty adopted at the United Nations Climate Change Conference held in Kyoto, Japan, on December 11, 1997, to combat global climate change. The protocol was developed under the UNFCCC and includes commitments from various countries to reduce greenhouse gas emissions. Although it was adopted in 1997, it did not come into force until 2005.

The Kyoto Protocol consists of two commitment periods. During the first commitment period (2008-2012), countries listed in Annex I of the UNFCCC were required to reduce their total greenhouse gas emissions by at least 5% from 1990 levels. In this period, specific emission reduction or limitation obligations were established for the countries listed in Annex B of the protocol.

The Paris Agreement is an international treaty adopted in 2015 in France to prevent climate change. The agreement was ratified and entered into force within a year on November 4, 2016. It aims to set limits on global warming, reduce greenhouse gas emissions, and establish a common framework for addressing climate change. At the 21st Conference of the Parties (COP21), for the first time, all countries committed to globally reducing greenhouse gas emissions beyond 2020. The agreement has been signed by 196 countries and the European Union and ratified by 191 countries. The annual COP meetings address the implementation and enhancement of the agreement.

To summarize the work and agreements carried out by the United Nations: The Framework Convention on Climate Change (UNFCCC) has two main implementation instruments: the Kyoto Protocol (up to 2020) and the Paris Agreement (post-2020). The Kyoto Protocol set specific targets for emission reduction commitments, while the Paris Agreement includes commitments from all countries to reduce greenhouse gas emissions under common but differentiated responsibilities.

Turkey became a party to the Kyoto protocol in 2009. When the Kyoto Protocol was adopted in 1997, Turkey was not yet a party to the UNFCCC and thus was not included in the Annex B list of countries with specific emission reduction or limitation obligations, so it had no commitments at that time. However, with the introduction of the Paris Agreement, the second commitment period was only formally recognized, leading to the conclusion of the Kyoto Protocol's function. After Kyoto Protocol, Paris Aggrement is accepted by Turkey at the end of 2021 (ÇŞİB, 2024).

Turkey's Energy Needs and Perspective on the Energy Sector

Turkey's energy needs and perspective on the energy sector are dynamic subjects, constantly evolving due to factors such as the country's economic growth, industrialization process, population increase, and rising energy demands. Over the past 20 years, Turkey has been the fastest-growing country in terms of energy demand among the Organization for Economic Co-operation and Development (OECD) countries. This situation highlights the need for the country to continuously strengthen and diversify its energy supply (ÇŞİB, 2016).

Turkey is a country with various energy potentials; however, due to insufficient domestic production, it also meets its energy needs from external sources, resulting in a position of energy dependency. Therefore, considering the country's geographical advantages and technical potential, it is necessary to increase the share of renewable energy sources in domestic production capacity. Turkey's energy policies that focusing on sustainable and renewable energy sectors/sources aims to minimize negative effects of fossil fuels on global warming. In addition, Turkey's energy policies that reducing energy dependency is crucial for lowering costs and increasing national income.

FULL TEXTS BOOK

The Ministry of Energy, through the Directorate of Renewable Energy, collaborates with organizations such as the International Energy Agency (IEA) and the International Renewable Energy Agency (IRENA) to monitor developments in the energy sector. Additionally, it follows the work carried out with the European Union (ÇŞİB, 2024; IEA, 2024; IRENA, 2024).

Energy Sources

Energy is an increasingly important concept, and the idea of sustainable energy is a priority for societies worldwide. The effective production and consumption of energy sources, minimizing environmental impacts, and the transition to clean and renewable energy sources are clearly highlighted by the concept and practice of sustainable energy.

The problems of global warming and environmental pollution, largely caused by the increasing energy demand being met by non-renewable energy sources like fossil fuels, combined with the likelihood of these fuels depleting in the near future, drive the promotion and widespread adoption of renewable energy to ensure sustainable energy.

Non-Renewable Energy Sources

Non-renewable energy sources are those that are limited in nature and take a very long time to replenish through natural processes after being consumed by human activities. These sources, such as fossil fuels, are formed through natural processes but deplete rapidly with human consumption. The rapid depletion of non-renewable energy sources, coupled with economic growth and increased energy demand, leads to environmental issues. Therefore, the search for and promotion of sustainable energy sources are becoming increasingly important.

Renewable energy sources

The use of renewable energy resources is increasing rapidly around the world. This trend is a result of global efforts on sustainable energy production. It is of critical importance for Turkey to keep up with this development, not only for the energy sector, but also for the general economic and environmental development of the country. The decrease in the costs of renewable energy resources allows resources such as solar and wind energy to become competitive with fossil fuels. Turkey's adoption of a strategic approach towards these low-cost and environmentally friendly energy sources will contribute to a sustainable energy future by transforming its energy consumption structure.

The Status of Non-Renewable Energy and Renewable Energy in Turkey

A large part of Turkey's energy demand is still provided by fossil fuels, which are non-renewable energy sources, as of 2023. Especially natural gas and coal play an important role in electricity production. Turkey's dependence on energy imports, especially the high level of natural gas imports, is an important issue in terms of energy security.

Turkey is taking important steps towards renewable energy sources in order to reduce foreign dependency and ensure the directive of the Kyoto and Paris agreements. It has great potential especially in the field of wind energy and solar energy. Turkey has implemented various support mechanisms to encourage renewable energy projects. Applications such as YEKA (Renewable Energy Resource Areas) projects and YEKDEM (Renewable Energy Resources Support Mechanism) are important steps in this framework (ÇŞİB, 2024).

However, the share of renewable energy in the energy mix is still not sufficient and most of the country's energy needs are met from fossil sources. Turkey should aim for a sustainable energy transformation by taking more renewable energy projects and energy efficiency measures in the coming period.

The electricity produced from renewable energy sources (Wind, Solar, Geothermal and Biomass energy) is 21.75%, 57.55% from fossil resources and 20.71% from hydroelectric power plants has been obtained.

FULL TEXTS BOOK

The percentage of electrical energy obtained from renewable energy sources is 42.45% in total. In 2022, the number of power plants benefiting from the RES Support Mechanism (YEKDEM) reached 1,036 and the operating power of these participants is 22,982.1 MW (EPDK, 2022).

Comparison of Energy Sources Effects

Turkey is a country in great need of energy. Therefore, it becomes very important to identify energy sectors that pollute the environment less and put them into practice. It is necessary to evaluate the projects, meet the energy needs with the energy/energies that will cause the least harm to the environment and, accordingly, determine the energy sectors that have the least negative effects. Positive or negative reflections of energy resources are presented in the figures below.

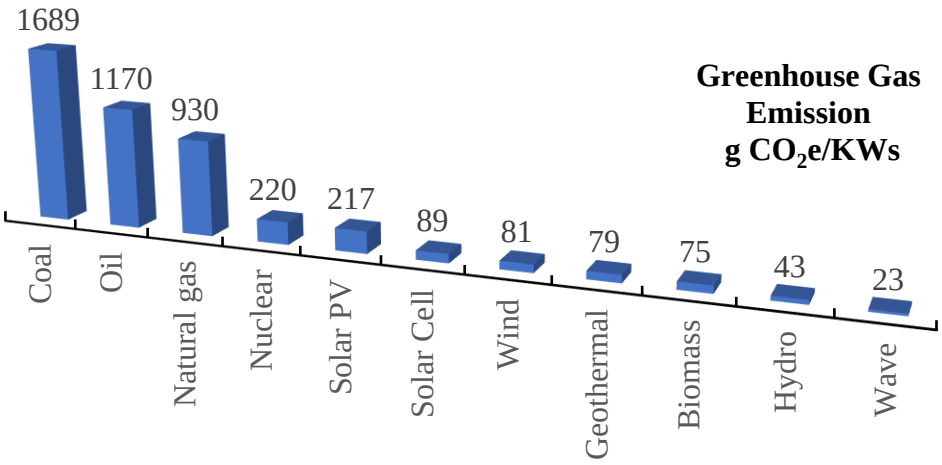

Figure1. CO_2 Emission obtained from power plants (Saner, 2015)

When we examine power plants in terms of greenhouse gas formation, it is seen that thermal power plants cause a large amount of greenhouse gas emissions (Figure 1). It is stated that the greenhouse gas emissions of other energy sources are greenhouse gas emissions that occur not during the operation phase of the power plants, but during the installation phase of the power plants.

Figure 2 presents water consumption of power plants, it can be seen in Figure 2 that thermal power plants and nuclear power plants need a large amount of water during operation and in the disposal of the waste generated. The water consumption of other energy sources, renewable energy sources, is much less than the consumption required by thermal power plants and nuclear power plants. Since the raw material of hydroelectric power plants is water, water consumption seems high, but it is compatible with the target of obtaining energy.

FULL TEXTS BOOK

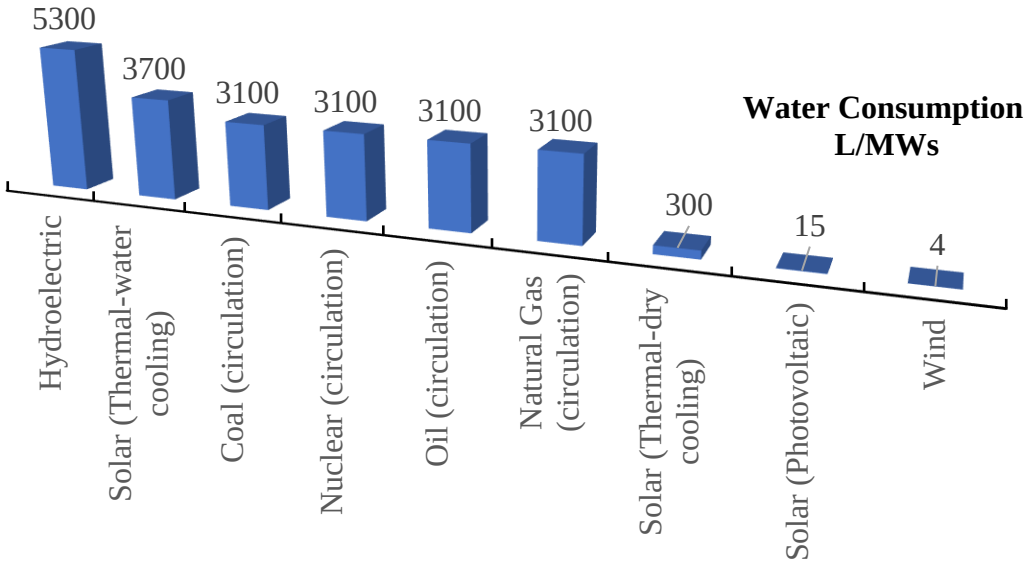

Figure 2**.** Water consumption of power plants (Saner, 2015).

When we examine the power plants in terms of required land installation, large areas are needed for the installation of hydroelectric power plants (Dam Type) and solar power plants. It can be said that non-renewable energy sources require less space than renewable energy sources.

In the evaluation based on water and air pollution parameters, it was stated that wind energy and solar energy did not have a negative effect. When evaluated in terms of global warming, it is seen that wind energy and solar energy do not have a negative effect. Wind energy does not cause thermal pollution in water, floods etc in superficial areas. It is also stated that it does not cause any problems, does not create waste, and does not have a negative impact on activities such as mining, etc. The energy sources with the least negative impact among alternative energy sources are wind energy and solar energy. It is reflected that negative effects may occur only during the construction phase.

It is very important to carry out environmental impact assessment very carefully in power plants planned to be operated using renewable energy resources, to thoroughly examine all possible negative effects along with the mentioned issues, to make the necessary reports, and it should be aimed to plan the projects very well. It should not be forgotten that as more hydroelectiric energy, wind energy, solar energy, biomass energy sources and geothermal energy will be used in the future, the environmental dimension of energy security will need to be addressed more comprehensively.

CONCLUSION

Energy is one of the main sources of economic development for all countries around the world. Therefore, the need for energy and energy resources is great for a balanced and sustainable development. The rapid increase in the world population causes the demand for energy to constantly increase. Environmental problems arising from the use of fossil fuels and concerns about energy supply security increase the importance of renewable energy sources. In addition, shortages in fossil fuel reserves, the UNFCCC, the Kyoto Protocol and the Paris Agreement direct countries to renewable energy sources and enable them to move away from the negative effects of fossil fuels.

Turkey is a country with various energy potentials, but since the resources it produces are insufficient, it meets its energy needs from external sources, which causes it to be in a foreign-dependent position in terms of energy. Energy is important to reduce foreign dependency, reduce costs and increase national

FULL TEXTS BOOK

income. Therefore, considering the country's geographical advantages and technical potential, the share of renewable energy sources in domestic production capacity should be increased.

Although Turkey has increased its use of renewable energy in recent years, it remains behind on a global scale. As of December 2022, most of the electricity produced is obtained from fossil resources (55%), and 45% is provided from renewable energy sources. Among the renewable energy sources, hydraulic energy provides 20% and the remaining 25% is provided by other renewable energy sources. Increasing the use of renewable energy and increasing energy efficiency will enable Turkey to take steps towards a more sustainable future in the energy sector.

ABSTRACT
While the soap manufacturing industry is vital for everyday products, it faces significant environmental challenges, particularly in the management of soap production wastewater containing color. The discharge of soap production wastewater into natural water bodies poses significant environmental risks to aquatic ecosystems by affecting photosynthesis and aquatic life. For this reason, it is necessary to treat wastewater containing color, especially soap processing effluent, before discharge. Effective treatment methods, including biological treatment systems such as activated sludge processes and physicochemical treatment processes such as coagulation-flocculation, are used to reduce color in wastewater. Additionally, advanced oxidation processes, including ozone oxidation, are promising for efficient removal of color and organic compounds from wastewater. In particular, the ozone oxidation process offers a sustainable solution in color removal due to its strong oxidation properties. Unlike traditional methods, ozone increases the clarity of water by effectively breaking down the organic molecules that create color. In this study, the use of ozone process for color removal from soap production wastewater was investigated. Statistical analysis identified a minimum ozone dose of approximately 340 mg/L.min to consistently achieve 80% or higher color removal under these conditions. These findings highlight ozone as a promising, cost-effective, and environmentally friendly solution for soap production wastewater treatment in the soap manufacturing sector.
Keywords: Color removal, ozone oxidation process, soap production wastewater.

INDTRODUCTION
The soap and detergent industry play a crucial role in maintaining cleanliness and hygiene. However, its production processes generate significant amount of wastewater, containing both organic and inorganic compounds. Soap production wastewater is generated during the various stages of soap making, including oil washing and preparation, saponification reaction, soap neutralization and washing, and the shaping and cutting of soap bars. This wastewater typically contains oil and soap residues, alkaline substances, and other chemicals. Proper treatment of this wastewater is necessary to prevent environmental harm. This colored wastewater is highly polluted due to its high content of organic and inorganic compounds (Pavithra et al., 2019).
Color in wastewater, often due to organic molecules with conjugated double-bond systems, reduces sunlight penetration, hindering photosynthesis and disrupting aquatic ecosystems. High chemical oxygen demand (COD) and biological oxygen demand (BOD) levels can lead to oxygen depletion. These components can pose environmental risks if discharged untreated (Pavithra et al., 2019; Alsukaibi, 2022; Ismail et al., 2022)
Due to its significant contaminant load, soap production wastewater requires extensive treatment using physical, physicochemical, and biological methods to reduce pollutants to acceptable levels before it can be safely discharged or repurposed. Various methods such as biological treatments, coagulation-flocculation, membrane filtration, and advanced oxidation processes have been developed to address

FULL TEXTS BOOK

this issue. Besides, some traditional wastewater treatment technologies have low feasibility on a large scale due to their high costs. Therefore, there is a need for a more economical and effective alternative treatment technology for the treatment of wastewater (Alfred et al.,2024). Effective treatment of soap production wastewater from soap industry is essential to minimize its environmental impact. Effective treatments, like ozone treatment, are essential to break down color-causing compounds and reduce pollution. Among the alternative treatment technologies, ozone treatment stands out as an environmentally friendly and efficient approach to remove color and reduce pollutants from wastewater. Recent studies by Tripathi and Hussain (2022) highlight the potential of ozone treatment as a cost-effective and energy-efficient alternative to traditional methods in wastewater treatment.

Ozone (O_3) is a reactive gas formed from dry air or pure oxygen, known for its thermodynamic instability, quickly reverting to oxygen. It is easily produced via electric discharge and reacts effectively with organic and inorganic compounds. In wastewater treatment, ozone is beneficial as it decomposes into oxygen, leaving no harmful residues, and interacts with contaminants through direct and indirect pathways. This process targets dissolved materials, including color, by breaking down organic molecules with conjugated double-bond systems that often cause coloration. The ozonation process enhances water clarity by decomposing color-causing compounds (Lim et al. 2022). Ozone oxidation process is an effective and eco-friendly method for treatment of wastewater (Krichevskaya et al., 2011; Mousset et al., 2021)

In this context, ozone oxidation process was used to remove color from soap production wastewater. The effects of ozone dose, contact time, and pH were examined by using Box-Behnken statistical design and optimize the conditions for the experimental range.

MATERIAL and METHODS

Wastewater

The soap production wastewater used in the experimental studies was untreated raw effluent collected directly from production of DALAN Chemistry located in İzmir. Before conducting any removal studies, the wastewater was first characterized to determine its properties. The characterization of the soap production wastewater is presented in Table 1. The intensity of a water sample's color is characterized by light absorption at wavelengths where the highest absorptions occur and is quantitatively determined using a spectrophotometer. Measurements at specific wavelengths are conducted to determine the colors of industrial wastewaters. According to international standards for industrial wastewater, the color is measured at three wavelengths within the visible light spectrum: 436 nm, 525 nm, and 620 nm (APHA 2005).

However, in this study, color analysis was performed at 350 nm, which is the wavelength that gives the maximum absorbance value. Data obtained at 350 nm for soap production wastewater are compatible with standard wavelengths of 436 nm, 525 nm and 620 nm (data not shown). Table 1 shows the various parameter values of the wastewater used in the experiment.

Table 1. Parameters and values measured in soap production wastewater

Parameters	Value

Parameters	Value
True Color Units (TCU) 620 nm	0.076
TOC (mg/L)	10750

Experimental Set up and Procedure

The laboratory-scale ozone reactor, made of 3 L glass column reactor, was used with ozone generator producing up to 15 grams per hour from 99.5% pure oxygen. Ozone was introduced at various rates via a 15 mm diffuser, with the flow controlled by adjusting the current and air flow. The ozone feeding rate was measured using the potassium iodide absorption method (APHA 1992). A constant dose of 0.15 mg/L ozone was selected as the standard for all experiments. The remaining ozone in the gas scrubber was also measured. An ozone monitor checked the effluent concentration, and excess ozone was destroyed using a catalytic unit (Cokay & Kargi 2009).

For soap production wastewater, color analysis is performed at 350 nm, which is the wavelength giving the maximum value in the wavelength scan. To prevent interference from suspended solids, the wastewater samples were filtered by 0.45 µm millipore filter. The percentage of color removal was determined using following equation.

Percentage Color Removal = $[(C_o - C) / C_o] * 100$

where X_o represents the initial absorbance and X represents the final absorbance measured at 350 nm.

pH levels were monitored with a WTW pH meter from Germany. All experiments were performed at room temperature.

Box-Behnken Statistical Experiment Design

Statistical experiment design takes into account interactions between variables while minimizing the number of tests required. Thus, it is possible to optimize operational parameters in multivariable systems. The Box-Behnken statistical experiment design was used to obtain optimal conditions for the ozonation process. The independent variables were pH (Factor X_1), ozone contact time (Factor X_2), while the dependent variable was the color removal efficiency (Response) (Box &Wilson, 1951; Eker & Kargı, 2008).

Ozone reacts with organic matter in two ways. In the ozone oxidation process, when the pH of the wastewater is below 5-6, ozone typically remains in the O_3 form and reacts with organic substances. When the pH is above 7, ozone decomposes to form hydroxyl radicals. These hydroxyl (OH•) radicals are fast and non-selective, reacting with many organic compounds. Therefore, having a pH higher than 7 in colored wastewater is advantageous for free radical formation and complete color removal. This pH range is also suitable for the raw wastewater and was chosen for its ease of adjustment and economic feasibility in the plant. Therefore, the pH range was set to the basic conditions (7–11) for the experiment design.

The ozone contact time for the experiments was planned to be between 2 and 10 minutes based on preliminary ozone experiments on the soap production wastewater. It was observed that after 10 minutes, there was no further color change, and the targeted color removal was achieved.

RESULTS and DISCUSSION

In the Box-Behnken design, the independent variables were the pH and ozone contact time. The color removal efficiencies obtained at the statistical experiment points in the experiments were given in Table 2.

FULL TEXTS BOOK

Table 2. Color removal at 350 nm

Run	Factor X1: pH	Factor X2: Ozone Contact Time (min)	Response Color Removal (350 nm) (%)
1	7	10	77.00
2	11	10	79.60
3	9	6	79.80
4	9	2	52.71
5	7	2	66.24
6	11	10	39.80
7	11	2	73.28
8	7	6	72.50
9	9	2	86.15
10	11	6	79.80
11	9	6	79.80

The optimization process involves looking at the results of statistically designed experiments, figuring out the coefficients by fitting the experimental data to the response function, guessing the results using the fitted model, and using Analysis of variance (ANOVA) tests to make sure the model is correct. The response function values for each independent variable were found by iterating over the experimental data. The coefficients of the response function for independent variables were determined correlating the experimental data by using the Stat-Ease Design Expert Software. ANOVA was performed to choose the response function to correlate experimental data. Response function calculated coefficients are shown in the equation below.

$$\text{Color Removal (\%)} = 18.87 + 11.34X_1 + 2.44X_2 + 0.91\ X_1 * X_2 - 1.04\ X_1^2 - 0.61\ X_2^2$$

ANOVA testing showed that model suited experimental data best with the lowest standard deviation, highest correlation coefficient, and lowest p-value (<0.0019). Response function predictions matched experimental data with R^2 values over 0.96.

Figure 1 depicts the percentage color removal at varying ozone contact times and pH levels. At low ozone contact time, there is a noticeable decrease in color removal efficiency as the pH increases from 7 to about 10. The results showed that both higher pH levels and longer ozone contact times are beneficial for reducing color in the wastewater. The interaction between these two factors shows that optimizing both parameters can significantly enhance the efficiency of the ozonation process for color removal.

FULL TEXTS BOOK

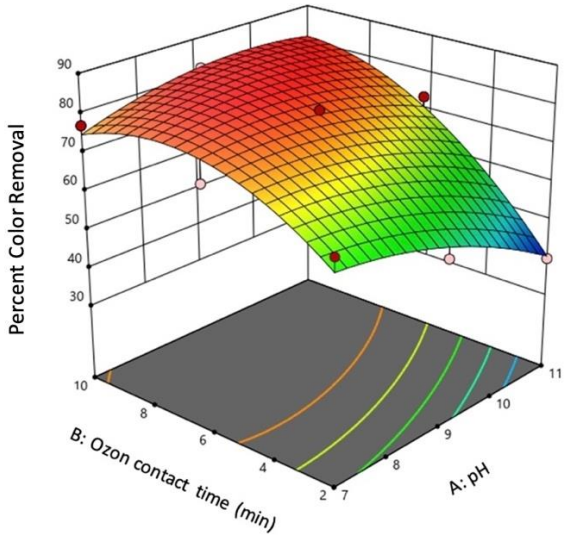

Figure 1. Variations of percent color removal at different ozone contact time and pH values.

Figure 2 shows the optimized reaction conditions according to the experimental results. With the experiments carried out using statistical design, the optimum ozone contact time and optimum pH value were found and the ozone dose that should be used for the highest color removal was determined.

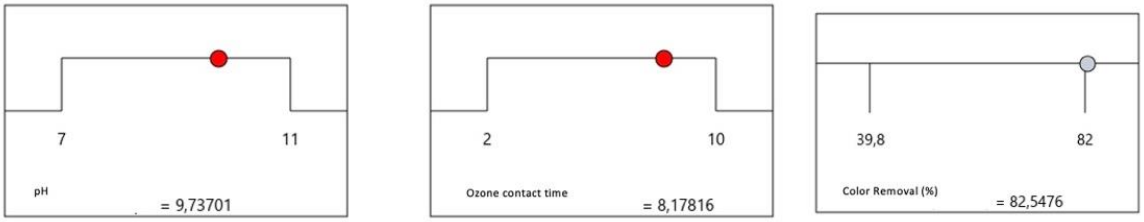

Figure 2. Suggested optimum operational conditions of pH, ozone contact time and ozone dose.

In the ozone oxidation process, when the pH value is around 9.7, the color removal efficiency can be obtained as 83% at an ozone contact time of 8.2 minutes. In addition, it was determined by the statistical program that the ozone dose that should be applied to the soap production wastewater to achieve 80% and above color removal under these reaction conditions is approximately 340 mg/L.min. The study conducted by Upadhyay (2013) on the treatability of soap and detergent industry wastewater by the ozonation process found that the ozonation process is effective in removing COD, BOD, and color from the wastewater. The optimal ozone doses were determined to be 19 mg/L, 21.58 mg/L, and 30.70 mg/L, achieving overall COD and color reductions of 50.8%, 53.4%, and 60.8%, and 52.6%, 57.4%, and 61.8%, respectively. These findings indicate the effectiveness of ozone process in the treatment of soap and detergent wastewater in both studies. The required ozone doses and efficiencies differ significantly, possibly due to variations in experimental conditions and wastewater characteristics.

CONCLUSION

As a result, in this study, within the scope of optimization experiments for color removal from soap production wastewater by ozone oxidation process, the minimum ozone dose and maximum efficiency were determined. The investigation revealed that ozonation is indeed a highly effective method for color removal. According to optimization experiments, approximately 85% color removal can be achieved if the pH is kept at 9-9.5 and the wastewater is exposed to ozone for approximately 8 minutes. The statistical analysis identified the optimal ozone dose required to attain 80% and above color removal under the experimental conditions as approximately 340 mg/L.min. Besides, even upon evaluating the raw experimental results, it was evident that the desired color removal efficiency could be reliably

FULL TEXTS BOOK

achieved with an ozone dose of approximately 400 mg/L.min across all pH values. The results demonstrated efficient, cost-effective, and sustainable color removal from soap production wastewater using the ozone oxidation process.

CONCEPTUAL ANALYSIS OF MODERN EUROSCEPTICISM

Prof. Milena Apostolovska -Stepanoska
Prof.Hristina Runcheva -Tasev
Department of Political Science Department, Faculty of Law, North Macedonia

ABSTRACT
Understanding euroscepticism goes beyond normative concerns about deepening European integration. It encompasses various aspects of political behavior, identities, public policies, democratic legitimacy, economy, ideology, and more. Euroscepticism is a complex and evolving phenomenon that lacks a universally accepted theoretical framework. Broadly, it denotes opposition to the European Union, whether in its entirety as a supranational entity or in its current structure, form, and political trajectory. Furthermore, euroscepticism manifests across the political spectrum, from left to right. Factors such as economic crises, fiscal policies, and the refugee crisis have intensified negative sentiments toward the EU among its populace. This environment has fostered the growth of eurosceptic parties and groups espousing populist and nationalist agendas. This study aims to delineate the contemporary dimensions of euroscepticism within the EU, following a review of the theoretical framework and essential conceptual clarifications related to euroscepticism. The results indicate that euroscepticism primarily revolves around concerns regarding sovereignty, identity, and the level of trust in national political systems. Additionally, euroscepticism correlates with the two significant crises that have challenged the EU and considerably tarnished its reputation: the economic crisis and the refugee crisis.

Keywords: Euroscepticism, European integration, European Union.

1. Defining the Euroscepticism

The term "euroscepticism" is widely used but lacks a specific, universally accepted definition. According to some scientists euroscepticism broadly encompasses varying degrees of opposition, from mild to absolute, towards the European integration process. [13]Taggart and Szczerbiak categorize euroscepticism within political parties into two main types: hard and soft. Hard euroscepticism refers to parties that fundamentally advocate for their countries to leave the European Union, with opposition to the European project being a core tenet. On the other hand, soft euroscepticism involves opposition to specific EU policies or beliefs that these policies negatively impact national interests, without rejecting the European project as a fundamental principle of the party.

In a different approach, some other authors build upon David Easton's foundational distinction among the different types of backing for political regimes. [14]They identify two dimensions for analyzing endorsement or skepticism towards European integration. They differentiate between "diffuse" and "specific" support for European integration. Diffuse support pertains to backing the overarching concepts of European integration that underpin the EU. Specific support relates to the practical implementation of European integration, meaning how the EU currently operates and its trajectory.

The first dimension, "support for the ideas of European integration," distinguishes between "Europhiles" and "Europhobes." Europhiles, as some authors define embrace the fundamental principles of European integration upon which the EU is founded. Europhobes, on the other hand, do not endorse and often

FULL TEXTS BOOK

oppose these foundational concepts, rejecting one or more of the ideas that form the bedrock of European integration.

The second dimension, "support for the European Union," separates "EU optimists" from "EU pessimists." Optimists believe in the current state of the EU and its ongoing development, either because they are content with its current operation or because they are optimistic about its future direction. EU pessimists, conversely, are dissatisfied with the current state of the EU or hold negative expectations about its future trajectory. It's important to note that being an EU pessimist doesn't necessarily imply opposition to EU membership; some simply believe that the current EU configuration diverges significantly from their understanding of the core principles of European integration and aspire to reform it.

In this context it is important to mention Mats Braun[15] who is political scientist whose research focuses on Euroscepticism and its implications for European integration and national sovereignty. His work typically examines several key aspects of Euroscepticism:

1.Impact on National Sovereignty: Braun explores how Eurosceptic movements and attitudes within member states challenge or advocate for the preservation of national sovereignty in the face of increasing European integration. This includes analysis of legal, political, and economic implications.

2.Political and Public Opinion Dynamics: He studies how Euroscepticism influences political behavior, party systems, and electoral outcomes across different European countries. This involves examining the rise of Eurosceptic parties, their rhetoric, and their impact on mainstream political agendas.

3.Policy Implications: Braun likely examines how Eurosceptic attitudes affect policy-making within the European Union. This includes assessing the negotiation of treaties, the implementation of EU directives, and the dynamics of intergovernmental cooperation versus supranational integration.

4. Comparative Analysis: His research may involve comparative studies of Euroscepticism across European countries, looking at variations in public opinion, political mobilization, and policy outcomes.

5. EU Institutions and Democratic Legitimacy: Braun might also explore debates surrounding the democratic deficit within EU institutions as perceived by Eurosceptic movements and the broader public. This involves questioning the accountability and transparency of EU decision-making processes.

Overall, Mats Braun's contributions to the field of political science provide nuanced insights into the multifaceted nature of Euroscepticism, its drivers, and its consequences for European integration and national sovereignty. His work helps to illuminate the complex interplay between national identities, political ideologies, and the evolving role of the European Union in contemporary Europe.

2. Factors that Influence Euroscepticism

Euroscepticism refers to skepticism or criticism towards the European Union (EU), its policies, and its institutions. The economic crisis, such as the global financial crisis of 2008-2009 and the subsequent Eurozone crisis, significantly contributed to the rise of euroscepticism for several reasons:

1.Economic Hardship: The economic crises led to widespread unemployment, austerity measures, and economic downturns in many EU member states. Citizens experiencing economic hardship often blamed EU policies for exacerbating their situations. Austerity measures imposed by the EU and bailout conditions imposed on countries like Greece by the EU and IMF were particularly contentious, leading to perceptions of loss of sovereignty and unfair economic burden-sharing.[16]

[15] Mats Braun (2019).Postfunctionalism, Identity and the Visegrad Group. https://www.researchgate.net/publication/336977963_Postfunctionalism_Identity_and_the_Visegrad_Group visited on 15.07.2024.

Europe at the Crossroads: Leadership, Challenges and State of Play (pp.121-137)Edition: 1stChapter: 5.1Publisher: Hellenic Association of Political Scientists - HAPSc

FULL TEXTS BOOK

2.Perceived Democratic Deficit: Many eurosceptics argue that the EU suffers from a democratic deficit, meaning that its decision-making processes are seen as distant, opaque, or not directly accountable to voters. During economic crises, decisions made by EU institutions (such as the European Commission and the European Central Bank) that affect national economies can be viewed as undemocratic or unrepresentative of national interests.
3.National Identity and Sovereignty: Economic crises can provoke a resurgence in nationalism and a desire to reclaim national sovereignty. Eurosceptics often argue that the EU imposes policies that undermine national sovereignty and cultural identity. Economic hardships can amplify these concerns, leading to increased support for nationalist or anti-EU political parties and movements.
4.Inequality and Social Cohesion: Economic downturns can widen economic inequalities within and between EU member states. This can lead to social discontent and a perception that the EU's policies exacerbate inequalities rather than address them. Eurosceptic parties may exploit these sentiments to gain support by advocating for policies that prioritize national interests over European integration.
5.Public Perception of EU Institutions: The handling of economic crises by EU institutions, such as the European Central Bank's monetary policies or the European Commission's fiscal rules, can be seen as ineffective or detrimental by affected populations. This can erode public trust in the EU and its ability to manage economic challenges.
Overall, the economic crises in the 2000s and early 2010s intensified existing eurosceptic sentiments and contributed to the electoral success of eurosceptic parties in several EU member states. These parties often campaigned on platforms that critiqued EU policies, advocated for greater national sovereignty, and appealed to citizens' frustrations with economic conditions and perceived loss of control over their own futures.
The other very important factor that influence the Euroscepticism is the EU's handling of the refugee crisis, which reached its peak in 2015-2016 and became a focal point of public dissatisfaction with the union. The surge in refugee and migrant arrivals, predominantly from Syria and other Middle Eastern nations, as well as from North Africa and Asia to the EU, became a rallying cry for various extremist eurosceptic parties. They capitalized on this discontent, often gaining significant electoral support.
Criticism towards the EU regarding the refugee crisis came from a wide spectrum of citizens, commentators, and political parties, regardless of their ideological leanings. Some blamed the EU for not adequately providing essential assistance to those in need, failing to efficiently redistribute refugees, and delaying asylum application processes. Others argued that the EU did not sufficiently protect its external borders, thereby challenging the integrity of the Schengen treaty.

3. Euroseptisism in Context of Different Ideologies

Euroscepticism refers to a spectrum of attitudes and beliefs that question or oppose the European Union (EU), its policies, or the process of European integration. It can manifest differently depending on the ideological perspective of the individuals or groups involved. Here's how euroscepticism aligns with different ideologies:

Conservatism:
Right-wing conservatism: Euroscepticism from the right often stems from concerns about national sovereignty and control over national laws and borders. These conservatives may view the EU as overly bureaucratic, infringing on national identity, and limiting economic freedom. They might advocate for a looser confederation of states rather than a centralized union.[17]

[17] Hans Kundnani (2016)"The Conservative Party and Euroscepticism: A Changing Relationship"

Liberalism:
Classical liberalism: Liberals might be eurosceptic due to concerns about democratic deficit within the EU institutions or issues related to economic liberalism. They might argue that the EU's regulatory framework restricts free markets and entrepreneurship.
Social liberalism: Some social liberals may be critical of the EU's policies on civil liberties, immigration, or social justice, feeling that EU regulations can undermine these values or fail to address them adequately across member states.

Socialism:
Left-wing socialism: Euroscepticism on the left often focuses on critiques of the EU's economic policies, perceiving them as favoring big business over workers' rights and social welfare. Left-wing eurosceptics may oppose EU austerity measures and advocate for policies that prioritize social equality and workers' rights.

Nationalism:
Nationalist movements: Nationalist eurosceptics are concerned with preserving national sovereignty and cultural identity. They may view the EU as eroding these aspects through its policies on immigration, integration, and economic harmonization. They often prioritize national interests over supranational governance.

Populism:
Populist movements: Populist eurosceptics typically appeal to the general dissatisfaction with established political elites and institutions. They frame the EU as an undemocratic entity that imposes policies without adequate popular consent. They may advocate for returning decision-making power to national governments seen as more responsive to popular will.

Environmentalism:
Green parties and environmentalists: Some environmentalists may be eurosceptic due to concerns about the EU's environmental policies. They may criticize the EU for not being ambitious enough in addressing climate change or for prioritizing economic interests over environmental protection.
In summary, euroscepticism is multifaceted and can arise from various ideological perspectives, each highlighting different aspects of concern ranging from sovereignty and democracy to economic policy and social justice. Understanding euroscepticism in these contexts helps to appreciate the diverse reasons why individuals and political groups might question or oppose the European Union and its integration efforts.

Conclusion

Euroscepticism is a complex and varied phenomenon that manifests differently across different regions and periods, lacking a universally accepted theoretical framework for its definition. It is not tied to any specific position on the Right-Left political spectrum. Some argue that it is part of a broader emerging divide that encompasses a growing range of issues. Research using Eurobarometer surveys indicates that the Eurozone crisis significantly contributed to the increase in euroscepticism in Europe. However, euroscepticism is not solely driven by economic concerns. Strong dissatisfaction with domestic political systems and the fragmentation of national party systems can also lead to a negative view of the EU's institutions. Additionally, it remains unclear whether the refugee crisis alone was a major factor or if it, combined with the lingering effects of the economic crisis, contributed to the rise in euroscepticism.

Authors[2]: Altin Bulku
PhD Student, Sports University of Tirana
Authors[3]: Kujtim Kapedani
Assoc.Prof.Dr, Sports University of Tirana

ABSTRACT

This clinical article underscores the global significance of core training in sports physiotherapy, with a focus on enhancing performance and minimizing injuries. The core concept has garnered considerable attention in media and scientific journals from the end of the last decade to the present. The role of core musculature in movement, trunk maintenance, and vertebral column stability has prompted a wide range of studies since 1950. The effective control of abdominal and lumbar muscles is crucial for preventing and recovering from musculoskeletal pathologies, maintaining posture, and improving sports performance.

Numerous studies have demonstrated that excellent core stability is linked to better physical performance across various sports. Proper force transmission from the lower to the upper limbs and effective stabilization provide a solid foundation for developing muscular strength, thereby enhancing the effectiveness of athletic movements. A strong and stable core improves an athlete's lower limb mobility, speed, and overall performance.

This article is based on a comprehensive review of scientific literature from databases such as Medline, Scopus, Web of Science, PubMed, and Cochrane Library, supplemented by Google Scholar, Springer Link, and Elsevier. A total of 32 publications were analyzed.

The purpose of this article is to review the literature examining the relationship between postural variations, core stability, and performance in sports that require balance and posture. It identifies gaps in the current literature and suggests areas for further research.

In conclusion, this article highlights the importance of a holistic approach to core training in sports physiotherapy for enhancing athletic performance and reducing injuries. The core is essential for stability, power transmission, and injury prevention. The findings and recommendations presented contribute to the body of knowledge in sports physiotherapy and serve as a valuable resource for professionals working with athletes at all levels.

Keywords: Core Training, Physiotherapy, Rehabilitation, Stability, Posture

Introduction

Soccer is one of the most popular sports globally, engaging players, spectators, and viewers alike. The latest FIFA report from 2007 highlights that 265 million people around the world regularly participate in the game of football. Performance in football is influenced by technical, tactical, physiological, and mental aspects. Physical fitness is a crucial element affecting football performance due to the high physical demands of the game.

As a high-impact sport, football poses a significant risk of injury, both in contact and non-contact situations. Studies have demonstrated that the risk of injury for professional players is 1,000 times higher compared to the general population [3].

The frequent changes in direction, accelerations, and rapid braking during matches increase the likelihood of muscle injuries among soccer players. These injuries not only impair player performance but also impose economic burdens on clubs due to rehabilitation costs. Power and speed are critical in decisive moments of the sport, which is why sprinting and changing direction are common during goal-scoring situations.

FULL TEXTS BOOK

Research indicates that during a high-level soccer match, a player performs a sprint every 90 seconds, with each sprint lasting an average of 2-4 seconds [5]. According to some studies [19], these sprints are short and explosive. Although evidence is limited, incorporating basic stabilization exercises into injury prevention programs, particularly for the lower extremities, has been shown to reduce injury rates [6,7,8]. A universally accepted definition of core stability is still lacking.

The importance of core musculature in movement and trunk stability, as well as vertebral column stability, has prompted extensive research since the 1950 until today [1]. Initially, the focus was on muscle strengthening through specific exercises. Over time, research has evolved to analyze the effects of various training methodologies aimed at trunk muscle strengthening, seeking optimal parameters for prevention, rehabilitation, and physical conditioning of football players.

Surface electromyography, which studies the myoelectric signal, has been a fundamental tool in scientific research related to the abdominal and lumbar regions. Its widespread use is attributed to technological advancements and the need to address existing scientific gaps.

There is growing interest in a more holistic view of the human body, transitioning from the concept of abdominal musculature to that of the "core region." The core, defined as "the functional center of the body," has become a significant focus of study. Over the past decade, a science of "core training" has emerged, revolutionizing many training methodologies and playing a leading role in various aspects of motor activity.

Core stability refers to the ability to maintain functional stability and neuromuscular control in the core region. Effective control of the abdominal and lumbar muscles is essential for preventing and recovering from musculoskeletal pathologies, controlling posture, and enhancing sports performance.

Core stability encompasses the lumbopelvic region, the hips, and the ability to maintain the balance of the vertebral column within its physiological limits, thereby reducing displacement and preserving structural integrity [2]. Some researchers propose viewing the core as a system of kinetic chains responsible for transferring force and energy between the lower and upper extremities [9,10].

Many muscles affecting the knee joint and its surrounding areas originate in the lumbopelvic region. Therefore, a loss of core muscle control and strength can increase rotational forces on the knee, particularly during the landing phase after a jump, which may lead to damage to the anterior cruciate ligament (ACL).

Core Concept

The core concept has been a focal point in media and scientific literature since the end of the last decade [4]. However, a precise and universally accepted definition remains elusive, with variations in interpretation based on different authors and contexts.

Historically, the core has been described as a "cylindrical box" encompassing the abdominal muscles in the front, the gluteal and paraspinal muscles in the back, the diaphragm at the top, and the pelvic floor/coxofemoral joint as the base.

Some authors [11] have expanded this definition to describe the core as the "lumbopelvic complex," which includes the lumbar vertebral column, pelvis, coxofemoral joint, and all associated muscles that produce or limit movements of these segments.

As suggested by other researchers [16], the definition of core endurance is context-dependent, varying between biomechanical laboratories, rehabilitation clinics, and sports centers. This definition must be grounded in principles from engineering and biomechanics, as well as the morphological and functional characteristics of the core structures. In light of these considerations, some researchers propose defining the core as the ability of osteoarticular and muscular structures, coordinated by the motor control system, to maintain or return to a desired trunk position or trajectory when subjected to internal or external forces. In training or sports medicine contexts, core endurance can be viewed as a physical quality that can be modified through training or rehabilitation, though it remains context-specific.

FULL TEXTS BOOK

In sports contexts, the core is often defined as "the group of all anatomical components between the sternum and the knees, with a focus on the abdominal region, lumbar spine, and coxofemoral joint." This perspective is supported by other researchers [12,13] who suggest that "core muscles" include "all muscles between the shoulders and pelvis that facilitate the transfer of forces from the vertebral column to the extremities."

Consequently, the core is considered a muscular corset that functions as a unit to stabilize the entire body, particularly the vertebral column, both during limb movements and at rest. It acts as a bridge connecting the upper and lower body, where forces are transmitted and generated.

Researchers [14] have highlighted the core's role in improving balance, strength, and proprioception during trunk examination, daily activities, and sports. In alternative medicine, the core is often viewed as "energy," serving as the source of all limb movements and the origin of all energy, referred to as the "inferior dan tian."

The core comprises both passive and active elements: passive structures include the thoracolumbar column and pelvis, while active structures involve the trunk muscles. These muscles are crucial for maintaining the stability of the vertebral column and pelvis, as well as generating and transferring forces between the trunk and limbs during sports activities.

Since the core connects the upper and lower limbs, controlling strength, balance, and movement in this region can optimize the entire kinetic chain, which includes both upper and lower limb athletic gestures. Some criteria for enhancing the sports specificity of core stability training programs involve performing exercises on the feet and incorporating three planes of motion. While some studies have analyzed core stability programs [17,18], there is a noted lack of research specifically evaluating sport-specific core stability programs that apply these criteria, highlighting a limitation in existing studies.

It is also important to train core muscles independently, despite their interdependence through fascial connections, which form a dynamic system that enables efficient movement and force transmission throughout the body.

Core anatomy includes all structures between the scapula and gluteals. Core structures can be categorized into stabilizers, such as the internal and external oblique muscles, which control movement angles eccentrically, and mobilizers, such as the rectus abdominis and iliocostalis, which accelerate movement concentrically.

The muscles constituting the core are responsible for maintaining posture in various positions and facilitating safe and effective movement through different planes and directions. The core, represented by the coxo-lumbo-pelvic complex, is the center of the kinetic chains from which all upper and lower limb movements originate.

An accurate anatomical understanding of the core region should also include the axial skeleton (coxofemoral and shoulder joints) and connective tissues (tendons, ligaments, fascia).

Researchers [20] have divided the core into three subsystems based on analogies with the "spinal stabilization system":

- **Passive**: Comprising vertebral ligaments, intervertebral discs, and articular fasciae.
- **Neural**: This subsystem controls core muscle usage through feedforward and feedback mechanisms.
- **Active**

The classification model proposed by researchers [21]is detailed in the following table (Tab 1).

LOCAL STABILIZER	GLOBAL STABILIZER	GLOBAL MOBILIZER
Transverse abdominal	Obliquo sterno	Rectus abdominis
Interspinal	Internal oblique	Ileocostal
Psoas (posterior fascia)	Gluteus medius	Piriformis

Pelvic muscles		Hip bi-articular muscles

Tab 1. Classification of Core Muscles

The core muscles can be classified into various groups based on their anatomical location and function. The primary groups include:

1. **Abdominal and Paraspinal Muscles**: These muscles are fundamental components of the core and have been extensively studied. They are divided into two main categories:
    - **Abdominal Muscles**: This group includes the rectus abdominis, external oblique, internal oblique, and transverse abdominis. These muscles are crucial for trunk flexion, rotation, and stabilization.
    - **Paraspinal Muscles**: This group consists of the spinal erectors (such as the iliocostalis and latissimus dorsi) and deeper trunk muscles like the rotatores, intertransversarii, and multifidus. These muscles are involved in extending and stabilizing the spine.

Particularly, the transverse abdominis is notable for its close anatomical relationship with the trunk and the thoracolumbar fascia. It has been the focus of many studies due to its role in core stability and is often targeted through specific exercises.

2. **Diaphragm**: The diaphragm is considered the upper part of the core region. Its contraction, in synergy with the transverse abdominis and pelvic floor muscles, increases intra-abdominal pressure and enhances trunk stability, independent of its role in respiration.
3. **Coxofemoral Joint and Pelvic Muscles**: These structures form the base of support for the core. Key muscles in this region include the gluteal muscles. The gluteals are significant for stability and force production during specific sports movements. They help stabilize the trunk through closed kinetic chain movements and contribute to the generation of power and force for lower limb activities.
4. **Iliopsoas**: The iliopsoas, a major muscle of the lumbar region, plays a role in trunk flexion but does not contribute significantly to stabilization. Hypertonicity in this muscle can increase the load on the lumbar spine.

Core Functions

The core performs four essential functions crucial for athletic performance:

1. **Movement Prediction**: The core helps prepare the body efficiently for dynamic movements by anticipating the demands of activity.
2. **Vertebral Column Stabilization**: It creates a stable base for effective power transmission.
3. **Support During Weight-Bearing Activities**: It ensures proper support during exercises and activities involving weight-bearing.
4. **Coordination Between Upper and Lower Body**: The core acts as a bridge, facilitating coordination of movements between the upper and lower body during activities such as walking and running.

Methodology

Core training is crucial for optimizing athletic performance and preventing injuries. The program outlined utilizes the "Key Principles of the Four Pyramids," which include four distinct phases: activation, stabilization, integration, and perturbation. Each phase has specific objectives and incorporates various exercises to achieve these goals.

FULL TEXTS BOOK

1. **Activation Phase**

The objectives of the activation phase are to reduce pain, regulate breathing, improve posture and range of motion, strengthen the core, increase coxofemoral joint strength, and provide patient education. Therapeutic interventions during this phase include: Modalities, Biofeedback, Diaphragmatic breathing, Core isometrics, Coxofemoral exercises, Pelvic positioning, Mobility exercises.

2. **Stabilization Phase**

In the stabilization phase, the focus shifts to coordinating respiration, aligning posture, and enhancing core strength without external cues. The objectives are to maintain proximal stability with distal mobility, generate force, introduce rhythmic stability, and regain trunk and coxofemoral joint strength. Exercises include:

- **Counter-movement exercises**: Dead-bugs, Bird-dogs, Lunge presses
- **Basic resistance exercises**: Plank (lateral, Copenhagen), Bridge
- **Balance and proprioception exercises**

Haroy et al. investigated the effectiveness of Copenhagen exercises in a group of 35 semi-professional soccer teams. The study found that performing three levels of the Copenhagen plank three times a week during the pre-championship period (6-8 weeks) and once a week during the season (28 weeks) led to a significant 41% reduction in pubalgia-related injuries, highlighting the importance of this exercise in injury prevention at this level [31].

3. **Integration Phase**

During the integration phase, athletes must demonstrate restored muscle relationships and maintain proper posture during multi-articular exercises. Objectives include performing movements such as sitting, hanging, falling, holding, vertical/horizontal pressing, and lateral sliding.

4. **Perturbation Phase**

In the perturbation phase, athletes are required to maintain proper posture under varying loads and demonstrate good neuromuscular control on unstable surfaces or stable surfaces with closed eyes. The main objectives are to enhance the central nervous system's ability to adapt to external forces, improve power transmission, and enhance reaction time.

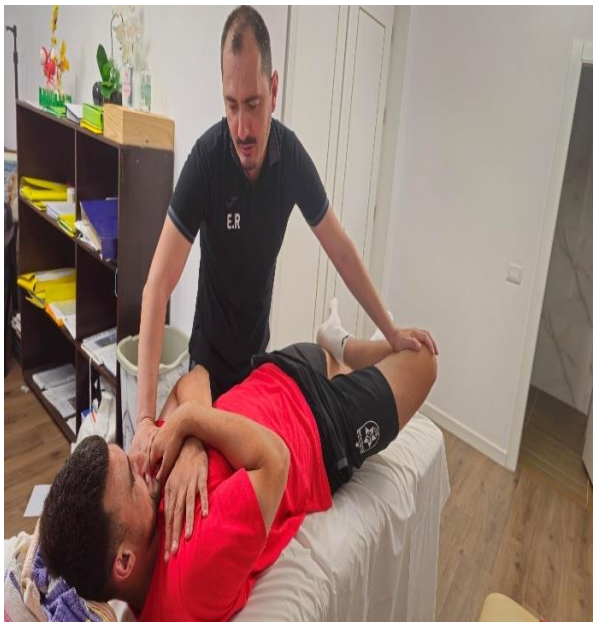
Clinical Assessment of Core Injuries

The clinical assessment of core injuries involves understanding the injury mechanism, sport-specific demands, and conducting both objective and subjective evaluations. This includes functional tests and specific assessments to identify the primary cause of the injury.

- **Injuries**: The rectus abdominis and adductor longus are commonly injured due to their opposing force vectors, acting as antagonistic muscles during coxofemoral extension and core rotation. These muscles connect to the pelvis along the pubic symphysis, forming the pubic aponeurosis or "plate," which serves as a fulcrum for these structures [23].
- **Subjective Symptoms**: Patients often report deep, chronic pain in the inguinal region and lower abdomen, which tends to ease with rest but can be exacerbated by directional changes. Common injury mechanisms identified include strains, hyperextension with rotation, and excessive load on the vertebral column [24].

FULL TEXTS BOOK

- **Objective Assessment**: Objective assessment includes palpation to gauge sensitivity in the core region [25], measuring mobility in the thoracic and pelvic areas, and examining the ribs. Strength measurement, particularly of adductor and abductor muscles, is also essential. Tyler et al. reported a 17-fold increase in injury risk for individuals with adductor strength less than 80% of normal [26].
- **Functional Testing**: Functional tests assess the base level of function and include exercises such as single-leg squats/step-ups, hip bridge tests with one foot, and trunk durability tests. Chaudhary et al. found that increased anterior-posterior deviation of the pelvis during a 3" step-up was associated with an elevated risk of injuries to the shoulders, ulnar collateral ligament, and elbows during major league bullpen games [27]. Meister et al. also identified a correlation between core stability, as determined by pelvic deviation during single-leg balance, and extremity injuries among professional shooters during competitive seasons [28].

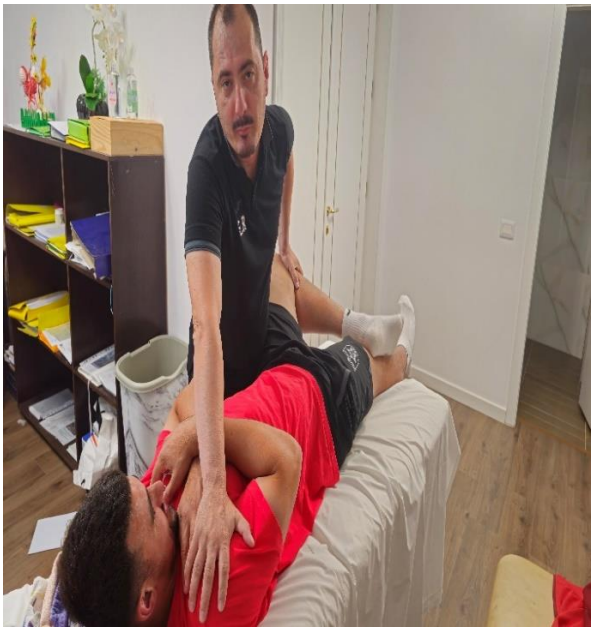


Testing trunk resistance is crucial for understanding the relationship between core stability and lower extremity injuries. Research by various authors [22] has provided insights into average endurance times for trunk exercises. Studies indicate that women generally exhibit greater endurance in flexion and extension exercises, whereas men tend to show more endurance in side bridge exercises. The authors [15] found that athletes with lower core stability are at a higher risk of sustaining lower extremity injuries compared to those with higher core stability. Injured athletes often demonstrate reduced hip abduction and external rotation, as well as decreased resistance in extension and side bridge exercises [29]. The test of resistance adduction is usedabout the differential patology of the pelvis from hip and about the identified patients without pubalgia

Figure 1. Test of resistance adduction

Kurowicki et al [22]. identify central muscle damage using four key criteria. Each test is designed to induce pain or reproduce the patient's symptoms:

FULL TEXTS BOOK



a. Sit-up with crossed resistance

b.Sit-up test with extended-leg

c. Test of hip flexion against resistance in extrarotation contracture

d. Test of adductor

Figure 2. Test of adductor and hip flexion

• **First Test**: Sit-up with crossed resistance in a quadruped position. The patient lies supine, positions the symptomatic side limb in a square shape, and brings the contralateral shoulder towards the symptomatic side against the therapist's resistance (Fig. 2a).
• **Second Test**: Extended-leg sit-up. The patient lies supine, raises both shoulders and the symptomatic leg approximately 10 inches off the bed, and attempts to maintain this position against resistance (Fig. 2b).
• **Third Test**: Coxofemoral flexion against resistance in external rotation (Fig. 2c).
• **Fourth Test**: Presence of adductor contracture while the patient is in a square position [30] (Fig. 2d).

FULL TEXTS BOOK

Finally, the author employs a custom dynamic evaluation to assess trunk stabilization across multiple planes. The therapist places the patient in a dead bug starting position (Fig. 3) and applies resistance in various directions to challenge the stability of each fascial line. The therapist communicates with the patient to identify the most challenging direction of stabilization. This assessment aids in identifying deficits and developing a personalized program.

Figure 3.Evaluation of trunk stabilization in multiple planes

RESULTS

Core stability plays a crucial role in athletic function and performance. Strengthening these muscles impacts the central nervous system, as these muscles help maintain trunk alignment and provide a stable pelvis foundation, thereby preventing instability. This stability enhances overall movement efficiency, dynamic control, and injury prevention during sports activities [22].

Core stability is closely related to the prevention and rehabilitation of lower limb injuries. The core is the primary point through which the lower limbs generate or resist forces during movements. Authors [15] have emphasized that core stability is vital for injury prevention. Reduced lumbo-pelvic stability has been shown to correlate with an increased risk of lower limb injuries, particularly in women. Beyond its stabilizing function and force generation, core functionality is integral to all sports involving extremities, such as athletics, football, swimming, and cycling.

A recent study by the authors [22] found that core stability exercises improve lower limb symmetry during jumping and kinetic variables during one-leg jumps and landings in patients who have undergone anterior cruciate ligament reconstruction. In a systematic review and meta-analysis, the authors [22] evaluated the effects of injury prevention programs incorporating core stability exercises on knee and ACL injuries. They discovered that such exercise programs reduced knee injury incidence by 46% in men and 65% in women.

Since the core connects the lower and upper limbs, controlling the strength, balance, and movement of the core can optimize the entire kinetic chain, including isolated athletic gestures of both the upper and lower limbs. Several studies have shown that excellent core stability is associated with improved physical performance in all sports. A precise transmission of forces from the lower to the upper limbs, along with good stabilization, provides a strong foundation for developing muscular strength, enhancing the effectiveness of athletic movements. A strong and stable core improves mobility, speed, and performance in athletes' lower extremities.

DISCUSSION

Many researchers question the significance of the connection between core training and performance, especially regarding injury prevention. Despite its importance in sports, scientific literature does not provide conclusive evidence about the actual impact of core training methods.

FULL TEXTS BOOK

Core training has gained prominence due to the belief that it contributes to injury prevention and the treatment of lower back pain. However, research on this topic remains contradictory and inconclusive. Studies often use abdominal muscle training programs, based on the notion that a "strong core" translates to increased lumbar spine support. Jeng (1999) suggested that strengthening the muscles of the legs, back, and abdomen could reduce lower back pain [32]. Conversely, McGill et al. argue that core muscle development is essential for preventing and rehabilitating lumbosacral injuries.

Research by the authors [32] reviews various studies that challenge the predominant view of abdominal muscles in preventing back pain. Lederman highlights the lack of evidence supporting the predictive role of the transversus abdominis muscle and its delayed activation in cases of lower back pain. He argues that common core stability exercises fail to restore the activation time of the abdominal muscles and that most exercises do not significantly improve core strength and endurance. This is supported by comparisons showing that basic exercises and general activation exercises are equally effective in preventing or rehabilitating lower back pain, indicating that improvements are likely due to the overall benefits of exercise.

"Core stability" is crucial in treating pubalgia, involving the synergistic training of the abdominal, adductor, and lumbar muscles to create a balanced muscular synergy among these groups. Specific exercises using the Swiss Ball are employed for this purpose. Core stability exercises target all abdominal muscles (rectus, transverse, oblique, and pyramidalis). Notably, exercises performed as part of a core stability program can achieve greater muscle activation compared to the same exercises done on a stable surface. Despite the lack of strong scientific evidence supporting core training's effectiveness, it remains widely used for prevention, sports performance, and rehabilitation, keeping the debate on its utility ongoing.

CONCLUSIONS

In conclusion, this article underscores the importance of a comprehensive approach to core training in sports physiotherapy for enhancing athletic performance and reducing injuries. The core plays a fundamental role in providing stability, transmitting power, and preventing sports-related injuries. This article offers valuable insights into core anatomy, function, various sports injuries, and clinical assessment techniques, benefiting sports physiotherapists.Implementing the "Four Principles of the Pyramid"—activation, stabilization, integration, and perturbation—provides a scientifically-based framework for designing effective programs. By adhering to this approach, athletes can improve core function, stability, and performance while minimizing injury risk. The results and recommendations presented contribute to advancing knowledge in sports physiotherapy and serve as a valuable resource for professionals working with athletes at all levels.

VALIDITY AND RELIABILITY EVALUATION OF THE FAMILY ROUTINES INVENTORY IN TURKISH: A METHODOLOGİCAL RESEARCH

Arş. Gör. Dr. Deniz S. YORULMAZ-DEMİR
Artvin Çoruh University, Faculty of Health Sciences
Prof. Dr. Deniz KOÇOĞLU-TANYER
Selçuk University, Faculty of Nursing

ABSTRACT

Aim: This research evaluated the validity and reliability of the Family Routines Inventory in Turkish.
Methods: This methodological research was completed with 390 adults. In the psychometric analysis of the scale, confirmatory factor analysis and criterion validity were examined in validity evaluation, item-total score correlation, split-half test consistency, and Cronbach's α coefficient were examined in reliability evaluation.
Result: 61.8% of the parents are women, 56.9% have a language education or higher, and 44.6% work in a job that does not require working on weekends. In the confirmatory factor analysis during the evaluation of the validity of the inventory, model fit indices were found to be $\chi 2/df=4.310$, RMSEA=0.092, CFI=0.647, GFI=0.741, AGFI= 0.699. The model improvements did not show a corrective effect on these values. During the evaluation of the reliability of the inventory, it was determined that item-total score correlation values varied between 0.207 and 0.574, Cronbach's α values were 0.886, and there was a high correlation between the two halves (r: 0.717, $p<0.001$).
Conclusion: As a result of the examinations, it was determined that the Family Routines Inventory has reliability qualities but does not have validity qualities. The need for a valid measurement tool that can assess family routines for Turkish culture continues.
Keywords: Family, validity, reliability, routine.

INTRODUCTION

The family is a complex social system in which family members depend on each other and their environment (Schlebusch et al., 2016). Although there are differences in family lives in different cultures, Similar practices, and family routines are observed in situations such as household management, child care, meal times, leisure activities, marriage, and death (Crespo et al., 2013). Family routines (AR) are defined as “behaviors that occur predictably throughout daily or weekly family life that can be observed repeatedly by two or more family members” (Jensen et al., 1983).

Because AR is repetitive behavior, it allows a supportive interaction between the child and the parent, creating an ideal educational environment for the child and creating multiple learning opportunities (Ferretti & Bub, 2017). AR is characterized by improving parental competence, ensuring a sense of belonging among family members, protecting and improving child health, increasing academic achievement, supporting the sociocultural development of family members, and family well-being (Schlebusch et al., 2016). AR has a dynamic structure; These are behaviors that can change and differentiate in the face of loss, life crises, and sudden events (Churchill & Stoneman, 2004). In addition, AR has a significant place in protecting the psychosocial health of family members, maintaining loyalty between family members, and supporting family integrity by acting as a buffer against adverse life events and conditions (Churchill & Stoneman, 2004; Ferretti & Bub, 2017).

When the reflections of family routines on health and health outcomes are evaluated, In adults with high AR, tobacco, alcohol, and addictive substance (cannabis) use is less, while violence and substance use disorders are more in adults with inconsistent AR (Abar, 2020), behavioral problems are less in kindergarten students with AR, and pro-social behavior gains are observed. Higher and their physical health status is better (Ferretti & Bub, 2017); by supporting AR with families with 2-5-year-old children,

FULL TEXTS BOOK

the body mass index in children decreases positively, and the risk of obesity decreases (Hanies et al., 2013), the disabled people's It has been reported that high AR is associated with psychological health in parents with children, and depression and stress are lower in parents with high AR (Larson & Miller, 2014).

Within the scope of this information, it is understood that family routines are an issue that affects the health of individuals, families, and society. In this context, the question of determining the family routines of individuals and families comes to the fore. Having a valid and reliable measurement tool to assess family routines can help determine a family's routine behaviors, evaluate the impact of family routines on health outcomes, and the gains that can be achieved by supporting family routines (Hatherly et al., 2023; Romano et al., 2022). Although there are valid and reliable measurement tools that evaluate family routines in different languages worldwide (Jensen et al., 1983), the lack of a measurement tool that assesses family routines in our country is a significant deficiency in the literature. Within the scope of all this information, this study aimed to evaluate the validity and reliability of the Family Routines Inventory in Turkish.

METHOD

Research Purpose and Type

This research was carried out using a methodological design to evaluate the validity and reliability of the Family Routines Inventory (FRI) in Turkish.

Adaptation Steps of the Family Routines Inventory

The inventory was first translated from Turkish to English, sent to 12 experts, and feedback was received from 10 experts. Following expert opinions, a preliminary draft form of the ARE was created by making minimal adjustments to some items. The inventory, for which a preliminary draft form was created, was translated from Turkish to English again by the translation center, and author approval was obtained. No changes were made to the inventory during the author's approval stage. The preliminary draft form was created for the inventory, which was pre-applied to 35 participants. During the pre-application phase, clarity, readability, etc., of the items in the inventory are checked. No negative feedback has been received about it. After the pre-application phase, the data collection phase started, and when the data collection phase was completed, the psychometric evaluation of the inventory was made.

Data Collection Tools

Research data were collected using the Personal Information Form and Family Routines Inventory.

Personal Information Form: This form is prepared by the researchers; there are 12 questions, including age, gender, marital status, employment status, number(s) of children, child age(s), and presence of children in need of constant care.

Family Routines Inventory (FRI): Jensen et al. (1983) developed it to evaluate the daily functioning of families in a wide range of families with children aged 0-16. The inventory is answered on a 4-point Likert scale: Every day (3 points), 3-5 times a week (2 points), 1-2 times a week (1 point), and Rarely (0 points). There are no reverse-scored items in the inventory. The total score is obtained by summing the responses to each item. The total score that can be obtained from the inventory is between 0 and 84. An increase in the total score obtained is not interpreted as having a high family routine. The Cronbach Alpha reliability coefficient of FRI was reported as 0.79.

Study Group

Considering the number of ARE items (28 items), reaching 140-280 participants is necessary. It was aimed to reach 300-500 participants to evaluate the psychometric properties of the inventory correctly. The research was completed with 390 participants.

Collection of Data

The data were collected by the researchers between June 1, 2023, and September 30, 2023, in a Family Health Center (FHC), where the community frequently applies for primary health care services.

FULL TEXTS BOOK

Data Analysis

The construct validity of the inventory was examined using Confirmatory Factor Analysis (CFA) and Explanatory Factor Analysis (EFA). In the CFA stage, $\chi 2/df$ value and standard fit indices (RMSEA, CFI, GFI, AGFI, NFI) were interpreted. In the EFA stage, the factor loadings of the items, the sub-dimensions in which the items were collected, and the explained variance rates were examined. For reliability, they focused on item-total score correlation, split-half reliability, and Cronbach's alpha reliability coefficient. A significance level of $p<0.05$ was considered in interpreting all analysis results.

Ethical Considerations

The researchers obtained permission from the authors (by e-mail) to adapt the FRI to Turkish. The study was approved by the ethics committee (number: E-18457941-050.99-38208, date: 02.02.2022) and institutional permission (number: E-17720518-602.01.01, date: 26/05/2022). The study adhered to the Declaration of Helsinki.

RESULTS

61.8% of the parents participating in the research are women, 56.9% have a seconder education or higher, and 44.6% work in a job that does not require working on weekends. While 40.5% of parents have someone to help with child care, 3.6% have a child who needs constant care.

Validity

The construct validity of the Turkish inventory was examined using CFA analysis. First of all, the adequacy of the sample size was discussed with the Holter value, and it was determined that the sample size should be at least 128 at the $p = 0.05$ significance level and at least 134 at the $p = 0.01$ significance level. Within the scope of these results, it was concluded that the sample size ($n = 390$) was sufficient. Before examining the construct validity of the inventory, the data set was analyzed to determine whether it met the average distribution assumptions. As a result of the evaluations, it was determined that the data set met the average distribution assumptions, and the construct validity of the inventory was evaluated with the maximum likelihood method, which tries to explain the factor structure with the highest probability for the measurement tools. It was determined that the factor loadings of the items in the inventory were between 0.19 and 0.66, some items in the inventory did not contribute sufficiently to the inventory, and the factor loading of some items was determined to be below 0.45 (Figure 1). When the fit indices of the inventory were examined, it was determined that the fit values of the inventory were far from acceptable values ($\chi 2 = 1508.541$, $\chi 2/df = 4.310$, RMSEA= 0.092, CFI= 0.647, GFI= 0.741, AGFI= 0.699) (Table 1).

FULL TEXTS BOOK

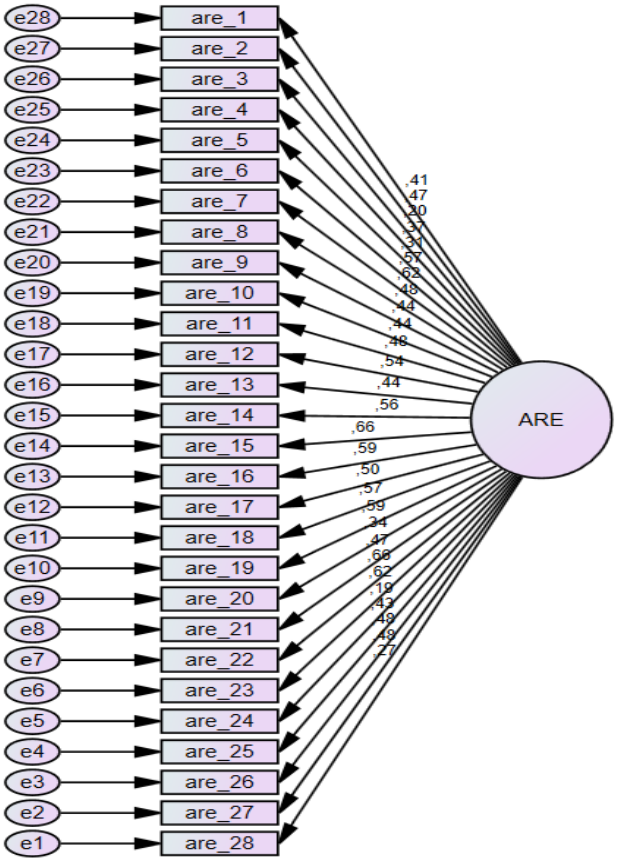

Figure 1. CFA Result and PATH diagram

Table 1. Acceptable fit, perfect fit, and scale values for CFA

	Acceptable fit	Perfect fit	Scale values
X^2/sd	<5	<2	4.310
GFI	> 0.90	>0.95	0.741
AGFI	> 0.90	>0.95	0.699
CFI	> 0.90	>0.95	0.647
RMSEA	<0.05	<0.08	0.092
RMR	<0.05	<0.08	0.074
NFI	> 0.90	>0.95	0.588

χ2: Chi-square, sd: degrees of freedom, χ2/sd: Chi-square/degrees of freedom, AGFI: Adjusted Goodness of Fit Index, GFI: Goodness of Fit Index, NFI: Normed Fit Index, CFI: Comparative Fit Index, RMSEA: Root Mean Square Error of Approximation, RMR: Root Mean Square Residual (Assessment was conducted in the default model)

Since the fit indices were far from acceptable and perfect fit values, various modifications were made, but it was determined that the fit values were outside the acceptable values. Explanatory Factor Analysis (EFA) was performed when compliance was not achieved during the CFA phase. In EFA, it was determined that the factor loadings of the items were between 0.23 and 0.66. When the sub-dimensions of the items in the inventory are examined, it is seen that items 8 and 10 are not included in any sub-dimensions, items 18, 14, 15, 6, 25, 26, 4, 5 and 13 are in two, and three sub-dimensions. It was determined that only item 6 was included under the fifth sub-dimension. In addition, when the sub-

FULL TEXTS BOOK

dimensions formed in the EFA phase were examined, it was determined that the items in the sub-dimensions were not related and did not provide conceptual integrity. These results show that the Family Routines Inventory does not meet the validity criteria for Turkish.

Reliability

The reliability of the Family Routines Inventory was examined with item-total score correlations, split-half correlation coefficient, and Cronbach α reliability coefficient. The item-total score correlation coefficients of the inventory are between 0.207 and 0.574.

The Cronbach α value for the entire inventory was calculated as 0.886, the Cronbach α value for the first half was calculated as 0.796, and the Cronbach α value for the second half was calculated as 0.817. In addition, the Spearmen-Brown coefficient of the inventory was found to be 0.835, Guttman's split-half coefficient was 0.835, and the inter-half correlation coefficient was 0.717 (Table 2).

Table 2. Reliability results of the Family Routines Inventory (n=390)

Features	Scale value
Cronbach α	0.886
First half Cronbach α	0.796*
Second half Cronbach α	0.817**
Spearman-brown	0.835
Gutman split half	0.835
Correlation between two halves	0.717

*İtem 1-14, **İtem 14-28

DISCUSSION

AR is behavior that repeats at regular intervals in a family; It creates a supportive environment between the child and the parent. AR has significant effects on the bio-psycho-socio-cultural health of family members in the short and long term (Schlebusch et al., 2016; Hatherly et al., 2023). Various studies in the literature report that positive gains can be achieved in the health outcomes of the child and the parent by supporting AR (Hanies et al., 2013; Larson & Miller, 2014; Romano et al., 2022). Although there are valid and reliable measurement tools that can evaluate the family routines of parents and families in different languages around the world (Jensen et al., 1983; Satoh et al., 2014), the lack of a valid and reliable measurement tool that evaluates family routines in Turkey is an essential deficiency in the literature. For this reason, this study aimed to assess the methodological evaluation of the Family Routines Inventory.

When the results obtained in the CFA phase of ARE are examined, it is seen that the standard fit indices are far from acceptable values and perfect fit values. EFA was performed to evaluate the construct validity of ARE because construct validity was not ensured. When the validity results of the ARE were examined at the EFA stage, it was determined that the factor loadings of some items were lower than 0.32, some items were included in more than one sub-dimension, and the explained variance rate of the inventory was low (43%). Within the scope of the results obtained during the evaluation of the construct validity of the ARE, it was determined that the construct validity of the ARE was not ensured.

When the reliability results for ARE were examined, it was determined that the correlation coefficient of the items was between 0.207 and 0.574, and the Cronbach α reliability coefficient was 0.886. When the two-half test consistency of the ARE was examined, it was determined that there was a high correlation between the two halves (Spearmen-Brown r: 0.835, Guttman's r: 0.835, inter-half r: 0.717). Although these results show a high correlation between the Cronbach α reliability coefficient of the ARE and the two halves, they show that some items in the ARE do not contribute sufficiently to the

FULL TEXTS BOOK

inventory. Within the scope of the reliability results obtained from the research, it was concluded that ARE meets the reliability criteria to a limited extent.

CONCLUSION AND RECOMMENDATIONS

This study, which was conducted to evaluate the validity and reliability of the Family Routines Inventory for Turkish, determined that the inventory had reliability qualities but did not have validity qualities. Considering the importance and impact of family routines on health outcomes, a valid and reliable measurement tool should be introduced into the literature to evaluate the family routines of parents and families in Turkish culture.

ABSTRACT

Anatolia, located at the convergence and transit point of three distinct continents, has functioned as a refuge and dispersal hub for several species inhabiting the neighboring continents throughout various geological periods in history. During the Ice Age, numerous species in the Northern Hemisphere became extinct, but certain species went to Anatolia and established themselves there. As the ice age ended and the climate became more temperate, these species expanded their presence to three continents starting from Anatolia. Consequently, Anatolia possesses a highly abundant array of species variety and genetic diversity. Türkiye is home to the natural habitats of the wild progenitors of numerous domesticated animal species, as well as many cultivated plant species. Türkiye has a significantly high rate of endemic species. It is a significant asset in terms of biodiversity for Türkiye. The industries of agriculture, cattle, fishery, forestry, tourism, medicine, and pharmaceuticals, which are the foundation of Türkiye's traditional economy, rely heavily on our natural resources and species diversity as their main supply of raw materials. Furthermore, numerous live species in Türkiye are highly sought after on a worldwide level due to their value as genetic resources and as a source of raw materials. The Anatolian area is a peninsula that harbors the untamed progenitors of several plant and animal species, which play a significant role in human sustenance. Conversely, compatibility is being assessed within the Anatolian environment by the examination of plant and animal creatures that have been imported from various geographical locations. The cultivation and experimentation of new kinds of plants and animals have the potential to benefit our country. However, when it comes to plants that are native to different regions and are grown in other places, their physiological and metabolic activities may also differ based on their ability to adapt to the surroundings and their genetic traits. Observations are made regarding variations in the number and concentration of bioactive compounds present in plants, as well as the identification of variances in secondary metabolites across plants cultivated under different conditions. Intensive research is being conducted worldwide on the transformation of herbal products into medicinal compounds. The scientific analysis of changes in plant composition and the implementation of extensive profile studies play a significant role in the economy. In the Sivas region, a few producers have recently started cultivating the *Gynura procumbens* plant, also known as long-life spinach. It is believed by the

FULL TEXTS BOOK

public to have beneficial effects in treating diabetes mellitus. Nevertheless, the scientific literature does not contain any evidence of the biological activity of this plant. The objective of this study is to elucidate the antibacterial properties of the *G. procumbens* plant. Growers have extracted the *Gynura procumbens* plant by using ethanol, methanol, ethyl acetate, and water to obtain extracts from its green leaves. The extract's antibacterial activities on different bacterial and fungal strains have been investigated using the Minimum Inhibition Concentration (MIC) method. The majority of plant extracts have been found to possess a moderate level of antibacterial activity against specific types of microbes.
Keywords: *Gynura procumbens*, long-life spinach, extraction, antimicrobial activity.

INTRODUCTION

Biological richness and diversity can be defined as the comprehensive knowledge and genuine comprehension of the full range of possibilities within a particular group of living organisms, taking into account both the temporal and spatial aspects of each taxonomic category. To comprehensively achieve the goals of biodiversity, it is imperative to thoroughly examine and elucidate not only the genetic, species, and ecosystem diversity of an ecosystem, but also its functional diversity (Işık, 2014). It is crucial to understand the composition of plant organisms, the advantages of their metabolites, the assessment of their efficacy, and the practical applications of utilizing them. While it is acknowledged that there are recognized plant species globally, there is currently no comprehensive study on the composition and behavior of these species, both at a national level and in populations cultivated under varying geographical conditions. Humans have consistently derived advantages from plants and herbal remedies to fulfill their dietary requirements and enhance their well-being. Currently, medicinal and aromatic plants are the most abundant sources in contemporary medicine, traditional medicine, culinary traditions, the development of synthetic drugs, and pharmaceutical research (Baytop, 1999; Ncube et al., 2008; Farnsworth et al., 1985; Ekim et al., 1989, Erik and Tarıkahya, 2004). Technological and industrial progress has expedited people's access to information and resources, effectively reducing the global scale for humanity. Individuals are endeavoring to cultivate plants that they have imported from foreign countries, particularly in their local regions, and the majority of these plants are thriving. The plant under investigation in this study is *Gynura procumbens*, which is not native to Anatolia. It has been cultivated and utilized in regions like as Indonesia and Malaysia due to its purported health benefits. This investigation has examined the chemical features of this plant, which is capable of thriving in Sivas circumstances, as well as its antibacterial action against specific microorganisms. Therefore, it was feasible to examine different instances of a plant referred to as "Sabungai" or "long-life spinach" in other countries. This plant is extensively utilized for both culinary and health purposes. It was cultivated in the ecological conditions of Sivas, and its activity values were documented in literature. The experiment isolates water, ethanol, methanol, and ethyl acetate from the plant "*Gynura procumbens*". Once again, the data on the antibacterial activity of the plant "*Gynura procumbens*", which is utilized in ethno-pharmacology, has been assessed.

METHODOLOGY

Material

The "*Gynura procumbens*" plant leaves utilized in the study were gathered from the breeder garden located in the province of Sivas during the months of August and October. The plant leaves that were gathered were dehydrated in a shaded area and then crushed into a fine powder using a gentle homogenizer (Figure 1).

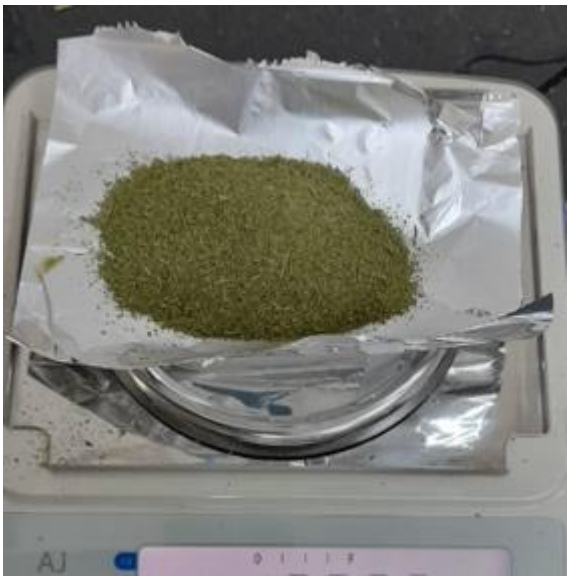

Figure 1. Dry leaf mowed sample and weight measurement

Obtaining the Plant Extracts

The plant's desiccated leaves have been extracted by ethanol, methanol, ethyl acetate, and water extraction techniques. For the extraction of ethanol, methanol, and ethyl acetate, each solvent was applied to the melted sections of the plant at a concentration of 1 part solvent to 10 parts plant material by weight/volume. The mixture was then incubated in a dark atmosphere in a water bath while continuous mixing for a duration of 3 days, as shown in Figure 2.

Figure 2. Adding a solvent to the mowed plant sample.

The maceration has been fully executed through the process of scratching. After 24 hours, the maserates were emptied and 100 mL of new solvent was introduced back to the plant material (Figure 3, 4). The macerates obtained after a 3-day maceration process were separated from the solvents using a low temperature (40°C) vacuum in the rotary evaporator (Figure 5). They were then combined in glass containers with a dark-colored lid and stored in the refrigerator at -20°C until they were used in experimental studies. The efficiency of the macerates was determined by calculating the percentage.

FULL TEXTS BOOK

Figure 3. The process of incubation in a water bath in order to interact with the solvent.

Figure 4. The process of draining the macerates.

Figure 5. The process of removing the solvent in the Rotary evaporator.

The water extract has undergone infusion. A total of 10 grams of vegetable material was combined and diluted. Subsequently, 100 milliliters of hot distilled water were added, and the mixture was left at room temperature for a duration of 10 to 15 minutes, with the container sealed. Afterward, the mixture was further diluted, and an additional 100 milliliters of hot water were added to the vegetable materials. Following three successive iterations, the water included in the extract was transferred to the lyophilizer in order to achieve total removal (Figure 6). Prior to being placed in the lyophilizer, the samples should be frozen in the deep freezer. A freezer with a temperature of -80°C is utilized for the purpose of storing items for an extended period of time. The water extracts that seeped into the sample containers were subjected to freezing at a temperature of -80°C for a duration of 3 days. Once the water extracts were frozen, the lids were then opened and placed into the lyophilizer. A lyophilizer is a device that uses the process of sublimation to extract water from frozen substances by converting ice crystals directly into vapor. The solid phase of water, known as ice crystals, undergoes sublimation when the ambient atmospheric pressure is reduced, transitioning directly from a solid to a gas. The frozen water extracts are dehydrated using a lyophilizer at a temperature of -80°C. The lyophilizer was run at a pressure of 4-6 atm and a temperature of -40°C for approximately 6 days. The desiccated samples were extracted from glass containers with an opaque lid and preserved in a freezer at -20°C until further analysis of biological activity was conducted.

Figure 6. Application of lyofilizer to samples in the water extraction process.

Stock solutions have been produced from each extract at a concentration of 1 mg/mL for the purpose of conducting research on biological activity. The stock solution concentrations for the tests were obtained by dissolving the water extract in distilled water and the other extracts in dimethyl sulfoxide (DMSO).

Antimicrobial Activity Testing

The Minimum Inhibition Concentration (MIC) of leaf extracts from the *Gynura procumbens* plant against microorganisms was determined using the Microdistribution Broth method in the investigation (Eloff, 1998). The study employed microorganisms including *Staphylococcus aureus, Pseudomonas aeruginosa, Escherichia coli, Bacillus cereus,* and *Candida albicans*. The extracts are dissolved in a solution containing 40% Dimethyl sulphoxide (DMSO) and then prepared by sequentially irrigating with dilution solutions following the preparation of skin-like solutions. Mueller Hinton Broth (Accumix® AM1072) is used for culturing bacteria, while Saboraud Dekstroz broth (Himedia ME033)

FULL TEXTS BOOK

is used for culturing yeast and molds (CLSI, 2002; CLSI, 2012). Initially, 90 microliters were added to the first row of 96 microtitrate plates, while the remaining rows received 50 microliters each. 11. The subsequent stacks were utilized as controls to ensure sterility, and 100 µl of nutrients were introduced. 12. The subsequent stacks were employed as reproductive control groups. A volume of 10 µL of extract was added to the first row of wells and thereafter subjected to a series of irrigations. The suspension was generated using McFarland's 0.5 optical density standard, derived from microorganisms cultured on agar medium. A 50 µL suspension of microorganisms has been added to each bucket, resulting in a concentration of 5×10^5 CFU/mL for bacterial strains and $0.5\text{-}2.5\times10^3$ CFU/mL for the marine strain. Bacterial stem plaques were cultured at a temperature of 37 °C, while myrtle stem plaques were cultured at a temperature of 35 °C for a duration of 16 to 24 hours. The first pits where the bacterial colony's appearance diminished were considered as the minimum inhibitory concentration (MIC) value. The analyses were conducted thrice (Saraç et al., 2018a, 2018b).

RESULTS

The study performed four distinct extractions of the *Gynura procumbens* plant, which is currently being cultivated in the province of Sivas. The study then assessed the antibacterial activity of these extracts in certain microbe cultures. The plant underwent extraction using four distinct solvents: water, methanol, ethanol, and ethyl acetate. The obtained extracts were formulated at a concentration of 1mg/mL in stock form, and subsequently used in diluted forms for the studies. The yield accounts are determined as percentages by determining the quantities of extracts initially used and obtained during the process of extraction (Table 1). The plant often exhibits a greater production of ethanol extract; however, the yield of water extract has been observed to be lower. (Table 1).

Table 1. Yield percentages of extracts

Extract	Yield %
Gynura procumbens Water Extract	2.1 %
Gynura procumbens Ethanol Extract	13.3 %
Gynura procumbens Ethyl Acetate Extract	7.5 %
Gynura procumbens Methanol Extract	7.8 %

Table 2 displays the antibacterial properties of several extracts derived from the *Gynura procumbens* plant. The material exhibits strong antimicrobial properties when the minimum inhibitory concentration (MIC) values are equal to or less than 0.1 mg/mL. The substance is moderately effective against microbes when the MIC values are greater than 0.1 mg/mL but less than or equal to 0.625 mg/mL. Substances with MIC values in this range are considered to have moderate effectiveness. Substances with MIC values above 0.625 mg/mL are classed as having poor antimicrobial activity (Kuete, 2010; Awouafack et al., 2013). Based on the obtained results, the plant extracts generated with 4 different solvents exhibited significant antibacterial activity against the pathogens we investigated. Overall, the ethanol extracts showed a positive impact on all the microorganisms examined in this investigation. Furthermore, it has been discovered that plant extracts demonstrate superior antibacterial efficacy against *E. coli, S. aureu*s, and *P. aeruginosa* bacteria in all extracts, as seen in Table 2 and Figure 7.

CONCLUSION AND DISCUSSION

In recent years, there has been a significant increase in interest in natural resources due to several factors. These include the potential side effects of synthetic and semi-synthetic drugs used in modern medicine, the economic burden on countries, the development of resistance by microorganisms to these antimicrobial drugs, and concerns about the chemical ingredients used for food preservation purposes (Ünlü, 2016). In the aftermath of the global Covid-19 epidemic, individuals are seeking to utilize a diverse array of items that will enhance their immune system, combat illness, and foster the creation of novel products. Studying the bioactive components of natural and nourishing foods is crucial due to their advantageous effects on health.

Research has demonstrated that samples obtained from various geographic areas of a plant have distinct morphological characteristics, and furthermore, their vegetable composition might vary. However, variations in the chemical makeup of plants are also known to result in various levels of bioavailability, as they can modify the biological activity that the plant displays. Consequently, while doing pre-clinical research using plant extracts from various locales, notable variations in activity have been detected in

FULL TEXTS BOOK

both laboratory and animal models. Consequently, the therapeutic benefits of items obtained from various places will vary. Significantly, plant products exhibit chemical compositions that reflect the floral, geographical, soil, geological, and climatic characteristics of the specific place from which they are derived. It is crucial to analyze the composition of each plant, compare them across different regions, identify their biological and therapeutic capabilities, and adjust their usage for daily therapeutic dietary consumption. This is necessary for various reasons.

However, due to climate change and enhanced global transportation, we are currently exploring the growth of plants that are not native to our country. Surprisingly, some of these plants are being produced with great productivity. The *Gynura procumbens* plant, which is currently available for sale in our country, has demonstrated exceptional adaptability to the environmental conditions of the Sivas region. The present investigation involved the extraction of green leaves from the *Gynura procumbens* plant using four distinct solvents: ethanol, methanol, ethyl acetate, and water. The antibacterial efficacy of these extracts was subsequently evaluated against five diverse microorganisms. The study has demonstrated that the plant extracts possess moderate to strong antibacterial properties against these pathogens. The ethyl alcohol extract, in particular, has demonstrated efficacy on all of the additional factors we examined. The efficacy of water extract seems to be slightly inferior to that of other extracts. However, it would be more beneficial in the future to examine the extended consequences of these extracts on a wider range of bacterial species.

Gynura procumbens is a medicinal plant that is extensively utilized in tropical Asian nations including China, Thailand, Indonesia, Malaysia, and Vietnam. However, other from a comprehensive study conducted in Malaysia in 2016 that compiled information on the overall biological properties of this plant, there is a lack of specific details available in the literature (Tan et al., 2016). In this respect, we believe that the results of our work will contribute to the existing literature and inspire new studies.

THE DISCOVERY OF ASHAB AL AIKAHH IN JORDAN VALLEY- SOUTHERN LEVANT

Mohammed Waheeb
Hashemite University
Queen Rania College for Tourism & Cultural Heritage

ABSTRACT

The Ashab Al Aikah civilization in the Jordan Valley extend from the Wadi Shuaib area in the north to the area of Sweima and, Wadi Husban in the south, and the Jordan River in the west, while it is bordered on the east by a series of highlands up to the region of Madaba, Amman and Balqa, The area takes a semicircular shape with a diameter of about 25 kilometers and includes the central Jordan Valley or what is termed today the Southern Shunah Brigade, which belongs to the Balqa Governorate.

Many experts and scholars have referred to the civilization of Ashab Al Aikahh through the descriptions and journeys they made over the past centuries and indicated that it dates to the civilization of the Bronze Ages, especially the Middle Bronze Age, equivalent to 2000-1600 BC .

Keywords: Archaeology, history, Heritage, Excavations, Labb Analysis.

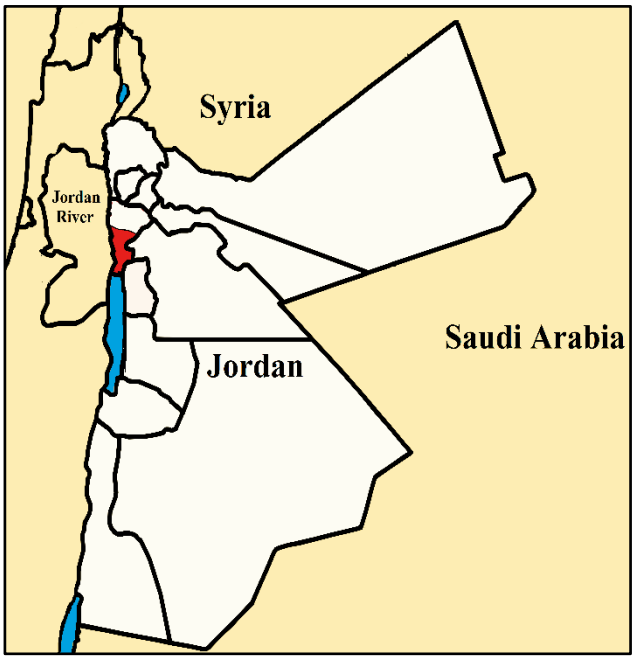

Figure 1: Map showing the location of the study area in red color and its surroundings (Waheeb:2024)

The field studies and archaeological surveys resulted valuable preliminary information that helped identify the place, and provided an opportunity for archaeologists to excavate in the region in order to obtain accurate information, where the archaeological team led by the author participated in intensive excavation and field surveys in each of the site of Tel Um Hadhar, Khirbet al-Kafrein, Tel Ramah, the site of the Baptism of Christ (Al-Maghtas) on the eastern side of the Jordan River, and also excavated the site of Ain Saleem adjacent to the plains where the remains of the civilization of Ashab Al Aikahh are located. The results confirmed the appearance of remains and destruction observed by the researchers due to several reasons. They also found pottery fragments with external surfaces melted into glass, clay bricks melted ns into bubbles due to very high temperatures, and partially melted building materials, all of which are indicators of an abnormally high temperature (about two thousand degrees Celsius) that technology at that time was not able to produce.

This confirms what some interpreters have argued that severe destruction has afflicted the area, and that historical evidence points to a kind of torment called (Al -Thella Day / the Shadow).

We have no doubt that the excavation missions were aimed at searching for the causes of the massive destruction that afflicted the area, and the results confirmed a clear correspondence between the place of the Ashab Al Aikahh and the mass destruction, in terms of results and tangible and intangible physical evidence on the ground.

On the other hand, after conducting various laboratory analyses on soil and sediments, researchers detected the presence of small globules rich in iron and silica as well as molten minerals, which confirms

FULL TEXTS BOOK

the high temperatures that led to a disaster whose effects remain to this day through archaeological evidence.

Keywords: Archaeology, history, Heritage, Excavations, Labb Analysis.

Introduction:

A lot of archaeologists, scholars and researchers tried during the last decades to find the place of Ashab Al- Aikahh in Arab countries, while others referred to the Jordanian land as a possible place of that great event mentioned in the holy Quraan.

The team of the Hashemite university initiated a campaign to find the location of Ashab A-al Aikahh in Jordan Valley, a field project started during 2020 and continued during the period of 2021-2024 under direct supervision of the article author with support from the scientific research fund from Ministry of Higher education and Scientific research.

During the field work in Medyan in southern Jordan -Keral District, the team identified remains of architecture and artifacts dated back to Middle- Late bronze Age, 2000-1500BC.

The archaeological evidence from Medyan as well as the traveleres description supported by local traditions indicated a strong relation between Shueib the Prophet and Medyan in Kerak.

The discovered archaeological remains in Wadi Shueib 10 KM to the north of Medyan revealed identical historical resemblance between Medyan, Wadi Shueib, and Livias Plains just to the east of baptism Site in Rama and Kafrein Villages.

The tow civilizations Medyan & Ashab Al-Aikahh were lived and existed at the same time or period during the Late Middle Bronze to the beginning of Late Bronze Age.

Methodology:

The scientific research methodology was adopted in the field work to evaluate & assess the recovered remains in terms of literature study, desk base assessment, survey and sites visit s, data gathering, & data sharing as well as lab analysis. Also discussing the intangible heritage belonging to the Ashab Al-Aikah narratives. Field assessment includes documentation and photographing, in addition to investigation of the surrounding zone.

Field Activities:

Field work includes survey, excavations and investigations were concentrated on the area of Kafrein and Rama in southern Shunah, the area historically called Livias and irrigated by three major Wadies, Shueib, Kafrein & Husban.

FULL TEXTS BOOK

Figure 2: Tel Rama in Livias (Waheeb:2020)

The search was ongoing to find what proves and confirms the existence of Ashab Al-Aikahh civilization in the Balqa region in general and in Wadi Shuaib and Livias in particular . The Holy Qur'an ,indicated the importance of this civilization and its role in the religious, economic and intellectual aspects. Here we cite one of the verses that mentioned "Ashab Al Aikahh":

- " And if the Ashab Al Aikahh were wrongdoers" (Al-Hijr: 78).

Many researchers and archaeologists conducted studies/surveys and archaeological excavations in Livias & ,Wadi Shuaib region during the end of the last century and the beginning of the current century where many sites were uncovered and documented.

Field surveys focused on the city of Salt and the crossroads between the valley and the city, especially what was done by Merrill in 1881, where he focused on describing Wadi Nimrin (Merrill, S. 1881) and the natural environment adjacent to Tel Nimrin, while Nelson Glueck conducted a systematic study of the valley, where he described many sites located between the southern town of Shuna (Glueck : 1951, pp. 25-28) .

As for the French Devaux, in 1938 he conducted surveys in the valley that included a number of sites near the city of Salt (Devaux. R. 1938 pp. 398-425). The Jordan Valley survey carried out by Muawiyah Ibrahim, James Sawer and Khair Yassine in 1988 recorded a number of sites in Livias and the archaeological site near Wadi Nimrin (Ibrahim, et al: 1975, 41-66).

In 1965 Raiks by exploring the central region of Wadi Shuaib and surrounding zone, he uncovered three sites, one of which was a cave dating back to the period of hunters (Epi-Paleolithic).

Several western scholars wrote about the area of livias, among of them: ((Dvorjetski:2007, Glueck :1951, Flanagan and McCreery 1990, Collins et al 2009, Albright:1924, Prag:1991, Conder and Kitchener :1881, Graves and Stripling:2011)).

A number of specialized researchers also focused their studies and field work on the Neolithic site near Nimreen Wadi Shuaib Bridge, which is located within the (Baqnis village).

Rollefson referred to this site and its importance in 1987 during his study to identify human settlement in Wadi Shuaib since the Neolithic era (Rollefson: 1987, 29-32). According to rainfall rates, the annual precipitation rate is about 400 mm (Beaumont, P 1985, PP 291-296) in this area, which allows for the emergence of a good agricultural life in the valley Test trench work carried out by a number of researchers at the site also confirmed that the Wadi Shuaib settlement was one of the largest residential centers during the Neolithic Age (Simmons: 1989, PP : 27-41).

FULL TEXTS BOOK

(Zeuner: 1957) referred to Site No. 44 near the Wadi Shuaib Bridge dating back to the PPN period (the pre-pottery Neolithic), where he indicated that it consisted of gypsum floors and various flint tools, Mellart also pointed to the settlement of Wadi Shuaib, where he referred to the vessels made of white stone and the disappearance of this settlement at the end of the seventh millennium BC (Mellart , 1975: pp. 36-38) .

A team from Durham University also conducted soil tests as part of an environmental study program for Wadi Shuaib within the Jordan River Valleys Study Project (Atkinson etal 1967) .

Limited excavations were conducted at the site in cooperation with Yarmouk University (Rollefoon, 1987: PP 521).

Waheeb from Hashemite University achieved several seasons of survey and excavations in this general area looking for archaeological sites related to ancient civilizations & narratives. (Waheeb, M:2002-2008-2009-2011-2013-2014-2015-2017-2018-2019-2020-2022).

Archaeologists and experts have found evidence of temperatures higher than 2,000 degrees Celsius, so that the charred and molten materials in Tell el-Hammam looked familiar to researchers who linked the explosion of Tell el-Hammam to identical explosion that occurred in 1908 in Tunguska, Russia, with a force of 12 megatons, when a meteorite with a height of 56-60 meters in the Earth's atmosphere over eastern Siberia. See (Collins:2007).

The explosion at Tal el-Hamam was enough to demolish the city in Livias plains and level its inhabitants to the ground. The distribution of bones indicated severe disintegration and fragmentation of the skeletons of humans killed in the explosion. The explosion may also explain the presence of abnormally high concentrations of salt in the destruction layer, averaging 4% in the sediment and reaching 25% in some samples.

Researchers believe that the meteorite impact may have partially hit the Dead Sea and contributed to its richness in salt. The local shores of the Dead Sea are also rich in salt, so the impact may have redistributed these salt crystals on a large scale in the region and increased the salinity rates in the soil and then reduced the population from tens of thousands to perhaps a few hundred, after the population migrated from the region due to the difficulty of cultivating it due to Salinity(Collins :2007).

About 7 years ago, archaeologists confirmed their discovery that the Jordanian city of Tell el-Hamam represents a site where Lot's people lived thousands of years ago, but how did they arrive at their discovery? The beginning was with the American archaeologist Stephen Collins, head of the Trinity Southwestern University mission in New Mexico, who discovered the ruins of Sodom a city with two , ,parts, an upper and a lower one. In it, a mud brick wall appeared, 10 meters high and 5.2 meters wide and the remains of temple gates appeared, as did towers. With a main square in addition to a site that , seems to have been special, because it was supported by special protections, all of which were facilities that required millions of bricks, in addition to a large number of workers. However, all aspects of life suddenly stopped at the end of the middle of the Bronze Age. It cannot be traced back to anything other than the fact that a disaster struck this region and wiped out all signs of life.

In 2021 experts published, in the scientific journal Nature a long and detailed article with illustrations , ,summarizing the results of research that lasted nearly 15 years in the Jordanian town of Tal Al-Hamam which is 12 kilometers northeast of the Dead Sea in Livias plains (Rama + Kafrein) where scientists , found during excavations in Tal Al-Hamam. On the traces of a horrific disaster that occurred on the land of what is now known as Jordan 3,600 years ago.see (Colins:2007).

Among the artifacts, scientists found so-called "cosmic particles", which are impurities of small grains of platinum, which melts at a temperature of 1800 degrees Celsius, and iridium, which has a melting point of approximately 2500 degrees Celsius, and nothing of this kind can be formed During a volcanic eruption, earthquake, or fire resulting from military operations.

The reason for what happened, as scientists believe, is a mass the size of the "Tunguska" meteorite with a diameter of 50-60 meters. It flew into the Earth's atmosphere at a speed of 61 thousand kilometers per

FULL TEXTS BOOK

hour, and exploded at an altitude of about 4 kilometers. The explosion was a thousand times stronger than the atomic bomb that was dropped On Hiroshima.

,Hence, scholars have suggested that this region in Jordan was subjected to a lightning bolt from the sky and that those who inhabited it were the people of Lot, who, according to the Holy Qur'an were subjected to the wrath of God, making its highest part its lowest part.

The Ashab Al Aikah used to make their residence in the expansive plains of Levias during the ,winter fall, and spring along Wadi Al-Ramah, Wadi Hisban, Wadi Al-Kafrin, and Wadi Nimrin which are , valleys with constant flow. In the summer, some of them moved to the Middle Slopes region, which is Wadi Shuaib,Wadi Kafrein and Wadi Husban .where the tomb of the Prophet is currently located Shuaib, and the people used to move between the Middle slopes and the lower area of Livias Plains regions as required by the working conditions in the agricultural plains, as this region is considered the widest along the length of the Jordan Valley and is opposite Jericho on the western side of the Jordan River, which separates the two regions.

Discussion and conclusion :

,Perhaps the motive for narrating the results of the discovery of the estate of Abu Sufyan in Wadi Shuaib and the reality of the location of the Ashab Al-Aikah is to prove that the region was targeted before the , period of Islamic times, and even constituted the most important points of attraction for settlement in the highland region, as archaeological sites are spread along the extension of the valley all the way to the Jordan River, where it flows. There is running water in it, and ancient caravan routes used to take this area It is most likely that the incense route made it possible to pass through . Livias & ,Wadi Shuaib and one of the most important markets of Elaf Al-Qurashi was later established in it, in which the merchants and caravans of the Arabian Peninsula and the Levant gathered at a site called to this day Khirbet Al-Souq. What is meant by this is the old market, the ruins of which are still prominent above the surface of the earth, awaiting the shovels of prospectors, especially food processing, and the many facilities that were partially uncovered in the valley, where factories, presses, and courier stations (Khashkhsh Cave) and many others are located.

Perhaps the discovery of traces of the Bronze Ages is clear and evident in the valley. The period associated with the Prophet Shuaib (**peace be upon him)** extending from the end of the last Bronze Age to the beginning of the first Iron Age, and by reviewing the results of the seasons of archaeological ,excavations that took place at the site of Tell Nimrin under the supervision of Flammingen and Yassin the remains of the village that existed during the lateBronze Age were found and confirmed. (Num e ira was destroyed during the last Bronze Age, only to appear again in the first Iron Age).

During the 1990 season, David McCreary, Flamingen, and Khair Yassin performed With archaeological excavations at Tell Nimrin at the bottom of Wadi Shuaib, in continuation of the previous seasons of exploration, studies and continuous scientific publication, where the eastern side of Tell Nimrin was uncovered, then the excavation stopped above the last Bronze Age layer.

Excavation of the Late Iron Age I layers that were crossed by the paved road continued during the 1989 season .(Yassine:1988).

During the excavation, limited pottery fragments were found covering the era between the Second Iron ,Age and the last Bronze Age, where small-sized potsherds were found, and colored fragments with red brown, black, and gray lines were found, in addition to the discovery of waste dating back to the period between the last Bronze Age. In the upper parts of the hill, where the hill still preserves its parts well (Yassine:1988).

,Through studying the plants using the flotation method, it became clear that the cultivation of wheat barley, olives, figs, and others was cared for by settled farmers in Tal al-Numairah. This clearly indicates that settled people were residing here and were not nomads, as it is most likely that they were

FULL TEXTS BOOK

selling their agricultural products on the roads, especially on the connecting road. Between the city of Jericho and Livias in ancient times during those early times in the area where the river overflows and forms a fertile flood plain (the location of the Wadi Shuaib Dam today) in addition to the Livias area close to Wadi Husban and Wadi Kafrein .

We have no doubt that the wide plain at the end of Wadi Shuaib, Husban & Kafrein was the appropriate area for commercial exchange and sale because it was a crossroads in the four directions for ancient trade caravans.

Perhaps these results confirm the importance of the region during the time of Shuaib between Middle- to Late Bronze Age as the region had continued importance since the Stone Ages, and perhaps the , arrival of the Prophet Shuaib to it to spread preaching and guidance was motivated by its fame that reached the cities, villages and countryside, people used to visit it more than others so he wanted to convey He sent his message to a large number of local residents, caravan owners, and merchants passing through the region. Many reasons combined that prompted Prophet Shuaib to reside in this place and not in any other place, as its importance is no less than the importance of Medy an. It is not strange to find a historical market in Livias and Wadi Shuaib, whose large and monumental ruins are still present next to it. This market also had, in early times, a carrier pigeon post station that was used for trade purposes.

The discovery of Medyan and Ashab Al-Aikah in both Kerak & Livias confirms the archaeological evidences, the traveler descriptions and the intangible heritage.

ABSTRACT
Most references on topological spaces seem to define a compact space in terms of open coverings of a space having finite sub coverings. Formally, we say that a collection of open sets $\{U_i : i \in I\}$, indexed by some set I, is an open covering of a topological space K if $K \subseteq \bigcup_{i\in I} U_i$. We define K to be compact if there exist finitely many open sets $U_{i_1}, U_{i_2}, ..., U_{i_n}$ in the open covering such that $K \subseteq \bigcup_{j=1}^{n} U_{i_j}$. There exists a number of equivalent definitions of a compact space, which we briefly mention here. A topological space K is compact if and only if K has the finite intersection property: if $\{E_i : i \in I\}$ is a collection of a closed sets indexed by a set I such that, for any finite subset $I_0 \subseteq I$, $\bigcap_{i\in I_0} E_i \neq \phi$, then $\bigcap_{i\in I} E_i \neq \phi$. Another equivalent definition is in terms of nets. A topological space K is compact if and only if every net $(x_\alpha : \alpha \in \Lambda)$ in K has a convergent subnet. In 2020, M. Anto and S. Andrin Shahila introduced and studied properties of a new class of sets in topological spaces namely $\hat{g}^{**}s$-closed sets and $\hat{g}^{**}s$-open sets. We will extend the concept of compactness via $\hat{g}^{**}s$-open sets by introducing $\hat{g}^{**}s$-compactness in topological spaces and will investigate its characterizations by making use of generalized mappings including $\hat{g}^{**}s$-continuous functions and $\hat{g}^{**}s$-irresolute functions. The objective of this paper is to introduce the new concepts called $\hat{g}^{**}s$-compact space, $\hat{g}^{**}s$-Lindelof space, countably $\hat{g}^{**}s$-compact space, almost $\hat{g}^{**}s$-compact space, and mildly $\hat{g}^{**}s$-compact space in topological spaces and investigate fundamental properties and characterizations of these new notions in topological spaces.
2020 AMS Subject Classification. Primary: 54B05, 54D20, 54D30.
Key Words and Phrases: Topological space, $\hat{g}^{**}s$-closed set, $\hat{g}^{**}s$-open set, $\hat{g}^{**}s$-compact space, $\hat{g}^{**}s$-Lindelof space, countably $\hat{g}^{**}s$-compact space, almost $\hat{g}^{**}s$-compact space, mildly $\hat{g}^{**}s$-compact space

1. INTRODUCTION

The concept of supra topology was introduced by A. S. Mashhour et al [21] in the year 1983. They studied s-continuous functions and s^*-continuous functions. In 2008, R. Devi et al [10] introduced the concept of supra α-open sets and supra α-continuous mappings. Jamal M. Mustafa [25] studied supra b-compact and supra b-Lindelof spaces. Vidyarani et al [41] introduced the concept of supra N-compact, countably supra N-compact, supra N-Lindelof and investigated their relationships using the concept of continuity. In 2013, Missier and Rodrigo [23] introduced new class of sets in general topology called α-open (supra α-open) sets. In 2019, Amir A. Mohammed and Beyda S.

FULL TEXTS BOOK

Abdullah [24] introduced a new class of open sets in a topological space called $ii\text{-}open$ sets and investigated its fundamental properties and studied some properties and several characterizations of this class including the relation of $ii\text{-}open$ sets with many other classes of open sets. They showed that the family of $ii\text{-}open$ subsets of a topological space (X,τ) forms a topology on X which is finer than τ. . In 2020, M. Anto and S. Andrin Shahila [4] introduced and studied properties of a new class of sets in topological spaces namely $\hat{g}^{**}s$-closed sets and $\hat{g}^{**}s$-open sets. We will extend the concept of compactness via $\hat{g}^{**}s$-open sets by introducing $\hat{g}^{**}s$-compactness in topological spaces and will investigate its characterizations by making use of generalized mappings including $\hat{g}^{**}s$-continuous functions and $\hat{g}^{**}s$-irresolute functions. The objective of this paper is to introduce the new concepts called $\hat{g}^{**}s$-compact space, $\hat{g}^{**}s$-Lindelof space, countably $\hat{g}^{**}s$-compact space, almost $\hat{g}^{**}s$-compact space, and mildly $\hat{g}^{**}s$-compact space in topological spaces and investigate fundamental properties and characterizations of these new notions in topological spaces.

2. PRELIMINARIES

The (X,τ) and (Y,σ) $(or\ simply, X\ and\ Y)$ denote topological spaces on which no separation axioms are assumed unless explicitly stated and $f:(X,\tau)\to(Y,\sigma)$ means a mapping f from a topological space X to a topological space Y. A subset A of a topological space (X,τ) is said to be open if $A\in\tau$. A subset A of a topological space X is said to be closed if the set $X-A$ is open. The interior of a subset A of a topological space X is defined as the union of all open sets contained in A. It is denoted by $Int(A)$. The closure of a subset A of a topological space X is defined as the intersection of all closed sets containing A. It is denoted by $Cl(A)$. If U is a set and x is a point in X, then $N(x)$, and U^c denote respectively, the neighborhood system of x, and the complement of U, respectively. We shall define the concept of $\hat{g}^{**}s$-open set and determine its connection to the classical open set and characterize the concepts of $\hat{g}^{**}s\text{-}open$ sets.

Definition 2.1. A subset A of a topological space (X,τ) is an $\alpha\text{-}open$ set, if $A\subseteq Int\left[Cl\left(Int(A)\right)\right]$ and an $\alpha\text{-}closed$ set, if $Cl\left[Int\left(Cl(A)\right)\right]\subseteq A$.

The $\alpha\text{-}closure$ of a subset A of X denoted by $\alpha Cl(A)$ is defined to be the intersection of all $\alpha\text{-}closed$ sets containing A. The $\alpha\text{-}interior$ of A denoted by $\alpha Int(A)$ is defined to be the union of all $\alpha\text{-}open$ sets contained in A.

Definition 2.2. A subset A of a topological space (X,τ) is an $semi\text{-}open$ set, if $A\subseteq Cl\left(Int(A)\right)$ and a $semi\text{-}closed$ set if $Int\left(Cl(A)\right)\subseteq A$.

The $semi\text{-}closure$ of a subset A of X denoted by $sCl(A)$ is defined to be the intersection of all $semi\text{-}closed$ sets containing A. The $semi\text{-}interior$ of A denoted by $sInt(A)$ is defined to be the union of all $semi\text{-}open$ sets contained in A.

FULL TEXTS BOOK

Definition 2.3. A subset A of a topological space (X,τ) is called a *regular-open* set, if $A=Int(Cl(A))$ and a *regular-closed* set if $A=Cl(Int(A))$.

Definition 2.4. A subset A of a topological space (X,τ) is called a *generalized-closed* (*briefly* g*-closed*) set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is *open* in (X,τ).

Definition 2.5. A subset A of a topological space (X,τ) is called a *generalized semi-closed* (*briefly* gs*-closed*) set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is *open* in (X,τ).

Definition 2.6. A subset A of a topological space (X,τ) is called a $\hat{g}$*-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is *semi-open* in (X,τ).

Definition 2.7. A subset A of a topological space (X,τ) is called a g*-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is g*-open* in (X,τ).

Definition 2.8. A subset A of a topological space (X,τ) is called a $\hat{g}$*-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is $\hat{g}$*-open* in (X,τ).

Definition 2.9. A subset A of a topological space (X,τ) is called a g**-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is g**-open* in (X,τ).

Definition 2.10. A subset A of a topological space (X,τ) is called a gs*-closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs*-open* in (X,τ).

Definition 2.11. A subset A of a topological space (X,τ) is called a $\hat{g}$s*-closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is $\hat{g}$*-open* in (X,τ).

Definition 2.12. A subset A of a topological space (X,τ) is called a g*s**-closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is g**-open* in (X,τ).

Definition 2.13. A subset A of a topological space (X,τ) is called a gs**-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs**-open* in (X,τ).

Definition 2.14. A subset A of a topological space (X,τ) is called a gs**-closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs*-open* in (X,τ).

Definition 2.15. A subset A of a topological space (X,τ) is called a $\hat{g}$**s*-closed* set if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is $\hat{g}$**-open* in (X,τ). The complement of a $\hat{g}$**s*-closed*

FULL TEXTS BOOK

set is caaled a $\hat{g}^{**}s$-*open* set in (X,τ). The collection of all $\hat{g}^{**}s$-open $(\hat{g}^{**}s$-closed$)$ subsets of (X,τ) is denoted by $\hat{g}^{**}s$-$O(X,\tau)$ $(\hat{g}^{**}s$-$C(X,\tau))$.

Proposition 2.16. (i) Every closed (open) set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(ii) Every α-*closed* $(\alpha$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(iii) Every *semi*-*closed* $(semi$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(iv) Every $g^{*}s$-*closed* $(g^{*}s$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(v) Every *regular*-*closed* $(regular$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(vi) Every g^{*}-*closed* $(g^{*}$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

Proposition 2.17. Arbitrary intersection of $\hat{g}^{**}s$-closed sets is $\hat{g}^{**}s$-closed.

Proposition 2.18. Arbitrary union of $\hat{g}^{**}s$-open sets is $\hat{g}^{**}s$-open.

Definition 2.19. Let (X,τ) be a topological space and $B\subseteq X$. We define the $\hat{g}^{**}s$-closure of B $(\text{briefly } \hat{g}^{**}s\text{-Cl}(B))$ to be the intersection of all $\hat{g}^{**}s$-closed sets containing B which is denoted by $\hat{g}^{**}s$-$Cl(B)=\cap\{A: B\subseteq A \text{ and } A\in\hat{g}^{**}s\text{-}C(X,\tau)\}$. We note that $\hat{g}^{**}s$-$Cl(B)$ is the smallest $\hat{g}^{**}s$-*closed* set containing B.

Definition 2.20. Let (X,τ) be any topological space and B be a subset of X. A point p of X is called a $\hat{g}^{**}s$-*interior* point of B, if there exists a $\hat{g}^{**}s$-*open* set G such that $p\in G\subseteq B$. The set of all $\hat{g}^{**}s$-*interior* points of B is said to be $\hat{g}^{**}s$-*interior* of B $(\text{briefly } \hat{g}^{**}s\text{-Int}(B))$ and it is defined by $\hat{g}^{**}s$-$Int(B)=\cup\{A: A\subseteq B \text{ and } A\in\hat{g}^{**}s\text{-}O(X,\tau)\}$.

Proposition2.21. If U and V are sets in a topological space (X,τ), then

(1) $\hat{g}^{**}s$-$Int(\phi)=\phi$.

(2) $\hat{g}^{**}s$-$Int(X)=X$.

(3) $\hat{g}^{**}s$-$Int(U)\subseteq U$.

(4) $U\subseteq V\Rightarrow\hat{g}^{**}s$-$Int(U)\subseteq\hat{g}^{**}s$-$Int(V)$.

Proposition2.22. Let G be any subset of a topological space (X,τ). Then $x\in\hat{g}^{**}s$-$Cl(A)$ if and only if for every $\hat{g}^{**}s$-*open* set U containing x, $U\cap G\neq\phi$.

Proposition2.23. For any subset U of topological space (X,τ), $\hat{g}^{**}s$-$Int(U)\subseteq U\subseteq\hat{g}^{**}s$-$Cl(U)$.

Definition 2.24. Let A be a subset of a topological space (X,τ). A point $x\in A$ is said to be a $\hat{g}^{**}s$-*limit* point of A if for each $\hat{g}^{**}s$-*open* set U containing x, $U\cap(A-\{x\})\neq\phi$. The

FULL TEXTS BOOK

set of all $\hat{g}^{**}s$-*limit* points of A is called the $\hat{g}^{**}s$-*derived* set of A and is denoted by $\hat{g}^{**}$-$D(A)$.

Theorem 2.25. For any subset A of a topological space X, $\hat{g}^{**}s$-$Cl(A) = A \cup [\hat{g}^{**}s\text{-}D(A)]$.

Proof. Since $\hat{g}^{**}s\text{-}D(A) \subseteq \hat{g}^{**}s\text{-}Cl(A)$. $A \cup [\hat{g}^{**}s\text{-}D(A)] \subseteq \hat{g}^{**}s\text{-}Cl(A)$. On the other hand, let $x \in \hat{g}^{**}s\text{-}Cl(A)$. If $x \in A$, then the proof is complete. If $x \notin A$, each $\hat{g}^{**}s$-*open* set U containing x intersects A at a point distinct from x, so $x \in \hat{g}^{**}s\text{-}D(A)$. Thus, $\hat{g}^{**}s\text{-}Cl(A) \subseteq [A \cup (\hat{g}^{**}s\text{-}D(A))]$, which completes the proof.

Corollary 2.26. A subset A of a space X is $\hat{g}^{**}s$-*closed* if and only if it contains the set of all of its $\hat{g}^{**}s$-*limit* points.

Theorem 2.27. For subsets A, B of a space X, the following statements are true:

(1) $\hat{g}^{**}s$-$Int(A)$ is the largest $\hat{g}^{**}s$-*open* set contained in A;

(2) A is $\hat{g}^{**}s$-*open* if and only if $A = \hat{g}^{**}s$-$Int(A)$.

(3) $\hat{g}^{**}s$-$Int[\hat{g}^{**}s\text{-}Int(A)] = \hat{g}^{**}s$-$Int(A)$;

(4) $\hat{g}^{**}s$-$Int(A) = [A - (\hat{g}^{**}s\text{-}D(X - A))]$;

(5) $[X - (\hat{g}^{**}s\text{-}Cl(A))] = \hat{g}^{**}s$-$Int(X - A)$;

(6) $[X - (\hat{g}^{**}s\text{-}Int(A))] = \hat{g}^{**}s$-$Cl(X - A)$;

(7) $[\hat{g}^{**}s\text{-}Int(A)] \cup [\hat{g}^{**}s\text{-}Int(B)] \subseteq \hat{g}^{**}s$-$Int(A \cup B)$;

(8) $\hat{g}^{**}s$-$Int(A \cap B) = [\hat{g}^{**}s\text{-}Int(A)] \cap [\hat{g}^{**}s\text{-}Int(B)]$;

Proof. (4) If $x \in [A - (\hat{g}^{**}s\text{-}D(X - A))]$, then $x \notin \hat{g}^{**}s\text{-}D(X - A)$ and so there exists a $\hat{g}^{**}s$-*open* set U containing x such that $U \cap (X - A) = \phi$. Then, $x \in U \subseteq A$ and hence $x \in \hat{g}^{**}s$-$Int(A)$, that is, $[A - (\hat{g}^{**}s\text{-}D(X - A))] \subseteq \hat{g}^{**}s$-$Int(A)$. On the other hand, if $x \in \hat{g}^{**}s$-$Int(A)$, then $x \notin \hat{g}^{**}s\text{-}D(X - A)$ since $\hat{g}^{**}s$-$Int(A)$ is $\hat{g}^{**}s$-*open* and $[(\hat{g}^{**}s\text{-}Int(A)) \cap (X - A)] = \phi$. Hence, $\hat{g}^{**}s$-$Int(A) = [A - (\hat{g}^{**}s\text{-}D(X - A))]$.

(6) $X - [\hat{g}^{**}s\text{-}Int(A)] = X - [A - (\hat{g}^{**}s\text{-}D(X - A))] = (X - A) \cup [\hat{g}^{**}s\text{-}D(X - A)] = \hat{g}^{**}s$-$Cl(X - A)$.

Theorem 2.28. Let (X, τ) be a topological space and $A, B \subseteq X$. Then the following statements are true:

(1) $x \in \hat{g}^{**}s$-$Cl(A)$ if and only if for every $\hat{g}^{**}s$-*open* subset U containing x, $U \cap A \neq \phi$.

(2) $A \subseteq B$ implies that $\hat{g}^{**}s$-$Cl(A) \subseteq \hat{g}^{**}s$-$Cl(B)$.

(3) A is $\hat{g}^{**}s$-*closed* if and only if $\hat{g}^{**}s$-$Cl(A) = A$.

FULL TEXTS BOOK

(4) $\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Cl(A)\right]=\hat{g}^{**}s\text{-}Cl(A)$.

(5) $\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cup\left[\hat{g}^{**}s\text{-}Cl(B)\right]=\hat{g}^{**}s\text{-}Cl(A\cup B)$.

(6) $\hat{g}^{**}s\text{-}Int(X-A)=X-\left[\hat{g}^{**}s\text{-}Cl(A)\right]$.

(7) $\hat{g}^{**}s\text{-}Cl(X-A)=X-\left[\hat{g}^{**}s\text{-}Int(A)\right]$.

Definition 2.29. $\hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]$ is said to be the $\hat{g}^{**}s\text{-}border$ of A.

Theorem 2.30. For a subset A of a space X, the following statements hold:

(1) $Bd(A)\subseteq\hat{g}^{**}s\text{-}Bd(A)$ where $Bd(A)$ denotes the border of A;

(2) $A=\hat{g}^{**}s\text{-}Int(A)\cup\hat{g}^{**}s\text{-}Bd(A)$;

(3) $\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi$;

(4) A is a $\hat{g}^{**}s\text{-}open$ set if and only if $\hat{g}^{**}s\text{-}Bd(A)=\phi$;

(5) $\hat{g}^{**}s\text{-}Bd\left[\hat{g}^{**}s\text{-}Int(A)\right]=\phi$;

(6) $\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi$;

(7) $\hat{g}^{**}s\text{-}Bd\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\hat{g}^{**}s\text{-}Bd(A)$;

(8) $\hat{g}^{**}s\text{-}Bd(A)=A\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right]$;

(9) $\hat{g}^{**}s\text{-}Bd(A)=\hat{g}^{**}s\text{-}D(X-A)$.

Proof. (6) If $x\in\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]$, then $x\in\hat{g}^{**}s\text{-}Bd(A)$. On the other hand, since $\hat{g}^{**}s\text{-}Bd(A)\subseteq A$, $x\in\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]\subseteq\hat{g}^{**}s\text{-}Int(A)$. Therefore, we get $x\in\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Bd(A)\right]$, which contradicts (3). Thus, $\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi$.

(8) $\hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]=A-\left[X-\left(\hat{g}^{**}s\text{-}Cl(X-A)\right)\right]=A\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right]$.

(9) $\hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]=A-\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]=\hat{g}^{**}s\text{-}D(X-A)$.

Definition 2.31. $\hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Cl(A)\right]-\left[\hat{g}^{**}s\text{-}Int(A)\right]$ is said to be the $\hat{g}^{**}s\text{-}frontier$ of A.

Theorem 2.32. For a subset A of a space X, the following statements hold:

(1) $Fr(A)\subseteq\hat{g}^{**}s\text{-}Fr(A)$ where $Fr(A)$ denotes the frontier of A;

(2) $\hat{g}^{**}s\text{-}Cl(A)=\left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Fr(A)\right]$;

(3) $\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\phi$;

(4) $\hat{g}^{**}s\text{-}Bd(A)\subseteq\hat{g}^{**}s\text{-}Fr(A)$;

(5) $\hat{g}^{**}s\text{-}Fr(A)=[\hat{g}^{**}s\text{-}Bd(A)]\cup[\hat{g}^{**}s\text{-}D(A)];$

(6) A is a $\hat{g}^{**}s\text{-}open$ set if and only if $\hat{g}^{**}s\text{-}Fr(A)=\hat{g}^{**}s\text{-}D(A);$

(7) $\hat{g}^{**}s\text{-}Fr(A)=[\hat{g}^{**}s\text{-}Cl(A)]\cap[\hat{g}^{**}s\text{-}Cl(X-A)];$

(8) $\hat{g}^{**}s\text{-}Fr(A)=\hat{g}^{**}s\text{-}Fr(X-A);$

(9) $\hat{g}^{**}s\text{-}Fr(A)$ is $\hat{g}^{**}s\text{-}closed;$

(10) $\hat{g}^{**}s\text{-}Fr[\hat{g}^{**}s\text{-}Fr(A)]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

(11) $\hat{g}^{**}s\text{-}Fr[\hat{g}^{**}s\text{-}Int(A)]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

(12) $\hat{g}^{**}s\text{-}Fr[\hat{g}^{**}s\text{-}Cl(A)]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

(13) $\hat{g}^{**}s\text{-}Int(A)=A-[\hat{g}^{**}s\text{-}Fr(A)].$

Proof. (2) $[\hat{g}^{**}s\text{-}Int(A)]\cup[\hat{g}^{**}s\text{-}Fr(A)]=$

$\hat{g}^{**}s\text{-}Int(A)\cup[\hat{g}^{**}s\text{-}Cl(A)-\hat{g}^{**}s\text{-}Int(A)]=\hat{g}^{**}s\text{-}Cl(A)$

(3) $[\hat{g}^{**}s\text{-}Int(A)]\cap[\hat{g}^{**}s\text{-}Fr(A)]=[\hat{g}^{**}s\text{-}Int(A)]\cap[(\hat{g}^{**}s\text{-}Cl(A))-(\hat{g}^{**}s\text{-}Int(A))]$

$=\phi.$

(5) $Since\ [\hat{g}^{**}s\text{-}Int(A)]\cup[\hat{g}^{**}s\text{-}Fr(A)]=$

$[\hat{g}^{**}s\text{-}Int(A)]\cup[\hat{g}^{**}s\text{-}Bd(A)]\cup[\hat{g}^{**}s\text{-}D(A)],$

$\hat{g}^{**}s\text{-}Fr(A)=[\hat{g}^{**}s\text{-}Bd(A)]\cup[\hat{g}^{**}s\text{-}D(A)].$

(7) $\hat{g}^{**}s\text{-}Fr(A)=[\hat{g}^{**}s\text{-}Cl(A)]-[\hat{g}^{**}s\text{-}Int(A)]=$

$[\hat{g}^{**}s\text{-}Cl(A)]\cap[\hat{g}^{**}s\text{-}Cl(X-A)].$

(9) $\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Fr(A)]=\hat{g}^{**}s\text{-}Cl[(\hat{g}^{**}s\text{-}Cl(A))\cap(\hat{g}^{**}s\text{-}Cl(X-A))]\subseteq$

$\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Cl(A)]\cap\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Cl(X-A)]$

$=[\hat{g}^{**}s\text{-}Cl(A)]\cap\hat{g}^{**}s\text{-}[\hat{g}^{**}s\text{-}Cl(X-A)]=\hat{g}^{**}s\text{-}Fr(A).$ Hence $\hat{g}^{**}s\text{-}Fr(A)$ is $\hat{g}^{**}s\text{-}closed.$

(10) $\hat{g}^{**}s\text{-}Fr[\hat{g}^{**}s\text{-}Fr(A)]=$

$\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Fr(A)]\cap\hat{g}^{**}s\text{-}Cl[X-(\hat{g}^{**}s\text{-}Fr(A))]\subseteq$

$\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Fr(A)]=\hat{g}^{**}s\text{-}Fr(A).$

(12) $\hat{g}^{**}s\text{-}Fr[\hat{g}^{**}s\text{-}Cl(A)]=\hat{g}^{**}s\text{-}Cl[\hat{g}^{**}s\text{-}Cl(A)]-\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(A)]=$

$[\hat{g}^{**}s\text{-}Cl(A)]-[\hat{g}^{**}s\text{-}Int(\hat{g}^{**}s\text{-}Cl(A))]\subseteq$

$[(\hat{g}^{**}s\text{-}Cl(A))-(\hat{g}^{**}s\text{-}Int(A))]=\hat{g}^{**}s\text{-}Fr(A).$

(13) $A-[\hat{g}^{**}s\text{-}Fr(A)]=A-[(\hat{g}^{**}s\text{-}Cl(A))-(\hat{g}^{**}s\text{-}Int(A))]=\hat{g}^{**}s\text{-}Int(A).$

FULL TEXTS BOOK

Definition 2.33. A subset A of a topological space (X,τ) is called a $\hat{g}^{**}s$-*neighbourhood* of a point x in X if there exists a $\hat{g}^{**}s$-*open* set U in X such that $x\in U\subseteq A$. The set of all $\hat{g}^{**}s$-*neighbourhoods* of an element x in X will be denoted by: $\hat{g}^{**}s\text{-}N_x=\hat{g}^{**}s\text{-}N_x(X)=\{A\subseteq X : A \text{ is a } \hat{g}^{**}s\text{-neighbourhood of } x\}$.

Proposition 2.34. A subset A of a topological space (X,τ) is $\hat{g}^{**}s$-*open* if and only if it is a $\hat{g}^{**}s$-*neighbourhood* of each of its points.

Proof. If A is $\hat{g}^{**}s$-*open* in X, then $x\in A\subseteq A$ for each $x\in A$. Thus A is a $\hat{g}^{**}s$-*neighbourhood* of each of its points. Conversely, suppose that A is a $\hat{g}^{**}s$-*neighbourhood* of each of its points. Then for each $x\in A$, there exists a $\hat{g}^{**}s$-*open* set U_x in X such that $x\in U_x\subseteq A$. Hence $\bigcup_{x\in A}U_x\subseteq A$. Since $A\subseteq\bigcup_{x\in A}U_x$, therefore $A=\bigcup_{x\in A}U_x$. Thus A is a $\hat{g}^{**}s$-*open* set in X, since it is a union of $\hat{g}^{**}s$-*open* sets

Definition 2.35. A mapping $f:(X,\tau)\to(Y,\sigma)$ is called $\hat{g}^{**}s$-*irresolute* at a point $x\in X$ if for all $\hat{g}^{**}s$-*open* subsets V in Y containing $f(x)$, there is a $\hat{g}^{**}s$-*open* subset U of X such that $x\in U$ and $f(U)$ is a subset of V. The function f will be called $\hat{g}^{**}s$-*irresolute* if f is $\hat{g}^{**}s$-*irresolute* at each point $x\in X$.

Theorem 2.36. Let $f:(X,\tau)\to(Y,\sigma)$ be a function. Then the following statements are equivalent.

(1) f is $\hat{g}^{**}s$-*irresolute*.

(2) For each $x\in X$ and each $\hat{g}^{**}s$-*neighbourhood* V of $f(x)$ in Y, there is a $\hat{g}^{**}s$-*neighborhood* U of x such that $f(U)\subseteq V$.

(3) The inverse image of every $\hat{g}^{**}s$-*closed* subset of Y is a $\hat{g}^{**}s$-*closed* subset of X.

(4) The inverse image of every $\hat{g}^{**}s$-*open* subset of Y is a $\hat{g}^{**}s$-*open* subset of X.

Definition 2.37. A function $f:(X,\tau)\to(Y,\sigma)$ is called $\hat{g}^{**}s$-*continuous* if $f^{-1}(V)$ is $\hat{g}^{**}s$-*open* set in X for every open set V in Y.

Proposition 2.38. A function $f:(X,\tau)\to(Y,\sigma)$ is called $\hat{g}^{**}s$-*continuous* if and only if $f^{-1}(V)$ is $\hat{g}^{**}s$-*closed* set in X for every closed set V in Y.

Definition 2.39. A function $f:(X,\tau)\to(Y,\sigma)$ is called *Pre*-$\hat{g}^{**}s$-*open* if and only if the image set $f(U)$ is $\hat{g}^{**}s$-*open* set in Y for every $\hat{g}^{**}s$-*open* set U in X.

Proposition 2.40. A bijection function $\hat{g}^{**}s$-*irreseolute* function $f:(X,\tau)\to(Y,\sigma)$ is called $\hat{g}^{**}s$-*homeomorphism* if f is *pre*-$\hat{g}^{**}s$-*open* and

Definition 2.41. A function $f:(X,\tau)\to(Y,\sigma)$ is called perfectly $\hat{g}^{**}s$-*continuous* if the inverse image $f^{-1}(V)$ of every $\hat{g}^{**}s$-*open* set V of Y is both open and closed in X.

FULL TEXTS BOOK

Definition 2.42. A function $f:(X,\tau)\to(Y,\sigma)$ is called strongly $\hat{g}^{**}s$-*continuous* if the inverse image $f^{-1}(V)$ of every $\hat{g}^{**}s$-*open* V in Y is open in X.

3. $\hat{g}^{**}s$-COMPACT SPACES

Definition 3.1. A collection $\{A_i : i\in I\}$ of $\hat{g}^{**}s$-*open* sets in a topological space (X,τ) is called a $\hat{g}^{**}s$-*open* cover of a subset B of X if $B\subseteq \mathrm{U}\{A_i : i\in I\}$ holds.

Definition 3.2. A topological space (X,τ) is called $\hat{g}^{**}s$-*compact* if every $\hat{g}^{**}s$-*open* cover of X has a finite subcover.

Definition 3.3. A subset B of a topological space (X,τ) is said to be $\hat{g}^{**}s$-*compact* relative to (X,τ) if, for every collection $\{A_i : i\in I\}$ of $\hat{g}^{**}s$-*open* subsets of X such that $B\subseteq \mathrm{U}\{A_i : i\in I\}$ there exists a finite subset I_0 of I such that $B\subseteq \mathrm{U}\{A_i : i\in I_0\}$.

Definition 3.4. A subset B of a topological space (X,τ) is said to be $\hat{g}^{**}s$-*compact* if B is $\hat{g}^{**}s$-*compact* as a subspace of X.

Definition 3.5. Every $\hat{g}^{**}s$-*compact* space is compact.

Proof. Let $\{A_i : i\in I\}$ be an open cover of (X,τ). Since every open set in X is $\hat{g}^{**}s$-*open* in X. So $\{A_i : i\in I\}$ is an $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is $\hat{g}^{**}s$-*compact*, $\hat{g}^{**}s$-*open* cover $\{A_i : i\in I\}$ of (X,τ) has a finite sub cover say $\{A_i : i=1,2,3,...,n\}$ for X. Hence (X,τ) is a compact space.

Definition 3.6. Every $\hat{g}^{**}s$-*closed* subset of a $\hat{g}^{**}s$-*compact* space (X,τ) is $\hat{g}^{**}s$-*compact* relative to X.

Proof. Let A be a $\hat{g}^{**}s$-*closed* subset of a topological space (X,τ). Then A^c is $\hat{g}^{**}s$-*open* in (X,τ). Let $\Gamma=\{A_i : i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of A by $\hat{g}^{**}s$-*open* subsets of (X,τ). Then $\Gamma^{*}=\Gamma\,\mathrm{U}\{A^c\}$ is a $\hat{g}^{**}s$-*open* cover of (X,τ). That is $X=\left(\mathrm{U}_{i\in I}A_i\right)\mathrm{U}A^c$. By hypothesis, (X,τ) is a $\hat{g}^{**}s$-*compact* space and hence Γ^{*} is reducible to a finite subcover of (X,τ) say $X=\left(\mathrm{U}_{i\in I_0}A_i\right)\mathrm{U}A^c$ for some finite subset I_0 of I. But A and A^c are disjoint. Hence $A\subseteq \mathrm{U}\{A_i : i\in I_0\}$. Thus $\hat{g}^{**}s$-*open* cover $\Gamma=\{A_i : i\in I\}$ of A contains a finite subcover. Hence A is $\hat{g}^{**}s$-*compact* relative to (X,τ).

Theorem 3.7. A $\hat{g}^{**}s$-*continuous* image of a $\hat{g}^{**}s$-*compact* space is compact.

Proof. Let $f:(X,\tau)\to(Y,\sigma)$ be a $\hat{g}^{**}s$-*continuous* mapping from a $\hat{g}^{**}s$-*compact* topological space (X,τ) onto a topological space (Y,σ). Let $\Gamma=\{A_i : i\in I\}$ be an open cover of Y. Therefore $f^{-1}(\Gamma)=\{f^{-1}(A_i) : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of X, as f is $\hat{g}^{**}s$-*continuous*. Since X is $\hat{g}^{**}s$-*compact*, the $\hat{g}^{**}s$-*open* cover $f^{-1}(\Gamma)=\{f^{-1}(A_i) : i\in I\}$ of X, has a finite

FULL TEXTS BOOK

subcover say $\{f^{-1}(A_i): i=1,2,3,...,n\}$. Therefore $X=\bigcup_{i=1}^{n} f^{-1}(A_i)$, which implies $Y=f(X)=\bigcup_{i=1}^{n} A_i$. That is $\{A_i: i=1,2,3,...,n\}$ is a finite subcover of $\Gamma=\{A_i: i\in I\}$. Hence (Y,σ) is compact.

Theorem 3.8. Suppose that a function $f:(X,\tau)\to(Y,\sigma)$ is $\hat{g}^{**}s$-*irresolute* and a subset S of X is $\hat{g}^{**}s$-*compact* relative to (X,τ), then the image $f(S)$ is $\hat{g}^{**}s$-*compact* relative to (Y,σ).

Proof. Let $\Gamma=\{A_i: i\in I\}$ be a collection of $\hat{g}^{**}s$-*open* subsets of (Y,σ), such that $f(S)\subseteq \mathrm{U}\{A_i: i\in I\}$. Since f is $\hat{g}^{**}s$-*irresolute*. So $S\subseteq \mathrm{U}\{f^{-1}(A_i): i\in I\}$, where $\{f^{-1}(A_i): i\in I\}\subseteq \hat{g}^{**}s\text{-}O(X,\tau)$. Since S is $\hat{g}^{**}s$-*compact* relative to (X,τ), there exists a finite sub collection $\{f^{-1}(A_1), f^{-1}(A_2),\ldots, f^{-1}(A_n)\}$ such that $S\subseteq \mathrm{U}\{f^{-1}(A_1), f^{-1}(A_2),\ldots, f^{-1}(A_n)\}$. That is $f(S)\subseteq \mathrm{U}\{A_1,A_2,...,A_n\}$. Hence $f(S)$ is $\hat{g}^{**}s$-*compact* relative to (Y,σ).

Theorem 3.9. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is strongly $\hat{g}^{**}s$-*continuous* mapping from a compact space (X,τ) onto a topological space (Y,σ). Then (Y,σ) is $\hat{g}^{**}s$-*compact*.

Proof. Let $\{A_i: i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of (Y,σ). Since f is strongly $\hat{g}^{**}s$-*continuous*, $\{f^{-1}(A_i): i\in I\}$ is an open cover of (X,τ). Again, since (X,τ) is compact, the open cover $\{f^{-1}(A_i): i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i): i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i): i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i: i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i: i=i=1,2,3,...,n\}$. Thus $\{A_1,A_2,...,A_n\}$ is a finite subcover of $\{A_i: i\in I\}$ for (Y,σ). Hence (Y,σ) is $\hat{g}^{**}s$-*compact*.

Theorem 3.10. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is perfectly $\hat{g}^{**}s$-*continuous* mapping from a compact space (X,τ) onto a topological space (Y,σ). Then (Y,σ) is $\hat{g}^{**}s$-*compact*.

Proof. Let $\{A_i: i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of (Y,σ). Since f is perfectly $\hat{g}^{**}s$-*continuous*, $\{f^{-1}(A_i): i\in I\}$ is an open cover of (X,τ). Again, since (X,τ) is compact, the open cover $\{f^{-1}(A_i): i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i): i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i): i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i: i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i: i=1,2,3,...,n\}$. That is $\{A_1, A_2,\ldots, A_n\}$ is a finite subcover of $\{A_i: i\in I\}$ for (Y,σ). Hence (Y,σ) is $\hat{g}^{**}s$-*compact*.

FULL TEXTS BOOK

Theorem 3.11. Suppose that a function $f:(X,\tau)\to(Y,\sigma)$ is a $\hat{g}^{**}s$-*irresolute* mapping from a $\hat{g}^{**}s$-*compact* space (X,τ) onto a topological space (Y,σ). Then (Y,σ) is $\hat{g}^{**}s$-*compact*.

Proof. Let $f:(X,\tau)\to(Y,\sigma)$ be a $\hat{g}^{**}s$-*irresolute* mapping from a $\hat{g}^{**}s$-*compact* space (X,τ) onto a topological space (Y,σ). Let $\{A_i : i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of (Y,σ). Then $\{f^{-1}(A_i) : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of (X,τ), since f is $\hat{g}^{**}s$-*irresolute*. As (X,τ) is $\hat{g}^{**}s$-*compact*, the $\hat{g}^{**}s$-*open* cover $\{f^{-1}(A_i) : i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i) : i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i) : i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i : i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. That is $\{A_1, A_2, \ldots, A_n\}$ is a finite subcover of $\{A_i : i\in I\}$ for (Y,σ). Hence (Y,σ) is $\hat{g}^{**}s$-*compact*.

Theorem 3.12. If (X,τ) is compact and every $\hat{g}^{**}s$-*closed* set in X is also closed in X, then (X,τ) is $\hat{g}^{**}s$-*compact*.

Proof. Let $\{A_i : i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of X. Since every $\hat{g}^{**}s$-*closed* set in X is also closed in X. Thus $\{X-A_i : i\in I\}$ is a closed cover of X and hence $\{A_i : i\in I\}$ is an open cover of X. Since (X,τ) is compact. So there exists a finite subcover $\{A_i : i=1,2,3,...,n\}$ of $\{A_i : i\in I\}$ such that $X=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. Hence (X,τ) is $\hat{g}^{**}s$-*compact*.

Theorem 3.13. A topological space (X,τ) is $\hat{g}^{**}s$-*compact* if and only if every family of $\hat{g}^{**}s$-*closed* sets of (X,τ) having finite intersection property has a nonempty intersection.

Proof. Suppose (X,τ) is $\hat{g}^{**}s$-*compact*. Let $\{A_i : i\in I\}$ be a family of $\hat{g}^{**}s$-*closed* sets with finite intersection property. Suppose $\mathrm{I}_{i\in I} A_i=\phi$, then $X-\mathrm{I}(\{A_i : i\in I\})=X$. This implies $\mathrm{U}\{(X-A_i) : i\in I\}=X$. Thus the cover $\{(X-A_i) : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of (X,τ). Then as (X,τ) is $\hat{g}^{**}s$-*compact*, the $\hat{g}^{**}s$-*open* cover $\{(X-A_i) : i\in I\}$ has a finite sub cover say $\{(X-A_i) : i=1,2,3,...,n\}$. This implies that $X=\mathrm{U}\{(X-A_i) : i=1,2,3,...,n\}$ which implies $X=X-\mathrm{I}\{A_i : i=1,2,3,...,n\}$, which implies $X-X=X-[X-\mathrm{I}\{A_i : i=1,2,3,...,n\}]$, which implies $\phi=\mathrm{I}\{A_i : i=1,2,3,...,n\}$. This disproves the assumption. Hence $\mathrm{I}\{A_i : i\in I\}\neq\phi$.

Conversely, suppose (X,τ) is not $\hat{g}^{**}s$-*compact*. Then there exits a $\hat{g}^{**}s$-*open* cover of (X,τ) say $\{G_i : i\in I\}$ having no finite subcover. This implies for any finite subfamily $\{G_i : i=1,2,3,...,n\}$ of $\{G_i : i\in I\}$, we have $\mathrm{U}\{G_i : i=1,2,3,...,n\}\neq X$, which implies $X-(\mathrm{U}\{G_i : i=1,2,3,...,n\})\neq X-X$, therefore $\mathrm{I}\{X-G_i : i=1,2,3,...,n\}\neq\phi$. Then the family $\{X-G_i : i\in I\}$ of $\hat{g}^{**}s$-*closed* sets has a finite intersection property. Also by assumption

FULL TEXTS BOOK

I $\{X - G_i : i \in I\} \neq \phi$ which implies $X - (\mathrm{U}\{G_i : i \in I\}) \neq \phi$, so that $\mathrm{U}\{G_i : i \in I\} \neq X$. This implies $\{G_i : i \in I\}$ is not a cover of (X, τ). This disproves the fact that $\{G_i : i \in I\}$ is a cover for (X, τ). Therefore a $\hat{g}^{**}s$-*open* cover $\{G_i : i \in I\}$ of (X, τ) has a finite sub cover $\{G_i : i = 1,2,3,...,n\}$. Hence (X, τ) is $\hat{g}^{**}s$-*compact*.

Theorem 3.14. Let A be a $\hat{g}^{**}s$-*compact* set relative to a topological space X and B be a $\hat{g}^{**}s$-*closed* subset of X. Then $A \mathrm{I}\ B$ is $\hat{g}^{**}s$-*compact* relative to X.

Proof. Let A be $\hat{g}^{**}s$-*compact* relative to X. Let $\{A_i : i \in I\}$ be a cover of $A \mathrm{I}\ B$ by $\hat{g}^{**}s$-*open* sets in X. Then $\{A_i : i \in I\} \mathrm{U} \{B^C\}$ is a cover of A by $\hat{g}^{**}s$-*open* sets in X, but A is $\hat{g}^{**}s$-*compact* relative to X, so there exists a finite subset $I_0 = \{i_1, i_2, i_3, \ldots, i_n\} \subseteq I$ such that $A \subseteq (\mathrm{U}\{A_{i_k} : k = 1, 2, 3, \ldots, n\}) \mathrm{U}\, B^C$. Then $A \mathrm{I}\ B \subseteq \mathrm{U}\{A_{i_k} \mathrm{I}\ B : k = 1, 2, 3, \ldots, n\} \subseteq \mathrm{U}\{A_{i_k} : k = 1,2,3,...,n\}$. Hence $A \mathrm{I}\ B$ is $\hat{g}^{**}s$-*compact*.

Theorem 3.15. Suppose that a function $f : (X, \tau) \to (Y, \sigma)$ is $\hat{g}^{**}s$-*irresolute* and a subset B of X is $\hat{g}^{**}s$-*compact* relative to X. Then $f(B)$ is $\hat{g}^{**}s$-*compact* relative to Y.

Proof. Let $\{A_i : i \in I\}$ be a cover of $f(B)$ by $\hat{g}^{**}s$-*open* subsets of Y. Since f is $\hat{g}^{**}s$-*irresolute*. Then $\{f^{-1}(A_i) : i \in I\}$ is a cover of B by $\hat{g}^{**}s$-*open* subsets of X. Since B is $\hat{g}^{**}s$-*compact* relative to X, $\{f^{-1}(A_i) : i \in I\}$ has a finite sub cover say $\{f^{-1}(A_1), f^{-1}(A_2), \ldots, f^{-1}(A_n)\}$ for B. Then it implies that $\{A_i : i = 1,2,3,...,n\}$ is a finite subcover of $\{A_i : i \in I\}$ for $f(B)$. So $f(B)$ is $\hat{g}^{**}s$-*compact* relative to Y.

Definition 3.16. Let (X, τ) be a topological space and let E be a subset of X. Let $\tau_E^{\hat{g}^{**}s} = \{A \mathrm{I}\ E : A \in \hat{g}^{**}s\text{-}O(X, \tau)\}$. Then $(E, \tau_E^{\hat{g}^{**}s})$ is a topological space.

Theorem 3.17. Let (X, τ) be a topological space and let E be a subset of X. Then $(E, \tau_E^{\hat{g}^{**}s})$ is compact if and only if for any $\hat{g}^{**}s$-*open* cover Γ of E has a finite subcover of E.

Proof. Suppose E is compact. Let $\Gamma \subseteq \hat{g}^{**}s\text{-}O(X, \tau)$ such that $E \subseteq \mathrm{U}\Gamma$. Let $\Gamma_E = \{A \mathrm{I}\ E : A \in \Gamma\}$. Then $E = \mathrm{U}\Gamma_E$ and $\Gamma_E \subseteq \tau_E^{\hat{g}^{**}s}$. By hypothesis, there exists a finite subset $\Gamma_E^* = \{A_i \mathrm{I}\ E : i = 1,2,3,...,n\} \subseteq \Gamma_E$ such that $E = \mathrm{U}\Gamma_E^*$. Then $\Gamma^* = \{A_i : i = 1,2,3,...,n\} \subseteq \Gamma$ and $E \subseteq \mathrm{U}\Gamma^*$.

Conversely, let $\Upsilon = \{A_i \mathrm{I}\ E : i \in I\} \subseteq \tau_E^{\hat{g}^{**}s}$ such that $E = \mathrm{U}\Upsilon$. Then $\Upsilon^* = \{A_i : i \in A\}$ is a $\hat{g}^{**}s$-*open* covering of E. By hypothesis, there exists $\Upsilon^{**} = \{A_i : i = 1,2,3,...,n\}$ a finite subset of Υ^* such that $E \subseteq \mathrm{U}\Upsilon^{**}$. Then $\Upsilon^{\#} = \{A_i \mathrm{I}\ E : i = 1,2,3,...,n\}$ is a finite subset of Υ such that $E = \mathrm{U}\Upsilon^{\#}$. This proves that $(E, \tau_E^{\hat{g}^{**}s})$ is compact.

4. COUNTABLY $\hat{g}^{**}s$-COMPACT SPACES

In this section, we present the concept of countably $\hat{g}^{**}s$-*compactness* and its properties.

Definition 4.1. A topological space (X,τ) is said to be countably $\hat{g}^{**}s$-*compact* if every countable $\hat{g}^{**}s$-*open* cover of X has a finite sub cover.

Theorem 4.2. If (X,τ) is a countably $\hat{g}^{**}s$-*compact* space, then (X,τ) is countably compact.

Proof. Let (X,τ) be a countably $\hat{g}^{**}s$-*compact* space. Let $\{A_i : i\in I\}$ be a countable open cover of (X,τ). Since $\tau\subseteq \hat{g}^{**}s\text{-}O(X,\tau)$. So $\{A_i : i\in I\}$ is a countable $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is countably $\hat{g}^{**}s$-*compact*, therefore countable $\hat{g}^{**}s$-*open* cover $\{A_i : i\in I\}$ of (X,τ) has a finite sub cover say $\{A_i : i=1,2,3,\ldots,n\}$ for X. Hence (X,τ) is a countably compact space.

Theorem 4.3. If (X,τ) is countably compact and every $\hat{g}^{**}s$-*closed* subset of X is closed in X, then (X,τ) is countably $\hat{g}^{**}s$-*compact*.

Proof. Let (X,τ) be a countably compact space. Let $\{A_i : i\in I\}$ be a countable $\hat{g}^{**}s$-*open* cover of (X,τ). Since every $\hat{g}^{**}s$-*closed* subset of X is closed in X. Thus every $\hat{g}^{**}s$-*open* set in X is open in X. Therefore $\{A_i : i\in I\}$ is a countable open cover of (X,τ). Since (X,τ) is countably compact, so countable open cover $\{A_i : i\in I\}$ of (X,τ) has a finite sub cover say $\{A_i : i=1,2,3,...,n\}$ for X. Hence (X,τ) is a countably $\hat{g}^{**}s$-*compact* space.

Theorem 4.4. Every $\hat{g}^{**}s$-*compact* space is countably $\hat{g}^{**}s$-*compact*.

Proof. Let (X,τ) be a $\hat{g}^{**}s$-*compact* space. Let $\{A_i : i\in I\}$ be a countable $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is $\hat{g}^{**}s$-*compact*, so $\hat{g}^{**}s$-*open* cover $\{A_i : i\in I\}$ of (X,τ) has a finite sub cover say $\{A_i : i=1,2,3,...,n\}$ for (X,τ). Hence (X,τ) is countably $\hat{g}^{**}s$-*compact* space.

Theorem 4.5. Let $f:(X,\tau)\to(Y,\sigma)$ be a $\hat{g}^{**}s$-*continuous* onjective mapping. If X is countably $\hat{g}^{**}s$-*compact* space, then (Y,σ) is countably compact.

Proof. Let $f:(X,\tau)\to(Y,\sigma)$ be a $\hat{g}^{**}s$-*continuous* mapping from a countably $\hat{g}^{**}s$-*compact* space (X,τ) onto a topological space (Y,σ). Let $\{A_i : i\in I\}$ be a countable open cover of Y. Then $\{f^{-1}(A_i) : i\in I\}$ is a countable $\hat{g}^{**}s$-*open* cover of X, as f is $\hat{g}^{**}s$-*continuous*. Since X is countably $\hat{g}^{**}s$-*compact*, the countable $\hat{g}^{**}s$-*open* cover $\{f^{-1}(A_i) : i\in I\}$ of X has a finite sub cover say $\{f^{-1}(A_i) : i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i) : i=1,2,3,...,n\}$, which implies $Y=f(X)=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. That is $\{A_i : i=1,2,3,...,n\}$ is a finite sub cover of $\{A_i : i\in I\}$ for Y. Hence Y is countably compact.

FULL TEXTS BOOK

Theorem 4.6. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is perfectly $\hat{g}^{**}s$-*continuous* mapping from a countably compact space (X,τ) onto a topological space (Y,σ). Then (Y,σ) is countably $\hat{g}^{**}s$-*compact*.

Proof. Let $\{A_i : i\in I\}$ be a countable $\hat{g}^{**}s$-*open* cover of (Y,σ). Since f is perfectly $\hat{g}^{**}s$-*continuous*, $\{f^{-1}(A_i) : i\in I\}$ is a countable open cover of (Y,σ). Again, since (X,τ) is countably $\hat{g}^{**}s$-*compact*, the countable open cover $\{f^{-1}(A_i) : i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i) : i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i) : i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i : i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. That is $\{A_1,A_2,\ldots,A_n\}$ is a finite subcover of $\{A_i : i\in I\}$ for (Y,σ). Hence (Y,σ) is countably $\hat{g}^{**}s$-*compact*.

Theorem 4.7. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is strongly $\hat{g}^{**}s$-*continuous* mapping from a countably compact space (X,τ) onto a topological space (Y,σ). Then (Y,σ) is countably $\hat{g}^{**}s$-*compact*.

Proof. Let $\{A_i : i\in I\}$ be a countable $\hat{g}^{**}s$-*open* cover of (Y,σ). Since f is strongly $\hat{g}^{**}s$-*continuous*, $\{f^{-1}(A_i) : i\in I\}$ is a countable open cover of (X,τ). Again, since (X,τ) is countably compact, the countable open cover $\{f^{-1}(A_i) : i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i) : i=1,2,3,...,n\}$. Therefore $X=\mathrm{U}\{f^{-1}(A_i) : i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i : i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. That is $\{A_1,A_2,...,A_n\}$ is a finite subcover of $\{A_i : i\in I\}$ for (Y,σ). Hence (Y,σ) is countably $\hat{g}^{**}s$-*compact*.

Theorem 4.8. The image of a countably $\hat{g}^{**}s$-*compact* space under a $\hat{g}^{**}s$-*irresolute* mapping is countably $\hat{g}^{**}s$-*compact*.

Proof. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is a $\hat{g}^{**}s$-*irresolute* mapping from a countably $\hat{g}^{**}s$-*compact* space (X,τ) onto a topological space (Y,σ). Let $\{A_i : i\in I\}$ be a countable $\hat{g}^{**}s$-*open* cover of (Y,σ). Then $\{f^{-1}(A_i) : i\in I\}$ is a countable $\hat{g}^{**}s$-*open* cover of (X,τ), since f is $\hat{g}^{**}s$-*irresolute*. As (X,τ) is countably $\hat{g}^{**}s$-*compact*, the countable $\hat{g}^{**}s$-*open* cover $\{f^{-1}(A_i) : i\in I\}$ of (X,τ) has a finite sub cover say $\{f^{-1}(A_i) : i=1,2,3,...,n\}$. Then it follows that $X=\mathrm{U}\{f^{-1}(A_i) : i=1,2,3,...,n\}$, which implies $f(X)=\mathrm{U}\{A_i : i=1,2,3,...,n\}$, so that $Y=\mathrm{U}\{A_i : i=1,2,3,...,n\}$. That is $\{A_1,A_2,\ldots,A_n\}$ is a finite subcover of $\{A_i : i\in I\}$ for (Y,σ). Hence (Y,σ) is countably $\hat{g}^{**}s$-*compact*.

Theorem 4.9. Let (X,τ) be a topological space and $x\in X$. A point $x\in X$ is said to be $\hat{g}^{**}s$-*limit* point of $A\subseteq X$ provided that every $\hat{g}^{**}s$-*neighbourhood* of x contains at least one point of A different from x.

Theorem 4.10. Every infinite subset of a $\hat{g}^{**}s$-*compact* space has a $\hat{g}^{**}s$-*limit* point.

FULL TEXTS BOOK

Proof. Let A be an infinite subset of a $\hat{g}^{**}s$-*compact* space (X,τ). Suppose that A has not a $\hat{g}^{**}s$-*limit* point. Then for each $x \in X$, there exists a $\hat{g}^{**}s$-*open* set G_x containing at most one point of A. Now, the collection $\Lambda = \{G_x : x \in X\}$ forms a $\hat{g}^{**}s$-*open* cover of X. As X is $\hat{g}^{**}s$-*compact*, then there exist $x_1, x_2, \ldots, x_n$ in X such that $X = \bigcup_{i=1}^{i=n} G_{x_i}$. Therefore X has at most n points of A. This implies that A is finite. But this contradicts that A is infinite. Thus A has a $\hat{g}^{**}s$-*limit* point.

5. $\hat{g}^{**}s$--LINDELOF SPACES

In this section, we concentrate on the concept of $\hat{g}^{**}s$-*Lindelöf* space and its properties.

Definition 5.1. A topological space (X,τ) is said to be $\hat{g}^{**}s$-*Lindelöf* space if every $\hat{g}^{**}s$-*open* cover of X has a countable subcover.

Definition 5.2. Every $\hat{g}^{**}s$-*Lindelöf* space (X,τ) is *Lindelöf* space.

Proof. Let (X,τ) be a $\hat{g}^{**}s$-*Lindelöf* space. Let $\{A_i : i \in I\}$ be an open cover of (X,τ). Since $\tau \subseteq \hat{g}^{**}s\text{-}O(X,\tau)$. Therefore $\{A_i : i \in I\}$ is a $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space. So there exists a countable subset I_0 of I such that $\{A_i : i \in I_0\}$ is a $\hat{g}^{**}s$-*open* subcover of (X,τ). Hence (X,τ) is a *Lindelöf* space.

Theorem 5.3. Every $\hat{g}^{**}s$-*compact* space is $\hat{g}^{**}s$-*Lindelöf*.

Proof. Let (X,τ) be a $\hat{g}^{**}s$-*compact* space. Let $\{A_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is $\hat{g}^{**}s$-*compact* space. Then $\{A_i : i \in I\}$ has a finite sub cover say $\{A_i : i = 1,2,3,\ldots,n\}$. Since every finite subcover is always countable subcover and therefore $\{A_i : i = 1,2,3,\ldots,n\}$ is a countable subcover of $\{A_i : i \in I\}$. Hence (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space.

Theorem 5.4. Every $\hat{g}^{**}s$-*closed* subset of a $\hat{g}^{**}s$-*Lindelöf* space is $\hat{g}^{**}s$-*Lindelöf*.

Proof. Let F be a $\hat{g}^{**}s$-*closed* subset of X and $\{G_i : i \in I\}$ be $\hat{g}^{**}s$-*open* cover of F. Then F^c is $\hat{g}^{**}s$-*open* and $F \subseteq \mathrm{U}\{G_i : i \in I\}$. Hence $X = (\mathrm{U}\{G_i : i \in I\}) \mathrm{U} F^c$. Since X is $\hat{g}^{**}s$-*Lindelöf*, then $X = (\mathrm{U}\{G_i : i \in I_0\}) \mathrm{U} F^c$ for some countable subset I_0 of I. Therefore $F \subseteq \mathrm{U}\{G_i : i \in I_0\}$. Thus F is $\hat{g}^{**}s$-*Lindelöf*.

Theorem 5.5. Let A be a $\hat{g}^{**}s$-*Lindelöf* subset of X and B be a $\hat{g}^{**}s$-*closed* subset of X. Then $A \mathrm{I}\ B$ is $\hat{g}^{**}s$-*Lindelöf*.

Proof. Let $\{G_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of $A \mathrm{I}\ B$. Then $A \subseteq (\bigcup_{i \in I} G_i) \mathrm{U} B^c$. Since A is $\hat{g}^{**}s$-*Lindelöf*, then there exists a countable subset I_0 of I such that $A \subseteq (\bigcup_{i \in I_0} G_i) \mathrm{U} B^c$. Therefore $A \mathrm{I}\ B \subseteq \bigcup_{i \in I_0} G_i$. Thus $A \mathrm{I}\ B$ is $\hat{g}^{**}s$-*Lindelöf*.

FULL TEXTS BOOK

Theorem 5.6. A topological space (X,τ) is $\hat{g}^{**}s$-*Lindelöf* if and only if every collection of $\hat{g}^{**}s$-*closed* subsets of X satisfying the countable intersection property, has, itself, a non-empty intersection.

Necessity: Let $\Lambda=\{F_i : i\in I\}$ be a collection of $\hat{g}^{**}s$-*closed* subsets of X which has the countable intersection property. Assume that $\bigcap_{i\in I} F_i=\phi$. Then $X=\bigcup_{i\in I} F_i^c$. Since X is $\hat{g}^{**}s$-*Lindelöf*, then there exists a countable subset I_0 of I such that $X=\bigcup_{i\in I_0} F_i^c$. Therefore, $\bigcap_{i\in I_0} F_i=\phi$ contradicts that Λ has the countable intersection property. Thus Λ has, itself, a non-empty intersection.

Sufficiency: Let $\{G_i : i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of X. Suppose $\{G_i : i\in I\}$ has no countable subcover. Then $X-\bigcup_{i\in J} G_i\neq\phi$, for any countable subset J of I. Now, $\bigcap_{i\in J} G_i^c\neq\phi$ implies that $\{G_i^c : i\in I\}$ is a collection of $\hat{g}^{**}s$-*closed* subsets of X which has the countable intersection property. Therefore $\bigcap_{i\in I} G_i^c\neq\phi$. Thus $X\neq\bigcup_{i\in I} G_i$ contradicts that $\{G_i : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of X. Hence X is $\hat{g}^{**}s$-*Lindelöf*.

Theorem 5.7. A $\hat{g}^{**}s$-*continuous* image of a $\hat{g}^{**}s$-*Lindelöf* space is a *Lindelöf* space.

Proof. Let $f:(X,\tau)\to(Y,\sigma)$ be a $\hat{g}^{**}s$-*continuous* mapping from a $\hat{g}^{**}s$-*Lindelöf* space X onto a topological space Y. Let $\{A_i : i\in I\}$ be an open cover of Y. Then $\{f^{-1}(A_i) : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of X, as f is $\hat{g}^{**}s$-*continuous*. Since X is $\hat{g}^{**}s$-*Lindelöf* space, the $\hat{g}^{**}s$-*open* cover $\{f^{-1}(A_i) : i\in I\}$ of X has a countable subcover say $\{f^{-1}(A_i) : i\in I_0\}$ for some countable set $I_0\subseteq I$. Therefore $X=\mathrm{U}\{f^{-1}(A_i) : i\in I_0\}$, which implies $f(X)=\mathrm{U}\{A_i : i\in I_0\}$, then $Y=\mathrm{U}\{A_i : i\in I_0\}$. That is $\{A_i : i\in I_0\}$ a countable subcover of $\{A_i : i\in I\}$ for Y. Hence (Y,σ) is a *Lindelöf* space.

Theorem 5.8. The image of a $\hat{g}^{**}s$-*Lindelöf* space under a $\hat{g}^{**}s$-*irresolue* mapping is $\hat{g}^{**}s$-*Lindelöf*.space.

Proof. Suppose that a mapping $f:(X,\tau)\to(Y,\sigma)$ is a $\hat{g}^{**}s$-*irresolue* mapping from a $\hat{g}^{**}s$-*Lindelöf* space (X,τ) onto a topological space (Y,σ). Let $\{B_i : i\in I\}$ be a $\hat{g}^{**}s$-*open* cover of (Y,σ). Since f is $\hat{g}^{**}s$-*irresolue*. Therefore $\{f^{-1}(B_i) : i\in I\}$ is a $\hat{g}^{**}s$-*open* cover of (X,τ). As (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space, the $\hat{g}^{**}s$-*open* cover $\{f^{-1}(B_i) : i\in I\}$ of (X,τ) has a countable subcover say $\{f^{-1}(B_i) : i\in I_0\}$ for some countable set $I_0\subseteq I$. Therefore $X=\mathrm{U}\{f^{-1}(B_i) : i\in I_0\}$, which implies $f(X)=\mathrm{U}\{B_i : i\in I_0\}$, so that $Y=\mathrm{U}\{B_i : i\in I_0\}$. That is $\{B_i : i\in I_0\}$ a countable subcover of $\{B_i : i\in I\}$ for Y. Hence (Y,σ) is a $\hat{g}^{**}s$-*Lindelöf* space.

Theorem 5.9. If (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space and countably $\hat{g}^{**}s$-*compact* space, then (X,τ) is $\hat{g}^{**}s$-*compact* space.

FULL TEXTS BOOK

Proof. Suppose (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space and countably $\hat{g}^{**}s$-*compact* space. Let $\{A_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of (X,τ). Since (X,τ) is $\hat{g}^{**}s$-*Lindelöf* space, $\{A_i : i \in I\}$ has a countable subcover say $\{A_i : i \in I_0\}$ for some countable set $I_0 \subseteq I$. Therefore $\{A_i : i \in I_0\}$ is a countable $\hat{g}^{**}s$-*open* cover of (X,τ). Again, since (X,τ) is countably $\hat{g}^{**}s$-*compact* space, $\{A_i : i \in I_0\}$ has a finite subcover and say $\{A_i : i = 1,2,3,...,n\}$. Therefore $\{A_i : i = 1,2,3,...,n\}$ is a finite subcover of $\{A_i : i \in I\}$ for (X,τ). Hence (X,τ) is a $\hat{g}^{**}s$-*compact* space.

Theorem 5.10. If a function $f:(X,\tau)\to(Y,\sigma)$ is $\hat{g}^{**}s$-*irresolue* and a subset A of X is $\hat{g}^{**}s$-*Lindelöf* relative to X, then $f(A)$ is $\hat{g}^{**}s$-*Lindelöf* relative to Y.

Proof. Let $\{B_i : i \in I\}$ be a cover of $f(A)$ by $\hat{g}^{**}s$-*open* subsets of Y. By hypothesis, f is $\hat{g}^{**}s$-*irresolue* and so $\{f^{-1}(B_i) : i \in I\}$ is a cover of A by $\hat{g}^{**}s$-*open* subsets of X. Since A is $\hat{g}^{**}s$-*Lindelöf* relative to X, $\{f^{-1}(B_i) : i \in I\}$ has a countable subcover say $\{f^{-1}(B_i) : i \in I_0\}$ for A, where I_0 is a countable subset of I. Now $\{B_i : i \in I_0\}$ is a countable subcover of $\{B_i : i \in I\}$ for $f(A)$. So $f(A)$ is $\hat{g}^{**}s$-*Lindelöf* relative to Y.

6. ALMOST $\hat{g}^{**}s$-COMPACT SPACES

Definition 6.1. A topological space (X,τ) is called almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ provided that every $\hat{g}^{**}s$-*open* cover of X has a finite (resp. countable) sub-collection, the $\hat{g}^{**}s$-*closure* of whose members cover X.

The proofs of the following four propositions are straightforward and therefore will be omitted.

Proposition 6.2. Every almost $\hat{g}^{**}s$-*compact* space is almost $\hat{g}^{**}s$-*Lindelöf* space.

Proposition 6.3. Every $\hat{g}^{**}s$-*compact* space $(resp.\ \hat{g}^{**}s\text{-}Lindelöf\ space)$ is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proposition 6.4. Any finite (resp. countable) topological space (X,τ) is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proposition 6.5. A finite (resp. countable) union of almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ subsets of (X,τ) is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Definition 6.6. A subset E of (X,τ) is called $\hat{g}^{**}s$-*clopen* provided that it is $\hat{g}^{**}s$-*open* and $\hat{g}^{**}s$-*closed*.

Theorem 6.7. Let F be a $\hat{g}^{**}s$-*clopen* subset of an almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ space (X,τ). Then F is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

FULL TEXTS BOOK

Proof. Let F be a $\hat{g}^{**}s$-*clopen* subset of an almost $\hat{g}^{**}s$-*compact* space X and $\{G_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of F. Then F^c is $\hat{g}^{**}s$-*open* and $X \subseteq \left(\cup\{G_i : i \in I\}\right) \cup F^c$. Since X is almost $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $X = \left(\cup\{\hat{g}^{**}s\text{-}Cl(G_i) : i \in I_0\}\right) \cup F^c$. Thus it follows that $F \subseteq \cup\{\hat{g}^{**}s\text{-}Cl(G_i) : i \in I_0\}$. Hence F is almost $\hat{g}^{**}s$-*compact*.

The proof is similar in the case of almost $\hat{g}^{**}s$-*Lindelöf*.

Theorem 6.8. If A is an almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ subset of (X, τ) and B is a $\hat{g}^{**}s$-*clopen* subset of X, then $A \cap B$ is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proof. Let $\Lambda = \{G_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of $A \cap B$. Then $A \subseteq \left(\cup\{G_i : i \in I\}\right) \cup B^c$. Since A is almost $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $A \subseteq \left(\cup\{\hat{g}^{**}s\text{-}Cl(G_i) : i \in I_0\}\right) \cup B^c$. Hence $A \cap B \subseteq \cup\{\hat{g}^{**}s\text{-}Cl(G_i) : i \in I_0\}$. Thus $A \cap B$ is almost $\hat{g}^{**}s$-*compact*.

The proof is similar in the case of almost $\hat{g}^{**}s$-*Lindelöf*.

Theorem 6.9. Let a mapping $f : (X, \tau) \to (Y, \sigma)$ be $\hat{g}^{**}s$-*irresolute*. Suppose that A is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ subset of X. Then $f(A)$ is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proof. Suppose that $\{G_i : i \in I\}$ is $\hat{g}^{**}s$-*open* cover of $f(A)$. Then $f(A) \subseteq \cup\{G_i : i \in I\}$. Now $A \subseteq \cup\{f^{-1}(G_i) : i \in I\}$. Since f is $\hat{g}^{**}s$-*irresolute*, then $\{f^{-1}(G_i) : i \in I\}$ is a $\hat{g}^{**}s$-*open* cover of A. By hypothesis, A is almost $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $A \subseteq \cup\{\hat{g}^{**}s\text{-}Cl[f^{-1}(G_i)] : i \in I_0\}$. Since f is $\hat{g}^{**}s$-*irresolute*, then $\hat{g}^{**}s\text{-}Cl(f^{-1}(G_i)) \subseteq f^{-1}[\hat{g}^{**}s\text{-}Cl(G_i)]$, for all $i \in I_0$. Hence it follows that $f(A) \subseteq \cup_{i \in I_0} f[f^{-1}(\hat{g}^{**}s\text{-}Cl(G_i))] \subseteq \cup_{i \in I_0} \hat{g}^{**}s\text{-}Cl(G_i)$, which implies that $f(A) \subseteq \cup_{i \in I_0} \hat{g}^{**}s\text{-}Cl(G_i)$. Thus $f(A)$ is almost $\hat{g}^{**}s$-*compact*.

The proof is similar in the case of almost $\hat{g}^{**}s$-*Lindelöf*.

Theorem 6.10. Let $f : (X, \tau) \to (Y, \sigma)$ be a $\hat{g}^{**}s$-*open* bijective mapping and (Y, σ) is almost $\hat{g}^{**}s$-*compact*. Then (X, τ) is almost compact.

Proof. Let $\{G_i : i \in I\}$ be an open cover of X. Then $f(X) = f(\cup_{i \in I} G_i)$. Therefore $Y = \cup_{i \in I} f(G_i)$. Now, Y is almost $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $Y = \cup_{i \in I_0} \hat{g}^{**}s\text{-}Cl[f(G_i)]$. Since f is $\hat{g}^{**}s$-*open* bijective mapping, then f is $\hat{g}^{**}s$-*closed* mapping. Therefore, we have $\hat{g}^{**}s\text{-}Cl[f(G_i)] \subseteq f[Cl(G_i)]$, for all $i \in I_0$. Thus

FULL TEXTS BOOK

$Y \subseteq \bigcup_{i\in I_0} f\left[Cl(G_i)\right] \subseteq f\left[\bigcup_{i\in I_0} Cl(G_i)\right]$, which implies that $X = f^{-1}(Y) \subseteq \bigcup_{i\in I_0} Cl(G_i)$. Thus $X = \bigcup_{i\in I_0} Cl(G_i)$. Hence X is almost compact.

Theorem 6.11. If every collection of $\hat{g}^{**}s$-*closed* subsets of (X,τ), satisfying the finite (resp. countable) intersection property, has, itself, a non-empty intersection, then X is almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proof. Let $\{G_i : i \in I\}$ be a $\hat{g}^{**}s$-*open* cover of X. Suppose $\{G_i : i \in I\}$ has no finite sub collection such that the $\hat{g}^{**}s$-*closure* of whose members cover X. Then $X - \bigcup_{i=1}^{i=n} \hat{g}^{**}s\text{-}Cl(G_i) \neq \phi$, for any $n \in N$. Therefore $X - \bigcup_{i=1}^{i=n} G_i \neq \phi$. Now, $\bigcap_{i=1}^{n} G_i^c \neq \phi$ implies $\{G_i^c : i \in I\}$ is a collection of $\hat{g}^{**}s$-*closed* subsets of X which has the finite intersection property. Thus $\bigcap_{i\in I} G_i^c \neq \phi$ implies $X \neq \bigcup_{i\in I} G_i$. But this is a contradiction. Hence X is almost $\hat{g}^{**}s$-*compact*.

A similar proof is given in the case of *almost* $\hat{g}^{**}s$-*Lindelöf*.

7. MILDLY $\hat{g}^{**}s$-COMPACT SPACES

Definition 7.1. A topological space (X,τ) is called mildly $\hat{g}^{**}s$-*compact* $(resp.\ mildly\ \hat{g}^{**}s\text{-}Lindelöf)$ provided that every $\hat{g}^{**}s$-*clopen* cover of X has a finite (resp. countable) subcover.

Definition 7.2. Every mildly $\hat{g}^{**}s$-*compact* space is mildly $\hat{g}^{**}s$-*Lindelöf*.

Proof. It is straightforward.

Theorem 7.3. Every almost $\hat{g}^{**}s$-*compact* $(resp.\ almost\ \hat{g}^{**}s\text{-}Lindelöf)$ space (X,τ) is mildly $\hat{g}^{**}s$-*compact* $(resp.\ mildly\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proof. Let $\Lambda = \{H_i : i \in I\}$ be a $\hat{g}^{**}s$-*clopen* cover of (X,τ). Since (X,τ) is almost $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $X = \bigcup_{i\in I_0} \hat{g}^{**}s\text{-}Cl(H_i)$. Now, $\hat{g}^{**}s\text{-}Cl(H_i) = H_i$. Thus (X,τ) is mildly $\hat{g}^{**}s$-*compact*.

A similar proof is given when (X,τ) is *almost* $\hat{g}^{**}s$-*Lindelöf*.

Corollary 7.4. Every $\hat{g}^{**}s$-*compact* $(resp.\ \hat{g}^{**}s\text{-}Lindelöf)$ space is mildly $\hat{g}^{**}s$-*compact* $(resp.\ mildly\ \hat{g}^{**}s\text{-}Lindelöf)$.

Theorem 7.5. If F is a $\hat{g}^{**}s$-*clopen* subset of a mildly $\hat{g}^{**}s$-*compact* $(resp.\ mildly\ \hat{g}^{**}s\text{-}Lindelöf)$ space X, then F is mildly $\hat{g}^{**}s$-*ompact* $(resp.\ mildly\ \hat{g}^{**}s\text{-}Lindelöf)$.

Proof. Let F be a $\hat{g}^{**}s$-*clopen* subset of X and $\{G_i : i \in I\}$ be a $\hat{g}^{**}s$-*clopen* cover of F. Then F^c is a $\hat{g}^{**}s$-*clopen* set and $F \subseteq \bigcup_{i\in I} G_i$. Therefore $X = \left(\bigcup_{i\in I} G_i\right) \cup F^c$. Since X is

FULL TEXTS BOOK

mildly $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $X=\left(\bigcup_{i\in I_0}G_i\right)\cup F^c$. So $F\subseteq\left(\bigcup_{i\in I_0}G_i\right)$. Hence F is mildly $\hat{g}^{**}s$-*compact*.

The proof is similar in a case of mildly $\hat{g}^{**}s$-*Lindelöf*.

Theorem 7.6. If A is a mildly $\hat{g}^{**}s$-*compact* (*resp. mildly* $\hat{g}^{**}s$-*Lindelöf*) subset of X and B is a $\hat{g}^{**}s$-*clopen* subset of X, then $A\cap B$ is mildly $\hat{g}^{**}s$-*compact* (*resp. mildly* $\hat{g}^{**}s$-*Lindelöf*).

Proof. Let $\Lambda=\{G_i:i\in I\}$ be a $\hat{g}^{**}s$-*clopen* cover of $A\cap B$. Then $A\subseteq\left(\bigcup_{i\in I}G_i\right)\cup B^c$. Since A is mildly $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $A\subseteq\left(\bigcup_{i\in I_0}G_i\right)\cup B^c$. Therefore $A\cap B\subseteq\bigcup_{i\in I_0}G_i$. Thus $A\cap B$ is mildly $\hat{g}^{**}s$-*compact*.

The proof is similar in case of mildly $\hat{g}^{**}s$-*Lindelöf*.

Theorem 7.7. If $f:(X,\tau)\to(Y,\sigma)$ is a $\hat{g}^{**}s$-*open* bijective mapping and (Y,σ) is mildly $\hat{g}^{**}s$-*compact*, then (X,τ) is mildly compact.

Proof. Let $\{G_i:i\in I\}$ be a clopen cover for X. Then $f(X)=f\left(\bigcup_{i\in I}G_i\right)$. Hence $Y=\bigcup_{i\in I}f(G_i)$. Since f is $\hat{g}^{**}s$-*open* bijective mapping, then f is $\hat{g}^{**}s$-*closed*. Therefore $\{f(G_i):i\in I\}$ is a $\hat{g}^{**}s$-*clopen* cover of X. Since Y is mildly $\hat{g}^{**}s$-*compact*, then there exists a finite subset I_0 of I such that $Y=\bigcup_{i\in I_0}f(G_i)$. Therefore $X=\bigcup_{i\in I_0}G_i$. Thus X is mildly compact.

Proposition 7.8. A subset A of (X,τ) is mildly compact (*resp. mildly Lindelöf*) if and only if (A,τ_A) is mildly compact (*resp. mildly Lindelöf*).

8. CONCLUSIONS

We have used $\hat{g}^{**}s$-*open* sets to introduce the new concepts of notions in topological spaces namely $\hat{g}^{**}s$-*compact* space, countably $\hat{g}^{**}s$-*compact* space, $\hat{g}^{**}s$-*Lindelöf* space, almost $\hat{g}^{**}s$-*compact* space, and mildly $\hat{g}^{**}s$-*compact* space and have investigated several properties and characterization of these new concepts.

ACKNOWLEDGEMENT

The author is highly and gratefully indebted to Prince Mohammad Bin Fahd University, Saudi Arabia, for providing research facilities during the preparation of this research paper.

ABSTRACT

Analysis is one of the greatest achievements in the history of mathematics. The achievement opens a new era of mathematical progress and plays an important role in the development of physics, astronomy, signal processing and other disciplines. At the end of the 19th century, mathematicians deduced many properties of continuous functions on closed intervals, which undoubtedly promoted the development of analytical theory. Bolzano's Function Theory gives the earliest proofs of the Boundedness theorem and the Extreme value theorem and Weierstrass proved the Extreme value theorem in Berlin lecture. The Intermediate value theorem was first proved in 1817 by Bolzano, and then Cauchy gave a proof in 1821. The definition of uniform continuity is proposed by Heine, and he published a proof of the Uniform continuity theorem. There are some important properties of continuous functions on closed intervals including Weierstrass second theorem: Boundedness theorem, Weierstrass first theorem: Extreme value theorem, Bolzano-Cauchy second theorem: Intermediate value theorem, Cantor theorem: Uniform continuity theorem. Continuous functions have four fundamental properties on closed intervals: Boundedness theorem, Extreme value theorem, Intermediate value theorem, Uniform continuity theorem. These theorems are the basis of mathematical analysis and the direct expression of real number theory in functions. In 2020, M. Anto and S. Shahila Andrin [2] inroduced a new class of closed sets called $\hat{g}^{**}$closed sets in topological spaces and investigated some basic properties. In this paper, we introduce $\hat{g}^{**}$continuous function, $\hat{g}^{**}$irresolute function, $\hat{g}^{**}$open function, $\hat{g}^{**}$closed function, pre$-\hat{g}^{**}$open function, and pre$-\hat{g}^{**}$closed function, and investigate several properties and characterizations of these new types of mappings in topological spaces.

Mathematics Subject Classification (2020): 54C05, 54C08, 54C10.

Keywords and Phrases: Topological space, $\hat{g}^{**}$open set, $\hat{g}^{**}$closed set, $\hat{g}^{**}$interior set, $\hat{g}^{**}$closure set, $\hat{g}^{**}$continuous function, $\hat{g}^{**}$iirresolute function, $\hat{g}^{**}$open function, $\hat{g}^{**}$closed function, pre$-\hat{g}^{**}$open function, pre$-\hat{g}^{**}$closed function.

1. INTRODUVTION

Introducing new versions of open sets in a topological space which may acquire either weaker or stronger properties is often studied. The first attempt was done by Levine [14], where he introduced the concepts of semi-open set, semi-closed set, and semi-continuity of a function. In 2020, M. Anto and S. Shahila Andrin [2] inroduced a new class of closed sets called $\hat{g}^{**}$closed sets in topological spaces and investigated some basic properties. In this paper, we introduce $\hat{g}^{**}$continuous function, $\hat{g}^{**}$irresolute function, $\hat{g}^{**}$open function, $\hat{g}^{**}$closed function, pre$-\hat{g}^{**}$open function, and pre$-\hat{g}^{**}$closed function, and investigate several properties and characterizations of these new types of mappings in topological spaces.

FULL TEXTS BOOK

2. BASIC PROPERTIES AND APPLICATIONS OF $\hat{g}^{**}s$- OPEN SETS

In this section, we shall define the concept of $\hat{g}^{**}s$- open set and determine its connection to the classical open set and characterize the concepts of $\hat{g}^{**}s$- *open* sets.

Definition 2.1. A subset A of a topological space (X,τ) is an α- *open* set, if $A \subseteq Int\left[Cl\left(Int\left(A\right)\right)\right]$ and an α- *closed* set, if $Cl\left[Int\left(Cl\left(A\right)\right)\right] \subseteq A$.

The α- *closure* of a subset A of X denoted by $\alpha Cl\left(A\right)$ is defined to be the intersection of all α- *closed* sets containing A. The α- *interior* of A denoted by $\alpha Int\left(A\right)$ is defined to be the union of all α- *open* sets contained in A.

Definition 2.2. A subset A of a topological space (X,τ) is a *semi* - *open* set, if $A \subseteq Cl\left(Int\left(A\right)\right)$ and a *semi* - *closed* set if $Int\left(Cl\left(A\right)\right) \subseteq A$.

The *semi* - *closure* of a subset A of X denoted by $sCl\left(A\right)$ is defined to be the intersection of all *semi* - *closed* sets containing A. The *semi* - *interior* of A denoted by $sInt\left(A\right)$ is defined to be the union of all *semi* - *open* sets contained in A.

Definition 2.3. A subset A of a topological space (X,τ) is called a *regular* - *open* set, if $A = Int\left(Cl\left(A\right)\right)$ and a *regular* - *closed* set if $A = Cl\left(Int\left(A\right)\right)$.

Definition 2.4. A subset A of a topological space (X,τ) is called a *generalized* - *closed* (*briefly* g- *closed*) set, if $Cl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is *open* in (X,τ).

Definition 2.5. A subset A of a topological space (X,τ) is called a *generalized semi* - *closed* (*briefly* gs- *closed*) set, if $sCl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is *open* in (X,τ).

Definition 2.6. A subset A of a topological space (X,τ) is called a $\hat{g}$- *closed* set, if $Cl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is *semi* - *open* in (X,τ).

Definition 2.7. A subset A of a topological space (X,τ) is called a g^{*}-*closed* set, if $Cl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is g- *open* in (X,τ).

Definition 2.8. A subset A of a topological space (X,τ) is called a $\hat{g}^{*}$-*closed* set, if $Cl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is $\hat{g}$- *open* in (X,τ).

Definition 2.9. A subset A of a topological space (X,τ) is called a g^{**}- *closed* set, if $Cl\left(A\right) \subseteq U$, whenever $A \subseteq U$ and U is g^{*}-*open* in (X,τ).

FULL TEXTS BOOK

Definition 2.10. A subset A of a topological space (X,τ) is called a g^*s-*closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs-*open* in (X,τ).

Definition 2.11. A subset A of a topological space (X,τ) is called a $\hat{g}^*s$-*closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is $\hat{g}$-*open* in (X,τ).

Definition 2.12. A subset A of a topological space (X,τ) is called a g^*s^*-*closed* set, if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is g^*-*open* in (X,τ).

Definition 2.13. A subset A of a topological space (X,τ) is called a gs^{**}-*closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs^*-*open* in (X,τ).

Definition 2.14. A subset A of a topological space (X,τ) is called a gs^*-*closed* set, if $Cl(A)\subseteq U$, whenever $A\subseteq U$ and U is gs-*open* in (X,τ).

Definition 2.15. A subset A of a topological space (X,τ) is called a $\hat{g}^{**}s$-*closed* set if $sCl(A)\subseteq U$, whenever $A\subseteq U$ and U is $\hat{g}^*$-*open* in (X,τ). The complement of a $\hat{g}^{**}s$-*closed* set is caaled a $\hat{g}^{**}s$-*open* set in (X,τ). The collection of all $\hat{g}^{**}s$-open $(\hat{g}^{**}s$-closed$)$ subsets of (X,τ) is denoted by $\hat{g}^{**}s$-$O(X,\tau)$ $(\hat{g}^{**}s$-$C(X,\tau))$.

Proposition 2.16. (i) Every closed (open) set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(ii) Every α-*closed* $(\alpha$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(iii) Every *semi*-*closed* $(semi$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(iv) Every g^*s-*closed* $(g^*s$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(v) Every *regular*-*closed* $(regular$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

(vi) Every g^*-*closed* $(g^*$-*open*$)$ set is $\hat{g}^{**}s$-closed $(\hat{g}^{**}s$-open$)$ set.

Proposition 2.17. Arbitrary intersection of $\hat{g}^{**}s$-closed sets is $\hat{g}^{**}s$-closed.

Proposition 2.18. Arbitrary union of $\hat{g}^{**}s$-open sets is $\hat{g}^{**}s$-open.

Definition 2.19. Let (X,τ) be a topological space and $B\subseteq X$. We define the $\hat{g}^{**}s$-closure of B $(\text{briefly } \hat{g}^{**}s\text{-Cl(B)})$ to be the intersection of all $\hat{g}^{**}s$-closed sets containing B which is denoted by $\hat{g}^{**}s$-$Cl(B)=\text{I}\{A: B\subseteq A \text{ and } A\in \hat{g}^{**}s\text{-}C(X,\tau)\}$. We note that $\hat{g}^{**}s$-$Cl(B)$ is the smallest $\hat{g}^{**}s$-*closed* set containing B.

FULL TEXTS BOOK

Definition 2.20. Let (X,τ) be any topological space and B be a subset of X. A point p of X is called a $\hat{g}^{**}s$-*interior* point of B, if there exists a $\hat{g}^{**}s$-*open* set G such that $p \in G \subseteq B$. The set of all $\hat{g}^{**}s$-*interior* points of B is said to be $\hat{g}^{**}s$-*interior* of B $\left(\text{briefly } \overset{\circ}{\hat{g}}{}^{**}s\text{-Int}(B)\right)$ and it is defined by $\hat{g}^{**}s\text{-}Int(B) = \cup\{A : A \subseteq B \text{ and } A \in \overset{\circ}{\hat{g}}{}^{**}s\text{-}O(X,\tau)\}$.

Proposition2.21. If U and V are sets in a topological space (X,τ), then

(1) $\hat{g}^{**}s\text{-}Int(\phi) = \phi$.

(2) $\hat{g}^{**}s\text{-}Int(X) = X$.

(3) $\hat{g}^{**}s\text{-}Int(U) \subseteq U$.

(4) $U \subseteq V \Rightarrow \hat{g}^{**}s\text{-}Int(U) \subseteq \hat{g}^{**}s\text{-}Int(V)$.

Proposition2.22. Let G be any subset of a topological space (X,τ). Then $x \in \hat{g}^{**}s\text{-}Cl(A)$ if and only if for every $\hat{g}^{**}s$-*open* set U containing x, $U \cap G \neq \phi$.

Proposition2.23. For any subset U of topological space (X,τ), $\hat{g}^{**}s\text{-}Int(U) \subseteq U \subseteq \hat{g}^{**}s\text{-}Cl(U)$.

Definition 2.24. Let A be a subset of a topological space (X,τ). A point $x \in A$ is said to be an $\hat{g}^{**}s$-*limit* point of A if for each $\hat{g}^{**}s$-*open* set U containing x, $U \cap (A - \{x\}) \neq \phi$. The set of all $\hat{g}^{**}s$-*limit* points of A is called the $\hat{g}^{**}s$-*derived* set of A and is denoted by $\hat{g}^{**}\text{-}D(A)$.

Theorem 2.25. For any subset A of a topological space X, $\hat{g}^{**}s\text{-}Cl(A) = A \cup [\hat{g}^{**}s\text{-}D(A)]$.

Proof. Since $\hat{g}^{**}s\text{-}D(A) \subseteq \hat{g}^{**}s\text{-}Cl(A)$. $A \cup [\hat{g}^{**}s\text{-}D(A)] \subseteq \hat{g}^{**}s\text{-}Cl(A)$. On the other hand, let $x \in \hat{g}^{**}s\text{-}Cl(A)$. If $x \in A$, then the proof is complete. If $x \notin A$, each $\hat{g}^{**}s$-*open* set U containing x intersects A at a point distinct from x, so $x \in \hat{g}^{**}s\text{-}D(A)$. Thus, $\hat{g}^{**}s\text{-}Cl(A) \subseteq [A \cup (\hat{g}^{**}s\text{-}D(A))]$, which completes the proof.

Corollary 2.26. A subset A of a space X is $\hat{g}^{**}s$-*closed* if and only if it contains the set of all of its $\hat{g}^{**}s$-*limit* points.

Theorem 2.27. For subsets A, B of a space X, the following statements are true:

(1) $\hat{g}^{**}s\text{-}Int(A)$ is the largest $\hat{g}^{**}s$-*open* set contained in A;

(2) A is $\hat{g}^{**}s$-*open* if and only if $A = \hat{g}^{**}s\text{-}Int(A)$.

(3) $\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Int(A)] = \hat{g}^{**}s\text{-}Int(A)$;

(4) $\hat{g}^{**}s\text{-}Int(A) = [A - (\hat{g}^{**}s\text{-}D(X - A))]$;

(5) $[X - (\hat{g}^{**}s\text{-}Cl(A))] = \hat{g}^{**}s\text{-}Int(X - A)$;

FULL TEXTS BOOK

$(6)\left[X-\left(\hat{g}^{**}s\text{-}Int(A)\right)\right]=\hat{g}^{**}s\text{-}Cl(X-A);$

$(7)\left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Int(B)\right]\subseteq\hat{g}^{**}s\text{-}Int(A\cup B);$

$(8)\ \hat{g}^{**}s\text{-}Int(A\cap B)=\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Int(B)\right];$

Proof. (4) If $x\in\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]$, then $x\notin\hat{g}^{**}s\text{-}D(X-A)$ and so there exists a $\hat{g}^{**}s\text{-}open$ set U containing x such that $U\cap(X-A)=\phi$. Then, $x\in U\subseteq A$ and hence $x\in\hat{g}^{**}s\text{-}Int(A)$, that is, $\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int(A)$. On the other hand, if $x\in\hat{g}^{**}s\text{-}Int(A)$, then $x\notin\hat{g}^{**}s\text{-}D(X-A)$ since $\hat{g}^{**}s\text{-}Int(A)$ is $\hat{g}^{**}s\text{-}open$ and $\left[\left(\hat{g}^{**}s\text{-}Int(A)\right)\cap(X-A)\right]=\phi$. Hence, $\hat{g}^{**}s\text{-}Int(A)=\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]$.

$(6)\ X-\left[\hat{g}^{**}s\text{-}Int(A)\right]=X-\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]=(X-A)\cup\left[\hat{g}^{**}s\text{-}D(X-A)\right]=\hat{g}^{**}s\text{-}Cl(X-A).$

Theorem 2.28. Let (X,τ) be a topological space and $A, B\subseteq X$. Then the following statements are true:

(1) $x\in\hat{g}^{**}s\text{-}Cl(A)$ if and only if for every $\hat{g}^{**}s\text{-}open$ subset U containing x, $U\cap A\neq\phi$.

(2) $A\subseteq B$ implies that $\hat{g}^{**}s\text{-}Cl(A)\subseteq\hat{g}^{**}s\text{-}Cl(B)$.

(3) A is $\hat{g}^{**}s\text{-}closed$ if and only if $\hat{g}^{**}s\text{-}Cl(A)=A$.

(4) $\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Cl(A)\right]=\hat{g}^{**}s\text{-}Cl(A)$.

(5) $\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cup\left[\hat{g}^{**}s\text{-}Cl(B)\right]=\hat{g}^{**}s\text{-}Cl(A\cup B)$.

(6) $\hat{g}^{**}s\text{-}Int(X-A)=X-\left[\hat{g}^{**}s\text{-}Cl(A)\right]$.

(7) $\hat{g}^{**}s\text{-}Cl(X-A)=X-\left[\hat{g}^{**}s\text{-}Int(A)\right]$.

Definition 2.29. $\hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]$ is said to be the $\hat{g}^{**}s\text{-}border$ of A.

Theorem 2.30. For a subset A of a space X, the following statements hold:

(1) $Bd(A)\subseteq\hat{g}^{**}s\text{-}Bd(A)$ where $Bd(A)$ denotes the border of A;

(2) $A=\hat{g}^{**}s\text{-}Int(A)\cup\hat{g}^{**}s\text{-}Bd(A)$;

(3) $\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi$;

(4) A is a $\hat{g}^{**}s\text{-}open$ set if and only if $\hat{g}^{**}s\text{-}Bd(A)=\phi$;

(5) $\hat{g}^{**}s\text{-}Bd\left[\hat{g}^{**}s\text{-}Int(A)\right]=\phi$;

(6) $\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi$;

(7) $\hat{g}^{**}s\text{-}Bd\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\hat{g}^{**}s\text{-}Bd(A)$;

(8) $\hat{g}^{**}s\text{-}Bd(A)=A\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right]$;

FULL TEXTS BOOK

$(9)\ \hat{g}^{**}s\text{-}Bd(A)=\hat{g}^{**}s\text{-}D(X-A).$

Proof. (6) If $x\in\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]$, then $x\in\hat{g}^{**}s\text{-}Bd(A)$. On the other hand, since $\hat{g}^{**}s\text{-}Bd(A)\subseteq A,\quad x\in\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]\subseteq\hat{g}^{**}s\text{-}Int(A)$. Therefore, we get $x\in\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Bd(A)\right]$, which contradicts (3). Thus, $\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Bd(A)\right]=\phi.$

$(8)\ \hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]=A-\left[X-\left(\hat{g}^{**}s\text{-}Cl(X-A)\right)\right]=A\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right].$

$(9)\ \hat{g}^{**}s\text{-}Bd(A)=A-\left[\hat{g}^{**}s\text{-}Int(A)\right]=A-\left[A-\left(\hat{g}^{**}s\text{-}D(X-A)\right)\right]=\hat{g}^{**}s\text{-}D(X-A).$

Definition 2.31. $\hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Cl(A)\right]-\left[\hat{g}^{**}s\text{-}Int(A)\right]$ is said to be the $\hat{g}^{**}s$- *frontier* of A.

Theorem 2.32. For a subset A of a space X, the following statements hold:

$(1)\ Fr(A)\subseteq\hat{g}^{**}s\text{-}Fr(A)$ where $Fr(A)$ denotes the frontier of A;

$(2)\ \hat{g}^{**}s\text{-}Cl(A)=\left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Fr(A)\right];$

$(3)\ \left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\phi;$

$(4)\ \hat{g}^{**}s\text{-}Bd(A)\subseteq\hat{g}^{**}s\text{-}Fr(A);$

$(5)\ \hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Bd(A)\right]\cup\left[\hat{g}^{**}s\text{-}D(A)\right];$

$(6)\ A$ is a $\hat{g}^{**}s$-*open* set if and only if $\hat{g}^{**}s\text{-}Fr(A)=\hat{g}^{**}s\text{-}D(A);$

$(7)\ \hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right];$

$(8)\ \hat{g}^{**}s\text{-}Fr(A)=\hat{g}^{**}s\text{-}Fr(X-A);$

$(9)\ \hat{g}^{**}s\text{-}Fr(A)$ is $\hat{g}^{**}s$-*closed;*

$(10)\ \hat{g}^{**}s\text{-}Fr\left[\hat{g}^{**}s\text{-}Fr(A)\right]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

$(11)\ \hat{g}^{**}s\text{-}Fr\left[\hat{g}^{**}s\text{-}Int(A)\right]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

$(12)\ \hat{g}^{**}s\text{-}Fr\left[\hat{g}^{**}s\text{-}Cl(A)\right]\subseteq\hat{g}^{**}s\text{-}Fr(A);$

$(13)\ \hat{g}^{**}s\text{-}Int(A)=A-\left[\hat{g}^{**}s\text{-}Fr(A)\right].$

Proof. $(2)\ \left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\hat{g}^{**}s\text{-}Int(A)\cup\left[\hat{g}^{**}s\text{-}Cl(A)-\hat{g}^{**}s\text{-}Int(A)\right]=\hat{g}^{**}s\text{-}Cl(A)$

$(3)\ \left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\left[\hat{g}^{**}s\text{-}Int(A)\right]\cap\left[\left(\hat{g}^{**}s\text{-}Cl(A)\right)-\left(\hat{g}^{**}s\text{-}Int(A)\right)\right]=\phi.$

FULL TEXTS BOOK

(5) $Since\left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Fr(A)\right]=$
$\left[\hat{g}^{**}s\text{-}Int(A)\right]\cup\left[\hat{g}^{**}s\text{-}Bd(A)\right]\cup\left[\hat{g}^{**}s\text{-}D(A)\right],$
$\hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Bd(A)\right]\cup\left[\hat{g}^{**}s\text{-}D(A)\right].$

(7) $\hat{g}^{**}s\text{-}Fr(A)=\left[\hat{g}^{**}s\text{-}Cl(A)\right]-\left[\hat{g}^{**}s\text{-}Int(A)\right]=\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cap\left[\hat{g}^{**}s\text{-}Cl(X-A)\right].$

(9) $\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\hat{g}^{**}s\text{-}Cl\left[\left(\hat{g}^{**}s\text{-}Cl(A)\right)\cap\left(\hat{g}^{**}s\text{-}Cl(X-A)\right)\right]\subseteq$
$\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cap\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Cl(X-A)\right]$
$=\left[\hat{g}^{**}s\text{-}Cl(A)\right]\cap\hat{g}^{**}s\text{-}\left[\hat{g}^{**}s\text{-}Cl(X-A)\right]=\hat{g}^{**}s\text{-}Fr(A)$. Hence $\hat{g}^{**}s\text{-}Fr(A)$ is $\hat{g}^{**}s\text{-}closed$.

(10) $\hat{g}^{**}s\text{-}Fr\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Fr(A)\right]\cap\hat{g}^{**}s\text{-}Cl\left[X-\left(\hat{g}^{**}s\text{-}Fr(A)\right)\right]\subseteq$
$\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Fr(A)\right]=\hat{g}^{**}s\text{-}Fr(A).$

(12) $\hat{g}^{**}s\text{-}Fr\left[\hat{g}^{**}s\text{-}Cl(A)\right]=\hat{g}^{**}s\text{-}Cl\left[\hat{g}^{**}s\text{-}Cl(A)\right]-\hat{g}^{**}s\text{-}Int\left[\hat{g}^{**}s\text{-}Cl(A)\right]=$
$\left[\hat{g}^{**}s\text{-}Cl(A)\right]-\left[\hat{g}^{**}s\text{-}Int\left(\hat{g}^{**}s\text{-}Cl(A)\right)\right]\subseteq$
$\left[\left(\hat{g}^{**}s\text{-}Cl(A)\right)-\left(\hat{g}^{**}s\text{-}Int(A)\right)\right]=\hat{g}^{**}s\text{-}Fr(A).$

(13) $A-\left[\hat{g}^{**}s\text{-}Fr(A)\right]=A-\left[\left(\hat{g}^{**}s\text{-}Cl(A)\right)-\left(\hat{g}^{**}s\text{-}Int(A)\right)\right]=\hat{g}^{**}s\text{-}Int(A).$

Definition 2.33. A subset A of a topological space (X,τ) is called a $\hat{g}^{**}s\text{-}neighbourhood$ of a point x in X if there exists a $\hat{g}^{**}s\text{-}open$ set U in X such that $x\in U\subseteq A$. The set of all $\hat{g}^{**}s\text{-}neighbourhoods$ of an element x in X will be denoted by: $\hat{g}^{**}s\text{-}N_x=\hat{g}^{**}s\text{-}N_x(X)=$ $\{A\subseteq X: A\ is\ a\ \hat{g}^{**}s\text{-}neighbourhood\ of\ x\}$.

Proposition 2.34. A subset A of a topological space (X,τ) is $\hat{g}^{**}s\text{-}open$ if and only if it is a $\hat{g}^{**}s\text{-}neighbourhood$ of each of its points.

Proof. If A is $\hat{g}^{**}s\text{-}open$ in X, then $x\in A\subseteq A$ for each $x\in A$. Thus A is a $\hat{g}^{**}s\text{-}neighbourhood$ of each of its points. Conversely, suppose that A is a $\hat{g}^{**}s\text{-}neighbourhood$ of each of its points. Then for each $x\in A$, there exists a $\hat{g}^{**}s\text{-}open$ set U_x in X such that $x\in U_x\subseteq A$. Hence $\bigcup_{x\in A}U_x\subseteq A$. Since $A\subseteq\bigcup_{x\in A}U_x$, therefore $A=\bigcup_{x\in A}U_x$. Thus A is a $\hat{g}^{**}s\text{-}open$ set in X, since it is a union of $\hat{g}^{**}s\text{-}open$ sets

3-8: CHARACTERIZATIONS OF $\hat{g}^{**}s$-MAPPINGS

The purpose of this part is to introduce $\hat{g}^{**}s\text{-}continuous$, $\hat{g}^{**}s\text{-}irresolute$, $\hat{g}^{**}s\text{-}open$, $\hat{g}^{**}s\text{-}closed$, $pre\text{-}\hat{g}^{**}s\text{-}open$, and $pre\text{-}\hat{g}^{**}s\text{-}closed$ functions and explore properties and characterizations of these functions.

3. $\hat{g}^{**}s$-CONTINUOUS FUNCTIONS

The purpose of this section is to investigate the properties and characterizations of $\hat{g}^{**}s\text{-}continuous$ functions.

FULL TEXTS BOOK

Definition 3.1. *A function* $f:(X,\tau)\to(Y,\sigma)$ *is said to be* $\hat{g}^{**}s$*-continuous if* $f^{-1}(V)\in \hat{g}^{**}s\text{-}O(X,\tau)$ *for every* $V\in\sigma$.

Theorem 3.2. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a function. Then the following statements are equivalent:*

(1) f is $\hat{g}^{**}s$*-continuous.*

(2) *The inverse image of each closed set in* Y *is a* $\hat{g}^{**}s$*-closed set in* X*;*

(3) $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(V)\right]\subseteq f^{-1}\left[Cl(V)\right]$*, for every* $V\subseteq Y$*;*

(4) $f\left[\hat{g}^{**}s\text{-}Cl(U)\right]\subseteq Cl\left[f(U)\right]$*, for every* $U\subseteq X$*;*

(5) *For any point* $x\in X$ *and any open set* V *of* Y *containing* $f(x)$*, there exists* $U\in \hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in U$ *and* $f(U)\subseteq V$*;*

(6) $\hat{g}^{**}s\text{-}Bd\left[f^{-1}(V)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}d(V)\right]$*, for every* $V\subseteq Y$*;*

(7) $f\left[\hat{g}^{**}s\text{-}D(U)\right]\subseteq Cl\left[f(U)\right]$*, for every* $U\subseteq X$*;*

(8) $f^{-1}\left[Int(V)\right]\subseteq \hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$*, for every* $V\subseteq Y$*;*

Proof. $(1)\Rightarrow(2)$: *Let* $F\subseteq Y$ *be closed. Since* f is $\hat{g}^{**}s$*-continuous,* $f^{-1}(Y-F)=X-f^{-1}(F)$ *is* $\hat{g}^{**}s$*-open. Therefore,* $f^{-1}(F)$ *is* $\hat{g}^{**}s$*-closed in* X.

$(2)\Rightarrow(3)$: *Since* $Cl(V)$ *is closed for every* $V\subseteq Y$*, then* $f^{-1}\left[Cl(V)\right]$ *is* $\hat{g}^{**}s$*-closed. Therefore* $f^{-1}\left[Cl(V)\right]=\hat{g}^{**}s\text{-}Cl\left[f^{-1}\left(Cl(V)\right)\right]\supseteq \hat{g}^{**}s\text{-}Cl\left[f^{-1}(V)\right]$.

$(3)\Rightarrow(4)$: *Let* $U\subseteq X$ *and* $f(U)=V$. *Then* $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(V)\right]\subseteq f^{-1}\left[Cl(V)\right]$. *Thus* $\hat{g}^{**}s\text{-}Cl(U)\subseteq \hat{g}^{**}s\text{-}Cl\left[f^{-1}\left(f(U)\right)\right]\subseteq f^{-1}\left[Cl\left(f(U)\right)\right]$ *and* $f\left[\hat{g}^{**}s\text{-}Cl(U)\right]\subseteq Cl\left[f(U)\right]$.

$(4)\Rightarrow(2)$: *Let* $W\subseteq Y$ *be a closed set, and* $U=f^{-1}(W)$. *Then* $f\left[\hat{g}^{**}s\text{-}Cl(U)\right]\subseteq Cl\left[f(U)\right]$ $=Cl\left[f\left(f^{-1}(W)\right)\right]\subseteq Cl(W)=W$. *Thus* $\hat{g}^{**}s\text{-}Cl(U)\subseteq f^{-1}\left[f\left(\hat{g}^{**}s\text{-}Cl(U)\right)\right]\subseteq f^{-1}(W)$ $=U$. *So* U *is* $\hat{g}^{**}s$*-closed.*

$(2)\Rightarrow(1)$: *Let* $V\subseteq Y$ *be an open set. Then* $Y-V$ *is closed. Then* $f^{-1}(Y-V)=X-f^{-1}(V)$ *is* $\hat{g}^{**}s$*-closed in* X *and hence* $f^{-1}(V)$ *is* $\hat{g}^{**}s$*-open in* X.

$(1)\Rightarrow(5)$: *Let* $f:(X,\tau)\to(Y,\sigma)$ *be* $\hat{g}^{**}s$*-continuous. For any* $x\in X$ *and any open set* V *of* Y *containing* $f(x)$, $U=f^{-1}(V)\in \hat{g}^{**}s\text{-}O(X,\tau)$, *and* $f(U)=f\left[f^{-1}(V)\right]\subseteq V$.

$(5)\Rightarrow(1)$: *Let* $V\in\sigma$. *We prove* $f^{-1}(V)\in \hat{g}^{**}s\text{-}O(X,\tau)$. *Let* $x\in f^{-1}(V)$. *Then* $f(x)\in V$ *and there exists* $U\in \hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in U$ *and* $f(x)\in f(U)\subseteq V$. *Hence* $x\in U\subseteq f^{-1}\left[f(U)\right]\subseteq f^{-1}(V)$. *It shows that* $f^{-1}(V)$ *is a* $\hat{g}^{**}s$*-neighborhood of each of its points. Therefore* $f^{-1}(V)\in \hat{g}^{**}s\text{-}O(X,\tau)$.

FULL TEXTS BOOK

$(6)\Rightarrow(8)$: *Let* $V\subseteq Y$. *Then by hypothesis,* $\hat{g}^{**}s\text{-}Bd\left[f^{-1}(V)\right]\subseteq f^{-1}\left[Bd(V)\right]$

$\Rightarrow f^{-1}(V)-\left[\hat{g}^{**}s\text{-}Int\left(f^{-1}(V)\right)\right]\subseteq f^{-1}\left[V-Int(V)\right]=f^{-1}(V)-f^{-1}\left[Int(V)\right]$

$\Rightarrow f^{-1}\left[Int(V)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$.

$(8)\Rightarrow(6)$: *Let* $V\subseteq Y$. *Then by hypothesis,* $f^{-1}\left[Int(V)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$

$\Rightarrow f^{-1}(V)-\left[\hat{g}^{**}s\text{-}Int\left(f^{-1}(V)\right)\right]\subseteq f^{-1}(V)-f^{-1}\left[Int(V)\right]=f^{-1}\left[V-Int(V)\right]$

$\Rightarrow\hat{g}^{**}s\text{-}Bd\left[f^{-1}(V)\right]\subseteq f^{-1}\left[Bd(V)\right]$.

$(1)\Rightarrow(7)$: *It is obvious, since* f *is* $\hat{g}^{**}s$*-continuous and by* (4) $f\left[\hat{g}^{**}s\text{-}Cl(U)\right]\subseteq Cl\left[f(U)\right]$ *for each* $U\subseteq X$. *So* $f\left[\hat{g}^{**}s\text{-}D(U)\right]\subseteq Cl\left[f(U)\right]$.

$(7)\Rightarrow(1)$: *Let* $U\subseteq Y$ *be an open set,* $V=Y-U$ *and* $f^{-1}(V)=W$. *Then by hypothesis* $f\left[\hat{g}^{**}s\text{-}D(W)\right]\subseteq Cl\left[f(W)\right]$. *Thus* $f\left[\hat{g}^{**}s\text{-}D\left(f^{-1}(V)\right)\right]\subseteq Cl\left[f\left(f^{-1}(V)\right)\right]\subseteq Cl(V)$ $=V$. *Then* $\hat{g}^{**}s\text{-}D\left[f^{-1}(V)\right]\subseteq f^{-1}(V)$ *and* $f^{-1}(V)$ *is* $\hat{g}^{**}s$*-closed. Therefore,* f *is* $\hat{g}^{**}s$*-continuous.*

$(1)\Rightarrow(8)$: *Let* $V\subseteq Y$. *Then* $f^{-1}\left[Int(V)\right]$ *is* $\hat{g}^{**}s$*-open in* X. *Thus* $f^{-1}\left[Int(V)\right]=$ $\hat{g}^{**}s\text{-}Int\left[f^{-1}\left(Int(V)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$. *Hence* $f^{-1}\left[Int(V)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$.

$(8)\Rightarrow(1)$: *Let* $V\subseteq Y$ *be an open set. Then* $f^{-1}(V)=f^{-1}\left[Int(V)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$. *Therefore,* $f^{-1}(V)$ *is* $\hat{g}^{**}s$*-open. Hence* f *is* $\hat{g}^{**}s$*-continuous.*

In the next Theorem, $\#\hat{g}^{**}s\text{-}c.$ *denotes the set of points* x *of* X *for which a function* $f:(X,\tau)\to(Y,\sigma)$ *is not* $\hat{g}^{**}s$*-continuous.*

Theorem 3.3. $\#\hat{g}^{**}s\text{-}c.$ *is identical with the union of the* $\hat{g}^{**}s$*- frontiers of the inverse images of* $\hat{g}^{**}s$*-open sets containing* $f(x)$.

Proof. *Suppose that* f *is not* $\hat{g}^{**}s$*-continuous at a point* x *of* X. *Then there exists an open set* $V\subseteq Y$ *containing* $f(x)$ *such that* $f(U)$ *is not a subset of* V *for every* $U\in\hat{g}^{**}s\text{-}O(X,\tau)$. *containing* x. *Hence, we have* $U\cap f^{-1}\left(X-f^{-1}(V)\right)\neq\phi$ *for every* $U\in\hat{g}^{**}s\text{-}O(X,\tau)$ *containing* x. *It follows that* $x\in\left[\hat{g}^{**}s\text{-}Cl\left(X-f^{-1}(V)\right)\right]$. *We also have* $x\in f^{-1}(V)\subseteq\hat{g}^{**}s\text{-}Cl\left[f^{-1}(V)\right]$. *This means that* $x\in\hat{g}^{**}s\text{-}Fr\left[f^{-1}(V)\right]$. *Now, let* f *be* $\hat{g}^{**}s$*-continuous at* $x\in X$ *and* $V\subseteq Y$ *any open set containing* $f(x)$. *Then,* $x\in f^{-1}(V)$ *is a* $\hat{g}^{**}s$*-open set of* X. *Thus.* $x\in\hat{g}^{**}s\text{-}Int\left[f^{-1}(V)\right]$ *and therefore* $x\notin\hat{g}^{**}s\text{-}Fr\left[f^{-1}(V)\right]$ *for every open set* V *containing* $f(x)$.

Remarks 3.4. (1) *Every* $\hat{g}^{**}s$*-continuous function is continuous, but the converse may not be true.*

FULL TEXTS BOOK

(2) *If a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-continuous and a function* $g:(Y,\sigma)\to(Z,\vartheta)$ *is* $\hat{g}^{**}s$*-continuous, then* $gof:(X,\tau)\to(Z,\vartheta)$ *is* $\hat{g}^{**}s$*-continuous.*

(3) *If a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-continuous and a function* $g:(Y,\sigma)\to(Z,\vartheta)$ *is continuous, then* $gof:(X,\tau)\to(Z,\vartheta)$ *is* $\hat{g}^{**}s$*-continuous.*

(4) *Let* (X,τ) *and* (Y,σ) *be topological spaces. If* $f:(X,\tau)\to(Y,\sigma)$ *is a function, and one of the following*

(a) $f^{-1}\left[Int(B)\right]\subseteq \hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$ *for each* $B\subseteq Y$.

(b) $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]\subseteq f^{-1}\left[Cl(B)\right]$ *for each* $B\subseteq Y$.

(c) $f\left[\hat{g}^{**}s\text{-}Cl(A)\right]\subseteq Cl\left[f(A)\right]$ *for each* $A\subseteq X$ *holds, then* f *is continuous.*

Lemma 3.5. *Let* $A\subseteq Y\subseteq X$, Y *is* $\hat{g}^{**}s$*-open in* X *and* A *is* $\hat{g}^{**}s$*-open in* Y. *Then* A *is* $\hat{g}^{**}s$*-open in* X.

Proof. *Since* A *is* $\hat{g}^{**}s$*-open in* Y, *there exists a* $\hat{g}^{**}s$*-open set* $U\subseteq X$ *such that* $A=Y\cap U$. *Thus* A *being the intersection of two* $\hat{g}^{**}s$*-open sets in* X, *is* $\hat{g}^{**}s$*-open in* X.

Theorem 3.6. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a mapping and* $\{U_i:i\in I\}$ *be a cover of* X *such that* $U_i\in\hat{g}^{**}s\text{-}O(X,\tau)$ *for each* $i\in I$. *Then prove that* f *is* $\hat{g}^{**}s$*-continuous.*

Proof. *Let* $V\subseteq Y$ *be an open set, then* $\left(f|U_i\right)^{-1}(V)$ *is* $\hat{g}^{**}s$*-open in* U_i *for each* $i\in I$. *Since* U_i *is* $\hat{g}^{**}s$*-open in* X *for each* $i\in I$. *So by* Lemma 3.5, $\left(f|U_i\right)^{-1}(V)$ *is* $\hat{g}^{**}s$*-open in* X *for each* $i\in I$. *But,* $f^{-1}(V)=\cup\left\{\left(f|U_i\right)^{-1}(V):i\in I\right\}$, *then* $f^{-1}(V)\in\hat{g}^{**}s\text{-}O(X,\tau)$ *because* $\hat{g}^{**}s\text{-}O(X,\tau)$ *is closed under union. This implies that* f *is* $\hat{g}^{**}s$*-continuous.*

4. $\hat{g}^{**}s$-IRRESOLUTE FUNCTIONS

In this section, the functions to be considered are those for which inverses of $\hat{g}^{**}s$*-open sets are* $\hat{g}^{**}s$*-open. We investigate some properties and characterizations of such functions.*

Definition 4.1. *Let* (X,τ) *and* (Y,σ) *be topological spaces. A function* $f:(X,\tau)\to(Y,\sigma)$ *is called* $\hat{g}^{**}s$*-irresolute if the inverse image of each* $\hat{g}^{**}s$*-open set of* Y *is a* $\hat{g}^{**}s$*-open set in* X.

Theorem 4.2. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a function between topological spaces. Then the following statements are equivalent:*

(1) f *is* $\hat{g}^{**}s$*-irresolute;*

(2) *The inverse image of each* $\hat{g}^{**}s$*-closed set in* (Y,σ) *is a* $\hat{g}^{**}s$*-closed set in* (X,τ),

(3) $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq f^{-1}\left[Cl(B)\right]$, *for each* $B\subseteq Y$,

(4) $f\left[\hat{g}^{**}s\text{-}Cl(A)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f(A)\right]\subseteq Cl\left[f(A)\right]$, *for each* $A\subseteq X$,

FULL TEXTS BOOK

(5) $f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$, *for each* $B\subseteq Y$,

(6) $\hat{g}^{**}s\text{-}Bd\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Bd(B)\right]$, *for each* $B\subseteq Y$,

(7) $\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\right]$, *for each* $B\subseteq Y$,

(8) $f\left[\hat{g}^{**}s\text{-}b(A)\right]\subseteq\hat{g}^{**}s\text{-}b\left[f(A)\right]$, *for each* $A\subseteq X$,

(9) $f\left[\hat{g}^{**}s\text{-}Cl(A)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f(A)\right]$, *for each* $A\subseteq X$.

Proof. $(1)\Rightarrow(2)$: *Obvious.*

$(2)\Rightarrow(3)$: *Let* $B\subseteq Y$ *and* $B\subseteq\hat{g}^{**}s\text{-}Cl(B)\subseteq Cl(B)$. *Then by* (2) $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f^{-1}\left(\hat{g}^{**}s\text{-}Cl(B)\right)\right]=f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq f^{-1}\left[Cl(B)\right]$.

$(3)\Rightarrow(4)$: *Immediately by replacing* B *by* $f(A)$ *in (3).*

$(4)\Rightarrow(1)$: *Let* $W\in\hat{g}^{**}s\text{-}O(Y)$ *and* $F=Y-W\in\hat{g}^{**}s\text{-}C(Y)$. *Then by (4),* $f\left[\hat{g}^{**}s\text{-}Cl\left(f^{-1}(F)\right)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f\left(f^{-1}(F)\right)\right]\subseteq\hat{g}^{**}s\text{-}Cl(F)=F$. *So* $\hat{g}^{**}s\text{-}Cl\left[f^{-1}(F)\right]\subseteq f^{-1}(F)$ *and hence,* $f^{-1}(F)=X-f^{-1}(F)\in\hat{g}^{**}s\text{-}C(X)$, *thus* $f^{-1}(W)\in\hat{g}^{**}s\text{-}O(X)$. *Therefore* f *is* $\hat{g}^{**}s$*-irresolute.*

$(1)\Rightarrow(5)$: *Let* $B\subseteq Y$. *Then* $\hat{g}^{**}s\text{-}Int(B)$ *is* $\hat{g}^{**}s$*-open in* Y. *By (1),* $f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$ *is* $\hat{g}^{**}s$*-open in* X. *Hence* $f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]=\hat{g}^{**}s\text{-}Int\left[f^{-1}\left(\hat{g}^{**}s\text{-}Int(B)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$.

$(5)\Rightarrow(6)$: *Let* $B\subseteq Y$. *Then by (5),* $f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$ *we have* $f^{-1}(B)-\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}(B)-f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$. *Therefore we obtain* $\hat{g}^{**}s\text{-}Bd\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Bd(B)\right]$.

$(6)\Rightarrow(5)$: *Let* $B\subseteq Y$. *Then by (6),* $\hat{g}^{**}s\text{-}Bd\left[f^{-1}(B)\right]=f^{-1}(B)-\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Bd(B)\right]=f^{-1}\left[B-\left(\hat{g}^{**}s\text{-}Int(B)\right)\right]=f^{-1}(B)-f^{-1}\left[Int(B)\right]$. *This implies* $f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$.

$(5)\Rightarrow(1)$: *Let* $B\subseteq Y$ *be* $\hat{g}^{**}s$*-open. Then* $B=\hat{g}^{**}s\text{-}Int(B)$. *Hence by (5) we have* $f^{-1}(B)=f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$. *Thus* $f^{-1}(B)$ *is* $\hat{g}^{**}s$*-open in* X. *So,* f *is* $\hat{g}^{**}s$*-irresolute.*

$(1)\Rightarrow(7)$: *Let* $B\subseteq Y$, *by (3), we have*

$\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]=\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]-\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]$
$-\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\cup\hat{g}^{**}s\text{-}Int(B)\right]-\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq$

FULL TEXTS BOOK

$f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\cup\hat{g}^{**}s\text{-}Int(B)\right]-\hat{g}^{**}s\text{-}Int\left[f^{-1}\left(\alpha^{*}\text{-}Int(B)\right)\right]$. *By (1) we have* $\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]\subseteq\left[f^{-1}\left(\hat{g}^{**}s\text{-}b(B)\right)\cup f^{-1}\left(\hat{g}^{**}s\text{-}Int(B)\right)\right]-f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$ $=f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\right]$.

(7)⇒(1): *Let* $B\in\hat{g}^{**}s\text{-}C(Y)$ *and* $\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\right]$. *Then,* $\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)-\hat{g}^{**}s\text{-}Int(B)\right]=f^{-1}(B)-\hat{g}^{**}s\text{-}Int(B)=f^{-1}\left[\hat{g}^{**}s\text{-}Bd(B)\right]\subseteq f^{-1}(B)$, *we have,* $f^{-1}(B)\in\hat{g}^{**}s\text{-}C(X)$. *Therefore,* f *is* $\hat{g}^{**}s$*-irresolute.*

(7)⇒(8): *Follows by replacing* $f(A)$ *instead of* B *in (7).*

(8)⇒(7): *Let* $B\subseteq Y$, *by (8), we have* $f\left[\hat{g}^{**}s\text{-}b\left(f^{-1}(B)\right)\right]\subseteq\hat{g}^{**}s\text{-}b\left[f\left(f^{-1}(B)\right)\right]\subseteq\hat{g}^{**}s\text{-}b(B)$ *and therefore* $\hat{g}^{**}s\text{-}b\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}b(B)\right]$.

(1)⇒(9): *Let* $A\subseteq X$. *Then by (4),* $f\left[\hat{g}^{**}s\text{-}d(A)\right]\subseteq f\left[\hat{g}^{**}s\text{-}Cl(A)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f(A)\right]$.

(9)⇒(1): *Let* F *be a* $\hat{g}^{**}s$*-closed set in* Y, *by (7),* $f\left[\hat{g}^{**}s\text{-}d\left(f^{-1}(F)\right)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f\left(f^{-1}(F)\right)\right]\subseteq\hat{g}^{**}s\text{-}Cl(F)=F$, *then* $\hat{g}^{**}s\text{-}d\left[f^{-1}(F)\right]\subseteq f^{-1}(F)$. *We have* $f^{-1}(F)\in\hat{g}^{**}s\text{-}C(X)$. *Therefore* f *is* $\hat{g}^{**}s$*-irresolute.*

Definition 4.3. *Let* (X,τ) *be a topological space. Let* $x\in X$ *and* $N\subseteq X$. *We say that* N *is an* $\hat{g}^{**}s$*-neighborhood of* x *if there exists a* $\hat{g}^{**}s$*-open set* M *of* x *such that* $x\in M\subseteq N$.

Theorem 4.4. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-irresolute if and only if for each* x *in* X, *the inverse image of every* $\hat{g}^{**}s$*-neighborhood of* $f(x)$, *is an* $\hat{g}^{**}s$*-neighborhood of* x.

Proof. *Necessity. Let* $x\in X$ *and let* B *be a* $\hat{g}^{**}s$*-neighborhood of* $f(x)$. *Then there exists* $U\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *such that* $f(x)\in U\subseteq B$. *This implies that* $x\in f^{-1}(U)\subseteq f^{-1}(B)$. *Since* f *is* $\hat{g}^{**}s$*-irresolute, so* $f^{-1}(U)\in\hat{g}^{**}s\text{-}O(X,\tau)$. *Hence* $f^{-1}(B)$ *is a* $\hat{g}^{**}s$*-neighborhood of* x. *Sufficiency. Let* $B\in\hat{g}^{**}s\text{-}O(Y,\sigma)$. *Put* $A=f^{-1}(B)$. *Let* $x\in A$. *Then* $f(x)\in B$. *But then,* B *being* $\hat{g}^{**}s$*-open set, is a* $\hat{g}^{**}s$*-neighborhood of* $f(x)$. *So by hypothesis,* $A=f^{-1}(B)$ *is a* $\hat{g}^{**}s$*-neighborhood of* x. *Hence by definition, there exists* $A_x\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in A_x\subseteq A$. *Thus* $A=\cup\{A_x:x\in A\}$. *It follows that* A *is a* $\hat{g}^{**}s$*-open set in* X. *Therefore* f *is* $\hat{g}^{**}s$*-irresolute.*

FULL TEXTS BOOK

Theorem 4.5. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-irresolute if and only if for each point* p *in* X *and each* $\hat{g}^{**}s$*-open set* B *in* Y *with* $f(p)\in B$*, there is a* $\hat{g}^{**}s$*-open set* A *in* X *such that* $p\in A$*,* $f(A)\subseteq B$*.*

Proof. *Necessity. Let* $p\in X$ *and* $B\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *such that* $f(p)\in B$*. Let* $A=f^{-1}(B)$*. Since* f *is* $\hat{g}^{**}s$*-irresolute,* A *is* $\hat{g}^{**}s$*-open in* X*. Also* $p\in f^{-1}(B)=A$ *as* $f(p)\in B$*. Thus we have* $f(A)=f\left[f^{-1}(B)\right]\subseteq B$*.*

Sufficiency. Let $B\in\hat{g}^{**}s\text{-}O(Y,\sigma)$*, and* $A=f^{-1}(B)$*. We show that* A *is* $\hat{g}^{**}s$*-open in* X*. For this let* $x\in A$*. It implies that* $f(x)\in B$*. Then by hypothesis, there exists* $A_x\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in A_x$ *and* $f(A_x)\subseteq B$*. Then* $A_x\subseteq f^{-1}\left[f(A_x)\right]\subseteq f^{-1}(B)=A$*. Thus* $A=\mathrm{U}\{A_x:x\in A\}$*. It follows that* A *is* $\hat{g}^{**}s$*-open in* X*. Hence* f *is* $\hat{g}^{**}s$*-irresolute.*

Definition 4.6. *Let* (X,τ) *be a topological space. Let* $x\in X$ *and* $N\subseteq X$*. We say that* N *is a* $\hat{g}^{**}s$*-neighborhood of* x *if there exists a* $\hat{g}^{**}s$*-open set* M *of* x *such that* $x\in M\subseteq N$*.*

Theorem 4.7. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-irresolute if and only if for each* x *in* X*, the inverse image of every* $\hat{g}^{**}s$*-neighborhood of* $f(x)$*, is a* $\hat{g}^{**}s$*-neighborhood of* x*.*

Proof. *Necessity. Let* $x\in X$ *and let* B *be a* $\hat{g}^{**}s$*-neighborhood of* $f(x)$*. Then there exists* $U\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *such that* $f(x)\in U\subseteq B$*. This implies that* $x\in f^{-1}(U)\subseteq f^{-1}(B)$*. Since* f *is* $\hat{g}^{**}s$*-irresolute, so* $f^{-1}(U)\in\hat{g}^{**}s\text{-}O(X,\tau)$*. Hence* $f^{-1}(B)$ *is a* $\hat{g}^{**}s$*-neighborhood of* x*.*

Sufficiency. Let $B\in\hat{g}^{**}s\text{-}O(Y,\sigma)$*. Put* $A=f^{-1}(B)$*. Let* $x\in A$*. Then* $f(x)\in B$*. But then,* B *being* $\hat{g}^{**}s$*-open set, is a* $\hat{g}^{**}s$*-neighborhood of* $f(x)$*. So by hypothesis,* $A=f^{-1}(B)$ *is a* $\hat{g}^{**}s$*-neighborhood of* x*. Hence by definition, there exists* $A_x\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in A_x\subseteq A$*. Thus* $A=\mathrm{U}\{A_x:x\in A\}$*. It follows that* A *is a* $\hat{g}^{**}s$*-open set in* X*. Therefore* f *is* $\hat{g}^{**}s$*-irresolute.*

Theorem 4.8. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-irresolute if and only if for each* x *in* X *and each* $\hat{g}^{**}s$*-neighborhood* U *of* $f(x)$*, there is a* $\hat{g}^{**}s$*-neighborhood* V *of* x *such that* $f(V)\subseteq U$*.*

Proof. *Necessity. Let* $x\in X$ *and let* U *be a* $\hat{g}^{**}s$*-neighborhood of* $f(x)$*. Then there exists* $O_{f(x)}\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *such that* $f(x)\in O_{f(x)}\subseteq U$*. It follows that* $x\in f^{-1}\left[O_{f(x)}\right]\subseteq f^{-1}(U)$*. By hypothesis,* $f^{-1}\left[O_{f(x)}\right]\in\hat{g}^{**}s\text{-}O(X,\tau)$*. Let* $V=f^{-1}(U)$*. Then it follows that* V *is a* $\hat{g}^{**}s$*-neighborhood of* x *and* $f(V)=f\left[f^{-1}(U)\right]\subseteq U$*.*

FULL TEXTS BOOK

Sufficiency. Let $B \in \hat{g}^{**}s\text{-}O(Y,\sigma)$. *Put* $O = f^{-1}(B)$. *Let* $x \in O$. *Then* $f(x) \in B$. *Thus* B *is a* $\hat{g}^{**}s$-*neighborhood of* $f(x)$. *So by hypothesis, there exists a* $\hat{g}^{**}s$-*neighborhood* V_x *of* x *such that* $f(V_x) \subseteq B$. *Thus it follows that* $x \in V_x \subseteq f^{-1}[f(V_x)] \subseteq f^{-1}(B) = O$. *Since* V_x *is a* $\hat{g}^{**}s$-*neighborhood of* x, *so there exists an* $O_x \in \hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x \in O_x \subseteq V_x$. *Hence* $x \in O_x \subseteq O$, $O_x \in \hat{g}^{**}s\text{-}O(X,\tau)$. *Thus* $O = \cup\{O_x : x \in O\}$. *It follows that* O *is* $\hat{g}^{**}s$-*open in* X. *Therefore,* f *is* $\hat{g}^{**}s$-*irresolute.*

Theorem 4.9. *Prove that a function* $f:(X,\tau) \to (Y,\sigma)$ *is* $\hat{g}^{**}s$-*irresolute if and only if* $f[\hat{g}^{**}s\text{-}D(A)] \subseteq f(A) \cup [\hat{g}^{**}s\text{-}D(f(A))]$, *for all* $A \subseteq X$.

Proof. *Necessity. Let* $f:(X,\tau) \to (Y,\sigma)$ *be* $\hat{g}^{**}s$-*irresolute. Let* $A \subseteq X$, *and* $a_0 \in \hat{g}^{**}s\text{-}D(A)$. *Assume that* $f(a_0) \notin f(A)$ *and let* V *denote a* $\hat{g}^{**}s$-*neighborhood of* $f(a_0)$. *Since* f *is* $\hat{g}^{**}s$-*irresolute, so by* Theorem 4.8, *there exists a* $\hat{g}^{**}s$-*neighborhood* U *of* a_0 *such that* $f(U) \subseteq V$. *From* $a_0 \in \hat{g}^{**}s\text{-}D(A)$, *it follows that* $U \cap A \neq \phi$; *there exists, therefore, at least one element* $a \in U \cap A$ *such that* $f(a) \in f(A)$ *and* $f(a) \in f(V)$. *Since* $f(a_0) \notin f(A)$, *we have* $f(a) \neq f(a_0)$. *Thus every* $\hat{g}^{**}s$-*neighborhood of* $f(a_0)$ *contains an element of* $f(A)$ *different from* $f(a_0)$, *consequently,* $f(a_0) \in \hat{g}^{**}s\text{-}D[f(A)]$. *This proves necessity of the condition.*

Sufficiency. Assume that f *is not* $\hat{g}^{**}s$-*irresolute. Then by* Theorem 4.6, *there exists* $a_0 \in X$ *and a* $\hat{g}^{**}s$-*neighborhood* V *of* $f(a_0)$ *such that every* $\hat{g}^{**}s$-*neighborhood* U *of* a_0 *contains at least one element* $a \in U$ *for which* $f(a) \notin V$. *Put* $A = \{a \in X : f(a) \notin V\}$. *Then* $a_0 \notin A$ *since* $f(a_0) \in V$, *and therefore* $f(a_0) \notin A$; *also* $f(a_0) \notin \hat{g}^{**}s\text{-}D[f(A)]$ *since* $V \cap (V - \{f(a_0)\}) = \phi$. *Thus,* $f(a_0) \in f[\hat{g}^{**}s\text{-}D(A)] - [f(A) \cup (\hat{g}^{**}s\text{-}D(f(A)))] \neq \phi$, *which is a contradiction to the given condition. The condition of the Theorem is therefore sufficient, and the theorem is proved.*

Theorem 4.10. *Let* $f:(X,\tau) \to (Y,\sigma)$ *be a one-to-one function. Then* f *is* $\hat{g}^{**}s$-*irresolute if and only if* $f[\hat{g}^{**}s\text{-}D(A)] \subseteq \hat{g}^{**}s\text{-}D[f(A)]$, *for all* $A \subseteq X$.

Proof. *Necessity. Let* f *be* $\hat{g}^{**}s$-*irresolute. Let* $A \subseteq X$, $a_0 \in \hat{g}^{**}s\text{-}D(A)$ *and* V *be a* $\hat{g}^{**}s$-*neighborhood of* $f(a_0)$. *Since* f *is* $\hat{g}^{**}s$-*irresolute, so by* Theorem 4.8, *there exists a* $\hat{g}^{**}s$-*neighborhood* U *of* a_0 *such that* $f(U) \subseteq V$. *But* $a_0 \in \hat{g}^{**}s\text{-}D(A)$; *hence there exists an element* $a \in U \cap A$ *such that* $a \neq a_0$; *then* $f(a) \in f(A)$ *and since* f *is one to one,* $f(a) \neq f(a_0)$. *Thus every* $\hat{g}^{**}s$-*neighborhood* V *of* $f(a_0)$ *contains an element of* $f(A)$

FULL TEXTS BOOK

different from $f(a_0)$; *consequently* $f(a_0) \in \hat{g}^{**}s\text{-}D[f(A)]$. *We have therefore* $f[\hat{g}^{**}s\text{-}D(A)] \subseteq \hat{g}^{**}s\text{-}D[f(A)]$.

Sufficiency. Follows from Theorem 4.9.

5. $\hat{g}^{**}s$-OPEN FUNCTIONS

The purpose of this section is to investigate some characterizations of $\hat{g}^{**}s$-*open mappings.*

Definition 5.1. *Let* (X, τ) *and* (Y, σ) *be topological spaces. A function* $f:(X, \tau) \to (Y, \sigma)$ *is called* $\hat{g}^{**}s$-*open if for every open set* G *in* X, $f(G)$ *is a* $\hat{g}^{**}s$-*open set in* Y.

Theorem 5.2. *Prove that a mapping* $f:(X, \tau) \to (Y, \sigma)$ *is* $\hat{g}^{**}s$-*open if and only if for each* $x \in X$, *and* $U \in \tau$ *such that* $x \in U$, *there exists a* $\hat{g}^{**}s$-*open set* $W \subseteq Y$ *containing* $f(x)$ *such that* $W \subseteq f(U)$.

Proof. *Follows immediately from* Definition 5.1.

Theorem 5.3. *Let* $f:(X, \tau) \to (Y, \sigma)$ *be* $\hat{g}^{**}s$-*open. If* $W \subseteq Y$ *and* $F \subseteq X$ *is a closed set containing* $f^{-1}(W)$, *then there exists a* $\hat{g}^{**}s$-*closed set* $H \subseteq Y$ *containing* W *such that* $f^{-1}(H) \subseteq F$.

Proof. *Let* $H = Y - f(Y - F)$. *Since* $f^{-1}(W) \subseteq F$, *we have* $f^{-1}(Y - F) \subseteq (Y - W)$. *Since* f *is* $\hat{g}^{**}s$-*open, then* H *is* $\hat{g}^{**}s$-*closed and* $f^{-1}(H) = X - f^{-1}[f(X - F)] \subseteq X - (X - F) = F$.

Theorem 5.4. *Let* $f:(X, \tau) \to (Y, \sigma)$ *be a* $\hat{g}^{**}s$-*open function and let* $B \subseteq Y$. *Then* $f^{-1}[\hat{g}^{**}s\text{-}Cl(\hat{g}^{**}s\text{-}Int(\hat{g}^{**}s\text{-}Cl(B)))] \subseteq Cl[f^{-1}(B)]$.

Proof. $Cl[f^{-1}(B)]$ *is closed in* X *containing* $f^{-1}(B)$. *By* Theorem 5.3, *there exists a* $\hat{g}^{**}s$-*closed set* $B \subseteq H \subseteq Y$ *such that* $f^{-1}(H) \subseteq Cl[f^{-1}(B)]$. *Thus,*

$f^{-1}[\hat{g}^{**}s\text{-}Cl(\hat{g}^{**}s\text{-}Int(\hat{g}^{**}s\text{-}Cl(B)))] \subseteq f^{-1}[\hat{g}^{**}s\text{-}Cl(\hat{g}^{**}s\text{-}Int(\hat{g}^{**}s\text{-}Cl(H)))]$

$\subseteq f^{-1}[H] \subseteq Cl[f^{-1}(B)]$.

Theorem 5.5. *Prove that a function* $f:(X, \tau) \to (Y, \sigma)$ *is* $\hat{g}^{**}s$-*open if and only if* $f[Int(A)] \subseteq \hat{g}^{**}s\text{-}Int[f(A)]$, *for all* $A \subseteq X$.

Proof. *Necessity. Let* $A \subseteq X$ *and* $x \in Int(A)$. *Then there exists* $U_x \in \tau$ *such that* $x \in U_x \subseteq A$. *So* $f(x) \in f(U_x) \subseteq f(A)$. *and by hypothesis,* $f(U_x) \in \hat{g}^{**}s\text{-}O(Y, \sigma)$. *Hence* $f(x) \in \hat{g}^{**}s\text{-}Int[f(A)]$. *Thus* $f[Int(A)] \subseteq \hat{g}^{**}s\text{-}Int[f(A)]$.

Sufficiency. Let $U \in \tau$. *Then by hypothesis,* $f[Int(U)] \subseteq \hat{g}^{**}s\text{-}Int[f(U)]$. *Since* $Int(U) = U$ *as* U *is open. Also,* $\hat{g}^{**}s\text{-}Int[f(U)] \subseteq f(U)$. *Hence* $f(U) = \hat{g}^{**}s\text{-}Int[f(U)]$. *Thus* $f(U)$ *is* $\hat{g}^{**}s$-*open open in* Y. *So* f *is* $\hat{g}^{**}s$-*open.*

Remark 5.6. *The equality may not hold in the preceding Theorem.*

FULL TEXTS BOOK

Theorem 5.7. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-open if and only if* $Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$, *for all* $B\subseteq Y$.

Proof. *Necessity. Let* $B\subseteq Y$. *Since* $Int\left[f^{-1}(B)\right]$ *is open in* X *and* f *is* $\hat{g}^{**}s$*-open,* $f\left[Int\left(f^{-1}(B)\right)\right]$ *is* $\hat{g}^{**}s$*-open in* Y. *Also we have* $f\left[Int\left(f^{-1}(B)\right)\right]\subseteq f\left[f^{-1}(B)\right]\subseteq B$. *Hence,* $f\left[Int\left(f^{-1}(B)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int(B)$. *Therefore* $Int\left(f^{-1}(B)\right)\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$.

Sufficiency. Let $A\subseteq X$. *Then* $f(A)\subseteq Y$. *Hence by hypothesis, we obtain* $Int(A)\subseteq Int\left[f^{-1}\left(f(A)\right)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int\left(f(A)\right)\right]$. *Thus* $f\left[int(A)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f(A)\right]$, *for all* $A\subseteq X$. *Hence, by* Theorem 5.5, f *is* $\hat{g}^{**}s$*-open.*

Theorem 5.8. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a mapping. Then a necessary and sufficient condition for* f *to be* $\hat{g}^{**}s$*-open is that* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq Cl\left[f^{-1}(B)\right]$ *for every subset* B *of* Y.

Proof. *Necessity. Assume* f *is* $\hat{g}^{**}s$*-open. Let* $B\subseteq Y$. *Let* $x\in f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]$. *Then* $f(x)\in\hat{g}^{**}s\text{-}Cl(B)$. *Let* $U\in\tau$ *such that* $x\in U$. *Since* f *is* $\hat{g}^{**}s$*-open, then* $f(U)$ *is a* $\hat{g}^{**}s$*-open set in* Y. *Therefore,* $B\cap f(U)\neq\phi$. *Then* $U\cap f^{-1}(B)\neq\phi$. *Hence* $x\in Cl\left[f^{-1}(B)\right]$. *We conclude that* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq Cl\left[f^{-1}(B)\right]$.

Sufficiency. Let $B\subseteq Y$. *Then* $(Y-B)\subseteq Y$. *By hypothesis,* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(Y-B)\right]\subseteq Cl\left[f^{-1}(Y-B)\right]$. *This implies that* $X-Cl\left[f^{-1}(Y-B)\right]\subseteq X-f^{-1}\left[\hat{g}^{**}s\text{-}Cl(Y-B)\right]$. *Therefore* $X-Cl\left[X-f^{-1}(B)\right]\subseteq f^{-1}\left[Y-\left(\hat{g}^{**}s\text{-}Cl(Y-B)\right)\right]$. *This implies that* $Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$. *Now form* Theorem 5.7, *it follows that* f *is* $\hat{g}^{**}s$*-open.*

6. $\hat{g}^{**}s$-CLOSED FUNCTIONS

In this section, we introduce $\hat{g}^{**}s$*-closed functions and study certain properties and characterizations of these types of functions.*

Definition 6.1. *A mapping* $f:(X,\tau)\to(Y,\sigma)$ *is called* $\hat{g}^{**}s$*-closed if the image of each closed set in* X *is a* $\hat{g}^{**}s$*-closed set in* Y.

Theorem 6.2. *Prove that a mapping* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-closed if and only if* $\hat{g}^{**}s\text{-}Cl\left[f(A)\right]\subseteq f\left[Cl(A)\right]$ *for each* $A\subseteq X$.

Proof. *Necessity. Let* f *be* $\hat{g}^{**}s$*-closed and let* $A\subseteq X$. *Then* $f(A)\subseteq f\left[Cl(A)\right]$ *and* $f\left[Cl(A)\right]$ *is a* $\hat{g}^{**}s$*-closed set in* Y. *Thus* $\hat{g}^{**}s\text{-}Cl\left[f(A)\right]\subseteq f\left[Cl(A)\right]$.

FULL TEXTS BOOK

Sufficiency. Suppose that $\hat{g}^{**}s\text{-}Cl[f(A)] \subseteq f[Cl(A)]$, *for each* $A \subseteq X$. *Let* $A \subseteq X$ *be a closed set. Then* $\hat{g}^{**}s\text{-}Cl[f(A)] \subseteq f[Cl(A)] = f(A)$. *This shows that* $f(A)$ *is a* $\hat{g}^{**}s$*-closed set. Hence* f *is* $\hat{g}^{**}s$*-closed.*

Theorem 6.3. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be* $\hat{g}^{**}s$*-closed. If* $V \subseteq Y$ *and* $E \subseteq X$ *is an open set containing* $f^{-1}(V)$, *then there exists an* $\hat{g}^{**}s$*-open set* $G \subseteq Y$ *containing* V *such that* $f^{-1}(G) \subseteq E$.

Proof. *Let* $G = Y - f(X-E)$. *Since* $f^{-1}(V) \subseteq E$, *we have* $f(X-E) \subseteq Y - V$. *Since* f *is* $\hat{g}^{**}s$*-closed, then* G *is a* $\hat{g}^{**}s$*-open set and also* $f^{-1}(G) = X - f^{-1}[f(X-E)] \subseteq X - (X-E) = E$.

Theorem 6.4. *Suppose that* $f:(X,\tau)\to(Y,\sigma)$ *is an* $\hat{g}^{**}s$*-closed mapping. Then* $\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(f(A))] \subseteq f[Cl(A)]$ *for every subset* A *of* X.

Proof. *Suppose* f *is a* $\hat{g}^{**}s$*-closed mapping and* A *is an arbitrary subset of* X. *Then* $f[Cl(A)]$ *is* $\hat{g}^{**}s$*-closed in* Y. *Then* $\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(f(Cl(A)))] \subseteq f[Cl(A)]$. *But also* $\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(f(A))] \subseteq \hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(f(Cl(A)))]$. *Therefore,* $\hat{g}^{**}s\text{-}Int[\hat{g}^{**}s\text{-}Cl(f(A))] \subseteq f[Cl(A)]$.

Theorem 6.5. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a* $\hat{g}^{**}s$*-closed function, and* $B, C \subseteq Y$.

Proof. (1) *If* U *is an open neighborhood of* $f^{-1}(B)$, *then there exists a* $\hat{g}^{**}s$*-open neighborhood* V *of* B *such that* $f^{-1}(B) \subseteq f^{-1}(V) \subseteq U$.

(2) *If* f *is also onto, then if* $f^{-1}(B)$ *and* $f^{-1}(C)$ *have disjoint open neighborhoods, so have* B *and* C.

Proof. (1) *Let* $V = Y - f(X-U)$. *Then* $V^c = Y - V = f(U^c)$. *Since* f *is* $\hat{g}^{**}s$*-closed, so* V *is a* $\hat{g}^{**}s$*-open set. Since* $f^{-1}(B) \subseteq U$, *we have* $V^c = f(U^c) \subseteq f[f^{-1}(B^c)] \subseteq B^c$. *Hence,* $B \subseteq V$, *and thus* V *is a* $\hat{g}^{**}s$*-open neighborhood of* B. *Further* $U^c \subseteq f^{-1}[f(U^c)] = f^{-1}(V^c) = [f^{-1}(V)]^c$. *This proves that* $f^{-1}(V) \subseteq U$.

(2) *If* $f^{-1}(B)$ *and* $f^{-1}(C)$ *have disjoint open neighborhoods* M *and* N, *then by* (1), *we have* $\hat{g}^{**}s$*-open neighborhoods* U *and* V *of* B *and* C *respectively such that* $f^{-1}(B) \subseteq f^{-1}(U) \subseteq \hat{g}^{**}s\text{-}Int(M)$ *and* $f^{-1}(C) \subseteq f^{-1}(V) \subseteq \hat{g}^{**}s\text{-}Int(N)$. *Since* M *and* N *are disjoint, so are* $\hat{g}^{**}s\text{-}Int(M)$ *and* $\hat{g}^{**}s\text{-}Int(N)$, *hence so* $f^{-1}(U)$ *and* $f^{-1}(V)$ *are disjoint as well. It follows that* U *and* V *are disjoint too as* f *is onto.*

Theorem 6.6. *Prove that a surjective mapping* $f:(X,\tau)\to(Y,\sigma)$ *is* $\hat{g}^{**}s$*-closed, if and only if for each subset* B *of* Y *and each open set* U *in* X *containing* $f^{-1}(B)$, *there exists a* $\hat{g}^{**}s$*-open set* V *in* Y *containing* B *such that* $f^{-1}(V) \subseteq U$.

FULL TEXTS BOOK

Proof. *Necessity. This follows from* (1) *of* Theorem 6.5.

Sufficiency. Suppose F *is an arbitrary closed set in* X. *Let* y *be an arbitrary point in* $Y - f(F)$. *Then* $f^{-1}(y) \subseteq X - f^{-1}[f(F)] \subseteq (X - F)$ *and* $(X - F)$ *is open in* X. *Hence by hypothesis, there exists a* $\hat{g}^{**}s$-*open set* V_y *containing* y *such that* $f^{-1}(V_y) \subseteq (X - F)$. *This implies that* $y \in V_y \subseteq [Y - f(F)]$. *Thus* $Y - f(F) = \cup\{V_y : y \in Y - f(F)\}$. *Hence* $Y - f(F)$, *being a union of* $\hat{g}^{**}s$-*open sets, is* $\hat{g}^{**}s$-*open. Thus its complement* $f(F)$ *is* $\hat{g}^{**}s$-*closed. This shows that* f *is* $\hat{g}^{**}s$-*closed.*

Theorem 6.7. *Let* $f : (X, \tau) \to (Y, \sigma)$ *be a bijection. Then the following are equivalent:*

(a) f *is* $\hat{g}^{**}s$-*closed.*

(b) f *is* $\hat{g}^{**}s$-*open.*

(c) f^{-1} *is* $\hat{g}^{**}s$-*continuous.*

Proof. (a) $\Rightarrow$ (b): *Let* $U \in \tau$. *Then* $X - U$ *is closed in* X. *By* (a), $f(X - U)$ *is* $\hat{g}^{**}s$-*closed in* Y. *But* $f(X - U) = f(X) - f(U) = Y - f(U)$. *Thus* $f(U)$ *is* $\hat{g}^{**}s$-*open in* Y. *This shows that* f *is* $\hat{g}^{**}s$-*open.*

(b) $\Rightarrow$ (c): *Let* $U \subseteq X$. *be an open set. Since* f *is* $\hat{g}^{**}s$-*open. So* $f(U) = (f^{-1})^{-1}(U)$ *is* $\hat{g}^{**}s$-*open in* Y. *Hence* f^{-1} *is* $\hat{g}^{**}s$-*continuous.*

(c) $\Rightarrow$ (a): *Let* A *be an arbitrary closed set in* X. *Then* $X - A$ *is open in* X. *Since* f^{-1} *is* $\hat{g}^{**}s$-*continuous,* $(f^{-1})^{-1}(X - A)$ $\hat{g}^{**}s$-*open in* Y. *But* $(f^{-1})^{-1}(X - A) = f(X - A) = Y - f(A)$. *Thus* $f(A)$ *is* $\hat{g}^{**}s$-*closed in* Y. *This shows that* f *is* $\hat{g}^{**}s$-*closed.*

Remark 6.8. *A bijection* $f : (X, \tau) \to (Y, \sigma)$ *may be open and closed but neither* $\hat{g}^{**}s$-*open nor* $\hat{g}^{**}s$-*closed.*

7. PRE-$\hat{g}^{**}s$-OPEN FUNCTIONS

The purpose of this section is to introduce and discuss certain properties and characterizations of pre-$\hat{g}^{**}s$-*open functions.*

Definition 7.1. *Let* (X, τ) *and* (Y, σ) *be topological spaces. Then a function* $f : (X, \tau) \to (Y, \sigma)$ *is said to be pre-*$\hat{g}^{**}s$-*open if and only if for each* $A \in \hat{g}^{**}s\text{-}O(X, \tau)$, $f(A) \in \hat{g}^{**}s\text{-}O(Y, \sigma)$.

Theorem 7.2. *Let* $f : (X, \tau) \to (Y, \sigma)$ *and* $g : (Y, \sigma) \to (Z, \mu)$ *be any two pre-*$\hat{g}^{**}s$-*open functions. Then the composition function* $gof : (X, \tau) \to (Z, \mu)$ *is a pre-*$\hat{g}^{**}s$-*open function.*

Proof. *Let* $U \in \hat{g}^{**}s\text{-}O(X, \tau)$. *Then* $f(U) \in \hat{g}^{**}s\text{-}O(Y, \sigma)$. *Since* f *is pre-*$\hat{g}^{**}s$-*open. But then* $g(f(U)) \in \hat{g}^{**}s\text{-}O(Z, \mu)$ *as* g *is pre-*$\hat{g}^{**}s$-*open. Hence,* gof *is pre-*$\hat{g}^{**}s$-*open.*

FULL TEXTS BOOK

Theorem 7.3. *Prove that a mapping* $f:(X,\tau)\to(Y,\sigma)$ *is* $pre\text{-}\hat{g}^{**}s\text{-}open$ *if and only if for each* $x\in X$ *and any* $U\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in U$, *there exists* $V\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *such that* $f(x)\in V$ *and* $V\subseteq f(U)$.

Proof. *Routine.*

Theorem 7.4. *Prove that a mapping* $f:(X,\tau)\to(Y,\sigma)$ *is* $pre\text{-}\hat{g}^{**}s\text{-}open$ *if and only if for each* $x\in X$ *and for any* $\hat{g}^{**}s\text{-}neighborhood$ U *of* x *in* X, *there exists a* $\hat{g}^{**}s\text{-}neighborhood$ V *of* $f(x)$ *in* Y *such that* $V\subseteq f(U)$.

Proof. *Necessity. Let* $x\in X$ *and let* U *be a* $\hat{g}^{**}s\text{-}neighborhood$ *of* x. *Then there exists* $W\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in W\subseteq U$. *Then* $f(x)\in f(W)\subseteq f(U)$. *But* $f(W)\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *as* f *is* $pre\text{-}\hat{g}^{**}s\text{-}open$. *Hence* $V=f(W)$ *is an* $\hat{g}^{**}s\text{-}neighborhood$ *of* $f(x)$ *and* $V\subseteq f(U)$.

Sufficiency. Let $U\in\hat{g}^{**}s\text{-}O(X,\tau)$ *and let* $x\in U$. *Then* U *is a* $\hat{g}^{**}s\text{-}neighborhood$ *of* x. *So by hypothesis, there exists a* $\hat{g}^{**}s\text{-}neighborhood$ $V_{f(x)}$ *of* $f(x)$ *such that* $f(x)\in V_{f(x)}\subseteq f(U)$. *It follows at once that* $f(U)$ *is an* $\hat{g}^{**}s\text{-}neighborhood$ *of each of its points. Therefore* $f(U)$ *is* $\hat{g}^{**}s\text{-}open$. *Hence* f *is* $pre\text{-}\hat{g}^{**}s\text{-}open$.

Theorem 7.5. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $pre\text{-}\hat{g}^{**}s\text{-}open$ *if and only if* $f\left[\hat{g}^{**}s\text{-}Int(A)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f(A)\right]$, *for all* $A\subseteq X$.

Proof. *Necessity. Let* $A\subseteq X$ *and* $x\in\hat{g}^{**}s\text{-}Int(A)$. *Then there exists* $U_x\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in U_x\subseteq A$. *So* $f(x)\in f(U_x)\subseteq f(A)$ *and by hypothesis,* $f(U_x)\in\hat{g}^{**}s\text{-}O(Y,\sigma)$. *Hence* $f(x)\in\hat{g}^{**}s\text{-}Int\left[f(A)\right]$. *Thus* $f\left[\hat{g}^{**}s\text{-}Int(A)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f(A)\right]$.

Sufficiency. Let $U\in\hat{g}^{**}s\text{-}O(X,\tau)$. *Then by hypothesis,* $f\left[\hat{g}^{**}s\text{-}Int(U)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f(U)\right]$. *Since* $\hat{g}^{**}s\text{-}Int(U)=U$ *as* U *is* $\hat{g}^{**}s\text{-}open$. *Also* $\hat{g}^{**}s\text{-}Int\left[f(U)\right]\subseteq f(U)$. *Hence* $f(U)=\hat{g}^{**}s\text{-}Int\left[f(U)\right]$. *Thus* $f(U)$ *is* $\hat{g}^{**}s\text{-}open$ *in* Y. *So* f *is* $pre\text{-}\hat{g}^{**}s\text{-}open$.

We remark that the equality does not hold in Theorem 7.5 *as the following example shows.*

Example 7.6. *Let* $X=Y=\{1,2\}$. *suppose* X *is anti-discrete and* Y *is discrete. Let* $f=Id.$, $A=\{1\}$. *Then* $\phi=f\left[\hat{g}^{**}s\text{-}Int(A)\right]\neq\hat{g}^{**}s\text{-}Int\left[f(A)\right]=\{1\}$.

Theorem 7.7. *Prove that a function* $f:(X,\tau)\to(Y,\sigma)$ *is* $pre\text{-}\hat{g}^{**}s\text{-}open$ *if and only if* $\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$, *for all* $B\subseteq Y$.

Proof. *Necessity. Let* $B\subseteq Y$. *Since* $\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]$ *is* $\hat{g}^{**}s\text{-}open$ *in* X *and* f *is* $pre\text{-}\hat{g}^{**}s\text{-}open$, $f\left[\hat{g}^{**}s\text{-}Int\left(f^{-1}(B)\right)\right]$ $\hat{g}^{**}s\text{-}open$ *in* Y. *Also we have*

FULL TEXTS BOOK

$f\left[\hat{g}^{**}s\text{-}Int\left(f^{-1}(B)\right)\right]\subseteq f\left[f^{-1}(B)\right]\subseteq B$. *Hence,* $f\left[\hat{g}^{**}s\text{-}Int\left(f^{-1}(B)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int(B)$. *Therefore* $\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$.

Sufficiency. Let $A\subseteq X$. *Then* $f(A)\subseteq Y$. *Hence by hypothesis, we obtain* $\hat{g}^{**}s\text{-}Int(A)\subseteq\hat{g}^{**}s\text{-}Int\left[f^{-1}\left(f(A)\right)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int\left(f(A)\right)\right]$. *This implies that* $f\left[\hat{g}^{**}s\text{-}Int(A)\right]\subseteq f\left[f^{-1}\left(\hat{g}^{**}s\text{-}Int\left(f(A)\right)\right)\right]\subseteq\hat{g}^{**}s\text{-}Int\left[f(A)\right]$. *Thus* $f\left[\hat{g}^{**}s\text{-}Int(A)\right]\subseteq\ \hat{g}^{**}s\text{-}Int\left[f(A)\right]$, *for all* $A\subseteq X$. *Hence, by* Theorem 7.5, f *is pre-*$\hat{g}^{**}s$*-open.*

Theorem 7.8. *Prove that a mapping* $f:(X,\tau)\to(Y,\sigma)$ *is pre-*$\hat{g}^{**}s$*-open if and only if* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]$, *for every subset* B *of* Y.

Proof. *Necessity. Let* $B\subseteq Y$ *and let* $x\in f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]$. *Then* $f(x)\in\hat{g}^{**}s\text{-}Cl(B)$. *Let* $U\in\hat{g}^{**}s\text{-}O(X,\tau)$ *such that* $x\in U$. *By hypothesis,* $f(U)\in\hat{g}^{**}s\text{-}O(Y,\sigma)$ *and* $f(x)\in f(U)$. *Thus* $f(U)\cap B\neq\phi$. *Hence* $U\cap f^{-1}(B)\neq\phi$. *Therefore,* $x\in\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]$, *So we obtain* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(B)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f^{-1}(B)\right]$.

Sufficiency. Let $B\subseteq Y$. *Then* $(Y-B)\subseteq Y$. *By hypothesis,* $f^{-1}\left[\hat{g}^{**}s\text{-}Cl(Y-B)\right]\subseteq\hat{g}^{**}s\text{-}Cl\left[f^{-1}(Y-B)\right]$. *This implies that* $X-\left[\hat{g}^{**}s\text{-}Cl\left(f^{-1}(Y-B)\right)\right]\subseteq X-f^{-1}\left[\hat{g}^{**}s\text{-}Cl(Y-B)\right]$. *Therefore,* $X-\hat{g}^{**}s\text{-}Cl\left[X-f^{-1}(B)\right]\subseteq f^{-1}\left[Y-\left(\hat{g}^{**}s\text{-}Cl(Y-B)\right)\right]$. *Then this implies that* $\hat{g}^{**}s\text{-}Int\left[f^{-1}(B)\right]\subseteq f^{-1}\left[\hat{g}^{**}s\text{-}Int(B)\right]$. *Now by* Theorem 7.7, *it follows that* f *is pre-*$\hat{g}^{**}s$*-open.*

Theorem 7.9. *Let* $f:(X,\tau)\to(Y,\sigma)$ *and* $g:(Y,\sigma)\to(Z,\mu)$ *be two mappings such that* $gof:(X,\tau)\to(Z,\mu)$ *is* $\hat{g}^{**}s$*-irrsolute. Then*

(1) *If* g *is a pre-*$\hat{g}^{**}s$*-open injection, then* f *is* $\hat{g}^{**}s$*-irrsolute.*

(2) *If* f *is a pre-*$\hat{g}^{**}s$*-open surjection, then* g *is* $\hat{g}^{**}s$*-irrsolute.*

Proof. (1) *Let* $U\in\hat{g}^{**}s\text{-}O(Y,\sigma)$. *Then* $g(U)\in\hat{g}^{**}s\text{-}O(Z,\mu)$ *since* g *is pre-*$\hat{g}^{**}s$*-open Also* gof *is* $\hat{g}^{**}s$*-irrsolute. Therefore, we have* $(gof)^{-1}\left[g(U)\right]\in\hat{g}^{**}s\text{-}O(X,\tau)$. *Since* g *is an injection, so we have :* $(gof)^{-1}\left[g(U)\right]=\left(f^{-1}og^{-1}\right)\left[g(U)\right]=\ f^{-1}\left[g^{-1}\left(g(U)\right)\right]=f^{-1}(U)$. *Consequently* $f^{-1}(U)$ *is* $\hat{g}^{**}s$*-open in* X. *This proves that* f *is* $\hat{g}^{**}s$*-irrsolute.*

(2) *Let* $V\in\hat{g}^{**}s\text{-}O(Z,\mu)$. *Then* $(gof)^{-1}(V)\in\hat{g}^{**}s\text{-}O(X,\tau)$ *since* gof *is* $\hat{g}^{**}s$*-irrsolute. Also* f *is pre-*$\hat{g}^{**}s$*-open,* $f\left[(gof)^{-1}(V)\right]$ *is* $\hat{g}^{**}s$*-open in* Y. *Since* f *is surjective, we note*

FULL TEXTS BOOK

that $f\left[(gof)^{-1}(V)\right]=\left[fo(gof)^{-1}\right](V)=\left[fo\left(f^{-1}og^{-1}\right)\right](V)=\left[\left(fof^{-1}\right)og^{-1}(V)\right]$ $=g^{-1}(V)$. *Hence* g *is* $\hat{g}^{**}s$-*irrsolute.*

8. PRE-$\hat{g}^{**}s$-CLOSED FUNCTIONS

In this last section, we introduce and explore several properties and characterizations of *pre*-$\hat{g}^{**}s$-*closed functions.*

Definition 8.1. *A function* $f:(X,\tau)\to(Y,\sigma)$ *is said to be* *pre*-$\hat{g}^{**}s$-*closed if and only if the image set* $f(A)$ *is* $\hat{g}^{**}s$-*closed for each* $\hat{g}^{**}s$-*closed subset* A *of* X.

Theorem 8.2. *The composition of two* *pre*-$\hat{g}^{**}s$-*closed mappings is a* *pre*-$\hat{g}^{**}s$-*closed mapping.*

Proof. *The straightforward proof is omitted.*

Theorem 8.3. *Prove that a mapping* $f:(X,\tau)\to(Y,\sigma)$ *is* *pre*-$\hat{g}^{**}s$-*closed if and only if* $\hat{g}^{**}s$-$Cl\left[f(A)\right]\subseteq f\left[\hat{g}^{**}s\text{-}Cl(A)\right]$ *for every subset* A *of* X.

Proof. *Necessity. Suppose* f *is a* *pre*-$\hat{g}^{**}s$-*closed mapping and* A *is an arbitrary subset of* X. *Then* $f\left[\hat{g}^{**}s\text{-}Cl(A)\right]$ *is* $\hat{g}^{**}s$-*closed in* Y. *Since* $f(A)\subseteq f\left[\hat{g}^{**}s\text{-}Cl(A)\right]$, *we obtain* $\hat{g}^{**}s$-$Cl\left[f(A)\right]\subseteq f\left[\hat{g}^{**}s\text{-}Cl(A)\right]$.

Sufficiency. Suppose F *is an arbitrary* $\hat{g}^{**}s$-*closed set in* X. *By hypothesis, we obtain* $f(F)\subseteq\hat{g}^{**}s$-$Cl\left[f(F)\right]\subseteq f\left[\hat{g}^{**}s\text{-}Cl(F)\right]=f(F)$. *Hence* $f(F)=\hat{g}^{**}s$-$Cl\left[f(F)\right]$. *Thus* $f(F)$ *is* $\hat{g}^{**}s$-*closed in* Y. *It follows that* f *is* *pre*-$\hat{g}^{**}s$-*closed.*

Theorem 8.4. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a* *pre*-$\hat{g}^{**}s$-*closed function, and* $B,C\subseteq Y$.

(1) *If* U *is a* $\hat{g}^{**}s$-*open neighborhood of* $f^{-1}(B)$, *then there exists a* $\hat{g}^{**}s$-*open neighborhood* V *of* B *such that* $f^{-1}(B)\subseteq f^{-1}(V)\subseteq U$.

(2) *If* f *is also onto, then if* $f^{-1}(B)$ *and* $f^{-1}(C)$ *have disjoint* $\hat{g}^{**}s$-*open neighborhoods, so have* B *and* C.

Proof. (1) *Let* $V=Y-f(X-U)$. *Then* $V^c=Y-V=f\left(U^c\right)$. *Since* f *is* *pre*-$\hat{g}^{**}s$-*closed,* *so* V *is* $\hat{g}^{**}s$-*open. Since* $f^{-1}(B)\subseteq U$, *we have* $V^c=f\left(U^c\right)\subseteq f\left[f^{-1}\left(B^c\right)\right]\subseteq B^c$. *Hence,* $B\subseteq V$, *and thus* V *is a* $\hat{g}^{**}s$-*open neighborhood of* B. *Further* $U^c\subseteq f^{-1}\left[f\left(U^c\right)\right]=f^{-1}\left(V^c\right)=\left[f^{-1}(V)\right]^c$. *This proves that* $f^{-1}(V)\subseteq U$.

(2) *If* $f^{-1}(B)$ *and* $f^{-1}(C)$ *have disjoint* $\hat{g}^{**}s$-*open neighborhoods* M *and* N, *then by* (1), *we have* $\hat{g}^{**}s$-*open neighborhoods* U *and* V *of* B *and* C *respectively such that* $f^{-1}(B)\subseteq f^{-1}(U)\subseteq\hat{g}^{**}s$-$Int(M)$ *and* $f^{-1}(C)\subseteq f^{-1}(V)\subseteq\hat{g}^{**}s$-$Int(N)$. *Since* M *and* N *are disjoint, so are* $\hat{g}^{**}s$-$Int(M)$ *and* $\hat{g}^{**}s$-$Int(N)$, *and hence so* $f^{-1}(U)$ *and* $f^{-1}(V)$ *are disjoint as well. It follows that* U *and* V *are disjoint too as* f *is onto.*

FULL TEXTS BOOK

Theorem 8.5. *Prove that a surjective mapping* $f:(X,\tau)\to(Y,\sigma)$ *is pre-*$\hat{g}^{**}s$*-closed if and only if for each subset* B *of* Y *and each* $\hat{g}^{**}s$*-open set* U *in* X *containing* $f^{-1}(B)$*, there exists a* $\hat{g}^{**}s$*-open set* V *in* Y *containing* B *such that* $f^{-1}(V)\subseteq U$.

Proof. *Necessity. This follows from* (1) *of* Theorem 8.4.

Sufficiency. Suppose F *is an arbitrary* $\hat{g}^{**}s$*-closed set in* X*. Let* y *be an arbitrary point in* $Y-f(F)$*. Then* $f^{-1}(y)\subseteq X-f^{-1}[f(F)]\subseteq(X-F)$ *and* $(X-F)$ *is* $\hat{g}^{**}s$*-open in* X*. Hence by hypothesis, there exists a* $\hat{g}^{**}s$*-open set* V_y *containing* y *such that* $f^{-1}(V_y)\subseteq(X-F)$*. This implies that* $y\in V_y\subseteq[Y-f(F)]$*. Thus* $Y-f(F)=\cup\{V_y\,|\,y\in Y-f(F)\}$*. Hence* $Y-f(F)$*, being a union of* $\hat{g}^{**}s$*-open sets is* gsg*-open. Thus its complement* $f(F)$ *is* $\hat{g}^{**}s$*-closed. This shows that* f *is* $\hat{g}^{**}s$*-closed.*

Theorem 8.6. *Let* $f:(X,\tau)\to(Y,\sigma)$ *be a bijection. Then the following are equivalent:*

(1) f *is pre-*$\hat{g}^{**}s$*-closed.*

(2) f *is pre-*$\hat{g}^{**}s$*-open.*

(3) f^{-1} *is* $\hat{g}^{**}s$*-irresolute.*

Proof. $(1)\Rightarrow(2)$: *Let* $U\in\hat{g}^{**}s$*-*$O(X,\tau)$*. Then* $X-U$ *is* $\hat{g}^{**}s$*-closed in* X*. By* (1)*,* $f(X-U)$ *is* $\hat{g}^{**}s$*-closed in* Y*. But* $f(X-U)=f(X)-f(U)=Y-f(U)$*. Thus* $f(U)$ *is* $\hat{g}^{**}s$*-open in* Y*. This shows that* f *is pre-*$\hat{g}^{**}s$*-open.*

$(2)\Rightarrow(3)$: *Let* $A\subseteq X$*. Since* f *is pre-*$\hat{g}^{**}s$*-open, so by* Theorem 7.8, $f^{-1}[\hat{g}^{**}s\text{-}Cl(f(A))]\subseteq\hat{g}^{**}s\text{-}Cl[f^{-1}(f(A))]$*. It implies that* $\hat{g}^{**}s\text{-}Cl[f(A)]\subseteq f[\hat{g}^{**}s\text{-}Cl(A)]$.

Thus $\hat{g}^{**}s\text{-}Cl[(f^{-1})^{-1}(A)]\subseteq(f^{-1})^{-1}[\hat{g}^{**}s\text{-}Cl(A)]$*, for all* $A\subseteq X$*. Then by* Theorem 4.8*, it follows that* f^{-1} *is* $\hat{g}^{**}s$*-irresolute.*

$(3)\Rightarrow(1)$: *Let* A *be an arbitrary* $\hat{g}^{**}s$*-closed set in* X*. Then* $X-A$ *is* $\hat{g}^{**}s$*-open in* X*. Since* f^{-1} *is* $\hat{g}^{**}s$*-irresolute,* $(f^{-1})^{-1}(X-A)$ *is* $\hat{g}^{**}s$*-open in* Y*. But* $(f^{-1})^{-1}(X-A)=f(X-A)=Y-f(A)$*. Thus* $f(A)$ *is* $\hat{g}^{**}s$*-closed in* Y*. This shows that* f *is pre-*$\hat{g}^{**}s$*-closed.*

9. CONCLUSIONS

In this article, we have used $\hat{g}^{**}s$*-open and* $\hat{g}^{**}s$*-closed to introduce new types of mappings in topological spaces namely* $\hat{g}^{**}s$-continuous *function and* $\hat{g}^{**}s$-irresolute *function,* $\hat{g}^{**}s$-open *function,* $\hat{g}^{**}s$-closed *function,* pre$-\hat{g}^{**}s$-open *function and* pre$-\hat{g}^{**}s$-closed *function and have investigated several properties and characterizations of these mappings in topological spaces.*

THE CHALLENGE FOR SUSTAINABLE DEVELOPMENT OF RURAL TOURISM - THE ALBANIA CASE

Dr. Blerta Avdia
Logos University College, Tirana, Albania
Dr. Klementina Ngjeci
"Scanderbeg" High School, Has, Albania

ABSTRACT
Albania has a population of 2,761,785 inhabitants on January 1, 2023 (INSTAT, 2023). The largest percentage of the population is being concentrated in urban areas, abandoning rural areas. Faced with this phenomenon, the Albanian state has set priorities and drafted policies to develop rural areas and return the population there where one of the possibilities is through the sustainable development of rural tourism.
In this paper, we aim to answer the research questions:
a) Does Albania have the potential to develop rural tourism?
b) What are its challenges to develop?

To identify not only the opportunities for the development of rural tourism in Albania but also the challenges that the sustainable development of rural tourism in Albania faces today.
The methodology we will use is in the function of the topic "The challenge for sustainable development of rural tourism - the Albania case". Through the analytical and comparative method, we will identify the current situation and the future of rural tourism in rural areas; through a questionnaire, we will identify the perception that the population has for the development of rural tourism, and we will statistically process the data collected in SPPS.
At the end, the paper will be closed with the SWOT analysis.
Keywords: Rural Tourism, culture, Agriculture, rural areas, sustainable development

1. Introduction

Albania is located in the southeastern part of Europe, in the western part of the Balkan Peninsula. It has a mainly hilly-mountainous relief. It has a population of 2,761,785 inhabitants on January 1, 2023 (INSTAT, 2023). The largest percentage of the population is being concentrated in urban areas, abandoning rural areas.
The development of rural tourism in Albania has favorable conditions for development: diverse relief, rich water resources, fauna, and flora that are of interest to tourists.
Rural areas offer a rich cultural heritage such as archaeological, historical, ethnographic, culinary, religious, etc.
Nowadays, rural areas in Albania are facing problems such as abandonment by the population, changes in the structure of the age pyramid, and loss of public services, but on the other hand, they possess a favorable natural and cultural potential for the development of tourism. (B. Avdia, K. Ngjeci, 2021). To mitigate the negative social, economic, and environmental effects, it has been assessed by the government, experts, and researchers to develop rural tourism.
The development of rural tourism will be a complement to two government priorities a) the development of tourism and b) the agricultural sector. (Government Program 2021-2025)
The purpose of the paper is to identify not only the opportunities for the development of rural tourism in Albania but also the challenges that the sustainable development of rural tourism faces today. Also, we aim to answer the research questions:

FULL TEXTS BOOK

Does Albania have the potential for the development of rural tourism?
What are its challenges to develop?
Where through the method of literature research, questionnaires, the analysis of collected data will affirm or deny the research questions raised.
The paper will be organized: an introduction, literature review, research methods, results, discussions, and conclusions.
The development of rural tourism in Albania is a good opportunity for the community. They will engage in the establishment of tourism businesses such as the opening of guesthouses, Agri-tourism, employment as local guides, etc. This means that the development of rural tourism in Albania will affect the revitalization of life in the village, but also of the sectors in function of the development of tourism. This paper will be of interest to researchers in the field, rural institutions in Albania and other actors involved in the tourism sector.

2. Literature review

Albania has a favorable natural and cultural potential for the development of Tourism. Favorable geographical position, natural and cultural wealth, and supporting policies influenced the development of tourism. The population of Albania on September 18, 2023, turned out to be 2,402,113 inhabitants, but Albania for the year 2023 is ranked fourth in the world with an increase in international tourists of 56% in 2019 (UN Tourism, April 9, 2024). In 2023, Albania welcomed 10.1 million international tourists. In 2021, the Gross Domestic Product (GDP) recorded an increase in real terms (in volume) of 8.91%, compared to 2020, after an increase of -3.30% in 2020, compared to 2019. The main contribution to this growth was given by economic activities such as: "Trade, transport, accommodation and food service" with +1.64 percentage points; "Agriculture, forests and fishing" with +0.35 percentage points; (INSTAT, 2021). In terms of the GDP structure according to economic activities, the largest weight in the economy for 2021 continues to be occupied by Services in total with 47.86%, marking an increase in real terms of 8.41%. Industry and Construction account for 20.75% of GDP, marking growth in real terms of 10.44% and 18.01%, respectively. Agriculture, hunting, forestry, and fishing account for 18.36% of GDP with an increase in real terms of 1.80%.
These data show the importance of the service sector and agriculture in improving the economic and social life of the population.

Tourism and agriculture in Albania are priorities of the Albanian government, as such rural tourism takes on a special importance to develop. The development is also related to other sectors of the economy such as agriculture, light food industry, crafts, services, etc.
In the national strategy for the sustainable development of tourism 2019 - 2023, rural tourism is analyzed within the framework of natural tourism about the potential that these areas offer such as (rafting, parachuting, mountain biking, fishing, trekking, mountain climbing, nature walking- hiking, horseback riding, study tours.
In the national strategy for the development of agrotourism in Albania, Agrotourism is seen as an opportunity to further develop rural tourism.
In the strategy of agriculture and rural development 2013-2020, rural tourism will be developed within small businesses.
The development of rural tourism in Albania relies on the best models of neighboring countries such as Italy.
In relation to scientific works on rural tourism for Albania, there are not many, identifying the fact that Albania has a still unexplored tourism potential.

FULL TEXTS BOOK

Despite the challenges faced by rural areas such as depopulated villages, abandoned agricultural lands, lack of services and unmaintained roads, they carry a rich cultural and natural heritage to develop tourism. (B. Avdia, 2021)

The development of rural tourism is an opportunity to mitigate the negative social and economic phenomena that rural areas face today.

Rural tourism will play a key role in the multifunctional development of agriculture in Albania by expanding the field of action of farms operating in the agricultural sector. Agricultural and rural development policies have contributed significantly to the economic, environmental and social development of agriculture and rural communities.

3. Research Method

The purpose of this study is to identify the challenges of sustainable rural tourism development in Albania.

For the realization of the paper, the following research questions were raised:

- *Does Albania have the potential for the development of rural tourism?*
- *What are its challenges to develop?*

For the realization of the work, after reviewing the literature, a questionnaire was drawn up to obtain the opinion on the challenges that Albania has for the development of rural tourism.

The questionnaire was randomly distributed online. The instrument used for data collection is a Google Forms-type questionnaire and consists of open and closed questions. Participants who completed the questionnaire in this study were informed about the purpose of the study. Also, ethical aspects have been taken into account in the use of questionnaires, ensuring that the anonymity, confidentiality, and fair treatment of the participants are maintained. The questionnaire focused on: identifying the potential, challenges of rural areas for tourism development. Then, through the SPSS program, we analyzed the collected data to identify the findings and give the corresponding recommendations, the identification of the religious object in the tourist route.

60 people who work in different professions in Albania, both in rural and urban areas and aged 18+, participate in the questionnaire, 64.4% are women and 35.6% are men. The participants in the questionnaire are from different professions, but those who work in the education sector predominate. Completing the questionnaire by people from different professions will help us to make the results of our study as close to reality as possible.

4. Results

The development of sustainable rural tourism is a challenge for rural areas. This is related not only to the drafting of efficient policies, and the lack of investments but also to the perceptions of the population. In the questionnaire organized on the Challenges of sustainable rural development, they stated that:

In rural areas in Albania, age 65+ predominates with 54.2% of their answers, showing that the population is aging and that young people have left. (Figure 1)

FULL TEXTS BOOK

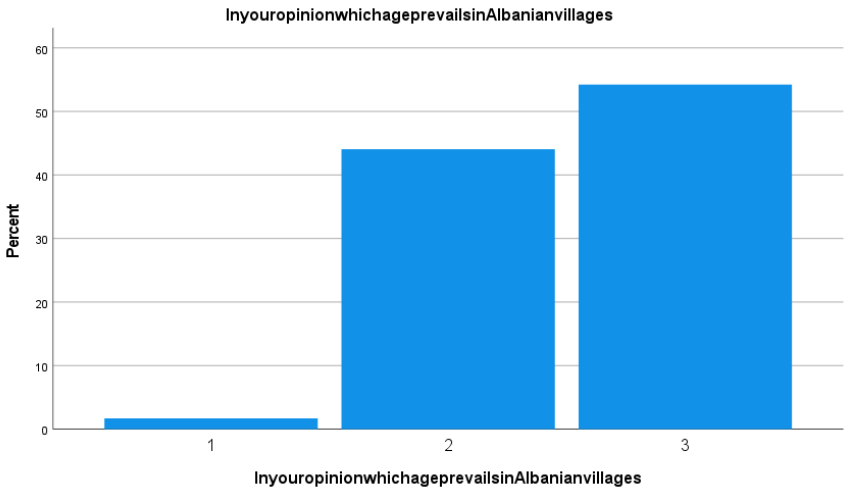

Figure 1. In your opinion which age prevails in Albania Villages

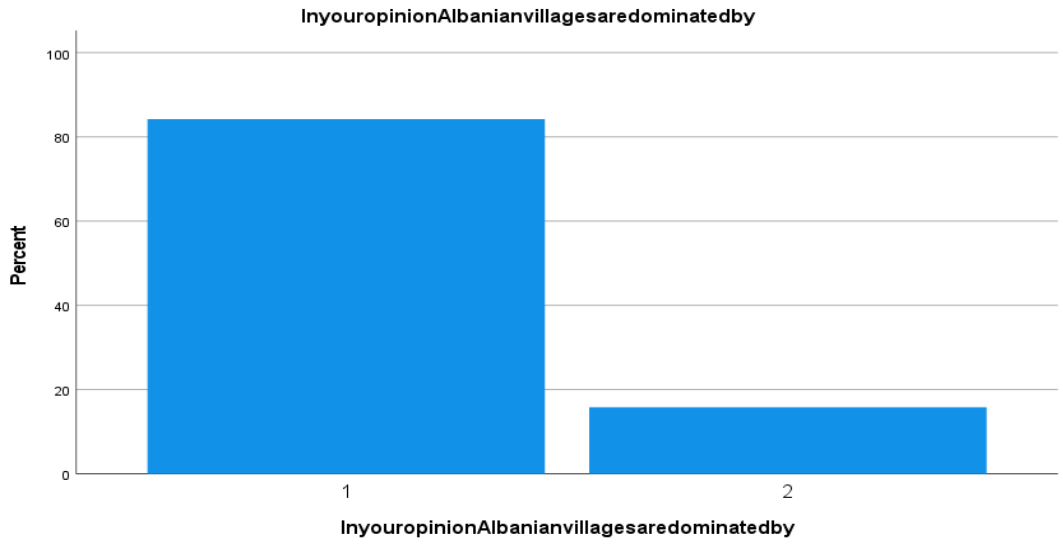
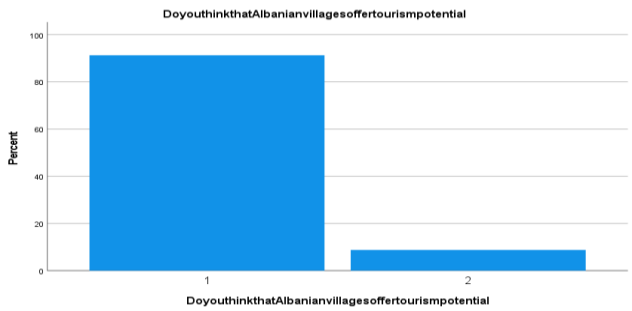
Regarding employment, 84.2% of the participants said that unemployment prevails. (Figure 2). This shows the importance of encouraging new investments to create jobs.





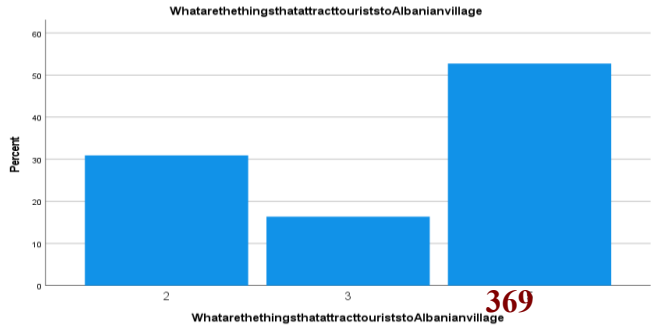


Figure 2 In your opinion Albanian villages are dominated by: 1) unemployment or 2) employment

Albanian villages are distinguished from each other by natural features, history, culinary traditions, hospitality, authenticity, and architecture. Along with the values that constitute potential, they are also distinguished by problems such as depopulation, aging of the population, expansion of unplanned constructions, and out of their tradition.

Despite this, 91.2% of the responses of the survey participants say that Albanian villages have the potential for the development of tourism. The factors that attract tourists are the landscape (30.9.%), hospitality and standard (16.4%), and the cultural program they offer (52.7%). (Figure 3)

FULL TEXTS BOOK

Figure 3. Do you think Albania villages offer tourism potential; What are the things that attract tourists to Albania villages: 1) cultural program 2) landscape 3) Hospitality and standards 4) History 5) all

More than half of them say that Albanian villages are famous for hospitality, history, and cuisine. But they are distinguished from each other by the holidays they have and celebrate, the presence of which enriches the tourist offer, so it is required to work on their marketing and promotion.
Most of the income in rural areas is provided by agriculture with 86.2% of the answers given, followed by the services sector with 10.3% of them.

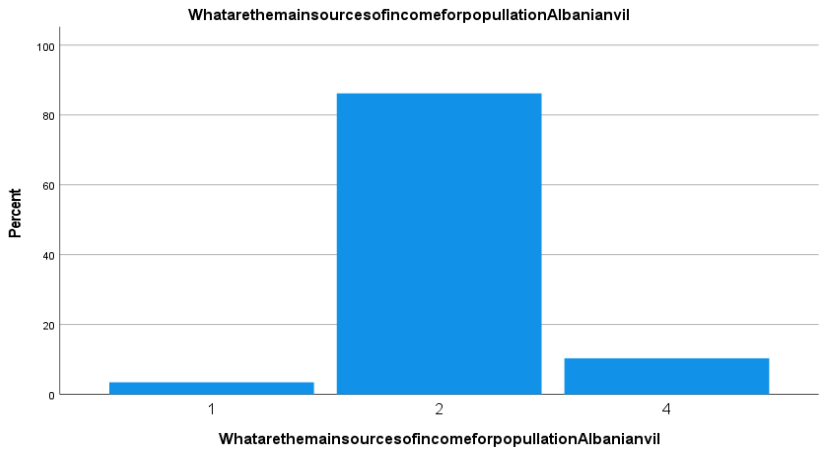

Figure 4. What are the main sources of income for the population in Albania Villages: 1) administration 2) agriculture 3) Industry 4) service sector
Regarding the infrastructure of the respondents, they answered that it is not good at all, penalizing the accessibility of rural areas for tourist purposes.
Regardless of the fact that in rural areas there are projects that develop tourism and have a good position in relation to promoted tourist destinations such as Butrinti, Apollonia, Durrës, etc.

Activities that will promote the development of tourism are the establishment of agro-tourism, the organization of fairs for agricultural and livestock products, sports games such as horse-riding, canoeing, cycling, and mountaineering, Traditional games; participation of tourists in crops, harvests, Transhumance. Also, the branding of tourist attractions, the description and promotion of tourist attractions, and the publication of the area's holiday calendar to organize various activities; road infrastructure, and standard hostels will be a factor that will attract tourists to rural areas.

Rural areas in Albania can produce products that can be offered to tourists, respondents say that they can be: handicrafts, wine, cheese, and canned products (jam, gliko, pickles, etc.) (Figure 5)

FULL TEXTS BOOK

Figure 5 Give them an idea of what the soil can produce in Albanian villages

More than half of the respondents say that for the development of rural tourism there is a spirit of cooperation between public and private institutions, local government and the community. They are of the opinion that rural tourism will serve to mitigate the social, economic and environmental phenomena that rural areas face today.

The development of rural tourism in Albania relies on the variety of authentic products that can be offered to tourists, such as artisanal products, dairy products, meat products, dough products, pies, mesnik, and traditional drinks such as brandy, wine, cider, lemonade from flowers, etc. olive oil.

According to the respondents, rural tourism should be the responsibility of local, central, community, and other actors operating in tourism. Attention should be paid to the development of infrastructure and the increase of the capacity of hostels, to maintain authenticity, the development of rural areas through community-based projects; the development of rural tourism while preserving the environment; the involvement of the community as local guides, why not the teachers of the area..

Supporting businesses and stimulating agricultural production with a secure market. Provide water supply, electricity, telecommunications, etc.

Based on the answers of the respondents, it is evident that the lack of knowledge of a foreign language remains a hindering factor. They think that rural tourism is a factor that affects the development of rural areas, but it is not the main responsibility.

Czechs are the ones who participate more in rural tourism in Albania, followed by Germans and Albanians. According to the respondents, the government should pay more attention to the development of rural areas.

To understand the future of rural tourism, a correlation was made between the question "Any spirit of cooperation between agencies and institutions" and the question "The interest of the rural community to invest in development". From this correlation, it turned out that the community needs to cooperate with all actors for the development of rural stability.

5. Discussions and conclusions

The challenges of sustainable rural development in Albania are great. This is seen in the study of the literature and the results obtained from the questionnaire.

Through a SWOT analysis, we identified the indicators that should be taken into account by the actors who operate in the field of tourism in rural areas.

Tab. 2 SWOT Analysis

Strengths	Weak points
• Diverse natural features • Rich and traditional cuisine • Hospitality • The rich natural and cultural heritage, • Development of the variety of tourism branches: white, green, river, etc. • The entrepreneurial spirit of the community	• Lack of vision • Lack of infrastructure • Agriculture, lacks modern technology • Overlapping of owners on properties • Lack of investment
Opportunity	The Risks

FULL TEXTS BOOK

• Returning dignity to the villages • The towers should be revitalized by turning them into hostels and adding new hostels • Subsidy from the local and central government to encourage entrepreneurship and investments in infrastructure • Diverse natural and cultural wealth still underutilized • Investments in the development of Agrotourism • The collection of medical plants in the area, the possibility of fruit for packaging, and the creation of a safe sales market • Promotion of local businesses and employment of young people • Motivating farmers with soft loans from the state. • The right management of projects and donations, the involvement of the community in the development of rural tourism	• Being neglected by the institutions • Abandonment of villages by the population • MIGRATION • Environmental pollution and degradation of forests and land • High prices • lack of stores for food, fuel, etc. • Lack of funds for development and lack of manpower • The risk of losing authenticity

Rural areas in Albania have the potential for the development of tourism, but they face many problems such as infrastructural, lack of investment, but also human resources.
Despite the fact that the Government has priority for the development of tourism and agriculture, challenges for the development of sustainable rural tourism appear before it, such as:

- Drafting development plans for rural areas with a focus on tourism
- Development of road infrastructure, tourism, telecommunications and public services
- Investment incentives for the return of towers to hostels
- The return of young people to the village and their employment
- Increasing the number of professional local guides
- Awareness of the environment and the importance of preserving it
- Preserving the authenticity of the natural and cultural heritage
- Encouraging the application of communities for projects in the field of rural development
- Maintaining the balance between prices and tourist offer
- Management from overloading the number of tourists
- To maintain the balance of children's involvement in work (in rural areas we mainly have family businesses)

As a conclusion, we say that Albania has potential for the development of rural tourism, despite the challenges it will face.

RESTORING HISTORICAL BUILDINGS FOR BARRIER-FREE ACCESS (KONYA ALÂEDDIN MOSQUE)

Doç. Dr. Duygu İLKHAN SÖYLEMEZ
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu
Doç. Dr. Adnan SÖYLEMEZ,
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu

ABSTRACT

Historical buildings represent the rich cultural heritage and architectural ingenuity of societies, offering insights into the values, beliefs, and ways of life of past civilisations. However, many of these structures were not designed with accessibility in mind, posing challenges for individuals with disabilities or mobility limitations. As societies become more inclusive, ensuring barrier-free access in historical sites after restoration is crucial for preserving cultural treasures for all people. This study evaluates the suitability of the recently restored Alaaddin Mosque in Konya, Turkey, a renowned 13th-century Seljuk architectural masterpiece, for achieving barrier-free access.

A comprehensive literature review examines existing guidelines, approaches, and case studies related to implementing accessible design in historical buildings while preserving their cultural integrity. The study employs a mixed-methods approach, combining site observations, measurements, and interviews with experts and stakeholders involved in the mosque's restoration. The evaluation criteria encompass physical accessibility, wayfinding, and information dissemination, with the objective of assessing the mosque's barrier-free features.

The findings highlight the strengths and limitations of the restoration efforts in accommodating accessibility requirements. Innovative solutions implemented, such as ramps and inclusive signage, are analysed alongside remaining barriers posed by structural constraints and heritage conservation considerations. The discussion interprets these findings within the context of current literature and provides recommendations for future restoration projects, policy implications, and potential areas for further research.

By evaluating the Alaaddin Mosque's barrier-free accessibility, this study contributes to the ongoing discourse on integrating universal design principles in historical sites. Ultimately, the study aims to promote inclusivity and equal access to cultural heritage for all individuals.

Keywords: barrier-free access, historical buildings, restoration, cultural heritage preservation

INTRODUCTION

Historical and cultural heritage sites, such as religious buildings, monuments, and architectural wonders, are indeed very important because they represent in a tangible way the riches in terms of cultural identity and tradition of a people. These structures are embodiments of the ingenuity, art, and craft of past civilizations, dealing in ways that offer an insight into their beliefs, values, and ways of life. But it appears evident that the majority of these historical sites have been built during an era when there was hardly any consideration to be made for the disabled individuals or reduced mobilities. Due to the changing outlook of society and the growing concern towards preparing barrier-free and universally acceptable environments, renovation and modification of heritage structures present several unique challenges.

Barrier-free access—or, equivalently, universal design or inclusive design—is the concept of designing the environment and space for use by everyone—regardless of physical abilities, sensory impairments, or age. And this approach acknowledges a fact—the disability should not be treated as an inherent characteristic of a human being but as a result of the inadequacy of the built environment that minimally caters to diverse needs. Appending barrier-free access to all historical buildings after their restoration

FULL TEXTS BOOK

are paramount in securing affirmative actions, keeping cultural assets available to everyone, and—principally—securing equal opportunities and participation.

One of the most important problems that could be raised due to this act is shown in the case of Alâeddin Mosque in Konya, Turkey. This 13th-century Seljuk masterpiece is one of the most important examples of architectural greatness and historical richness in the mosque typology under focus and has been restored recently. The restoration was to protect the structural entity of the mosque and provide it with improved aesthetics for furthering use as a place of worship and cultural significance. However, the major question is: to what extent does this restored Alâeddin Mosque include barrier-free access, so that people with disabilities or locomotion handicaps are able to visit and enjoy this important historical place?

Earlier research has examined the challenges and strategies by which historical buildings are made accessible to all. Most of the literature focused on finding sensitive balances between keeping cultural and architectural values of such places and simultaneously developing them to be more inclusive using accessible design—together with. These guidelines for integration, such as the Americans with Disabilities Act and principles from the International Council on Monuments and Sites, establish frameworks for integrating features of accessibility into heritage sites while maintaining principles of heritage conservation.

The researchers listed some of the identified practices intended for making historical buildings accessible without barriers, including innovative design solutions involving assistive technologies, and systems of inclusive interpretation and wayfinding. Accessible through illustrative case studies, such a success story ranges from the Guggenheim Museum in Bilbao, Spain, to the Royal Crescent in Bath, United Kingdom—sharing creative solutions that balance accessibility with the preservation of historical character movingly.

The literature, however, also points out challenges and limitations in the way of realizing furthest possible accessibility without barriers in historic buildings. These could range from structural issues to heritage conservation stipulations and even the issue of finding a balance between accessibility and conservation of original architectural features and materials without alteration.

This study evaluates the appropriateness, in relation to barrier-free access, of the recently renovated Alâeddin Mosque in Konya, Turkey. The present study further attempts to show the positive and negative sides of the detailed special measures in specific functions or parts of a building, regarding their overall accessibility at one common site. The study is conducted with the aim of contributing to the ongoing discourse on integration issues with reference to barrier-free access in historical buildings while preserving their cultural and architectural values.

LEGISLATION GOVERNING ACCESS TO HISTORIC STRUCTURES

Access to historic buildings and places does not only make them more serviceable, but it can also be used as a means of emphasizing their cultural, social, and economic culture. In principle, accessible design in heritage buildings contributes to, but also helps to meet, society's requirement of the protection of architectural heritage and equal access for all. It is an approach that can save these sites in a manner where each maintains its intrinsic cultural value but is also fitted for uses relevant to modern needs (ENAT, 2012).

"Barrier-free accessibility" itself explains that when a person with a certain disability cannot do something which others can easily do or access, only then it becomes a handicap. And when such barriers are removed, then persons with a disability can also get equal opportunities like any other person, hence improving the quality of their lives (AFIL, 2022). Barrier-free designs and renovations, such as building ramps for safe access, are part of this initiative (B. F. P., 2024). This is the method focused on making historical buildings more accessible by creating environments-that are inclusive: heedful of all individuals' needs, making them more functional.

FULL TEXTS BOOK

The barrier-free access to historical buildings has been a center of research and discussion, whereby through scholars and practitioners, the antithetic concerns of preservation of cultural heritage versus access for all are weighed off. The guidelines, such as the Americans with Disabilities Act (ADA) Standards for Accessible Design and those developed by the International Council on Monuments and Sites, take into consideration the unique challenges of including accessibility features in such a way that it preserves the cultural and architectural integrity of a historic site (U.S. Department of Justice, 2010). These standards highlight a balanced approach that could allow creative solutions using alternative routes, temporary or reversible modifications, and assistive technologies in order to preserve accessibility without affecting historical character.

It is possible to access historic structures for the disabled, but again this is a procedure that requires the appreciation of how the ADA legislation relates to buildings. First what is even a "historic' building under the ADA?. The ADA considers historic properties to be properties listed on or eligible for listing on the National Register of Historic Places under the National Historic Preservation Act, or properties designated as historic under state or local law (Uzeta, 2023). Accessibility is standard for new construction today but wasn't always so. Federal accessibility laws started with the Architectural Barriers Act of 1968 which declared that all buildings designed and constructed, and since altered, by the federal government be accessible (Lacke, 2020).

Also according to the Architectural Barriers Act, modifications to federal buildings were supposed to be in line with the Uniform Federal Accessibility Standards (UFAS) that have special provisions for historic buildings, which 'may be threatened or destroyed by full accessibility requirements (Technical Preservation Services (U.S. National Park Service), n.d.)

Under Title II of the ADA, state and local governments are required to eliminate access barriers by either relocating services and programs to buildings with accessibility or by retrofitting in existing buildings. For example, a licensing office may be relocated into the accessible first-floor space; if this is not feasible, mail service could be provided. However, historic preservation State and local government facilities whose primary purpose is historic preservation but have the characteristics of place of public accommodation facilities, such as state-owned historic museums and historic state capitols offering tours, 12 must meet the physical accessibility standards. For historic properties subject to the requirements of the ADA, owners are, therefore, required to consult with people with disabilities, disability organizations, and their State Historic Preservation Officer (SHPO) in developing a determination as to whether special accessibility provisions for historic property can be utilized. If it is determined, in consultation with the SHPO, that these provisions would also "threaten or destroy" the significance of a property, alternative methods of access, such as home delivery and audiovisual programs, must be used instead (Lacke, 2020).

Regardless of their historic status, all existing places of public accommodation are required to remove barriers where readily achievable and comply as much as possible with the ADA. The degree of modification necessary will vary greatly from property to property, and an accessibility consultant lets a business take the least invasive approach toward compliance to assure that historic buildings retain their character while being accessible for all to enjoy (Christy, 2019).

Finally, the ADA National Network has a number of more in-depth resources available related to the impact of the ADA on historic properties, including clarifying that historic properties are not exempt from the accessibility requirements of the ADA and may only be permitted to use alternative requirements in discharging their accessibility commitments. (Uzeta, 2023).

Historic or not, all such places of public accommodation must eliminate barriers that are easily obtainable and become as compliant with the ADA to the maximum feasible extent Facilities vary widely in their extent of modifications that will need to be required, and an accessibility consultant can help identify the least-invasive approach to compliance that will assure that historic buildings retain their character while being enjoyed by all. Finally, the ADA National Network provides much

FULL TEXTS BOOK

information on the field concerning the impacts that the ADA had on historic properties but, by the fact, the historic properties are not exempt from the ADA requirements on access, the accommodations can be done with the use of alternative requirements to meet their accessibility obligations (Uzeta, 2023).

CURRENT STATE OF ACCESSIBILITY AT ALÂEDDİN MOSQUE

According to the Altunapa Foundation, the structure located in Konya, the capital of the Anatolian Seljuks, is situated in the inner castle at the heart of the Taht neighborhood. During this period, the area where the mosque currently stands was home to the Medrese-i Sultaniye, the Seljuk Palace, and the Eflatun Mescidi, a church from the Byzantine era (Konyalı, 1965).

The Alâeddin Mosque, located in the historic city of Konya, is a 13th-century Seljuk architectural masterpiece renowned for its grandeur and cultural significance. The mosque recently underwent a comprehensive restoration process, aiming to preserve its structural integrity, enhance its aesthetic appeal, and ensure its continued use as a place of worship and cultural heritage. This study focused on the restored mosque as the primary research site.

Alaeddin Mosque, located on an eponymous hill in the very center of Konya, is one of the most important and yet problematic monuments from the period of the Seljuks in Anatolia. It has a southern prayer hall with a courtyard to the north, U-shaped around the northern side. The hall of prayer is composed of three heterogeneous sections: an east-west oriented seven-aisle section parallel to the qibla wall, a multi-columned unit with a domed space in front of the mihrab, and a western wing with five aisles also parallel to the qibla wall. The southern wall of the mosque curves slightly to the north at the point where the multi-columned unit and the domed space in front of the mihrab meet, before continuing west. As a consequence of this adjustments, though the multi-columned unit has deviated from the qibla direction, the domed unit in front of the mihrab is aligned exactly in the qibla direction (Asutay-Effenberger, 2006).

Within the courtyard are two adjacent tombs: the eastern ten-sided, also bears an inscription attributed to Kilij Arslan II, while the western octagonal tomb remains unknown and was never completed. The courtyard walls have no consistency whatsoever: the Eastern and northeastern sides are quite plain, while the northwestern side reuses columns, bears inscriptions, and two gateways give it monumentality. Excavations into the courtyard have revealed several remains to the exterior beyond the buildings as they exist today. Repairs to the mosque at various times were so extensive that very little of its original form is left today, and few of its original materials survive.

While its architectural value cannot be disproved, assessing its accessibility to the disabled is important in light of the modern dimensions of accessible design. Having viewed the current status at Alaeddin Mosque, this assessment documents the points which require improvements so that this site can be fully made accessible to all categories of visitors.

However, this first approach was not a significant problem for people with physical disabilities. Roads surrounding Alaeddin Mosque are very smooth and negotiable, making easy wheelchair access to the main entrance of the mosque. That would be a good feature since it qualifies this condition that visitors using a chair or having some other difficulty of mobility may easily approach the mosque. This, however, does not mean that from the very start all parts of the mosque have been easily accessible, as will be elaborated in the following sections.

From the description above, it can be noted that Alaeddin's main entrance door was poorly designed for the disabled. The main issue of using a mosque as a scenario for hosting a disabled person is first the placement of the shoe racks and need to strip shoes off even before entering. Those are two things that make the entrance quite hectic and cumbersome for people with physical disabilities, more so those using wheelchairs or other walking aids. No alternative arrangements or facilities, like ramps or lifts, which can help disabled persons get into the mosque, are provided for easier entry into the mosque. This

FULL TEXTS BOOK

lacuna seriously impinges on the accessibility of the mosque as it builds a threshold at the very entrance itself.

A warning and guidance system for the visually challenged is absent inside the mosque. According to the new concepts of accessibility, tactile pathways, audio cues, and braille signage play an important role in enabling a visually impaired person to move around in public spaces. Alaeddin Mosque does not have these facilities, meaning that visually impaired visitors will view movement as a risky and relatively arduous exercise. According to this survey, there lies a drastic gap in the accessibility provision of the mosque, and it testifies that a substantive amount of effort has to be injected for accommodating all.

The inner courtyard of the mosque, where several tombs are located, also does not have facilities that would make it convenient for disabled persons. There is no facility for ramps or other ways through which a wheelchaired or otherwise disabled person could move. Steps and uneven surfaces present great barriers to disabled persons visiting these very historically significant mausoleums. This fact further limits every opportunity for full enjoyment and appreciation of all historical and cultural values the mosque represents for people with disabilities.

CONCLUSION AND RECOMMENDATIONS

This accessibility assessment identifies quite a good number of issues that need to be improved in order to make Alâeddin Mosque more inclusive for all its visitors. The path that goes to this mosque can be accessed by all, including persons with different kinds of physical disability, but access to the main entrance remains a hurdle due to a lack of facilities to take off shoes and position racks where shoes can be kept. Moreover, there is no guideline or tactile system to guide the visually impaired person, nor any audio guidance within the compound of the mosque, highly limiting access to people with these kinds of disabilities. Moreover, the courtyard and mausoleums are inaccessible to subjects with mobility impairments.

To this regard, following are the suggested recommendations:

Entrance modification: Ramps or other aids should be fitted to help disabled persons to remove their shoes and enter the mosque with a certain level of ease.

Interior navigation aids Tactile pathways, Braille signage, and audio guidance systems would make interior navigation of the mosque safe for any visually impaired visitors.

Courtyard and Mausoleum Accessibility: Ramps should be provided, and pathways to the mausoleums will need to be smoothed out and paved for accessibility by wheelchair and people with mobility impairment.

Since these are executed, accessibility to the Alâeddin Mosque will be greatly enhanced, hence able to help all its visitors, regardless of their physical abilities in visiting this historic site in comparison to others. This degree of inclusiveness is not simply to obey modern requirements; rather, it is prevailing hospitality of the mosque.

ACCESSIBILITY AS A CORNERSTONE OF CULTURAL ENGAGEMENT: LESSONS FROM THE ÇATALHÖYÜK

Doç. Dr. Duygu İLKHAN SÖYLEMEZ
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu
Doç. Dr. Adnan SÖYLEMEZ,
Selçuk Üniversitesi, Sosyal Bilimler Meslek Yüksekokulu

ABSTRACT

The role of the museum is very vital for the preservation of cultural heritage and the encouragement of education and understanding. However, challenges to inaccessibility are barriers to most of the visitors when exploring and experiencing such cultural institutions. This paper critically assesses the measures for accessibility taken at Çatalhöyük in Konya, Turkey, which is one of the most important archaeological sites and museums in the region.

Using a truly mixed-method approach that pairs on-site observations with visitor surveys and interviews, this research will assess the current state of accessibility in the Çatalhöyük. This study is particularly concentrated on physical access in relation to wheelchair accessibility, tactile guidance, and seating provisions. In addition, this research will cover the means of assistive technologies, such as audio guides, captioning, and sensory accommodations for visitors with visual impairments or deafness/hearing impairments.

The findings present a very mixed picture for the accessibility initiatives at the museum. It would not be remiss to say that some attempts have been commendable, like the installation of ramps and provision of audio guides, but huge gaps remained.

Added to international good practice in accessible design worldwide, elsewhere, this paper suggests the establishment of an internal set of recommendations for infrastructure modifications, universal design practices, staff training programs, and the adoption of inclusive interpretative strategies, all in place to assist visitors to Çatalhöyük in their overall experience. Through working with these issues of access, the museum could become more of a culture ambassador, promoting greater possibilities for many more to discover and become attune to the significance of the rich cultural heritage of Çatalhöyük.

Keywords: Accessibility, Çatalhöyük, Cultural Heritage, Inclusive Design

INTRODUCTION

Museums are a critical part of cultural identity, heritage preservation, education, and more profound understanding among the different populations. However, accessibility poses a serious constraint that narrows the potential for realization in most visitors to such institutions. The following investigation aims to critically inspect the access measures of the Çatalhöyük Museum in Konya, Turkey-arguably one of the most important archaeological sites and museums in the region-in order to have an informed understanding of how access has the means to inform cultural engagement and be improved in a way that reflects international best practice.

The concept of accessibility in museums has undergone many changes in the past couple of decades, shifting from simple physical access to a holistic approach that shall allow the integration in order to incorporate the diverse visitor needs. This is supported by a modern view on museums as agencies of social inclusion and their responsibility to society as well as the need to provide for users from all sectors of society.

However, archaeological museums such as the Çatalhöyük have to balance these preservation needs with accessibility requirements. Archaeological material is of delicate nature and in most cases carries complex stories and demands innovative modes of interpretation and display (Opitz & Herrmann, 2018). Besides, the physical structure of an archaeological site, and its related museums, can represent an

FULL TEXTS BOOK

obstacle to accessibility, especially because they involve special needs mostly with regard to visitors' mobility problems (Mesquita & Carneiro, 2016).

The archaeological site of Çatalhöyük is one of the most important Neolithic settlements ever to be discovered in the 1950s. The associated museum has a very important in the interpretation and presentation of the findings made at the site to the local populace. Nevertheless, to what extent this cultural engagement is efficient is highly related to the accessibility of the museum. The museum's accessibility, according to Weisen(2008), does imply not only being able to physically access it but also being given intellect as well as emotional contact with its contents.

It is supported by research that there are huge benefits to be had from greater accessibility to the experiences and learning outcomes of visitors in museums. For example, Hein proved that multi-sensory exhibitions and universal design have clearly favored the understanding and enjoyment by visitors coming from diverse audiences. Cock et al. showed this can vastly improve the museum experience for visually impaired visitors by using assistive technologies like audio guides and tactile models.

Thus, the majority of museums, even with this development, especially in developing countries or connected to archaeological sites, still indeed experience serious challenges in implementing a wide-ranging accessibility program—in fact, this disparity opens the way for investigation into targeted practical improvement options and a contribution to the broad discourse of museum accessibility.

The study seeks to fill this gap by critically assessing the current situation on accessibility at the Çatalhöyük and proposing evidence-based recommendations for its enhancement. This focus is hoped to have much to offer to the fast-growing literature on accessibility in a museum context and the understanding of how the lessons learned from it can be comparatively applied to other similar institutions globally.

MUSEUM ACCESSIBILITY: THEORETICAL FRAMEWORK

Accessibility from the concept of museums has been changing for the last few decades and has replaced the previously existing pure physical access by much elaborated in considering the needs of different visitors. Thus, according to Rappolt-Schlichtmann and Daley, "true museum accessibility is physical, cognitive, and socially barrier-free museum education.". This indeed affirms their research on universal design principles in the exhibition development, and how universal design principles are advantageous to everyone, not just for specified disabled individuals.

Based on this premise, Mesquita and Carneiro conducted a study in 2016 on the access provided by European museums to users with visual impairment. Their findings reflect enormous differences in access measures not only from country to country, but also between different types of museums. The authors emphasize the urgent need for standardized guidelines for all-round access measures and insist on enhanced training for staff to enable the implementation of inclusive practices coherently and effectively.

Universal Design Principles in a Cultural Institution

Interest in applying universal design principles in the museum environment has increased, in that it allows for the making of more inclusive settings. Persson et al. have researched how universal design has been put into practice within Swedish museums and have established that while a large number of institutions recognize its importance, practical application often falls far behind. Key challenges identified by the authors include resources and a lack of skills among staff. It also highlights case studies on the important role universal design has played in increasing the visitor experience at exhibitions.

Handa et al. (2010) provide a universal design review and discuss taking its principles into museums. These authors state that adherence to these principles does not only help visitors in terms of accessibility, but it/the result is added value for enhancement of the museum experience in general for all patrons. The authors give concrete examples of how each principle might be used in the design of exhibits, wayfinding systems, and interactive displays.

FULL TEXTS BOOK

Assistive Technologies in Museum Settings

Recent research has paid special attention to the ways through which assistive technologies can enhance accessibility to museums. Reichinger et al. (2016) have explored 3D printing technology in applying this vision of creating tactile replicas of artworks so that visually impaired people can get a feel for them. Their work consisted of tests showing that such tactile models may significantly lead to considerable improvements in understanding and appreciation regarding visual art, hence rendering approaches to a rather more inclusive museum experience.

Pretto et al., (2020) focused on the subject of the effectiveness of audio description technologies within an art museum environment. Their work showed that well-designed audio guides could hugely enhance the experience of visually impaired visitors but also benefit sighted visitors by providing additional content and encouraging closer observation of works of art.

Visitor Experience and Engagement in Archaeological Museums

Archaeological museums pose both challenges and opportunities related to accessibility. Langer et al. (2018) evaluated the potential of technologies such as 3D printing and augmented reality for improving engagement with audiences within an archaeological museum environment. Their findings demonstrate how these technologies can begin to close the gap between rich data about archaeology and public understanding, therefore improving access to exhibitions for a diverse audience.

In a case study on the Acropolis Museum in Athens, Gazi (2014) evaluated the impact of multisensory exhibits on engaging viewers with an archaeological site's artifacts. The paper explains how touch experiences, sound installations, and interactive digital displays can enhance the inclusiveness of a museum environment by catering to the different learning styles and abilities of visitors.

CURRENT STATE OF ACCESSIBILITY AT ÇATALHÖYÜK

The Çatalhöyük Promotion and Welcome Centre project strives to rejuvenate and welcome visitors effectively to Çatalhöyük—a UNESCO World Heritage Site. The Çatalhöyük Promotion and Reception Centre is the largest wooden public building in Turkey and was fast becoming one of the city's most popular attractions, implemented by Konya Metropolitan Municipality with the support of the Ministry of Culture and Tourism. Constructed totally of wood on a 28,500 square meter site, the center bears the title of the largest 'wooden public investment' in Turkey, having an indoor area of 4,500 square meters (Konya Büyükşehir Belediyesi, 2023).

Other facilities, such as comprehensive facilities, cafeterias, and big exhibition spaces, have been outfitted to guarantee total satisfaction of the demands of visitors. A summary is that wider audiences get familiar with the rich cultural heritage of Çatalhöyük, which makes a great contribution towards the tourism of Konya. The center uses environmentally friendly wooden architecture and therefore refers to bureaucracy for sustainable tourism. This is definitely a great step toward preserving cultural heritage and increasing touristic potential (Konya Büyükşehir Belediyesi, n.d.).

Accessibility features at the Çatalhöyük Promotion and Welcome Centre are some of the most striking, making visits easier and more comfortable for people with disabilities. The present paper scrutinizes the accessibility features of this centre for disabled persons and investigates some of the good practices regarding this aspect.

First of all, the entrance to the car park is disabled person-friendly. There are places specifically set aside for the handicapped or physically challenged visitors within the car park area near the center, so that when they get out of their vehicle, a disabled person can comfortably reach the centre. This arrangement greatly facilitates the approach of visitors who are physically handicapped or older and have reduced mobility.

The centre's entrance stairs that have disability ramps enable the disabled to access the centre without depending on other people for their movement. It provides huge convenience for visitors using wheelchairs, families with prams, and others who face difficulties in movement. These ramps have

FULL TEXTS BOOK

proper angles of inclination and surface materials, ensuring smooth and safe passage in a non-slippery manner.

The corridors at the Reception Centre are wide, thus granting easy access to the disabled. While these wide corridors would provide an ideal area for wheelchair users and their companions to move around, they also mean that, in case of an emergency, there will be a quick and safe evacuation. It is in this design that comfortable circulation, especially for people with disabilities but for everybody else during periods of heavy visitor traffic, can be provided.

Another example is the sensitivity of the centre regarding disabled accessibility. On the right side of the entrance door, it has a disabled WC. Wide doors, washbasins, and toilet seats at the right height, all kinds of equipment needed to allow disabled persons to fulfill all their needs on their own. Moreover, such areas with emergency call buttons add safety by giving them a chance to call for help in case of some kind of problem.

Another important facility for visually impaired visitors is an audio system in a headset that narrates digital and visual content. These audio narratives describe in minute detail the historical and archaeological importance of Çatalhöyük and hence make the richness of this cultural heritage a reality for the visually impaired. The headset audio system will also be appealing to international visitors by having options in different languages.

Another important accessibility feature observable at this site is the presence of a long metal ramp on the road from the reception centre to the excavation site. Such a ramp would make the excavation site safely accessible to people who are either using wheelchairs or have a general reduction in mobility. The fact that the ramp is built with durable materials and features an inclination angle that is suitable increases safety and ease of use.

On the security side, however, one inadequacy discovered is the inability to access the model living area located at the 1st floor and only accessible by stairways. A lift or additional ramp system installation is necessary to have access to this. In this way, wheelchair-bound people and those who have problems with mobility will be able to visit this very significant site.

Consequently, the Çatalhöyük Promotion and Welcome Centre is a fine model with facilities accessible to all kinds of people with many kinds of practices. So, this includes practices such as parking provisions, ramps for the disabled, wide corridors, disabled toilets, audio narration systems, and ramps that manifest inclusion in their design for people with disabilities. Nevertheless, the scraping away of some these inadequacies, such as access to the model living space, will further set a higher standard in accessibility at this centre. Such initiatives will strongly support Çatalhöyük's goal of opening its rich cultural heritage to all people.

CONCLUSION

The Çatalhöyük Promotion and Welcome Centre is an outstanding example of what could be done with regard to accessibility in heritage sites. Responses to specific questions on the design of the Centre and facilities availed to it clearly show that due regard has been taken to provide access to those with disabilities. Disabled parking, entrance ramps, wide corridors, and accessible toilets provide physical ease and independence for those with mobility issues throughout the center. Specifically, it is much easier for the audio translation system to allow the visually impaired view, hence opening up the rich history of Çatalhöyük to many more people. The centre has increased access due to the installment of a long metal ramp at the site of the excavation.

While there have been numerous successes, there is still room to improve. For example, at the moment, the showroom on the first floor is still a big access challenge for clients using a wheelchair or having other mobility impairments, since it lacks a lift or ramps. This deficiency will be filled by the installation of suitable access solutions. by enhancing the facilities, making the Çatalhöyük Promotion and Welcome

FULL TEXTS BOOK

Centre accessible by overcoming the existing barriers in its management, it will raise the standard of accessibility and inclusiveness in the sphere of cultural tourism.

ABSTRACT
The piston is one of the most important elements that set the vehicle in motion by converting combustion energy into mechanical energy. In internal combustion engines, combustion usually takes place in the space between the piston crown and the cylinder head. In this study, the shape of the piston crown was modified to obtain different types of combustion chamber shapes in direct injection engines. Also, three different piston head designs were used to investigate the thermal convection effects. These are described as crown, curved, and flat. Since the strength of the material at high temperatures is also important, three different materials were analyzed. These are referred to as Partially Stabilized Zirconia (PSZ), 38MnVS6, 42CrMo. A total of nine analyzes were carried out with three different designs and three different materials. The ANSYS program was used to see if the piston would transfer the required amount of heat in the thermal simulation. The results of the thermal analysis were then compared to determine the most suitable material and design. It is also interesting to note that more and more heat was concentrated in the center of the piston. The reason for this is that the heat accumulated in the center has to travel a long way to spread. This situation was observed in all piston geometries. In this design, a temperature of 750 °C on the upper surface of the piston and a temperature of 300 °C on the wall edges were used as boundary conditions. The results displayed that the design that transmitted the best temperature was curved and the PSZ material defined design had a maximum temperature of 749.32 C° and a minimum temperature of 300 C°. It was found that the flat design with 42CrMo material had the lowest thermal conductivity. While the flat design with 42CrMo material had the lowest thermal conductivity, the analysis results revealed that the maximum temperature value was 597.96 C° and the minimum temperature value was 310.29 C°. When compared in terms of geometries, when the material was the same, piston head designs with curved design had the highest temperature, while the lowest temperatures were reached in piston head designs with flat design.
Keywords: Piston Head, Geometric Design, Material Change, Thermal Analysis, Temperature

INTRODUCTION
Internal combustion engines are defined as machines that convert chemical energy into mechanical energy. In combustion engines, thermal energy is obtained from chemical energy by burning a fuel. Mechanical energy is generated by using thermal energy. In internal combustion engines, energy is generated in the same volume. Approximately 25-30% of the thermal energy generated during the combustion of fuels in conventional engines can be converted into mechanical energy in gasoline engines and approximately 30% in diesel engines. The remaining part of the energy is emitted by the exhaust gasses, converted into heat by friction, and absorbed by the components surrounding the combustion chamber (Heywood, 1988). The pistons are most affected by the energy conversions, pressure, and high temperatures that take place inside the engine. Developing a piston that can withstand these stresses and ensure more efficient combustion is one of the most critical phases in the development of an engine. More efficient combustion can be achieved by making changes to the piston. These changes can be achieved through the geometry of the combustion chamber and the materials. The area

FULL TEXTS BOOK

of the piston that is most stressed is the top surface facing the combustion chamber. (Satyanarayana et al., 2015) Many studies have been done and continue to be done on piston geometry designs. Most of the studies in the literature on the effects of thermal loads on the piston are studies analyzed using the finite element method (Büyükkaya,2008).

In addition to geometry, the type of material is also an important parameter for the high pressure, temperature, and load in the pistons. Since the dawn of mankind, the use of materials and energy has played a decisive role in the development of human life. Even today, despite advanced materials science, it is still not possible to obtain materials with all the desired properties. Therefore, studies to improve the quality of materials are becoming increasingly important. Advances in material science are expanding the applications of materials by improving their chemical and physical properties. Problems such as wear and tear of materials lead to deformation of the active parts due to effects such as heating, stress, and friction, which is one of the biggest challenges. Some of the reasons for the increase in research and studies on engine materials are the requirements for the development of vehicle engines used in the automotive industry. These requirements include objectives such as improving the wear and friction properties of the parts, ensuring a long service life of the parts, increasing engine efficiency, and improving fuel consumption. Studies carried out in this direction increase the performance and durability of engines, benefiting both users and the environment (Moffa et al., 1973).

There are many studies in the literature regarding piston geometry and the use of different materials on the piston. Morel and Keribar analyzed the temperature and heat flow distribution of a gasoline engine. In their study, they carried out calculations using two methods: a theoretical approach with pressure, temperature, and volume calculations and a numerical simulation with elliptical piston profile analysis using ANSYS software. As a result of the comparisons, the numerical results were found to be compatible with the theoretical results (Morel and Keribar,1990). Singh and Parmanik performed a thermal simulation in ANSYS by defining three different materials on three different piston geometries. They stated in the results that the aluminum material piston design with a flat design provides the most optimum performance in cooling (Singh and Parmanik 2015). Winkler and Parker investigated the effects of thermal barrier coatings on the performance of diesel engines and the service life of the components. In their study, they compared experimental and simulation methods and observed a high degree of agreement between the results obtained. Using the simulation program they developed, they successfully simulated piston ring movements and blow-by/blow-back flows. Although there is no algebraic equation for the ring profile, they found that the simulation technique they developed is suitable for the complex surfaces of pistons and rings (Winkler and Parker, 1993). Gustov determined the temperature distribution in the piston at the start of operation of a turbocharged diesel engine using a two-zone combustion model and the finite element method. Numerical calculations have shown that the original two-zone combustion model and the finite element method can be successfully used to analyze the values and the transient temperature distribution on the individual surfaces of the piston. (Gustov, 2009). Wannatong et al. aimed to determine the thermal properties of the piston in the design of a piston. In order to determine stresses and deformations, the temperature distribution of the piston must be determined. The dynamics of piston rings play an important role in the lubrication characteristics of piston engines, leading to engine wear and high consumption of lubricating oil. Due to the complexity of the movement, a study of piston ring movements and effects is usually performed in a simulation program. Therefore, this study was analyzed using the ANSYS simulation program to minimize piston wear (Wannatong et al., 2008).

In this paper, thermal analysis studies were performed on three different materials and three different geometries that have not been combined before in the literature. The results are compared in terms of heat flux and temperature and the optimum material and geometric design is presented.

MATERIAL

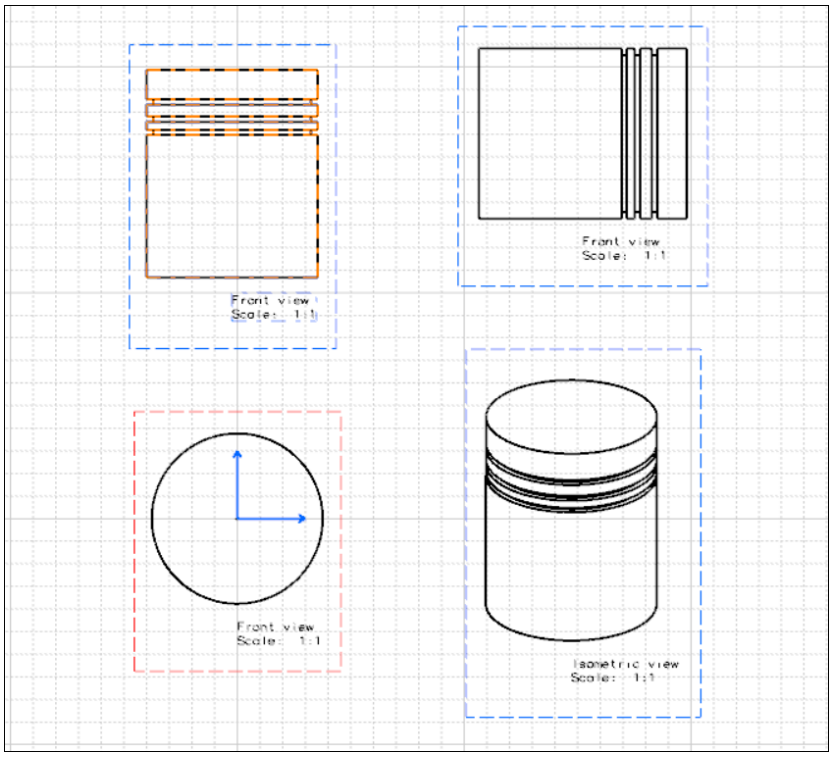
In the study, three different materials (42CrMo, Partially Stabilized Zirconia (PSZ), 38MnVS6 and three different designs (flat shape, crown shape, curved shape) were used in the analysis. The material properties are given in Table 1.

Table 1. Material characteristics (Büyükkaya and Cerit, 2007; Lu et al., 2017; Vedharaj et al.,2017)

	38MnVS6	42CrMo	Partially Stabilized Zirconia (PSZ)
Density [kg/m ^{3}]	7780	7900	5600
Thermal conductivity [W/mK]	38	40	1.68
Young modulus [GPa]	208	206	48
Average linear thermal expansion [10^6m/mK]	13.1	12.1	10.5
Poisson ratio	0.29	0.28	0.25

METHOD

In this study, the designs were created using the CATIA V5 program. The analyzes were carried out using the ANSYS program. The dimensions of the piston were taken from a previous study and used for the design. The temperature of the top of the piston was set at 750 °C and the temperature of the piston walls at 300 °C. The analyzes were carried out after the design had reached the maximum number of meshes. Figure 1 gives a technical drawing of piston head geometry. CATIA view of piston design is presented in Figure 2. Changes were only made to the upper surface of the piston.



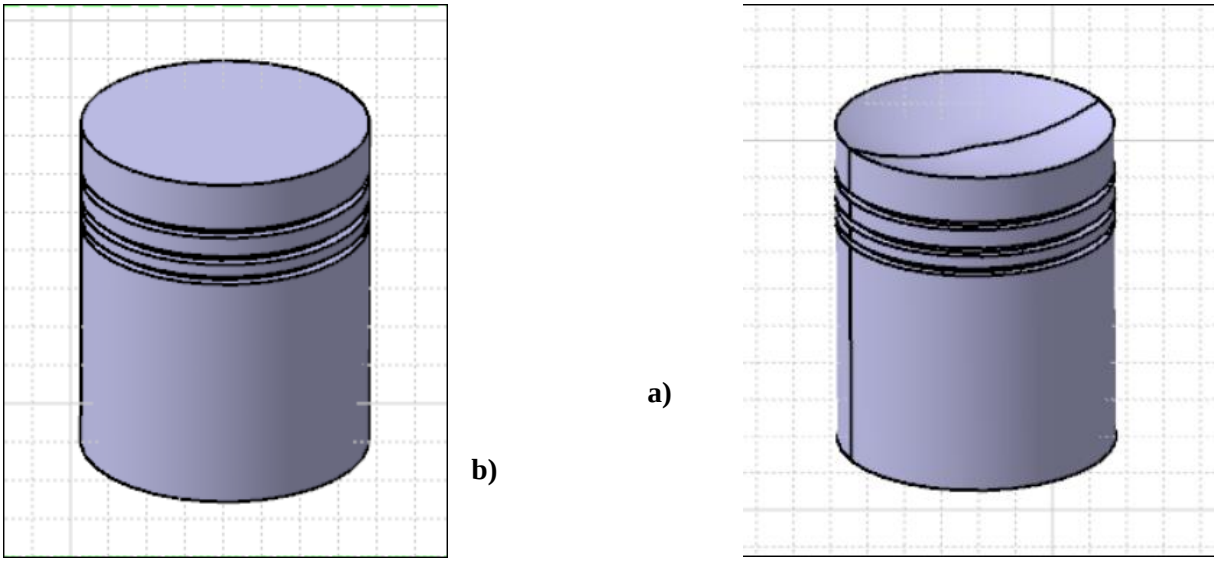


Figure 1. General technical drawing of the piston

Figure 3 displays the mesh view of the piston head. As a result of the meshing process, 24053 nodes and 13296 elements were obtained. The mesh was enlarged until the mesh quality was stable. Figure 4 indicates the surface and edge meshes. Surface and edge meshing were optimized for accuracy of analysis.

FULL TEXTS BOOK

Figure 3. Design mesh view of piston head

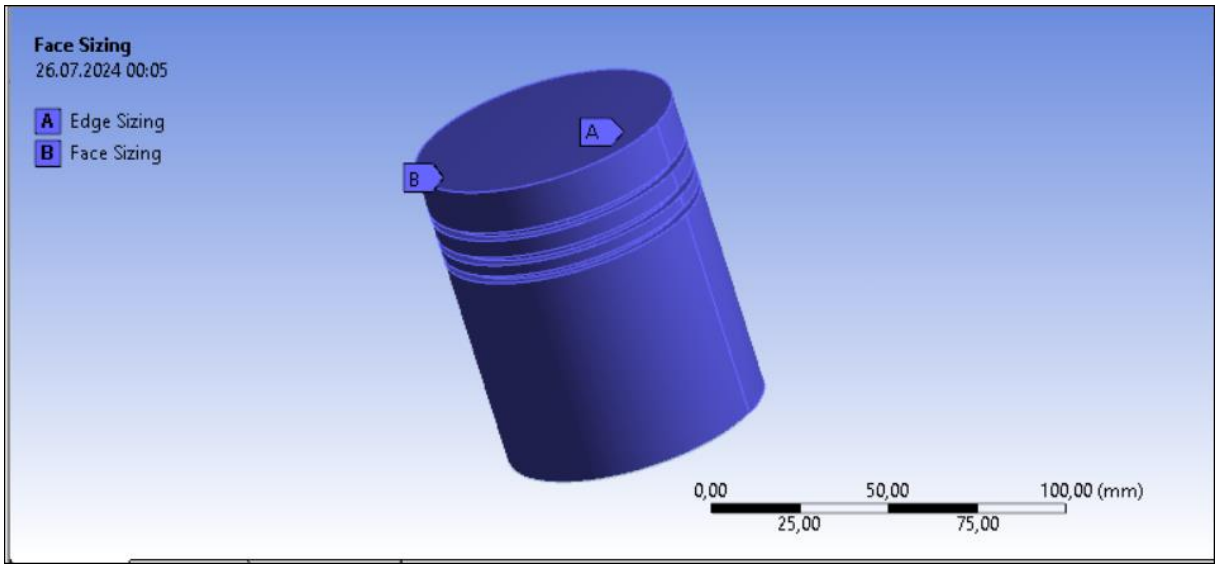

Figure 4. Edge and surface mesh view of the piston head

A temperature of 750 °C was applied to the top of the bottom of the piston head as displayed in Figure 5. A temperature of 300 °C was applied to the sides of the flask shown in Figure 6. The temperature values were determined taking into account the experiments and research carried out today. High temperatures were chosen because high-quality analysis cannot be performed at low temperatures. In this way, a better observation can be made when comparing the selected materials.

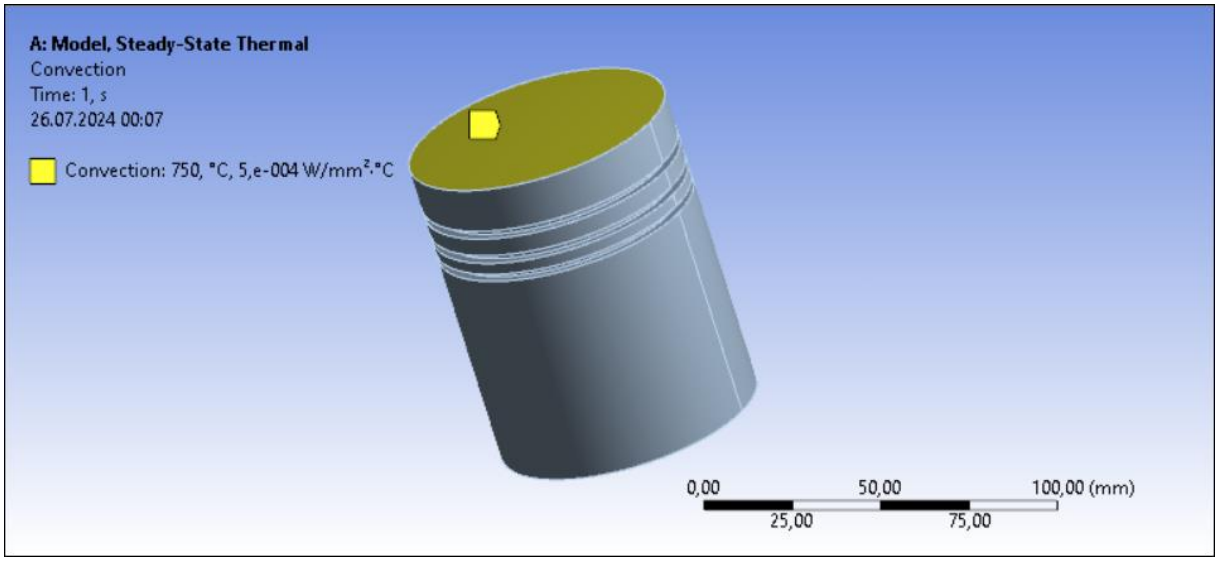

Figure 5. Temperature distribution on the upper surface of the piston head

CONCLUSION AND DISCUSSION

The numerical results of the analysis are presented in Table 2 and Table 3. When comparing the materials, it was found that the material that conducts the most heat is PSZ, followed by the material 38MnVS6, and the material with the lowest value was 42CrMo. It was found that the temperature differences between the material 42CrMo and the material 38MnVS6 are very low. When comparing the designs, it was found that the design with the highest temperature was the crown shape, followed by the curved shape and the design with the lowest temperature was the flat shape. For the flat shape, the material that conducted the best temperature was found to be PSZ material with a total heat flux of 0.0449 and a temperature of 741.14 °C. After that, the temperature was 602.02 °C and 0.3557 with the material 38MnVS6. In the material 42CrMo design, the lowest temperature is 597.96°C with a total heat flow of 0.363. For the crown shape, the material PSZ was found to have the highest temperature of 749.32°C and a total heat flux of 0.0469. The material with the best results was determined to be 38MnVS6 with a temperature of 629.65°C and a total heat flux of 0.357. In this design, the material 42CrMo was found to have the lowest temperature with a temperature of 625.29°C and a total heat flux of 0.365. When comparing the materials in the curved form, it was found that the material PSZ had the highest temperature with a temperature of 746.72°C and a total heat flux of 0.047. 38MnVS6 with a temperature of 616.08°C and a total heat flow of 0.372 was found to be the material with the average best temperature. The material with the lowest temperature was found to be 42CrMo with a temperature of 611.86°C and a total heat flow of 0.38. When examining the numerical results, it becomes clear that the temperature result of the model and the result of the total heat flow are inversely proportional. It was found that the PSZ material, which gives the highest temperature result among the materials, also has the lowest total heat flux. It was found that the 42CrMo material, which gave the lowest temperature result, also had the highest total heat flux.

As a result of the study, the following conclusions were reached:

- Examination of the analysis results showed that the design that delivered the best temperature among nine different models had a crown shape geometry and the material PSZ.
- According to analysis, the temperature result of the model and the result of the total heat flow are inversely proportional.
- It was found that the PSZ material, which gives the highest temperature result among the materials, also has the lowest total heat flux. It was found that the 42CrMo material, which gave the lowest temperature result, also had the highest total heat flux.
- The analysis using PSZ material and flat design proved to be the best option for internal combustion engines. A piston head designed for specific loads helps to reduce specific fuel consumption.

ABSTRACT
Biogas, produced via anaerobic digestion, is a renewable and eco-friendly energy source with methane content ranging from 45% to 75%, translating to an energy content of 16 to 28 MJ/m^3. It is suitable for various applications, including heat production, combined heat and power generation, and as a vehicle fuel. While primarily used for electricity generation, its economic feasibility as a sole electricity source is challenged by higher costs compared to wind and solar photovoltaic (PV) systems. The future trend leans towards upgrading biogas to biomethane for direct injection into existing gas grids or use as renewable transport fuel, supporting the decarbonization of the transport sector. Promoting biogas and biomethane through competitive policies and supportive energy environments is crucial for their role in long-term carbon reduction strategies and meeting sustainable energy goals.
Keywords: Biogas, renewable energy, decarbonization

INTRODUCTION
Energy is crucial for daily life. Many countries, especially developing ones, rely heavily on fossil fuels. Industries are expanding, and their primary energy source, fossil fuels, is decreasing. The rapid development of renewable energy is crucial for global energy security and combating climate change. Countries globally seek sustainable energy solutions. Rising economic growth and energy demand have increased oil and gas prices, reducing reliance on these sources. This has led many nations to prioritize energy security and overhaul their energy strategies (IEA, 2020; Mai-Moulin et al., 2021; Kabeyi et al.,2022; IEA, 2023; Jameel et al., 2024; IEA, 2024). By the end of 2022, 46% of Turkey's total electricity capacity and 58% of its gross electricity production came from fossil fuels. Since Turkey imports nearly all its fossil fuel oil and natural gas, it is highly vulnerable to global price increases. Hence, transitioning to low-carbon energy is crucial for reducing foreign energy dependence and mitigating current account deficit fragility (TSKB, 2023).
Renewable energy sources are gradually replacing fossil fuels around the world. Biomass, geothermal, hydro, solar, and wind are poised to become key energy sources (Yavuz et al., 2022). Bioenergy, which is derived from biomass such as plants, animal waste, and organic materials, is alternative energy sources. Bioenergy is a form of secondary energy obtained from biomass, which includes options such as bioethanol, biogas, biodiesel, biohydrogen, electricity generation, etc. (Duarah et al., 2022). Biogas is a type of bioenergy produced through the anaerobic digestion of biomass like agricultural waste, manure, and organic waste. It is considered a second-generation biofuel because it uses non-food-based materials, unlike first-generation biofuels that come from food crops such as corn or sugarcane. Biogas production helps reduce greenhouse gas emissions and avoids the food-versus-fuel conflict. It can be used for generating electricity, heating, or upgraded to biomethane for vehicle fuel or natural gas grid injection (Torrijos, 2016; Korbag et al., 2021; Duarah et al. 2022; WBA, 2023). Biomethane is an alternative to natural gas and can be utilized as a transportation fuel, achieving an emission reduction of

FULL TEXTS BOOK

60-80% based on the biogas production feedstock (Kabeyi, et al.,2022) This makes biogas a sustainable and eco-friendly energy source.

RENEWABLE ENERGY SOURCE: BIOGAS

Biogas and biomethane are renewable energy sources with numerous benefits both locally and globally. Biogas is produced from biomass, including agricultural waste, municipal waste, and animal excrement, etc. It is produced through anaerobic digestion, where bacteria break down organic matter in the absence of oxygen. The biogas production process involves anaerobic digestion, which includes four main stages: hydrolysis, acidogenesis, acetogenesis, and methanogenesis. Biogas is produced by mixing organic materials with an equal volume of water, homogenizing the mixture, and placing it in a digestion reservoir. During hydrolysis, Anaerobic bacteria break down complex organic molecules like proteins, carbohydrates, and fats into smaller compounds such as volatile fatty acids, ammonia, and carbon dioxide. Acidogenesis further breaks these down into volatile fatty acids, which are then converted into acetic acid, hydrogen, and carbon dioxide during acetogenesis. After an appropriate retention period, methane and carbon dioxide gas is generated through anaerobic digestion by methanogenic bacteria. Proper conditions are required to balance acid and methane production. Optimal conditions, such as temperature and pH levels, are crucial for efficient and economic methane production (Sher et al., 2024). Biogas, primarily composed of methane and carbon dioxide, can be used for heating, generating electricity, making it a versatile and sustainable energy option. The calorific value of biogas depends on its composition, primarily the methane content. Typically, the heating value ranges from 21 to 23.5 MJ/m^3, meaning that 1 m^3 of biogas is equivalent to 0.5-0.6 liters of diesel fuel or approximately 6 kWh of electricity. Cogeneration systems, producing both electricity and heat, are used in biogas electricity production. With an electrical efficiency of 40%, 1 cubic meter of biogas equals 2.61 kWh. Biogas reduces greenhouse gas emissions significantly, with 26 gCO_2 per kWh compared to coal's 710 gCO_2, resulting in a reduction of 684 gCO_2 per kWh (Korkmaz & Hacısalihoğlu, 2024). The methane content in biogas usually ranges from 45% to 75%. Biomethane is a purified form of biogas with a higher methane content of around 35 MJ/m^3. It is produced by upgrading biogas to remove CO_2 and other contaminants (Arshad et al.2021, Aziz et al.2019; Kabeyi et al.,2022; Jameel et al, 2024; Sher et al., 2024).

Energy Trends and Renewable Energy

Global electricity generation increased by an estimated 2.5% in 2022, reaching 28,294 terawatt-hours (TWh) This increase in electricity demand reflects the continuous expansion of global electricity needs. The increase in global energy demand increases the need for alternative energy sources and it highlights taking measures to reduce the environmental impacts resulting from the use of fossil fuels. Due to decreasing costs and the implementation of more green legislation, the share of electricity, produced from renewable energy sources, has continued to grow. By 2023, renewable energy sources accounted for approximately 32% of the world's electricity production, up from 29% in 2020. Renewable energy consumption climbed by 5% in 2023, while demand for all other fuels remained relatively stable or declined (REN21, 2024; IRENA 2024). In 2023, renewable electricity capacity increased by 507 GW, nearly 50% higher than in 2022, driven by strong policy support in over 130 countries. This growth was primarily due to China's significant expansions in solar PV and wind. The reason for the increasing share of wind and solar energy in these predictions is their ongoing cost reductions. It's anticipated that costs will continue to drop, especially for solar PV, in the coming years. The wind energy industry is facing global financial challenges, with most major western manufacturers reporting losses over the past two years. Project development outside of China has been slower than expected, leading to a downward revision of onshore wind forecasts. In large markets like India, Africa, and the Middle East, slow project progress and policy uncertainties have also caused downward revisions. In the European Union, long

FULL TEXTS BOOK

permitting times, supply chain issues, and higher costs are reducing anticipated onshore wind deployment. Offshore wind development costs have increased the most, resulting in a 16% downward revision in forecasts outside of China (IEA, 2023; IEA, 2024; IRENA 2024). Over the next five years, renewable capacity will continue to rise, with solar PV and wind making up 96% of the additions due to their lower generation costs and ongoing policy support. In addition, renewable energy is projected to surpass coal as the largest source of electricity generation globally by 2025. This progression highlights the growing dominance and importance of renewable energy in the global electricity landscape (IEA, 2024).

Although this increase is primarily driven by solar PV and wind, developments in bioenergy are also continuing, the use of bioenergy in industry has continued to increase, contributing to the overall growth in renewable energy. The global biogas plant market has seen significant growth in recent years. As of 2023, the installed capacity of biogas energy worldwide reached approximately 21.9 gigawatts (GW). This capacity is expected to continue growing, potentially reaching around 37.5 GW by 2032, driven by increasing government initiatives and the rising focus on sustainable energy sources (IMARC 2024, WBA 2023).

Future Trends for Biogas

The cost of biogas production will also continue to decline, but it will remain higher than that of solar PV. The cost of electricity generation from biogas varies considerably depending on the feedstock used and the level of sophistication of the plant and can exceed USD 50/MWh (Kabeyi, et al.,2022; Pinheiro et al.,2024). By 2028, new biogas plants may become cost-competitive with new coal and natural gas plants, but they will struggle to match the cost advantage of solar PV (IEA, 2023). Operation and maintenance costs typically account for 7.4% of the total investment for biogas plant. It takes 6 years or more for biogas plants established for electricity purposes to earn their initial investment costs (Kabeyi, et al.,2022). Therefore, biogas plants will need additional incentives and support to remain viable. It should be noted that the economics of biogas production can vary by region. For example, although growth has slowed in recent years due to changes in policy support in European countries, the biogas sector continues to grow in other markets such as China and Turkey (IEA, 2020). Biogas offers unique benefits such as waste management and the production of fertilizer, which can provide added value beyond just energy production. Therefore, it is important to provide various support mechanisms and long-term policy commitments to enhance the economic sustainability of biogas plants. Considering biogas's contribution to local energy security and its role in reducing carbon emissions, its strategic importance should be emphasized. With the right support and policies, biogas can remain a sustainable option despite its higher costs. Europe remains the leading region for biogas production, most of which are in Germany. These plants predominantly generate on-site electricity and heat, with a portion dedicated to upgrading biogas to biomethane. The ratio of renewable energies in Europe's electricity production remains low, but there is a political commitment to increase it in the future through the development of solar, wind, and biogas energies. (FNR 2019; IEA, 2020; IEA, 2023; Scarlat, et al.,2018; Sesini, et al.,2024). Figure 1 shows the projected biogas production by 2028 in different regions.

FULL TEXTS BOOK

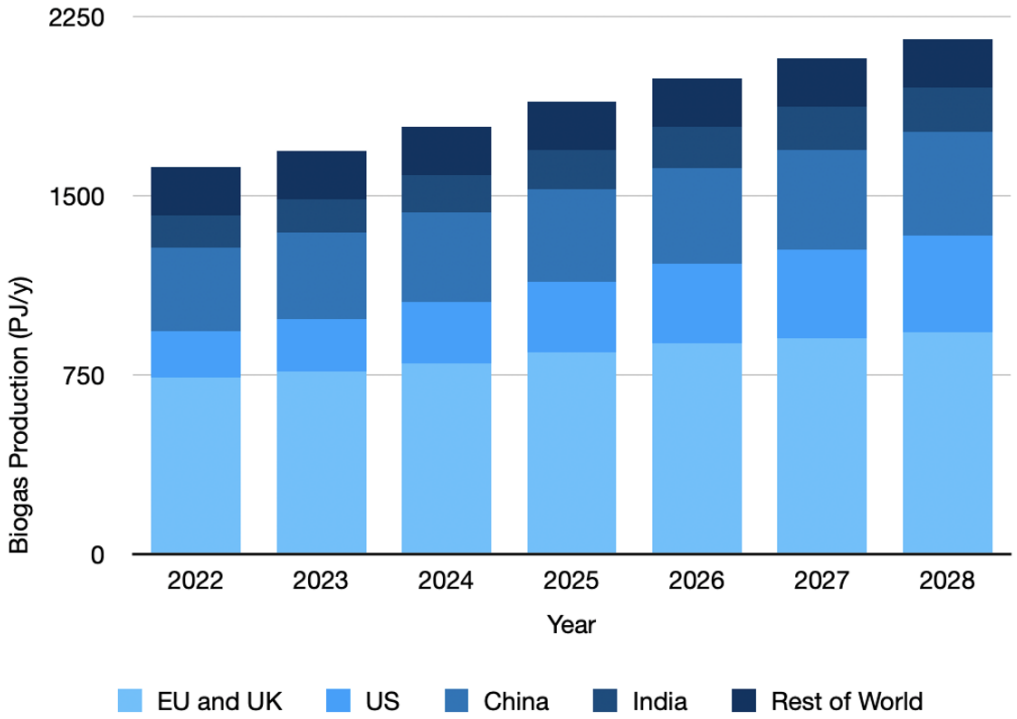

Figure 1 Biogas production forecast in different regions. (produced from IEA 2023 data)

It is expected that there will be significant increases in biogas production, especially in the European Union and the United Kingdom, as well as in the USA and China. By 2028, total biogas production is expected to reach 2157 PJ/year. However, the relatively high costs associated with biogas electricity generation suggest that future expectations for solely electricity-producing biogas facilities may be limited. Given these economic considerations, the future of biogas appears increasingly favorable for its direct use as a gas rather than for electricity generation. The future trend will therefore result in more biogas plants focusing on biogas upgrading. Upgrading biogas to biomethane allows for its direct injection into existing gas grids or use as a renewable transport fuel, offering a versatile and potentially more cost-effective solution. This approach also supports the decarbonization of the transport sector and provides a flexible energy source that can complement intermittent renewable electricity sources like wind and solar PV. Therefore, focusing on the direct utilization of biogas as gas can enhance the role of countries in achieving their sustainable energy goals.

Challenges in Biogas Sector

Biogas systems face many significant challenges that prevent their widespread development. In addition to the technical difficulties in production, there are various problems ranging from the initial investment of biogas to the use of gas in the energy sector (Kabeyi, et al.,2022; Sher et al., 2024). In a study conducted by Korkmaz & Hacısalihoğlu, (2024), several factors were identified that could negatively impact the efficiency of biogas plants. These include high initial investment and operating costs, expenses related to the collection and transportation of feedstock (such as fuel costs), potential decreases in feedstock, and risks associated with equipment failures. These challenges should be considered when evaluating the overall efficiency and viability of biogas plants. In addition, policy uncertainties, insufficient investment in grid infrastructure, lengthy permitting processes, and financing challenges are significant obstacles hindering the widespread adoption of renewable energy. Governments must respond with clearer and faster policy actions, establishing long-term targets and incentives to provide certainty for investors. It is also vital to increase investments in grid infrastructure to support the expansion of renewable energy projects. Simplifying and expediting permitting processes can reduce

FULL TEXTS BOOK

delays and project costs, facilitating quicker deployment of renewable energy initiatives. Additionally, addressing financing challenges, especially in developing countries, requires financial institutions and governments to offer guarantees and incentives to attract investment and mitigate risks in renewable energy projects. Addressing these challenges with targeted solutions will facilitate the faster and more efficient development of renewable energy, contributing to a sustainable and secure energy future.

CONCLUSIONS

The global energy market is undergoing a significant transformation, driven by the need to reduce reliance on fossil fuels and mitigate environmental impacts. Biogas production is expected to gain more value in terms of integration into the circular economy and especially in the energy policies of countries. Biogas, in particular, stands out due to its dual benefits of waste management and renewable energy production. It is economically more advantageous to use biogas directly as gas instead of producing electricity. Converting biogas into biomethane, integrating the gas into networks and using it as a renewable transportation fuel will further increase the environmental benefits of biogas. Competitive and supportive energy policies will also act as a catalyst to move the biogas market forward. Therefore, it is very important to promote biogas and biomethane. In this context, Biogas production facilities are expected to play an increasingly important role in long-term carbon reduction strategies in the next years. It is predicted that biogas production will increase if decarbonization and sustainability policies are continued on a global scale. Hence, biogas investors should focus on developing process optimization and practices that will increase biogas production efficiency.

ÖZET
Her yıl milyonlarca insan bulundukları ülkelerde var olan ekonomik koşullara uyum sağlayamadıkları için bulundukları ülkelerden kilometrelerce uzaklıkta olan ülkelere göç etmektedirler. Çoğunlukla Ekonomik nedenlerle yapılan göç hareketleri yasal yollarla gerçekleştiği gibi yasadışı yollarla da gerçekleşmektedir. Yasal göçle ilgili kısıtlamalar ve denetimler katı oldukça yasadışı göçmen kaçaklığının artışı önem arz etmektedir. Bu durum hem bulundukları ülkeler için hem de göç ettikleri ülkeler açısından ekonomik, sosyal ,siyasi ve özellikle güvenlik açısından sorun teşkil etmektedir. Düzensiz göçmen sorunu ülkemizde olduğu gibi her ülkenin sorunu haline gelmeye devam etmektedir. İllegal yolları kullanarak ülkelere giriş yapan göçmenler kendilerini tehlikeye atmakla birlikte göç ettikleri ülkeler için de ciddi problemlere sebep olmaktadırlar.
Bu çalışma ile 2004-2008 yılları baz alınarak ülkemizde yakalanan yasadışı göçmenler, Göçmenlerin uyruklarına göre dağılımı, ülkemizde tespit edilen insan ticareti mağdurları, Yakalanan insan ticareti organizatörleri, tespit edilen insan ticareti mağdurlarının uyruklarına göre dağılımı üzerinde durularak İçişleri Bakanlığı Emniyet Genel Müdürlüğünden alınan veriler doğrultusunda değerlendirmeler yapılmıştır.
Anahtar kelimeler: Göç, Kaçakçılık, Ekonomi, Suç, Göçmen

ABSTRACT
Every year, people migrate to places that are miles away from their diversity because the existing economic segments they live in cannot adapt. Partially economic migration movements are carried out to be legalized. Restrictions and controls on legal immigration strictly concern the increase in illegal immigrant smuggling. This situation poses an economic, social, political and especially security problem for both the countries they live in and the regions they migrate to. The problem of irregular students continues, and it continues to become a problem for the country. It causes deaths of immigrants who enter using illegal means and causes serious problems for the countries they migrate to.
With this study, the data received from the Ministry's General Directorate of Security were evaluated by focusing on the immigrants released between 2004 and 2008, the current known human transportation victims according to the nationality of the immigrants, the captured human transportation areas, the situations of the detected human transportation victims according to their nationalities. .
Key Words: Immigration, Smuggling, Economy, Crime, Immigrant

GİRİŞ

Her yıl milyonlarca insan bulundukları ülkelerde var olan ekonomik koşullara uyum sağlayamadıkları için bulundukları ülkelerden kilometrelerce uzaklıkta olan ülkelere göç etmektedirler. Çoğunlukla Ekonomik nedenlerle yapılan göç hareketleri yasal yollarla gerçekleştiği gibi yasadışı yollarla da gerçekleşmektedir. Yasal göçle ilgili kısıtlamalar ve denetimler katı oldukça yasadışı göçmen kaçaklığının artışı önem arz etmektedir. Bu durum hem bulundukları ülkeler için hem de göç ettikleri ülkeler açısından ekonomik, sosyal ,siyasi ve özellikle güvenlik açısından sorun teşkil etmektedir. Düzensiz göçmen sorunu ülkemizde olduğu gibi her ülkenin soruna haline gelmeye devam etmektedir. İllegal yolları kullanarak ülkelere giriş yapan göçmenler kendilerini tehlikeye atmakla birlikte göç ettikleri ülkeler için de ciddi problemlere sebep olmaktadır. Ulusal ve uluslararası ekonomik çatışmalar, siyasi ve sosyal eşitsizlikler, savaş ve benzeri sebepler nedeniyle bulundukları ülkeleri terk etme

FULL TEXTS BOOK

zorunluluğu ile karşı karşıya kalan ulus vatandaşları kendilerince normal bir yaşam yada çoğu zaman daha iyi şartlarda yaşama umudu ile farklı coğrafyalara göç etmektedirler. Bu durumu avantaja çeviren yapısal ve ekonomik eşitsizliği sömüren yasa dışı örgütlerin ortaya çıkması hayatın olağan akışı içerisinde yer almaktadır. Ekonomik çatışma ,siyasi istikrarsızlık savaş ve benzeri nedenlerle göç edenlerle birlikte yaşam olanaklarını genişletmek amacıyla göç edenlerin bu durumunu yasadışı faaliyetlerine dahil eden suç örgütlerinin ortaya çıkması göçmen kaçakçılığını tetikleyen bir durum olarak ortaya çıkmaktadır.

Bu tarz yasadışı faaliyetlerin içerisinde yer alan organizasyonlar nispeten düşük riskler alarak yüksek kar elde etmeyi amaçlayan örgütlerdir. Bu sebeple yasadışı göçmen kaçakçılığı sürekli artma eğilimde devam etmektedir. Özellikle gelişmemiş ülkelerden gelişmiş ülkelere doğru bir göç akımı yaşanmaktadır. neredeyse her yıl on binlerce insan yasadışı yollarla ülkelere giriş yapmaktadır. Yasal yollarla giren kişiler bile yasal süre dolduktan sonra girdikleri ülkeleri terk etmemektedir. Ülkeyi terk etmeyen göçmenler barınma sorunlarıyla karşı karşıya kalırken aynı zamanda sağlık korunmasından uzak oldukları için ciddi tehlikelerle karşı karşıya kalarak hem kendi sağlıklarını hem de bulundukları ülkenin şartlarını zorlamaktadırlar. Yasadışı yollarla ülkeyi terk etmeyen göçmenler bulundukları ülkelere entegresyon noktasında sorun yaşarken aynı zamanda ekonomik bir yük oluşturarak suç oranlarının artmasına neden olmaktadırlar. Suç oranlarının artışı ile birlikte toplumsal sorunlar ortaya çıkarak siyasi ve ekonomik dengesizliğin merkezine yerleşebilmektedirler.

Ülkeden ülkeye yasadışı göç yollarını kullanarak giriş yapan göçmenlerin bu durumunu bazı grup yada örgütler illegal yollar aracılığıyla haksız kazanç sağlama girişiminde bulunmaktadırlar. Göçmen kaçaklığı suçları da haksız kazanç elde etmek amacıyla gelişim göstermektedir. İnsanların daha iyi bir hayat umuduyla ülkelerini terk etmeleri suç örgütlerini hareket geçiren ve durumu rant aracı olarak görmelerini sağlayan önemli bir durumdur. Türkiye göçmenlerin özellikle tercih ettikleri ülkeler arasında yer almaktadır. Jeopolitik konumu sebebiyle transit bir ülke konumunda görülen ülkemizde göçmen kaçakçılığı üzerinde durulan önemli bir konudur.

Aşağıda yer alan tablolar da ülkemizde yakalanan yasadışı göçmenler, 2008 yılında ülkemizde Yakalanan yasadışı göçmenlerin uyruklarına göre dağılımı, 2004-2007 yılları arasında Ülkemizde yakalanan yasadışı göçmenler, . Yıllara göre ülkemizde tespit edilen insan ticareti Mağdurları, yıllara göre ülkemizde yakalanan insan ticareti organizatörleri, 2008 yılında Ülkemizde tespit edilen insan ticareti mağdurlarının uyruklarına göre dağılımı yer almaktadır.

Tablo 1. Yıllara Göre Ülkemizde Yakalanan Yasadışı Göçmenler

2005	**2006**	**2007**	**2008**

2005	2006	2007	2008
379	422	308	248

Kaynak : İçişleri Bakanlığı Emniyet Genel Müdürlüğü

Tablo 5 te görüldüğü üzere 2006 yılında 422 olan insan ticareti organizatörleri 2008 yılında azalarak 248 olarak görülmektedir.

Tablo 6.2008 Yılında Ülkemizde Tespit Edilen İnsan Ticareti Mağdurlarının Uyruklarına Göre Dağılımı

Özbekistan	**Moldova**	**Türkmenistan**	**Rusya**	**Kırgızıstan**	**Gürcistan**	**Azerbaycan**
30	**22**	**25**	**7**	**7**	**7**	**6**

Kaynak : İçişleri Bakanlığı Emniyet Genel Müdürlüğü

Tablo 6 da görüldüğü üzere insan ticareti mağdurlarının uyruklarına bakıldığında Özbekistan uyruklu mağdurun diğer ülkelere kıyasla yüksek olduğu görülmektedir.

Tablo 7. 2008 Yılında Ülkemizde Yakalanan İnsan Ticareti Organizatörlerinin Uyruklarına Göre Dağılım

Türkiye	**Özbekistan**	**Gürcistan**	**Kırgızıstan**	**Moldova**	**Azerbaycan**	**Ukrayna**
210	**12**	**5**	**4**	**4**	**3**	**3**

Kaynak : İçişleri Bakanlığı Emniyet Genel Müdürlüğü
Tablo 7 incelendiğinde insan ticareti organizatörlerinin uyruklarına bakıldığında uyruğu Türkiye olan 210 kişinin olduğu görülmektedir.

SONUÇ

Göçmen kaçakçılığı uluslararası bir suç olarak varlık göstermekle birlikte göç ettikleri ülkelerde ekonomik ve toplumsal sorun oluşturan bir durumdur. uluslararası arenada önemlilik arz eden bu konu ile ilgili olarak pek çok ülke bu durumla mücadele etmek adına hukuki düzenlemelere başvurmuştur. göçmen kaçakçılığını bireysel olarak değil toplumsal bir durum olarak algılamak ve tedbirleri bu yönde uygulamak elzemdir. Özellikle gelişmemiş ülkelerden gelişmekte olan ülkelere ve gelişmiş ülkelere olan

FULL TEXTS BOOK

göç hareketliliği göç ettikleri ülkeleri siyasi ekonomik ve toplumsal istikrarsızlığa sürükleyen önemli bir tehdit unsuru olarak görülmektedir.

Yasal yollardan ülkelere giriş yapan göçmenlerin yasal süresi dolduktan sonra ülkeyi terk etmemeleri ve yasam alanlarını genişletmeleri ile suç organizasyonlarının odak noktası haline gelen alanlar oluşmaktadır. Göç edilen ülkelerde suç oranlarının artmasıyla birlikte sosyal düzensizliklerin önüne geçilmesi önemlilik arz etmektedir. Yasal çerçevelerin güncellenmesi geliştirilmesi ve denetlenmesi ile birlikte sosyal, siyasi ve ekonomik istikrarın bozulmasının önüne geçilmiş olunacaktır. Hukuki düzenlemeler ve emniyet güçlerinin tedbirlerini arttırması ile güvenli ortamın geliştirilmesi mümkün olabilmektedir.

YABANCI DİL ÖĞRETİMİNDE DİL BECERİLERİNİN GELİŞİMİNDE KARŞILAŞILAN PROBLEMLER

PROBLEMS ENCOUNTERED IN THE DEVELOPMENT OF LANGUAGE SKILLS IN FOREIGN LANGUAGE TEACHING

Enver ESERLİ [1]***, Prof. Dr. Gülay EKİCİ*** [2]

ÖZET

Dil insanı diğer canlılardan ayıran en önemli özelliklerden biridir. İnsanlara ait bir özellik olan dil, anlamlı kelimelerden oluşan sistemli cümleler bütününü temsil eder ve insanoğlu doğduğu günden itibaren iletişim kurmak amacıyla dili kullanır. Aynı zamanda dil, bilgi aktarmayı amaçlayan fen bilimleri veya matematik gibi içerik tabanlı bir konu değil, bir beceridir. Bu nedenle, dil psikomotor alana girer ve bir şeyi iyi yapma yeteneği olarak tanımlanabilir ve yüzme veya bisiklete binmek gibi, dil de öğrenildikten sonra yapılan bir beceridir (Husain, 2015, s. 1). Küreselleşmenin de etkisiyle insanlar arasında iletişim kaçınılmaz olmuş ve bu iletişim dil aracılığıyla sağlanmaktadır. İngilizce evrensel bir dil olarak kabul görmesinden dolayı bu görevi gören en önemli araçtır. İnsanların birbirleri arasındaki iletişimin gerekliliği dil öğretimine verilen önemin de artmasına sebep olmuştur. Geçmişten günümüze dil öğretiminde farklı yaklaşımlar öne sürülürken, bu yaklaşımlarda dil becerilerinin dil öğretimindeki etkisi ön plana çıkmaktadır. Dil öğretiminde dört temel dil becerisi olan dinleme, konuşma, okuma ve yazma, öğrencilerin dil öğreniminde çok önemli bir yere sahiptir. Bu dil becerileri üretken ve alıcı beceriler olarak ikiye ayrılmaktadır. Konuşma ve yazma üretken beceriler olarak adlandırılırken, dinleme ve okuma becerileri ise alıcı becerilerdendir. Dil öğretiminde hazırlanan dil öğretim programlarında çeşitli dil yaklaşımlarından da yararlanılırken, dil becerileri üzerinde durulur ve bu öğretim programlarında öğrencilerin iletişimsel becerilerinin geliştirilmesi amaçlanmaktadır. Bu çalışma yabancı dil öğreniminde dört temel dil becerisi olan okuma, yazma, dinleme ve konuşma becerilerinin öğreniminde karşılaşılan problemleri incelemek amacıyla hazırlanmıştır. Bu amaçla ulusal ve uluslararası literatürde yabancı dil öğretiminde dil becerileri ile ilgili çalışmalar incelenmiştir. Bu çalışma nitel araştırma modeli kapsamında durum çalışması deseniyle hazırlanmıştır. Bu kapsamda ilgili literatürde yer alan dokümanlar analiz edilmiş olup elde edilen veriler ilgili bölümlerde frekans değerleriyle verilerek yorumlanmıştır. Çalışmanın sonuçları kapsamında öğrencilerin dil becerilerinde kelime bilgisinde eksiklik yaşamaları, dil becerileri stratejilerinde yetersiz olmaları, ders materyallerinden kaynaklı problem yaşamaları, dil becerileri arasında denge kurulamaması, öğretmenlerin derste yetersiz kalması, kelime telaffuzlarında sorunlar yaşanması, cümle kuramama, dersle ilgili hata yapma korkusu, derse motive olamama gibi sorunlar çalışma sonunda elde edilmiştir. Çalışma sonuçları yönünde öneriler belirtilmiştir.

Anahtar kelimeler: Dil, dil öğretimi, dil becerileri, okuma, yazma, dinleme, konuşma

ABSTRACT

Language is one of the most important features that distinguish humans from other living creatures. Language, which is a characteristic of humans, represents a set of systematic sentences consisting of meaningful words, and human beings have been using language to communicate since the day they were born. At the same time, language is a skill, not a content-based subject like science or mathematics that

FULL TEXTS BOOK

aims to convey knowledge. Therefore, language falls under the psychomotor domain and can be defined as the ability to do something well. Like swimming or riding a bicycle, language is a skill that is performed after being learned (Husain, 2015, s. 1). Due to the effect of globalization, communication between people has become inevitable and this communication is provided through language. Since English is accepted as a universal language, it is the most important tool that performs this task. The necessity of communication between people has led to an increase in the importance given to language teaching. Different approaches have been put forward in language teaching from past to present and the effect of language skills in language teaching comes to the fore in these approaches. In language teaching, the four basic language skills of listening, speaking, reading and writing have a very important place in students' language learning. These language skills are divided into two as productive and receptive skills. While speaking and writing are called productive skills, listening and reading skills are receptive skills. Besides, various language approaches are used in the language teaching programs prepared in language teaching, language skills are emphasized and it is aimed to develop the communicative skills of the students with these teaching programs. This study was prepared to examine the problems encountered in learning the four basic language skills of reading, writing, listening and speaking in foreign language learning. For this purpose, studies on language skills in foreign language teaching were examined in the national and international literature. This study was prepared with a case study design within the scope of the qualitative research model. In this context, documents in the relevant literature were analyzed and the obtained data were interpreted by giving frequency values in the relevant sections. Within the scope of the study results, several issues were identified among students in their language skills: deficiencies in vocabulary knowledge, inadequacies in language skills strategies, problems arising from course materials, imbalance among language skills, teachers being insufficient in class, problems with word pronunciation, inability to form sentences, fear of making mistakes related to the lesson, and lack of motivation for the lesson. Suggestions based on the study results are stated.
Keywords: Language, Language teaching, Language skills, reading, writing, listening, speaking

GİRİŞ

Dil, düşüncelerin ve duyguların iletişiminde, işlerde ve yönetimde, bilim, felsefe ve şiirin aktarımında önemli bir araçtır. Bir dilin önem kazanmasında, dilin içsel avantajlarından ziyade ulusların siyasi, ekonomik, teknolojik ve askeri gücü gibi dış faktörler de etkilidir. İngilizce, Fransızca, Almanca ve İspanyolca gibi diller, bu dış faktörler sayesinde önem kazanmış ve uluslararası alanda yaygın olarak kullanılmıştır. Özellikle İngilizce, dünya çapında 380 milyondan fazla kişi tarafından konuşulmakta ve siyasi, ekonomik ve teknolojik gücü sayesinde geniş bir alanda etkili olmaktadır (Baugh ve Cable, 2005).

İngilizce, 53 ülkenin resmi dili olmaktadır ve ayrıca en yaygın ikinci dil konumundadır. İş ve kültürel alanlarda önemli bir rol oynayan İngilizce pek çok ülkede okullarda ikinci dil olarak öğretilmektedir. Bunların yanı sıra İngilizce bilim, havacılık, bilgisayar, diplomasi ve turizm dili olarak da önemli bir yere sahiptir. Bu bağlamda İngilizce öğrenme sebeplerini şu şekilde sıralayabiliriz (Ilyosovna, 2020, s. 23):

- Uluslararası ortak dil olması
- Akademik bir dil olması
- Zengin yazılı medyaya erişim sağlaması
- Seyahat ederken kullanışlı olması
- Uluslararası iş dünyasında gerekli olması
- Hollywood'un dili olması

Küreselleşme çağında İngilizce, kariyer ilerlemesinde kritik bir rol oynamaktadır. Özellikle Hindistan gibi ülkelerde, İngilizce becerilerinin eksikliği genç mezunların kariyer fırsatlarını olumsuz etkilemektedir. Araştırmalar, güçlü dil becerilerinin uluslararası iletişimde ve iş performansında önemli

FULL TEXTS BOOK

olduğunu göstermekte, yetersiz İngilizce bilgisine sahip çalışanların profesyonel gelişiminde zorluklar yaşamasına neden olmaktadır (Clement ve Murugavel, 2018, s. 2).

Dil öğretimi, yirminci yüzyılda bir meslek olarak gelişmeye başladıktan sonra bu dönemde dilbilim ve psikolojiden yararlanarak daha etkili öğretim yöntemleri ve dil öğretim yaklaşımları geliştirildi. Bu yaklaşımları şu şekilde sıralayabiliriz (Richards ve Rodgers, 2001):

- Dil Bilgisi Çeviri Yöntemi
- Düzvarım Yöntemi
- İşitsel-Dilsel Yöntem
- Tüm Fiziksel Tepki Yöntemi
- Sessiz Yol
- İletişimsel Dil Öğretim Yöntemi
- Bilişsel Kod Yaklaşımı
- Grupla Dil Öğretim Yöntemi
- Telkin Yöntemi
- Doğal Yaklaşım

İngilizceyi yabancı dil olarak öğretmenin temel amacı, dinleme, konuşma, okuma ve yazma olmak üzere dört beceriyi geliştirmektir. Ancak, bu yaklaşımın uygulanması sırasında çeşitli zorluklar yaşanmıştır. Birçok öğretmen, öğrencilerinden dinledikleri veya okudukları her kelimeyi tam olarak anlamalarını veya dil öğrenme sürecinde normal olarak karşılaşılan hataları yapmadan yazmalarını ve konuşmalarını beklemektedir. Bu tür beklentiler, dil öğrenme sürecinde doğal olan hataların tolere edilmesini zorlaştırmakta ve öğrencilerin dil becerilerini geliştirme konusunda engeller yaratmaktadır (Shamsitdinova ve Salakhova, 2018, s. 2).

Araştırmanın Amacı

Bu çalışmanın genel amacı, yabancı dil öğreniminde okuma, yazma, dinleme ve konuşma becerilerinin öğretiminde karşılaşılan sorunları incelemek ve bu sorunların çözümüne yönelik öneriler geliştirmektir. Bu sebeple İngilizce öğretiminde okuma, yazma, dinleme ve konuşma becerilerinde karşılaşılan sorunlar ulusal ve uluslararası literatürdeki dokümanlar incelenerek araştırılmıştır. Ayrıca dil eğitimi üzerinde etkili olan unsurlar incelemeye çalışılmıştır.

Araştırmanın genel amacına dayalı olarak aşağıdaki araştırma sorularına cevap aranmıştır:

Konuyla ilgili yapılmış olan araştırmalara göre;

1. Yabancı dil öğretiminde okuma becerilerinde karşılaşılan sorunlar nelerdir?
2. Yabancı dil öğretiminde yazma becerilerinde karşılaşılan sorunlar nelerdir?
3. Yabancı dil öğretiminde dinleme becerilerinde karşılaşılan sorunlar nelerdir?
4. Yabancı dil öğretiminde konuşma becerilerinde karşılaşılan sorunlar nelerdir?
5. Yabancı dil öğretim sürecinde karşılaşılan diğer sorunlar nelerdir?

Araştırmanın Önemi

Bu çalışma ülkemizde yabancı dil öğretiminde dil becerilerinde karşılaşılan sorunları inceliyor olması yönünden yapılmış sayılı araştırmalardan biridir. Bu alanda bundan sonra yapılacak olan araştırmalara yol gösterici olması yönünden önemlidir. Araştırmada yabancı dil öğretiminde dil becerilerinin gelişiminde karşılaşılan sorunlar farklı yönleriyle ele alınarak şu konular üzerinde durulmuştur:

- Ülkemizde dil becerilerinde karşılaşılan sorunlar
- Diğer ülkelerde dil becerilerinde karşılaşılan sorunlar
- Dört temel dil becerisinde karşılaşılan ortak sorunlar
- Dil becerilerinin gelişimine etki eden diğer faktörler

YÖNTEM

Araştırma Modeli

Bu çalışmada nitel araştırma modellerinden durum çalışması deseni seçilmiştir. Durum çalışması, genellikle sosyal ve yaşam bilimlerinde görülen bir araştırma metodolojisidir. Durum çalışması, bir kişi, bir grup insan veya bir birim hakkında, birçok birim üzerinde genelleme yapmayı amaçlayan çalışmalarda kullanılır. Ayrıca, araştırmacının birkaç değişkene ilişkin derinlemesine verileri incelediği tek bir birey, grup, topluluk veya başka bir birimin yoğun, sistematik bir araştırmasında da tercih edilir (Heale ve Twycross, 2018, s. 7).

Yıldırım ve Şimşek (2016) tarafından belirtilen yöntemler araştırma çalışmasında şu şekilde uygulanmıştır:

1. Araştırma sorularının formüle edilmesi
2. Alt sorunların detaylandırılması
3. Analiz odak noktasının belirlenmesi
4. İncelenecek olayın seçilmesi
5. Katılımcıların belirlenmesi
6. Verilerin toplanarak bu verilerin alt sorunlarla ilişkilendirilmesi
7. Verilerin analiz edilip değerlendirilmesi
8. Çalışmanın rapor olarak hazırlanması

Örneklem

Bu çalışma yabancı dil öğretimi ve dil becerileri ile ilgili 13 ulusal ve 3 uluslararası araştırma seçimi ile sınırlıdır. Ulusal düzeyde olan çalışmalardan 6 tez, 5 makale ve iki çalışma da bildiridir. Uluslararası olan 3 çalışma makaledir.

Çalışmalardan 11 tanesi nitel araştırma türünde durum çalışması deseninde yapılırken 4 tanesi ise nicel araştırma türlerinden deneysel araştırma deseni ile yapılmıştır. Bir çalışma ise karma araştırma yöntemiyle yapılmıştır. Bu araştırma kapsamında seçilen çalışmalara rastgele çalışma numaraları verilmiş ve çalışma numaralarına göre örneklemler kısaca çalışma numaralarıyla belirtilmiştir (Örneğin; Ç1, Çalışma 1'i ifade etmektedir).

Çalışmalar araştırma türü, örneklem ve frekansına göre Tablo 1'de sınıflandırılmıştır.

Tablo:1 İncelenen çalışmaların yöntemine göre dağılımı

Araştırma Türü	Örneklem	Çalışma No	f
Nitel	İngilizce öğretmenleri	Ç1, Ç5, Ç13	11
	Doküman	Ç3, Ç6, Ç7, Ç14, Ç15	
	İngilizce öğretmenleri-9.sınıf öğrencileri	Ç10	
	Öğretmen-Öğrenci-Veli	Ç13	
	5.sınıf öğrencileri	Ç16	
Nicel	11.sınıf öğrencileri	Ç2	4
	Üniversite düzeyi öğrenciler	Ç4	
	İngilizce öğretmenleri-8.sınıf öğrencileri	Ç8	
	İngilizce öğretmenleri	Ç9	
Karma Yöntem	İngilizce öğretmenleri	Ç11	1

FULL TEXTS BOOK

Araştırmalardan Ç1, Ç3, Ç5, Ç6, Ç7, Ç10, Ç12, Ç13, Ç14, Ç15 ve Ç16 nitel araştırma türünde olup, Ç2, Ç4, Ç8 ve Ç9 nicel araştırma türünde hazırlanmıştır. Ç11 ise karma yöntemle yapılmış bir çalışmadır.

Nitel araştırma yöntemlerinde bulunan Ç1, Ç3 ve Ç5'in örneklemini İngilizce öğretmenleri, Ç3, Ç6, Ç7, Ç14 ve Ç15'in örneklemini ise dokümanlar oluşturmaktadır. Ç10 ve Ç16'nın örneklemini ise farklı düzeydeki dil öğrenen öğrenciler oluştururken Ç13'deki çalışmada ise örneklem grubunu öğretmen, öğrenci ve veliler birlikte oluşturmaktadır.

Nicel araştırma yönteminde hazırlanmış olan Ç2 ve Ç4'de örneklemi farklı düzeyde dil öğrenen öğrenciler oluştururken, Ç9'da İngilizce öğretmenleri, Ç8'de de öğretmen ve öğrenciler örneklem grubunu birlikte oluşturmaktadır.

Karma yöntemde hazırlanmış olan Ç11'de de örneklem grubunu İngilizce öğretmenleri oluşturmaktadır.

Tablo 2'de yabancı dil öğretimi ve dil becerileri ile ilgili ulusal araştırmaların, Tablo 3'te ulusal tezlerin, Tablo 4'te de uluslararası makalelerin künyesi ve çalışma numaraları verilmiştir.

VERİ TOPLAMA ARAÇLARI VE VERİLERİN ANALİZİ

Bu çalışmada literatürdeki yabancı dil öğretimi ve dil becerileri ile ilgili ulusal ve uluslararası düzeydeki dokümanlar taranmıştır. Verilerin toplanmasında tarama sürecinde makale taramaları için Google akademik ve Dergipark sitelerinden yararlanılmıştır. Ulusal Tez Merkezi internet adresinden ise tez araması gerçekleştirilmiştir. Tarama yapılırken, *dil öğretimi, dil becerileri, dört temel dil becerisi, İngilizce öğretimi* ve *yabancı dil öğretiminde İngilizce, İngilizce öğretim programı, dil becerilerinde karşılaşılan sorunlar, İngilizce öğretiminde karşılaşılan sorunlar* gibi anahtar sözcükler farklı kombinasyonlarda kullanılarak ilgili çalışmalara ulaşılmıştır. Bu çalışma yabancı dil öğretimi ve dil becerileri ile ilgili 16 çalışmayla sınırlıdır. Seçilen çalışmalar araştırma konusu ve araştırma sonuçları bakımından incelenerek veriler tablolar halinde düzenlenmiştir. Verilerin analizinde frekans (f) değerlerinden yararlanılmıştır. Verilerin analizinde betimsel analiz yapılmıştır. Betimsel analizlerde elde edilen sonuçlar, önceden belirlenmiş temalar doğrultusunda değerlendirilir. Bu aşamada amaç, verileri düzenli ve yorumlanmış bir şekilde sunmaktır (Yıldırım & Şimşek, 2016, s. 239). Belirlenen temalar ve çalışmaların bu temalara göre gruplandırılması Tablo 5'te sunulmuştur.

Tablo:5 İncelenen çalışmaların temalara göre dağılımı

Araştırma Konusu	Çalışma Numarası	f
Dil Öğretimi ve dil becerileri	Ç4, Ç5, Ç6, Ç7, Ç8, Ç14, Ç15, Ç16	9
İngilizce Öğretimi ile ilgili Sorunlar	Ç1, Ç3, Ç8, Ç9, Ç12, Ç13	6
İngilizce öğretim programında karşılaşılan sorunlar	Ç7, Ç9, Ç10, Ç11,	4
İngilizce dersine yönelik özyeterlik inancı	Ç2	1

Bu araştırmada en fazla konu edinilen *dil öğretimi ve dil becerileri* ilgili çalışmalar olmuştur. Dil öğretimi ve dil becerileri ile ilgili 9 çalışmaya ulaşılırken ikinci sırada bulunan *İngilizce öğretimi ile ilgili sorunlar* konusunda 6 çalışmaya erişilmiştir. Bunun yanı sıra *İngilizce öğretim programında karşılaşılan sorunlar* konusunda da 4 çalışma incelenirken *İngilizce dersine yönelik özyeterlilik inancı* konusunda *ise* bir çalışma incelenmiştir.

FULL TEXTS BOOK

BULGULAR

Elde edilen bulgulara yönelik veriler Tablo 6'da okuma becerilerine yönelik sorunlar, Tablo 7'de yazma becerilerine yönelik sorunlar, Tablo 8'de dinleme becerilerine yönelik sorunlar, Tablo 9' da konuşma becerilerine yönelik sorunlar ve Tablo 10'da da diğer karşılaşılan sorunlar olarak sınıflandırılmıştır.

Tablo:6 İncelenen çalışmaların okuma becerilerinde karşılaşılan sorunlara yönelik dağılımı

Okuma Becerilerinde Karşılaşılan Sorunlar	Çalışma Numarası	f
Okuma becerilerine az zaman ayrılması.	Ç1, Ç13	2
Sesli okumada kelimeleri telaffuz ederken problem yaşanması.	Ç5, Ç13	2
Okuma becerisi öğretim yöntem ve tekniklerinin bilinmemesi.	Ç6	1
Okuma becerisi kazanımlarının azaltılması.	Ç7	1
Kelime bilgisi eksikliğinden kaynaklı problem yaşamaları.	Ç13	1
Okuma etkinliğini yaparken özgüven eksikliği, kaygı ve endişe duygularının hâkim olması.	Ç13	1

Elde edilen bulgulara göre okuma becerilerinde karşılaşılan sorunların başında okuma becerilerine az zaman ayrılması ve öğrencilerin sesli okuma yaparken telaffuz problemi yaşamaları gelmektedir. Bu problemlere ek olarak okuma becerisi öğretim yöntem ve teknikleri yönünden bilgi eksikliği, İngilizce öğretim programında okuma becerisi kazanımlarının azaltılması, kelime bilgisi eksikliğinden kaynaklı problem yaşanması ve okuma etkinliği yaparken özgüven eksikliği, kaygı ve endişe duygularının hâkim olması da karşılaşılan diğer sorunlardır.

Tablo:7 İncelenen çalışmaların yazma becerilerinde karşılaşılan sorunlara yönelik dağılımı

Yazma Becerilerinde Karşılaşılan Sorunlar	Çalışma Numarası	f
Yazma becerilerine az zaman ayrılması.	Ç1, Ç7, Ç13	3
Cümle oluştururken dil bilgisi eksikliğinden kaynaklı sorun yaşanması.	Ç5, Ç13	2
Kelimeleri okunduğu gibi yazmaları.	Ç12, Ç13	2
Yazma becerisi öğretim yöntem ve tekniklerinin bilinmemesi.	Ç6	1
Yazma becerisi kazanımlarına 6.sınıf düzeyine kadar yer verilmemesi.	Ç7	1
Yazma becerisinin değerlendirilmesine yok denecek kadar az vakit ayırılması.	Ç8	1
Yazma becerisine karşı özyeterliliğin düşük olması.	Ç12	1
İngilizce alfabesinin Türkçeye göre farklılık göstermesi.	Ç12	1
Kelime bilgisi eksikliğinden kaynaklı problem yaşamaları.	Ç13	1

Yazma becerisinde karşılaşılan sorunların başında yazma becerilerine az zaman ayrılması gelmektedir. İngilizce öğretim programında öğrencilerin iletişim becerilerine ağırlık verilmeye çalışılmasından kaynaklı daha çok konuşma ve dinleme becerilerine ağırlık verilmektedir. Ancak yazma becerisine ise 6.sınıfa kadar yer verilmemesi karşılaşılan bir sorun olarak karşımıza çıkmaktadır.

Yazma becerilerinde karşılaşılan diğer problem de gramer bilgisi eksikliğinden kaynaklı öğrencilerin cümle kurarken problem yaşamalarıdır. Öğrenciler cümle dizimini Türkçe ile karıştırmakta ve özne yüklem ilişkisini Türkçe ile karıştırmaları yazma becerisinde karşılaşılan bir problem olarak ortaya çıkmaktadır.

Öğrencilerin Türkçedeki gibi kelimeleri okunduğu gibi yazmaları ön plana çıkan bir diğer problemdir. Öğrenciler yazma becerisinde İngilizce kelimeyi nasıl duyuyorlarsa aynı şekilde yazmaktadırlar.

Ana dili İngilizce olan konuşmacının aksanından dolayı problem yaşanması.	Ç5	1
Konuşmacının hızlı konuşmasından kaynaklı sorun yaşanması.	Ç5	1
Dinleme becerisi öğretim yöntem ve tekniklerinin bilinmemesi.	Ç6	1
Dinleme becerisinin değerlendirilmesine yok denecek kadar az vakit ayırılması.	Ç8	1
Öğretim programının dinleme becerilerini kazandırmada yetersiz olması.	Ç9	
Dinleme metinlerinin anlaşılır olmaması.	Ç12	1
Dinleme metinlerine öğrencilerin odaklanma problemi yaşamaları.	Ç12	1
Sınıf mevcutlarının kalabalık olmasından dolayı dinlemede problem yaşanması.	Ç12	1
Telaffuzu benzer kelimeleri karıştırma.	Ç13	1
Kelime eksikliğinden kaynaklı problem yaşamaları.	Ç13	1
Kelimelerin yazılışları ile okunuşlarının farklı olması.	Ç13	1

Dinleme becerisinde elde edilen bulgulara göre dinleme becerisine hiç zaman ayrılmaması dinleme becerisinde karşılaşılan problemlerden biridir. Bunun yanı sıra dinleme metinlerinin hızlı biçimde geçmesinden dolayı öğrenciler dinleme metinlerini anlamakta zorluk çekmektedir. Konuşmacının hızlı konuşması ve özellikle ana dili İngilizce olan konuşmacıların aksanından kaynaklı öğrencilerin dinleme metnini anlamada problem yaşamaları karşılaşılan bir diğer problemdir.

FULL TEXTS BOOK

Sözlü iletişimin temelini oluşturan konuşma becerisinde karşılaşılan başlıca sorunlarından biri konuşma becerilerine az zaman ayrılmasıdır. Dersin daha çok dil bilgisi odaklı işlenmesi ve okuma metinleri üzerinden konuların ilerlemesinden dolayı derslerde konuşma becerilerine çok fazla zaman ayrılmaması bir problem olarak ortaya çıkmaktadır.

Öğrencilerin kelime bilgisi eksikliğinden kaynaklı sorun yaşamaları da karşılaşılan başlıca problemlerden biridir. Öğrenciler konuşurken ifade etmeye çalıştıkları düşüncelerde ihtiyaç duydukları kelimenin İngilizcesini bilmekte zorluk yaşamaktadır.

Öğrencilerin İngilizceyi günlük hayatta kullanacak bir alan bulamaması karşılaşılan bir diğer problemdir. Öğrencilerin ders dışında İngilizce pratiği yapmak için bir imkanlarının olmaması öğrencileri konuşma becerilerinde zorlamaktadır ve öğrencilerin dil gelişiminin önüne geçen bir engel olarak ortaya çıkmaktadır.

Tablo:10 İncelenen çalışmaların yabancı dil öğretim sürecine etki eden diğer faktörlere göre dağılımı

Karşılaşılan Diğer Sorunlar	Çalışma Numarası	f
Materyal eksikliğinden kaynaklı sorunlar (kitaplık, bilgisayar, CD. DVD, akıllı tahta vb.) olması	Ç1, Ç3, Ç11, Ç12, Ç16	5
İngilizce dersine karşı motivasyonlarının düşük olması.	Ç3, Ç11, Ç12	3
Ders materyallerinin öğrencilerin ilgisini çekecek düzeyde olmaması.	Ç11, Ç12, Ç14	3
Gramer odaklı ders işlenmesi	Ç1, Ç3	2
Öğretmenlerin dil öğretim stratejilerinde yetersiz kalması	Ç1, Ç12	2
Öğrencilerin dil öğretim sürecinde özyeterlik seviyesinin düşük olması.	Ç2, Ç12	2
Eğitim Fakülteleri dışında farklı fakülte mezunlarının İngilizce öğretmeni olması.	Ç9, Ç12	2
İngilizce ders saatlerinin yetersiz olması.	Ç9, Ç12	2
Dil Bilgisi Çeviri Yaklaşımı ağırlıklı ders işlenmesi.	Ç4	1
Dört becerinin entegre edilerek ders işlenmemesi.	Ç4	1
Öğretim programının öğrencilere telaffuz ve dil bilgisi öğretiminde yetersiz kalması.	Ç9	1
Dil becerilerinin değerlendirilmesinde uygulama sınavlarına yer verilmemesi.	Ç10	1
Öğrenci velilerinin İngilizce eğitimine yönelik olum algıya sahip olması.	Ç12	1
Öğretmenlerin dersi Türkçe anlatması.	Ç12	1

İngilizce dersinde sınıf yönetiminde problem yaşanması.	Ç13	1
İngilizce dersine az önem verilmesi.	Ç13	1
İngilizce öğretim programının dil becerilerine odaklanacak şekilde düzenlenmemesi.	Ç14	1
Dört temel becerileri arasında denge olmaması.	Ç15	1

Yabancı dil öğretiminde karşılaşılan diğer sorunlar incelendiğinde başı materyal eksikliğinin olmasından kaynaklı problem yaşanması çekmektedir. Okulların materyal olarak yetersiz kalması İngilizce öğretiminin etkin bir şekilde olmasının önüne geçen bir faktör olarak elde edilmiştir.

Öğrencilerin İngilizce dersine karşı tutumlarının zayıf olması ve ders materyallerinin öğrencilerin ilgisini çekecek düzeyde olmaması karşılaşılan diğer problemlerdir. Bu iki durum da öğrencilerin derse

FULL TEXTS BOOK

olan motivasyonlarını düşürmektedir ve dil becerilerinin gelişimini engellediğini verilerden elde edilmiştir.

SONUÇ, TARTIŞMA VE ÖNERİLER

Yabancı dil öğretimi ve dil becerileri ile ilgili yapılan çalışmalarda nitel araştırma modelinin daha fazla tercih edildiği görülmüştür. Dört temel dil becerisinde ortak karşılaşılan sorun kelime bilgisi eksikliğidir. Öğrencilerin İngilizce kelime bilgisinde sorun yaşaması aynı şekilde onların okuma, yazma, dinleme ve konuşma becerilerinde de problem yaşamalarına sebep olmaktadır. Bir diğer ortak sorun da öğrencilerin kelimeleri telaffuzları ederken yaşadıkları zorluklardır. Öğrenci hem kelimeyi telaffuz ederken problem yaşamakta hem de telaffuzu edilen kelimeyi anlamakta sorun yaşamaktadır. İngilizcenin Türkçedeki gibi yazıldığı gibi okunmaması bu sorunun temelini oluşturmaktadır.

İngilizce dersi öğretim programının da ayrıca dil becerilerinin öğretiminde yetersiz olduğu görülmüştür. Yazma becerisi kazanımlarına 6.sınıfa kadar yer verilmemesi yazma becerisinin diğer becerilere göre geride kaldığını göstermektedir. 2018 İngilizce Dersi Öğretim Programına göre dil öğretiminde öğrencilerin iletişim becerilerini güçlendirmek amacıyla dinleme ve konuşma becerilerinin kazanımları arttırılmış, okuma ve yazma becerilerinin kazanımları ise azaltılmıştır (MEB, 2018). Ancak araştırmanın sonucunda elde edilen bulgularda konuşma becerilerinin değerlendirilmesine zaman ayrılmaması, konuşma becerilerine yok denecek kadar az zaman ayrılması, dinleme becerilerine yok denecek kadar az zaman ayrılması gibi sonuçlar İngilizce öğretim programının amaçları ile çelişmekte ve programın etkililiğinin zayıf olduğunu göstermektedir.

Okullarda materyal eksikliğinden kaynaklı sorunların yaşanması, öğrencilerin İngilizce dersine olan ilgilerinin zayıf olması ve ders materyallerinin öğrencilerin ilgilerini çekecek düzeyde olmaması başlıca diğer karşılaşılan sorunlardandır. Dil öğretiminde öğrencilerin ilgilerini çekecek düzeyde materyal kullanılmaması öğrencilerin İngilizce dersine karşı ilgilerini düşürmekte ve öğrenciler İngilizce dersine karşı olumsuz tutumlara sahip olabilmektedir.

Yapılan bu çalışmaların sonuçları incelendiğinde yabancı dil öğretimi ve dil becerileri ile ilgili aşağıdaki noktalar öneriler yönünde belirtilebilir:

- Kelime öğretimine önem verilmeli ve öğrencilerin ilgisini çekebilmek amacıyla farklı kelime öğretim yöntem ve tekniklerinden yararlanılmalıdır.
- Öğrencilerin kelimelerin telaffuzundaki karşılaştıkları problemin önüne geçmek amacıyla öğretmenler derste mümkün olduğunca öğrenci seviyesi için uygun olacak şekilde İngilizce konuşmalı ve öğrencileri dile maruz bırakmalıdır.
- İngilizce dersi öğretim programını dört temel dil becerisini entegre ederek yeniden düzenlenmelidir.
- Okullardaki İngilizce öğretiminde kullanılan materyaller öğrencilerin ilgilerini çekecek düzeyde olmalıdır.
- Öğrencilerin kaygı ve endişelerini en aza indirmek için sınıf ortamı öğretmenler tarafından düzenlenmelidir.
- Öğrencilerin derse ilgisini çekebilmek amacıyla ders içinde oyun, şarkı, hikâye, drama vb. etkinliklere yer verilmelidir.
- İngilizce öğretmenlerine mesleki bilgi ve tecrübelerini geliştirmek amacıyla belirli aralıklarla hizmetiçi eğitim verilmelidir.
- Yapılandırmacı yaklaşım temel alınarak öğrenci merkezli eğitim verilmelidir.
- Dil becerilerinin değerlendirilmesinde uygulama sınavlarına yer verilmelidir.

ÖZET

Çocuk yetiştirme sürecinde ebeveynler çeşitli stres faktörleriyle karşı karşıya kalmaktadır (March, 2020). Ebeveyn olmanın stresi ile baş edebilmek ebeveyn ve çocuk arasındaki etkileşimin sağlıklı olması açısından oldukça önemlidir. Bu konuda ebeveynin bilinçli farkındalık düzeyi bir kaynak oluşturmaktadır (Polat ve Yaman 2020) Bilinçli farkındalık aslında bir yaşam şeklidir. Yaşamımıza entegre ettiğimizde hayat standartlarımızı yükseltecek bir öğretidir. Bilinçli farkındalık bireyin dikkatini anlık olarak, yargısız bir şekilde çevresel ve içsel deneyimlere odaklaması; geçmişte yaşadığı veya gelecekte planladığı olası duyguların ve deneyimlerin etkisinde kalmadan anlık deneyimleri yaşayarak an'ı kabul etmesi olarak tanımlanmaktadır (Atalay, 2018). Ayrıca bilinçli farkındalık otomatik pilottan kaçarak ve kişinin kendi deneyimlerinin bir gözlemcisi olarak tamamen anda olmak için pratikler sunar ve anda kalabilme özelliğinin geliştirilmesine yardımcı olabilir. Duygusal tepkiselliği yumuşatmaya, deneyimler ve duygularla başa çıkmaya yardımcı olur (Lucena ve ark., 2020). Bilinçli farkındalık düzeyinin ebeveynlerde stresin azaltılması ve bununla bağlantılı olarak psikolojik iyilik halinin artması ile ilişkili olduğunu gösteren araştırmalar vardır (Gray, 2019) Ebeveynlikte bilinçli farkındalık, bir çocuğun duyguları ve ihtiyaçları hakkında daha fazla farkındalık; hazır olma ve tüm dikkatle dinleme becerisi; iyi veya kötü her şeyi her an olduğu gibi tanımak ve kabul etmek; kişinin kendi tepkilerini tanımak ve tüm açıklık ve nezaketle daha uygun yanıt vermeyi öğrenmeyi içeren ve gitgide gelişebilecek bir süreçtir (Bögels ve Restifo, 2013). Bilinçli farkındalığı yüksek olan ebeveynlerin bu farkındalığı hayatının her anına taşınır. Çünkü bu ebeveynler çocukları ile ilişkisinde olanların farkında olur ve daha bilinçli davranışlar sergiler (Atalay, 2020). Bu bağlamda, çocukların ilgi ve ihtiyaçlarının farkına varma ve yaşadıkları olumlu ya da olumsuz tüm yaşam deneyimleri sonucu çocuklarına yönelik daha anlayışlı, kabullenici ve şefkatli yaklaşım sergilemelerinde bilinçli farkındalık önemlidir. Ebeveynlerde bilinçli farkındalık düzeyi Bilinçli Farkındalık Temelli Stres Azaltma Programı (MBSR) uygulanarak geliştirilebilmektedir. MBSR, bilinçli farkındalık uygulamalarının düzenli olarak adım adım ilerlediği, meditasyonlarla birlikte bilinçli farkında olmayı öğreten, etkisi bilimsel olarak da desteklenmiş bir grup programıdır. MBSR 8 haftalık bir süreci kapsayan, farkındalık becerilerinin geliştirilmesine özgü derslerden ve uygulama yapmayı sağlayan ödevlerden oluşmaktadır. MBSR programı tamamlayıcı, önleyici, destekleyici veya tek başına da kullanılabilmektedir (Wolf ve Serpa, 2015; Baer 2015; Atalay, 2018; Arslan, 2018; Errázuriz Concha ve ark., 2020; Pinho ve ark., 2020). Bunla birlikte aile temelli bilinçli farkındalık eğitimleri de düzenlenmekte olup bilinçli farkındalığın ebeveynler üzerindeki olumlu etkisinin arttığı görülmektedir (Aday, 2021). Bu araştırmanın amacı ebeveynlerde bilinçli farkındalık kavramını, bilinçli farkındalığın ebeveynler üzerindeki etkisini ve bilinçli farkındalığın geliştirilmesi için yapılabilecekleri üzerine literatürü derlemektir.

Anahtar Kelimeler: Bilinçli Farkındalık, Ebeveynler, Aile, Çocuk, Toplum Ruh Sağlığı

FULL TEXTS BOOK

ABSTRACT

Parents are faced with various stress factors during the child-rearing process (March, 2020). Being able to cope with the stress of being a parent is very important for the healthy interaction between the parent and the child. In this regard, the parent's level of conscious awareness is a resource (Polat, Yaman 2020). Conscious awareness is actually a way of life. It is a teaching that will raise our life standards when we integrate it into our lives. Conscious awareness is defined as the individual focusing their attention on environmental and internal experiences instantly and without judgment; accepting the moment by living instant experiences without being influenced by possible emotions and experiences they have experienced in the past or planned for the future (Atalay, 2018). In addition, conscious awareness offers practices to escape from automatic pilot and be completely in the moment as an observer of one's own experiences and can help develop the ability to stay in the moment. It helps to soften emotional reactivity and cope with experiences and emotions (Lucenave et al., 2020). There are studies showing that the level of conscious awareness is associated with reducing stress in parents and increasing psychological well-being in relation to this (Gray, 2019). Mindfulness in parenting is a process that can be developed gradually, including greater awareness of a child's emotions and needs; the ability to be ready and listen with full attention; recognizing and accepting everything, good or bad, as it is at every moment; recognizing one's own reactions and learning to respond more appropriately with all openness and kindness (Bögels and Restifo, 2013). This awareness of parents with high conscious awareness is carried over to every moment of their lives. Because these parents are aware of what is happening in their relationship with their children and exhibit more conscious behaviors (Atalay, 2020). In this context, conscious awareness is important in recognizing the interests and needs of children and in exhibiting a more understanding, accepting and compassionate approach towards their children as a result of all their positive or negative life experiences. The level of conscious awareness in parents can be developed by applying the Mindfulness-Based Stress Reduction Program (MBSR). MBSR is a group program with scientific support, where mindfulness practices progress step by step regularly, and teaches conscious awareness together with meditations. MBSR consists of lessons specific to the development of mindfulness skills and homework that allows practice over an 8-week period. The MBSR program can be used as complementary, preventive, supportive, or alone (Wolf and Serpa, 2015; Baer 2015; Atalay, 2018; Arslan, 2018; Errázuriz Concha et al., 2020; Pinho et al., 2020). In addition, family-based mindfulness trainings are also organized, and it is seen that the positive effect of mindfulness on parents increases (Aday, 2021). The purpose of this research is to compile the literature on the concept of mindfulness in parents, the effect of mindfulness on parents, and what can be done to develop mindfulness.

Key Words: Conscious Awareness, Parents, Family, Child, Community Mental Health

GİRİŞ

Bilinçli farkındalık bireyin dikkatini anlık olarak, yargısız bir şekilde çevresel ve içsel deneyimlere odaklaması; geçmişte yaşadığı veya gelecekte planladığı olası duyguların ve deneyimlerin etkisinde kalmadan anlık deneyimleri yaşayarak an'ı kabul etmesi olarak tanımlanmaktadır (Atalay, 2018). Bilinçli farkındalığın sağladığı önyargısız kabulleniş hali; bireylerin algıladıkları stresi azaltıp, duygu durumunu kontrol altına alarak yaşadıkları problemlerle etkili bir şekilde başa çıkmalarına katkı sağlamaktadır (Shapiro ve ark., 2007; Arslan, 2018; Juul ve ark., 2018; Pinho ve ark., 2020; Diachenko ve ark., 2021). Ebeveynlik paha biçilemez ve eşsiz bir deneyim olmasının yanı sıra bireyin kendi ebeveynlerinden, kültüründen, kalıp yargılardan etkilenilerek öğrenilen bir rol olduğunda bazı psikososyal sorunların ortaya çıkmasına zemin hazırlamaktadır. Ebeveynlerin çocuk yetiştirme sürecinde yaşadıkları stresi yönetebilmeleri için bilinçli farkındalık düzeyinin yüksek olması önemlidir. Bilinçli farkındalık, ebeveynlerin kendi düşüncelerinin, duygularının ve tepkilerinin farkında olmalarını, bu deneyimleri yargılamadan kabul etmelerini ve deneyimlerini nasıl karşıladıklarını fark etmelerini

FULL TEXTS BOOK

içerir. Ebeveynlikte bilinçli farkındalık kavramı aynı zamanda bir beceridir. Bu beceri ebeveynlerin çocuklarının duyguları ve ihtiyaçları hakkında daha fazla farkındalık geliştirmelerini, dikkatle dinlemeyi, her durumu olduğu gibi kabul etmeyi ve uygun tepkiler vermeyi içerir (Bögels ve Restifo, 2013). Bilinçli farkındalık, ebeveynlerin çocuklarının ihtiyaçlarını fark etmeleri, bu ihtiyaçları karşılamaları ve ebeveynlik deneyimlerine dair farkındalıklarını artırmaları açısından kritiktir (Duncan ve ark., 2009). Bilinçli farkındalığı yüksek ebeveynler, bu farkındalığı yaşamlarının her anına taşır ve çocuklarıyla ilişkilerinde daha bilinçli ve dikkatli davranışlar sergilerler (Atalay, 2020). Literatür incelendiğinde ebeveynlikte bilinçli farkındalıkla ilgili son yıllarda oldukça fazla çalışmalar yapıldığı görülmektedir (Karataş ve Ayhan,2023). Bu kapsamda aile temelli bilinçli farkındalık eğitimleri düzenlenmekte olup bilinçli farkındalığın ebeveynler üzerindeki olumlu etkisinin arttığı görülmektedir. Bu araştırmanın amacı ebeveynlerde bilinçli farkındalık kavramını, bilinçli farkındalığın ebeveynler üzerindeki etkisini ve bilinçli farkındalığın geliştirilmesi için yapılabilecekleri üzerine literatürü derlemektir.

BİLİNÇLİ FARKINDALIK NEDİR?

Bilinçli farkındalık, son yıllarda batı dünyasında dikkat çekmiş olsa da kökeni yaklaşık 2500 yıl öncesine dayanmaktadır. Buda öğretilerinin benimsediği Pali dilindeki "Sati" kelimesinden türetilmiştir. "Sati" kelimesi, hafıza anlamına gelirken, İngilizce'de "mindfulness" olarak çevrilen bu kavram, Türkçede bilinçli farkındalık olarak kullanılmaktadır (Kang ve Whittingham 2010). Günlük yaşamda birçok uyarana maruz kalıyoruz ve bazen hızlı yaşanan olaylar nedeniyle yemeğin tadından hava koşullarına kadar pek çok şeyin farkına varamıyoruz. Bu durum, hayatımızın sanki otomatik bir pilotun kontrolündeymiş gibi hissettirebilir (Brown ve Ryan 2003). Bilinçli farkındalık, yaşanılan anın getirdiklerine dikkat etmeyi ve yargılardan uzak durarak mevcut anı farkına varmayı savunan bir kavramdır. Bu kavram, kişilerin yaşadıkları anı daha derinlemesine anlamalarına ve otomatik tepkiler yerine bilinçli bir şekilde yaşantılarını yönlendirmelerine yardımcı olur (Kabat-Zinn 2012).

BİLİNÇLİ FARKINDALIĞIN YARARLARI

Bilinçli farkındalık kişinin otomatik pilottan çıkmasını ve kişinin kendi tecrübelerinin farkında bir biçimde tamamen kişinin bulunduğu anın içinde var olabilmesi için egzersizler sunar ve anda kalabilme becerisinin geliştirilmesine yardımcı olmayı amaç edinmektedir. Bilinçli farkındalık kavramı olaylara verilen tepkisel davranışları yumuşatmaya, bütün tecrübeler ve duygularla başa çıkmaya yardımcı olmayı hedeflemektedir (Lucena ve ark., 2020). Duygu ve düşüncelerimizin farkına varmayı fonksiyonel olmayan düşünceleri ve ruminasyonu önlemek ister. Bilinçli farkındalık acı ve üzüntülerimiz üzerinde sürekli ve yoğun bir şekilde düşünmeyi azaltır ve bu duygu durumlarının farklı açılardan ifade edilmesini kolaylaştırmaktadır (Bagherzadeh ve ark., 2022). Bilinçli farkındalık kavramının amacı içinde bulunulan andaki duygularımızı ve hissettiklerimizi değiştirmek değildir, bunları olduğu gibi görmemizi ve kabullenmemizi amaç edinmiştir. Bunların yanı sıra bilinçli farkındalık hali tepkilerimizi otomatik halden kurtarmak, her zaman ki alıştığımız tepki kalıplarını gözlemlemeyi ve kişinin kendisi için zararlı ve faydasız olan davranışlardan uzaklaşmasını sağlamaktadır (Bulat ve Baltacı, 2021). Farkındalığın yoğunluğunun artması, çevremize karşı daha alakalı olmamızı sağlarken, dış dünyadan ayrı olma halimizi de kendiliğinden azalmaktadır. Şimdiki ana tamamen var olmak ve bunu istemek, her şeyin daha yoğun ve daha gerçek hissedilmesini sağlamaktadır. Bu durum da kişinin stres ve kaygı durumunu azaltarak, yaşam kalitesini arttırmaktadır. Bilinçli farkındalık seviyesinin artması kişinin bütün olaylara karşı kabul durumunu da kolaylaştırmaktadır. Ayrıca bu davranış şekli kişinin kendisine ve çevresine karşı sergilediği yargılama, suçlama gibi otomatik davranış tutumunu azaltarak yaşanılan deneyimlerden daha gerçekçi sonuçlar almasına katkı sağlar. (Polat ve Yaman, 2023)

FULL TEXTS BOOK

EBEVEYNLERDE BİLİNÇLİ FARKINDALIK

Ebeveynlik, bir belirsizlik ve bilinmezlik, önemli bir stres kaynağı ve sürekli değişim ve gelişim halidir; Kabat-Zinn, ebeveynliği kişiyi dönüştüren en zorlayıcı ve stres dolu döngülerden biri olarak tanımlamıştır (Kabat Zinn, 2021). Ebeveynlikte anda kalmak, kaygıyı ve stresi yönetmek, olanı olduğu haliyle görmek ve kabullenmek, çocuğun sağlıklı gelişimi ve ebeveynin ruhsal dengesi için gereklidir ve bu süreç ebeveynlerde bilinçli farkındalık kavramıyla ilişkilidir. Ebeveynlerde bilinçli farkındalık kavramı, ebeveynlerin anda kalmalarını, anı fark etmelerini, çocuklarının ihtiyaçlarını karşılamalarını ve çocuklarıyla iletişimlerinde öz kontrollerini kullanmalarını hedefler. Bilinçli farkındalık özümsendiğinde, ebeveynlik yaklaşımında değişim meydana gelir; geleneksel bir bakış açısı olarak çocuklar üzerinde hak sahibi olma ve benmerkezci yaklaşımlardan uzaklaşarak ebeveyn-çocuk ilişkisini paydaşlı bir yaklaşıma dönüştürmeyi amaçlar. Bu değişim ve dönüşüm, ebeveynlerin çocuklarıyla daha sağlıklı ve dengeli bir ilişki kurmalarına yardımcı olur ve ebeveynlikte daha bilinçli ve etkili bir yaklaşım sağlar. (Duncan ve ark., 2009).

EBEVEYNLERİN STRES YÖNETİMİNDE BİLİNÇLİ FARKINDALIK

Ebeveynler stresten olumsuz etkilenir, çünkü stres altındaki ebeveyn çocuklarına karşı daha uzak, olumsuz ve daha denetleyici bir tavırda yaklaşır. Ebeveynliğin kolay, eğlenceli yanları olduğu gibi zorlayıcı ve olumsuz anları da mevcuttur (Atalay, 2021). Ebeveyn olmak başlı başına stresle mücadele yaratan da bir durumdur, bu süreci daha stresli hale getiren dış uyaranlar ortaya çıkabilmektedir. Yaklaşık 4 yıl önce yaşadığımız COVID-19 salgını olumsuz dış uyarana örnektir. Pandemi sürecinde ebeveynlerin stres ve depresyon yaşama seviyelerinde bir artış gösterdiği açıklanan durumlar arasındadır. Bununla birlikte ebeveynler için bilinçli farkındalık odaklı müdahaleler, ebeveynlerin stres seviyelerini azaltarak ebeveyn-çocuk ilişkilerine yardımcı olmayı hedefler (Fuller ve Fitter, 2020). Ebeveyn stresle baş edebildiğinde dikkatini çocuğuna ve onun ihtiyaçlarına yöneltip, çocuğuna fayda sağlamak cevap için kullanabilir. Bu bağlamda, ebeveynin bilinçli farkındalığı bakım sürecini ve kalitesini etkilemektedir. Bilinçli farkındalığı yüksek olan ebeveynin, çocuğunu daha özenli dinleme, kendine ve çocuğuna karşı suçlayıcı olmadan kabul etme, kendisi ve çocuğu için duygu durum farkındalığı artmakta, ebeveynin kendisine olan öz-şefkatini de artırmaktadır (Arıcı-Özcan vd., 2019)

EBEVEYNLER İÇİN GÜNLÜK YAŞAMDA UYGULANACAK BİLİNÇLİ FARKINDALIK EGZERSİZLERİ

Mindfulness'ın ebeveynlere uygulanması ile ilgili ilk önemli çalışma Myla ve Jon Kabat-Zinn tarafından yayımlanmıştır (The Inner Work of Mindfull Parenting-Kabat- Zinn,2022) Bu öncül çalışma, temelleri Massachusetts Tıp Merkezi'nde geliştirilmiş olan MBSR (Mindfullness Temelli Stres Azaltma Programı)'a dayanmaktadır. Dünyada ebeveynlikte bilinçli farkındalık ile ilgili geliştirilmiş ve araştırmalarla desteklenmiş programlar mevcuttur. Bunlardan başlıcası Susan Bögels'in bilinçli farkındalıkla ebeveynlik programıdır. Bu programın adı 'Mindful Parenting in Mental Health Care' olarak geçmektedir. (Pakdaman,2014) Başka bir araştırmacı olan Dumas, Mindfulness eğitimlerini, ebeveynler için faydalı olmayan 'otomatik' etkileşimlerini kırmaları için tek yol tanımlamıştır. Eğitimlerini 'Ebeveynlerin kendi davranışlarını ve çocuklarının davranışlarını yargısızca dikkate alabileceği, hoşa gitmeyen duygularına karşı mesafe koyabileceği, maksatlı ve seçilmiş bir eylem planı eşliğinde ebeveynlik hedefi geliştirebilecekleri uygulamalar' olarak belirtmektedir. (Karaağaç ve Deniz,2023)

Atalay (2020) tarafından 4D modeli olarak isimlendirilen ve zorlayıcı bir ebeveynlik durumuyla karşı karşıya kalındığında uygulanacak bilinçli farkındalık temelli yaklaşımlar aşağıda verilmiştir:

D1- Dur: Ne zaman stresli olduğunuzu hissederseniz onu yalnızca fark edin ve eyleme geçmeden önce bunu fark ederek içinde durun.

FULL TEXTS BOOK

D2- Dikkat et: Dikkatinizin odağını nefes alan bedenimize yönlendirin, nefesinizin verdiği duyumsamaları dikkatinizin ön planına alın. Bu süreçte zihninizin nasıl yatıştığını ve daha berraklaştığını hissedin.

D3- Deneyimle: Çevrenizde mevcut anda neler oluyor deneyimleyin. Yani gördüklerinizi, duyduklarınızı; çocuğunuzla yüz yüzeyseniz onun yüzündeki ifadeyi, ses tonunu fark edin ve deneyimleyin.

D4- Devam et: Burada eylem geçmeniz gerekir. Bu eylemin içeriği duruma göre değişir. Mevcut durumda tepki vermemek, ne düşündüğünüzü ve hissettiğinizi ifade etmek, başka bir işle meşgul olmak bunların her birisi devam ettiğiniz aşamada bir seçenek olabilir. Buradaki anahtar kelime seçimdir ve bu duruma bilgece yanıt vermektir. Yani sıcak bir kalp ve serin bir baş yolunuzu aydınlatabilir.

Duncan ve arkadaşlarına (2009) göre ebeveynlikte bilinçli farkındalığın beş boyutu vardır. Bahsedilen 5 boyut aslında günlük yaşama dahil edilip uygulamaya konulabilecek, egzersiz haline getirilebilecek çalışmalar için de öncü olmaktadır.

Egzersiz tekniği olarak kullanılabilecek yaklaşımlar aşağıda verilmiştir:

1. Çocuğunu tüm dikkatiyle dinlemek
2. Kendini ve çocuğunu yargısız kabul etmek
3. Kendi ve çocuğu için duygusal farkında olmak
4. Anne baba olarak kendini kontrol etme yeteneği
5. Kendisi ve diğerlerine şefkat gösterme

Bilinçli farkındalık düzeyinin arttırılması için ebeveynler tarafından günlük olarak yapılacak egzersizlerin özeti aşağıda verilmiştir (Oskay, 2022; Kabaoğlu, 2021).

- Günün herhangi bir anında, en azından çocuk bakımında kalan 1 dakikalık bir zaman zarfında, sabit bir yerde olarak zihni sessiz moda almak.
- Rahat hissedilen herhangi bir yerde sadece oturup etrafı izlemek. Etraf izlenirken görülen renklere, renklerin boyadığı objelere odaklanılmalı ve resim daha da detaylandırılmalıdır.
- Çocukla oynanılan herhangi bir oyunu bilinçli farkındalıklı bir deneyimle oynamak. Örneğin oynanan oyuncakla ilk kez oynanıyormuş gibi farkındalıkla oynamak ve çocuğunuza da bunu anlatarak oynamak örnek olarak gösterilebilir.
- Günün herhangi bir anında otomatik pilotta alıp verilen nefesi fark etmek.
- Her gün yenilen bir şeyi mesela çocuğunuzdan kalan bir çikolatayı bilinçli farkındalıkla yemek. Bunu farkındalıkla yapabilmek için çikolatayı sanki ilk kez yiyormuş gibi yavaş yavaş çiğnemek farkındalıkla yemenin en güzel örneği olabilmektedir.
- Sesleri bilinçli farkındalıkla dinlemek. Bulunulan yerde çocuğunuz uyurken ya da ona mama hazırlarken kulağınıza gelen en uzak sese odaklanılarak, ses fark edilir.
- Bilinçli farkındalıkla yürümeyi deneyimlemek.
- Bilinçli farkındalıkla kahve ya da çay içmek.

EBEVEYNLİKTE MÜKEMMELLİK BEKLENTİSİNİ KIRMAK

Mükemmel ebeveyn ya da yeterli ebeveyn olmak net bir tanım olarak karşımıza çıkmasa da, bu kavram "çocuğuna karşı duyarlı ve empatik yaklaşıp, fiziksel ve duygusal olarak ulaşılabilir olmak, çocuğuna güvenli ve destekleyici yaklaşım sergileyen, maddi ve manevi bütün ihtiyaçlarına karşılık verebilen ebeveyn" olarak tanımlanabilmektedir (Leigh, 2016). Bu konuda Dr. Winnicott "yeterince iyi ebeveynlik''hakkında araştırmalar yapmıştır. Buna göre ebeveynlerin bebeklerinin ihtiyaçlarına yüzde yüz tutarlılık ve doğrulukta yanıtlar vermesi her zaman gerekli değildir. Ebeveynler çocuklarının ihtiyaçlarına %30 oranında doğru yanıt verdikleri durumlarda bile, bebeklerin yeterince iyi ilgi gördüğü ve güvenli bağlanma sağlandığı söylenebilmektedir. Güvenli bağlanma, çocukların çevrelerini keşfederken ebeveynlerine geri dönme ve ebeveynlerini bulabilme güvenini taşımalarını ifade eder.

FULL TEXTS BOOK

Yeterince iyi ilgi gören çocukların, güvenli bağlanmış ve mutlu bireyler olarak büyüdükleri bilinmektedir. Ebeveynlerin mükemmel yanıtlar vermektense, yeterince iyi bir ilgi ve destek sunmalarının çocuklarının sağlıklı gelişimi için yeterli olduğu bilinmektedir (Balis, C., 2021). Dr. Winnicott'un "yeterince iyi" kavramı, ebeveynlerin olabildiğince iyi ve dengeli bir bakım sunmalarını ve zaman zaman hata yapabileceklerini ifade eder. Bu yaklaşım, mükemmellik arayışından uzaklaşıp, gerçekçi ve destekleyici bir ebeveynlik anlayışını teşvik eder. Bu kavram doğrultusunda, çocuklar daha özgüvenli ve dışa dönük olarak büyüyebilirler. Ayrıca, ebeveynlerin hataları çocuğun dış gerçeklikleri anlamasına ve hazırlıklı olmasına katkıda bulunur. Winnicott, mükemmel bir ortamın sağlanmasının mümkün olmadığını ve çocukların gerçek dünya ile uyumlu şekilde gelişmesi için yeterince iyi bir ortamın yeterli olduğunu belirtmiştir. Bruno Bettelheim, Winnicott'un "yeterince iyi annelik" kavramını genişleterek "yeterince iyi ebeveynlik" olarak yeniden düzenlemiş ve babaları da bu kavrama dahil etmiştir (Gray, 2015). Bettelheim, ebeveynlerin ve çocukların mükemmel olmalarını beklememek gerektiğini vurgulamıştır; önemli olan iyi insan ilişkileri oluşturmaktır. Woodhouse, yıllar sonra bu kavramı genişleterek, ebeveynlerin bebeklerinin ihtiyaçlarına yanıt verme seviyesini yüzde elli olarak hesaplamıştır. Bu, ebeveynlerin yeterli düzeyde yanıt vermelerinin çocuk gelişimi için yeterli olabileceğini öne sürer. Bu kavramlar, ebeveynlikte mükemmeliyet arayışından ziyade, yeterince iyi olmanın ve gerçekçi beklentilerin çocukların sağlıklı gelişimi için önemli olduğunu vurgular (Woodhouse ve ark., 2019).

BİLİNÇLİ FARKINDALIKLA İLGİLİ YAPILAN ÇALIŞMALAR

Yurt dışında ebeveynlerin bilinçli farkındalık düzeyini konu alan araştırmalardan örnekler ve sonuçları aşağıda verilmiştir:

2020'de yapılan bir çalışma da ergenlerin yaşam doyumu ile ebeveynlerin bilinçli farkındalıkları arasındaki ilişkide, başa çıkma öz yeterliliğinin aracılık rolünü incelemeyi amaçlamıştır. Araştırmaya 479 ergen ve 42 ebeveyn katılmıştır. Ebeveynlerin bilinçli farkındalıklarının, ergenlerin yaşam doyumu ile ilişkili olduğu bulunmuştur. Bu ilişkide, başa çıkma öz yeterliliği önemli bir aracılık rolü üstlenmiştir. Ebeveynlerin bilinçli farkındalıkları, ergenlerin başa çıkma öz yeterliliklerini artırarak yaşam doyumlarını olumlu yönde etkilemiştir. Ebeveynlerin bilinçli farkındalıkları, ergenlerin hemen her duygu durumuyla başa çıkma yeteneklerini önemli ölçüde destekleyerek yaşam doyumlarını artırmaktadır. Bu sonuçlar, ebeveynlerin bilinçli farkındalığının, ergenlerin başa çıkma becerilerini ve yaşam doyumlarını geliştirmede önemli bir faktör olduğunu göstermektedir (Lui ve ark., 2020).

2021' de Portekiz'de yapılan bir çalışmada COVID-19 salgını sırasında Portekizli annelerin bilinçli farkındalık, ruh sağlığı ve anne-bebek bağı üzerindeki etkilerini incelenmiştir. Çalışma, salgın öncesi ve sırasında doğum yapan, 0-12 ay arası bebeğe sahip toplam 567 annenin kaygı, depresyon, stres, bilinçli farkındalık ve doğum sonrası bağlanma düzeylerini değerlendiren ölçeklerle yapılmıştır. Anne-bebek arasında yaşanan bağlanma bozukluğunun, ebeveynlerde bilinçli farkındalığın tüm alt boyutlarıyla pozitif yönde ilişkili olduğu bulunmuştur. Yani, bilinçli farkındalık, bağlanma sorunlarını azaltma yönünde olumlu etkiler göstermiştir. COVID-19 sırasında doğum yapan annelerin bilinçli farkındalık düzeylerinin, salgın öncesi doğum yapan annelere göre daha düşük olduğu gözlemlenmiştir. COVID-19 salgınının, annelerin bilinçli farkındalık seviyelerini olumsuz yönde etkilediği ve bu durumun anne-bebek bağlanmasını etkileyebileceği sonucuna ulaşılmıştır. Bu bulgular, pandemi döneminin annelerin ruh sağlığı ve ebeveynlik uygulamaları üzerindeki etkilerini anlamak ve destekleyici stratejiler geliştirmek için önemlidir (Fernandes ve ark., 2021)

2022 yılında Çin'de yapılan bir çalışmada ,COVID-19 sırasında Çinli annelerin stres düzeyleri ile çocuklarının uyum davranışları arasındaki ilişkide, ebeveynlikte bilinçli farkındalığın rolünü inceleyen bir çalışma yapılmıştır. Araştırma, 172 Çinli anne ve okul öncesi çağdaki çocuklarıyla gerçekleştirilmiştir. Annelerin bilinçli farkındalık düzeylerinin, stres seviyeleri ile olumsuz yönde ve çocukların içsel ve dışsal davranış sorunları ile de olumsuz yönde ilişkili olduğu bulunmuştur. Bu,

FULL TEXTS BOOK

bilinçli farkındalığın stres ve davranış sorunlarını artırabileceğini göstermektedir. Annelerin bilinçli farkındalık düzeylerinin, çocuklarının prososyal davranışlarını olumlu yönde etkilediği gözlemlenmiştir. Yani, yüksek bilinçli farkındalıklı olan ebeveynin, çocuklarının yardımseverlik ve iş birliği gibi olumlu davranışlarını artırmıştır. Ebeveynlikte bilinçli farkındalığın, stres ve çocukların uyum davranışlarının tüm alt boyutları ile ilişkide aracı bir rol oynadığı bulunmuştur. Bu, bilinçli farkındalığın, annelerin stres ve çocukların uyum davranışları arasındaki ilişkiyi etkileyen bir faktör olduğunu göstermektedir. Bu bulgular, ebeveynlikte bilinçli farkındalığın, stres yönetimi ve çocuk davranışları üzerindeki etkilerini anlamak için önemlidir ve ebeveyn destek programlarının bu unsurları göz önünde bulundurması gerektiğini vurgulamaktadır (Cheung ve Wang, 2022).

Türkiye ebeveynlerin bilinçli farkındalık düzeyini konu alan araştırmalardan örnekler ve sonuçları aşağıda verilmiştir:

3-18 yaş arasında olan Yaygın Gelişimsel Bozukluk tansına sahip çocukların ebeveynlerinin aile uyumlarını ve duygularının sosyalleştirme tepkilerini ikili ABCX Stres Modeli kapsamında incelenmiştir. Çalışma, YGB tanısı almış çocukların ebeveynlerinin aile uyumlarını ve duygusal sosyalleştirme tepkilerini ikili ABCX Stres Modeli çerçevesinde incelemeyi hedeflemiştir. Çalışmada 140 ebeveyn yer almıştır. Ebeveynlikte bilinçli farkındalık, ailenin uyum kaynaklarından biri olarak ele alınmıştır. Bu, ebeveynlerin duygusal durumlarını ve tepkilerini yönetmelerine yardımcı olan bir faktör olarak değerlendirilmiştir. Ebeveynlerin destekleyici ve önleyici tepkilerinin bilinçli farkındalık ile ilişkili olduğu bulunmuştur. Yani, bilinçli farkındalığa sahip ebeveynler, çocuklarının duygusal ihtiyaçlarına daha destekleyici ve önleyici yanıtlar verme eğilimindedir. Damgalanma algısı ile duygu sosyalleştirme tepkileri arasındaki ilişkide, bilinçli farkındalıklı ebeveynliğin aracı rol oynadığı sonucuna ulaşılmıştır. Bu, bilinçli farkındalığın, ebeveynlerin damgalanma algısını ve dolayısıyla çocuklarına verdikleri duygusal tepkileri etkileyebileceğini gösterir. Bilinçli farkındalıklı ebeveynliğin, ebeveynlerin duygu sosyalleştirme tepkilerini olumlu yönde etkilediği ve damgalanma algısının bu ilişkiyi etkileyen bir faktör olduğu sonucuna varılmıştır. Bu bulgular, bilinçli farkındalığın ebeveynlerin stres yönetimi ve çocuklarına yönelik duygusal tepkiler üzerindeki etkilerini anlamak açısından önemlidir. Ayrıca, aile içindeki uyum ve ebeveyn-çocuk ilişkilerini destekleyen stratejilerin geliştirilmesine katkıda bulunabilir (Türsel ,2019).

12-17 yaş arasında çocuğu olan annelerin ebeveynlikte bilinçli farkındalık düzeyleri ve dijital ebeveynlik tutumları ile çocuklarının internet bağımlılığı arasındaki ilişkiyi incelenmiştir. Çalışma, annelerin ebeveynlikte bilinçli farkındalık düzeyleri ve dijital ebeveynlik tutumlarının, çocuklarının internet bağımlılığı üzerindeki etkilerini ölçmeyi hedef edinmiştir. Annelerin ebeveynlikte bilinçli farkındalık düzeyleri ile dijital ebeveynlik tutumları arasında istatistiksel olarak anlamlı bir ilişki bulunamamıştır. Bu, bilinçli farkındalık ile dijital ebeveynlik tutumlarının birbirinden bağımsız olabileceğini veya etkilenmediğini gösterebilir. Annelerin ebeveynlikte bilinçli farkındalık düzeyleri ile çocuklarının internet bağımlılığı düzeyleri arasında ters yönlü ve zayıf bir ilişki saptanmıştır. Bu, daha yüksek bilinçli farkındalık seviyelerine sahip annelerin çocuklarının internet bağımlılığı riskinin daha düşük olabileceğini gösterir, ancak bu ilişkinin zayıf olduğunu belirtir. Çalışmada dijital ebeveynlik tutumlarının çocukların internet bağımlılığı üzerindeki etkisi konusunda net bir ilişki bulunmamıştır. Bu, dijital ebeveynlik tutumlarının çocukların internet bağımlılığı üzerinde belirgin bir etkisi olmadığını veya başka faktörlerin etkili olabileceğini düşündürmektedir. Bilinçli farkındalık ve dijital ebeveynlik tutumlarının çocukların internet bağımlılığı üzerinde önemli etkiler yaratmadığı sonucuna varılmıştır. Ancak, bilinçli farkındalığın çocukların internet bağımlılığı ile zayıf bir ters ilişkiye sahip olması, daha geniş bir bağlamda bu ilişkinin değerlendirilmesi gerektiğini bize göstermektedir. Bu bulgular, ebeveynlerin bilinçli farkındalık düzeylerinin ve dijital ebeveynlik yaklaşımlarının çocukların internet kullanım alışkanlıkları üzerindeki etkilerini daha detaylı incelemek için ek araştırmalar yapılması gerektiğini işaret edebilir (Günaydın,2021).

FULL TEXTS BOOK

2021'de yapılan bir çalışmada bilinçli farkındalığa dayalı aile eğitim programlarının ebeveynler ve çocuklar üzerindeki etkilerinin incelenmesi amaçlanmıştır. Çalışmada 4-6 yaş aralığında çocuğu olan ebeveynlere yönelik 11 hafta süren bir eğitim programı uygulanmış ve programın sonuçları araştırılmıştır. Araştırmanın bulguları şu şekildedir: Program, ebeveynlerin bilinçli farkındalık seviyelerinde anlamlı bir artış sağlamıştır. Bu, ebeveynlerin çocuklarıyla olan etkileşimlerinde daha dikkatli ve duyarlı olmalarını desteklemiştir. Ebeveynlerin ebeveynlik becerilerine yönelik algıları ve kendilerine olan güvenleri de artmıştır. Ebeveynler, çocuklarını daha etkili bir şekilde yönlendirme ve destekleme yeteneklerinde bir gelişim görmüşlerdir. Ebeveynler arasında iletişim düzeylerinde bir iyileşme sağlanmıştır. Bu, aile içi iletişimde daha açık, anlayışlı ve destekleyici bir ortam oluşturmuştur. Çocukların davranış problemlerinde gözle görülür bir azalma gözlemlenmiştir. Ebeveynlerin geliştirdiği bilinçli farkındalık ve iletişim becerileri, çocukların davranışsal sorunlarına olumlu yönde etki yapmıştır. (Işık ve Demircioğlu, 2021).

2022'de yapılan 150 katılımcı baba ile baba-çocuk ilişkisi, ebeveynlikte bilinçli farkındalık ve çocuklarının psikolojik sağlamlığı arasındaki ilişkileri araştıran bir çalışma yapılmıştır. Çalışmanın bulguları şu şekildedir: Baba-çocuk ilişkisi ile ebeveynlikte bilinçli farkındalık alt boyutları ve toplam puanları arasında pozitif yönde, ancak zayıf düzeyde bir ilişki bulunmuştur. Bu, baba-çocuk ilişkisinin ebeveynlikte bilinçli farkındalığı biraz artırabileceğini, ancak bu etkinin çok güçlü olmadığını göstermektedir. Babaların öğrenim durumu ile ebeveynlikte bilinçli farkındalık alt boyutu olan "çocukla anda olma" arasında pozitif yönde, zayıf bir ilişki bulunmuştur. Bu, daha yüksek öğrenim durumuna sahip babaların çocuklarıyla daha iyi anda olma becerisine sahip olabileceğini ancak etkisinin sınırlı olduğunu göstermektedir. Çocuğun yaşı ile ebeveynlikte bilinçli farkındalık alt boyutları ve toplam puanı arasında ters yönde ve zayıf düzeyde bir ilişki bulunmuştur. Bu bulgu, yaş arttıkça babaların bilinçli farkındalık düzeylerinde bir azalma olabileceğini, ancak bu etkinin zayıf olduğunu göstermektedir. Hafta sonu çalışma durumu açısından babaların ebeveynlikte bilinçli farkındalık düzeylerinde anlamlı farklılıklar gözlemlenmiştir. Hafta sonu çalışan babaların, çalışmayan babalara göre "ebeveyn öz yeterliliği" alt boyutu ve toplam puanları daha düşük bulunmuştur. Bu, hafta sonu çalışan babaların, bilinçli farkındalık ve ebeveynlik becerileri açısından daha düşük performans sergilediğini göstermektedir. Genel olarak, çalışma, baba-çocuk ilişkisi ve ebeveynlikte bilinçli farkındalık arasındaki ilişkinin zayıf olduğunu, babaların öğrenim durumu ve çocuk yaşının da bu ilişkiye sınırlı etkilerde bulunduğunu göstermektedir. Ayrıca, hafta sonu çalışma durumu, bilinçli farkındalık düzeylerini etkileyen önemli bir faktör olduğunu da ortaya koymuştur (Sezgin,2022).

2022'de otizm spektrum bozukluğu (OSB) olan çocukların davranış problemleri ile ebeveynlerinin duygu düzenleme zorluğu arasındaki ilişkide ebeveynlikte bilinçli farkındalığın aracı rolünü incelemek isteyen ve 273 ebeveynin katıldığı çalışmanın bulguları şu şekildedir: Ebeveynlikte bilinçli farkındalık ile ebeveynlerin duygu düzenleme güçlüğü arasında negatif yönde anlamlı bir ilişki bulunmuştur. Yani, ebeveynlerin bilinçli farkındalık düzeyi arttıkça, duygu düzenleme güçlüğü yaşama olasılıkları azalmaktadır. Ebeveynlikte bilinçli farkındalık ile çocukların davranış problemleri arasında da negatif yönde anlamlı bir ilişki gözlemlenmiştir. Bu, ebeveynlerin bilinçli farkındalık düzeylerinin artmasının çocuklarının davranış problemlerini azaltma yönünde etkili olduğunu göstermektedir. Ebeveynlerin duygu düzenleme güçlüğü ile çocuklarının davranış problemleri arasında pozitif yönde bir ilişki bulunmuştur. Ebeveynlerin duygu düzenleme zorlukları, çocukların davranış problemleri ile daha fazla ilişkilidir. Ebeveynlikte bilinçli farkındalık, ebeveynlerin duygu düzenleme güçlüğü ile çocuklarının davranış problemleri arasındaki ilişkiye kısıtlı miktarda aracılık etmektedir. Bu, bilinçli farkındalığın duygu düzenleme zorlukları ve çocukların davranış problemleri arasındaki ilişkiyi belirli bir ölçüde etkileyebileceğini, ancak bu etkileşimin sınırlı olduğunu gösterir. Sonuç olarak, yapılan bu çalışma, ebeveynlikte bilinçli farkındalığın, ebeveynlerin duygu düzenleme güçlüğü ve çocukların davranış problemleri üzerindeki etkisini anlamada önemli bir rol oynadığını ortaya koymaktadır. Bilinçli farkındalığın, ebeveynlerin duygu düzenleme becerilerini iyileştirebileceği ve dolayısıyla çocukların

FULL TEXTS BOOK

davranış problemlerini azaltabileceği ancak aracılık etkisinin sınırlı olduğunu tespit eden bir çalışma olmuştur (Aydın, 2022)

SONUÇ

Ebeveynlerde bilinçli farkındalıkla ilgili olarak yapılan çalışmalar, ebeveynlikte bilinçli farkındalık düzeyinin ebeveyn ve çocuk arasındaki iletişimi güçlendirdiği belirlenmiştir. Literatürde bilinçli farkındalık düzeyinin ebeveynlerin stres düzeyini azalttığını gösteren çalışmalar mevcuttur. Ebeveynlerde bilinçli farkındalık, toplum sağlığı içinde oldukça önemli bir kavramdır. Bilinçli farkındalık düzeyi yüksek ebeveynlerin yetiştirdiği çocukların daha pozitif, dışa dönük, özgüvenli ve mutlu olduğu saptanmıştır.

ABSTRACT
The development of probation service has gone through different stages whereas each of them has reflected the context of that time, challenges and the evolving needs of the society. In various countries probation service is well established, while in others like Albania, the probation service is recently developed and the justice system is still undergoing reforms. Countries with a long tradition in probation service usually have served as mentors providing valuable insights and best practices for countries less experienced. Reflecting on the development of probation service and its future challenges not only helps in informing the currents practices, but also in improving outcomes in service delivery and addressing possible gaps in the country context. This article aims to provide a comprehensive framework of the evolving role of the probation service while thinking proactively for the new challenges and perspectives. A literature review was conducted using online platforms. Several research articles focused on the probation history and the new developments were part of the review. The study highlighted issues regarding the new contemporary challenges including improved IT infrastructure and logistic; maximizing human resource capacity and the need for more integrated services. Implications for the future of probation service in Albania are also discussed.
Keywords: Probation service, history, development, challenges, future.

INTRODUCTION
The Probation service history dates back over a century and have continually evolved adapting to the changing needs of the society and criminal justice system. The early etymology of the probation comes from the Latin word *probare* which means "being tested" or "proving" (House of Commons Justice Committee, 2012). Probation is an alternative to incarceration, allowing offenders to be supervised in community instead of prisoning while fulfilling certain obligations imposed from the court. Its valuable role in rehabilitating and reintegrating offenders makes probation an essential part of the criminal justice system.

In the 19-th century the society started to review its approach toward punishment and incarceration, feeling that there is a need to work more individually with the offender in order to rehabilitate him rather than placing the focus only in the effect the prisoning will have in protecting the society (Webster, 1952). During the middle ages, punishments for even minor crimes were harsh and the death penalty was among the most widespread. Till the late of 18-th century in America child offender were treated same as adult and children from seven years could be sentences even with death if found guilty (Angell, 2004; Office of Juvenile Justice and Delinquency Prevention, 1999). Despite the severity this punishments did not really lead to the reduction of crime and discussion of that time prompt for other alternatives. These changes in the philosophy of thinking preceded the development of the probation service.

Early roots of probation service
The first pioneer of the probation service was John Augustus, a Boston shoemaker who founded the probation service in 1841. Augustus, "the father of probation service", convinced a Boston judge to release a drunken man instead of imprisoning, promising that he will assist the man by helping him in rehabilitation and reintegration into the society (Mackey & Levan, 2012). Augustus assisted mostly

FULL TEXTS BOOK

alcohol abusers and minor offenders that were unable to pay their fines (Taxman, 2012). The first rehabilitate initiatives where family-centric approaches. In 1878, Massachusetts introduced the first probation law, enabling courts to appoint official probation officers. The development of probation service in America was similar with the development of probation service in other countries. The pioneer of the development of the probation service in England was Britain's Matthew Davenport Hill in 1840s. However, in case of England the beginnings of the probation service were influenced mostly by religion. During that time the England church was concern about the amount of crimes associated with alcohol abuse, and the missionaries offered the court the option to rehabilitate them (Bird & Ward, 2021). This differences in the origin of the development of the probation service in America and England, also leads in using different approaches in treating the offenders, whereas in England the supervising and training where religious in character and in America it was followed a more secular approach (Phillips, 2010). Similarly with England, also in other the European countries the early foundation of the probation initiatives were laid by charitable and religious organizations. Despite America and England considered as the first countries that laid the foundations of the probation service, the late 19 century would mark the beginning of the probation service also for other countries like Sweden, Germany, France, Netherland etc.

Expansion and formalization of probation service

The practice of probation service spread across the United States, during the period of 1912- 1933 and the number of probation service offices grew from 200 to 4000 (Rothman, 1979). However, according to Webster (1952) the probation developed gradually and the progress was not very fast, especially in sates with a rural nature. The Federal Probation Act of 1925 will be the one that will create a unified practice of probation service in America by establishing probation service for federal courts and allowing judges to consider alternative sentences like suspension of execution of sentence of imprisonment to the convicts and placing them under supervision. While in UK, the passing of the Probation of Offenders Act 1907 formalized the probation service, marking so the most important date in terms of probation development (Annison, 2013). The court were allowed to place the offender in probation rather than sentencing taking into consideration characteristic like age, health, mental conditions and other aspects etc. Also in other European countries the 20th century would mark major changes in the evolution of the probation service. The transition to a more individualized approach in the rehabilitation of convicts would lead to the development of some alternatives to imprisonment such as conditional and suspended sentence, parole, house arrest, bail, conditional release etc. (Kalmthout & Durnescu, 2018), and for many countries, these changes in the sanctions influenced the improvement and further development of the probation service.

Important developments were especially in the field of juvenile justice. An important achievement was the creation for the first time of juvenile courts in 1899, in Illinois, and then their wide spread in different states of the USA in the first half of the 20th century (Rothman, 1979). While in England, in 1969 the amendment of the Children and Young Persons Act 1933 gave an even greater priority to placing the child's well-being at the center of the criminal process (Pratt, 1989). In other countries in Europe like Poland and Hungary the first initiatives of probation service were only dedicated to juvenile offenders (Kalmthout & Durnescu, 2018).

Efforts to improve juvenile justice reinforced the value of the probation service. For example, in America the American system, during that time, young offenders 16-18 could be treated or not as a young offender depending on the recommendation of the Grand Jury and on the own motion of the judge Addressing the importance of improving youth correction discussions in the literature of that time by Webster (1952) highlighted that before deciding not to treat a young person as a juvenile offender, it would be useful to require a probation report, because that report would help decision-makers making reasonable decision regarding the youth's future. In other words, Probation Service report would help

FULL TEXTS BOOK

judges make more informed decisions. Nowadays, the preparation of pre-sentence reports is one of the main duties of the probation service.

Till 1960 the main reform program applied in America was the same with that designed in the 1910-1920 considering problems related with the strengthening juvenile system, probation reforming, and improving outpatient care (Rothman, 1979). After 1960 there was a need to learn from these reforms, in what has function and what not and what they should have done better. These reflections included several countries, and were not limited only in America or England. Probation caseloads were analyzed and were categorized considering the level of risk and the level of supervision required. Also Classification criteria were created to make it easier to identify and accomplish goals related to socialization, career training, and education (May, 1995). During that time, Probation was increasingly tasked with managing cases involving drug offenders and people with addiction problems. According to Sparrow (2014) in the cases of drug addicts, they relied heavily on psychiatric services to help them rehabilitate.

Probation as social work and the decline of the rehabilitative ideal

For a long time, probation service was seen as an activity closely related to social work (Canton, 2024; House of Commons Justice Committee, 2012). It should be widely accepted that social work and probation service share a series of common principles such as: improving the well-being of individuals, integrating them in social life. providing support, embracing values such as non-discrimination, integrity, respect for human dignity etc. However, the pessimism that underpinned the discourse of the time regarding the role of probation in the rehabilitation of persons and the reduction of crime, also targeted social work, seeing its influence as ineffective (Smith, 2005). According to Raynor & Vanstone (2016) changes in research base of probation, organization, and training influenced the continuous separation between social work and probation service. The effectiveness of the role of probation service workers began to be discussed, and probation officers were seen as they were not doing nothing more than social service worker (Svensson, 2003). This was also influenced by the fact that there were also an increased number of the welfare agencies that worked with different vulnerable groups, including offenders (Raynor, 2010). At that time, the discussions of the literature advanced further when Neils (1995) claimed that now new values such as restorative justice, community safety and anti- custodialism would be more suitable in the context of probation service. In the meantime the probation service was accused as it was losing its role as an alternative of punishment and was only focusing on social aspects. This earlier ideology sometimes referred to as a "medical model", saw the causes of criminal behavior in psychological, biological and social deficiencies, assuming that through treatment the deviant behavior could be corrigible (Cullen, 2017). The importance that aspects of social work had on probation service began to fall due to the influence of the doctrine "nothing work". High crimes rates and recidivism placed more questions in rehabilitation. In 1970-1980 the doctrine “nothing work” by Robert Martinson's (1974) viewed rehabilitation efforts as ineffective. Consequently, the focus on rehabilitating and integrating people in the society started to diminish and there was a shift toward punitive measure.

Evidence based practice, from “nothing work” to “what work”

The "nothing works" theory had some early effects, but eventually it prompted a more thorough evaluation of the types of rehabilitation programs that really worked. This eventually led to the improvement and reaffirmation of the use of social work ideas by the probation service. Since then, evidence-based techniques that have been shown to reduce recidivism rates, such as cognitive-behavioral therapy and other treatments and have been incorporated into probation services, consistent with social work objectives. In fact, the previous studies were criticized for the methodology and the results being not so true (Raynor, 2018). The “black box of community supervision” by Bonta et al, (2008) would open a new chapter in the approach to the treatment of convicts in the probation service.

FULL TEXTS BOOK

From the ideollogy “nothing work” it changed to “what work”. According to research in diferent fields from psychology, the sociology of criminal justice etcc. interventions that incorporate the principles of rehabilitation, prevention, procedural justice, and cooperation have been shown to be effective in reducing recidivism rates (Raynor, 2018). By addressing factors such as risk-need- responsivity factores and promoting justice and cooperation, these interventions have the potential to have a significant impact on preventing reoffending. It is important for policymakers and practitioners to consider these findings when designing programs aimed at reducing recidivism and promoting positive outcomes for individuals involved in the criminal justice system. Now the focus is on the training of probation officers based on evidence-based practice (Bonta, 2006)

Probation service in Albania

The Probation Service has a brief history in the Republic of Albania**.** Law No. 10 023, dated 27.11.2008, "On some additions and changes to Law No. 7895, dated 27.1.1995 of the Criminal Code of the Republic of Albania, as amended," laid the foundations of the probation service in Albania. Albania undertook continuous reforms in the framework of alignment with the European legislation. These amendments on the criminal code The Law nr. 78/2020 “On the Organization and Functioning of the Probation Service”. Created the necessary legal spaces for the establishment of the probation service institution charged with the supervision of the offenders. Thus, in 2009 Probation Service was established. For a long time probation service has developed its activity based on the Decision of the Council of Ministers no. 302 date. 25.03.2009 “On the Approval of the Regulation ‘On the Organization and Function of the Probation Service and on the Definition of Standards and Procedures of the Supervision of the Execution of the Alternative Sanctions”, being not in accordance with the recommendation of the committee of the Council of Ministers of Europe, where it was recommended that the regulation of such institutions must be done by law. It was not until 2020, when probation service has its law, law no 78/2020 “On the Organization and Function of the Probation Service”.

The Probation Service in Albania has undergone many improvements. Initially, it grew from 4 local offices to 22 offices currently located near the Courts of First Instance, and from 50 employees now it has around 147 employees (Xhangolli, 2021). The mission of the Probation Service in Albania is to protect the community, prevent recidivism and provide guidance and support to those under supervision so that they can successfully reintegrate and socialize into the community by overcoming obstacles and making positive changes.

After the entry into force of the Juvenile Justice Code in 2018, the Albanian Probation Service adopted a new methodology of working with juvenile offenders mentored by the Swedish Probation Service, in the framework of the Albanian-Swedish juvenile justice program (2017-2022). The adaptation of the new instruments was accompanied with training, mentoring and workshop with the staff that addressed the juvenile cases. The methodology of work was based in the leading model of the Risk-Need-Responsivity factors (Lovkrona & Ymeri, 2022).

Challenges and perspectives

The development of the Probation Service has been accompanied by various challenges. In the Albanian context, many of the challenges facing are similar to those in other countries, while others are more specific to the country context. High caseload and workload pressure places probation workers in a difficult position to manage cases and to work individually with offenders who may need support and guidance (Rachal, 2020). Hoxha & Rama (2024) found that probation specialist in Albania face difficulty in applying cognitive behavioral technique due to cases overload.

Another challenge is related to IT infrastructure and adaptation to technology. In the framework of the digital strategy, Probation Service has raised an electronic system for digitizing the Probation Service system, which has been in place since 2015. This would enable the digitalization of the files of convicts.

FULL TEXTS BOOK

However, datas from Audit Report (2022) has showed problems with entering the data on time, and problems with the use of the system have also led to inefficient use of public funds. Another challenges is related to the electronic monitoring which has been suspended since 2017 also highlighted in the European progress report (2023). This make difficult excecuting alternative sentences like home confinement.

The supervision of offender requires a qualified and trained staff. According to Law no. 78/2020 "For Organization and Functioning of Probation Service", article 15/2 probation service specialist must follow two programs of training: primary and ongoing training. In order to maximize human resource capacity, probation service specialist have received training regarding juvenile treatment and lately training regarding radicalization and violent extremism. However, there is a need to receive ongoing training following an evidence based practice (Hoxha & Rama, 2024). Certain groups like those with mental health problems, sex offenders and drug abuser may have more complex needs and may be more challenging regarding their rehabilitation. Further training programs should take into consideration this issues.

In addition, there is a need for more integrated services that would facilitate rehabilitation of individuals with multiple needs such as coordination among agencies including social services, employment centers, mental health service, substance abuse treatment, education programs, housing ECT. Service in Albania are mostly fragmented and limited human and financial resource can hinder the implementation of such services. Hoxha & Rama (2024) found that probation service in Albania has limited cooperation with other agencies in treating offenders.

Concluding remarks

In order to overcome the challenges faced by probation systems it is important to address limitations through strategic planning, engaging stakeholders, building capacity and conducting ongoing evaluations. By taking these steps we can work towards improving outcomes for individuals under supervision. Through careful planning and collaboration with all parties involved we can create a more effective and efficient probation system that ultimately benefits both the individuals being supervised and society as a whole.

Faculty of Disability Management and Special Education,
Vidyalaya Campus, SRKV Post, Coimbatore, Tamilnadu, India – 20

ABSTRACT
The current study fosters e-learning in teaching-learning and transforms future education in the modern era. E-learning holds excellent promise to preserve knowledge and experiences for the next generation, and the value of youth education is being acknowledged more in contemporary society. A more significant number of people can now get degrees because of online curricula. Because of this, students can get an excellent education regardless of where they live. Students can study at their own pace and in their own time with e-learning. With that being said, in a distributed, open, and ever-changing e-learning setting, it might be challenging to provide a suitable means of spreading different information. Amidst the ongoing discussion over the validity of online learning, concerns regarding the benefits and drawbacks of E-learning and its role in professional development for educators and learners are growing. E-learning is here for several reasons, including shorter product development cycles, fiercer global competition, a need for more qualified workers, and the shift from an industrial to a knowledge-based economy. E-learning in teaching-learning is playing an increasingly important role in traditional classrooms. The importance of knowledge, the advantages of lifelong learning, mobility, and globalization are all factors that contribute to this. Even with meticulous preparation and implementation, there is no assurance that an E-learning program will succeed. E-learning that isn't well-organized and managed has a far higher chance of falling short of teachers' and students' expectations and goals. Learning could shake up established industries and schools because it gives students more flexibility in when and where they get their education. E-learning will change the way people get degrees in the future. E-learning platforms offer a wealth of information regarding students' accomplishments and development. E-learning has the potential to be more economical than more conventional classroom settings. It is easier to expand to meet the needs of more students if we do not rely on costly physical infrastructure like classrooms and textbooks. The ability to effectively communicate and use digital tools is more important than ever for thriving in the modern world. The fundamentals of the technology that modern companies rely on can be taught to students through online courses. Promoting e-learning in the classroom is essential to equip students better for the opportunities and challenges ahead. By incorporating digital technologies into the design of interactive, relevant, and hands-on classes, educators may better equip their students for the modern era.
Keywords: Fostering, E-Learning, Teaching-Learning, Transformation, Future, Education, and Modern Era

Introduction

Learning new things through reading and listening to discussions on various online platforms is one way "e-learning" is defined. Several other names describe this method of teaching. Due to the wide variety of online learning settings, the terms dispersed learning, virtual learning, and online learning have merged into one. Students need unique abilities to succeed in e-learning since they enter a different kind of classroom (Romiszowski, 2004). Virtual, online, web-based, dispersed, "e-learning," and online learning are many words that describe distant education. Coming from the root word "electronic," the term "e-learning" can refer to any student-driven learning that utilises computers, regardless of whether

FULL TEXTS BOOK

it occurs in a formal educational setting or not. Due to the deluge of information students face nowadays, the ability to analyse, research, and evaluate material is more important than ever (New Media Consortium, 2007). No student who is serious about raising their grade point average should ever skip a lesson. Studying for your degree online is a great way to practise making wise decisions, sharpen your analytical abilities, and broaden your horizons. It is not appropriate for children to rely on their teachers. They didn't dally around at the beginning. Learning can occur at the student's pace and environment with the correct tools. Our favourite students are the ones who consistently show up to class prepared to learn. Any number of students can sign up for free once it's ready. Teachers can use their class time more efficiently by dividing extensive courses into smaller, more manageable ones. No matter the time of day, we promise to process your transaction quickly. By providing children with skills that are relevant to today's world, educators may help students thrive in this modern era.

Additionally, online students are often more independent than their in-person peers. Huynh et al. (2003) found that students showed more engagement and dedication to studying when they actively participated in class debates. Although online students outperform their in-class counterparts on average, they are likelier to skip class or not turn in their work (Zhang, Zhou and Briggs, 2006). In education, "e-learning" describes a method that blends internet resources with traditional classroom methods to create an atmosphere where students collaborate to solve real-world issues. One of the initial goals of online education, often known as computer-assisted learning, was to provide course materials digitally. An increasing number of individuals are considering the benefits of e-learning. Any instructional methods using electronic devices are collectively called "e-learning" here. Regardless of its network connectivity, technology can nonetheless facilitate learning and transform future education in the Modern Era.

Notion of E-Learning

Each individual has their own set of learning preferences based on their own set of habits, interests, and degrees of involvement. Many things are putting a lot of pressure on our country's educational system, including changes in population, rising corporate demands, and an influx of young, ambitious people who want to go to college to better their professions. The traditional model of education is fast losing its relevance. The abundance of information available online has made self-education easier than ever before. There is an overwhelming variety of creative degree programs offered by universities worldwide. We must be innovative if we want technology to meet their unique needs. To build a knowledge society that embraces diversity and inclusion, it is vital to create accessible online learning environments. Any education heavily relying on the Internet is called "e-learning" here. This study investigates how educational institutions adjust to accommodate students' demands in light of the difficulties inherent in online learning. Acronym for "electrical learning," "e-learning" denotes instruction that does not occur in a conventional classroom context. Electronic learning, or e-learning, relies heavily on online resources such as databases, video and audio files, search engines, and libraries. This kind of education is equally effective in traditional classroom settings as e-learning transforms future education in the modern era.

School websites increasingly provide the option to enrol in online courses these days. In an online classroom, students can access various tools, such as course materials, and several ways to communicate with their instructors and peers, such as private and public networks, email, and message boards. Most people imagine students accessing course materials through digital methods like the Internet, CDs, satellites, or multimedia software when they hear "e-learning" or "electronic learning." However, this is only sometimes the case. Students work together using various tools to accomplish common goals (Gul, S. B. A, 2015). The growth of e-learning platforms and Web 2.0 technology has brought new challenges to both teachers and students. When used in the classroom, these devices transform entirely children's learning. Due to the unique characteristics of online learning, both students and teachers may encounter new challenges. The first step in improving online education is acknowledging the numerous issues with

FULL TEXTS BOOK

this new sort of virtual classroom. Students may be better prepared for the demands of an online course if they have a solid understanding of what e-learning means. In 2011, Clark and Mayer coined e-learning to describe the instruction process using any medium that leverages the Internet. Both teachers and students may face additional challenges as a result of the many ways in which online learning varies from traditional classrooms. Due to the plethora of materials technology enhances, traditional classrooms are being replaced by online and hybrid learning settings. Our ability to swiftly detect and address problems is essential when we want our students to thrive in e-learning and influence the future of education in the modern era.

Types of E-Learning

The e-learning field is currently deciding on a common name, similar to other rapidly evolving academic fields. Various scholars define the phrase differently and may even disagree on what it means. Despite this, the meanings are usually interchangeable. Since there are a variety of beneficial e-learning formats, students can choose the one that suits them best. For the most thorough and valuable learning experiences, various approaches are advised. A key component of modernizing education is incorporating online learning resources into classroom training. Due to the increased flexibility it provides students in terms of time and location, online education can radically alter how people learn in conventional classrooms. Here are a few pros and cons of online learning that you can encounter in a traditional classroom setting: As its goals, content, and technology have evolved, e-learning has also undergone substantial methodological and stylistic shifts. Some of the most common kinds of e-learning include these:

Asynchronous Learning

Asynchronous learning and teaching have been the favoured e-learning strategy up until this point due to their versatility (Hrastinski, 2008). Asynchronous learning gives students access to everything they need for a course, including live and recorded lectures, readings, presentations, and more. Asynchronous learning allows students more freedom to work at their own speed, unlike conventional classroom settings, which require students to finish assignments in real-time. Thanks to the method's flexibility and ease of use, students may complete assignments, participate in class discussions, and access course materials whenever it's most convenient. Learning at one's own pace is a fundamental human right. They take it easy while things are going well but shine when faced with adversity. Students are not required to finish all the materials found on the internet immediately. This includes books, articles, spreadsheets, presentations, WhatsApp groups, YouTube videos, and more. Synchronous learning allowed students to participate in two-way conversations, finish group projects, and receive responses instantly. Rather than engaging in real-time conversation and engagement, a crucial component of asynchronous learning is providing feedback after the class has ended. They greatly aided the children in both groups as they practised problem-solving collaboration (Hizriani, N., Nor, H., & Saadillah, S, 2022). The lack of rigid class timetables gives students greater flexibility to juggle academic and extracurricular commitments. A learning management system or online platform usually keeps a course's text, multimedia, and supplementary materials. The practice of allowing students to access recorded classes whenever it is convenient for them is relatively standard. It is up to each student to figure out how much time is optimal for reviewing the material. Teachers and students can collaborate in real-time through online message boards and forums where they can share ideas and ask questions. As long as they stay within the time constraints imposed by their instructors, students are granted considerable leeway to complete the various assessments at their own pace. Online learning gives students more academic and personal freedom because they can access course materials and finish tasks whenever convenient. Allows pupils to breeze through more accessible classes while they devote more time to studying for harder ones. If students are in a rush or in a different time zone, they should have the option to not participate in real-

FULL TEXTS BOOK

time if it is too much trouble. There is more leeway for students to reflect on the material and their understanding of the material before they are required to submit their answers or projects. Timely assignment completion still requires students to have internal desire and self-control, even with the availability of rapid feedback. Students might learn less if they had to wait for responses to their questions and assignments instead of receiving them instantly. Without many opportunities for face-to-face communication between teachers and students, children may experience feelings of unwanted isolation. Asynchronous e-learning has recently become popular as students' go-to for online education (Parsad and Lewis, 2008). The expectations of being adept with a broad range of online tools and having a constant internet connection may be too much for some students to manage. Students enrolled in online courses can study at their own pace. There is a plethora of specific materials that can be utilized in the educational setting. Asynchronous learning platforms such as Canvas, Blackboard, and Moodle allow students to pose questions and participate in discussions. The possibility of asynchronous online learning enhancing students' knowledge was discovered by Lin, Hong, and Lawrenz (2012). As an adjunct to more conventional classroom methods, asynchronous learning could be helpful for students who thrive when given extensive leeway in determining when and how they study.

Synchronous Learning

In a synchronous learning virtual classroom, students work together in real time to solve classroom problems as they arise. Part of this strategy is using pre-arranged online lectures or meetings. Online video conferencing has made it possible for everyone to take part in these classes electronically. Virtual classrooms, online discussion forums, etc., promote student engagement in the creation of course standards. The traditional classroom has seen numerous changes due to the rapid expansion of e-learning. One way to tell whether an online program is primarily synchronous or asynchronous is by looking at the degree of synchronization. However, outcomes have been conflicting; there is some indication that these two types of e-learning can potentially improve students' average grade point averages (Zeng, H., & Luo, J, 2023). Students can complete assignments and participate in class discussions in real time using digital tools. This allows people to get their questions answered quickly. Participants are expected to be punctual for all activities and classes. Sort things out and get everyone on the same page by using live video conferences, chats, or phone calls. In this type of class, the instructor may observe the progress of each student as well as the results of their group projects. Teachers can deliver live lectures to their classes using a variety of online video conferencing platforms, such as Zoom, Google Meet, and Microsoft Teams.

In e-learning, a broad range of synchronous, asynchronous, and hybrid approaches are employed. Synchronous learning allows students to collaborate in real time to solve problems that arise after a lecture (Salmon, 2013). Alternatively, students in asynchronous classes can work on their online assignments at their own pace and in their own time. In hybrid virtual worlds, users can accomplish active and passive tasks in real-time sessions. Hybrid lesson ideas merge the advantages of both online and conventional classrooms. Experts in a certain subject hold live online presentations called webinars, which include Q&A sessions. Instructional programs that put students' knowledge to practice through group projects or independent experimentation with the assistance of a teacher. This is when the lesson is guided by an educated teacher who breaks down ideas and gives pupils opportunities to put what they've learned into practice. Depending on their preference, workshop participants can work in smaller groups, on larger projects, or even solo. Students retain more information when they are able to ask questions and receive prompt responses. The widespread availability of real-time communication has greatly increased student engagement in class. Students who put in the effort to prepare before class can make the most of their time there and avoid interruptions. To make students more accountable and motivated, try implementing planned sessions and having them communicate in real time. One way to

FULL TEXTS BOOK

make a classroom more interesting is to add more interactive activities, debates, and conversations that happen in real time. Due to scheduling conflicts, students in various time zones can miss out on live sessions.

We may be less capable of learning when problems with infrastructure, like slow internet connections, affect the technology we rely on. It seems like some students simply lack the self-control or self-discipline to arrive on time for class every day. Instantaneous online meetings are more likely to have interruptions and derailments. It may be too much for some kids to handle being online all the time and having to participate at certain times. Microsoft Teams, Zoom, and Google Meet are just a few of the many available real-time conferencing options. Platforms that integrate video conferencing providers make features like polls, breakout rooms, and real-time chat available. Services such as Twitch and YouTube Live have made it possible to webcast live seminars and lectures. Teachers and students can work together in real time using Google Docs and Miro. Through the strategic application of concurrent learning, one can enhance critical thinking, discourse, and engagement. While asynchronous components might be useful for students taking a lot of classes, they truly shine when immediate feedback is needed. Outcomes from a study conducted by Asoodar, Atai, Vaezi, and Marandi (2014) and Teng, Chen, Kinshuk, and Leo (2012) indicate that synchronous group learning helps students develop stronger peer ties. The ability to work together in real-time is a crucial feature of synchronous online courses.

Blended Learning

Blended learning, which combines traditional classroom teaching methods with modern online resources, relies heavily on online education. Even after over two decades, it hasn't become as famous as its makers had intended. Courses that include e-learning modules are becoming more accessible through a proliferation of online resources (Nagaraj C. et al., 2021). Blended learning is an innovative strategy combining online resources with conventional classroom methods. This approach combines online learning with more traditional classroom methods to create an environment that is more adaptable, productive, and tailored to the needs of individual students. Looks at potential physical and digital solutions. Students can now take advantage of online and hands-on learning in the same class with the help of technological tools like labs and workshops. Students greatly benefit from online education since they can quickly move through the content. Plus, kids get to do more engaging things like work on group projects, solve problems, and participate in activities that have real-world relevance. Students can complete online tests and group projects and work on individual assignments at one of many stations. Most online courses need students to collaborate in smaller groups, either virtually or in an actual classroom. Students who pursue their education online benefit from more time freedom and more opportunities for hands-on experience. As part of this, they will work together on projects, share ideas for solutions, and draw on their collective knowledge. Even though most course materials are available online, students are still urged to contact their instructors whenever needed. Not all courses necessitate students' physical presence; some classes are only offered online. Attendance is required for a portion of the in-person activities in blended learning courses, such as labs, exams, and group projects, but not all of them.

Blended learning combines online and conventional classroom teaching, giving students more study flexibility. When training is needed, people can learn online or in a more traditional classroom setting. This mixed-mode technique combines online and in-person training to meet the specific needs of each learner. Blended learning, which mixes online and in-person instruction, appears more popular among students than in traditional classroom settings. Why? The reason behind this is that it facilitates the establishment of student-centred programs that cater to each student's unique requirements. Students can choose how they wish to engage in class, whether in person, online, or another format. In contrast to more conventional classroom settings, research by Vo et al. (2017) and Smith and Hill (2019) shows

FULL TEXTS BOOK

that students in blended learning contexts have more control over their education. Students can study whenever it suits them best because this classroom technique is not reliant on location or schedule. Encouraging students to personalize their learning to meet their requirements is a great way to get them invested in their education. Time and priority management skills are taught to students in both traditional and online classrooms. Integrating digital resources with more conventional teaching strategies can help students become more active in their education. Blended learning, which combines personalized instruction with many delivery modalities, may help children succeed in school. Access to a wealth of materials that might be inaccessible in a more conventional classroom is made possible for pupils. Students with access to online and in-person course materials are more likely to work together and pay attention in class.

Microlearning

The premise of microlearning is that information could be better retained if presented in smaller, more manageable portions. Designed to facilitate regular, targeted study, this layout is excellent for just-in-time learning and concept reinforcement. They streamlined video guides that either introduce new material or review old material. Infographics simplify complex subjects by drawing attention to critical points. Teachers offer detailed feedback on students' work after they finish brief tests to gauge their understanding of the content. They use simple flashcards, often available online, to increase their knowledge base. Literature that is either overly wordy or fails to address the topic adequately. As a whole, microlearning aims to improve comprehension and memorization. Placing students in more minor, manageable groups can improve their subject recall and make progress tracking easier. Microlearning has a few flaws, such as its incompleteness when handling complex or challenging subjects and its dependence on previously learned material. The wide variety of human learning styles allows us to do many things. A few students can persist in their confusion no matter how often you review the material. Educators are responsible for curriculum creation as part of their professional duties. Class preparation is a challenge for many educators. Microlearning strategies are flexible enough to be adjusted to different contexts, even when there is a significant difference in the preferred technologies of teachers and pupils—completing all the course materials (Fitria, T. N, 2022). A discussion, analysis, or summary is audio-recorded and focused on a topic. Students may hone their abilities and learn to make better decisions by participating in brief, interactive situations or simulations.

Microlearning sessions are created to help students better absorb large amounts of content. Session lengths could be anything from a few seconds to nearly fifteen minutes. Every microlearning module is designed to cater to specific skills or learning objectives, allowing for more focused study and faster understanding. This data is often updated and accessible from various devices, including smartphones, tablets, and desktop computers. Games, simulations, and quizzes are standard interactive components of microlearning that help students stay interested and enhance their memorization. Study materials are available 24/7, so students may choose when it is most convenient. Children learn best when exposed to new concepts in smaller, more focused doses rather than all at once. Multimedia and interactive elements make courses more engaging and fun to use. Aids pupils in overcoming challenges and reaching their full potential by making relevant information easily accessible to them. Shorter, more focused learning modules may be more effective than lengthier, more traditional course materials. A life skill that children will gain substantially from is the capacity to concentrate for short periods. Microlearning isn't well suited for advanced topics due to its simplistic nature. Students risk falling behind or not understanding important ideas since microlearning modules do not offer a consistent method of instruction and do not form a cohesive whole. Assessing the efficacy of individual microlearning modules in meeting their learning goals is a crucial but challenging undertaking. All the subtleties and vital details can be lost in a simplified version.

FULL TEXTS BOOK

Microlearning takes advantage of this fad in training and education by highlighting the significance of concentrated, brief sessions to improve learning and memorization. Students who have trouble responding quickly or are anxious about being late might find this strategy helpful. Microlearning sessions can eventually aid in word-of-mouth and address individual needs. Try adding multimedia, interactive elements, and real-life examples to make the training more engaging and applicable. Not making things too easy and continually checking content for accuracy and relevance is the only way to ensure enough high-quality information. Students should be able to deepen their understanding using these scenario-based microlearning courses. A microlearning program's success or failure can be revealed through key performance indicators and student feedback. New hire orientation is a breeze when we talk about strategy compliance. Assists in learning via doing, reflecting, and applying. This allows experts to make effective use of their ever-expanding corpus of knowledge.

Adaptive Learning

Adaptive learning technology enables students to become self-directed learners and take responsibility for their education, according to Yazon et al. (2002). (Jonsdottir, 2015; Truong, 2016) Adaptive learning technology can change lessons depending on students' answers to questions. Students can better grasp abstract systems through interest-based Adaptive learning technology, which helps them learn more rapidly and retain more information (Walkington, 2013). Adaptive learning technology has allowed educators to personalize course content based on students' interests, strengths, and prior knowledge. Adaptive learning systems use data and algorithms to adjust the speed, content, and teaching methods to assist students in achieving their maximum academic potential. Adaptive learning systems consider the unique abilities and areas of improvement of each learner to enhance the relevance and efficiency of learning. The message it provides is that the subject is both challenging and relevant. So that their progress can be monitored in real time, the system adapts the difficulty level, subject order, and exercise types based on how well the learners are doing. Information scrutiny allows teachers to monitor student development, spot trends, and understand the results of their choices. With its many examples, explanations, and exercises, this lesson plan will be easy for students of all levels to follow. The system records student interactions, including response times, task lengths, and activity participation levels. By utilizing algorithms on the gathered data, we can ascertain each learner's level of understanding and progress. It is possible to meet the specific requirements of every student by employing this method of goal-oriented requirements engineering. Douglas et al. (2019) propose utilizing an Adaptive learning technology to guarantee that each student gets individualized course materials. According to Dhakshinamoorthy (2019), student academic performance improves when adaptive learning technologies are tailored to their cognitive learning methods. The technology then adjusts the difficulty level of the material to make it easier or harder to understand when the test is over. Provides students with timely, personalized feedback on their work, including suggestions for how to improve. Meeting students' needs and reducing uncertainty leads to more investment and better outcomes. Adaptive learning can improve performance, understanding, and memory by tailoring support and adjusting content levels.

Gamified Learning

The goal of gamified learning is to increase participation and recall of course material by integrating game design elements into more conventional classroom settings. The gamification of education approach aims to increase student engagement and retention of course content by using game mechanics and concepts in the classroom (Dicheva & Dicheva, 2017). Traditional classroom instruction is enhanced in gamified learning by incorporating game mechanics like leader boards, challenges, points, and badges. Including elements of play makes learning more engaging. Levels, challenges, leader boards, badges, and points are all a part of this. Earning prizes and completing milestones as the course

FULL TEXTS BOOK

progresses motivates students to study more. It uses resources like games, quizzes, and role-playing settings to make learning more exciting for pupils. Similar to a game's objectives and scoring system, this gives pupils instantaneous feedback on their progress. Game enthusiasts comprise most of the intended demographic (Fardo, 2014). The application of gamification in these settings has been backed by studies conducted by Borges et al. (2013), Dichev and Dicheva (2017), Krause et al. (2015), and Knutas et al. (2014). Students can earn medals, badges, and points as they progress through the levels and accomplish the objectives. It reminds pupils of their accomplishments and encourages them to strive for more significant achievements in class. To unlock incentives or advance to the next level, students must finish most activities within the allotted time.

Students can put their new knowledge into practice in a risk-free environment, much like in a game or role-playing activity. As they move through the stages, pupils gain confidence and competence through the game's more difficult content or exercises. There is a risk that incentives and competitiveness may overshadow the importance of students' intrinsic motivation and the primary goals of education. Involvement, goal-setting, skill-improvement, sociability, and learning maximization are all important outcomes. Scientists are eager to examine the effects of gamification on classrooms because studies have demonstrated that some elements of games can improve engagement, retention, comprehension, and collaboration (Hakulinen & Auvinen, 2014; Tvarozek & Brza, 2014). In a separate study, Christy and Fox (2014) discovered that gamification has unexpected significance. Building engaging, gamified learning spaces that improve students' knowledge acquisition is no easy feat. The rules and content of the game need to align with the learning objectives so that there is no wasted effort leading to bogus information acquisition. Incorporating gamification into the classroom and more traditional methods can enhance students' ability to retain course information.

Social Learning

In social learning courses, students collaborate on projects and participate in class discussions to develop their skills. Students learn more when they work together, whether in smaller groups, bigger ones, or even just with their instructors. Collaborating with others to discover solutions is a part of it. Encourages students to think critically and articulate their understanding, aiding their personal development. Social learning is quickly becoming the industry standard, according to multiple studies. This is in contrast to traditional NRM techniques. Typical instances of this type of publication include Dodds et al., Keen et al. 2005a, and Parson and Clark (1995). Students can find information about individuals who share their interests through online groups and social media. As an alternative to sitting in a stuffy classroom, today's children would instead engage in online activities such as group projects, discussion forums, and social media. Promotes teamwork and exchanging ideas using internet platforms such as social media and discussion boards. Managers increasingly rely on adaptive management and stakeholder participation strategies to deal with complicated and uncertain situations, as stated by Holling and Walters (1978) and Walters and Holling (1990). Exploration suggests that managers of social-ecological systems may benefit from increased knowledge and flexibility when participating in decision-making (Folke et al., 2005; Fazey et al., 2007).

Social learning theory states that an individual's authority will be unaffected by internal pressures. It places a premium on self-regulation, symbolic and vicarious processes, and others like them (Bandura, 1971). Establishing communities of practice, or networks of people with similar goals and interests, can enhance current educational practices. At an increasing rate, natural resource administrators and policymakers consider social learning ideal. Even after all this time, no one has reached a theoretical agreement on where it came from or what it means. The words "social learning" and "participation" are sometimes used interchangeably due to the lack of clarity surrounding individual and group learning. Many assertions regarding social learning are unsubstantiated, and its notion is often confused with its possible advantages. At this time, we do not have enough information to say whether or not social

FULL TEXTS BOOK

learning has occurred, how much it has, when it happened, who was involved, or what kind of learning it was (Reed, M. S., et al., 2010). This idea states that one's social environment and past experiences significantly impact one's preferred learning method. The requirement of mentoring connections is emphasized in this method so that students can benefit from one other's experiences, both good and bad. This may be most natural in less stuffy settings like study groups or collaborative projects. No matter how different our lives are, we can all learn from each other's experiences. Many different online communities exist, each serving a unique purpose in making connections, commerce, and disseminating information. Among many others are social media, internet forums, and business networks. Setting up meetings and transactions may foster cooperation and information sharing. Help create an environment where students feel safe expressing themselves. As a group, people learn more efficiently, enthusiastically, and autonomously than they would alone. Honest dialogue and teamwork are vital in today's linked world.

Interactive Learning

An interactive learning method encourages a three-way conversation between the teacher, the students, and the course content. Improving comprehension, memorization, and application of knowledge are the aims of immersive, participatory, and interactive learning. Participatory learning is promoted rather than passive learning, in which students merely take part in the process. The course material includes exercises that require students to work in groups, solve problems, and participate in discussions. Projects, simulations, role-playing, and experimentation can achieve active learning and more student engagement. The significance of learning methodologies is recognized and prioritized. Instantaneous responses, user-friendliness, and minimal effort on the part of the buyer characterize the ideal product in today's technology landscape. Educational researchers have mainly used the term interactive in two contexts: pedagogy and investigating how new technologies could augment more conventional forms of teaching. When new, more effective ways of teaching a subject emerge, traditional approaches become outmoded. The term interactive perfectly captures the features of a productive and efficient learning environment compared to the conventional method of instruction, which benefits both the teacher and the pupils (Pradono S. et al., 2013). Interactive learning encourages students to work in groups to accomplish common goals, such as finishing an assignment, making art, or solving an issue. On-time and with substance, gives pupils comments on their work. We aim for the kids to work in more intimate groups where they can freely express themselves and ask questions. Whether students collaborate on a group project, present their research, or work independently, they should always support one another. Using game design concepts creates interactive learning spaces that highlight the need for critical thinking and creative problem-solving.

The goal of interactive learning is to foster student engagement and interpersonal skills via the use of various technological tools. Researchers have found a way to solve this issue by combining digitally self-directed learning with interactive studying. There are multiple advantages to using interactive learning strategies in the classroom. This article employs a systematic review of hundreds of articles published in peer-reviewed international journals to explore the many kinds of interactive learning, its multidisciplinary applications, and its educational benefits (Lukita, H. et al., 2017). Active participation and the usage of interactive tactics improve students' learning experiences. Learning exercises that strengthen students' ability to understand and remember new information can help all students. It helps with understanding the content and finding real-world uses for it. Everyone should be highly concerned with a person's communication skills, teamwork abilities, critical thinking, and problem-solving creativity. In an online class with a professional moderator, students pay more attention, contribute more thoughtfully, and get more valuable comments. Managing technology and interactive components efficiently is essential to achieve the intended learning outcomes. Including interactive activities in your class plan helps captivate students and enhance their learning experience. What a difference it would

FULL TEXTS BOOK

make if teachers and parents taught children that group projects are more successful when everyone pitches in, and everyone listens. Interactive learning unlocks a treasure trove of exciting and helpful information by combining group work, participation, and real-world application. Teachers can engage students' attention and foster learning through various interactive strategies.

Mobile Learning

The world is evolving at a dizzying rate, and new information is appearing even faster. Due to the ever-changing modern world, books have become outmoded as a source of information due to the expansion of websites, applications, videos, live chats, etc. The impact of technology on people's lives and futures is growing. Regardless of their position, most individuals in today's culture would support technologically enabled educational reforms. The proliferation of educational institutions using technology is just one of the several factors contributing to its growing significance in education. The positive effects of technological advancements on education far exceed any negative ones; these innovations have altered the nature of education. Education and technology are powerful tools that may achieve excellent outcomes when appropriately applied.

Mobile learning generally refers to expanding educational opportunities enabled by portable electronic devices. To present a comprehensive overview of mobile learning, this chapter will analyse its characteristics, advantages, and problems with long-term retention. Plus, it works with a ton of various apps for mobile devices. Software developed with mobile devices in mind is often smaller and lighter than its desktop and laptop counterparts, making it ideal for portability (Kumar, P., & Raja, V.,2019). The benefits of mobile learning are only now being realized by members of Generation Z and Millennials. The positive cycle begins from mobile learning, improving students' critical thinking skills, to deep learning, which generates new, valuable data. Mobile learning has numerous advantages, including additional classroom training, which can be supplemented with mobile learning and is constantly accessible on any wireless device. Students with various mobile learning options to access course content are more engaged and work harder to succeed. Using mobile learning, which uses portable digital devices, is one way to boost enrolment at four-year universities. Students now have constant access to course materials and assignments because of the portability and convenience of mobile devices. Students have more flexibility in their study schedules and locations when they have access to course materials online. The mobility it offers regarding access to course materials is one of the many benefits of mobile learning. They improved mobile multimedia learning experiences by integrating text, images, video, and interactive elements. Assists users in coordinating online conversations and projects through chat rooms and message boards. Teachers can track students' progress using mobile learning apps and cater to their unique needs. Various educational resources, including courses, tutorials, quizzes, and more, are accessible through mobile apps. Apps such as Duolingo and Khan Academy have made learning a new language relatively easy.

Distance Learning

Some educational approaches are referred to as online learning, though they are known by more terms than just distance learning. On this platform, there are abundant web-based tools that teachers and students can use to work together digitally. This method ensures that students can keep up with their education even if they are physically unable to attend class. More and more universities are moving their courses online, which means that students from all over the world may soon be able to take lessons without wasting time and money travelling. Both students and teachers rely on video conferencing, learning management systems, and other digital communication tools. When students cannot physically attend a traditional classroom, distance learning can assist them in receiving the individualized attention they need through different technological resources. This idea is what Honeyman and Miller (1993) describe as the process of designing and delivering educational experiences in which the learner and the

FULL TEXTS BOOK

information provider are geographically or temporally separated. It was in the 1840s that Isaac Pitman introduced the concept of distance learning to the British people through mail networks to teach shorthand (Moore & Kearsley, 2005). It allows students to study when it is most convenient for them by offering both scheduled and unstructured learning. This includes both synchronous (in which students engage in real-time activities) and asynchronous (in which they can access course materials and complete tasks at their own speed) learning styles. It uses a variety of media, including books, films, quizzes, and online forums, to accommodate various learning styles and interests.

Distance education students have more flexible schedules since they can conveniently access and participate in course materials. When people cannot attend traditional schools due to geography, financial, or time constraints, we help. When you include transportation, books, and tuition, attending an online school can cost less than a conventional, in-person school. Since students design their personalized study plans according to their interests and goals, they can go through the material at their speed while still touching on earlier courses. An optimal learning environment is created when knowledgeable teachers collaborate with various digital resources and fresh viewpoints. Despite its obvious importance, many kids will go without regular internet access. Distance learning aims to broaden participation in formal education and training by reducing or eliminating physical and temporal obstacles. Because of its adaptability, it works well both in and out of the classroom. There is no other field of study that is seeing the same rate of growth as this one. The development of web-based technologies has shed light on the possible implications of distant learning for education. Teachers define it as using information and communication technologies in various settings (Webster & Hackley, 1997). Online course participants must be highly motivated and self-controlled to succeed without a teacher and a flexible class schedule. Less face-to-face interaction between students, teachers, and classmates means fewer opportunities for students to learn from their teachers and classmates. Issues with the program or the network could prevent people from participating and learning. Involving diverse student groups and providing them with high-quality digital tools can be a real problem. Technology advancements have made online learning more accessible and adaptable for students. Regardless of the challenges, great learning experiences are the result of meticulous preparation and execution.

E-Learning Transforms Future Education

The future of education is being rapidly transformed by the introduction of innovative approaches, resources, and models that promote engagement, customization, and accessibility. Significant progress is being made during this time of change. The introduction of e-learning has been the driving force behind this massive transformation in the educational landscape. Thanks to the rise of online education, which does away with geographical barriers, students worldwide can now have access to first-rate teaching tools and resources. As a result, individuals from different parts of the globe can expand their knowledge. In turn, this democratizes educational chances since more people can afford to get an education. Students can accommodate various schedules and personal activities because instructional content is accessible 24/7. This is going to be helpful for the kids. AI and other complex algorithms have made it feasible to personalize instruction and assessment based on each student's strengths, weaknesses, interests, and past performance. This capacity is coming to fruition as these systems evolve. The learning and teaching processes are substantially improved When students collaborate to understand complex ideas, evaluate alternative perspectives, and participate in question-and-answer sessions. Educators who create an environment that recognizes and commends pupils for their analytical thinking and academic success may pave the way for such opportunities. Part of this is getting pupils to think creatively, critically, and about the future. The usage of online classrooms for the international propagation of these new ideas has risen in the past few years. More and more institutions are embracing e-learning approaches, combining online and traditional classroom training. According to figures collected by the Form Research Centre, most four-year colleges and universities offered some form of

FULL TEXTS BOOK

online course in 2010 and 2011. A hybrid, online, or distant learning technique would have been more beneficial, according to Parker, Lenhart, and Moore (2011). A third of undergraduates participated in programs offered only online in 2013, as Allen and Seaman (2013) reported. The outcome is that every student will get a personalized education based on their desires and needs. Incorporating additional hands-on activities and allowing students greater freedom to examine material at their own pace, this course is well-suited to help students prepare for life in the modern era.

E-learning covers many diverse topics in a somewhat subjective time frame. Utilizing computers to enhance education stands out the most. There is an endless variety of configurations for an online classroom, and some might not work with one another. Even thinking about it makes me nervous. Since it has so many different qualities, describing it and understanding how its functions is challenging. Among the many potential business uses is improving educational settings (Shoppers, P. A. C., 2018). Incorporating multimedia elements such as movies, simulations, and interactive exercises into e-learning platforms has the potential to elevate and optimize the learning process. It is possible to incorporate various aspects of gaming into educational activities. Features such as leader boards, challenges, and badges are a part of this. As we lead students through their learning journey, we aim to enthral and excite them. Teachers can provide their students with internet access to lesson plans through e-learning, allowing for instructional content distribution. This time savings will allow teachers to concentrate on presenting students with a more robust curriculum while students can participate in more meaningful conversations and hands-on activities. A more adaptable and comprehensive method of education can be developed by combining online and in-person instruction. This approach takes advantage of and improves upon the numerous strengths of both approaches to teaching-learning and transforms education in the modern era.

E-learning platforms collect data, such as student interactions and grades, that can provide teachers with valuable insights into their students' strengths and areas for improvement. By analysing data, we can predict how well children will do and catch problems before they escalate so we can help them when they genuinely need it. Businesses and institutions can save money by providing e-learning instead of constructing expensive new facilities to accommodate additional students. The potential for online education to drastically lower the cost of conventional schooling is high because it does away with the necessity for textbooks, computers, and teachers. Anyone can improve their education and career prospects using the information available online. We devoted the first year to studying e-learning and its possible uses in creating models. It appears that this instructional design class agrees that e-learning has numerous benefits. We considered online and traditional classroom settings when developing our Edmodo e-learning methodologies. The present work was finished after evaluation, following the analysis, design, development, execution, and completion (Siagian, S., Sinambela, P. N. J. M., & Wau, Y, 2020). Learners can rapidly acquire specialized knowledge or skills using condensed, concise learning modules to promote continual progress and adaptability to changing job demands. Students from around the globe can freely exchange and discuss information in online classes. There is an improvement in peer support and learning quality when people work together on projects and participate in online discussion groups. Nowadays, we have access to various evaluation tools, including quizzes, interactive simulations, and peer-reviewed assignments. Quick comments on tests help students see where they excel and where they need more work to transform education in the modern era.

Students can supplement their traditional classroom instruction with digital materials or spend all day in a virtual environment using these tools. Artificial intelligence allows us to automate administrative processes, create personalized learning paths, and provide virtual instruction or support. Low-income and rural residents do not have equal access to technology and the Internet, making this an enormous issue. Online learning must be regularly updated with new course materials and delivery techniques to ensure its success and reliability. It takes careful planning and execution to create strategies that engage kids in a digital setting. In profound ways, e-learning is altering the educational landscape by allowing

FULL TEXTS BOOK

for innovations in learning that were previously unimaginable. One promising avenue for the future of international knowledge development and innovation is e-learning, made possible by the dizzying rate of technical advancement to transform education in the modern era.

Conclusion

Finally, e-learning is an ever-evolving field that adapts to the needs of today's students by capitalizing on the various digitally-enabled learning opportunities that are accessible, personalized, and adaptive. As computer and communication technologies improve, the benefits of distance learning will only increase. To help students see the world outside the four walls of a typical classroom, it employs various teaching strategies that use online resources. Even the busiest people can use online learning's convenience to further their careers and develop their skill sets at their own speed. Many game-changing innovations have occurred in education since the advent of the internet. Because of their familiarity with cell phones, messaging apps, and the internet, modern students have no trouble participating in or managing an online course. The significance of online education is anticipated to grow as time passes and technology advances. The rapid development of technologies such as adaptive learning, virtual reality, and artificial intelligence could drastically alter the future of education. We sincerely wish to build an educational system that is innovative, accessible, and successful, and we must address the existing problems and accept new technologies. With the right e-learning resources, education is now within reach of almost anybody, thanks to the proliferation of affordable e-learning platforms that transform education in the modern era.

SOLID WASTE SERVICES IN CITIES IN THE CONTEXT OF MIGRATION AND ENVIRONMENTAL ISSUES: GAZİANTEP METROPOLITAN MUNICIPALITY

Assoc. Prof. Dr. Ömer Faruk TEKİN
Selçuk University

ABSTRACT
Environmental problems, which are already difficult and costly to solve by their qualifications, are becoming bigger problems in the cities with increasing population, industrializing, and migrating. The population growth, industrialization and even regular migration occur at a certain pace. This may provide some time for public administrations to take some measures and prepare the infrastructure of services for increasing needs. However, the wave of global migration, which started with the Syrian War, took place very quickly and captured the urban and state administrations unprepared.
Meet the vital needs (such as health, safety, shelter, and nourishment) of Syrian refugees who took refuge in Turkey, are more priority services fulfilled by central government and local governments. As these intensive refugee flows increased the number of people living in urban areas, even in the implementation of basic municipal services there emerged major difficulties. It has taken some time to adapt to this rapid change in services that require significant plans, projects, and high costs, such as solid waste services. However, in the following periods, it has been observed that the services required for the solution of the environmental and infrastructure problems have also started to be fulfilled.
This study focuses on intensive immigration cities, where those services for refugees are offered. In these cities, there are difficulties in the fulfilment of solid waste services, such as many basic local services. In the study, a conceptual framework will be presented primarily on migration and environmental issues. The administrative, political, financial, and social aspects of solid waste services will be examined, and their importance will be emphasized in terms of city and environment. Finally, the problems of solid waste in Gaziantep, which is the most affected by the Syrian crisis and hosts a large number of refugees, will be approached and the solid waste services of Gaziantep Metropolitan Municipality will be examined.
Keywords: Migration, Environment, City, Municipality, Solid Waste Services

INTRODUCTION

Human and economic activities such as agriculture and tourism, industrialization, urbanization, and rapid population growth are the main causes of environmental problems. With industrialization, population movements from rural areas to cities began to increase. While the population of cities is rising, urban services, infrastructure, superstructure, and housing stock in these settlement areas have not developed at the same pace. In addition to the negative consequences of the inadequate built environment, the natural environment and resources are rapidly consumed and polluted.
However, population growth, industrialization, and even regular migration occur at a certain pace. This may provide some time for city administrations to take some measures and prepare the infrastructure of services for increasing needs. On the other hand, the global migration wave that started with the Syrian War took place very quickly. It caught both central government institutions and local governments unprepared. As the population living in cities increases rapidly, there have been great difficulties in even providing basic municipal services. It took some time to solve the problems encountered especially in high-cost services that require long-term plans and projects, such as solid waste management.

1. ENVIRONMENTAL PROBLEMS IN IMMIGRANT-RECEIVING CITIES

Today, which is considered the information age, cities continue to receive immigration and the urban population is all the more increasing. However, this rapid population growth in urban areas brings with

FULL TEXTS BOOK

it many environmental problems. These environmental problems in migration-receiving cities can seriously affect the quality of life of local people and immigrants. Threats to the environment observed in cities that receive intense immigration are as follows:

- First of all, basic infrastructure deficiencies emerge in cities that receive intense immigration. Issues such as inadequacy of water and sewage systems and difficulties in waste management increase public and environmental health risks. Problems such as unplanned construction and slums cause uncontrolled deterioration of the urban environment.
- The second threat to the environment in immigrant-receiving cities is the problem of overconsumption of natural resources. The insufficiency of the built environment leads to rapid exploitation and pollution of the natural environment and resources. Pollution and excessive consumption of water resources, destruction of forests, and conversion of agricultural lands into residential areas damage biodiversity. The natural environment is important for a good urban environment. Damage to natural resources and ecosystems can endanger environmental sustainability.
- Finally, rapid population growth increases energy needs in cities. This increases the overuse of fossil fuels and therefore greenhouse gas emissions. In addition, heavy traffic and industrial activities cause air pollution.

In case of rapid and intense migration, city governments experience some difficulties in providing health, education, housing, social services, and infrastructure services (Güven, 2016). While newcomers to the city wait for many services to reach them, there may be poor quality and disruptions in the services of local people. There are traffic and transportation problems, a lack of green areas and parking spaces, electricity, drinking water, and sewage problems, and deficiencies in health and education. These lead to irregular and unplanned development of the city and some environmental problems (Ceritli, 1995):

- Disorganization of waste management and street cleaning services
- Deficiencies in water and sewage services
- Traffic problems and inadequacy in transportation services
- Spatial planning problems and unplanned use of land
- Illegal construction and slums (squatting)
- Exploitation and pollution of the natural environment and resources
- Deterioration of the social and cultural environment
- Destruction of forests, green areas, and agricultural areas

Irregular and unplanned urban development in cities that receive intense and rapid migration can lead to such environmental problems. There has been an intense and rapid influx of people to other countries since the civil war that started in Syria in 2011. Such a wave of migration, of course, affected the cities receiving immigrants more.

In Gaziantep, one of the cities where the highest number of refugees migrated from Syria, the problems listed above have been largely experienced. However, this study focuses on the difficulties experienced in solid waste management in Gaziantep and the services provided.

2. SOLID WASTE SERVICES IN CITIES THAT RECEIVE INTENSIVE MIGRATION: GAZİANTEP METROPOLITAN MUNICIPALITY

Providing solid waste services in cities that receive intense migration is one of the most important challenges for city administrations. It is possible to collect these difficulties under four headings:

- First, the amount of waste produced is increasing. Rapid population growth rapidly increases solid waste generation (the amount of waste generated per person per day) and challenges the current waste management system.

FULL TEXTS BOOK

- Solid waste management infrastructure remains inadequate. The current waste collection, transportation, processing, and storage infrastructure is falling short of meeting the rapidly growing amount of waste. Waste management projects are based on very costly and time-consuming practices.
- Inadequacy in solid waste services poses dangers to the environment and public health. It can lead to serious health and environmental problems such as depletion and pollution of natural resources, and soil, water, and air pollution.
- Legal and administrative inadequacies may cause solid waste services to be disrupted. If the legal frameworks, administrative decisions and policies regulating solid waste management are missing or weak, effective management cannot be achieved.

In addition to cities that normally already receive intense immigration, increasing global migration movements in recent years have become a significant challenge for city administrations. The wars and civil conflicts in Afghanistan, Iraq and most recently Syria have forced many people to relocate. Infrastructure services, especially solid waste management, emerge as a major problem in regions where immigrants and refugees densely live.

The number of refugees and asylum seekers is important to examine the effects of migration and refugee population on solid waste services in the city of Gaziantep, where this study focuses. Gaziantep hosts a significant refugee population after waves of immigration from Syria and other surrounding countries in recent years.

Table 1. Population of Gaziantep Province by Years

Year	Population
2009	1.653.670
2010	1.700.763
2011	1.753.596
2012	1.799.558
2013	1.844.438
2014	1.889.466
2015	1.931.836
2016	1.974.244
2017	2.005.515
2018	2.028.563
2019	2.069.364
2020	2.101.157
2021	2.130.432
2022	2.154.051
2023	2.164.134

Source: TÜİK, 2024

According to 2023 TÜİK data, the population of Gaziantep province is announced as approximately 2 million 164 thousand. As seen in Table 1, the population of Gaziantep, which is already becoming crowded every year, has increased by more than half a million in the last 15 years. After the civil war started in Syria in 2011, a large influx of refugees began to Gaziantep, one of the closest cities. In Table 1, asylum seekers accepted under "temporary protection" are not included in the figures. According to the data of the Ministry of Internal Affairs, Directorate of Immigration Management, dated July 11, 2024, the number of Syrians under temporary protection within the provincial borders of Gaziantep is around 430 thousand. In addition, more than 10 thousand foreigners in Turkey with a "residence permit" live in Gaziantep (Göç İdaresi Başkanlığı, 2024). All these data show that approximately 17 percent of the number of people living in Gaziantep are Syrian refugees and the population living in the city exceeds 2 million 600 thousand.

FULL TEXTS BOOK

In Gaziantep province, there are 9 district municipalities in addition to the metropolitan municipality. District municipalities are responsible for collecting waste within their borders and transporting it to facilities. The metropolitan municipality is responsible for the preparation of the solid waste management plan within the provincial borders and the management and coordination of the system. The metropolitan municipality has duties and powers, especially regarding solid waste facilities, that is, the separation, processing, recycling, and storage stages of solid waste management.

Table 2 shows the increase in solid waste collected in Gaziantep over the years. The amount of waste produced increases in direct proportion to the increase in population. However, the large increase, especially between 2010 and 2012, seems to be compatible with the period when the effects of the refugee influx were most visible.

Table 2. Amounts of Solid Waste Collected in Gaziantep Province by Years

Year	Ton
2001	263.327
2002	305.767
2003	344.140
2004	337.572
2006	443.512
2008	410.554
2010	413.233
2012	522.679
2014	584.017
2016	637.478
2018	650.984
2020	676.082
2022	682.796

Source: TÜİK, 2022

There are two solid waste regular storage areas in Gaziantep, one in the center and the other in the Nizip district (Table 3). At the same time, an average of 2 thousand tons of waste per day arrived in these landfills, where electrical energy is produced, in 2023. Since the storage life of these areas is about to expire, it is planned to build a new regular storage area in the Şehitkamil district (Dündarlı village). The waste coming to the Central Solid Waste Regular Landfill is taken to the "mechanical biological separation facility" and sorted. 100 thousand tons of urban waste is processed annually in this facility. The amount of packaging waste separated from domestic waste in 2023 is 1665.27 tons (Gaziantep Büyükşehir Belediyesi, 2024).

This modern waste separation facility fulfills an important function in solving the solid waste problem caused by overpopulation in the city due to the Syrian refugee crisis. The facility was built by the United Nations Development Program (UNDP) with financial support of 9.2 million euros from the European Union, in partnership with İlbank and Gaziantep Metropolitan Municipality. The facility, one of the largest in Europe in its class, exemplifies circular economy principles. When operational at full capacity, it is expected to produce biogas and recycled resources and provide additional income to the municipal budget (UNDP, 2021).

Table 3. Solid Waste Facilities in Gaziantep

Location	Facility	Start of Activity
Gaziantep Merkez	- Central Solid Waste Sanitary Landfill	2007
	- Electrical Energy Production Facility	2011
	- Mechanical Biological Waste Separation Facility	2022

İslahiye	- Fevzipaşa Solid Waste Transfer Station	2018
Araban	- Muratlı Solid Waste Transfer Station	2018

Source: Gaziantep Büyükşehir Belediyesi, 2024

Table 3 shows the solid waste facilities in Gaziantep. All but two of these facilities were built after 2011, when the refugee influx began. A regular landfill was established in Nizip in 2015, and other facilities were later built. New facilities are still being planned within the solid waste management system. To briefly summarize, in Gaziantep, in addition to 2 regular landfills, there are 2 landfill gas electricity generation facilities, 1 mechanical biological separation facility, and 3 solid waste transfer stations.

One of the waste transfer stations is in the Şehitkamil district, and the others are in Fevzipaşa and Muratlı villages. Approximately 1000 tons of domestic solid waste comes to the Şehitkamil waste transfer station daily. Waste is disposed of by transporting it to the central solid waste landfill via tractors and semi-trailers. The waste collected from the İslahiye and Nurdağı districts is brought to the Fevzipaşa waste transfer station, and the waste collected from the Araban and Yavuzeli districts is brought to the Muratlı waste transfer station. These two facilities receive approximately 120 tons and 60 tons of urban solid waste per day, respectively. Wastes are disposed of by being transported to the regular landfill in the center (Gaziantep Metropolitan Municipality, 2024).

CONCLUSION

The rapid increase in population in Gaziantep province due to intense migration and refugee influx, naturally, negatively affects the effectiveness of solid waste management services. While city governments in Gaziantep worked to meet the urgent and vital needs of refugees, they also made efforts for long-term services such as solid waste management. Since their budgets were not sufficient for these long-term and high-cost services, they cooperated with national organizations such as the GAP (Southeastern Anatolia Project) Regional Development Administration, and İlbank and international organizations such as the European Union, United Nations Development Program, and Japan International Cooperation Agency (JICA). They also partnered and cooperated with private sector organizations to provide some services and establish facilities (Gaziantep Büyükşehir Belediyesi, 2017; 2024; UNDP, 2024; GAP, 2024; Gökşin, 2018).

The Gaziantep example provides some useful information for local governments to provide effective, efficient, and economical solid waste services in cities that receive intense and rapid migration:

- First of all, the urban infrastructure as well as the infrastructure related to the solid waste management system should be strengthened. Solid waste services must be carried out strictly in accordance with an integrated and sustainable solid waste system.
- Integrated and sustainable solid waste management plans should comply with the waste hierarchy accepted in the sector and literature. In other words, waste reduction should be the priority and zero waste should be targeted.
- In addition to long-term policies and strategies, short-term plans should not be ignored.
- Technological innovations such as smart waste collection systems, waste separation, and recycling facilities should be utilized.
- Strengthening cooperation between the public sector and the private sector will provide advantages in improving the waste management infrastructure.
- Local, national, regional, and international cooperation opportunities should be explored in costly projects required for the solid waste management system.

FULL TEXTS BOOK

- Education and information activities that are inclusive of urban citizens, immigrants, and refugees and encourage social participation should be carried out.
- Participation and information activities regarding solid waste should be carried out with a multicultural understanding.

Solid waste management problems encountered in cities that receive intense and rapid migration are of great importance not only in terms of environment and public health but also in terms of urban life quality and sustainability. Integrated approaches, technological innovations, social participation, and effective governance are issues that should not be neglected to solve these problems.

For sure, it is not an easy task to quickly respond to a large wave of immigration, population growth, and the increase in the amount of solid waste with solid waste services. Solid waste management is one of the leading urban services that require great cost and time. It is based on planning and coordination, large investments, projects, and facilities. In addition, it is closely tied to public participation and good governance elements. This process is also challenging for Gaziantep in terms of time and cost, management, and planning. Nevertheless, there have been significant developments in the field of solid waste.

ABSTRACT
Afghanistan is a landlocked country located at the crossroads of Central Asia and South Asia. Occupying 652 230 km^2 of land, the country is predominantly mountainous with plains in the north and the southwest, which are separated by the Hindu Kush mountain range. It is an agricultural country where approximately 80% of the population is engaged in agriculture and animal husbandry. The agricultural and livestock sectors play a crucial role in improving the livelihoods of rural communities and meeting the needs of urban areas. However, agricultural productivity is low due to high insufficiencies. Food storage and processing are essential for improving the availability of diverse foods throughout the year. Despite the significant scale of agricultural production, the lack of technical facilities and machinery hampers full processing, resulting in most products being exported as raw materials. Agricultural products produced in Afghanistan mainly include food products such as fruits, vegetables, grains, and legumes. Simple techniques like drying fruits and vegetables and making pickles are common, but there is potential to enhance these practices to improve food quality and security. Traditional food processing involves post-harvest handling, sorting, washing, packaging, and storage, often done manually. Establishing processing and packaging centers enhances the potential for local and export markets. This study examines the food production of Afghanistan and provides insights into the significance of traditional food products in the country's food sector.
Keywords: Afghanistan, Agriculture, Livestock, Traditional Food Products, Food Processing

INTRODUCTION
Afghanistan is located in Central Asia with Iran to the west, with Turkmenistan, Uzbekistan, and Tajikistan to the north, with Tajikistan and China to the east and with Pakistan to the south. The country covers an area of 652,860 km^2 and has Kabul as its capital (Bashiri, 2002). In 2023, the total Afghan population was estimated to be 43 million, with approximately 85 percent living in rural areas. However, these numbers can vary significantly due to the ongoing impacts of conflict and instability in the country. The major ethnic groups include Pashtun, Tajik, Hazara, and Uzbek (Bashiri, 2002).
Afghanistan is an agricultural country with approximately 80% of the population engaged in agriculture and animal husbandry. Agriculture and livestock products not only improve the villages' lives but also meet the cities' needs. These two sectors play a crucial role in improving the livelihoods of rural communities and meeting the needs of urban areas.
Agricultural products that Afghanistan is known for can be listed as wheat, fruits (Kandahar pomegranates, grapes, apricots etc.), nuts (almonds and pistachios), vegetables (i.e. potatoes, onions), and saffron. Livestock farming, including sheep, goats, and cattle, is also plays a vital role in the agricultural sector, providing meat, milk, and wool. The country was once self-sufficient in livestock products. However, agricultural productivity is low due to high insufficiencies (practical, allocative, and economics). The lack of technical facilities and machinery hampers full processing, resulting in most

FULL TEXTS BOOK

products being exported as raw materials. Also challenges such as lack of resources, water scarcity, inadequate agronomic methods, lack of crop storage facilities, low-quality seeds, inadequate infrastructure, high input cost, security issues, climate change, outdated farming techniques, market access, financial constraints, education and training collectively hinder the growth and efficiency of agricultural sector of the country (Samim & Zhiquan, 2020). Consequently, most products are exported as raw materials and are then processed and marketed abroad.

Afghanistan's key exports consist of vegetable saps, fresh and dried grapes, carpets and other textile floor coverings, as well as fresh and dried fruits. The country's primary imports include wheat and meslin flour, textile braids, animal or vegetable fats and oils, petroleum gas, machinery, and surgical instruments. The main importers of Afghan products are Pakistan, India, Iran, Türkiye, and Iraq, while the leading sources of Afghan imports are Iran, Pakistan, China, Kazakhstan, and Uzbekistan (Mazhar, 2020).

Despite Afghanistan's rich agricultural output, including fruits and vegetables, many families still lack diverse food, especially in remote areas during winter. The country has intense and prolonged winters, especially in the Central Highlands, Northern Plains, and the Hindu Kush range. The cold and snow restrict the local availability of fresh foods and hinder the transport of the different types of food from other regions. As a result, many families face significant food insecurity and malnutrition for several months each year. This limited diet contributes to widespread micronutrient deficiencies, particularly affecting mothers and children. However, the country is slowly regaining crop production, with positive developments such as the spread of improved seeds and increased use of fertilizers contributing to food production recovery.

The amount of agricultural production in Afghanistan is not consistently monitored or reported by government agencies. This lack of comprehensive data makes it difficult to assess the true scale and trends in the food industry.

Food Processing and Storage

Many Afghan families currently employ basic food storage and processing methods, such as drying fruits and vegetables or producing pickles. However, there is potential to enhance these processed foods' quality and diversify the techniques utilized. Introducing advanced food processing in regions where it is not yet common-such as Bamyan, Badakhshan, Ghor, and Daikundi, which are typically food-insecure, could positively impact household food security, nutrition, and income. Due to limited awareness and knowledge about simple post-harvest food processing techniques, food losses are generally high in Afghanistan.

Traditional food processing techniques that have been used for generations to preserve and enhance the products are given below:

Sun-drying is a common method used for preserving fruits such as grapes (for raisins), apricots, and vegetables. This technique involves spreading the produce in the sun to remove moisture, preventing spoilage and extending shelf life.

Salting and drying are traditional methods for preserving meat. The meat is first salted to draw out moisture and then dried.

Fermentation is used to produce a variety of dairy products such as yogurt and kurut. This technique not only preserves milk but also enhances its nutritional value and flavor.

Pickling is a popular method for preserving vegetables. Cucumbers, carrots, and other vegetables are immersed in a solution of vinegar, salt, and spices, creating flavorful pickles that can be stored for long periods.

Drying herbs and spices: Herbs like mint and coriander, as well as spices like saffron, are traditionally dried to preserve their flavor and potency. These dried herbs and spices are essential ingredients in Afghan cuisine.

FULL TEXTS BOOK

Grinding and Milling (Flour Production): Traditional stone mills are often used to grind grains such as wheat into flour. This method retains more nutrients compared to modern milling techniques and is still practiced in many rural areas.

Jams and Preserves: Making jams and fruit preserves is a traditional technique for extending the shelf life of fruits.

In some areas of Afghanistan, simple coolers are used for storage. These coolers are effective in maintaining lower temperatures and preserving products. Additionally, underground storage pits and caves are utilized for storing vegetables like potatoes and root crops. These traditional methods help extend the shelf life of produce in regions where modern storage facilities may be lacking.

Industrial Food Processing

Afghanistan's food industry plays a pivotal role in both the domestic and regional economies. The combination of traditional and modern processing techniques is crucial for enhancing the quality and sustainability of agricultural products.

Afghanistan remains an agrarian country with most analyses holding food production and processing as key to recovery. Increasing food processing capacity throughout Afghanistan has become a central focus of the central government of Afghanistan, development organizations, and private investors. Recently, the establishment of food processing companies in order to better exploit Afghanistan's products has attracted more attention from the public and private sectors. Practical steps have been taken to establish new food processing companies, and a large number of companies have started their activities in various sectors. However, their work is in the early stages and can be improved according to the relevant departments (Tavva et al., 2019).

A list of food production and processing factories has been prepared by the Ministry of Agriculture; however, this list is not completed, and many factories are not included in it (Table 1).

Table 1. Food Production and Processing Companies in Afghanistan (Noori, 2020)

No	Name of Factory	Activity	Location
1	Afghan Rice Processing and Packaging Company	Rice production / processing	Nangarhar
2	Afghan Women Fruits/Vegetables Processing Company	Food production	Kabil
3	Arab Rice Production and Processing Company	Rice production / processing	Laghman
4	Armin Agricultural Company	Food production	Balkh
5	Aryan Agricultural Company	Food production	Kabil
6	Baghlan Rice Production and Processing Company	Rice production / processing	Baghlan
7	Bahar Biscuit Production Company	Food production	Kabil
8	Bamyan Company	Food production	Kabil
9	Chiefs Nan Pazi	Food production	Kabil
10	Dil Pesand Company	Food production	Kabil
11	Dinar Khel Company	Food production	Kabil
12	Easy Food	Food production	Kabil
13	Etehad Jawedan Company	Food production	Balkh
14	Faqiri Food Production Company	Food production	Kabil
15	Farhangesh Company	Food production	Balkh
16	Firooz Nouri Food Production Company	Food production	Balkh

21	Hery Dunya Company	Food production	Kabil
22	Hivad Doost Group Agricultural Company	Food production	Kabil
23	Ispar Aria Company	Food production	Kabil
24	Kabul Super Company	Food production	Kabil
25	Kabul Zubair Beyk	Food production	Kabil
26	Maiwand Asia Company	Lentils processing	Kabil
27	Muzaffar Ebadi Food Production Company	Food production	Balkh
28	Nan Khoshmaza Production Company	Food production	Kabil
29	Nawin Afghan Company	Food production	Kabil
30	Noor Safi Limited Company	Food production	Herat
31	Sami Ebrahim Rice Processing and Packaging Company	Rice production / processing	Nangarhar
32	Shad Mir Food Production Company	Food production	Balkh
33	Shoaib Faisal Company	Food production	Kunduz
34	Suharab Company	Food production	Kabil
35	Super Rayhan Company	Food production	Kandahar
36	Yaksad Agricalcural Company	Food production	Kabil
37	Zahed production, processing and packaging company	Rice production / processing	Kabil
38	Zer Dast Company	Food production	Kunduz

12 fruit processing and packaging centers were established in five provinces of Afghanistan. Each center has a processing capacity of 7 tons of fruit per day, which includes washing, grading, and packaging. At present, Afghan fruits are mostly sold in the markets in the traditional way. Fruit processing companies are not yet operating in the country, and the fruits are transferred to the markets through plastic bags. Improper transportation and packaging of Afghan fruits cause even these fruits to rot and lose their quality until they reach local markets.

Afghanistan’s expanding food and beverage processing sector reflects the country’s core strengths in dried fruits and nuts, as well as new products typically supplied as imports, such as bottled water, soft drinks, and vegetable oil. Raisins dominate this sector, as the largest economic horticultural crop in Afghanistan, and its primary export commodity and the legacy of a traditional Afghan industry once accounted for 60% of the world raisin market.

These exports play a crucial role in the country's economy by generating revenue and supporting livelihoods. The production and export of the goods create job opportunities for many Afghans, supporting local communities and promoting economic development. While exporting these products brings economic benefits, there are challenges such as market access, quality control, unreliable data, limited modern storage facilities, and logistical issues. Addressing these challenges and exploring new markets can further boost the impact of these exports. In addition, by focusing on improving production efficiency, expanding market access, and embracing both traditional and modern practices, Afghanistan can enhance its food security, increase its regional integration, and boost economic growth. Moving forward, continued investment in infrastructure, technology, and training will be essential to support these goals and ensure a prosperous and sustainable future for Afghanistan's food industry.

FULL TEXTS BOOK

According to the data reported by spokesman for the Ministry of Industry and Commerce, Afghanistan has exported 255 tons of fresh fruit so far this year to India, Europe and some Arab nations, making 30 percent increase compared to the same period in 2018 (Jahanmal, 2021).

According to the Afghanistan Chamber of Trade and Investment, the list of the latest food products exports is listed in Table 2. The list also includes countries to which food products have been exported with the amount of ingredients and the total price of each item.

Table 2. List of food products exported from Afghanistan in 2019 (Popal, 2020)

No	Product	Product quantity (kg)	Price ($)	Country to which product was exported
1	Red raisins	14 640 000	43 920 400	Turkey, Pakistan, Russia, Kazakhstan, Iran, Australia, Saudi Arabia, Netherlands, China, India, Germany, Spain + 20
2	Green raisins	525 549 300	3 678 845 000	India, Dubai, Germany, Canada, USA, Australia, Iran, UK, Sweden, Saudi Arabia, Pakistan, New Zealand, Turkey + 18
3	Black raisins	822 856 200	5 759 993 500	India, Dubai, Iran, Kuwait, Kazakhstan, Germany, Canada, Turkey + 20
4	Abjosh raisins	1 244 410 700	6 222 053 540	India, Dubai, USA, Canada, Turkey, China
5	Pistachio	135 315 900	1 930 725 900	India, Lebanon, Turkey, Dubai, USA, Germany, Canada, France, Japan, UK, Sweden, Kazakhstan, Uzbekistan, China, Malaysia, Norway + 14
6	Almond	5 237 100	40 039 000	Turkey, Dubai, Germany, India, Saudi Arabia, Iran, Australia, Iraq, Pakistan, USA, Kuwait, UK + 10
7	Chilgoza	18 700	617 150	India, Dubai, UK, USA, Australia, Pakistan, Sweden, Turkey, New Zealand, France + 7
8	Walnuts	2 138 000	4 413 800	India, Dubai, Pakistan, UK, Belgium, Germany, Sweden, Japan, USA, Turkey + 7
9	Dried fig	10 395 700	75 888 700	India, Dubai, Germany, USA, Canada, UK, Pakistan, Kuwait, Qatar, Australia + 9
10	Saffron	32 000	27 428 700	India, Saudi Arabia, Dubai, USA, Spain, Germany,

Investors in the food and beverage processing sector can capitalize on large, adjacent consumer markets, and Afghanistan's growing domestic population. The fact that most processed food and beverage items are currently imported into Afghanistan to meet local demand shows clear potential for production in the country. In terms of exports, Afghanistan now provides only 2% of the US$2.2 billion, 1.3 million-

FULL TEXTS BOOK

ton world market for raisins, pistachios, almonds and walnuts. India and Pakistan-two of the world's most populous countries-are proximate, natural buyer markets for Afghan products. In fact, Afghanistan's traditional fruit products, especially raisins, already are a recognized quality brand and common cooking ingredient among India's one billion consumers. In addition, the reduced import duties of several preferential trade agreements provide a strong incentive for exporters in Afghanistan. A recent agreement with India covers many dried and fresh fruits and nuts, including Afghan green, black, golden and red raisins.

CONCLUSION AND DISCUSSION

Afghanistan's food industry plays a pivotal role in both the domestic and regional economies. The combination of traditional and modern processing techniques is crucial for enhancing the quality and sustainability of agricultural products. The country's key exports, such as raisins, pistachio, and saffron, not only contribute significantly to its trade balance but also bolster employment and economic development. However, challenges such as unreliable data, limited modern storage facilities, and market access issues must be addressed to fully realize the potential of Afghanistan's food sector. By focusing on improving production efficiency, expanding market access, and embracing both traditional and modern practices, Afghanistan can enhance its food security, increase its regional integration, and boost economic growth. Moving forward, continued investment in infrastructure, technology, and training will be essential to support these goals and ensure a prosperous and sustainable future for Afghanistan's food industry

ÖZET
Afganistan, Çin ve Hindistan'ı birbirine bağlayan enerji koridoru üzerinde bulunan stratejik konumda bir ülkedir. Ülke ekonomisi ağırlıklı olarak tarım ve hayvancılığa dayalı olup süt ve süt ürünleri en önemli tarım ürünlerindendir. Hayvancılık, ülkedeki çiftçiler ve aileler için en önemli gelir kaynaklarının başında gelmektedir. Ancak, Afganistan uzun süren çatışmalar, altyapı eksiklikleri ve sınırlı teknolojik ilerlemeler gibi birçok negatif durumla karşı karşıyadır. İklim krizi, kuraklık, sezonluk ürün dalgalanmaları, yetersiz soğuk zincir altyapısı ve sınırlı pazar erişimi de gıda sektörünün gelişmesini yavaşlatan temel etmenler arasındadır. Tüm bu zorluklara rağmen, Afganistan süt endüstrisi dikkate değer bir dayanıklılık ve büyüme potansiyeli göstermektedir. Ülkede üretilen süt ürünleri genellikle inek sütünden yapılmaktadır. İnek sütünün yanı sıra keçi, koyun, manda ve deve sütlerinden de geleneksel olarak yapılan süt ürünleri bulunmaktadır. Genellikle geleneksel süt ürünleri küçük çaplı işletme ve ev işletmelerinde yapılıp satışa sunulmaktadır. Üretilen süt ve süt ürünleri; taze süt, kaymak, yoğurt, süzme yoğurt (chaka), ayran (doogh), peynir, kurut, tereyağı ve krema olarak sıralanabilmektedir. Bu ürünlerin çoğu hem geleneksel olarak hem de endüstriyel boyutta üretilmektedir. Bunun yanı sıra süt kullanılarak yapılan çeşitli içecek, yemek ve tatlılar bulunmaktadır. Bu çalışmada Afganistan'ın süt üretimi incelenerek geleneksel süt ve süt ürünlerinin üretimi ile ilgili bilgiler verilmiştir.
Anahtar Kelimeler: Afganistan, Süt Üretimi, Geleneksel Süt Ürünleri, Süt Endüstrisi

GİRİŞ
Afganistan, 652 230 km^2 alan ile Asya'da denize sınırı olmayan 1919 yılından itibaren bağımsız bir devlettir. Ülkenin kuzeyinde Türkmenistan, Özbekistan ve Tacikistan, doğusunda Tacikistan ve Çin, güneyinde Pakistan ve batısında İran bulunmaktadır (Bashiri, 2002). Afganistan, Çin ve Hindistan'ı birbirine bağlayan enerji koridoru üzerinde bulunan stratejik konumda bir ülkedir.

Afganistan'ın ekonomisi, topraklarının sadece %15'i ekilebilir olmasına rağmen, ağırlıklı olarak tarım ve hayvancılığa dayanmaktadır. Ülkede tarım ve hayvancılığın, özellikle de koyun ve keçi yetiştiriciliğinin önemi büyüktür (T.C. Ticaret Bakanlığı, 2020). Sanayi üretimi ise ağırlıklı olarak küçük çapta tekstil, sabun, mobilya, ayakkabı, gübre, çimento, el yapımı halılar, doğal gaz, yağ, kömür, bakır, mermer işletmelerine dayanmaktadır (T.C. Ticaret Bakanlığı, 2020).

Afganistan'ın ekonomik görünümü 2001 yılından beri, uluslararası yardım akışı ve dört yıllık bir kuraklığın ardından, artan yağışlarla tarımsal üretimde gözlenen çarpıcı artış sayesinde önemli ölçüde iyileşmiş olmakla birlikte, ülke halen dünyanın en fakir ülkelerinden biridir. Diğer taraftan, ülke ekonomisi 2005-2017 yılları arasında yıllık ortalama yaklaşık %8.3 oranında artarken, 2018 yılında %3 oranında artışın olduğu bildirilmiştir. Bu düşüşte olumsuz hava koşulları büyük rol oynamıştır (T.C. Ticaret Bakanlığı, 2020).

Süt ve süt ürünleri en önemli tarım ürünlerindendir. Hayvancılık, ülkedeki çiftçiler ve aileler için en önemli gelir kaynaklarının başında gelmektedir. Ancak, Afganistan uzun süren çatışmalar, altyapı eksiklikleri ve sınırlı teknolojik ilerlemeler gibi birçok negatif durumla karşı karşıyadır. İklim krizi, kuraklık, sezonluk ürün dalgalanmaları, yetersiz soğuk zincir altyapısı ve sınırlı pazar erişimi de gıda sektörünün gelişmesini yavaşlatan temel etmenler arasındadır (Samim ve Zhiquan, 2020). Tüm bu zorluklara rağmen, Afganistan süt endüstrisi dikkate değer bir dayanıklılık ve büyüme potansiyeli göstermektedir. Hayvan yetiştiriciliğinde modern yöntemler kullanılmamasına rağmen hayvancılık, ülkedeki çiftçiler ve aileler için en önemli gelir kaynaklarının başında gelmektedir.
Son yıllarda ülkede süt sektöründe belirgin gelişmeler görülmektedir. Çizelge 1.'de 2019 yılında kaydedilen 26 süt ürünleri işletmelerinin listesi verilmiştir.

Çizelge 1. Afganistan'da faaliyet gösteren süt ve süt ürünleri işletmeleri (2019)

No	İşletme Adı	Üretilen Ürünler	Kullanılan Hammadde	Yer	İşletmenin Kuruluş Yılı
1	Afghan Maldar Fabrikası	Süt, krema, ayran ve tereyağı	İnek sütü ve süt tozu	Kandahar	-
2	Baghlan Süt Ürünleri Fabrikası	Yoğurt, peynir ve ayran	İnek sütü	Baghlan	2010
3	Balkh Süt Ürünleri Birliği	Pastörize süt, yoğurt, tereyağı, krema, peynir, chaka, shirpera	İnek sütü	Mezâr-ı Şerîf	2005
4	Chopan Herat Süt Ürünleri Fabrikası	Yoğurt, krema ve ayran	İnek sütü	Herat	2015
5	Dehqan Roz Mushtari Süt Fabrikası	Yoğurt, ayran, chaka ve krema	İnek sütü ve süt tozu	Kabil	2010
6	Family Süt Ürünleri Fabrikası	Yoğurt, süt, yağsız süt, chaka	İnek sütü ve süt tozu	Kabil	2016
7	Gulistan Arghawan Fabrikası	Peynir, ayran, krema ve yoğurt	İnek Sütü	Herat	2017
8	Habib Gulzar	Süt tozu	Süt tozu	Kabil	2019
9	Herat Ice Krema	Yoğurt, ayran, dondurma	İnek sütü ve süt tozu	Herat	2009
10	Herat Süt Ürünleri Birliği	Pastörize süt, yoğurt, tereyağı, krema, peynir, chaka	İnek sütü	Herat	2012
11	Hüseyni Şirketi	Yoğurt, ayran, chaka ve tereyağı	İnek sütü	Kabil	2017
12	Kabil Süt Ürünleri Birliği	Pastörize süt, yoğurt, tereyağı, krema, peynir, chaka	İnek sütü	Kabil	2005
13	Kamil Süt Ürünleri	Kurut, yoğurt ve ayran	İnek sütü ve süt tozu	Herat	2016
14	Khateez Süt Ürünleri Birliği	Pastörize süt, yoğurt, tereyağı, krema, peynir, chaka	İnek sütü	Celalabad	2015

FULL TEXTS BOOK

15	Kunduz Süt Ürünleri Birliği	Pastörize süt, yoğurt, tereyağı, krema, peynir, chaka	İnek sütü	Kunduz	2006
16	Mashaal (Bahare sabz)	Yoğurt ve ayran	İnek sütü ve süt tozu	Kabil	2011
17	Medo Süt Ürünleri	Yoğurt	İnek sütü ve süt tozu	Kabil	2017
18	Milko Süt Ürünleri Şirketi	Yoğurt, peynir, ayran, süt ve krema	İnek sütü ve süt tozu	Kandahar	2017
19	Mushtari Süt Fabrikası	Yoğurt ve ayran	İnek sütü ve süt tozu	Kabil	2015
20	Nishat Süt Ürünler	Süt, yoğurt, ayran ve krema	İnek sütü	Kabil	2019
21	Omid Bahar Milk Plus	Süt	Süt tozu	Kabil	-
22	Pakiza Süt Ürünleri	Yoğurt, ayran ve tereyağı	İnek sütü ve süt tozu	Mezâr-ı Şerîf	2015
23	Sada Süt Ürünleri	Yoğurt, chaka, peynir ve tereyağı	İnek sütü	Logar	2013
24	Shirgah Süt Ürünleri Sanayi Şirketi	Yoğurt, tereyağı, kurut, ayran ve krema	İnek Sütü	Herat	2017
25	Takhar Süt Ürünler	Süt, yoğurt, ayran ve chaka	İnek sütü	Takhar	2016
26	Tala Süt Ürünleri Fabrikası	Süt, yoğurt ve ayran	İnek sütü ve süt tozu	Kabil	2012

Çizelge 1.'de verilen işletmeler arasında en eski işletme olan Kabil Süt Ürünleri Birliği günümüzde de halen faaliyet göstermektedir. İşletmede pastörize süt, krema, tereyağı, sarı yağ, chaka, peynir, yoğurt ve ayran üretimleri gerçekleştirilmektedir. Ürünler, geleneksel yöntemlerle genellikle katkı maddeler kullanılmadan üretilip satışa sunulmaktadır. Ancak, yoğurdun üretiminde mikrobiyal transglutaminazın kullanıldığı görülmektedir.

Afganistan'da üretilen süt ürünleri genellikle inek sütü kullanılarak yapılmaktadır. İnek sütünün yanı sıra keçi, koyun, manda ve deve sütlerinden de geleneksel olarak yapılan süt ürünleri bulunmaktadır. Genellikle geleneksel süt ürünleri küçük çaplı işletme ve ev işletmelerinde yapılıp satışa sunulmaktadır. Üretilen süt ve süt ürünleri; taze süt, kaymak, yoğurt, süzme yoğurt (chaka), ayran (doogh), peynir, kurut, tereyağı ve krema olarak sıralanabilmektedir. Bu ürünlerin çoğu hem geleneksel olarak hem de endüstriyel boyutta üretilmektedir. Bunun yanı sıra süt kullanılarak yapılan çeşitli içecek, yemek ve tatlılar bulunmaktadır. Çalışmanın sonraki bölümlerinde Afganistan'da geleneksel olarak ve endüstriyel boyutta üretilen süt ve süt ürünleri hakkında bilgiler verilmiştir.

AFGANİSTAN'DA ÜRETİLEN SÜT VE SÜT ÜRÜNLERİ

Yoğurt

Yoğurt, diğer ülkelerde olduğu gibi Afganistan'da da yaygın olarak üretilen bir fermente süt ürünüdür. Ülkede sade yoğurt olarak adlandırılan bir çeşit yoğurt üretilmektedir. Geleneksel yoğurt üretiminde maya olarak önceden yapılmış yoğurt kullanılmaktadır.

FULL TEXTS BOOK

Ayran (Doogh)

Doogh olarak bilinen ayran önceden hazırlanmış yoğurttan yapılmaktadır. Yoğurt deri tuluma, pişmiş topraktan yapılan kap veya bakır tas içerisine alındıktan sonra kabın ağzı kapatılıp yaklaşık bir saat boyunca çalkalanmaktadır. Çalkalanma sırasında yoğurdun yağı ayrılmakta ve bir araya toplanmaktadır. Arta kalan su ise doogh olarak isimlendirilmektedir. Doogh genellikle salatalık, tuz ve nane ile karıştırılarak yaz aylarında yemeklerle birlikte tüketilmektedir. Günümüzde doogh endüstriyel boyutta da üretilmektedir.

Süzme Yoğurt (Chaka)

Ülkede yağlı ve yağsız olmak üzere iki çeşit süzme yoğurdu üretilmektedir. Halk arasında süzme yoğurt chaka olarak adlandırılmaktadır. Yağlı chaka doğrudan yoğurdun bezlerden süzdürülmesi ile elde edilirken, yağsız chaka doogh'un bezlerden süzdürülerek (Şekil 1) suyundan ayrılması ile elde edilmektedir.

Şekil 1. Chaka

Peynir Çeşitleri

Afganistan'da çok fazla peynir çeşidi bulunmamaktadır. En yaygın peynir çeşitleri; taze peynir, Kulça peynir, Ashawa peynir ve Kurut olarak verilebilir.

Taze peynir: Bu peynirin üretim yönteminde bölgeden bölgeye farklılıklar görmek mümkündür. En ayırt edici farklılıklardan biri kullanılan pıhtılaştırıcı türüdür. Bazı yörelerde bitkisel maya (*Withania coagulans*) kullanılırken, bazılarında şirdenden yapılan maya kullanılmaktadır. Bitkisel maya kullanılan yöntemde; ısıtılmış süt içerisine önceden temizlenerek kurutulan ve toz haline getirilen W*ithania coagulans*'ın bir bez içerisinde süte daldırılmakta ve süt mayalandıktan sonra bir bezden süzdürülerek peyniraltı suyundan ayrılmaktadır. Bu peynirin nem miktarının yüksek olmasından dolayı peynirin raf ömrü kısadır. Bu nedenle kısa sürede tüketilmesi önerilmektedir. Taze peynirin bez içerisinde süzdürülerek iyice peyniraltı suyundan ayrıldıktan sonra salamura içerisinde 4-6 saat bekletilmesi ile tuzlu taze peynir (Şekil 2) de elde edilebilmektedir.

FULL TEXTS BOOK

Şekil 2. Tuzlu peynir

Kulça peyniri: sütün bir tencerede ısıtıldıktan sonra içerisine birkaç damla limon suyu veya sirke eklenerek mayalanması sağlanmaktadır. Kısık ateşte süt karıştırılarak ısıtılmaya devam edilmektedir. Teleme ve peyniraltı suyu iki ayrı faz şeklinde ayrıldığında karıştırma ve ısıtma işlemine son verilmekte ve telemenin peyniraltı suyu içerisinde beş dakika boyunca çökmesi beklenmektedir. Daha sonra teleme iki katlı bez içerisine aktarılarak peyniraltı suyunun ayrılması sağlanmaktadır. El yardımıyla bez içerisindeki teleme suyundan ayrılmaktadır. Ayrıca süzdürme işlemi sırasında içerisinde teleme bulunan bezin üzerinden soğuk su geçirilmektedir. Bez içerisinde peynir kendi halinde birkaç saat bekletilmektedir. Daha sonra bezler açılmakta ve taze olarak tüketilmektedir. Kulça peyniri halk arasında genellikle kuru üzümle birlikte servis edilmektedir. Bu nedenle bazı bölgelerde kuru üzümlü peynir anlamına gelen "kishmish paneer" olarak da isimlendirilmektedir. Kulça peynirinin önceden kaynatılmış ılıtılmış tuzlu su içerisinde (salamura) birkaç saat bekletilmesi ile "Ashawa peynir" olarak bilinen diğer peynir çeşidi elde edilmektedir.

Kurut

Kurut, yoğurt ve chaka'dan elde edilen Afganistan'ın en popüler süt ürünlerinden biridir. Afganistan'ın yanı sıra kurut Orta Asya ülkelerinde de yaygın şekilde üretilmektedir. Kurut yapımı için öncelikle yoğurt hazırlanmakta, daha sonra yoğurt suyunun hemen hemen tamamının ayrılması için yoğurt keten torbalar içerisinde birkaç gün süzdürülmektedir. Elde edile chaka daha sonra bezlerden çıkartılarak tuzlanmakta ve el ile şekil verilerek güneş almayan temiz bir ortamda kurutulmaktadır. Bu şekilde üretilen süt ürününe kurut ismi verilmektedir (Şekil 3). Kurut uzun süre bozulmadan kuru ortamda muhafaza edilebilmektedir.

Şekil 3. Kurut

FULL TEXTS BOOK

Kaymak

Afganistan'da kaymak olarak bilinen süt ürünü süt üzerinde oluşan yağa verilen bir addır. Süt kaymağı ve yoğurt kaymağı olmak üzere ülkede iki çeşit kaymak yapılmaktadır. Süt kaymağının yapılması için, kaynatılmış süt bir süre açık havada soğumaya bırakılmakta, ardından sütün üzerinde ince bir tabaka şeklinde oluşan yağ toplanmaktadır. Yoğurt kaymağın yapılması için ise taze hazırlanmış yoğurt soğutulduktan sonra açık havada bir süre bekletilmektedir. Yoğurt üzerinde oluşan yağ tabakası yoğurdun pıhtısı kırılmadan yavaşça alınmaktadır (Şekil 4). Yoğurt kaymağı, yoğurt tadına sahip olduğu için ve süt kaymağına göre oluşan yağ tabakasının kalınlığı daha fazla olduğu için halk tarafından daha çok tercih edilmektedir.

Şekil 4. Gazne kaymağı

Tereyağı

Tereyağı, esas olarak inek veya koyun sütünden üretilen yoğurdun çalkalanması ve ortaya çıkan yayık suyunun ayrılması ile elde edilmektedir. Çalkalama işlemi keçi derisi içinde yapılmakta ve çalkalama sırasında yağ ve su olmak üzere iki süt ürünü elde edilmektedir. Yağ kısmı tereyağı olarak isimlendirilirken (Şekil 5), arta kalan su ayran (doogh) olarak adlandırılmaktadır. Köylerde soğuk hava depolarının ve/veya buzdolaplarının bulunmamasından dolayı tereyağı soğuk su içinde muhafaza edilmektedir. Bunun yanı sıra elde edilen tereyağdan hoş koku ve koyu sarı renge sahip olan ve sarıyağ olarak adlandırılan bir süt ürünü de yapılabilmektedir. Sarıyağı, yoğurdun kısık ateşte uzun süre kaynatılmasıyla elde edilmektedir. Buradaki amaç, tereyağda bulunan tüm suyun buharlaşmasıdır. Bu şekilde üretilen sarıyağ uzun süre bozulmadan muhafaza edilebilmekte ve genellikle çeşitli yemeklerin yapımında kullanılmaktadır.

Şekil 5. Taze tereyağı

Krema

Halk arasında krema iki şekilde elde edilmektedir. Birinci yöntem, çiğ sütün bekletilerek üzerinde oluşan yağın yavaş yavaş toplanmasını ifade ederken, ikinci yöntem sütün kaynatıldıktan sonra bir gece buzdolabında bekletilerek ardından üzerinde oluşan yağın toplanmasını ifade etmektedir.

Dondurma (Sheer Yakh)

Bu ürünün yapımı çok zahmetli olmasına rağmen ülkenin hemen hemen tüm illerinde üretilip tüketilmektedir. Yapımında kullanılan malzemeler; taze süt, kakule, gül suyu, şeker, kaymak, fıstık ve badem olarak sıralanmaktadır.

FULL TEXTS BOOK

Dondurma üretimi: Bir litre süt kısık ateşte kaynatıldıktan sonra içerisine bir yemek kaşığı mısır nişastası eklenip iyice karıştırılmaktadır. Daha sonra ayrı bir tencerede şeker, kakule ve gül suyu şerbet kıvamına getirildikten sonra süt karışımına ilave edilip kaynatma işlemine devam edilmektedir. Karışım buzdolabında soğutulduktan sonra 2/3'si bir tencereye alınıp kalan kısım buzdolabında soğumaya devam edilmektedir. Daha sonra soğumuş miksin bulunduğu tencere buz parçaları bulunan daha büyük bir tencerenin içerisine konulmakta ve hızlı şekilde karıştırma işlemi yapılmaktadır. Karışımın sürekli olarak tencerenin duvarlarına yayılarak donması sağlanmaktadır. Bu şekilde elde edilen dondurma kaymak, ufalanmış fıstık ve badem ile süslenerek servis edilmektedir.

Süt Tozu

Afganistan'da süt tozu üretimi yapılmayıp çoğunlukla ambalajsız şekilde diğer ülkelerden ithal edilmektedir. Bu süt tozu, genellikle süt işleme şirketleri tarafından taze inek sütü ve diğer süt ürünleri olarak etiketlenmeden içme sütü şeklinde hazırlanmakta ve satışa sunulmaktadır. Bu durum, etiketleme ve tüketiciyi yanıltma açısından sahtekarlık olarak değerlendirilmektedir. Bu durum, halk arasında süt işleme şirketlerine karşı güvensizlik oluşturmuş ve tüketicilerin birçok şirketten süt ve süt ürünlerinin satın almasını engellemiştir.

GELENEKSEL SÜTLÜ İÇECEKLER

Afganistan'da taze süt çok popüler olup çoğunlukla kahvaltıda çay ile tüketilmektedir. Bölgeden bölgeye taze sütten farklı içecekler hazırlanmaktadır. Bunlardan en yaygın olanları aşağıda özetlenmiştir.

Sütlü Kakule Çayı (Sheer Chai)

Sheer chai sütlü çay anlamına gelmektedir. Sütlü kakule çayı Afganistan'da çok sevilen bir içecek olup en çok ülkenin başkenti olan Kabil'de yapılıp tüketilmektedir. Aslen Keşmir'den gelen bu nefis içecek, Keşmir Çayı olarak da bilinmektedir. Gerçek Keşmir çayı yapımında yalnızca Keşmir'de bulunan özel çay yaprakları kullanılırken, Afgan Sheer Chai için herhangi bir siyah veya yeşil çay yaprağı kullanılabilmektedir. Sheer Chai yapımında siyah çay ve taze süt (inek veya koyun sütü) yanı sıra şeker ve kakule kullanılmaktadır. Siyah çay hazırlandıktan sonra içerisine süt, kakule ve şeker ilave edilerek iyice karıştırılıp birkaç dakika boyunca kaynatılmaktadır.

Tuzlu Sütlü Çay (Shor Chai)

Ülkenin güney bölgesinde, özellikle Badakhshan ilinde yaygın olarak yapılan bir içecektir. Shor chai için gereken malzemeler; taze süt (inek, keçi veya koyun sütü), siyah çay, çeviz hamuru, kaymak ve tuz şeklindedir. Yapımında öncelikle çay hazırlanılmakta, daha sonra içerisine süt, tuz, çekilmiş ve hamur haline getirilmiş ceviz ilave edilerek karıştırılmaktadır. Karışım birkaç dakika kaynatıldıktan sonra bardaklara dökülerek üzerine kaymak konulup servis edilmektedir.

Kaymak Çay

Bu içeceğin hazırlanması için başta yeşil çay olmak üzere, süt, kabartma tozu, kaymak, şeker, kakule ve ufalanmış fıstık gerekmektedir. Öncelik olarak yeşil çay 20 dakika boyunca yüksek ateşte pişirilmektedir. Genellikle 2 litre su içerisine bir fincan yeşil çay eklenmektedir. Daha sonra içine yarım yemek kaşığı kabartma tozu ilave edilip çay yavaşça karıştırılmaktadır. Oluşan köpüğün rengi nar rengini alıncaya kadar çay kaynatılmaya devam etmektedir. Bu süre genellikle 10 dakika sürmektedir. Ardından karışım süzgeçten geçirilerek üzerine soğuk su ilave edilip tekrar kaynamaya alınmaktadır. Elde edilen karışım içerisine yarısı kadar taze süt, damak zevkine göre şeker ve kakule ilave edilmekte ve karıştırılarak kaynatmaya devam edilmektedir. Servis edilmesi için bardak içerisine alınan çayın içerisine kaymak eklenerek ufalanmış fıstıkla süslenmektedir.

FULL TEXTS BOOK

Yumurtalı Süt

Bu içeceğin yapımında süt, şeker ve çiğ yumurta sarısı kullanılmaktadır. Bir yumurta sarısı iyice çırpıldıktan sonra üzerine kaynatılmış şekerli süt eklenmekte ve karıştırıldıktan hemen sonra tüketilmektedir.

Sütlü Meyve Suyu

Muz, hurma ve mango gibi meyvelerin blenderden geçirildikten sonra süt ile karıştırılması ile elde edilen çeşitli sütlü meyve suları halk tarafından sevilerek tüketilmektedir. Bu çeşit sütlü içecekler küçük çaplı meyve suyu satış noktalarında bol miktarlarda üretilirken, endüstri boyutta üretimi henüz yapılamamaktadır.

SÜTLÜ TATLILAR

Shirpera

Afganistan'ın geleneksel sütlü tatlılardan biri olan Shirpera tatlısının yapımı için sut tozu (2 su bardağı), badem (1/2 su bardağı), ceviz (1/2 su bardağı), kakule (1 çay kaşığı), şeker (1 su bardağı), gül suyu (1 çay kaşığı), su (1 su bardağı) ve fıstık (2 yemek kaşığı) gerekmektedir. Öncelikle süt tozu, ufalanmış ceviz ile badem ve kakule bir kap içerisinde karıştırılmaktadır. Daha sonra şeker ve su orta ateşte sürekli karıştırılarak şerbet haline getirilmektedir. Hazır hale gelen şerbetin içerisine kuru malzemeler eklenerek karıştırma işlemine devam edilmektedir. Bu şekilde homojen bir karışım elde edilmektedir. Ardından karışım bir tepsiye yayılmakta ve üzeri ufalanmış fıstıkla süslenmektedir. Soğuduktan sonra tatlı dilimlenip servis edilebilmektedir (Şekil 6).

Şekil 6. Shirpera

Firni

Firni tatlısı süt, mısır nişastası, şeker, kakule, gül suyu ve ufalanmış fıstık kullanılarak yapılmaktadır. Bir bardak süt için bir buçuk yemek kaşığı mısır nişastası gerekmektedir. Öncelikli olarak süt ve şekerin karıştırılarak kaynaması sağlanmaktadır. Daha sonra sütün bulunduğu tencereye yarım bardak su içerisinde erimiş mısır nişastası eklenmekte ve karışım kısık ateşte sürekli karıştırılarak 5 dakika boyunca pişirilmektedir. Elde edilen tatlı tencereden başka bir tabağa aktarılarak soğumaya bırakılmakta ve soğutulduktan sonra ufalanmış fıstık ile süslenerek tüketilmektedir (Şekil 7).

Şekil 7. Firni tatlısı

FULL TEXTS BOOK

Sütlaç

Sütlaç yapımı için pirinç, tam yağlı inek sütü, şeker ve kakule gerekmektedir. Pirinç bir gece boyunca ılık suda bekletildikten sonra suyundan ayrılması için bir bezden süzdürülmektedir. Süt içerisine pirinç, şeker ve kakule eklenmekte ve tüm karışım kısık ateşte pişirilmektedir. Bu şekilde Afgan halkı tarafından çok sevilen bir sütlü tatlı elde edilmektedir.

SONUÇLAR

Afganistan'ın tarım ve hayvancılık sektörü, uzun yıllar süren savaşlar nedeniyle ciddi zararlar görmüştür. Ülke, geniş mera alanlarına sahip olmasına rağmen, geçim kaynaklarının yetersizliği nedeniyle hayvancılık yeterince gelişmemiştir. Son yıllarda hayvancılık çiftliklerinin kurulması ve süt üretimindeki fabrikalarda bazı ilerlemeler yaşanmış olsa da, sektör hala emekleme aşamasındadır. Süt şirketleri farklı bölgelerde faaliyet göstermekte, ancak doğal ürünlere olan talep nedeniyle fabrika ürünleri pazarda yeterince ilgi görmemektedir. Ayrıca, depolama tesislerinin eksikliği nedeniyle doğal ürünlerin bir kısmı pazara ulaşmadan kaybolmaktadır.

M. Sc. Mustafa Sertçelik
Konya Technical University, Department of Civil Engineering

ABSTRACT
Lateral-torsional buckling (LTB) is the primary failure mode where slender cantilevers experience nonuniform twisting and buckling about their weak axes. Many studies are related to the elastic LTB load of simply supported beams, and modern codes present simple formulations. However, the studies focused on the elastic LTB load of cantilevers are rare, most of which are numerical since the LTB failure mode of cantilevers is much more complicated. Furthermore, no comprehensive study has examined the LTB of web-tapered cantilevers with mono-symmetric I-sections subjected to various load types and load positions. Thus, the present study intends to establish an analytical procedure for evaluating the elastic LTB load of web tapered mono-symmetric I-section cantilever, which is aesthetic and structurally efficient. The analytical method developed considers first-order bending distribution, load height level, monosymmetry property of the section, and web tapering. A parametric study has also investigated the effect of slenderness, tapering angles, load types, and load positions on the LTB of symmetric and mono-symmetric web tapered I-section cantilevers. The analytical solutions were verified with finite element analysis (FEA). It was found that analytical solutions are pretty compatible with FEA, and the proposed analytical treatment could be safely used to calculate the elastic LTB of the web-tapered I-section cantilevers. Besides, the present study has, for the first time, characterized and interpreted the LTB behavior of the web-tapered cantilevers with mono-symmetric I-sections in detail based on the presented analytical treatment.
Key Words: Lateral-Torsional Buckling, Cantilevers, Web-Tapered I-Section, FEA.

INTRODUCTION
Stability research has gained importance nowadays since technological and economic advancements necessitate constructing steel and composite structures that are ever lighter and stronger. Ever-stronger and lighter structures are becoming more common because of advancements in manufacturing and computer-aided design (CAD) software, cost considerations, and efficiency in construction. These ongoing advancements altered conventional building and design techniques and made it crucial to use materials efficiently in various industries, including offshore buildings, the automotive sector, and aerospace. The local and overall stability must be considered to assess the behavior of these structures precisely during the construction of structures with greater strength and reduced weight (Mohri, Damil & Potier-Ferry, 2013). The doubly symmetric and mono-symmetric I-sections are widely used in modern construction thanks to their structural efficiency. Besides, cantilevers with I-sections widely take place in steel structures. They are assembled so that they are subjected to bending about their major axis with the greatest flexural rigidity to use structural material economically. However, lateral-torsional buckling (LTB) is a global stability loss for cantilevers, where a cantilever that is bent about its strong axis may buckle out of a plane by deflecting laterally and twisting as the values of the applied loads reach a limit value called the elastic LTB load. Along with stress and deformation analysis, the LTB failure mode should be considered in design since it may take place long before the bending stress, which occurs at the extreme fiber of the section, reaches the yield point.
The differential equilibrium equations obtained for calculating the elastic LTB load of beams, beam-columns, and cantilevers under uniform bending can be solved and presented in the closed form.

FULL TEXTS BOOK

However, for cases where the moment gradient changes along the length of the beam and/or support conditions differ from simple support, the analytical solution becomes highly complex or includes infinite series (Yilmaz, 2023). Thus, numerical approaches including finite difference, finite integral, finite element, finite strip, and boundary element methods (Yilmaz, 2023; Ozbasaran 2013, 2014; Ozbasaran, Aydin & Dogan, 2015; Anderson & Trahair, 1972; Bui, 2009, 2012; Adany & Schafer, 2014; Naderian & Ronagh, 2015; Sapountzakis & Dourakopoulos, 2009) were developed for the calculation of the LTB load.

Another convenient tool to solve the LTB problem is the energy method, which is based on the equality between the additional strain energy stored during LTB and the extra work done by the applied forces. This method calculates the LTB load by substituting an approximate buckled shape in the energy equation. The approximate buckled shape should be compatible with the actual mode shape and satisfy the kinematic boundary conditions (Yilmaz, 2023). There are many studies focused on the LTB behavior of the beams, beams with mono-symmetric I section, C, Z, and box sections, the beam-columns, the castellated beam, and cantilevers using the energy method (Mohri, Bouzerira & Potier-Ferry, 2008; Torkamani & Roberts, 2009; Yilmaz, Kirac & Kilic, 2017; Ozbasaran, 2019; Saoula et al., 2021; Bresser, Ravenshorst & Hoogenboom, 2020; Belaid, Ammari & Adman, 2018; Mohri, Damil & Potier-Ferry, 2013; Yilmaz & Kirac, 2017; Yilmaz, Kirac & Anil, 2019; Aydin, Gunaydin & Kirac, 2015; Mohri, Brouki & Roth, 2003; Camotim, Andrade & Basaglia, 2012; Mohammadi, Hosseini & Rohanimanesh, 2016; Cheng, Kim & Li, 2013; Soula et al., 2016; Zhang & Tong, 2016; Kim, Li & Edmonds, 2016; Wang & Kitipornchai, 1986; Ozbasaran, Aydın & Dogan, 2015; Andrade, Camotim & Providência e Costa, 2007; Aydin et al., 2013; Zhang & Tong, 2008; Zhang et al., 2016; Yilmaz 2023). Steel web-tapered beams with I-sections are very popular in structural practices thanks to their aesthetic features and lightweight. These beams are mainly used as cantilevers and provide the advantage of low weight-to-strength ratios. Their structural efficiency is owing to their web can be tapered through the beam length according to the variation of bending moment. For the cantilever optimization, while beam height is maximum at fixed support where the bending moment is maximum, beam height gradually decreases towards the free end as the bending moment decreases. Trahair and Kitipornchai analytically and experimentally investigated doubly symmetric beams with tapered webs or flanges and mono-symmetric beams with tapered flanges (Kitipornchai & Trahair, 1972, 1975). In these researches, the flange bending during lateral buckling was analyzed and utilized to establish the governing differential equilibrium equations for bending and torsion. Trahair (2017) also utilized the energy method to develop a finite element method that can be used to evaluate the LTB of tapered beam-columns in case of various loading and boundary conditions. Benyamina et al. (2013) proposed a formula for calculating elastic LTB of doubly symmetric web-tapered I-beams. Asgarian, Soltani, and Mohri (2013) investigated the LTB of tapered thin-walled beams with arbitrary cross-sections. The LTB of the beams whose flanges and web are simultaneously tapered was examined by Kus (2015). Osmani and Meftah (2018) investigated the lateral buckling of doubly-symmetric beams subjected to combined bending and axial force effects by considering shear deformations. Authors have encountered only two comprehensive analytical studies focused on the LTB of web-tapered mono-symmetric I-section cantilevers in the literature. In these studies presented by Andrade, Camotim, and Dinis (2007) and Andrade and Camotim (2005), the elastic LTB load of web-tapered monosymmetric I-section cantilevers and simply supported beams subjected to free end and mid-span point loads, respectively, have been investigated via energy method considering the pre-buckling deflections. Studies have demonstrated that LTB loads of simply supported beams decreased while LTB loads of cantilevers increased, compared with those of un-tapered ones. Another significant contribution of the study by Andrade Camotim and Dinis (2007) is the presented detailed comparison of the LTB solutions of prismatic and web-tapered beams and cantilevers obtained by the one-dimensional analytical model based on the energy method and two-dimensional shell finite element modeling. The study unveils that for short cantilevers, in contrast to the shell model,

FULL TEXTS BOOK

the 1D frame element assumption could not capture remarkable web and/or flange distortion or a localized web buckling phenomenon near the application point of load. The LTB behavior of web-tapered tee-section cantilevers is different from web-tapered I-section cantilevers since the lack of the bottom flange leads to the lower part of the web being subjected to compression, which increases buckling instability. The study by Yuan, Kim and Chen (2013) found that web tapering may lead to an increase or decrease in the LTB load according to flange width. The optimum design of tapered I-beams, considering the LTB, deformation, and stress constraints, was studied by Ozbasaran and Yilmaz (2018). A closed-form solution for tapered cantilever strip beam-columns loaded with point loads at the free end has been presented by Challamel et al. (2010).

The literature review unveils that there is no comprehensive study in which the LTB of cantilevers with mono-symmetric I-sections subjected to various load types and load positions has been investigated, and the general behavior of these cantilevers is interpreted. The primary motivation of the present study is to establish an analytical treatment based on the energy method for calculating the LTB of cantilevers with mono-symmetric I-sections under different load types and positions. The present analytical model considers the moment distribution that occurred due to transverse loads along the cantilever, the position of load along the cross-section, and the monosymmetry property of the section. The analytical procedure has been verified with finite element analysis (FEA). A parametric study using the verified analytical procedure has examined the effect of slenderness, tapering angles, load types, and load positions on the LTB of symmetric and mono-symmetric web tapered I-section cantilevers. The results were interpreted in detail to understand the general LTB behavior of web-tapered cantilevers.

ANALYTICAL MODEL

The LTB of the web-tapered cantilever with mono-symmetric I-section occurs in two stages. First, the cantilever bends about its major axis with the greatest flexural rigidity under transverse loads, and then the cantilever buckles by deflecting laterally and twisting when the magnitude of the loads acting on the cantilever reaches the elastic critical LTB load. **Fig. 1** shows the LTB of a web-tapered cantilever with a mono-symmetric I-section subjected to a point load at the end. In **Fig. 1(a)**, α and L are the tapering angle and the cantilever length, respectively. **Fig. 1(b)** illustrates the a-a section of the web-tapered cantilever. In **Fig. 1**, while the S and C denote the shear center and the center of gravity, the lateral and vertical displacements and the torsional rotation of the shear center were given with u, v, and φ, respectively. The y_0 indicates the distance between the shear center and the center of gravity. Furthermore, **Fig. 2** depicts the cross-section dimensions of a web-tapered cantilever with the mono-symmetric I-section. In **Fig. 2**, while the top and bottom flange width is shown with b_{f1} and b_{f2}, the t_{f1} and t_{f2} denote the top and bottom flanges' thickness.

FULL TEXTS BOOK

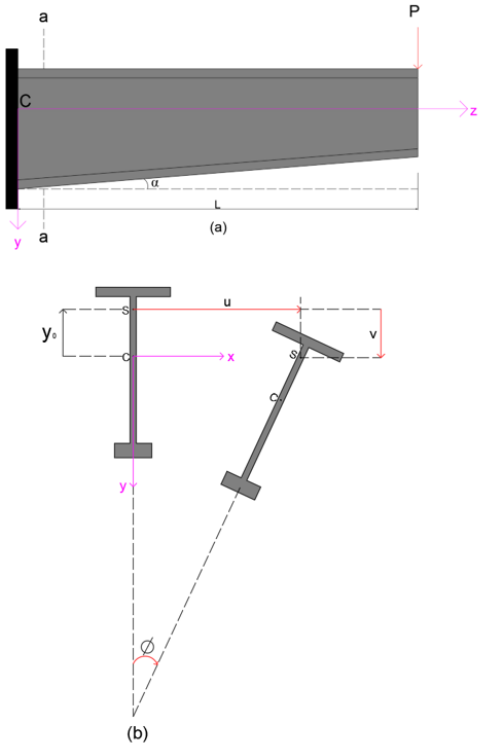

Fig. 1. The LTB of the web-tapered cantilever with mono-symmetric I-section (a) side view, (b) a-a section

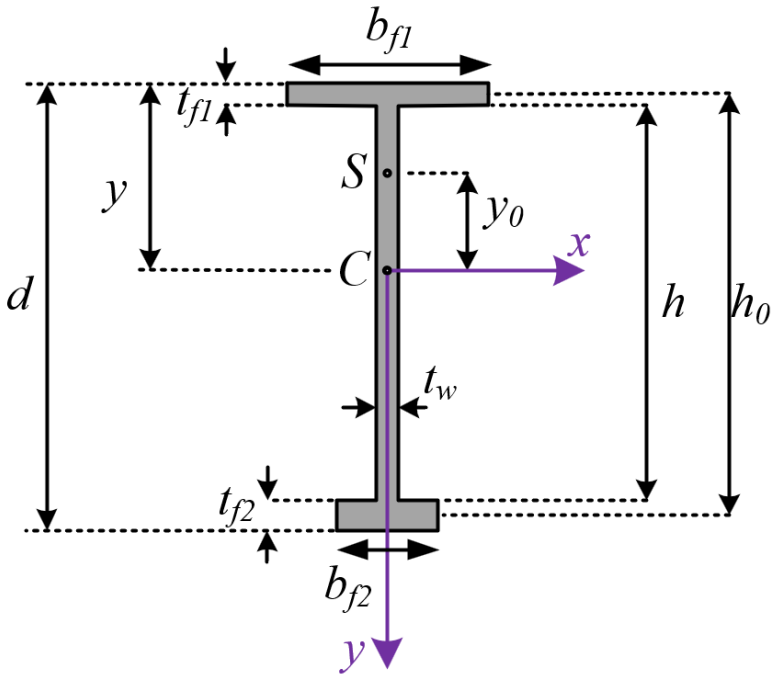

Fig. 2. The cross-section dimensions of a web-tapered cantilever

The *d* and *h* are heights of cross-section and web, respectively. These two dimensions are dependent on the distance to the fixed end in the z-axis since *h* decreases with tapering according to Eq. (1):

$$h(z) = h_i - z * \tan(\alpha) \quad (1)$$

Where h_i refers to the height of the web at a fixed end. Therefore *d* becomes:

$$d(z) = h(z) + t_{f1} + t_{f2} \quad (2)$$

The *y(z)* is the distance of the gravity center to the top of the section and is given as follows:

FULL TEXTS BOOK

$$y(z) = \frac{1}{A(z)}\left[\frac{A_{f1}t_{f1}}{2} + A_w(z)\left[t_{f1} + \frac{h(z)}{2}\right] + A_{f2}\left[d(z) - \frac{t_{f2}}{2}\right]\right] \quad (3)$$

A_{f1}, A_{f2}, *and* $A_w(z)$ are areas of the top flange, bottom flange, and web, respectively. The $A(z)$ implies the summation of these areas. The warping constant $C_w(z)$, torsional constant $J(z)$, and the moment of inertia belonging to the weak axis $I_y(z)$ are the main parameters that are effective on the LTB. For a web-tapered cantilever in **Fig. 1,** $C_w(z)$, $J(z)$, and $I_y(z)$ can be expressed as follows:

$$C_w(z) = \frac{h_0^2(z)b_{f1}^3t_{f1}s}{12} \quad (4)$$

$$J(z) = \frac{b_{f1}t_{f1}^3 + b_{f2}t_{f2}^3 + h_0(z)t_w^3}{3} \quad (5)$$

$$I_y(z) = \frac{b_{f1}^3t_{f1} + b_{f2}^3t_{f2} + h(z)t_w^3}{12} \quad (6)$$

Where $\bar{y}(z)$ denotes the distance from the gravity center to center of the top flange. The $h_0(z)$ is the distance between flange centers. The $\bar{y}(z)$, $h_0(z)$, and $y_0(z)$ can be calculated as follows:

$$\bar{y}(z) = y(z) - \frac{t_{f1}}{2} \quad (7)$$

$$h_0(z) = d(z) - \frac{t_{f1} + t_{f2}}{2} \quad (8)$$

$$s = \frac{1}{1 + \left[\frac{b_{f1}}{b_{f2}}\right]^3\left[\frac{t_{f1}}{t_{f2}}\right]} \quad (9)$$

$$y_0(z) = sh_0(z) - \bar{y}(z) \quad (10)$$

The strain energy stored in the cantilever due to lateral bending, warping, and torsion, respectively, can be written as follows (Yilmaz, Kirac & Anil, 2019; Yilmaz, 2023):

$$U = \frac{1}{2}\int_0^L EI_y(z)\left[\frac{d^2u(z)}{dz^2}\right]^2 dz + \frac{1}{2}\int_0^L EC_w(z)\left[\frac{d^2\phi(z)}{dz^2}\right]^2 dz + \frac{1}{2}\int_0^L GJ(z)\left[\frac{d\phi(z)}{dz}\right]^2 dz \quad (11)$$

E and G refer to Young's and shear modulus, respectively. The work done by the external transverse forces can be expressed in Eq. 12 (Yilmaz, Kirac & Anil, 2019; Yilmaz, 2023):

$$V = \frac{1}{2}\int_0^L M_x(z)\left[2\phi(z)\left[\frac{d^2u(z)}{dz^2}\right] + \beta_x(z)\left[\frac{d\phi(z)}{dz}\right]^2\right]dz + \frac{1}{2}\sum PH_p\phi_p^2 + \frac{1}{2}\int_0^L qH_q\phi(z)^2dz + M\phi_L\left[\frac{du_L}{dz}\right] \quad (12)$$

Where $M_x(z)$ denotes the bending moment about the major axis, the second and third terms in Eq. (12) refer to works done by concentrated load (P) and distributed load (q), respectively, which are transverse loads acting outside of the shear center on the cross-section. These works occur because the distance between the shear centers and the points where loads are applied changes when the cross-section rotates. In Eq. (12), the vertical distances of the points where the concentrated and uniformly distributed loads have been applied to the shear center are given as H_p and H_q. It should be noted here that the load height levels (H_p and H_q) become positive when the loads are applied below the shear center. Φ_p denotes torsional rotation at the application point of the concentrated load. Besides, an external moment acting on the shear centre at the end of the cantilever causes additional work existing in the last term of Eq. (12). When the end moment M is represented with an equivalent force couple, these opposite direction forces displace relatively in longitudinal directions and cause additional work as the cross-section rotates. Additional work V_M can be calculated by multiplying the magnitude of forces with their displacement in the longitudinal direction as follows:

FULL TEXTS BOOK

$$V_M = 2\left[\frac{M}{d_f}\right]\left[d_f\,\frac{\emptyset_L}{2}\,\frac{du_L}{dz}\right] = M\phi_L\left[\frac{du_L}{dz}\right] \tag{13}$$

While Φ_L refers to free-end rotation, d_f denotes the distance of the force couple. The end moment M should be considered positive in Eq. (12) when clockwise (Yilmaz, 2023). The LTB behavior of mono-symmetric I-sections is more complex than those of symmetric I-sections. Different from the symmetric I-sections, there is additional torque because of the monosymmetry of the section, arising from the pre-buckling longitudinal bending stresses as the beam twists during the buckling. This extra torque substantially affects the torsional stiffness of the beam. Torsional stiffness should be modified considering the major axis bending moment and mono-symmetry parameter of the beam for proper evaluation of the LTB (Wang & Kitipornchai, 1986). Wanger's coefficient (β_x) represents the mono-symmetry property of the cross-section and is defined by Eq. (14) (Yilmaz, 2023). In Eq. (14), x and y are Cartesian coordinates of the infinitesimal area (dA). I_x denotes the moment of inertia belonging to the major axis and can be presented for web-tapered cantilevers depending on the distance in the z-axis as in Eq. (15). The y_0 must be considered positive for the sections whose shear center is located under the gravity center.

$$\beta_x = \frac{1}{I_x}\int_A y(x^2+y^2)dA - 2y_0 \tag{14}$$

$$I_x(z) = \frac{b_{f1}t_{f1}^3 + h(z)^3 t_w + b_{f2}t_{f2}^3}{12} + A_{f1}\left[y(z) - \frac{t_{f1}}{2}\right]^2 + A_w(z)\left[t_{f1} + \frac{h(z)}{2} - y(z)\right]^2 + A_{f2}\left[d(z) - \frac{t_{f2}}{2} - y(z)\right]^2 \tag{15}$$

$\beta_x\,(z)$ can be expressed for web-tapered cantilevers in **Fig. 1** as follows:

$$\beta_x(z) = \frac{1}{I_x}\left[\begin{array}{l}[h_0(z) - \bar{y}(z)]\left[\frac{b_{f2}^3\,t_{f2}}{12} + b_{f2}t_{f2}\,[h_0(z) - \bar{y}(z)]^2 + \frac{t_w[h_0(z) - \bar{y}(z)]^3}{4}\right] \\ \quad -\bar{y}(z)\left[\frac{b_{f1}^3\,t_{f1}}{12} + b_{f1}t_{f1}\bar{y}^{\,2}(z) + \frac{t_w\bar{y}^{\,3}(z)}{4}\right]\end{array}\right] - 2y_0 \tag{16}$$

Therefore, the total potential energy ($\Pi=U+V$) of the cantilever can be expressed as in Eq. (17) by considering Vlassov's model, which assumes that the cross-section has been rigid in its plane and the shear deformation of the section's mean surface can be neglected (Yilmaz, 2023).

$$\Pi = \frac{1}{2}\int_0^L EI_y(z)\left[\frac{d^2u(z)}{dz^2}\right]^2 dz + \frac{1}{2}\int_0^L EC_w(z)\left[\frac{d^2\phi(z)}{dz^2}\right]^2 dz + \frac{1}{2}\int_0^L GJ(z)\left[\frac{d\phi(z)}{dz}\right]^2 dz + \frac{1}{2}\int_0^L M_x(z)\left[2\phi(z)\left[\frac{d^2u(z)}{dz^2}\right] + \beta_x(z)\left[\frac{d\phi(z)}{dz}\right]^2\right]dz + \frac{1}{2}\sum PH_p\phi_p^2 + \frac{1}{2}\int_0^L qH_q\phi(z)^2 dz + M\phi_L\left[\frac{du_L}{dz}\right] \tag{17}$$

The energy method is based on the equality between the additional strain energy stored during lateral buckling and the extra work done by the applied forces. The energy method requires a buckled shape assumption, which satisfies kinematic boundary conditions and represents the actual buckled shape. Thus, the LTB load is calculated by substituting the buckled shape in the total potential equation. The kinematic boundary conditions are geometrical constraints preventing one or more deflections or rotations at the support of the structural member. When a cantilever is considered, since clamped end restraints the whole deflections and rotations, it has been explicit that u, ϕ, du/dz, $d\phi/dz$ are equal to zero at fixed support ($z=0$). However, u, ϕ, du/dz, $d\phi/dz$ are unrestrained at the free end ($z=L$). The buckled shape of the cantilever can be expressed by the lateral deflection of the cantilever at the shear center (u)

FULL TEXTS BOOK

and the rotation angle of the cross-section (Φ). Considering the kinematic boundary conditions of the cantilever, buckled shape functions can be defined as in Eq. (18). A_i and B_i are amplitudes of buckled shape functions.

$$u(z) = \sum_{i=1}^{n} A_i \left(\frac{z}{L}\right)^{i+1}$$
$$\phi(z) = \sum_{i=1}^{n} B_i \left(\frac{z}{L}\right)^{i+1} \quad (18)$$

When buckled shape functions are substituted in Eq (17), the total potential energy becomes the following form:

$$\Pi = U + V = f(A_1, A_2, A_3 \dots, A_n, B_1, B_2, B_3 \dots, B_n) \quad (19)$$

Where f is a quadratic function in 2n variables. The variables are A_i and B_i terms. When the LTB occurs, the total energy function reaches a stationary condition, which requires:

$$\frac{\partial \Pi}{\partial A_i} = 0 \;\; for\; i = 1,2 \dots n$$
$$\frac{\partial \Pi}{\partial B_i} = 0 \;\; for\; i = 1,2 \dots n \quad (20)$$

Eq. (20) generates a system of 2n homogeneous linear equations, and the set of algebraic equations can be written in matrix form:

$$[K]_{2nx2n} \{d\}_{2nx1} = \{0\}_{2nx1} \quad (21)$$

Where K is a coefficient matrix and $\{d\} = \{A_1, A_2, A_3 \dots, A_n, B_1, B_2, B_3 \dots, B_n\}^T$. Eq. (21) has been satisfied when the determinant of the K coefficient matrix equals zero.

$$det\,[K]_{2nx2n} = 0 \quad (22)$$

Eq. (22) generates a power series of order 2n, of which the smallest feasible root gives the elastic LTB load or moment. The present analytical treatment can solve the elastic LTB load of the web-tapered cantilever with mono-symmetric I-section like in **Fig. 1**, subjected to the various load cases by considering the load height levels such as top flange, bottom flange, and shear center loading. The present analytical approach can be easily applied using mathematical programming software such as Matlab, Mathematica, Python, etc.

NUMERICAL ANALYSIS

In the numerical analysis part of the present study, using the proposed analytical model, the elastic LTB loads of web-tapered cantilevers with both doubly symmetric and mono-symmetric I-section subjected to six different load cases presented in **Fig. 3.** have been calculated for three loading positions along the cross-section, which are top flange, bottom flange, and shear centre loadings. Since it is also aimed that the effects of the tapering and the slenderness on elastic LTB loads of the web-tapered cantilevers have been investigated, the lengths and tapering angles of the cantilevers were taken as variables. **Table 1** shows the properties of the cantilevers investigated in the scope of numerical analysis. In **Table 1**, DS and MS mean doubly symmetric and mono-symmetric; d_e is the section height at the free end. All elastic buckling loads calculated via the presented analytical method have been verified with the 1D finite element analysis (1D-FEA) using LTBeamN software (Centre Technique Industriel de la Construction Metallique; 2015).

LTBeamN software has been commonly used in the literature to solve elastic LTB problems. The software calculates the elastic LTB load analysis utilizing the beam elements that consider warping, and it yields accurate results with 3D finite element analysis (3D-FEA) (Yilmaz & Kirac, 2017; Yilmaz, Kirac & Anil, 2019; Yilmaz, 2023). In the scope of the numerical analysis, for example, the elastic LTB loads of the cantilever beam C6 subjected to concentrated load have been calculated with the 3D-FEA in which shell elements are used in addition to the 1D-FEA to compare different analysis techniques' results. The 3D FEA analysis was carried out with Abaqus software (Dassault systèmes; 2022). The S8R5 shell element with five degrees of freedom at each node was used for modeling cantilever beam C6. It is reported in previous studies that the S8R5 shell element provides correct results in LTB problems (Yilmaz & Kirac, 2017; Yilmaz, Kirac & Anil, 2019; Yilmaz, 2023; Mohri, Bouzerira & Potier-Ferry, 2008; Aydin, Gunaydin & Kirac, 2015). The mesh examination was performed. It has been determined that element mesh sizes of sixty, ten, and four were sufficient for the cantilever length, the web's height, and the flanges' widths, respectively, for proper evaluation of buckling loads. Besides, it was found that more refinement has not been effective in achieving results despite increased computational time. **Fig. 4.** illustrates the buckled shape of the shell finite element model belonging to

FULL TEXTS BOOK

the cantilever C6 under concentrated load acting on the shear center. **Table 2** shows the LTB load comparisons of C6 obtained from the 1D-FEA and the 3D-FEA. In **Table 2**, TF, SC, and BF refer to top flange, shear center, and bottom flange loadings, respectively. AB and LT denote ABAQUS and LT-BeamN, respectively. When buckling loads are compared, it is determined that there is only a %2 average difference between results obtained from 1D-FEA and the 3D-FEA. Besides, the maximum difference is only %5. Results demonstrate that 1D-FEA, in other words, beam element including warping, can be used safely to evaluate LTB of tapered cantilevers with mono-symmetric I-section.

For each considered six load cases and three loading positions, the LTB loads of all cantilevers, calculated via the present analytical model and 1D-FEA, are presented in **Tables 3-8**. AN and LT refer to the LTB loads obtained by the present analytical model and 1D-FEA in these tables, respectively. When results presented in Tables 3-8 were examined, it can be seen there is excellent agreement between analytical and numerical LTB loads. The average difference is only 2%, and the maximum difference can only reach up to 5%. The present analytical model has perfectly captured the effects of tapering, slenderness, load types, and load positions on the LTB loads. Thus, it is found that the present analytical treatment can be safely used to evaluate the LTB of web-tapered cantilevers.

Results in **Tables 3-8** unveiled that the elastic LTB loads increase for top flange loading with the increase of tapering. This unexpected result can be explained by two opposite effects that occurred by tapering. The first effect is a decrease in stiffness with tapering, which has reduced the LTB loads. The second effect, which stems from the reduction of the distance between the load application point and shear center with the effect of tapering, has increased the LTB loads. Since the second effect is more dominant, the LTB loads have increased with the tapering increase for top flange loadings. However, for bottom flange loadings, it is explicit that both these effects occurred due to tapering tend to decrease buckling loads. These trends were reflected in the results, and the LTB loads decreased.

When results in **Tables 3-8** are examined, it can be observed that an increase in the tapering can reduce or increase LTB loads for shear center loading. The rise in tapering brings about two opposite effects for shear center loading. The first effect of tapering increase is the decrease in stiffness, which reduces LTB loads. The second effect of the tapering increase is that the shear center and the center of gravity become closer, which reduces the absolute value of the mono-symmetry parameter of the cross-section (β_x). The decrease in the β_x has an effect leading to an increase in the LTB loads. For shear center loading, the dominant one of these two effects of the tapering increase directs the LTB behavior of mono-symmetric web-tapered cantilevers. To better understand this complex behavior in shear center loading, a more detailed examination where different cross-sections are used has also been performed utilizing the present verified analytical model. The dimensions of the cantilevers and the calculated LTB loads are presented in **Table 9**. The mono-symmetry was generated by varying top and bottom flange widths, whereas other cross-section dimensions were kept the same.

When the LTB loads are examined in **Table 9**, it is found that for doubly symmetric cantilevers and cantilevers whose shear center is below the gravity of center, the first effect has been more dominant. Thus, tapering increases have decreased the LTB loads. The LTB loads of specimens *CB3*, *CB4*, and *CB5*, whose b_{f1} is less than or equal to b_{f2} have reduced with the increase of tapering level independent of the cantilever length. However, the second effect has been dominant for the behavior of Specimens *CB1* and *CB2*, of which shear center is above their center of gravity; in other words, b_{f1} is larger than b_{f2}. Thus, LTB loads increased with the tapering increase. When the LTB loads of *CB1* and *CB2* for cantilever lengths of 1.0 m and 2.0 m were examined, the tapering increase caused the increase in LTB loads of *CB1* and CB2 cantilevers with lengths of 1.0 m, but the decrease in LTB loads of *CB1* and *CB2* cantilevers with length of 2.0 m. As cantilevers become more slender with increased cantilever lengths, the tendency reverses, and the first effect becomes more effective. Therefore, the LTB loads decrease with the tapering increase. It is an explicit demonstration that slenderness affects the influence of tapering increase on LTB loads of web-tapered mono-symmetric cantilevers, of which the shear center is above their center of gravity when cantilevers are loaded from their shear center. In brief, for shear center loading, while the tapering increase leads to a decrease in the LTB loads for web-tapered cantilevers with doubly symmetric or monosymmetric I-section whose shear center is below the center of gravity, however, the LTB loads may increase or decrease with the tapering increase for the web-tapered cantilevers with monosymmetric I-section whose shear center is above the center of gravity depending on the cantilever length.

CONCLUSION

The present study has introduced an analytical procedure based on the energy method to evaluate the lateral-torsional buckling behavior of web-tapered cantilevers with mono-symmetric I-sections. The current treatment was verified with 1D finite element analysis. In the scope of the study, the effects of load types, tapering level, mono-symmetry, and load height level parameters on LTB loads of web-tapered cantilevers with mono-symmetric I-sections were investigated. The findings can summarized as follows:

- It has been determined that the present analytical approach can yield pretty accordant results with 1D finite element analysis by excellently capturing the effects of tapering, slenderness, load types, and load positions on the LTB loads. The average difference was only 2%, and the maximum difference could only reach up to 5%.
- The increase in tapering caused an increase in the LTB loads of web-tapered cantilevers for top flange loading, whereas it decreased the LTB loads for bottom flange loading. For top flange loading, this unexpected behavior, which is the increase of the LTB loads despite the decrease in stiffness with the tapering increase, stems from two opposite effects due to the tapering increase. The first effect is a decrease in stiffness with tapering, which has reduced the LTB loads. The second effect, which results from the reduction of the distance between the load application point and the shear center with the effect of tapering increase, has increased the LTB loads. The second effect is more dominant in behavior; thus, the LTB loads of web-tapered cantilevers increased with the increase of tapering. However, both these

FULL TEXTS BOOK

effects tend to decrease LTB loads when web-tapered cantilevers are loaded from their bottom flange. Therefore, the tapering increase led to a decrease in the LTB loads for the bottom flange loadings.

- Results unveiled that an increase in the tapering can reduce or increase LTB loads for shear center loading. In this case, two contrary effects manage the LTB behavior of web-tapered cantilevers. Similar to flange loadings, the first effect of the increase in tapering is the decrease in stiffness, which reduces LTB loads. The second effect of the tapering increase is that the shear center and the center of gravity become closer, which decreases the absolute value of the mono-symmetry parameter of the cross-section. The decrease in the mono-symmetry parameter has an increasing effect on the LTB loads. Therefore, results demonstrate that the tapering increase caused a reduction in the LTB loads for web-tapered cantilevers with doubly symmetric or monosymmetric I-sections whose shear center is below the center of gravity. Nevertheless, it is found that the LTB loads may increase or decrease with the tapering increase for the web-tapered cantilevers with monosymmetric I-sections whose shear center is above the center of gravity, depending on the cantilever length.

INTERRELATIONSHIPS AMONG ONLINE TEACHING SELF-EFFICACY, ATTITUDES, KNOWLEDGE, AND CONFIDENCE IN TRANSITIONING FOR CHEMISTRY TEACHERS IN UNIVERSITY OF CAPE COAST AFFILIATE COLLEGES OF EDUCATION

John Ametefe
University of Cape Coast, Ghana
Orcid Id: https://orcid.org/0000-0002-7958-6432

ABSTRACT
Understanding the online teaching self-efficacy of chemistry tutors, particularly their attitudes and confidence during the transition to online teaching, is limited. This study aimed to explore the relationships between Online Teaching Self-Efficacy, Attitudes, Knowledge, and Confidence in transitioning to teaching Chemistry Teachers in University of Cape Coast (UCC) Affiliate Colleges of Education (CoEs). Using a cross-sectional survey, the research examined how online teaching self-efficacy among chemistry teachers at UCC affiliate CoEs is influenced by their technological pedagogical knowledge, attitude towards online chemistry teaching, and confidence in managing related challenges. Data were gathered from twenty-four randomly selected chemistry teachers across sixteen purposively chosen UCC affiliate CoEs. The instrument was adapted from the Michigan Nurse Educators' Sense of Efficacy for Online Teaching (MNESEOT), Online Teaching Self-Efficacy Inventory (OTSEI), and an anonymous online survey. Data were analyzed using descriptive and inferential statistics, including the independent sample t-test, ANOVA, Pearson correlation, and regression. The results indicated that online teaching self-efficacy and the chemistry teachers' confidence in handling transition-related challenges was relatively high and strongly correlated. Therefore, professional development training should focus on enhancing the technological pedagogical knowledge of teachers with extensive experience in conventional chemistry.
Keywords: Attitudes, Chemistry teachers, Knowledge, Online teaching, Self-efficacy.

INTRODUCTION

The rapid shift to online teaching, propelled by increasing student enrolment, the COVID-19 pandemic, and inadequate infrastructure, has forced tertiary institutions worldwide to adopt online teaching methods (Marschall & Watson, 2022). This sudden transition poses significant challenges, especially for chemistry teachers, who must adapt their content, resources, and pedagogical approaches to an online format, with little to no prior training in digital pedagogy. Consequently, many educators experience decreased motivation, negative emotions, and low self-efficacy (Santi et al., 2020). These issues underscore the need for strong self-efficacy, positive attitudes towards online teaching, and confidence in handling the complexities of this transition.

Chemistry teachers transitioning to online teaching are confronted with a host of challenges. A significant challenge is online teaching self-efficacy. Technology in education enhances critical thinking, problem-solving skills, lifelong learning, and access to education for underserved populations (Schooner et al., 2017; Uçar et al., 2014a). The COVID-19 pandemic has accelerated the adoption of various e-learning models, necessitating adaptations in teaching practices to meet educational standards and student expectations (Carrillo & Flores, 2020; Murphy, 2020).

Teaching has evolved with technological advancements, requiring educators to blend content and pedagogical and technological knowledge to create engaging and effective online learning environments (Blonder & Rap, 2017; Hampton et al., 2020). Despite increased infrastructure and training, barriers such as a lack of self-confidence, competence, and resistance to change persist (Buabeng-Andoh, 2012). Addressing these challenges is crucial for improving online chemistry education in Colleges of Education (CoEs), where chemistry is often viewed as a practical and abstract subject (Delgado, 2020).

FULL TEXTS BOOK

This study explored the interrelationships between online teaching self-efficacy, attitudes towards online teaching, technological pedagogical knowledge, and confidence in transitioning among chemistry teachers at the University of Cape Coast affiliate Colleges of Education. This study aims to identify the factors that impact online teaching effectiveness and provide insights into supporting chemistry educators in their transition to online teaching.

LITERATURE REVIEW

Effective, learner-friendly teaching and learning can take place anywhere and at any time; however, regarding online teaching and learning, the procedure requires a different set of skills, strategies, and tools (Giri & Dutta, 2020; Jeffery & Bauer, 2020; Tigaa & Sonawane, 2020). It is also reported in the literature that, with the use of technology over time, teachers often change their classroom practices and ultimately adopt more student-centred beliefs (Tondeur et al., 2016). Most teachers tend to have low self-efficacy for online teaching because of the difference between conventional and online teaching and the steep nature of the learning curve involved. Teachers in a higher educational institution with prior experience of teaching in an online environment, according to (Horvitz et al., 2015; McLennan et al., 2017), have high self-efficacy, are highly motivated, and are more inclined to teach in an online environment.

On the contrary, as cited by (Ma, Chutiyami, Zhang, & Nicoll, 2021b), those without prior online teaching experience have low self-efficacy when they transition to online teaching. Kao and Tsai (2009) and Kao et al. (2014) also noted that the lack of opportunity to establish connections with students in an online environment, as in the conventional classroom, makes teachers feel less efficacious in interacting with and providing feedback to students. Dolighan and Owen (2021) claimed that previous experience with online learning in the form of additional certification or online professional development courses will help teachers acquire stronger self-efficacy when they move to online teaching. They also found that higher online teaching efficacy scores were correlated with having taken additional qualifications or online professional development courses.

Previous studies by (Celik & Yesilyurt, 2013; Smarkola, 2008; Uçar et al., 2014b) revealed a relationship between self-efficacy and attitudes towards the use of computers as well as the use of the Internet. This position was supported by (Cullen & Greene, 2011; Smarkola, 2008; Smarkola, 2011) with attitudes towards the use of computers positively correlated with their computer self-efficacy, and learners with greater self-efficacy for Internet use had a positive attitude towards the Internet.

Confidence, as reported by (Ertmer & Ottenbreit-Leftwich, 2010) constitutes one of the two greatest predictors of teachers' technology use in achieving instructional goals. He further suggested the need to devote time and effort to increasing teachers' confidence in using technology to achieve students' learning outcomes. Teachers are required to develop positive experiences with the use of computers in the classroom in the context of instructional tools. The confidence and self-efficacy in online teaching and its influence on teachers' pedagogical beliefs play a central role in the technological practices of teachers. Confidence in teaching in a conventional environment leads to misconceptions of students' perceptions of their skills and knowledge in online teaching. Pedagogies known to be effective in conventional teaching environments may not be suitable in online environments. Technological pedagogical knowledge (TPK), one of the seven components of the TPACK Model, focuses on pedagogies related to the use of technological tools and resources, in both online and conventional environments. The need to leverage technological resources as pedagogical tools for effective teaching cannot be overemphasized (Abdulai et al., 2022).

A key factor in transitioning to online chemistry teaching is the shift in pedagogical beliefs, attitudes, and ideologies (Ottenbreit-Leftwich et al., 2018). Teachers need ongoing professional development to build confidence and self-efficacy in their use of evolving technological tools (Ottenbreit-Leftwich et

FULL TEXTS BOOK

al., 2018). Technological knowledge alone is insufficient and confidence in using these tools is essential for effective teaching and learning. Confidence and the perceived value of using technology can enhance self-efficacy in online teaching. Technological pedagogical knowledge significantly affects students' scientific attitudes and literacy (Adebusuyi, Bamidele, & Adebusuyi, 2020). Effective teaching in the 21st century requires leveraging ICT tools as pedagogical resources and necessitating changes in teachers' knowledge, beliefs, and culture (Santos & Castro, 2021).

RESULTS AND DISCUSSION

Table 1: Summary Statistics for Attitude towards teaching (TAT) online, Technological pedagogical knowledge (TPK), Confidence in handling challenges (CiHc) and Online teaching self-efficacy (OTSE)

Variables (n= 24)	*M*	*SD*	Min	Max	Description
Technological pedagogical knowledge	3.95	0.39	3.37	4.95	High level
Attitude towards teaching online	3.51	0.38	2.78	4.11	High level
Confidence in handling challenges	15.11	2.30	10.55	19.25	High level
Online teaching self-efficacy	14.45	2.97	8.11	19.92	High level

Source: *Field data, May 2021*

Table 1 presents the mean and standard deviations of online teaching self-efficacy, attitudes towards online teaching, technological pedagogical knowledge, and confidence in handling challenges. From Table 1 above, teacher attitude towards teaching online had a mean of 3.51 (SD = 0.38, SEM = 0.08, Mode = 3.72, Mdn = 3.58, Min = 2.78, Max = 4.11) whereas that of technological pedagogical knowledge was 3.95 (SD = 0.39, SEM = 0.08, Mode = 3.95, Mdn = 3.95, Min = 3.37, Max = 4.95). The mean score for online teaching self-efficacy was 14.45 (SD = 2.97, SEM = 0.61, mode = 15.17, Mdn = 14.66, min = 8.11, max = 19.92). The confidence in handling challenges had a mean of 15.11 (SD = 2.30, SEM = 0.47, Mode = 10.55, Mdn = 15.14, Min = 10.55, Max = 19.25).

Table 2: Descriptive Statistics and Correlation coefficient of OTSE, CiHc, TPK and TAT

Variables	*M*	*SD*	1	2	3	4
1.Online teaching Self-efficacy	14.45	2.97	-			
2. Confidence in handling Challenges	15.11	2.30	0.64*	-		
3. Technological Pedagogical Knowledge	3.95	0.39	0.66*	0.61*	-	
4. Teacher attitude in Teaching online	3.51	0.38	0.12	0.43*	0.12	-

Note: *p < 0.05 level (2-tailed) N=24. ***Source****: Field data, May 2021*

Table 2 shows that there was a strong significant positive relationship between online teaching self-efficacy and confidence in handling challenges in an online environment, r (22) = 0.64, p = <.001, and technological pedagogical knowledge, r (22) = 0.66, p = <.001. It further indicated that there was a strong significant positive relationship between confidence in handling challenges in an online environment and technological pedagogical knowledge (r (22) = 0.61, p =.001) and teachers' attitude in teaching chemistry online (r (22) = 0.43, p =.018).

FULL TEXTS BOOK

Discussion

Online teaching self-efficacy was the dependent variable, with technological pedagogical knowledge, confidence in handling challenges, and teachers' attitude towards teaching chemistry online as independent variables. The objective was to determine the nature of the relationships between these variables.

Self-efficacy, a construct borne out of Bandura 's (1997) social cognitive theory, is one of the most studied constructs in both academia and business. Teaching self-efficacy has also received equal attention with respect to teaching in a conventional setting, alongside variables such as technological pedagogical knowledge, attitudes towards online teaching, and educational qualifications. Numerous studies in the literature have been confined to conventional classrooms with pre-service teachers and students (Ajayi et al., 2020; Arrington, 2023; Belardo et al., 2017). Few studies have targeted online teaching in tertiary landscapes among teacher educators. This survey sought to determine whether the relationship between the most researched variables in a conventional setting exists in an online environment.

A Pearson Product Moment correlation showed teachers online teaching self-efficacy was positively related with, confidence in handling challenges inherent with the transitioning to teach chemistry online r (23) =.64, p=.001 and technological pedagogical knowledge, r (23) =.61, p=.002; with the confidence in handling challenges .66 points higher (M=15.11, SD= 2.3) on average than the online teaching self-efficacy (M= 14.45, SD =2.29). Technological pedagogical knowledge was also .44 points higher (M=3.96, SD = .39) than attitudes towards teaching chemistry online (M= 3.51, SD= .39). The results of the study indicate that the confidence of chemistry teachers in UCC affiliate CoEs in handling challenges was strongly related to their technological pedagogical knowledge, attitude towards teaching chemistry online, and online teaching self-efficacy. On the other hand, online teaching self-efficacy was also found to be positively correlated with technological pedagogical knowledge, r (23) =.66, p < .001. Previous studies by Abbitt (2011) and Kul et al. (2019) found a similar relationship between technological pedagogical knowledge and self-efficacy beliefs of pre-service teachers.

Abbitt (2011) further posited that these multiple domains of self-efficacy beliefs account for teachers' thoughts and actions regarding the use of technology for teaching and learning. However, Hickson (2016) found no significant relationship between self-efficacy and the use of technology in pedagogical practice. This difference could be accounted for by the context, nature of the population, and prevailing conditions at the time of the research. The state of technological infrastructure and the availability of Wi-Fi Internet in CoEs cannot be compared to those in advanced countries; hence, the difference is not surprising.

Teachers' confidence in handling challenges inherent in transitioning to teaching chemistry online was operationalized in this study as the belief that a teacher has in looking beyond all obstacles and persisting to carry out activities such as the selection of technological resources, engaging students, and migrating and aligning course content and outcomes to national standards while teaching chemistry in an online environment. Prior et al. (2016) found a strong, positive, and significant relationship between online teaching self-efficacy and attitudes. This runs counter to the current non-significant relationship (r (23) =.12, p =.58). This difference can be attributed to the context and prevailing conditions in which the two studies were conducted. The nature of support received by chemistry teachers in the two settings might not be the same. The relationship between online teaching self-efficacy and technological pedagogical knowledge confirms Dolighan and Owen (2021), who found a similar relationship between online teaching self-efficacy and technological pedagogical knowledge.

The strong positive and significant relationship between teachers' confidence in handling challenges and the transition to teaching chemistry online with technological pedagogical knowledge and attitude underscores the fact that confidence plays a focal role in the development of self-efficacy when it comes to teaching chemistry in an online environment. Previous studies have identified attitudes as a

FULL TEXTS BOOK

determinant of teacher self-efficacy (Kuragayala, 2020). However, teachers' attitudes towards teaching chemistry and any other course in an online setting vary from their conventional teaching experiences. The current research shows that the relationship between attitudes towards teaching chemistry online and online teaching self-efficacy is positive, but the correlation coefficient was too low to make a significant difference.

CONCLUSION AND RECOMMENDATION

Conclusion: Chemistry teachers in UCC-affiliated CoEs reported a high level of satisfaction with various online teaching tasks, indicating a positive reception towards the transition to online teaching. The online teaching self-efficacy of these teachers was found to be positively and significantly related to their confidence in handling challenges during this transition, highlighting that teachers who feel capable of teaching online are also more confident in managing the associated difficulties. Despite this strong relationship, there was no statistically significant difference between online teaching self-efficacy and confidence in handling the challenges. Additionally, technological pedagogical knowledge was identified as a perfect predictor of online teaching self-efficacy among chemistry teachers, suggesting that their ability to integrate technology with pedagogy plays a crucial role in their self-efficacy in online teaching. Overall, chemistry teachers' online teaching self-efficacy in UCC-affiliated CoEs was strongly influenced by their technological pedagogical knowledge.

Recommendations: Since the Covid 19 pandemic has exposed shortfalls in online teaching practices, there is a need to provide support to teachers in colleges of education to develop and improve their online teaching self-efficacy. Stakeholders in the teacher education landscape should work towards finding the right technology-pedagogy mix to develop the right self-efficacy of teachers to function effectively and efficiently in an online environment.

APPLYING PYTHON TO DESIGN VISUAL AIDS FOR THE TOPIC "PERPENDICULAR RELATIONSHIPS IN SPACE" IN TEACHING AND LEARNING MATHEMATICS AT HIGH SCHOOLS

Thi Thai Nhat Duy
School of Education, Can Tho University, Vietnam
Du Xuan Phu*
School of Education, Can Tho University, Vietnam

ABSTRACT
According to the 2018 General Education Program of Vietnam, visual aids for teaching and learning mathematics are still limited and unequal across topics. Python is a free high-level programming language that is extremely flexible and adaptable, with the ability to combine artificial intelligence development skills. This research presents a Python technique for creating visual aids for teaching mathematics, specifically focusing on the topic "Perpendicular relationships in space." A quantitative analysis was also carried out to assess the efficiency of using Python to teach mathematics, with the goal of improving and advancing research.
Keywords: Visual aid, Python, Mathematics Education, high school.

1. Introduction

Today, the Fourth Industrial Revolution has influenced many aspects of life, especially the future of education (Elayyan, 2021). In this process, teaching and learning mathematics also follows the general trend of applying new technologies (Ayanwale et al., 2022). Although there are many software and platforms supporting math teaching and learning, Python, a free and versatile high-level programming language, is increasingly popular and widely used worldwide (Saha, 2015).

According to Tuan et al. (2022), visual aids are objects, phenomena, symbols, etc., directly used by teachers and students in the teaching process to acquire new knowledge and develop intellectual capacities. Visual aids have evolved, not only in quantity but also in quality, ranging from simple, rudimentary items to modern tools (Alshatri et al., 2019). Visual aids play a crucial role in teaching various subjects such as foreign languages (Pateşan et al., 2018), mathematics (Brewer, 2016), and sciences (Ho & Intai, 2017). Numerous studies have explored the use of Python in designing visual aids for educational purposes (Solem, 2012; Li et al., 2020). The application of Python in mathematical education has been adopted in several countries, including Korea (Park et al., 2019), the United States (Jackson et al., 2019), and Italy (Frassia et al., 2018).

This paper proposes a Python approach to designing visual aids for the topic "Perpendicular relationships in space" to facilitate mathematics teaching in high schools. A statistical study was also conducted to evaluate the effectiveness of this approach.

2. Literature Review

2.1. Definition of Visual Aids

Giardino (2010) describes visual aids as tools that provide learners with information to help them learn and accumulate experience, thus enabling them to understand general concepts through visual images and form new knowledge. According to Hyerle (2008), visual aids are non-verbal symbol systems used by learners, teachers, and leaders to link mental and emotional associations through images, creating and communicating rich thought patterns. Visual aids are categorized into three types: (1) Brainstorming Webs to promote creativity and intellectual exploration, (2) Graphic Organizers to enhance content analysis and specific learning processes, and (3) Conceptual Maps to foster cognitive development and critical thinking. Visual aids are essentially symbols, objects, drawings, phenomena, or familiar images used strategically in teaching to build knowledge content.

FULL TEXTS BOOK

Hamdani (2011) defines visual aids as a combination of sound and images. The presence of visual aids makes the teaching material more accessible and comprehensive for learners. Visual aids can also take on the role of the teacher in presenting content. Additionally, visual aids are materials and equipment that stimulate and support sound and images in teaching, facilitating learning by activating multiple sensory channels (Madhuri, 2013).

2.2. Python Software with Open-Source Library Manim

Manim is an open-source library written in Python designed to create visually appealing and dynamic educational videos about mathematics. This software allows users to create animations, graphs, charts, and mathematical simulations with high precision. Manim combines Python's programming capabilities with the need to present complex mathematical concepts visually, making it an ideal teaching tool for educators and students. Besides being an educational tool, Manim promotes creativity and research in mathematics. Its ability to simulate and visually represent mathematical concepts helps researchers and teachers develop new teaching methods and assists students in understanding complex mathematical ideas.

Key Features of Manim

(1) High-Quality Graphics: Manim provides tools to create sharp 2D and 3D images, from simple to complex.

(2) Python Integration: As a Python library, Manim allows users to utilize the full range of libraries and tools available in the Python environment to extend video capabilities.

(3) Flexible Customization: Users can create complex scenarios, adjusting every detail from color and transparency to motion, ensuring the videos meet their educational objectives.

(4) Strong Support for Mathematical Concepts: Manim is designed to solve mathematical problems and represent mathematical algorithms, making it an ideal tool for teaching and learning mathematics.

3. Research Results

3.1. Research Method

Step 1: Study the lesson content to select suitable visual aids.

Step 2: Use Python to design visual aids, then incorporate them into the lesson plan.

Step 3: Implement the lesson plan in actual teaching

Step 4: Collect feedback for improvement. If the feedback is positive, proceed to **Step 5**.

Step 5: Save the lesson plan with the designed visual aids for future teaching use. If the feedback is not positive, return to **Step 2**.

3.2. Visual Aids Designed

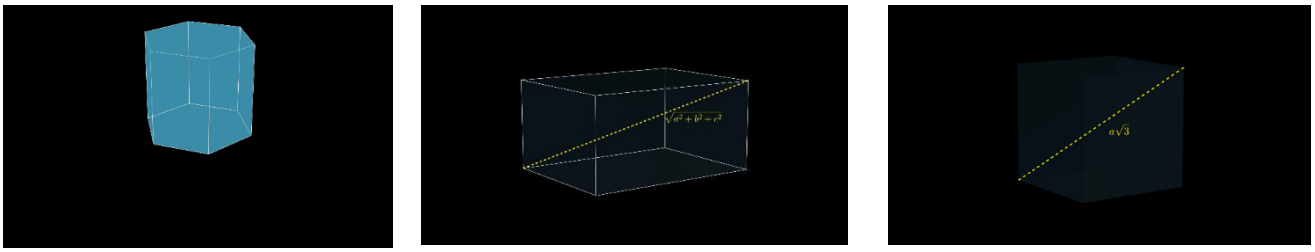

Figure 1. Illustrations of regular prisms, rectangular boxes, and cubes using Python

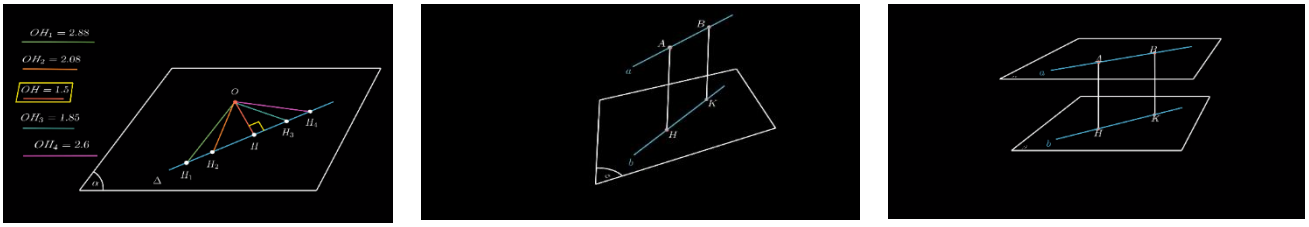

Figure 2. Illustrations of spatial distances using Python

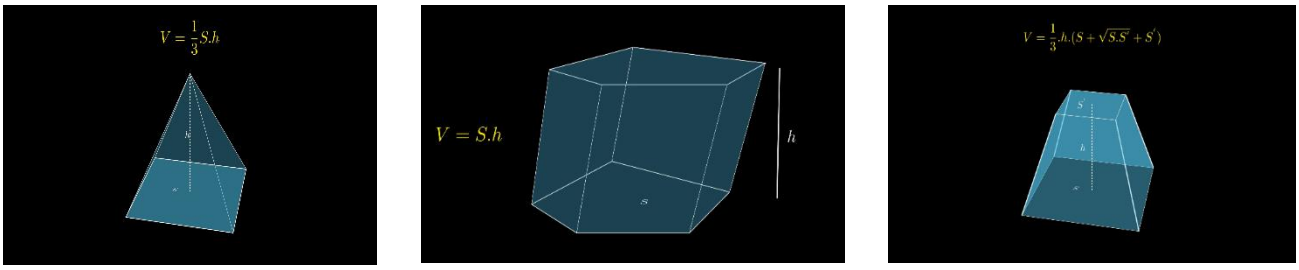

Figure 3. Illustrations of volumes of pyramids, prisms, and truncated pyramids using Python

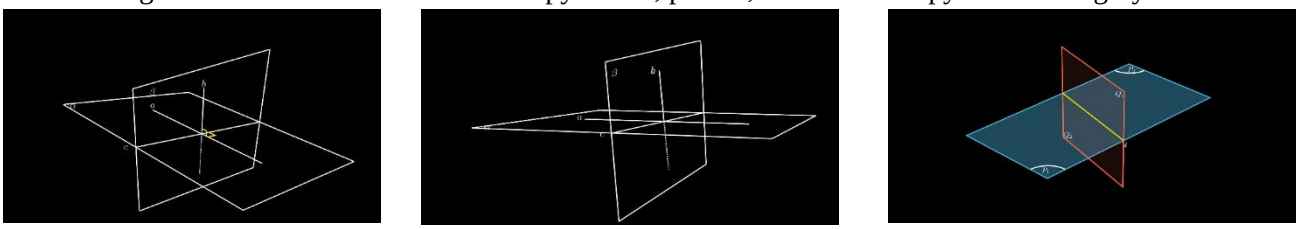

Figure 4. Illustrations of the angle between two planes and dihedral angles using Python

3.3. Survey Questionnaire

Table 1. Survey Questionnaire

Encode	Observed Variable
Q1. Compared to traditional teaching, learning math with visual aids through digital software has the following benefits:	
Q1A	Easy to access
Q1B	Increases interest in learning
Q1C	Can study at any time
Q1D	Can study anywhere
Q1E	Saves time and cost
Q1F	Easy to use
Q2. The content of knowledge when teaching with visual aids has the following characteristics:	
Q2A	Conveys information visually and understandably
Q2B	Increases interaction and curiosity
Q2C	Helps visualize and generalize knowledge
Q2D	Promotes thinking and creativity
Q2E	Improves learning experience
Q3. Arranging lessons with visual aids has the following characteristics:	
Q3A	Uses logical structure
Q3B	Balances theory and practice
Q3C	Meets the learning needs of students
Q4. Compared to traditional teaching, I think	
Q4A	Helps to imagine and understand the lesson better
Q4B	Promotes more interaction and positivity
Q4C	Enhances problem-solving skills
Q4D	Diversifies teaching methods
Q5. In your opinion about using visual aids in teaching mathematics	
Q5A	What are the advantages?
Q5B	What are the disadvantages?
Q6. On a scale of 1 to 10, how would you rate the visual teaching method?	

Questions **Q1**, **Q2**, **Q3**, **Q4** are designed on a 5-point Likert scale to evaluate the quantitative results of the answers. The questions are coded as follows: 1 = *Strongly disagree*, 2 = *Disagree*, 3 = *Neutral*, 4

FULL TEXTS BOOK

= *Agree*, 5 = *Strongly agree*. Question **Q5** is an open-ended question to analyze qualitatively. Question **Q6** has a scale from 1 to 10 to evaluate quantitatively.

3.4. Analysis Results

Statistical Data Collection: A total of 259 questionnaires were distributed, and all 259 were returned, achieving a response rate of 100%.

3.4.1. Reliability Analysis

Students' feedback on reliability was analyzed using IBM SPSS 26 software, presented in Tables 2, 3, 4, and 5.

Table 2. Analysis of Student Feedback for Q1 Group Questions

Reliability Statistics

Cronbach's Alpha	N of Items
0.684	6

Item-Total Statistics

FULL TEXTS BOOK

	Scale Mean if Item Deleted	Scale Variance if Item Deleted	Corrected Item-Total Correlation	Cronbach's Alpha if Item Deleted
Q3A	8.8687	0.835	0.461	0.465
Q3B	8.7954	1.039	0.516	0.395
Q3C	8.6757	1.212	0.316	0.650

Table 5. Analysis of Student Feedback for Q4 Group Questions

Reliability Statistics

Cronbach's Alpha	N of Items
0.694	4

Item-Total Statistics

	Scale Mean if Item Deleted	Scale Variance if Item Deleted	Corrected Item-Total Correlation	Cronbach's Alpha if Item Deleted
Q4A	13.3012	2.397	0.510	0.608
Q4B	13.2510	2.600	0.533	0.601
Q4C	13.2510	2.592	0.441	0.652
Q4D	13.3282	2.477	0.438	0.657

The above tables show that the observed variables have a suitable total variance correlation coefficient (all greater than 0.3). The Cronbach's Alpha coefficients for **Q1**, **Q2**, **Q3**, **Q4** groups are 0.684, 0.749, 0.613, and 0.694 respectively, all greater than 0.6, indicating reliability and appropriateness of the survey questions.

3.4.2. Descriptive Statistics of Variables

The 5-point Likert scale with 1 being the lowest (Minimum), 5 being the highest (Maximum), and 3 being Neutral. The mean values have specific meanings in the following ranges:

1.00 – 1.99: Strongly Disagree
2.00 – 2.99: Disagree
3.00 – 3.99: Neutral
4.00 – 4.99: Agree
5.00: Strongly Agree

Table 6. Descriptive Statistics of Variables

Encode	N	Mean	Std.Deviation
Q1A	259	3.7490	0.89071
Q1B	259	3.8958	0.82167
Q1C	259	3.8108	0.87100

Neutral	Frequency	77	63	76	77	59	79
	Percentage (%)	29.7	24.3	29.3	29.7	22.8	30.5
Agree	Frequency	112	121	105	108	134	107
	Percentage (%)	43.2	46.7	40.5	41.7	51.7	41.3
Strongly Agree	Frequency	52	62	61	58	51	64
	Percentage (%)	20.1	23.9	23.6	22.4	19.7	24.7
Total *Agree* and *Strongly Agree*	**Frequency**	**164**	**183**	**166**	**166**	**185**	**171**
	Percentage (%)	**63.6**	**70.6**	**64.1**	**64.1**	**71.4**	**66.0**

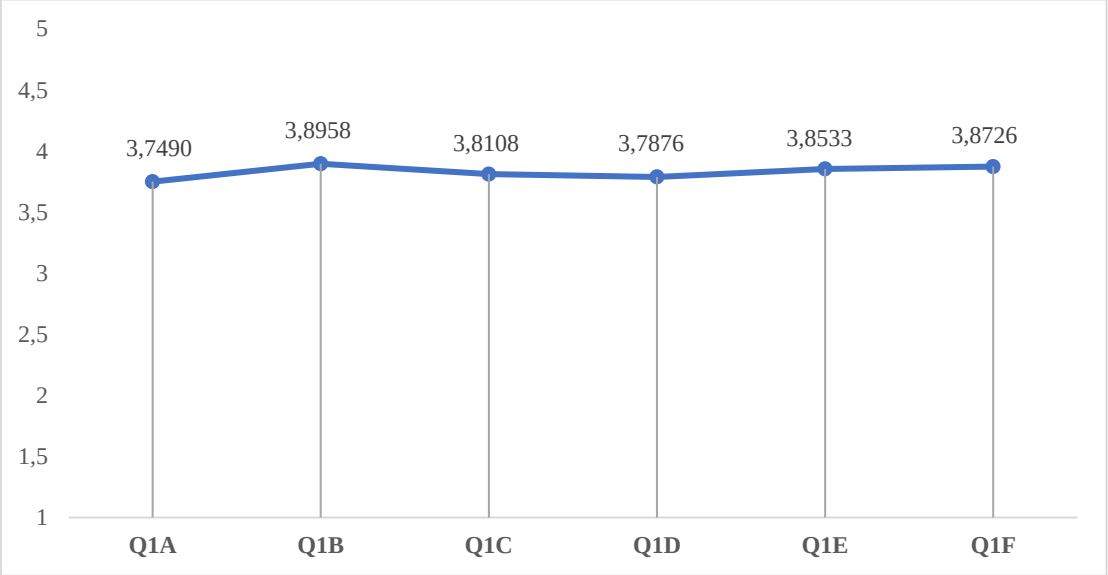

Chart 1. Average Value of Q1 Group Questions

Based on the above table, the total percentage of students selecting Agree and Strongly Agree is quite high, all above 50%, indicating that students tend to agree with the opinions. This shows that most

FULL TEXTS BOOK

students recognize the benefits of using visual teaching aids in teaching mathematics compared to traditional teaching methods.

3.4.4. Analysis of Q2 Group Questions

Table 8. Selection Ratio of Q2 Group Questions

Question		Q2A	Q2B	Q2C	Q2D	Q2E
Strongly Disagree	Frequency Percentage (%)	0 0.0	1 0.4	1 0.4	0 0	0 0
Disagree	Frequency Percentage (%)	10 3.5	7 2.7	9 3.5	7 2.7	8 3.1
Neutral	Frequency Percentage (%)	65 25.1	63 24.3	66 25.5	66 25.5	66 25.5
Agree	Frequency Percentage (%)	125 48.3	123 47.5	130 50.2	130 50.2	111 42.9
Strongly Agree	Frequency Percentage (%)	59 22,8	65 25.1	53 20.5	56 21.6	74 28.6
Total *Agree* and *Strongly Agree*	**Frequency Percentage (%)**	**184 71.1**	**188 72.6**	**183 70.7**	**186 71.8**	**185 71.5**

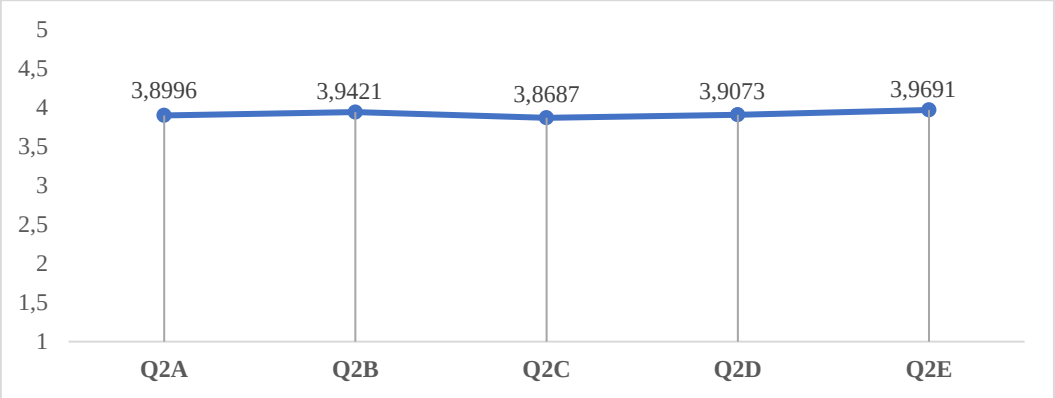

Chart 2: Average Value of Q2 Group Questions

From the table above, it can be seen that Q2A, Q2B, Q2C, and Q2E all have a relatively high rate of agreement and strong agreement above 50%, indicating that most students agree with the contents. This shows that when teaching with visual aids, it still provides the necessary knowledge and the content is suitable for students, making the presentation of knowledge content understandable.

Question		Q4A	Q4B	Q4C	Q4D
	Percentage (%)	33.6	40.2	32.0	31.3
Strongly Agree	Frequency	140	137	148	139
	Percentage (%)	54.1	52.9	57.1	53.7
Total *Agree* and	**Frequency**	**227**	**241**	**231**	**220**
Strongly Agree	**Percentage (%)**	**87.7**	**93.1**	**89.1**	**85**

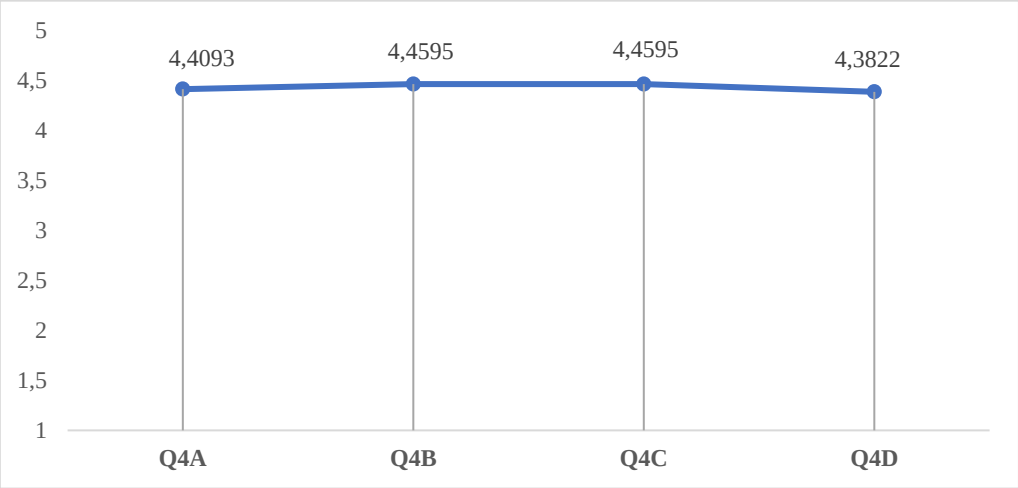

Chart 4: Average Value of Q4 Group Questions

The high rates of agreement and strong agreement for Q4A, Q4B, Q4C, and Q4D, all above 50%, indicate that the majority of students believe that compared to traditional teaching methods, using visual aids in teaching brings more benefits, such as enhancing interaction between teachers and students, promoting problem-solving skills, and better understanding of lessons.

3.4.7. Analysis of Q5 Group Questions

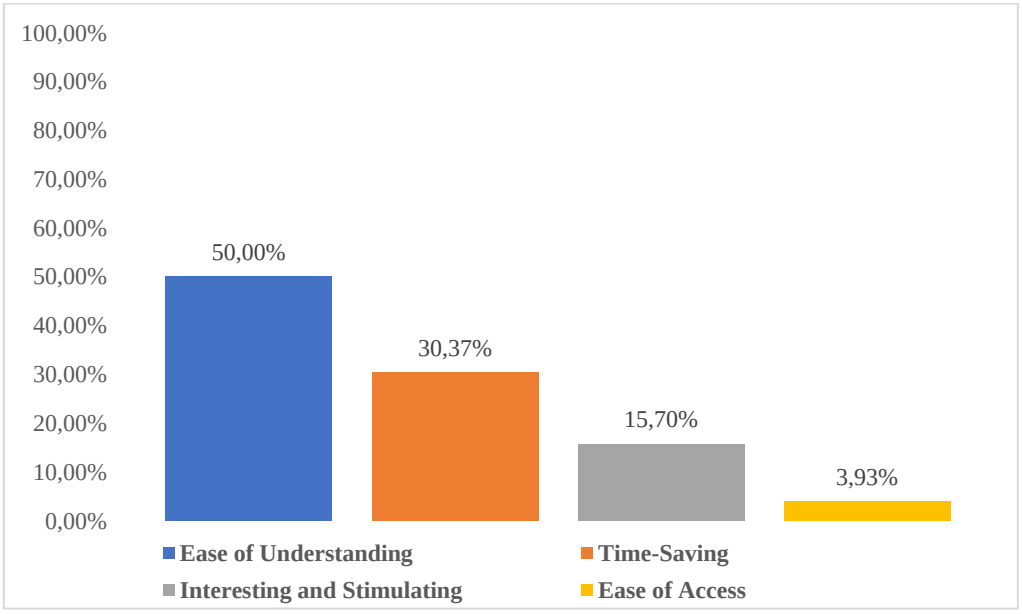

Chart 5: Advantages of Visual Teaching Methods

The results of the survey question Q5 show the advantages of teaching methods using visual aids as follows:

Ease of Understanding: 50% of survey respondents believe that the use of visual teaching aids in math teaching is easy to understand.

Time-Saving: 30.37% find it time-saving.

FULL TEXTS BOOK

Interesting and Stimulating: 15.70% find it interesting and stimulating.
Ease of Access: Only 3.93% believe it is easy to access, showing that some students are still not fully adapted to this teaching method.

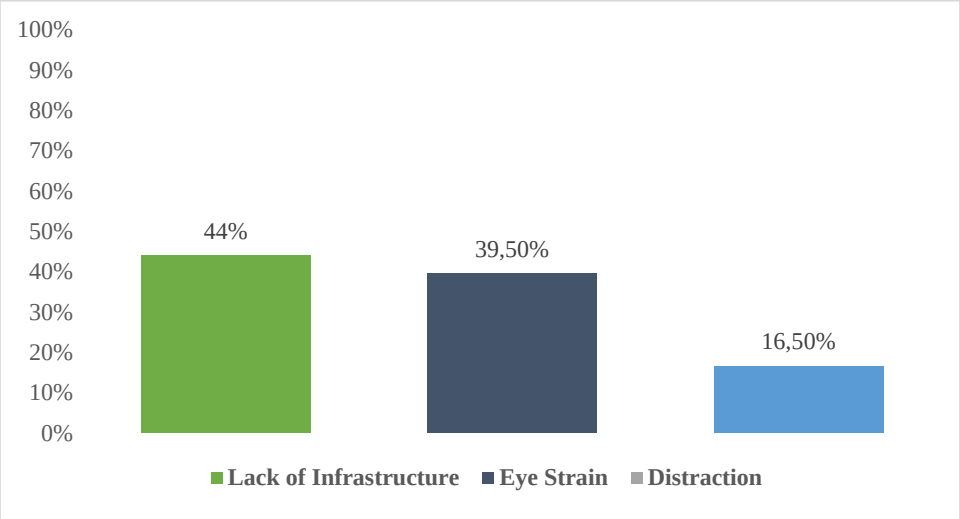

Chart 6: Disadvantages of Visual Teaching Methods

The results of the survey question Q6 show the disadvantages of teaching methods using visual aids as follows:

Lack of Infrastructure: 44% cited lack of infrastructure (wifi, electronic devices, etc.) as amajor disadvantage.

Eye Strain: 39.5% believe that visual teaching methods may affect vision due to prolonged exposure.

Distraction: 16.5% believe that for complex and difficult lessons, the use of visual materials can easily cause distraction.

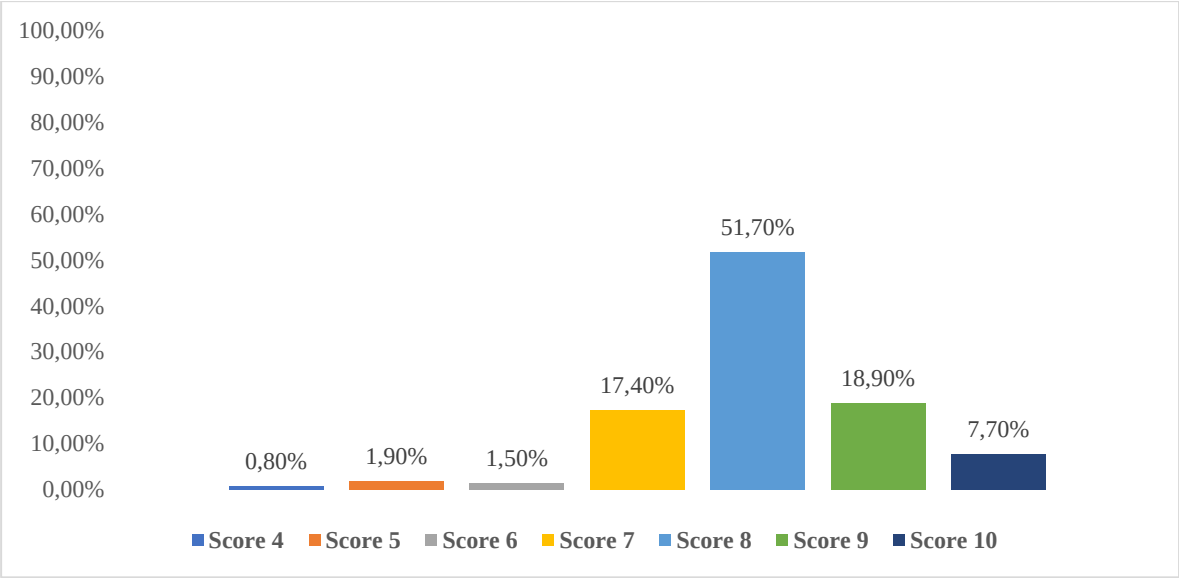

Chart 7: Score Range for Visual Teaching Methods

The average score of 8.0502 indicates that students are quite interested in the visual teaching method and recognize its effectiveness. The experimental results show that the purpose of the experiment has been achieved. Applying visual teaching methods in math education is a new trend in Education 4.0 today. The experiment shows that visual teaching methods in math are generally well received by students, although some limitations need to be addressed for further improvement.

4. Conclusion

Visual aids in teaching play a vital role in creating a positive learning environment, enhancing students' curiosity, and encouraging their eagerness to learn. These aids are in line with modern educational trends, aiming to develop students' overall competencies and effectively meet the current educational demands. However, attention must be paid to issues related to sound when using these aids. Some solutions to improve the learning experience include adjusting the volume to suit the classroom environment and providing features that allow teachers to increase or decrease the volume as needed. Background music, if used, should be instrumental or have a light tempo to avoid distracting students. Additionally, allowing teachers to mute the sound during important sections requiring high concentration is a good idea. Finally, regularly collecting feedback from students on the effectiveness of visual aids, including sound, will support adjustments and improvements in their use in future lessons. These adjustments will help enhance the effectiveness of visual aids, contributing to improving educational quality and the learning environment for students.

The study shows that the application of Python and the Manim open-source library has significant benefits in designing visual aids in mathematics, particularly for the topic “Perpendicular relationships in space” for the 11th-grade mathematics curriculum. Using technology in teaching not only helps make complex mathematical concepts more understandable and engaging but also encourages student interaction and active participation, thereby enhancing educational effectiveness. Integrating technology aligns with modern educational trends, better preparing students for an increasingly digital world. Future research should focus on expanding the application scope to various age groups and curricula, increasing interaction, and improving assessment tools to optimize the teaching and learning process.

In the future, besides Python, artificial intelligence tools such as ChatGPT, DALL-E, HeyGen, Cleanup, etc., can be used to design visual aids. Visual aids also need to develop new formats to be applicable to other subjects or mathematics at the primary and secondary school levels. Readers can refer to related articles on this research topic, such as Artificial Intelligence in Mathematics Education (Thanh & Tuan, 2021) and Augmented Reality Technology (Tuan & Ngan, 2021).

ABSTRACT
Moisture affects asphalt mixtures' characteristics adversely, reducing the performance of roadway pavement and may even cause the service life to end earlier than projected. In this study, it was aimed both to evaluate the effects of different aggregate gradations on the moisture susceptibility of dense-graded hot mix asphalt (HMA) via Retained Marshall Stability (RMS) method and to examine the effectiveness of RMS over time by applying longer water exposure periods to the HMA test samples. Three different aggregate gradations as middle (M), coarser (C) and finer (F) based on the Type 1 gradation envelope defined in Turkey's Highway Technical Specification for use in the wearing course of flexible roadway pavements, and two different water exposure periods as 2-days and 12-days were included in the study for this aim. All HMAs with M, C and F gradations were determined to have successful moisture resistances according to their RMS results fluctuating on the level of 85%. Moreover, the effectiveness of RMS was not detected to be changed significantly over time, since RMS values were found to be decreased no more than 3% in all gradations as the water exposure period was increased from 2 days to 12 days. So, it was concluded that extending the 2-days of water exposure period further was not necessary to evaluate the moisture susceptibility of dense-graded HMAs with RMS method.
Keywords: Water exposure period, Aggregate gradation, Retained Marshall Stability, Moisture susceptibility, Hot mix asphalt.

INTRODUCTION
Water causes loss of adhesive bond at the asphalt-aggregate interface, known as stripping, and lowers strength of hot mix asphalt (HMA) against roadway flexible pavement distresses like deformations, crackings and mechanical weathering-based failures. This phenomenon is commonly defined as susceptibility of a HMA to moisture damage. HMA with high moisture susceptibility is not desirable for the roadway pavement to maintain successful performance throughout its service life, since poor moisture resistance of HMA will possibly lead to a shortened life-span of roadway pavement, which in turn creates additional economic burden on transportation agencies and therefore on communities.
For higher durability and better performance of a pavement in its service life, efforts are being made to make HMA more resistant against moisture. Some factors like modification of HMAs with several additives, mineralogical composition-morphological properties and gradation characteristics of aggregate have rather influencing effect on the moisture susceptibility of HMAs. Modification of HMAs either with wet process or with dry process has been found to provide improvements in moisture resistance. About 1% addition of hydrated lime, which is a well-known modifier used to modify asphalt mixtures with dry process (mixture modification), almost eliminated stripping in asphalt mixtures [1].

*Corresponding author (d.arslan)

FULL TEXTS BOOK

Hydrated lime could also increase moisture resistance of mixtures when it was used in wet process (asphalt modification) which was reported to raise tensile strength ratio (TSR), the most commonly test used to measure moisture sensitivity of compacted asphalt mixtures and higher TSR means better water resistance, from 64.3% to 78.6% [2]. Moreover, the damaging effects of water on asphalt mixtures were determined to be reduced by many additives, the most known of which were Styrene-Butadiene-Styrene (SBS), Ethylene Vinyl Acetate (EVA), Crumb Rubber (CR) and Polyethylene Terephthalate (PET) [3-8]. Asphalt mixtures composed of hydrophobic aggregates were found to have more potential to resist water [9] showing the effect of mineralogical composition on the moisture susceptibility. Shape of aggregates, a significant morphological property, may also affect moisture susceptibility of HMAs. The moisture resistance of asphalt mixtures with angular, flat, elongated and round aggregates were compared and performance of each of the mixture were determined to differ from each other either significantly or negligible [10]. In another study, it was found that higher flat-elongated particles and inferior sphericity of the aggregate weakened moisture resistance of HMA [11]. The effects of aggregate gradation on the moisture resistance of HMAs were evaluated by examining asphalt mixtures prepared with finer and coarser or upper-middle-lower limit aggregate gradations as per local codes. The literature contains conflicting findings on this issue. It has been stated in some papers that finer aggregate gradation (or upper limit) provides more resistance to moisture [9, 12-17], while in some papers it has been stated that coarser aggregate gradation (or lower limit) provides more resistance to moisture [18, 19]. Moreover, there are also studies showing that aggregate gradation is ineffective on moisture resistance of asphalt mixtures which have the same type of grading characteristics i.e., dense-graded mixtures [20, 21]. Although it is difficult to explain the reasons for the confusion here, there are many effective parameters in this regard as briefly mentioned above. Asphalt properties used in the mixture, fabrication properties of the samples and whether they are fabricated identically or not, compaction effort and the technique used, air void contents and whether or not these air voids are interconnected, unit weights of the samples, asphalt film thickness, testing methods used in the moisture susceptibility comparisons, etc. can be added to the above-mentioned parameters.

The effects of aggregate gradation variations on the moisture susceptibility of the asphalt mixtures were aimed to be evaluated by Retained Marshall Stability (RMS) in this study. For this aim, three different aggregate gradations were determined based on the Type 1 gradation envelope defined in Turkey's Highway Technical Specification for use in the wearing course of flexible roadway pavements: middle gradation (M), coarser gradation (C) and finer gradation (F). M contains the values passing through the middle of that defined envelope. C was obtained by shifting the lower limit of the gradation envelope downwards by 7%, while F was obtained by shifting the upper limit upwards by 7%. Moreover, 2 days and 12 days of water exposure periods were included in the study, unlike other studies, in order to examine the effectiveness of RMS over time.

MATERIALS AND METHODOLOGY

50/70 penetration grade asphalt binder and crushed limestone aggregate were used in the study. The basic characteristics of the asphalt binder and specific gravity values of the aggregate were presented in Table 1 and Table 2.

Table 1. Characteristics of the 50/70 penetration grade asphalt binder.

Applied test	Test result	Standard
Penetration at 25℃, dmm	55.3	ASTM D5
Softening point, ℃	51.8	ASTM D36
Flash point, ℃	283	BS EN 22592
Specific gravity at 25℃	1.01	ASTM D70
Viscosity at 135℃, Pa.s	0.295	ASTM D4402

Viscosity at 150°C, Pa.s	0.184	ASTM D4402

Table 2. Specific gravity values of the crushed limestone aggregate.

	Bulk Specific Gravity	Apparent Specific Gravity
Coarse aggregate	2.759	2.781
Fine aggregate	2.727	2.760
Filler	-	2.764

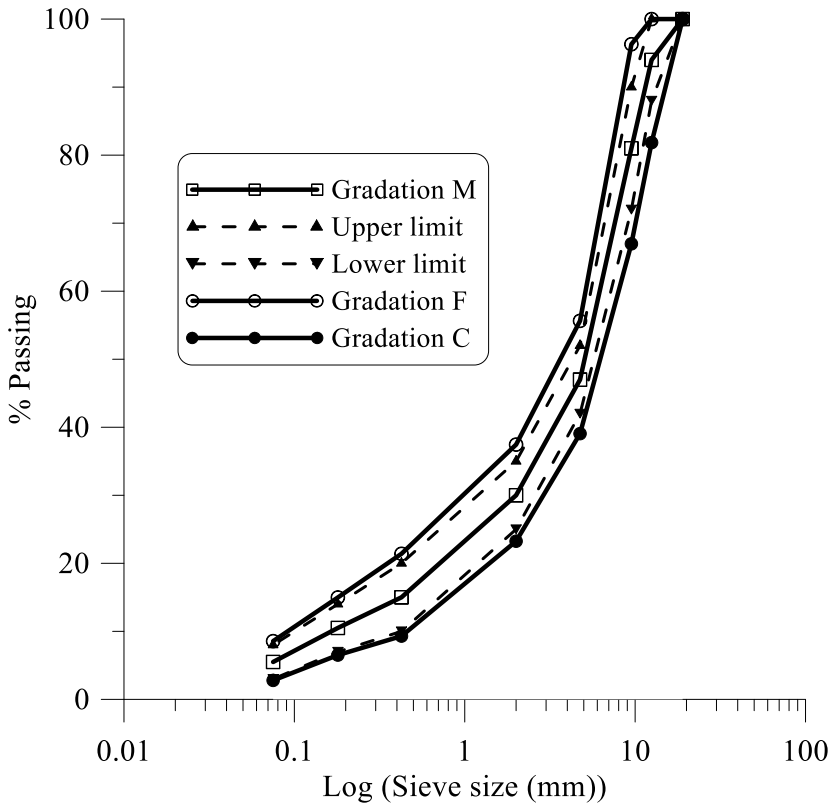

Figure 1. Aggregate gradations used in the Marshall briquettes.

M, C and F aggregate gradations shown in Figure 1 were used in Marshall briquettes. They were determined based on the Type 1 gradation envelope defined in Turkey's Highway Technical Specification [22]. M was the middle of that envelope while C and F were obtained by shifting the lower and upper limits of the gradation envelope downwards and upwards by 7%, respectively. That is, C is a coarser gradation than the lower limit, and F is a finer gradation than the upper limit of Type 1 gradation envelope. Optimum asphalt contents for each of the aggregate gradations were determined in accordance with Marshall method by us in our former study [23] as 4.68% for M, 4.64% for C, 4.96% for F and were used in that study. Marshall briquettes were fabricated at 150±5°C by compacting 75 blows to each face with Marshall hammer. Each briquette was produced with the optimum asphalt content according to the aggregate gradation. The effects of aggregate gradations on the moisture susceptibility of HMAs were detected by Retained Marshall Stability (RMS) method. The produced Marshall briquettes were divided into 3 groups, with two samples in each group. The reference group was unconditioned (dry), while one group was exposed to water at 60°C for 2 days (2 days-wet), and one group was exposed to water at 60°C for 12 days (12 days-wet). Briquettes were exposed to water for different periods of time in order to detect the change of effectiveness of the RMS over time. Stability measurements of all samples were carried out at 60°C and average values were calculated for each group. The effects of aggregate gradation on the moisture susceptibility of HMAs and the effectiveness of RMS over time were determined according to the Eq.1 given below.

FULL TEXTS BOOK

$$\text{RMS}, \% = \frac{\text{Average Marshall Stability of wet samples (2 days−wet or 12 days−wet)}}{\text{Average Marshall Stability of dry samples}} \text{x}100 \quad \text{(Eq.1)}$$

RESULTS AND DISCUSSION

The average mechanical properties of the test samples for each aggregate gradation were shown in Table 3.

Table 3. Mechanical properties of the test samples.

Gradation	Gmb	Va, %	VMA, %	Vfa, %
F	2.447	4.00	15.06	73.78
M	2.437	4.82	15.22	68.40
C	2.396	6.54	16.67	60.85

As expected, the bulk specific gravity (Gmb) and voids filled with asphalt ratio (Vfa) were decreased, while air void ratio (Va) and voids in mineral aggregate ratio (VMA) were increased when aggregate gradation gets coarser.

The average of Marshall Stability results for dry, 2 days-wet and 12 days-wet samples in each gradation type were presented in Figure 2. When Figure 2 was examined, it could be seen first of all that, dry or wet in all conditions, higher stability values were obtained as the gradation gets finer. Similar findings with finer gradation in dense-graded HMAs were seen in the literature [9, 23-27]. So, the results of the study can be said to be compatible with literature in this regard. When the differentiations in stability results were evaluated together with the data in Table 3, less void ratio and denser sample structure may have provided this outcome.

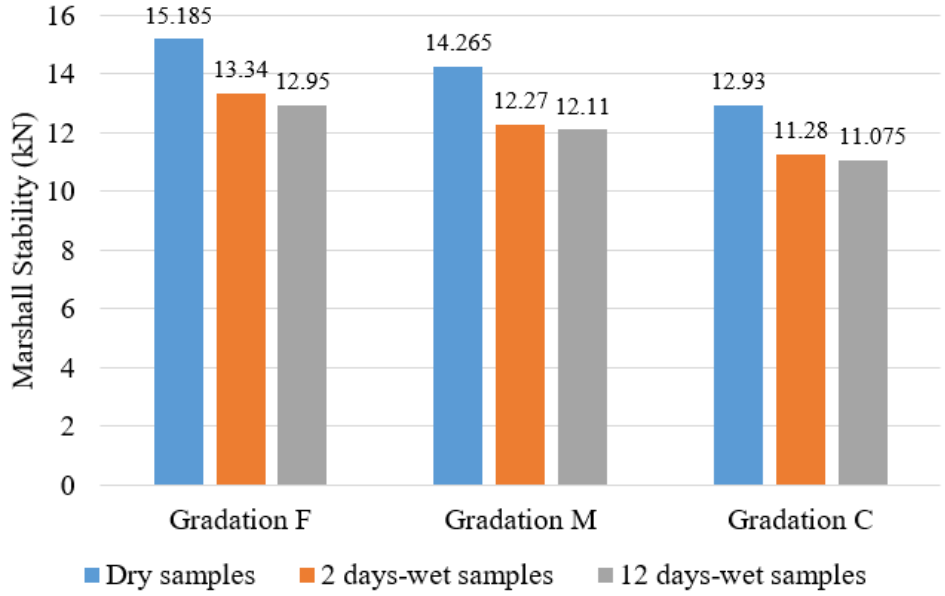

Figure 2. Marshall Stability results.

The RMS values were calculated according to the Eq. 1 in order to evaluate the effects of both the aggregate grading and the water exposure periods on the moisture susceptibility of HMAs. They were given in Figure 3.

FULL TEXTS BOOK

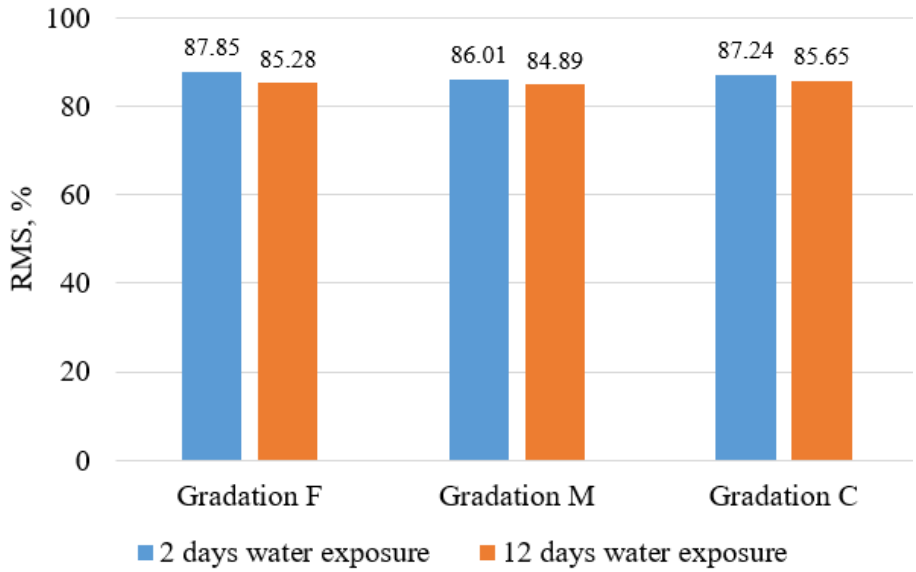

Figure 3. RMS results for aggregate gradings and water exposure periods.

All RMS values were found to be over 80% meaning that HMAs with all aggregate gradings perform well against detrimental effects of water and have successful moisture resistance. The highest RMS was in F grading as 87.85% (with 2 days of water exposure period), while the lowest was in M grading as 84.89% (with 12 days of water exposure period). According to the data in Figure 3, aggregate gradation characteristics were found to be ineffective on the moisture resistance of dense-graded HMAs, since all RMS values fluctuated on the level of 85%. Some literature studies also reflect this finding [20, 21].

RMS approach was stated to have low sensitivity in measuring moisture susceptibility of HMAs with respect to the other performance tests related on this issue [15]. Therefore, the effectiveness of RMS was examined by extending the water exposure period from 2 days to 12 days. RMS values were found to be decreased in all gradations as the water exposure period was increased from 2 days to 12 days. But, no significant decrements were detected. Even in the F grading, where the largest decrease was observed from 87.85% to 85.28%, this decrement was found to be less than 3%. It could be concluded that the effect of extending the water exposure period from 2 days to 12 days on RMS results is quite limited. Thus, when measuring the moisture sensitivity of dense-graded HMAs with the RMS approach, it was determined that 2 days of water exposure period would be sufficient and it was not necessary to extend this period further.

CONCLUSIONS

In this study, the effects of aggregate gradation on the moisture susceptibility of the HMAs and the effectiveness of RMS over time were evaluated. Three different aggregate gradations as M, C and F based on the Type 1 gradation envelope defined in Turkey's Highway Technical Specification and two different water exposure periods as 2 days and 12 days were included in the study. The following outcomes were achieved;

- In all conditions (dry, 2 days-wet and 12 days-wet), higher stability values were obtained as the gradation gets finer.
- All RMS values were fluctuated on the level of 85% for all gradations. The highest RMS was in F grading as 87.85% (with 2 days of water exposure period). The lowest RMS was in M grading as 84.89% (with 12 days of water exposure period).
- As the water exposure period was increased from 2 days to 12 days, RMS values were found to be decreased no more than 3% in all gradations.

Consequently, all HMAs with M, C or F gradations were determined to have successful moisture resistances according to their high RMS results. Moreover, 2-days of water exposure period would be

FULL TEXTS BOOK

sufficient to evaluate the moisture susceptibility of dense-graded HMAs with RMS approach and it was not necessary to extend this period further, since the effectiveness of RMS did not change much over time.

NAVIGATING MISUNDERSTANDINGS AND CONFLICTS IN MULTICULTURAL CLASSROOMS: A COMPREHENSIVE LITERATURE REVIEW

PhD (Cand) Xhiljola ABDIHOXHA
Barleti University, Tirana, Albania
ORCID ID: https://orcid.org/0009-0004-1012-7395

ABSTRACT
This paper, which is a literature review examines misunderstandings and conflicts in multicultural classrooms, focusing on interactions between students and professors. The aim of the study is to identify the root causes of these conflicts, understand their dynamics, and explore effective strategies for resolution. Drawing on a range of scholarly sources, including Banks (2015), Gorski (2016), and Deardorff (2019), the review highlights how language barriers, cultural assumptions, and differing educational expectations contribute to communication breakdowns and cultural clashes. Methodologically, this paper, being a literature review synthesizes qualitative and quantitative research findings on intercultural communication and educational conflict, providing a comprehensive overview of current academic discourse.
Key contributions of this review include a detailed analysis of the role of cultural competence in mitigating conflicts and fostering a more inclusive and understanding learning environment. The paper also discusses practical strategies for educators to enhance their teaching practices, such as promoting empathy, open communication, and cultural awareness etc. By offering insights and recommendations for improving interactions in diverse classrooms, this review aims to contribute to the ongoing conversation on intercultural education and provide valuable guidance for educators facing the challenges of teaching in increasingly multicultural settings.
Ultimately, this study underscores the importance of addressing cultural misunderstandings proactively to build harmonious and effective educational environments.
Keywords: Intercultural Communication; Multicultural Classrooms; Educational Conflicts and Misunderstandings; Cultural Competence; Inclusive Education

INTRODUCTION

Intercultural education, a relatively new field within educational studies, has evolved in response to social and historical transformations throughout the twentieth century, influenced by local conditions leading to diverse paradigms and issues. The onset of globalization, increased migration, political changes, democratization, and the acknowledgment of human rights have prompted a significant reevaluation of theoretical frameworks and their practical applications. This evolution has introduced new goals and research areas focused on global society issues, cultural hybridization, trans-nationalism, borderland cultural interactions, intercultural conflicts, and the role of educational systems in fostering peaceful coexistence, integration, and social capital development in multicultural societies. These trends have spurred innovative thinking and the reconstruction of fundamental principles in intercultural education.
Intercultural education (IE) intersects with other educational fields such as global, international, comparative, European, civic, and peace education, though these relationships are complex and sometimes ambiguous. Both intercultural and global education address global processes, cultural globalization, migration, and intercultural cooperation and conflicts, aiming to raise awareness of global interconnectedness and foster a sense of responsibility and solidarity (Melosik, 1998). IE focuses specifically on socio-cultural phenomena and local subject matter.

FULL TEXTS BOOK

The relationship between IE and international education (IEd) is less clear-cut, as IEd is a newer concept, primarily linked to formal education abroad. IEd and CE may eventually converge, enhancing international cooperation in culture, education, and social development. Peace education, rooted in the works of Dewey, Montessori, Freire, and Galtung, aims to prevent war and conflict through mutual understanding and tolerance, with UNESCO and UNICEF promoting these programs. IE and peace education overlap in promoting human rights, tolerance, and combating discrimination, especially in post-conflict multiethnic communities.

IE also connects with civic education in addressing human rights, combating social exclusion, and supporting human capital development. The increasing cultural diversity and migration in modern societies necessitate frameworks for integrating ethnic groups into a transcultural civic community, emphasizing individual responsibility and cooperation across cultures. European education, promoted by the European Commission, supports European integration, encourages cooperation among Europeans, and fosters a European identity. The overlap with IE appears in programs that promote cultural heritage, local languages, and the ability to function within the EU.

In today's increasingly globalized world, multicultural classrooms have become the norm rather than the exception. These environments, characterized by a diverse student body with varying cultural backgrounds, offer both unique opportunities and significant challenges. The richness of cultural diversity can enhance learning experiences and foster a more inclusive educational atmosphere. However, it also presents a complex landscape where misunderstandings and conflicts can arise due to cultural differences. Understanding these dynamics is crucial for teachers and professors aiming to create harmonious and effective learning environments.

Research indicates that cultural misunderstandings in classrooms can stem from a variety of sources, including differing communication styles, cultural norms, and values (Banks, 2015; Gay, 2018). For instance, what might be considered assertive communication in one culture may be perceived as aggressive or disrespectful in another. Such differences can lead to misinterpretations and conflicts among students and between students and teachers. These conflicts, if not addressed properly, can hinder the educational process and affect the overall classroom climate.

Moreover, the way conflicts are managed in multicultural classrooms significantly impacts the learning experience. Effective conflict resolution strategies that consider cultural sensitivities can transform potential conflicts into learning opportunities (Hofstede, 2011). Conversely, a lack of cultural awareness can exacerbate tensions and lead to prolonged disputes, further disrupting the educational process (Gorski, 2016).

This paper aims to provide a comprehensive literature review on the sources of misunderstandings and conflicts in multicultural classrooms and the strategies employed to navigate these challenges. By examining existing research, this review seeks to identify best practices for teachers to foster a more inclusive and understanding classroom environment. Through this exploration, the paper will contribute to the ongoing discourse on multicultural education and highlight the importance of cultural competence in contemporary educational settings. Also this paper will delve into the various factors contributing to misunderstandings and conflicts, explore the impact of these issues on the educational experience, and review effective strategies for conflict resolution and fostering understanding in multicultural classrooms.

1. LITERATURE REVIEW / DIFFERENT CATEGORIES OF CONFLICTS

In today's pluralistic society, diversity presents both opportunities for growth and potential for conflict, particularly in educational settings where immigrant and native students coexist. This coexistence naturally leads to contrasts and disputes, which necessitate effective conflict resolution strategies to maintain a positive educational environment. As Europe becomes increasingly ethnically diverse, new sociocultural dynamics emerge, influencing educational contexts. Experts in Intercultural Education,

FULL TEXTS BOOK

such as Aguado, Ortega, Essomba, Santos, and Soriano, emphasize that conflicts in multicultural school settings can be constructive if resolved with respect, dialogue, and mutual understanding. Traditionally, conflicts in such contexts have stemmed from differing communication styles, unshared disciplinary norms, and varying classroom atmospheres. Jordan's (2007) framework of dialoguing and participation promotes student-led conflict resolution, enhancing school climate. Additionally, the socio-cultural concept of a "Third Space," as discussed by Gutierrez, Rogoff, Larson, and Bhabha, serves as a hypothetical arena where diverse worldviews and learning strategies converge to foster negotiation and mutual respect without cultural assimilation. This space supports the creation of new relational frameworks and respectful learning strategies, helping teachers mitigate discord. The "Third Space" encourages expanded learning, personal knowledge referencing, and cultural hybridity. In their research, the "Third Space" concept is utilized to analyze conflicts as negotiation opportunities that improve interethnic classroom relations, broaden perspectives, and foster effective adaptation, listening, and self-expression strategies for students.

Disagreements in educational settings do not always escalate to conflicts, as highlighted by Cascón (2000), who classifies conflicts into three categories: pseudo conflicts, latent conflicts, and actual conflicts. Pseudo conflicts occur when there is no real antagonism between the interests and needs of the parties involved; misunderstandings or communication issues are usually at play, and reestablishing dialogue often resolves these issues. Latent (or hidden) conflicts, though lacking open confrontation, are prevalent due to perceived clashes of interests or values, or the parties' inability to address the conflict due to lack of awareness or strength. These conflicts can be as damaging as actual conflicts (the third category), causing significant emotional harm and requiring complex interventions. Schools often avoid addressing latent conflicts to prevent crises, but proactive conflict management, viewing diversity as an asset, and employing techniques like the Transcend Method (Galtung, 2003) can improve coexistence. This method emphasizes empathy, creativity, and non-violence, seeing conflict as an opportunity for growth. Addressing pseudo conflicts early, through dialogue, fosters positive intercultural coexistence and helps prevent escalation to violence (Galtung, 1988). Additionally, understanding and considering the perspectives of all parties involved—teachers, students, and families—are crucial. Research (Alvarez Garcia et al., 2007) shows that students often perceive the most common violence as stemming from teachers, which negatively affects student reactions and the classroom climate. This study investigates how pseudo conflicts impact the atmosphere in intercultural secondary education classrooms from both teachers' and students' viewpoints. The goal is to identify key conflicts and train teachers to use this knowledge to enhance classroom relationships, hypothesizing that alignment between teachers' and students' assessments of pseudo conflicts will foster resolution and improve the learning environment.

While scholars in intercultural communication have traditionally emphasized the role of cultural differences in causing miscommunication and misunderstanding, research on English as a lingua franca (ELF) challenges this view. Studies on intercultural communication in ELF contexts reveal that misunderstandings are less common than previously believed, and those that do occur are not necessarily due to cultural differences (House 1999; Mauranen 2006). This suggests that the lingua franca context influences interactions among diverse cultural groups. To further explore this, detailed analyses of naturally occurring ELF interactions are necessary.

The key distinction lies in the recipient's awareness of the communication problem. In cases of non-understanding, the recipient recognizes their failure to comprehend and can either signal this to the speaker or ignore it (Firth 1996). For example, Mauranen (2006) illustrates a scenario where the recipient first signals minimal incomprehension and then directly requests clarification. Conversely, in instances of misunderstanding, the recipient is unaware of the misinterpretation, which may become evident in subsequent turns through incoherent responses (Bremer et al. 1996).

FULL TEXTS BOOK

Explicitly differentiating misunderstanding from non-understanding is complex, as the distinction is neither absolute nor clear-cut. Understanding problems can stem from partial or non-understanding of a prior statement, and assessing the recipient's awareness of their misinterpretation can be challenging. For instance, a confirmation request might reveal a misinterpretation while also indicating some awareness of potential inaccuracy in understanding.

While awareness may be present, such cases cannot be classified as non-understanding because some level of understanding, albeit incorrect, has been achieved. Determining whether a check for accuracy is due to an awareness of a problem or a preemptive measure is challenging (Mauranen 2006, Kaur 2009). Therefore, confirmation requests revealing misinterpretation will be categorized as misunderstandings, aligning with Bazzanella and Damiano's view of misunderstanding as a continuum and Dascal's multi-level concept of misunderstanding (Bazzanella & Damiano, 1999; Dascal, 1999). The analysis provides insights into sources of misunderstanding in intercultural communication, specifically in ELF contexts (House, 2003; Mauranen, 2006). By considering the local context, participant orientations, and subsequent repair moves, a clearer picture of misunderstanding in these interactions emerges (Seidlhofer, 2011). Misunderstandings often stem from factors like ambiguity, mishearing, and lack of world knowledge, common in both intercultural and intracultural interactions (Gumperz, 1982; Roberts, 2000). While linguistic diversity and varying proficiency levels in ELF interactions contribute to misunderstandings, participants often collaboratively use strategies to prevent them (Kaur, 2009). Although language problems are not the primary cause, they can exacerbate issues like ambiguity and mishearing (Jenkins, 2000).

Additionally, the study highlights the role of cultural differences in intercultural misunderstandings (Wierzbicka, 1991). Research from various perspectives—cultural-anthropological, interactional-sociolinguistic, and cross-cultural pragmatic—often attributes misunderstandings to participants' differing cultural backgrounds (Scollon & Scollon, 2001; Tannen, 1984). These differences in assumptions, beliefs, discourse strategies, and communicative styles can make intercultural communication challenging (Hofstede, 1991)

1.1 Strategies to resolve conflicts based on literature review

Resolving conflicts in multilingual and multicultural classrooms is a complex endeavor that requires understanding the dynamics of cultural diversity, language differences, and educational settings (Garcia & Wei, 2014; Cummins, 2001). Recent studies highlight various approaches and strategies aimed at fostering harmonious interactions and effective conflict resolution among students from diverse linguistic and cultural backgrounds (Banks, 2015; Gay, 2018).

One prominent approach involves promoting cultural competence among teachers. Cultural competence encompasses awareness, knowledge, and skills necessary to understand and effectively interact with people from different cultural backgrounds (Sue et al., 2019). Teachers who are culturally competent can recognize cultural differences in communication styles, norms, and values, thereby mitigating potential misunderstandings and conflicts (Gay, 2018).

Effective communication strategies are crucial for resolving conflicts in multilingual classrooms. Open communication channels facilitate dialogue and understanding among students and between students and teachers (Samovar et al., 2012). This includes encouraging students to express their thoughts and feelings freely and promoting active listening to ensure that all perspectives are heard (Ting-Toomey, 2017).

Implementing inclusive teaching practices is another key approach. These practices accommodate diverse learning styles and linguistic abilities, ensuring that all students feel valued and included (Cummins, 2019). For instance, using multilingual resources, providing language support, and adapting instructional materials to students' proficiency levels can enhance comprehension and reduce language-related tensions (Hall, 2018).

FULL TEXTS BOOK

Conflict resolution skills training is increasingly recognized as essential in multicultural education contexts. Teaching negotiation, mediation, and problem-solving techniques empowers them to address conflicts constructively and collaboratively (Johnson & Johnson, 2019). These skills not only resolve immediate disputes but also promote long-term peacebuilding and mutual respect among students (Biggs, 2018).

Furthermore, promoting intercultural dialogue and understanding through structured activities and programs fosters positive interactions and reduces stereotypes and biases (Banks, 2018). Cultural exchange programs, peer mentoring initiatives, and collaborative projects allow students to learn from each other's cultural backgrounds and perspectives (Melby-Lervåg et al., 2020).

Recent studies emphasize the importance of professional development for teachers in multicultural settings. Ongoing training and workshops help teachers stay informed about best practices and new research in multicultural education and conflict resolution (García et al., 2021). This continuous learning enables teachers to adapt their teaching strategies and interventions to meet the evolving needs of diverse student populations.

1.2 Case studies of misunderstandings and conflicts in multicultural classrooms

In order to create a better vision and perspective of situations in which these misunderstandings and conflicts took place, I am referring to some known cases. Let's mention an example that underscores the complex interplay between language, culture, and education in multicultural classrooms, highlighting the need for continued research and practical interventions to navigate these challenges effectively. According to a recent study (published in European Journal of Psychology of Education) conducted in Norway, there has been a compelling case for examining misunderstandings and conflicts in multicultural classrooms. This research, published in 2023, explores the dynamics of inclusion and exclusion in Norwegian schools, particularly focusing on newly arrived minority language students. The study highlights the challenges these students face, including language barriers, cultural misunderstandings, and social integration issues. One specific example from the study involves the experiences of minority language students in introductory classes designed for newly arrived immigrants. These students often find themselves isolated due to their limited proficiency in Norwegian and their distinct cultural backgrounds. Teachers reported that these language barriers often led to misunderstandings and conflicts, as students struggled to communicate effectively with their peers and teachers (Hilt, 2023). The study also revealed that teachers' attitudes and preparedness to handle cultural diversity significantly impacted the classroom environment. In many cases, teachers who lacked training in multicultural education found it challenging to address the needs of these students adequately. This situation sometimes resulted in misinterpretations of students' behaviors and intentions, further exacerbating conflicts (Hilt, 2023; Fandrem, 2023). The study underscores the importance of culturally responsive teaching practices. For instance, teachers who employed inclusive strategies, such as incorporating students' native languages and cultural references into lessons, were more successful in fostering a supportive and harmonious classroom atmosphere. These practices not only helped in reducing misunderstandings but also promoted a sense of belonging among minority language students (Hilt, 2023; Emanuelsson, 2023). Overall, the research emphasizes the need for systematic changes in teacher training and educational policies to better support multicultural classrooms. By adopting inclusive practices and providing adequate resources, schools can mitigate conflicts and create a more inclusive learning environment for all students (Hilt, 2023; Fandrem, 2023).

Another case regarding Albanian reality is well described in a recent case study in Albania, which highlights the challenges and misunderstandings in multicultural classrooms. The research, published in 2023, focuses on the integration of minority students, particularly Roma children, into mainstream Albanian schools. Language barriers, cultural differences, and socioeconomic disparities contribute significantly to misunderstandings and conflicts between students and teachers. Teachers often

FULL TEXTS BOOK

misinterpret the behavior of Roma students, attributing it to lack of discipline rather than cultural differences. This misinterpretation leads to conflicts and hinders the students' integration and academic performance (Reach & Teach, 2023). The study also emphasizes the need for culturally responsive teaching methods. By incorporating Roma culture and language into the curriculum and employing inclusive teaching practices, teachers can reduce misunderstandings and foster a more inclusive and supportive learning environment. This approach not only helps in bridging the cultural gap but also promotes a sense of belonging and respect among all students (Reach & Teach, 2023).

Several recent cases in Albania and neighboring countries illustrate challenges in multicultural classrooms. In Kosovo, a study highlights the difficulties faced by Serbian minority students integrating into Albanian-majority schools, emphasizing issues of language and cultural identity (Bajrami, 2022). In North Macedonia, conflicts arise due to ethnic tensions between Macedonian and Albanian students, affecting classroom dynamics and peer relationships (Manevska, 2023). Additionally, a study in Montenegro reveals challenges for Bosniak students in predominantly Montenegrin schools, focusing on language barriers and cultural misunderstandings (Karabegović, 2021). These examples underscore the complex nature of multicultural education in the Balkans.

In addition to the cases mentioned, recent studies highlight several other instances of multicultural classroom challenges in Albania and neighboring countries. In Bulgaria, Turkish minority students face integration issues due to linguistic and cultural differences (Petrova, 2024). In Greece, classrooms with diverse ethnic backgrounds, including Albanian immigrants, encounter frequent misunderstandings and conflicts (Vassilakis, 2023). Similarly, in Serbia, Hungarian minority students experience difficulties adjusting to Serbian-majority schools, leading to tensions and conflicts (Toth, 2022). These cases collectively emphasize the ongoing need for culturally responsive teaching practices and inclusive educational policies in the region (Jovanović, 2024).

2. METHODOLOGY

The methodology for conducting a literature review on "Navigating Misunderstandings and Conflicts in Multicultural Classrooms" involves a systematic approach to gathering and analyzing scholarly sources from various academic databases, journals, books, and relevant institutional reports published mostly from 2018 onwards (but not only). The review focuses on identifying and synthesizing key themes, theories, empirical findings, and best practices related to conflict resolution and the management of misunderstandings in educational settings characterized by cultural and linguistic diversity. To begin, a comprehensive search strategy was employed using keywords such as "multicultural education," "conflict resolution," "intercultural communication," "language barriers," "cultural competence," and related terms. Academic databases will be utilized to access peer-reviewed articles, theoretical frameworks, case studies, and meta-analyses that address the topic.

The inclusion criteria prioritize recent publications in order to ensure that the review reflects current perspectives and practices in multicultural education. Articles should contribute significant insights into the causes, manifestations, and implications of misunderstandings and conflicts in diverse classrooms, as well as effective strategies for resolution and prevention.

Data extraction involves careful reading and analysis of each selected article to extract relevant information, including theoretical perspectives, methodologies used, key findings, and practical implications for teachers. Special attention will be paid to identifying common types of conflicts (e.g., communication styles, cultural norms, language barriers), factors influencing conflict escalation, and evidence-based strategies for fostering positive intercultural interactions and managing conflicts constructively.

Synthesizing the findings involves organizing the literature according to thematic categories and critically evaluating the strengths and limitations of existing research. The review aims to provide a clear understanding of the complexities involved in navigating multicultural classrooms, offering insights into

FULL TEXTS BOOK

how educators can promote inclusive learning environments and enhance student outcomes through effective conflict management strategies.

Ultimately, the literature review will contribute to the field by consolidating current knowledge, identifying gaps in research, and offering recommendations for future studies and practical applications in multicultural education settings.

3. DISCUSSION AND ANALYSIS OF FINDINGS

The various cases and scientific studies on multicultural classrooms highlight several critical conclusions about the interplay of language, culture, and education. These conclusions emphasize the systemic and pedagogical issues that need to be addressed for effective multicultural education.

Firstly, language barriers are a significant challenge in multicultural classrooms, often leading to misunderstandings and conflicts. The studies from Norway and Albania reveal that minority language students frequently experience isolation and communication difficulties. This isolation is exacerbated by a lack of proficiency in the majority language, which hinders their ability to participate fully in classroom activities and social interactions. Therefore, educational systems must prioritize language support programs to help these students bridge the language gap and integrate more effectively.

Secondly, the cultural misunderstandings between students and teachers are a recurrent theme. Teachers often misinterpret students' behaviors due to a lack of cultural awareness and training. This misinterpretation can lead to disciplinary actions that are perceived as unfair by the students, further deepening the divide. The research mentioned underscore the need for teachers to receive training in cultural competence to understand and appropriately respond to the diverse cultural backgrounds of their students. This training can help in creating a more inclusive and respectful classroom environment.

Thirdly, the importance of culturally responsive teaching practices is a recurring conclusion. Studies show that when teachers incorporate students' native languages and cultural references into their lessons, it fosters a more supportive and harmonious classroom atmosphere. These inclusive strategies not only reduce misunderstandings but also promote a sense of belonging among minority language students. Therefore, educational policies should encourage and support the implementation of culturally responsive teaching methods.

Additionally, the impact of socioeconomic disparities cannot be ignored. In the Albanian case study, socioeconomic factors contribute significantly to the challenges faced by Roma children in mainstream schools. These disparities often result in a lack of resources and support for minority students, further hindering their academic performance and integration. Addressing these disparities requires comprehensive policy changes that ensure equitable access to educational resources for all students, regardless of their socioeconomic background.

Moreover, the studies highlight the broader regional context, particularly in the Balkans, where ethnic tensions and historical conflicts continue to influence classroom dynamics. The cases from Kosovo, North Macedonia, and Montenegro illustrate how deeply entrenched ethnic identities can exacerbate conflicts in educational settings. This regional perspective suggests that resolving these issues requires not only educational reforms but also broader societal efforts to address ethnic tensions and promote reconciliation.

In conclusion, these research point to several critical areas for intervention: enhancing language support programs, providing cultural competence training for teachers, implementing culturally responsive teaching practices, addressing socioeconomic disparities, and tackling broader ethnic tensions. By focusing on these areas, educational systems can create more inclusive and supportive environments that better meet the needs of all students in multicultural classrooms.

FULL TEXTS BOOK

4. CONCLUSIONS

From what has been discussed until now, we can conclude that in multicultural classrooms, misunderstandings and conflicts can stem from various sources, each tied to cultural differences. First of all, language barriers present significant challenges in multicultural classrooms. Differences in language proficiency can lead to miscommunication and frustration. Non-native speakers might struggle to express themselves clearly or understand nuanced instructions, resulting in misunderstandings and feelings of exclusion. Additionally, idiomatic expressions and slang used by native speakers can confuse students unfamiliar with these terms, causing them to feel alienated or misunderstood. One significant area is communication styles. For instance, students from cultures that value direct communication may come across as blunt or even rude to those from cultures that prefer a more indirect approach.

Learning styles are another area where cultural differences can lead to misunderstandings. Some cultures emphasize collaborative learning and group success, while others focus on competition and individual achievement. This divergence can cause friction in classroom activities and assessments, as students might have contrasting approaches to learning and participating in class. Furthermore, the emphasis on memorization versus critical thinking varies across cultures. In cultures that value rote learning and memorization, students may struggle to adapt to environments that prioritize critical thinking and questioning, leading to misunderstandings with peers and teachers.

Implementing inclusive teaching strategies that accommodate diverse learning styles and cultural backgrounds is crucial. This includes using a variety of teaching methods, such as collaborative projects, individual assignments, and interactive discussions. Setting clear expectations and guidelines for classroom behavior and participation ensures that students understand the norms and rules, and explaining the rationale behind them fosters mutual respect. Practicing active listening and empathy in interactions with students shows genuine interest in their perspectives and experiences, and validates their feelings and concerns.

Teaching students conflict resolution skills, such as negotiation, mediation, and problem-solving, encourages them to address conflicts constructively and seek common ground. Providing language support for non-native speakers, including language classes, tutoring, and the use of visual aids and simplified language in instructions and materials, is essential. Organizing cultural exchange programs and activities that allow students to share their cultural backgrounds and learn from one another fosters mutual understanding and appreciation. Establishing peer mentoring programs where students from different cultural backgrounds can support and learn from each other helps build a sense of community and reduces feelings of isolation. Implementing regular feedback mechanisms to gather students' input on the classroom environment and teaching methods allows for necessary adjustments and improvements.

Resolving conflicts and misunderstandings in multicultural classrooms is essential for creating a positive and effective learning environment. By fostering cultural competence, encouraging open communication, and implementing inclusive teaching strategies, educators can help students navigate these challenges and promote mutual understanding and respect. These efforts not only improve the classroom dynamic but also prepare students to thrive in an increasingly diverse and interconnected world.

Obviously, resolving conflicts in multilingual and multicultural classrooms requires a comprehensive approach that integrates cultural competence, effective communication, inclusive teaching practices, conflict resolution skills training, and intercultural dialogue. By implementing these strategies, teachers can create inclusive learning environments where students from diverse backgrounds can thrive academically and socially.

BACTERIOLOGICAL ANALYSIS OF LOTIC AND LENTIC SURFACE WATERS IN GBOKO METROPOLIS.

Terungwa VAUNGWA
1Department of Microbiology, College of Biological Science, J. S. Tarka University, Makurdi, PMB 2373 Nigeria.
Esther Eneyi EBAH
1Department of Microbiology, College of Biological Science, J. S. Tarka University, Makurdi, PMB 2373 Nigeria

ABSTRACT
Background-Access to clean water in tropical regions of Africa has been a major challenge that has continued to ravage the health of average indigenes of such communities; hence, there is a need to investigate the Bacteriological quality of both lotic and lentic surface water in such regions.
Methods- A Multiple tube methods and relevant meters were employed in evaluating the physicochemical and coliform content of the water samples.
Results- The results shows a temperature mean values ranged from 27.21 to 27.40°C at lotic 1–3, while the mean value of temperature for lotic 1 was 27.45°C. The pH values range from 11.75–11.75 at lotic 1–3 and 12.32 at lentic 1. The dissolved oxygen had a value of 3.05–3.80 mg/L at lotic 1–3 and 3.75 at lentic 1. Biological oxygen demand (BOD) had a value of 0.00–0.05 mg/L at lotic 1-3 and 0.00 at lentic 1 and did not have their values within the standard set by WHO (2017).
Conclusion- The study revealed levels of coliform counts in the examined surface waters with values exceeding the standard set by WHO (2017). Coliform values were higher within the lotic environments. This work unrivaled an urgent need to sensitize the locals to the need to treat the water by boiling it prior to drinking.
Keywords: Water, lotic, lentic, biological oxygen demand, coliform, surface water.

Background of the Study

In Sustainable Development Goals (SDG)'s (2015), water is the 6th goal, namely: "Ensure availability and sustainable management of water and sanitation for all". It shows that clean water is one of human basic needs, and it is processed from raw water to clean water by using any treatment to reach the standard of living, water is necessary for humans.
Lotic water systems are bodies of water that is flowing continuously, ranging from torrential rapids to slow moving back waters. Surface water is the water running across or standing on the surface of the ground. These include bodies of water such as lakes, dams, streams, rivers and ponds which serve as major sources of drinking water and other domestic uses to most cities and rural communities (Ichor *et al.*, 2014).
Surface water (lotic and lentic) is particularly most likely to be exposed to man-made contamination both from the point sources and non-point sources such as run-offs from urban and suburban streets, agricultural lands, microorganisms from atmospheric water precipitation etc. Surface water contamination is polluted by many factors around us either by point or non-point source. Polluted water can harm and cause health effects to the public and the country (Shahabudin and Musa, 2018).
Bacteriological analysis of water is the isolation and count of indicator organism whose presence indicate that disease causing pollution has occurred in the water supply. These indicator organisms are called coliforms bacterial (Chukwurak, 2012). Coliform bacteria include a group enteric bacteria such as *Escherichia coli, klebsiella* sppand *Enterobacter* spp.
Few systematic studies have been undertaken in other countries to determine the prevalence of various bacteria pathogens in surface water. Epidemiological studies of waterborne outbreaks have indicated

FULL TEXTS BOOK

that the most important waterborne pathogens in Finland are the norovirus (Nvs) and Campylobacter; 11 of the 14 waterborne outbreak reported during 1998 and the 1999 were caused by these microbes (Norman and MacDonnell, 2004).

In Bauchi State, Nigeria, a study uncovers that *Schistosoma* sppis a contaminant of surface water sources. The parasite could be contracted through washing or bathing. (Ichor *et al.*, 2014). The human pathogens that contaminate water include: *Campylobacter, E. coli, Salmonella typhi, Shigella spp, Yersinia enterocolitica, Pseudomonas aeruginosa,* etc. Most of these pathogens account for the serious health risk associated with water predominantly obtained from human and animal enteric origins and causes diseases whenever it is present in any source of water supply (WHO, 2004).

In developing countries like Nigeria, where access to both clean water and sanitation are not the rule and waterborne infections are common that leads to increase in morbidity and mortality among people. Therefore, this study access the bacteria mean count of lotic and lentic surface water in Gboko metropolis

Statement of Problem

The major problem that could be associated with dealing with surface water contaminated by microorganisms is the infectious disease that could be contracted from them because the causative agents of these disease are present in the feces and urine of infected persons. These diseases include among others, bacillary dysentery, botulism, cholera, schistosomiasis, salmonellosis. The causative organism of these diseases are present in the feces and urine of infected persons and when discharged into water may gain entrance into anybody that may use the water for purpose of drinking and other domestic uses, (WHO, 2004).

Justification

Lotic and lentic surface waters are source of water for domestic, agricultural and industrial uses. Residents in the locality use this water for domestic purposes and for irrigational purposes for the cultivation of pepper, maize, tomatoes and vegetables (some of which are often eaten raw). The factory in the locality use this water source for various purposes (such as washing of equipment and cooling of machinery).

All these could pose serious health and environmental hazards to the community if not addressed. This study will benefit residents by creating awareness on the bacteriological, physicochemical qualities of lotic and lentic surface water with a view to having good quality water.

Aim of the Study

The aim of the study is to investigate the microbial quality of lotic and lentic surface water in Gboko metropolis.

Objectives of the Study

The objectives of this study is to:

- Isolate and identify the microbial quality of the water sample.
- Determine the bacteria load of the isolates.
- Determine the physicochemical parameter of the water samples under study (Temperature, PH, Dissolve Oxygen, Biological Oxygen Demand).

MATERIALS AND METHODS

Sample Collection

Sampling site were lentic 1, lotic 1,Lotic 2), Lotic 3. Manual sampling was employed. A total of 20 samples were collected at four different point using 400ml sterile bottles and were transported to Microbiological Laboratory Joseph Sarwuan Tarka University Makurdi for analysis.

FULL TEXTS BOOK

Sample Preparation

Nutrient Agar

Nutrient agar was prepare using the manufacturers instruction. 20g of nutrient agar powder was dissolved in1000ml distilled water and heated to boiling in other to harmonize it. It was them sterilize by autoclaving at 121°C for 15 minutes.

MacConkay Agar

MacConkay agar was prepared using the manufacturer's instructions. 28g of MacConkey Agar was measure and suspend in 1000 ml of distilled water, heat to boiling to dissolve the agar completely. The media was then sterilized by autoclaving at 121°C for 15 minutes

Enumeration of Heterotrophic Total Bacterial Count

Nutrient agar is the choice medium and pour plate method was used for enumeration for total bacteria count. Serial dilution was made using dilution factor of 10-3 which was used for inoculation. The dilution was made by introducing 1ml of sample in 9ml of distilled water as 10-1 tube. 1ml of dilution 10-1 was introduced into another 9ml of distilled water as dilution 10-2. For 10-3, 1ml was taken from each and introduced into molten nutrient agar and incubated 37oC for 24 – 48 hours.

Enumeration of Coliform Bacteria

Differential medium for the isolation of coliforms was MacConkey agar. Serial dilution was made using dilution factor of 10-3 which was used for inoculation. The dilution was made by introducing 1ml of sample in 9ml of distilled water as 10-1 tube. 1ml of dilution 10-1 was introduced into another 9ml of distilled water as dilution 10-2. For 10-3, 1ml was taken from each and introduced into molten macConkey agar and incubated 37oC for 24 hours.

Bacteria Identification

Gram Staining

A wire loop was sterilized in Bunsen burner and allowed to cool. A drop of normal saline was added on a clean microscope slide, and the wire loop was used to pick the isolates and smeared it on the drop of normal saline on the slide after which it was heat fixed by passing over a flame. The smear was flooded with Crystal violet as a primary stain for 1 minute, followed by Lugol's Iodine for 30 – 60 seconds and then washed off. It was decolorized by Acetone for 30 seconds and washed off with distilled water. The slide was counterstained with Safranin for 1 minute and then washed off. The slide was kept in a rack to air dry after wiping the back with cotton wool. The stained slide was then viewed with a microscope under oil immersion at x100 objective lens. Gram positive bacteria stains purple while Gram negative stains red.

Biochemical Tests

Biochemical tests were used to determine the biochemical reactions or characteristics of the isolated organisms from the water sample.

Catalase Test

Two 2ml of Hydrogen peroxide was poured into Petri dishes and using a sterile applicator stick, several colonies were immersed in the Hydrogen peroxide solution and carefully observed for immediate bubbling. The presence of bubbles indicates a positive result.

Citrate Test

Simmons citrate agar was used to prepare slants in test tubes according to the number of samples to be tested, using a sterile wire loop; the slants were streaked with the inoculum and then stabbed. It was allowed for 24 hours. A colour change from green to blue indicates a positive result.

Indole Test

Tryptophan broth was inoculated with emulsify isolated colony of the test organism in tryptophan broth and incubated at 37°C for 24-28 hours. 0.5 ml of Kovac's reagent was added to the broth culture down the side of the tube and observe color change. Development of brown-red to purple-red within 20 minutes indicates a positive result.

FULL TEXTS BOOK

Urease Test

This test was based on the organism's ability to split urea through the production of the enzyme urease. The entire surface of the urea slant was inoculated with the provided growth from the tryptic broth culture using the inoculating loop by streaking the surface of the agar in a zig zag manner. This was incubated at 37oC for 24-48 hours and a color change to pink indicate a positive result.

Temperature Measurement

Temperature was measured at the site of sample collection. It was measured by submerging the thermometer two-thirds below the surface of the water. The thermometer was allowed adjust to the water temperature for at least 1 minute before removing the thermometer from the water and taking the measurement.

pH Measurement

To carry out this test, a pH strip was dipped into the water sample and after a short while colour development occurred. The reaction time was specified by the manufacturer and this is important as the colour may continue to change after this period has elapsed. The concentration of analyte in the sample was determined by visual comparison with a printed reference chart showing a series of colours corresponding to specific concentrations.

Dissolved Oxygen

The water sample was collected in a special bottle that allows the water to be contained without coming into contact with air. Chemical reagents were then added to the water, including a titrant that is added until a reaction involving oxygen is complete (indicated by a color change).

Biological Oxygen Demand (BOD)

The BOD was measured by collecting water sample in BOD bottle and properly aerating the sample with oxygen. The oxygen level was determine using oxygen electrode. The water was incubated at 20°C for 5 days in the dark after which the oxygen level was redetermine.

Data Analysis.

The data analysis employed was ANOVA

RESULTS

Total Viable Counts and Coliform Counts of Samples

This table shows the Total Viable Counts and Total Coliform Counts with the highest count in lotic 2 $3.4\times10^{5} \pm 1.13 \times 10^{4a}$. it also has the highest number of total coliform count of $3.20\times10^{5} \pm 1.13 \times10^{4a}$ respectively. The lowest Viable count were reported in lentic 1 having TVC $1.41\times 10^{5} \pm 1.27\times 10^{4c}$ and a TCC $1.20 \times10^{5} \pm 0.00C$ respectively.

Sample location	TVC	TCC
Lotic 1	$2.79 \times 10^{5b} \pm 1.27 \times10^{4b}$	$2.32 \times 10^{5} \pm 3.39 \times 10^{4b}$
Lotic 2	$3.53 \times 10^{5} \pm 1.13 \times10^{4a}$	$3.20 \times 10^{5} \pm 1.13 \times10^{4a}$
Lotic 3	$3.48 \times 10^{5} \pm 5.66 \times 10^{4a}$	$3.16 \times 10^{5} \pm 5.66 \times10^{3a}$

DISCUSSION

To examine the bacteriological quality of lotic and lentic surface water, water quality testing was done. It obtained the test results for the physicochemical parameters: temperature, pH, DO, BOD. The measurement results in this present research shows that lentic1 had the highest pH of 12.8 and the lotic surface waters with a pH range of 11.62 -11.82 and both do not meet the standard of 6.5-8.5 given by Nigerian industrial standard (2007).Temperatures of all the samples investigated were within the WHO standards set by water regulatory agencies. DO of water samples shows the quality of water. The number of COD and BOD explains the number of Oxygen needed to decompose organic and inorganic compounds. The existence of Oxygen in water shows that the quality of water is good. The lotic and lentic surface water under study has a DO range of 2.9 – 3.8 and do not meets the standard of ≥6 mg/l by (WHO, 2017). It can be caused by the influx of domestic waste water. The concentration of DO in water should be increased, because the DO is needed by microorganisms to decompose pollutants in the water body.

The rate of contamination of each surface water was determined. The result showed that lentic 1 had the lowest total viable counts of 1.48 x 105± 1.27 × 10^{4c} and total coliform counts of 1.20 x 10^5 ± 0.00c. High total viable counts and total coliform counts were obtained in samples from the stream water which represent lotic surface waters. Lotic 2 has the highest number of total viable count of 3.53 x 10^5 ± 1.13 ×104a and a total coliform counts 3.20 x 10^5 ± 1.13 ×10^{4c}. The level of contamination between total viable counts and total coliform counts however differed significantly (df =2 P< 0.05), this result is in agreement with the results of Ichor et al. (2014). The total bacteria count for all the samples examined exceeded the limits of 1.0 x 10^2 Cfu/ml which is the limit for bacteria count for drinking water(WHO, 2017). High bacteria pollution recorded at lotic 2 may be linked to people's lifestyle of indiscriminate disposal of waste and poor sanitation system. Furthermore, free movement of domestic solid wastes disposed around the houses are likely sources of bacterial contamination of the streams in the other sample sites.

The presume coliform counts for all of the samples were higher than the limits set by WHO (2017) for coliform bacteria in drinking water which is zero total coliform/100ml of water. The count of E. Coli, *Shigella* spp, *Proteus* Spp, *Klebsiella* Spp, in all of the water samples is a clear deviation from the WHO standard for drinking water. The study revealed varying levels of coliform counts in the examined surface waters and were in agreement with results from an earlier study by Dirisu and Olomukoro (2015).

CONCLUSION

The bacteriological qualities of the evaluated surface waters were averagely poor, and are certainly not fit for human consumption as they are of low quality. The non-restriction of the unwholesome act of open defecation onto the top soils by individuals residing within the sampled sites should be discouraged. The bacteria gaining access to water is not only an indication of deterioration but also a warning sign of the presence of many water-borne pathogens, clean environment plays an important and vital role. As most of the isolated bacteria were able to produce toxins, it is recommended for strict

FULL TEXTS BOOK

monitoring and certification of the streams hoping to maintain quality of stream and ultimately to ensure good health.

RECOMMENDATION

The following recommendations are made

There is need for the state and local government to monitor the water source since they are very close to residential areas and outbreak of water borne disease in imminent as well as water inspection from the source should be consider very important. We

Sensitization of the communities residing within the area by relevant governmental and non-governmental bodies on the urgent need to treat the water by boiling prior to drinking should be conducted

INVESTIGATION OF THERMOLUM KINETIC PARAMETER OF SrB_6O_{10}:Dy PHOSPHOR SYNTHESIZED BY SOLUTION COMBUSTION SYNTHESIS

Doç. Dr. Adnan ÖZDEMİR
Kahramanmaras Istiklal University, Elbistan Vocational High School of Health Service, Kahramanmaras, Turkey.

ABSTRACT
Thermoluminescence (TL) is the process by which an insulating or semiconducting material that was earlier exposed to ionizing radiation produces light by heating it at a linear rate. The kinetic parameters, including the activation energy (E), frequency factor (s) and order of kinetics (b), of Dy doped SrB_6O_{10} phosphor synthesized by the SCS was determined by CGCD and initial rise. SrB_6O_{10}:$Dy_{0.5\%wt}$ phosphor were sintered at 750 ^oC for 4 h to obtain crystal form. TL glow curve of SrB_6O_{10}:$Dy_{0.5\%wt}$ phosphor exhibited two TL peak located at 110 ^oC, 230 ^oC when heating rate of 2 ^oC/s after 1 Gy beta dose. The phosphor exhibited good reusability of 10 experimental cycle with in experimental error of 3%. The kinetic parameters, including E, b, s was estimated two methods, i.e CGCD and initial rise. All measurements were obtained using the Risø TL/OSL DA-20 model device. Kinetic parameters were calculated by these methods and compared with each other.
Keywords: Thermoluminescence, Strontium borate, Dosimetry, kinetic parameter, activation energy

INTRODUCTION
Borates have garnered significant attention due to their numerous properties, such as a large band gap, thermal and chemical stability, high luminescence efficiency, and cost-effectiveness (Mutailipu, Poeppelmeier, & Pan, 2020). To develop Thermoluminescence dosimetry, various borate-based compounds including lithium borate, magnesium borate, and strontium borate have been doped with metal and/or lanthanide ions to enhance their dosimetric properties (González, Mendoza-Anaya, Ávila, & Escobar-Alarcón, 2023; Lim, Wagiran, Hussin, & Hashim, 2015; Liu et al., 2006; Ortega et al., 2006; A. Ozdemir, Guckan, Altunal, Kurt, & Yegingil, 2021; Santiago et al., 2011; Yukihara, Milliken, & Doull, 2014). Koskentalo et all studied the luminescence of Ce^{3+} and Tb^{3+} doped both for SrB_6O_{10} and for BaB_8O_{13} (Koskentalo, Niinistö, & Leskelä, 1985). Liyan et all studied Thermoluminescence properties of Tb doped SrB_6O_{10} phosphor (Liu et al., 2006). Traps responsible for the Thermoluminescence processes are characterized by specific parameters such as E, b, s. Understanding these parameters enhances our comprehension and interpretation of the luminescence mechanism and provides essential information for dosimeter applications. Many experimental methods are known for calculating TL trap parameters, including Computerized Glow Curve Deconvolution (CGCD), initial rise, various heating rates, Tm-Tstop, etc. Each method has its own advantages and disadvantages. For example, in the initial rise method the activation energy is independent of the kinetic order (b) of the TL peak any TL glow curves Many researchers have calculated the trap parameters of their materials using involving these methods (Andrade et al., 2022; Mostafa et al., 2023; Munoz, Yoshimura, Chithambo, Jacobsohn, & Trindade, 2022; A. Ozdemir, Altunal, Guckan, Kurt, & Yegingil, 2021). In this study, structural characterization analysis of 0.5%wt Dy doped to SrB_6O_{10} phosphor by SCS method was studied by XRD and SEM technique. TL glow curve of the phosphor was recorded with the heating rate of 2 ^oC/s. Its reproducibility was studied up to ten experimental cycle under the same laboratory condition. The kinetic parameters of the TL curve of the phosphor were studied and compared by CGCD and initial rise method.

FULL TEXTS BOOK

MATERIALS AND METHOD

Dy doped strontium borate (SrB_6O_{10}) phosphor was synthesized by the solution combustion synthesis. The chemicals purchased from Sigma Aldrich, including high purity Strontium nitrate ($SrNO_3$,), boric acid (H_3BO_3), Urea as precursor, and Dysprosium nitrate ($DyNO_3$) as dopant were used. The concentration of Dy was taken at 0.5%wt. Details of this are presented in our previous work (Adnan Ozdemir, 2020; A. Ozdemir, Altunal, et al., 2021; A. Ozdemir, Guckan, et al., 2021). All chemicals were placed in a beaker and heated in 150 ml of distilled water with the help of fish. Amorphous structure obtained by evaporation of water from the structure at 750 ^oC for 4 h was sintered to crystalline form. The material was taken in porcelain crucibles and heated from room temperature to 750 ^oC with 5 ^oC increments per minute. At 750 ^oC for 4 hours, it was sintered in the ash furnace to crystallize. After this process, SrB_6O_{10}:Dy (0.5%) powder was prepared for TL measurement. Thermoluminescence (TL) measurements of the synthesized $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor were performed on a Risø TL/DA 20 device accompanied with a photomultiplier (PM) tube with a bialkali photocathode (Electron Tubes, 9235QA). For TL measurements, a Schott BG-39 filter with visible region transmittance in the front of Photo Multiple Tube (PMT) was used. X-ray diffraction (XRD) was utilized for identifying crystalline phases. Scanning was typically performed at angles ranging from 5° to 90°. Surface morphological analysis was taken by FE-SEM, TL measurements for undoped SrB_6O_{10}:Dy phosphor powders was 5 mg. Test dose was used as 1 Gy beta dose.

RESULTS AND DISCUSSION

Basic TL glow curve of SrB_6O_{10}:Dy phosphor

Fig. 1 shows the TL glow curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor recorded at the heating rate of 2 $^oC/s$ from room temperature to 450 ^oC without preheating after 1 Gy dose. The TL curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ consists of two TL peak located at approximately 110 ^oC, and, 225 ^oC, respectively. High temperature TL peak located at 225 ^oC was used for dosimetric investigation.

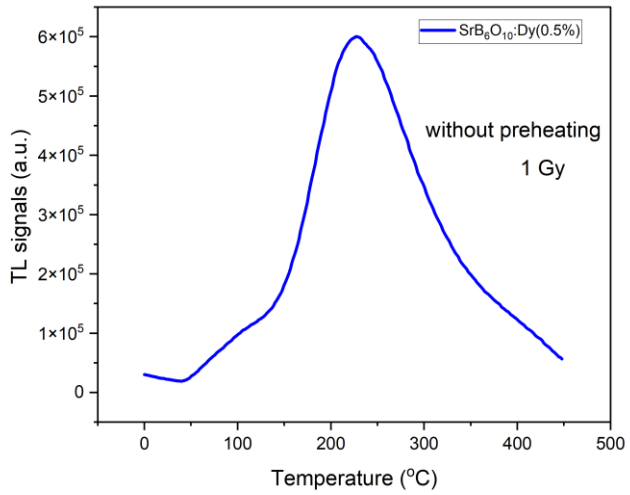

Figure 1. TL glow curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor recorded with the heating rate of 2 $^oC/s$ after 1 Gy.

Preheat experiment

The preheating experiment is performed to minimize the effect of unstable TL traps on the main dosimetric TL peak. This experimental procedure involves preheating between predetermined preheating temperatures after a test dose and then recording the TL reading. In this study, for $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor, TL irradiance curves were recorded after each preheat for the

FULL TEXTS BOOK

$SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor after preheating in 10/20 °C increments from 30 to 350 °C at a predetermined dose of 1 Gy. The phosphor is exposed to 1 Gy dose before each preheating. In the obtained TL curves, the preheating temperature graph was plotted against the TL signals between 215-240 °C and shown in Fig. 2. According to this graph, there is a flat position between 30 and 150 °C and a sharp decrease after 150 °C to 300 °C. The preheating temperature of this phosphor was taken as 120 °C.

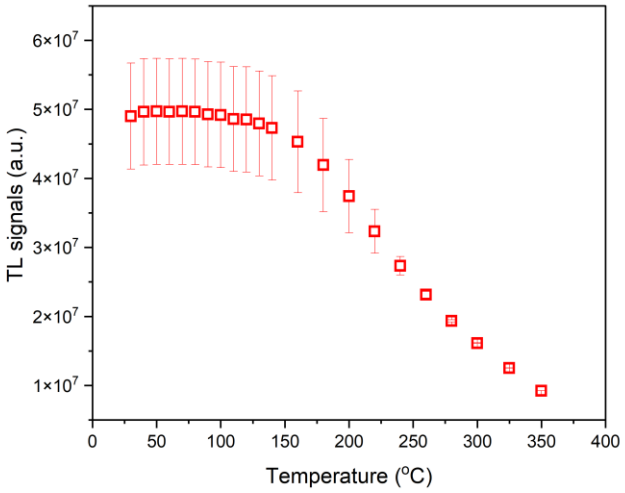

Figure 2. Integrated TL signal between between 215-240 °C vs preheating temperature

In Fig. 3, the TL curve of the same $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor recorded after 140 °C preheating is compared with the TL curves recorded without preheating at the same heating rate after 1 Gy dose. The low temperature TL peak was deleted after preheating at 140 °C. A new TL peak appeared, located at approximately 350 °C. The reason for the formation of this TL peak located at 350 °C is the charge transfer between the traps.

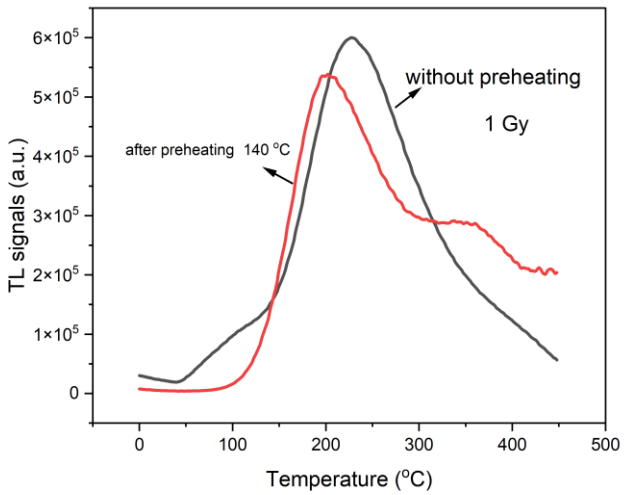

Figure 3. Comparation TL glow curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ without preheating after preheating 140 °C.

The effect of heating rate on the TL glow curve in $SrB_6O_{10}:Dy_{0.5\%wt}$

TL glow curves of $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor after 1 Gy beta dose were recorded using predetermined heating rates of 0.5, 1, 2, 3, 4, and 5 °C/s. Fig.4 shows the TL glow curve of the phosphor recorded at

FULL TEXTS BOOK

the aforementioned heating rates. The TL glow peak maximum shifted to higher temperatures as the heating rate increased from 0.5 to 5 °C/s. Intensity TL signals was also decreased to higher temperatures as the heating rates.

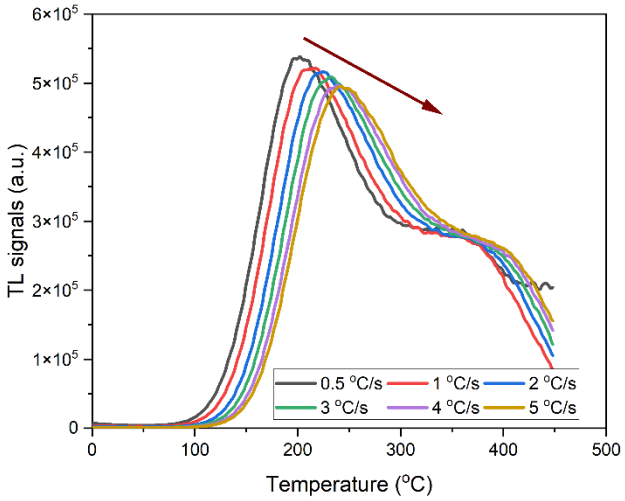

Figure 4. TL glow curve recorded in various heating rate of 0.5 to 5 °C/s after 1 Gy

Reusability

One of the most important features of TL dosimeters is that they can be used repeatedly. A good dosimeter should have a maximum standard deviation of 5% from the initial reading. Repeatability for $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor for TL readings were recorded after a 1 Gy dose followed by 120 °C preheating and this cycle was repeated 10 times, and shown in Fig. 5. The first reading was normalized and the deviation was determined to be ~3%. The phosphor has a good repeatability.

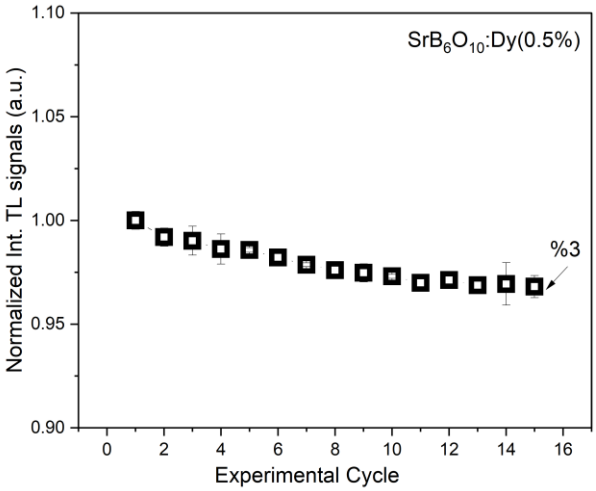

Figure 5. Normalized TL signals according to first TL readout vs experimental cycle

Kinetic parameters study

Computerized Glow Curve Deconvolution (CGCD)

FULL TEXTS BOOK

Computerized Glow Curve Deconvolution (CGCD) is a method to determine the activation energies E, frequency factors s and kinetic order b from any TL radiation curve. It has been used by many researchers to calculate kinetic parameters. In this study, the TL curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor recorded at a heating rate of 2 °C/s after 1 Gy dose was fit according to the equation given in Equation 1.

$$I(T) = I_m b^{-(b+1)} . \exp(\frac{E.(T-T_m)}{kT.T_m}) x[(b-1)\frac{T^2}{T_m^2}\left(1-\frac{2kT}{E}\right)\exp\left(\frac{E.(T-T_m)}{kT.T_m}\right) + 1(b-1)\frac{2kT_m}{E}]^{\frac{-b}{b-1}} \quad (1)$$

Where Im is the maximum intensity of the TL radiation peak and Tm is the temperature corresponding to the position of maximum intensity.

The TL glow of the $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor given in Fig.6 was fitted to the Eq.1., Goodness of fit was tested Figure of Merit (FOM) given in Equation 2.

$$FOM = \left|\frac{Y_{exp}-Y_{Fit}}{A}\right| . 100 \quad (2)$$

Here Yexp is the TL glow curve of the phosphor, Yfit is the fitted TL glow curve and A is the area under the fitted TL glow curve. The indicator of a successful fit is a FOM value of 3% or less. The frequency factor (s) was calculated. To determine the kinetic parameters of the $SrB_6O_{10}:Dy_{0.5\%wt}$ phosphor, the fitted to the Eq. 1 was applied and the kinetic parameters were estimated. The TL peaks was as label: TL Peak 1 at 107°C, TL Peak 2 at 227°C, TL Peak 3 at 326°C, and TL Peak 4 at 412 °C. The activation energies for each TL peak are 0.35 eV, 0.61 eV, 0.95 eV, and 1.69 eV, respectively. The kinetic orders are 2, 2, 2, and 1.11, respectively. The frequency factors are 2.07 x 10^3 s^{-1}, 6.98 x 10^4 s^{-1}, 5.43 x 10^6 s^{-1}, and 2.21 x 10^{11} s^{-1}, respectively.

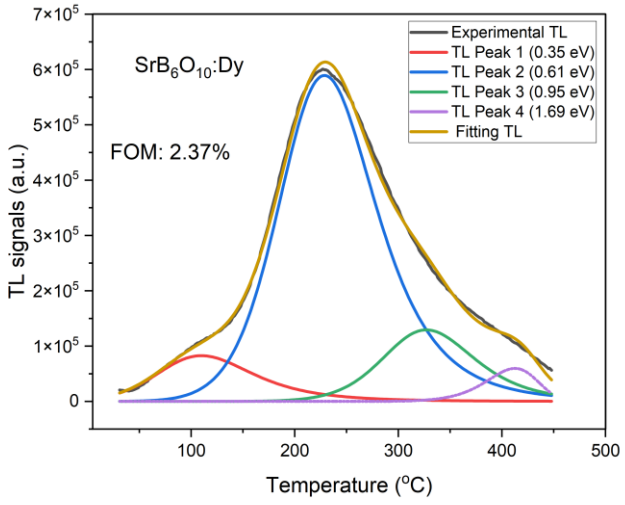

Figure 6. De-convulated TL glow curve of $SrB_6O_{10}:Dy_{0.5\%wt}$ via CGCG analysis

İnitial Rise method

The initial rise (IR) method is frequently used to determine the activation energy from any TL glow curve. This method does not require knowledge of the kinetic order (b). It functions effectively when applied to simple or well-isolated TL peaks.

TL glow curve of the $SrB_6O_{10}:Dy_{0.5\%wt}$ was recorded after preheating at 140°C from room temperature to 450°C, following 1 Gy dose. Activation energies was calculated from Eq. 3

$$I(T) = Aexp(-\frac{E}{kT}) \quad (3)$$

where; A is constant; E is activation energy; k is Boltzmann constant and T is temperature, is assumed approximately constant. The activation energy was calculated from the natural logarithm I(T) vs 1/kT given in Fig. 7. Its slope gives equal to -E. The activation energies of the TL Peak 2 at 227 °C was 0.71 eV, which is activation energy close to that obtained by the CGCD method.

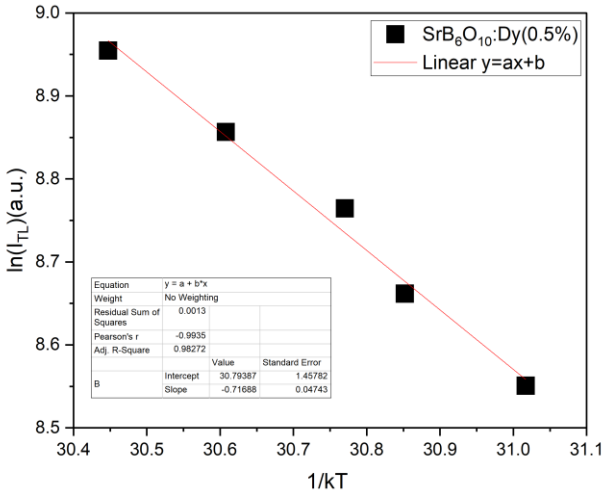

Figure 7. The natural logarithm I(T) vs 1/kt for TL Peak located at 227 °C.

CONCLUSION

Dy doped SrB_6O_{10} phosphor were synthesized by the SCS. Its structural characterization was done by SEM and XRD. TL glow curve of the $SrB_6O_{10}:Dy_{0.5\%wt}$ was composed of two TL peak located at approximately 110 °C, and, 225 °C when heating rate of 2 °C/s, respectively. Step annealing experimental was studied.Kinetic parameter parameters of TL glow curve SrB_6O_{10}:Dy was determined by CGCD and initial rise method. Activation energies by two methods are agreement.

ABSTRACT
Gilles published a taxonomy key to identified Anopheles Mosquitoes morphologically as mosquitoes constitute a very important component in the determinants of insect-borne diseases of public health importance. This study aimed to investigate the molecular genotyping for mosquitoes Anopheles using species-diagnostic DNA polymerase chain reaction (PCR) in order to give clear assessment to different Anopheles species morphology, distribution, molecular diversity and genotype so as to identify the major malaria vector groups of Anopheles mosquitoes. Morphological keys were first used to identify the mosquitoes from five breeding site. Mosquitoes belonging to the *Anopheles gambiae* complex were further morphologically identified using standard keys. *Anopheles gambiae* genomic DNA extracted are subjected to standard PCR assays. A total of 2,295 of Mosquitoes identified morphologically were collected belonging to three species of mosquitoes, 1454 of these were identified as anopheles mosquitoes consisting of (*Anopheles coluzzi* and *Anopheles gambiae* complex and *Anopheles arabiensis*), *Culex quinquefasciatus* were 585 and a total of 256 for *Aedes aegypti*. PCR analysis was used to identify the specific-species in Anopheles species and only Anopheles gambiae was identified molecularly and it is most prevalent. Molecular genotyping identification of Anopheles Mosquitoes shows that they are most prevalent and this contributes to targeting of major malaria vectors by the government and malaria vector control programmes to curb malaria in the society.
Keywords: Anopheles, Identification, Nigeria, Molecular Genotyping, PCR

Introduction

Mosquitoes are nuisance species as well as potential transmitters of zoonotic and human diseases such as dengue fever, yellow fever and malaria and they also constitute a very important component in the determinants of insect-borne diseases of public health importance, especially in places where the availability of diverse water bodies support their breeding. The pathogens carried by mosquitoes mainly include the malaria parasite (Plasmodium), filaria (Wucheria and Brugia) and arboviruses. (Adebote *et al.*,2008) (Okorie, 2014).

Malaria is one of the most severe global public health problems worldwide, particularly in Africa, where Nigeria has the greatest number of malaria cases (World Health Organization, 2014). About half of the world's population is at risk of malaria; in 2015, there were roughly 212 million malaria cases and an estimated 429,000 malaria deaths (WHO, 2014). Nigeria suffers the world's greatest malaria burden, with approximately 51 million cases and 207,000 deaths reported annually while 97% of the total population is at risk of infection (WHO, 2014); yellow fever epidemics have also had devastating effects on human populations (Nasidi *et al.*, 1989).

FULL TEXTS BOOK

Mosquitoes are widely distributed throughout the world and they utilize different water bodies for their breeding. Over 3400 species of mosquitoes have been identified, with many species breeding in both natural and artificial containers such as pools, gutters, coconut shells, tree holes, bamboo stumps, leaf axils, septic tank, and so on (Okogun, 2005). Among all mosquito species that have been recorded, about 10% are regarded as vectors of infectious agents having a considerable effect on public health. The most important mosquito vectors belong mainly to three genera including Anopheles, Aedes, and Culex (Negev, 2015).

In Africa, particularly in Nigeria, Malaria is an infectious disease caused by female Anopheles mosquitoes of the over 400 Anopheles species, only 30 to 40 can transmit malaria with Anopheles gambiae being the principal vector (Mbogo *et al.*, 2003). Anopheles gambiae transmits malaria to man through the malaria parasite Plasmodium.

Previous mosquito variety research in Nigeria has mostly relied on morphology, with only a few studies using DNA analysis to identify the different mosquito species (Iyiola *et al.*, 2021) Mosquito Species are distinguished by morphological features such as the legs, antennae, wings, and abdomen location (Iyiola *et al.*, 2021). Scientists all over the world have used two major ways to validate the identification of biological specimens: species identification based on morphological features and standard molecular techniques using DNA sequencing. The capacity to identify specific species of the Anopheles complex allows researchers to look into other elements of biology that differ between the species, such as larval ecology, resting behavior, and insecticide resistance, all of which are important for malaria epidemiology and vector control. Based on these data, this study aims to use standard molecular techniques using molecular genotyping method to distinguish the Anopheles mosquitoes morphological features using PCR method.

Literature review

The *Anopheles gambiae* complex has eight morphologically indistinguishable species of mosquitoes in the genus Anopheles. The complex was recognized in the 1960s and includes the most important vectors of malaria in sub-Saharan Africa, particularly of the most dangerous malaria parasite, Plasmodium falciparum (Walter Reed Army Institute of Research, 2007). It is one of the most efficient malaria vectors known. The Anopheles gambiae complex consists of *Anopheles arabiensis, Anopheles bwambae, Anopheles melas, Anopheles merus, Anopheles quadriannulatus, Anopheles gambiae sensu stricto, Anopheles coluzzii* and *Anopheles samharicus* and among the complex, *Anopheles gambiae s.s., Anopheles arabiensis,* and *Anopheles coluzzii;* the primary vector of malaria parasites in Africa (Ndo *et al.*, 2016) are the closest sibling species.

Current methods of molecular genotyping include restriction fragment length polymorphism identification (RFLPI) of genomic DNA, random amplified polymorphic detection (RAPD) of genomic DNA, amplified fragment length polymorphism detection (AFLPD), polymerase chain reaction (PCR), DNA sequencing, allele specific oligonucleotide (ASO) probes, and hybridization to DNA microarrays or beads.

Various molecular methods have been used to distinguish sibling species of Mosquitoes which includes karyotype, isozymes, and most recently polymerase chain reaction (PCR) amplification of rDNA of Anopheles mosquitoes (Rafferty *et al.*, 2002). PCR-RFLP technique has also been used for identification of members of the Anopheles species. Similarly, DNA sequences of different gene regions of the nucleus and mitochondria have been amplified to deduce the evolutionary relationship among species because they show high rates of nucleotide substitution (Havill *et al.*, 2007). The use of RAPD marker for genetic analysis of *Aedes aegypti* mosquito populations collected from Dengue outbreaks in Pakistan was reported and the study concluded that *Aedes aegypti* populations are genetically more diverse as previously reported in Pakistan (Ashraf *et al.*, 2016).

FULL TEXTS BOOK

PCR diagnostics is the current "benchmark" for distinguishing closely related and visually similar specimens. Sequence amplification by PCR and deduction of evolutionary relationship have also been used to differentiate and characterize mosquito species (Iyiola *et al.*, 2020) and due to its reliability, reproducibility and ease of use, there has been more interest towards methods that utilize the polymerase chain reaction (PCR). The use of PCR only requires a small part of the morphological identified mosquitoes, DNA sample can be gotten from just a single leg for molecular identification, allowing the rest of the specimen to be used for other analyses such as parasite detection (Walton *et al.*,1999).

However, unless DNA sequence analysis is performed on each specimen, using PCR method requires morphological identification of the species complexes in order to select the appropriate primers and to correctly interpret the results. Primers for species identification have been developed for numerous species complexes (Rafferty *et al.*, 2002). Polymerase chain reaction (PCR) is a method widely used to rapidly make millions to several copies of a specific DNA sample, allowing researchers to take a very small sample of DNA and amplify it to a large enough amount to study in detail. PCR was invented in 1983 by the American biochemist Kary Mullis at Cetus Corporation and is the most common DNA amplification method in molecular biology (VanRansburg *et al.*, 1996).

The identification of Anopheles as the sole vector of malaria transmission in humans has sparked a lot of interest in researching this genus (Sum *et al.*, 2014). More than half of malaria vectors are found to be members of sibling species that are physically similar but differ in genetics, ecology, biology, vectorial capacity, host choice, blood feeding behavior, and geographical distribution (Collins and Paskewitz, 1996) and PCR diagnostics being the current "gold standard" for distinguishing closely related and visually similar specimens is widely used. There is a variation in the second internal transcribed spacer (ITS2) of the rDNA in Anopheles mosquito and this can be used as diagnostic markers (Muller*et al.*, 2013) and identify specific species in genus Anopheles.

Materials and Methodology

Study Area

The study was carried out in Ilorin, Kwara state. *Anopheles gambiae s.l.* Mosquito larvae and pupae were collected from Post Office area (Ilorin West) N08029.398' E0040336.621', Oyun (Ilorin East) N0802455.54, E403649.78 and Amoyo (Ifelodun) N0802430.82, E403732.38in Ilorin, Kwara State, Nigeria.

Ilorin is within the equatorial rainforest belt, which is a tropical zone that houses vegetation of green foliage of trees, shrubs and oil palm trees. Local climate is tropical, with dry seasons between November and March and wet seasons between April and October. The average temperature ranges from 21°C - 37°C providing an ideal climate for malaria transmission throughout the year. Based on their dense population 3 areas were selected for the study. These areas were from Ilorin West, Ilorin East, and Ifelodun local government areas which are not apart from each other. These areas are usually characterized by stagnant pools in the rainy season.

Mosquito Larval Collection and Rearing

Larval collection was done between 7am to 9am. The larvae were identified on the field using their resting orientation to the surface of the water. After the collection of the larvae, the pupae were separated from the larvae using a pipette and they were put in separate containers, the pipette were also used to remove unwanted organisms or predators and they were transported to the laboratory. The larval stages were raised in the laboratory until the adult stage on a grounded mixture of non-fatty cabin biscuit and yeast. As the larvae transformed to pupae, the pupae were collected into a holding cage for emergence. The emerging adults were maintained in the insectary on a 10% glucose solution.

FULL TEXTS BOOK

Identification of Anopheles Mosquitoes

The adult mosquitoes were identified under a microscope as *Anopheles gambiae s.l.* based on morphological features as guided by morphological keys by Gilles and DeMeillon (1987). The morphological features are; pale interruptions on the costa area of the wings, three bands on the palps and speckled hind leg.

Preservation of Anopheles Mosquitoes

Members of *Anopheles gambiae* complex that emerged were left unfed to die after which they are identified morphologically into sex and species groups using stereo microscope with the use of morphological keys (Coetzee, 2020).

After that, a few beads of silica gel were put in the container. The silica gel will remove the excess humidity and will stop growth of fungus and mold. This way mosquitoes can easily be preserved for 1-2 months or even longer duration without disturbing their morphological features.

Mosquitoes DNA extraction

DNA was extracted using Zymo Research Quick Insect mini prep kit for 50 preps. The procedure for the extraction is as stated below.

Lysis

Mosquito was put in bashing bead tubes and 750L of bashing bead buffer was added to it and vortexed at high speed for 20 minutes to break open the cell membrane so that the DNA can be released. The mixture was centrifuged at 13000 rpm × 1 minutes to separate the supernatant from the pellets. Nucleic acids are usually in the supernatant.

Binding

400µL of the supernatant from the bashing bead tube was added to a collection tube into which 1200µL of genomic binding buffer was added and mixed thoroughly to bind the DNA to the spin column. From the supernatant in the bashing bead tube, 150µL was collected and put in another collection tube and 450Ml of genomic binding buffer was mixed into it. 800µL of the mixture from step 4 was transferred into Zymo spin HF tubes and spun at 13,000 rpm × 1 minutes. This step is to precipitate the DNA in the tube while impurities like RNA and proteins flow through the spin column are discarded.

Washing

Into the spin columns, 200µL of DNA pre-wash buffer was added and centrifuged at 13,000 rpm × 1 min. The flow through was discarded and the collection tubes were bloated. The spin columns were reinserted. 500µL of gDNA wash buffer was added to each column to wash off excess alcohol in the precipitation stage and also wash off leftover impurities. They were again centrifuged at 10,000 rpm ×1 minute.

Elution

The spin columns were put in labeled 1.5ml microcentrifuge tubes and a 10µL elution buffer was added directly into the columns and incubated for 10 minutes. It was centrifuged at 13,000 rpm ×1 min and the flow through in the micro centrifuge

DNA Agarose Gel Electrophoresis

The concentration of the agarose gels used during this study were 1,1.8 and 2. The 1% agarose gels were prepared to confirm the presence of genomic DNA extracted while the 2% agarose confirmed the presence of PCR amplicons. To prepare 1% agarose gel. I mixed 1g of agarose powder with 100 ml of 1X TBE running buffer, and then heated it until the mixture was clear. To prepare 2% agarose gel, 2g of agarose powder was mixed with 100ml 1X TBE running buffer, then heated until it was clear. The TBE buffer is made of Tris Base, Boric acid and EDTA. 200 ml of 50X stock was prepared using;

- 108g of Tris Base

FULL TEXTS BOOK

- 40 ml of 0.5M EDTA (pH 8.0)
- 55g of Boric acid
- 160 ml of distilled water.

The mixture is mixed vigorously with a magnetic stirrer until it is a clear solution. 100ml of 1X TBE is prepared from 50X stock by adding 2 ml of the stock to 98 ml of distilled water.

Fresh 1X TAE buffer and 1.8% agarose gel with 1X TAE were prepared for the gel extraction. 1.8% agarose was prepared by dissolving 7.2g of agarose powder in 400mls of 1X TAE. 200ml 0f 50X TAE stock contained;

- 48.4g of Tris Base
- 20 ml of 0.5M EDTA (pH 8.0)
- 11.42ml of glacial acetic acid
- 168.58ml of distilled water.

Tris Base was dissolved into 168.58ml of water and stirred at high speed using a magnetic stirrer until the solution was clear. EDTA and glacial acetic acid were then added and stirred. 400ml of 1X TAE was prepared from 50X stock by adding 8mls of 50X TAE to 392mls of distilled water. Ethidium bromide which is an intercalating dye was added to the agarose to enable viewing of bands when exposed to the UV radiation.

PCR Amplification for Molecular Identification of Anopheles Mosquitoes (gambiae) Complex

Molecular identification of mosquito samples was carried out according to the method described by (Collins et al. 1987) for Anopheles gambiae, four primers including ME (TGACCAACCCACTCCCTTGA), AR (AAGTGTCCTTCTCCATCCTA), QD (CAGACCAAGAT), UN A (GTGTGCCCCTTCCTCGATGT), GA (CTGGTTTGGTCGGCACGTTT) were used, this was done to identify sibling species of Anopheles gambiae s.s. complex.

Results

Anopheles Mosquitoes Breeding Habitat areas

The larva habitat encountered in this study include Pools, Ponds, Concrete reservoirs and Swampy areas around living homes and they were characterized according to (Table 1). Breeding habitats in Ilorin west were found to contain 209(9.1%) mosquito larvae, in Ilorin east were found to contain 372(16.2%), in Ilorin South were found to contain 6613(26.7%), in Lafiagi were found to contain 200 (8.71%) mosquito's larvae and post office were found to contain 901(39.3%) mosquito's larvae.

There was also a predominance of Anopheles mosquito larvae caught in Post office 901 (39.3%) breeding sites compared to those caught in Ilorin West 209(9.1%) breeding sites.

Morphological Identification of Mosquitoes

A total of 2,295 mosquitoes were collected from five areas in Ilorin within the period of collection and were used for morphological identification and 1454 of these were identified as anopheles mosquitoes consisting of *Anopheles coluzzi* and *Anopheles gambiae* complex and *Anopheles arabiensis* with 126 in Ilorin West, 163 in Ilorin east, 546 in Ilorin South, 112 in Lafiagi and 513 in post office. *Culex quinquefasciatus* were 585 with 65 in Ilorin West, 117 in Ilorin east, 44 in Ilorin South ,59 in Lafiagi and 300 in the post office, Ilorin.

Aedes aegypti collected in Ilorin west were 24, 92 in Ilorin east, 23 in Ilorin South, 29 in Lafiagi and 88 in the post office. *Aedes aegypti* and *Culex quinquefasciatus* collected were excluded from the study because they are not malaria vectors. PCR analysis was used to identify the specific species within the *Anopheles gambiae* complex.

Post office	513	300	88	901(39.3)
Total	1454	585	256	2295(100.0)

Molecular Identification of *Anopheles gambiae*

Molecular identification of sibling species of *Anopheles gambiae s.l.* in this study showed that bands were produced from samples from Ilorin West, Ilorin east and post office, LGAs. Only one member of the Anopheles complex was identified molecularly; Anopheles gambiae s.s in all of the locations. Also, Anopheles 1454 mosquito's larvae were the predominant member followed by Culex mosquitoes (584) in all the three LGAs. Figure 1 shows the agarose gel pictures of some samples after genomic DNA extraction. The samples were loaded with 1% gel agarose to detect the genomic DNA.

Discussion

This study showed the presence of Anopheles mosquitoes in the three studied LGAs reflecting the availability of suitable breeding sites (Table 1). All the larvae (100%) collected in this study were found breeding in stagnant water while none was found in flowing water. This agrees with already established knowledge that mosquitoes prefer to breed in all sorts of stagnant water but running streams and creeks with any water movement and ponds with predators such as fish, frogs, or dragonflies are not good breeding sites for mosquitoes (Farjana *et al.*, 2015).

There is significant difference between each compared group of habitat area (Balarabe *et al.*, 2015) hold the view that characterizing mosquito breeding sites in order to determine their influence on Anopheline and Culicine distribution and densities is very useful to understanding the variations observed in malaria transmission intensity and to plan more efficient vector control strategies. Considering the abundance of Anopheles breeding sites in this study, larval source management, environmental hygiene strategies and improved house design would be appropriate to effectively eliminate the various Anopheles mosquitoes breeding sites.

A total of 1454 Anopheles species belonging to three Anopheles species groups were identified morphologically from the studied LGAs. These include Anopheles gambiae s.l., Anopheles coluzzi and Anopheles arabiensis. These findings were similar with those identified morphologically in parts of Kano state (Ahmed and Ahmed, 2011). In this study, *Anopheles gambiae s.l.* had the highest occurrence, followed by *Anopheles arabiensis* and then *Anopheles coluzzi* was the least species group.

The presence of *Anopheles gambiae s.l.* and *Anopheles arabiensis* in this study could pose a major threat to the spread of malaria parasites as these species of mosquitoes have been implicated in various studies as the major malaria vector in Africa with the predominance of *Anopheles gambiae s.l.* over *Anopheles arabiensis* and *Anopheles colluzzi*. Studies done in various parts of Nigeria (Ahmed and Ahmed, 2011) reported this pattern while others recorded a similar trend from various parts of Africa (Antonio *et al.*, 2017).

Inaccurate identification of mosquito vector species has overtime lead to ineffective vector control strategies. This can now be avoided in these LGAs using the information here as baseline data for planning effective malaria vector control programmes.

Conclusion

The results from this study show that An. gambiae and Culex mosquitoes co-exist in Ilorin west, Ilorin East and post office, in Ilorin, Kwara State. *Anopheles gambiae* is the predominant species in this area. The breeding patterns of Anopheles and Culex mosquitoes vary in response to changes in environmental factors such as wind and rainfall.

The findings from this study contributes to the basic understanding of the distribution of Anopheles' mosquitoes with respect to species composition and heterogeneities that could serve as a base-line data for further entomological studies in the area and Malaria control since it shows that Anopheles is predominant here.

On the basis of the results, it was discovered that the *Anopheles gambiae* are the most prevalent and this calls the attention of the government to help to curb the mosquitoes to reduce the spread of malaria in this area of Ilorin.

BENEFİTS AND RİSKS OF GENERATİVE AI İN CONTENT MARKETİNG

Khalil Israfilzade
Asst. Prof. at Computer and Information Sciences, ADA University, Baku, Azerbaijan
ORCID: 0000-0001-8228-4024

ABSTRACT
In a short period of time since it was launched, Generative AI has caused widespread interest in the content marketing landscape, with significant benefits and notable risks. Undoubtedly, this is the primary reason for marketers, managers, and experts to have a tool that generates unlimited content on any topic. This article examines generative AI in content marketing by providing a holistic view of its benefits and challenges. The benefits of generative AI involve efficiency in content creation, better personalization, cost savings, creativity, and further improvements. Nevertheless, there are risks related to these advantages, including quality of the content, ethical concerns, dependence on technology, the potential for spreading misinformation, and diminished content value. This article attempts to provide a balanced perspective by observing both sides. Furthermore, the article highlights some future trends and developments in generative AI, providing an understanding of its potential impact on content marketing.
Keywords: Digital Marketing, Generative AI, AI in Marketing, Ethical AI, Content Marketing, AI-Generated Content

INTRODUCTION

Particularly with the fast development of digital technologies and the rise of artificial intelligence (AI), the field of marketing has experienced major changes recently. The integration of Generative AI, which has fundamentally reshaped the limits of customer engagement and interaction, is essential to this transformation.

Generative AI, a branch of artificial intelligence, possesses the ability to independently generate content, leading to significant improvements in various fields, including content marketing. This technology applies sophisticated algorithms to create text, images, videos, and other types of media, allowing marketers to generate content on a large scale and quickly (Israfilzade & Sadili, 2024). The emergence of generative AI presents a viable solution to the escalating need for digital content, as businesses progressively embrace digital marketing tactics to efficiently connect with their target audiences.

Generative AI has a complex and wide impact on content marketing. On one side, it offers possibilities for improved productivity, creativity, and personalisation that were previously unachievable. However, the rapid integration of this technology brings forth various challenges, such as concerns about the quality of content, ethical implications and the possibility of over-dependence on automated systems. This paper aims to review the benefits as well as potential drawbacks of generative AI in content marketing, offering an in-depth view of its role and implications in the industry.

Benefits of Generative AI in Content Marketing

Generative artificial intelligence is a subfield of artificial intelligence whereby new data from an initial set of input data is produced using machine learning algorithms. Basically, it lets machines produce original and unique content as well as ones that match the training data. Training the AI models on large volumes helps them to learn and replicate the patterns, subtleties, and complexity of the data (Goodfellow et al., 2014; Houde et al., 2020; Dwivedi et al., 2023).

Whereas classical artificial intelligence relies on patterns, decision-making, analytics, and fraud detection, generative artificial intelligence generates new content, chat responses, designs, synthetic data, or deepfakes. While classical artificial intelligence uses new data to generate simple results,

FULL TEXTS BOOK

generative artificial intelligence begins with user input and explores content variants (Israfilzade & Sadili, 2024).

Efficiency in Content Creation. One of the most significant advantages of generative AI is its ability to streamline the content creation process. Traditional content production can be time-consuming and labour-intensive, requiring substantial human effort in brainstorming, drafting, and editing (Mbotake, 2024). Generative AI automates these processes, allowing marketers to generate vast amounts of content quickly and efficiently. This efficiency not only saves time but also enables marketers to maintain a consistent flow of content, which is crucial for keeping audiences engaged and optimizing search engine performance.

For instance, AI-powered tools like GPT, and Gemini can generate articles, blog posts, social media updates, and other forms of content within minutes (Nalini et al., 2021, Israfilzade, 2023). These tools can produce content on a wide range of topics, making them valuable assets for content marketing teams looking to scale their output without compromising quality. By automating repetitive and time-consuming tasks, generative AI allows marketers to focus on more strategic and creative aspects of their work.

Enhanced Personalization. Personalization is a key driver of effective content marketing. Consumers today expect personalized experiences that cater to their specific preferences and needs (Terho et al., 2022). Generative AI can analyse vast amounts of data to understand user behaviour and preferences, allowing marketers to create highly targeted content.

By leveraging AI, marketers can tailor content to individual users, enhancing the relevance and impact of their messaging. This level of personalization can significantly improve customer engagement and satisfaction, leading to higher conversion rates and stronger brand loyalty (Babayev & Israfilzade, 2023). For example, AI can customize email campaigns based on user interactions with previous emails, ensuring that each message resonates with the recipient.

Generative AI also enables dynamic content personalization, where the content changes in real-time based on user interactions. This capability allows marketers to deliver a more engaging and interactive experience, further boosting customer engagement and retention.

Cost Savings. Generative AI can lead to substantial cost savings for businesses (Kshetri et al., 2023). Traditionally, creating high-quality content requires a team of writers, editors, designers, and other professionals, which can be expensive. AI can reduce the need for large content creation teams by automating much of the process, thereby lowering production costs (Soni, 2023).

These savings can be reallocated to other strategic areas such as customer acquisition, product development, or advanced marketing initiatives. By optimizing their budgets, companies can achieve greater efficiency and competitiveness in the market. Moreover, the cost-effectiveness of AI-generated content allows smaller businesses to compete with larger enterprises by producing high-quality content without a significant financial burden.

Enhanced Creativity. AI has the potential to enhance creativity in content marketing by offering new ideas and perspectives. While AI-generated content can serve as a starting point, human creators can refine and build upon these ideas, leading to innovative and engaging content.

AI tools can generate diverse content formats, from written articles to visual designs, providing a rich source of inspiration for marketers (Ameen, 2022; Israfilzade, 2023). For instance, AI can create multiple variations of a marketing campaign, allowing marketers to test different approaches and select the most effective one. This collaborative approach between AI and human creativity can result in more dynamic and compelling marketing content.

FULL TEXTS BOOK

Generative artificial intelligence can also help with brainstorming by producing a large spectrum of ideas dependent on input parameters. This capacity will enable advertisers to go in novel directions for their campaigns and breakthrough creative limitations. Adding AI-generated ideas to human creativity will help marketers create more original and powerful content strategies.

Risks of Generative AI in Content Marketing

With marketing not excluded, artificial intelligence has fundamentally changed many fields. From data analysis and customer segmentation to content creation and personalized advertising, artificial intelligence technologies have influenced every aspect of marketing during the past ten years (Israfilzade, 2023). On the other hand, generative artificial intelligence, despite its many benefits, presents significant risks.

Quality Concerns. It is important to note that the quality of the content is one of the significant risks that are associated with generative artificial intelligence. AI-generated content may lack the depth, tone, and originality that human creators can provide. While AI can produce grammatically correct and coherent text, it often struggles with context, tone, and cultural relevance.

Human control is required in order to reduce the impact of these problems. Editors and content creators must review and refine AI-generated content to ensure it meets quality standards and aligns with the brand's story. Without this crucial stage, company faces the danger of releasing poor quality work that might damage the brand's reputation.

Moreover, AI-generated content may accidentally contain factual inaccuracies or outdated information. Ensuring the accuracy and reliability of the content is essential to maintain the trust and credibility of the audience. Strict quality control procedures and such as subject-matter experts in the content review process help to solve these problems.

Ethical Concerns. The use of AI in content marketing raises several ethical concerns. One major issue is bias in AI algorithms (Ntoutsi et al., 2020). AI systems are trained on large datasets that may contain inherent biases, which can be reflected in the generated content. This can lead to discriminatory or offensive content that could damage the brand's image and alienate audiences.

Privacy is another ethical concern. AI relies on vast amounts of data to function effectively, raising questions about how this data is collected, stored, and used (Manheim & Kaplan, 2019). Marketers must ensure that they comply with data protection regulations and respect user privacy to avoid legal repercussions and maintain consumer trust.

Transparency and accountability are crucial in addressing these ethical concerns. Companies should be transparent about their use of AI and the data it relies on. Implementing ethical guidelines and standards for AI-generated content can help ensure that the technology is used responsibly and ethically.

Dependence on Technology. Over-reliance on AI tools can lead to a decline in human creativity and critical thinking (George, Baskar & Srikaanth, 2024). While AI can automate many aspects of content creation, it cannot replace the unique insights and emotional intelligence that humans bring to the table. Marketers must strike a balance between leveraging AI for efficiency and maintaining human input for creativity and strategic thinking. This balance is crucial for producing content that resonates with audiences on a deeper level and maintains the authenticity of the brand.

Furthermore, the dependence on technology can create vulnerabilities. Technical issues, such as system failures or cybersecurity threats, can disrupt the content creation process. Developing contingency plans and ensuring the robustness of AI systems are essential to mitigate these risks.

FULL TEXTS BOOK

Potential for Misinformation. AI-generated content can accidentally spread misinformation if not properly monitored. AI systems generate content based on patterns and data, which may include inaccuracies or outdated information (Zhou et al., 2023). Without thorough fact-checking, there is a risk of disseminating false information that could mislead audiences and damage the brand's credibility.

To address this risk, companies must implement robust verification processes to ensure the accuracy of AI-generated content. This includes cross-referencing information with reliable sources and involving subject matter experts in the content review process.

Moreover, the potential for misuse of AI to deliberately create and spread misinformation is a significant concern. Ensuring the ethical use of AI and promoting digital literacy among consumers are critical steps in combating the spread of misinformation.

Diminishing Content Value Over Time. Another significant risk associated with generative AI in content marketing is the potential for diminishing content value over time (Reisenbichler et al., 2022; Chui et al., 2023). As more businesses adopt AI-generated content strategies, the market could become saturated with similar types of content. This saturation can lead to content fatigue among consumers, reducing the overall impact and effectiveness of marketing efforts.

Additionally, if AI-generated content is not regularly updated and refreshed, it can become repetitive and lose its appeal. Audiences may begin to recognize and disregard AI-generated content, perceiving it as less authentic and engaging compared to human-created content. This diminishing value can undermine the long-term success of content marketing strategies.

To respond to this risk, marketers must continuously innovate and ensure that AI-generated content remains fresh, relevant, and valuable to their audiences. Combining AI capabilities with human creativity and strategic planning can help maintain the uniqueness and impact of marketing content.

Future Trends and Developments

The future of generative AI in content marketing holds exciting possibilities. Advances in AI capabilities will enable even more sophisticated personalization and creativity. For example, AI could analyse real-time user data to generate hyper-personalized content that adapts to changing consumer preferences.

Integration with other technologies, such as augmented reality (AR) and virtual reality (VR), could further enhance the impact of AI-generated content. These immersive technologies can create engaging and interactive experiences that captivate audiences and drive brand engagement.

Additionally, ongoing research and development will focus on addressing the ethical and quality concerns associated with AI. Efforts to reduce bias in AI algorithms and improve the transparency and accountability of AI systems will be crucial for building trust and

CONCLUSION

Generative AI offers a transformative approach to content marketing, presenting a blend of substantial benefits and notable risks. The efficiency in content creation, enhanced personalization, cost savings, and creative inspiration that generative AI provides can significantly sustain marketing strategies, enabling businesses to produce high-quality content at scale. However, the integration of this technology also brings forth challenges that require careful consideration and management.

Quality concerns are predominant, as AI-generated content often lacks the nuanced understanding and contextual relevance that human creators inherently possess. Ethical issues, including biases in AI algorithms and data privacy, necessitate the implementation of healthy ethical guidelines and transparency measures. The over-reliance on technology can diminish human creativity and critical thinking, underscoring the need for a balanced approach that leverages both AI capabilities and human insights.

FULL TEXTS BOOK

The potential for misinformation and the risk of diminishing content value over time further complicates the landscape. Ensuring accurate, up-to-date information and maintaining the freshness and uniqueness of content is crucial to sustaining audience engagement and trust.

Future trends in generative AI point towards even more sophisticated personalization and integration with immersive technologies like AR and VR, promising to enhance the impact of AI-generated content. Continuous advancements in AI capabilities, coupled with ethical research and development, will be essential in addressing current challenges and building a more reliable and trustworthy framework for AI in content marketing.

In conclusion, while generative AI holds huge promise for revolutionizing content marketing, its successful and sustainable implementation hinges on a balanced approach that combines technological innovation with human oversight and ethical considerations. By navigating the benefits and risks carefully, marketers can employ the full potential of generative AI to create compelling, effective, and responsible content that resonates with their audiences.

GAGAUZ TÜRKÇESİNDE BAĞLAMA EDATI "YA" NIN SEMANTİK KATMANDAKİ İŞLEVSEL YANSIMASI
FUNCTIONAL REFLECTION OF THE BINDING PREPOSITION "YA" IN GAGAUZ TURKISH IN THE SEMANTIC LAYER

LEYLA DİLEK
Siirt University Vocational School Applied English – Translation, Siirt, Türkiye

ÖZET
Çalışma enleminde, Gagauz Türkçesindeki "*ya*" bağlacının işlevsel doğrultuda imgelenen semantik vurgusu dikkate sunulmuştur. Bağlam ve şartların görünüm ufkuyla betimlenen anlamsal boyut, metin bağlamında motivize edilen "*ya*" bağlayıcı unsurunu derin yapıdan yüzey yapıya aktararak söylem periyodunu varsıl bir yöne çekmiştir. Yorumsal analiz modeliyle tasarlanan semantik perspektif, işlev odaklı polisemik imajların senkronik yankısıyla dizayn edilmiştir. Gagauz yazınındaki gizil estetik fayları açığa çıkaran bu anlamsal dizilim doküman analizi faktörüyle çözümlenerek anlambilimsel bir tarzla incelenmiştir. Dolayısıyla "*ya*" bağlama edatının biçimsel yönlü derin yapı işaretleyicilerinin saptandığı, çokanlamlı dizgenin semantik iz düşümünün, söylem perdesine özgün bir kreasyonla yansıtıldığı belirmiştir. Daha doğrusu, anlam paletinden akseden işlev odaklı estetik renkler vasıtasıyla ifade tablosunun polisemik bir izlenim yarattığı belirgin kılınmıştır.
Araştırma evreninde, bağlayıcı dil birimi "*ya*" nın anlamsal sınırdan tek başına geçebildiği gibi, "*yada, ye, eki (< ya ki), yaki, yakida*" tarzındaki biçimlere de dönüşebildiği dikkati çekmiştir. Ayrıca biçimbirimsel bir reaksiyonla işlenen söz konusu bağımsız görev birimlerinin, yüzey yapıda üstlendikleri özgün imgelemin yanı sıra, "seçenek sunma, soru sorma, açıklama, pekiştirme…" gibi farklı anlamsal ilgilerle otantik bir görünüm sergiledikleri görülmüştür. Gagauz Türkçesinin gramatikal yörüngedeki dilsel motiflerini ve değişken karakterli anlatı desenlerini semantize eden bu işlevsel dizayn, gözlem meridyeninden yansıyan polisemik kurguyu sanatsal bir hazla yeniden dramatize etmiştir. Tespiti yapılan işlev katmanına ad verme işlemi ise tümcede baskın olan anlam profili aracılığıyla gerçekleştirilmiştir. Böylelikle Gagauz edebi ikliminde bağımsız bir "*ya*" profilinin var olduğu tespit edilmiş ve bu kinestetik önermenin varlığını pekiştiren çeşitli yazınsal portrelerden orijinal tasarımlar resmedilmiştir.
Anahtar kelimeler: Gagauz Türkçesi, Ya bağlacı, Semantik, İşlev, Analiz.

ABSTRACT
At the latitude of the study, the semantic emphasis of the conjunction "*ya*" in Gagauz Turkish, which is visualized in a functional direction, is brought to attention. The semantic dimension described by the horizon of context and conditions has moved the discourse period in a rich direction by transferring the connecting element "either" motivated in the context of the text from the deep structure to the surface structure. The semantic perspective, designed with the interpretive analysis model, is designed with the synchronic echo of function-oriented polysemic images. This semantic sequence, which reveals the hidden aesthetic faults in Gagauz literature, was analyzed with the document analysis factor and examined in a semantic manner. Therefore, it has been determined that the formal deep structure markers of the linking preposition "*ya*" have been determined, and the semantic projection of the polysemous system is reflected on the discourse screen with a unique creation. More precisely, it is made clear that the expression table creates a polysemic impression through the function-oriented aesthetic colors reflected from the meaning palette.
In the research universe, it has been noticed that the connective linguistic unit "*ya*" can pass the semantic border alone, as well as transform into forms such as "*yada, ye, (< ya ki), yaki, yakida*". In addition, it has been observed that these independent task units, which are processed with a morphosyntactic

FULL TEXTS BOOK

reaction, display an authentic appearance with different semantic interests such as "offering options, asking questions, explaining, reinforcing...", in addition to the original imagery they assume in the surface structure. This functional design, which semanticizes the linguistic motifs of Gagauz Turkish in the grammatical orbit and narrative patterns with variable characters, has re-dramatized the polysemic fiction reflected from the observation meridian with artistic pleasure. The process of naming the detected function layer was carried out through the dominant semantic profile in the sentence. Thus, it has been determined that there is an independent "*ya*" profile in the Gagauz literary climate, and original designs from various literary portraits that reinforce the existence of this kinesthetic proposition have been illustrated.
Keywords: Gagauz Turkish, Ya conjunction, Semantics, Function, Analysis.

GİRİŞ

Dil örgesinin işlevsel boyutunu desenleyen, gramatikal odaktan yansıyan görev birimlerini bağlayıcı bir üslupla betimleyen, ifade düzlemini belirgin bir hedef ve bağlam ile güçlendiren anlamsal yapı, "bağlaç" motifinin betim sınırını semantize eder. Bu bağlayıcı unsur; görevdeş veya birbiriyle ilgili sözceler, tümceler ya da sözcük grupları arasında biçim ve anlam yönünden estetiksel bir âhenk yaratarak derin yapıdaki saklı anlam birimlerini yüzey yapıya aktarır. Farklı önermeler arasındaki gizil bağlantı noktalarından biri olan "*ya*" ögesinin ise söylem grafiğinde işlevsel bir yön çizerek anlam sınırını polisemik bir ivmeyle yeniden dizayn ettiği belirir. Dolayısıyla Gagauz Türkçesindeki "*ya*" bağlayıcı unsurunun işlevsel katmanda bağımsız bir tasarımla senkronize edildiği ve çeşitli anlam ilgileriyle desenlendiği görülür.

Sözcükleri, sözcük öbeklerini, cümleleri, ögeleri birbirine bağlayan öncül, bağımsız, görevsel biçimbirimler olan bağlaçlar; görevsel işlevlerinin yanı sıra bağladıkları yapılara çeşitli anlamsal katkılar sunar (Karaşin, 2008: 216). Bağlaç, metnin küçük ölçekli yapısında ardışık sözceler arasındaki anlamsal ilişkilerin metnin alıcısı ya da dinleyicisi tarafından açık olarak algılanmasını sağlayan belirginleştirici ögedir (Akt. Deniz ve Emir, 2009: 905). Aynı zamanda farklı durumlar arasındaki anlamsal ilişkilerin taşıyıcısıdır. Sözcük, söz grubu ve cümleler arasına girerek onları gerek biçim gerekse anlam açısından birbirine bağlar. Duygu, düşünce, istek ve durum odaklı karmaşık yapılar arasındaki bağlantıların, anlam kaybı olmaksızın kurulması da bu bağlayıcı unsurlar vasıtasıyla gerçekleşir (Deniz ve Emir, 2009: 906). Gramer birliklerini birbirine bağlayan, anlam ilişkileri kuran unsurlar (Korkmaz, 2009: 191) olarak nitelenen bağlaçların cümledeki yerleri ile yüklendikleri işlevler ve bağladıkları ögeler arasında kurdukları çeşitli anlam ilişkilerinde birbirine geçişler, iç içe girişler veya yan yana buluşlar söz konusu olduğundan, bunları her zaman kesin sınırlarla birbirinden ayırmak mümkün değildir (Korkmaz, 2009: 932). Bu nedenle aynı sözcük, sözcedeki kullanım yerine göre farklı sözcük ulamında yer alabilmekte ve değişik işlevler üstlenebilmektedir (Akt. Karaşin, 2008: 216). Dolayısıyla dili oluşturan birimlerin tek başına kullanıma çıkmaları, iletişimi sağlayamayacağından sistem içindeki konumlarının, kullanıldıkları yerin, ilişki kurdukları kavramların onları yönlendirişi, bildirişme adına büyük önem taşır. Bu doğrultuda görev üstlenen dil birimlerinin diğerlerinden ayrılması için ayrı birer göstergeyle adlandırılması kaçınılmazdır (Karaşin, 2008: 216).

BULGULAR

Gagauz Türkçesinde bağlama edatı *ya*'nın semantik boyuttaki işlevsel yansıması şu şekildedir:

1.Seslenme işlevi

Avşamêrsın, amuca, avşamêrsın,
Yok vakıt uyumaa!
Bu avşam Svıntu Vasiliy avşamıydır.
Amuca kalkêr,

FULL TEXTS BOOK

Çırakları, çobannarı toplêêr,
Da onnara söleer,
Ani vakıt geldi sürmää.
Amuca gider,
Koşêr beygirleri hem öküzleri.
Ya çocuklar, kaldırınız bir ses:
Hey-hey!
(Akt. Zanet, 2010: 304)

Şiirsel katmanda, *ya* bağlama edatının nida eksenindeki coşkun sesletimi göze çarpmıştır. Hissel bir devinimle tasarlanan anlam tablosu, konuşucunun hitabet motifiyle birleşerek çağrışımsal bir etki yaratmıştır. İki anlamsal dizgeyi birbirine bağlayan *ya* bağlantı birimi, aynı zamanda özne konumundaki "*çocuklar*" ibaresini de işaretlemiş; söylem periyodunu estetiksel bir üslûpla yeniden dramatize etmiştir.

2. Hayıflanma işlevi

Ah, güllär, güllär,
Kırmızı güllär,
Mancurii (h)aldı ellär.
Herbir fidan silkti yapraanı,
Ne pek titsi kaldı.
Ya, bizim genç yärlerimiz
Eşsiz kaldı,
Genç analar oolsuz kaldı.
(Akt. Zanet, 2010: 324)

Şiirsel düzlemin anlam sığasından akseden hissel imgelem, konuşucunun yaşanmış bir olaya yönelik derin üzüntüsünü yansıtmaktadır. Sanatsal iz düşümün retorik boyutunu tasvirleyen anlamsal çağrışım, *ya* bağlayıcı unsurunun işlevsel dokusuyla güçlendirilmiştir. Hayıflanma işleviyle duygusal bir yoğunluk yaratan *ya* biçimbirimi, kendinden sonra gelen cümleye bağlanarak anlam evrenini estetiksel yönde genişletmiştir.

3. Öfke – kızgınlık işlevi

Gün kauşmaa deyni girdik küü içinä. Yorgunnuktan ayaklarımız artık tutmazdılar, ama nesoy-nesoy sardırdık kendi maalemizä, etiştik Simonnarın evinä.
Açan kapu önünä girdik, Nüklay batü (Simonun tätüsu) üfkeli bir seslän dedi:
-Mamusunu-nesini **ya**… bütün gün çamur çiinedik, ayak kopardık da şindi sade turşu mu iyecez? …
(Filioglu, 2019: 84)

Metnin anlam yelpazesinde; bütün gün çalışmaktan yorulan ve acıkan bir grup insanın, günün sonunda kendilerine sunulan yemeğe dair memnuniyetsizliği ve bu durumdan kaynaklı öfke ve kızgınlık izleği konu edilmiştir. Kendinden önce ve sonra gelen tümceleri estetiksel bir tarzla işleyen *ya* bağlantı noktası, söylem ritmini zenginleştirerek verilmek istenen temsel olguyu güçlendirmiştir.

4. Emir işlevi

İçerdän çıktı Milana: "Kim orda?"
Petri, soruşa cuvap vermeyip, baardı: "**Ya** çaar o kocanı, mari!"
- Petri batü, sän mi? Buyurun aula! – çaardı Milana.
(Zanet, 2014: 11)

Metinde, kuvvetli bir buyruğun öfke ve kızgınlık perspektifiyle harmonize edildiği görülmektedir. Burada *ya*, başta bulunduğu cümleyi güçlendirmekte, emrin derecesini yükseltgen bir yapıya

FULL TEXTS BOOK

dönüştürmektedir. Bu tasarımda bağlaçtan sonra gelen önermenin kuvvetli emir ufkunu işaretlemesi ve söylem atmosferinin estetiksel bir betim kazanması söz konusudur.

5. Hatırlatma işlevi

- Desinner, ne deyirseler, biz büyük dedelerimizin yaptıklarını hem nasaatlarını tamamnamaktayız! – deyirdi İstemi-kağan Özgün-babaylan fikirleşerek.
- Elbet, elbet, şanlı kağanım! "Oğuz-name" dastanımızda **söylener ye**, ani Büyük babamız Oğuz-han düş görmüştü, ki dünyayı kara fenalıklardan kurtarmağa lazımmış…

(Tanasoğlu, 2009: 31)

Açıklama işleviyle paralel doğrultuda olan hatırlatma dizgesi, geçmişte tasarlanmış bir olguya dikkat çekerek çağrışımsal bir etki yaratmaktadır. Dinleyicinin söz konusu olguyu hatırlaması esas gayeyi teşkil ederken; anımsatıcı bir yaklaşımla kurgulanan *ya* bağlantı birimi, ifade enlemine işlevsel bir zenginlik yüklemektedir. Metinde konuşucu, önce İstemi Kağan'ın bir deyişini anımsatmakta, daha sonra bu deyişi açıklar nitelikte olan "*söylener ye*" kalıp örgesini işe koşmaktadır.

6. İstek işlevi

Donadarkan sofrayı,
Danışêr bana karı:
-**Ya** uyan, metin kuşum,
Sofraya çıkar turşu.
(Filioglu, 2019: 296)

Şiirde; eşler arasında geçen samimi diyalogta, *ya* bağlacının istek işlevine estetiksel bir gönderme yapılmaktadır. Eşinin uyanmasını ve sofraya turşu koymasını isteyen konuşucu, *ya* bağlayıcı unsurunun anlam ikliminden esinlenmektedir. Dizenin başında konumlanan *ya* biçimbirimi, kendinden sonra gelen sözceleri birbirine bağlayarak şiirin betim düzleminde anlamsal bir bütünlük sağlamaktadır.

7. Pekiştirme işlevi

- Ne sän. Kuruoğ? – genä kuşkulandı Külen. – Bän ne zor çektim yalnız, böylä işlerä mi aklım gideceydi? O köpäyi… bir kerä kaynak suylan haşladım… o hep… başka kerä dä yımışak mayızlan o hayın gözlerini doldurdum… komşular hepisi bilerlär artık… tä sor! Bir kerä ama, doorusunu söyleyim, atlı gelip şu maskara, ansızdan tuttu ardımdan peliyimi, da…

-Ne "da"?...

- … ama bän öylä keskin çekettim baarmağa, ani çadırdan fırladı Babaoğ-ata kılıç elindä, bir kaç ta karı komşu çadırlardan… da beni o cenabet braktı… ama kılıç-kılıç düyüştä o yaraladı bizim zavalı babamızı… aman-aman, kahırım benim hem günahım da ihtiyarın zor çekmekleri için o zamandan beri,
- aalamağa çeketti Külen fıtasına titireyerak sesinnän.
- Ye, hadi, brak Külen, uslan… **dedim ye**, ani kemikleri biyaziyär pelinnik içindä…

(Tanasoğlu, 2009: 48)

Metnin anlam yelpazesinde, geçmişte maruz kaldığı talihsiz olay nedeniyle ruhsal çöküntü yaşayan Külen adlı karakterin durumu konu edilmektedir. Bağlayıcı unsur *ya*'nın işlevsel yansıması olan "*dedim ye*" kalıbı, anlam düzlemini pekiştirerek yüzey yapıda konumlanan iki tümceyi birbirine bağlamaktadır. Konuşucu, *ye*'den önce gelen birime dikkat çekmek ya da dil tekrarı yapmamak adına *ye*'den önceki birimi (*dedim*) örüntülemektedir. Dolayısıyla konuşucunun, "*ani kemikleri biyaziyär pelinnik içindä…*" ifadesini daha önce dile getirdiğini söylemek mümkündür. Burada tasvirlenen *ye*, sezgisel bir ivmeyle hem önce söylenen düşünceyi şu an söylenen aynı düşünceyle birleştirmekte hem de pekiştireç görevi üstlenmektedir.

FULL TEXTS BOOK

8. Dikkat çekme işlevi

Petidä bir sarı şişiriga, güneş gibi var, Doruda sa bir biyaz, yaz havasının rengindä şişiriga var. Toplanmış uşaklar çocukların şişirigalarını görmää.

Ya, bakın! Bölä büük hem yalabık şişiriga, nicä bendä, siz taa görmediniz! – dedi Peti.

- E, görmedik, gördük! – dedi uşakların biri. – Senin şişirigan diil okadar gözäl!

(Stoletneaia vd., 2018: 28)

Metinde; Peti adlı çocuğun, sarı renkli balonuyla övünerek bulunduğu ortamda ilgi odağı olma isteği konu edilmektedir. Peti, bu isteğini gerçekleştirmek adına, *ya* bağlacının anlam ekseninden ilham almaktadır. "*Ya, bakın!*" cümlesindeki coşkun devinim, *ya* bağlayıcı unsurunun dikkat çekme işlevini yansıtmaktadır.

9. Tehdit işlevi

Bir gün adam demiş aslana:

-Günä karşı bitlä benim başımı.

Aslan bitlemää başladıynan, o adam sorêr aslana:

-Nasıl, kardaşlık, benim başım islää mi?

Aslan da demiş:

-İslää, insan kafasına benzeer.

İki-üç gündän sora kefi gelmiş aslanın, da o vermiş başını adama bitletmää. Şindi adam bitlärkän, sormuş aslan adama:

-Benim kafam nasıl, islää mi?

-İslää, - demiş adam, - ama benzeer köpek kafasına.

Açan işitmiş bu lafları aslan, osaat kalkmış, başlamış tırnaklarınnan topraa fırlatmaa geeri – ölä üfkelenmiş, ölä aar gelmiş ona, ani adam benzetmiş onun kafasını köpek kafasına. Adam sa annamamış, nedän aslan üfkelendi, demiş kendi kendinä: "Şindiyädän yoktu bölä yaptı, neçin şindi bölä yapêr acaba?" Da sormuş adam aslana:

-Neçin bölä yapêrsın?

Aslan durmuş, almış erdän yarım putluk bir taş, vermiş o taşı adama da demiş:

-Ur bu taşlan benim kafama!

Çocuk urmamış. İkinci kerä aslan teklif etmiş:

-Ur benim başıma!

Adam genä urmamış. Üçüncü kerä aslan demiş:

-**Ya** ur, **ya da** parça-parça paralarım seni!

(Çebotar, 2021: 68)

Metinde; tehdit etme işlevinin *ya* bağlacıyla senkronize edilmesiyle tasarlanan özgün imgelem, özgün bir yaklaşımla resmedilmiştir. Karşı tarafa yönelik bir saldırı gerçekleştireceğini, güçlü bir söylemle dile getiren aslan, içinde bulunduğu öfke ikliminin de etkisiyle, tehlikeli bir durum yaratma eğilimi göstermiştir. "*Ya ur, ya da parça-parça paralarım seni!*" cümlesiyle muhataba gözdağı vermiş, *ya* bağlacının güç potansiyelinden esinlenmiştir.

10. Pişmanlık işlevi

Sultan gene yalnız.

-Ne yaptım, ne yaptım? (Aalar) ko o sevmedi, gözü görsün beni yoktu, ama buradaydı, benimnen, ben de her gün onunnan yaşardım! O, fikirsizliğim benim!

Bir de "masa üstünde" hancerciği bular.

-Ah, te hancercik te, kim getirdiyse, beni saplasın, öldürsün? O ama beni öldürmedi, acıdı, akıllıcağım benim! Taa iyidi, o beni öldürsün, diyil ben onu, öyle bir gülü falayım. O, Allah! O kendi namuzluğunu

FULL TEXTS BOOK

korudu. **Ye**, ne için ben onu cezaya koydum? O ana toprağını sevirdi hem senselesini… bizim senselemizi…
(Tanasoğlu, 2009: 215-216)
Metnin söylem odağında, yaptığı davranışın sonucunu gören konuşucunun yaşadığı derin üzüntü ve hayıflanma göze çarpmaktadır. Suçlu olduğunu kabul eden konuşucu, bu durum nedeniyle yoğun bir pişmanlık yaşamaktadır. "*Ye, ne için ben onu cezaya koydum?*" cümlesinde geçen *ya* bağlayıcı deseni, pişmanlık işlevinin anlamsal iz düşümünü görünür kılınmaktadır.

11. Uyarı – ikaz işlevi
- Küüyä dönelim lääzım, mamu. Köklerimiz orada. Kopmayalım köklerimizdän. Baka da herkerä geeri dönmää istärdi, ma…
- Ama dönämeyecek. – kesti onun lafını Milana. – Bu mezarlıkta kalacek, o da, Mariniylän Doçi da.
- Hepsi senselemizin mezarları küüdä, ma mamu. – dedi Ligor. – İzin alıp, onnarın da mezarlarını küüyä taşıyacam. Doykuylan Yananın da mezarlarını bulacam, ma mamu… **Ya** bak gün batıya kayêr artık. Ha kalk, mamu, evä gidelim. – Ligor kalktı skemnedän, sora yavaçıcık aldı anasını kolundan. – Hadi, ma! Şindi karannık çökecek.
(Zanet, 2014: 29)
Metinde; *ya* bağlama edatı vasıtasıyla sergilenen uyarımsal söylem dikkati çekmektedir. Bu işlevin anlam dağarcığından yansıyan en belirgin husus, uyarının devamında olumsuz bir eylemin kestirilebilir olması, daha doğrusu kötü bir durumun olacağı haberinin yer almasıdır. "*Ya bak gün batıya kayêr artık.*" cümlesinde güneşin batmaya başladığı uyarısı *ya* birimi aracılığıyla desenlenmekte, bu uyarının sonunda karanlığın çökeceği olgusu da yine ikaz kanalı ile gerçekleşmektedir.

12. Korku-endişe etme işlevi
... Da te, bir günü, bu erif genä atlamış aul içinä da, açan hızlanmış ne sa çalmaa, kuytudan önünä Tayfun fırlamış. "Hav!" deyip, iki ayaklarını da bu erifin omuzlarına koymuş. İkisi burnu burnuya gelmişlär. Köpek başka salmamış, salt bu erifi ayakta tutmuş hem erif kıpırdadıynan hırlarmış. Bir parça vakıttan sora erif annêêr, ani iş şaka diil. Baaramêêr da. Zerä, taa aazını açtıynan, köpek ta aazını açêr. Korkudan erif donnarına işemiş. Bölä gerää gibi vakıt geçmiş. Görersiniz burada taa birisi yaşamêêr, hiç yok kim imdat ta versin. Bilmeerim neylän bu iş vardı nicä bitsin: ya köpek onu paralayaceydı, ya erifin ödü patlayaceydı, ama erifin kısmetinä o günü burada bir işim çıktı. Açan geldim da gördüm ne olêr bilmärdim aalayım mı, güliim mi! yavaştan alıp, çektim Tayfunu bir tarafa. Erif sa kıpırdamêêr. Bän da korktum: **ya** ödü patladısaydı?!
(Zanet, 2023: 270)
Metinde, hırsızlık yapmak üzere avluya giren kişinin, köpeğe yakalanması ve köpek tarafından engellenmesi söz konusudur. Bu olay karşısında konuşucunun yaşadığı endişe ve korku, "*ya ödü patladısaydı?!*" perspektifiyle dramatize edilmiştir. Olay, her ne kadar en az zararla atlatılmış olsa da, konuşucu, olası senaryolarla durum değerlendirmesi yapmıştır. Dolayısıyla *ya*'nın anlam süzgecinden geçen korku ve endişe işlevi, ifade enlemini güçlendirerek polisemik bir izlenim yaratmıştır.

13. Soru sorma işlevi
Çağay-hanın konaklarında toy, şennik, gülüş, tamahlık, karezlik – bak çalınmışları pay ederlär.
- Üsek han, taa çok mal kapamadık, cezalama, başka kerä uurumuz taa uygun gidär, - şalvir iyileräk yaltıklı sırıttı Titsi-Göz, saklayarak aslısını.
- Ozaman da payını alırsın! **Ye** kızlar?
- Kız pek alamadık…saklıydılar bulunmaz erlerdä…aradık, vakıt ta yoktu…tä bir bölücäk…istärsän görmäğä, üsek hanım, -dedi bu ordubaşı da elinnän nişan yaptı getirsinnär kızları içyanına. –Tä o miskin oğuz kızları, han.

FULL TEXTS BOOK

(Tanasoğlu, 2009: 112)

Metinde, soru sorma işleviyle örüntülenen *ya*, biçimsel açıdan bağlama işlevini üstlenirken, kendinden sonra gelen söylem platformunu da güçlendirmektedir. "*Ye kızlar?*" cümlesinde *ya* bağlayıcı ögesi sorgulayıcı bir üslupla resmedilmiş, *ye* biçimbirimine dönüşerek aynı zamanda merak ve öfke tarzındaki duygusal bağıntıyı da göz önüne sermiştir.

14. Şaşkınlık işlevi

- Görerim, ani buldunuz onu. Hem bilersiniz mi neçin bilerim? O da güzün her avşam gidip, sabaalän bölä pıtıraklan dolu, yorgun hem şen, gelärdi evä. Bän da onu kazayacaklan kazıyardım hem paklardım. Göräydiniz ozaman onun kanaatlı bakışını!
- Onun bakışı şindi da şen hem kanaatlı – dedim bän. – Hem da onun gibi taa beş orada var.
- Beş mi!? – şaşarak sordu kumiṭa.
- Beş – bir köpek hem dört pali! – cuvap etti ona kumi.
- **Ya** bak sän! – şaştı kumiṭa.

(Zanet, 2018: 469)

Metinde; bir süredir gözlerden aniden kaybolan köpeğin, bulunduğu ve yavruladığı haberini alan konuşucunun, yaşadığı şaşkınlık duygusu tasvir edilmiştir. "*Ya bak sän*!" cümlesi konuşucunun beklemediği durum karşısındaki şaşkınlığını ve verdiği ani tepkiyi sembolize ederken, aynı zamanda *ya* bağlayıcı deseninin varlığıyla anlamsal bağıntıyı pekiştirmiştir.

15. Neden – sonuç işlevi

Etiştiynän erimizä, bana düştü yakmaa ateşi, koymaa fasüleyi ötää dooru kaynasın hem hepbir göz-kulak olmaa şu kalmasın susuz, **ya** yanmasın, **yada** taşmasın. Bu bana deyni diildi bir sırasız ük. Ateşi yollandırdıynan, suyuna kontrol yaptıynan, kapattım tencerenin kapaanı, da bizim çoktan beklenän mancamız yollandı kaynamaa…

(Filioglu, 2019: 104-105)

Metnin betim katmanında konuşlanan neden-sonuç işlevi, *ya* bağlantı biriminin anlam odağından geçerek gramatikal bir görünüm arz etmiştir. Metinde, fasulyenin yanmaması ve taşmaması için bekleme, göz kulak olma eylemi, neden-sonuç ilişkisi çerçevesinde iletilmektedir. Bu anlamsal yörüngeden yansıyan bağlantı kuşağının, *ya* motifi vasıtasıyla güçlendiği ve anlatı tepkimesinin estetiksel bir tasarımla işlendiği dikkati çekmektedir.

16. Merak işlevi

Bir günü öküz deer çocaa:

-Şindi tä ne var. Tii o bayırın tepesini görersin mi? oradan çıkacek bir öküz. Da gelecek bizä karşı. Al benim buynuzlarımı da git. Bunu aç, i ekmek. Olmayınca kendi aulun, öbür buynuzumu açma. Açan olacek kendi aulun, taa ozaman ikinci buynuzumu aç. Ama aç aul içindä.

Da gider çocuk ileri. Acıktıynan, iyer buynuzdan. Etişer bir derä boyuna. Büük bir deräymiş. Yıkanmış orada, imiş, dinnenmiş, uyumuş. Açan kalker, geler aklına o ikinci buynuz. Da çocuk düşüner: "Neçin o dedi bana açmayım bu buynuzu? **Ya** açayım da bakayım, ne o"…

(Çebotar, 2021: 47-48)

Metnin anlam atmosferinden yansıyan anlatı yelpazesi, bilme ve öğrenme merkezli davranış örgesini sembolize etmiştir. Merak işlevini estetik bir iz düşümle semantize eden *ya* bağlayıcı unsuru, cümlenin sonunda betimlenen soru sorma dizgesiyle birleşerek anlamsal yapıyı güçlendirmiştir. Metinde, konuşucunun boynuzun içinde ne olduğunu merak etmesi *ya* bağlacı vasıtasıyla sunulmuştur.

FULL TEXTS BOOK

17. Beğeni işlevi

Gani şansora artık büük çocuktu, edinci yaşa bastıydı, ama büüdükçä taa pek sorucu olurdu. Kimseycii raada brakmazdı, hep sorardı. Olur-olmaz işleri dä o istärdi bilsin… Ganinin evdä manisinä deyärdilär Sofi babu, mamusuna – Mercanka bulü, bobası da Çoban Yorcuydu. Ona ölä deyärdilär, neçinki çobancılık edärdi koyunnarda. Hem dä içerdä taa vardı Ganinin kardaşçıı Veli. Çoban Yorcu sevärdi çok Ganiyi da hiçbir kerä onu azarlamazdı, nekadar da çok işlär sorsa.

Tä büün dä çıktı bobasına karşı. O gelirdi tırladan eşektä atlı, ama eşään dä ardına gelirdi bir küçük eşecik. Ganinin üzü-gözü güldü. Taa bobası eşektän inmedään, şaplattı ellerini da sevinmeli sordu:

- Baka, neredän aldın bu küçük eşecii? **Ya** ne gözäl!

(Baboglu, 2006: 5)

Metinde, Gani adlı çocuğun sevinç ve coşku enlemindeki hissel betimi konu edilmiştir. Gani'nin isteğini gerçekleştiren sürpriz gelişme; onun eğlenmesini ve yapılan eylemden doyum almasını sağlamıştır. "*ya ne gözäl!*" cümlesiyle gün yüzüne çıkan beğeni işlevi, *ya* bağlayıcı dokusunun güçlü vurgusuyla sanatsal bir intiba bırakmıştır.

18. Azarlama işlevi

- Ne oldu, ba Gani batü, ne ölä o basından hiç ses çıkmêêr?

- Taa olmadı, ama olacek, alarsaydım daulcunun elindän te o üç kilalık tokmaa e!.. **Ya** kaldır o boş kafanı yukarı da bak o instrumentin içindä, neturlü käämil semiçkalar büüyer, birazı artık tabla kolvermiş.

(Filioglu, 2019: 65)

Metinde kırıcı ve sert bir üslupla dizayn edilen anlamsal reaksiyon, azarlama işlevinin *ya* bağlayıcı ögesiyle olan kararlı bileşimini yansıtmaktadır. Cümlede "*Ya kaldır o boş kafanı yukarı da bak…*" ifadesinde her ne kadar öfke ve kızgınlık imgesi sezilse de kırıcı ve sert söylemin varlığı azarlama işlevinin baskın olduğunu göstermektedir.

19. Seçenek sunma işlevi

Geldi sevda bana
Derin sıklet sardı
Kondu uz canıma
Raatlıcaamı aldı.
"**Ya** sev beni" – dedi,-
"**Ya** ver ömürünü!"
(Akt. Karanfil, 2015: 39)

Şiirsel tepkimede "*ya…ya*" bağlacı, karşı tarafa seçenek sunarken aynı zamanda bir zorunluluk işlevi de üstlenmiştir. Dinleyiciden, iki seçenekten birini seçmesini isteyen konuşucu, bu istemini "*Ya sev beni ya ver ömrünü*!" cümlesiyle dile getirmiştir. Bu bağlamdan hareketle, seçenek sunma eyleminin, *ya* bağlantı noktasında işlevsel bir boyut kazandığı tespit edilmiştir.

20. Açıklama işlevi

Hederlezin çiçää sürtmäz uzun zaman:
Ya gök altın gözü yakêr hem kör yapêr,
Ya aydınnı üzü saklêêr koyu boran,
Gök gürüldemesi tomruu tez koparêr.
(Bujilova, 2020: 150)

Şiirde, birinci mısranın sonunda açıklayıcı bir önermenin dizayn edileceğine dair gizil bir gönderme söz konusudur. "*ya…ya*" bağlacı, kendinden önce gelen dizeyle anlamsal bir köprü kurarak açıklayıcı perspektifin estetik sınırında sanatsal bir ivme kazanmıştır.

FULL TEXTS BOOK

SONUÇ

Çalışma deseninde, Gagauz edebi ikliminde betimlenen bağlayıcı birim "*ya*"nın semantik katmandaki yorumsal iz düşümüne vurgu yapılmıştır. Gagauz Türkçesinden akseden söz konusu işlevsel görüngü, gramatikal bir çağrışımla senkronize edilmiştir. Anlambilim meridyeninden geçen bağlayıcı unsurlar ise bütünsel bir perspektifle dizayn edilmiş, anlamlandırma işlemi bağlam ve koşullar ekseninde resmedilmiştir. Bağlama edatı "*ya*" nın cümleye yüklediği anlamsal ivmenin lirik ve estetik bir betim kazanması adına, işlev merkezli otantik imgeler ve birey odaklı birtakım ibareler aracılığıyla işlev alanına ulaşılmaya çalışılmıştır. Dolayısıyla polisemi ufkundan akseden anlamsal dizgenin, ekstrem bir tasarımla yeniden inşa edilmesine imkan sunulmuştur. Bağlayıcılık göreviyle öne çıkan bağımsız biçimbirimsel model "*ya*" nın sözcük ve sözcük öbeklerini, tümceleri birbirine kenetlediği; anlam şeridinden tek başına geçebildiği ve birtakım kalıp formlar ışığında estetiksel bir görünüm sergilediği belirmiştir. Ayrıca cümlede üstlendiği işlevsel donanım ve kalıp yapı oluşturduğu diğer ögeler, bu estetiksel motifin görev alanının tespitinde önemli rol oynamıştır.

Dilsel örgeleri yüzey yapıda biçimsel bir yaklaşımla birbirine bağlayan bağlaç edimi, aynı zamanda bazı anlamsal işlevler üstlenerek derin yapıda oluşturduğu bağlantı noktalarının varsıl bir anlam potansiyeline sahip olduğunu bildirmiştir. Tespit edilen veriler kapsamında "*ya*" bağlantı biriminden akseden işlevsel dizayn sırasıyla şu şekilde görünüm arz etmiştir:

Seslenme işlevi, hayıflanma işlevi, öfke-kızgınlık işlevi, emir işlevi, hatırlatma işlevi, istek işlevi, pekiştirme işlevi, dikkat çekme işlevi, tehdit etme işlevi, pişmanlık işlevi, uyarı-ikaz işlevi, korku-endişe işlevi, soru sorma işlevi, şaşkınlık işlevi, neden-sonuç işlevi, merak işlevi, beğeni işlevi, azarlama işlevi, seçenek sunma işlevi, açıklama işlevi.

Araştırma düzleminde, Gagauz edebi kuşağından yansıyan "*ya*" bağlayıcı formunun özgün bir tarzla resmedilerek edebi yörüngenin kinestetik bir yönelimle aktivize edildiği görülmüştür. Metin bağlamında kurgulanan "*ya*"nın anlam penceresini açabilmek gayesiyle semantik boyuttan ilham alınmıştır. Bu birleştirici örgenin konumlandığı sanatsal boyutta polisemik bir yankının etkin varlığına dair güçlü verilere ulaşılmıştır. Polisemik ivmeden kaynaklı anlam çeşitliliğini ve dilsel zenginliği keşfedebilmek adına işlev merkezli anlam evreni görünür kılınmıştır. Böylelikle Gagauz Türkçesine yönelik orijinal bir bağlantı biriminin varlığı ve bu birimin var oluş ritmini kanıtlar nitelikteki yazınsal önermelere dikkat çekilmiştir.

ÖZET

Gebelik dönemi, doğum anı ve sonrası, ebeveyn olmak, kadının yaşam döngüsünde fiziksel ve psikososyal olarak birçok değişimin meydana geldiği önemli bir süreçtir (Teixeira ve Figueiredo, 2009). Bu süreçte annenin fiziksel görünümünde olduğu gibi hormonlarında da değişimler meydana gelmekte, tüm bunlar kadının strese karşı tepkilerini etkilemektedir. Gebelik kadın için annelik kimliği kazanma heyecanı, yeni bir bireyin dünyaya gelmesi, fiziksel görünümde değişikliklerin meydana gelmesi gibi mutluluk ve heyecan verici bir süreç olmakla birlikte aynı zamanda yönetilmesi gereken birçok psikososyal değişkeni de içinde barındırmaktadır. Bu dönemde stresin yönetilememesi fiziksel ve psikolojik olarak olumsuz sonuçların ortaya çıkmasına sebep olmaktadır. Kadın bu sürece adapte olmakta zorlandığında kendisini yetersiz hissedebilmektedir (Teixeira ve Figueiredo, 2009; Priya ve ark., 2018). Anne adayının gebelik döneminde yaşadığı ruhsal sorunların hem bebek hem de anne-bebek bağlanması üzerinde olumsuz etkilerinin olduğu; postpartum dönemde annenin kendisini savunmasız hissederek bakım verici rolüne zarar verdiği bilinmektedir (Özdamar ve ark., 2014). Diğer yandan bu sorunlara yönelik farmakolojik tedaviler yan etkileri dolasıyla gebelik döneminde endişe vermekte ve ilk etapta tercih edilmekten kaçınılmaktadır. Bu durumda gebelikte ruhsal iyilik halinin devamlılığının sağlanması, artması ve sorunlara yönelik çözüm üretilmesinde farklı profesyonel yaklaşımlara olan ilgi artmıştır. Bilinçli farkındalık temelli müdahaleler de bu nonfarmakolojik yöntemlerden biridir. Bilinçli farkındalık anda kalmayı ve yargısız kabulü hedefleyen, bedenin ve zihnin o anda olup bitenleri fark etmesini sağlayan, ortaya çıkan sonucu yargılamadan şefkatle kabulü içeren bir yaklaşımdır (Hisli ve Yeniçeri, 2015). Gebelik döneminde kadın ruh sağlığı ve anne-bebek sağlığının maksimum düzeyde tutulması için bilinçli farkındalık temelli müdahaleler çalışmalarla birlikte etkinliği kanıtlanmış olup günümüzde gün geçtikçe popülerliği artan bir yöntem olmuştur. Bilinçli farkındalık temelli müdahaleler, gebelerde fizyolojik ve psikolojik sorunların çözümünde kullanılmış olup pozitif yönde etkili sonuçlar alınmıştır. Bilinçli farkındalık temelli yaklaşımların, gebeliğe bağlı ortaya çıkan diyabette açlık ve tokluk kanında ölçülen glukoz düzeylerini ve hemoglobin A1c düzeylerini düşürdüğü ortaya konulmuştur (Youngwanichsetha ve Phumdoung, 2014). Gebelikte uyku kalitesini artırmıştır (Beddoe ve ark., 2010). Doğum ve doğum sonrasıyla ilgili özyeterlilik ve özgüven düzeyini artırmıştır (Pan ve ark., 2018). Algılanan stres düzeyini düşürerek kadınların yaşam kalitesinde artış sağlamıştır (Shahtaheri ve ark., 2016). Ayrıca bu müdahalelerin gebelerin anksiyete düzeyini düşürdüğü ve duygulanımdaki olumsuzluğu azalttığı belirlenmiştir (Vieten ve Astin, 2008). Bu araştırmada gebelikte kadın ruh sağlığının bilinçli farkındalık perspektifinden ele alınması ve ilgili literatür doğrultusunda etki mekanizmasının ortaya konulması amaçlanmıştır.

Anahtar Kelimeler: Gebelik, Kadın Ruh Sağlığı, Bilinçli Farkındalık, Anne, Bebek, Doğum, Stres

ABSTRACT

Pregnancy, the moment of birth and after, and becoming a parent are important processes in which many physical and psychosocial changes occur in a woman's life cycle (Teixeira and Figueiredo, 2009).

FULL TEXTS BOOK

During this process, changes occur in the mother's physical appearance as well as in her hormones, and all of these affect the woman's reactions to stress. Pregnancy is a happy and exciting process for a woman, such as the excitement of gaining a motherhood identity, the birth of a new individual, and changes in physical appearance, but it also includes many psychosocial variables that need to be managed. Failure to manage stress during this period leads to negative physical and psychological consequences. When a woman has difficulty adapting to this process, she may feel inadequate (Teixeira and Figueiredo, 2009; Priya et al., 2018). It is known that the psychological problems experienced by the expectant mother during pregnancy have negative effects on both the baby and the mother-baby bond; in the postpartum period, the mother feels vulnerable and harms her caregiving role. (Özdamar et al., 2014). On the other hand, pharmacological treatments for these problems cause anxiety during pregnancy due to their side effects and are avoided at first. In this case, interest in different professional approaches has increased in ensuring and increasing the continuity of psychological well-being during pregnancy and in producing solutions to problems. Conscious awareness-based interventions are one of these non-pharmacological methods. Conscious awareness is an approach that aims to stay in the moment and accept without judgment, allows the body and mind to notice what is happening at that moment, and includes compassionate acceptance of the resulting outcome without judgment (Hisli and Yeniçeri, 2015). Mindfulness-based interventions have been proven to be effective in studies to maximize women's mental health and mother-baby health during pregnancy and have become a method that is increasingly popular today. Mindfulness-based interventions have been used to solve physiological and psychological problems in pregnant women and have yielded positive results. Mindfulness-based approaches have been shown to reduce fasting and postprandial blood glucose levels and hemoglobin A1c levels in pregnancy-related diabetes (Youngwanichsetha and Phumdoung, 2014). It increased the quality of sleep during pregnancy (Beddoe et al., 2010). It increased the level of self-efficacy and self-confidence regarding birth and postpartum Pan et al., 2018). It provided an increase in the quality of life of women by reducing the level of perceived stress (Shahtaheri et al., 2016). It has also been determined that these interventions reduce the anxiety level of pregnant women and reduce emotional negativity (Vieten and Astin, 2008). In this study, it was aimed to address women's mental health during pregnancy from the perspective of mindfulness and to reveal the mechanism of action in line with the relevant literature.

Key Words: Pregnancy, Women's Mental Health, Conscious Awareness, Mother, Baby, Birth, Stress

GİRİŞ

Kadınlar yaşam döngüsünün ilk anlarından itibaren anne rahminden başlayan, çocukluk, ergenlik, yetişkinlik ve yaşlılığa kadar uzanan dönemlerden geçmektedir. Bu dönemlerde fizyolojik, sosyolojik ve psikolojik açıdan birçok değişim söz konusudur. Bu değişen faktörlere bakıldığında kadınları olumlu etkilediği kadar olumsuz da etkiledikleri görülmüştür. Kadınların yaşadıkları bu değişimler doğurganlık çağında en yüksek düzeye ulaşarak onları psikiyatrik hastalıklara yatkınlık açısından bir zemin hazırlamaktadır (Taşkın, 2011). Bu durumlar göz önünde bulundurulduğunda kadınların ruh sağlığı açısından erkeklerle kıyaslandıklarında daha riskli bir grup olduğu söylenebilmektedir (Schulz ve Mullings, 2006). Özellikle prenatal dönemde ruh sağlığı sorunlarının görülme sıklığı tüm dünyada artış göstermiştir ve gebelerin %10-20'sinin bu dönemde depresyon tanısı aldığı ve yaşadığı bilinmektedir (Madlala ve Kassier, 2017). Dünya Sağlık Örgütü'nün yayınlamış olduğu bir raporda gelişimde geri kalmış ve gelişmekte olan ülkelerin psikotik olmayan ruhsal hastalıkların oranına bakıldığında doğum öncesinde %15,6, doğum sonrasında %19,8 olduğu bildirilmiştir (Fisher ve ark., 2012). Ülkemizde yapılan bir çalışmada Beck Depresyon Envanteri (BDE) kullanılmış olup sonuçta gebelikte depresif belirtilerin görülme sıklığını; Şahin (2015) %53,1 orta düzey; %17,7 şiddetli düzey olarak; Erdem ve arkadaşlarının çalışmasında (2010) prenatal dönemde bu oran %31, postpartum dönemde ise %29 şeklinde belirlenmiştir (Erdem ve ark., 2010; Şahin, 2015). Kadınlarda gebelik dönemi fizyolojik,

FULL TEXTS BOOK

sosyolojik ve psikolojik değişimlerin eşlik ettiği önemli bir süreçtir. Bu süreçte hormonların değişimi, anneliğe hazır olma, fiziksel görünümde yaşanılan değişiklikler, doğum ve bebek bakımıyla ilgili kaygılar kadınlarda stresi tetikleyen durumlardır. Gebelik bu yüzden hassas bir dönem olabilmekte ve sürecin yönetilememesi kadınların ruh sağlığını olumsuz etkilemektedir (Lobel ve ark., 2008; Alderdice ve Lynn, 2011). Perinatal dönemde görülen ruhsal sorunlar ise gebelerde beslenmede düzensizlik, kilo kaybı, öz bakım yetersizliği, sigara/alkol kullanımı gibi riskli sağlık davranışlarının ortaya çıkmasına sebep olmakta, bu durum anne ve bebek sağlığını olumsuz etkileyebilmektedir. Gebelik döneminde yaşanan yoğun stres, gebelerde özellikle anksiyete ve depresyonun ortaya çıkma riskini artırmaya neden olmaktadır. Gebelikte yaşanan stresin yönetilememesi, doğum öncesi dönemde olumsuz etkilerin görülme ihtimalini artırmanın yanı sıra postpartum depresyon, anne/bebek bağlanmasını olumsuz etkileme, annelik rolüyle başa çıkmada yetersizlik hissi gibi olumsuz sonuçlar da ortaya çıkarmaktadır (Öztürk ve Aydın, 2017). Kadınlar bu süreçte yaşadıkları ruhsal sorunların ortaya çıkması halinde damgalanmaktan, yetersiz hissetmekten, ebeveynlik haklarının elinden alınacağından korkabilmekte ve yaşadıkları zorlanmaları dile getirmekten kaçınmaktadırlar. Bu nedenle gebelikte psikososyal destek uygulamaları oldukça önemlidir (Marjan ve Khajehei, 2015). Günümüzde, prenatal dönemde stres, anksiyete ve depresyonun tedavisinde farmakolojik uygulamaların gebelik sürecini ve bebeğin sağlığını olumsuz etkileyeceği düşünüldüğü için nonfarmakolojik alternatif müdahalelere başvurulmaktadır. Prenatal dönemde kadın ruh sağlığına destek olmak için kullanılan alternatif müdahalelerden biri de bilinçli farkındalık temelli girişimlerdir. Bilinçli farkındalık temelli uygulamaların gebelikte kadın ruh sağlığı üzerindeki etkilerine ilgi giderek artmaktadır (Matvienko-Sikar ve ark., 2016; Goetz ve ark., 2020). Bilinçli farkındalık temelli müdahaleler, gebelerin farkındalık düzeyini ve stres yönetim becerilerini geliştirmek amacıyla kadının düşünce ve duygularını fark etmesi, beden farkındalığı kazanması, kabul ve şefkat kapasitesinin artması, tepkiselliğin azalması üzerine yapılan çalışmalardan oluşmaktadır (Hall ve ark., 2016). Bu derlemenin amacı, gebelikte kadın ruh sağlığının nasıl etkilendiği ve günümüzde gittikçe yaygınlaşan, ilgi odağı haline gelmiş olan bilinçli farkındalık temelli müdahalelerin (mindfulness) gebelik ruh sağlığı üzerine etkilerini incelemektir.

1.Kadın Ruh Sağlığı Açısından Gebelik Dönemi

1.1.Gebelikte Stres

Gebelik, fiziksel değişimin ön planda olduğu bir süreç olarak görünmesinin yanında önemli psikolojik değişimlerin de yaşandığı bir dönemdir. Gebelerin bu dönemde birçok stres yaratacak durumla karşılaşma riski fazladır. Fiziksel görünümde, yakın çevre ve sosyal çevreyle olan ilişkilerde, rol ve sorumluluklarda değişimlerin görülmesi stres düzeyinin artmasına neden olmaktadır (Yali ve Lobel, 2002). Bayık ve ark.'nın (2006) yapmış olduğu bir çalışmada kadın yaşamındaki stresli olayların başında hamileliğin geldiği belirtilmiştir. Çapık ve ark.'nın (2015) yaptığı bir başka çalışmada da gebelik döneminde ciddi oranlarda distres yaşandığı belirtilmiştir. Yapılan bir araştırmada riskli gebeliklerde stres düzeyinin yüksek derecede olduğu ve strese neden olan faktörlere bakıldığında gebelikte yaşanan tehlikeli durumların olması, gebeliğin riskli olması, belirsizliklerin yaşanması, doğum ile ilgili kaygı ve korkuların olması bulunmuştur (Baran vd., 2020). Gebelikte bir başka stres kaynağı da doğum korkusudur ve gebenin duygu durumunu etkilemektedir (Aksoy, 2015). Prenatal dönemde kadınlarda stresi artırarak ruh sağlığını olumsuz etkileyen bazı etmenler vardır. Bunlar;

- Ailevi sorunlar,
- Eş ilgili sorunlar veya kadının eşinin olmaması,
- Önceden geçirilmiş psikiyatrik hastalıklar,
- Eğitim düzeyinin düşük olması,
- Annelik yaşının genç olması,
- Sosyo-ekonomik durumun yetersiz olması,
- Aile içinde şiddet,

FULL TEXTS BOOK

- Kronik hastalıkların varlığı,
- Beden imajında değişim,
- Gebeliğin istem dışı olması olarak sıralanabilir (Harrison ve Sidebottom, 2008; Vırıt ve ark., 2008; Karaçam ve Ançel, 2009; Şahin ve Kılıçarslan, 2010; Rosand ve ark., 2011; Çapık ve ark., 2015). Gebelikte yaşanan stres annenin ruh sağlığını etkilediği gibi bebeğin anne karnındaki gelişimini ve gelecekteki yaşamını da etkilemektedir (Dunkel Schetter ve Tanner, 2012). Gebelik, doğum ve ebeveynlik dönemlerinde annenin yaşadığı stresin azaltılmasını sağlamak, kadının stresle karşılaştığı durumlarda baş etme mekanizmasını geliştirmek, annenin beden ve ruh sağlığı ile bebeğin anne karnındaki ve gelecekteki ruh sağlığı açısından oldukça önemlidir (Boakye-Yiadom ve ark. 2015). Prenatal dönemde yaşanan stresin anne/bebek sağlığını iki farklı boyutta etkileyebileceği belirlenmiştir. Bunlardan ilki gebelik döneminde algılanan stresin artmasıyla birlikte kortizol hormonlarının yükselmesi vücut üzerindeki doğrudan etkisidir. İkincisi ise; gebelikte stresi yönetemeyen annelerde sağlıksız davranışların (alkol/madde kullanımı, sigara içme, kontrolleri aksatma vb.) görülmesi sonucunda anne/bebek sağlığını dolaylı olarak etkilemesidir. Gebelikte başa çıkılamayan stresin spontan abortus, erken doğum, preeklampsi ve düşük doğum ağırlığı gibi sonuçlara neden olduğu bilinmektedir (Bussieres ve ark. 2015; Shay ve ark. 2020). Ayrıca gebelikte yaşanan yoğun stres postpartum süreçte anne-bebek bağlanmasına olumsuz etki göstermektedir (Srivastava ve Bhatnagar, 2020). Yapılan çalışmalara bakıldığında prenatal dönemde stres yaşayan kadınların, mide bulantısı ve kusma gibi fiziksel şikayetlerinde, hastaneye başvurma sayısında, doğum korkusunda ve sezaryen doğum yapma isteğinde artış gibi davranışların olduğu bildirilmiştir (Andersson vd., 2004; Shishehgar vd., 2014). Gebelerin stres düzeyindeki artış, annelik ve beden algılarını olumsuz yönde etkilemektedir (Coşkun vd., 2020). Stresin bebeğe etkileri, erken doğum, bebek kalp hızında değişiklikler, bebeğin aktivitesinde değişiklikler, APGAR Skorunda düşüklük, düşük doğum ağırlıklı bebek, gelişim geriliği, enfeksiyonlar, ölü doğum olarak bildirilmiştir (Baibazarova ve ark., 2013; Graignic-Philippe ve ark., 2014; Staneva ve ark., 2015; Bussières ve ark., 2015).

1.2.Gebelikte Anksiyete

Doğurganlık dönemindeki kadının önemli fizyolojik ve psikolojik değişimler yaşaması, gebelik ve doğum sürecinde anksiyeteye yol açmaktadır. Yapılan çalışmalar gebelikte anksiyete düzeyinin yüksek derecede olduğunu ve en çok üçüncü trimesterda anksiyeteyle karşılaşıldığı bildirilmektedir (Karataylı, 2007, Figuerido ve Conde, 2011). Yaşanılan anksiyete nedenine bakıldığında annenin kendisinden çok bebeğe odaklanmasıyla ilişkilendirilmiştir (Özkan ve Bozkurt, 1999). Gebelerde, anomalili bebeğe sahip olmak, doğum şekli ve doğumun nasıl olacağını bilmemek, bebeğin sağlık durumu ve doğumda karşılaşılabilecek risklerin bebeği olumsuz etkileme ihtimali anksiyeteye yol açmaktadır (Şahin ve Kılıçarslan, 2010; Dönmez ve ark., 2014). Prenatal dönemde anksiyetenin görülme prevalansı %4-39'dur (Goodman ve ark., 2014; Marchesi ve ark., 2014). Gebelikte anksiyete ile ilişkili faktörlere bakıldığında geçmişte psikiyatrik hastalık öyküsü, eşler arasındaki iletişimin zayıf olması, daha önce yaşanmış fetal kayıp ve doğum deneyiminin zor olması yer almaktadır (Giakoumaki ve ark., 2009). Yapılan çalışmalarda anksiyete tedavi edilmezse, postpartum depresyon riskinin arttığı ve annenin özgüveninin olumsuz etkilendiği bildirilmiştir (Prenoveau ve ark., 2013; Zietlow ve ark., 2014). Bu da ilerleyen dönemlerde, anne-bebek arasında güvensiz bağlanma, davranış sorunları, anne-bebek iletişiminde olumsuzluk sonuçlarıyla ilişkilendirilmiştir (Glasheen ve ark., 2010). Prenatal anskiyeteyi etkileyen diğer faktörlere bakıldığında annenin sağlıksız yaşam tarzı ve davranış tutumu (sigara içme, aşırı kilo alımı vb.) kortizol ve epinefrin salınımının yüksek olması da anksiyeteye neden olmaktadır (Calavarini ve ark., 2010). Gebelikte fiziksel veya psikolojik şiddet, sosyal desteğin yetersiz olması, çevre ile ilişkilerin olumsuz olması, yakın geçmişte stresli bir olay yaşanmış olması yine anksiyeteye neden olan faktörler arasındadır (Karacam ve Ancel, 2009; Yelland ve ark., 2010; Giardinelli ve ark., 2012). Perinatal süreçte en sık görülen anksiyete bozuklukları; panik bozukluk ve yaygın anksiyete

FULL TEXTS BOOK

bozukluğudur. Gebelerde uykusuzluk, yoğun endişe, huzursuzluk hissi tarifi görülebilir. Ataklar sırasında, nefes almada güçlük, göğüste sıkışma hissi, ağlama, bulantı-kusma gibi belirtiler görülebilmektedir (Williams, 2014). Yapılmış bazı çalışmalarda prenatal dönemde, anksiyete ve depresyon belirtilerinin arasında paralel yönde ilişkilerin olduğu belirtilmiş olup gebelikte anksiyete düzeyinin artması depresif semptomların görülmesine neden olurken depresyon var olması da gebelerin anksiyete düzeyinin artmasına sebep olmaktadır (Şahin ve Kılıçaslan, 2010; Çelik ve ark., 2013).

1.3.Gebelikte Depresyon

Gebelikte depresyonun varlığı ve postpartum dönemde de devam etme ihtimali anne/bebek sağlığını olumsuz etkiler bu sebeple önemli bir sorun olup erken tanı ve tedavinin rehabilitasyon başarı oranını artırdığı savunulmaktadır (Marakoğlu ve Şahsuvar, 2008: Bunevicius ve ark., 2009; Çalık ve Aktaş, 2011; Savrun, 2008). Depresyonun risk faktörlerine bakıldığında; eşler arası iletişimin olumsuz olması, aile içi şiddetin olması, sosyo-ekonomik düzeyin düşük olması, gebelik bakımının yetersiz olması, eğitim seviyesinin düşük olması, gebelik yaşının erken veya geç olması, daha önceki gebelik ve doğumların sorunlu olması, daha önce tanı konulmuş bir psikiyatrik hastalığın bulunması ve emzirme süreci olarak sıralanmaktadır (Yazıcı ve ark., 2015). Yapılan çalışmalarda daha önce depresyon tanısı almış olmak, gebelik dönemi ve postpartum dönemde annenin tekrar depresyon geçirme ihtimali için önemli bir etkendir (Yazıcı ve ark., 2015; Gentile, 2017). Ülkemizde yapılmış bir çalışmada, gebelik döneminin ilk trimesterında depresyon geçirmiş olan kadınların postpartum dönem depresyon oranı %61,5 bulunmuştur. Çalışmanın sonucuna göre, gebelikte depresyon tanısı konulmuş ve tedavisi yapılmış hastaların hiçbirinde gebelik sonrası dönemde depresyon görülmemiş, gebelik döneminde tedavisi yapılmayanlarda ise postpartum dönemde depresyon görülme oranı %92 olarak bildirilmiştir (Yazıcı ve ark., 2015). Gebelikte depresyonun gidişatı yalnızca anne adayını değil, bebeğini ve ailesini de ilgilendirmektedir. Gebelikte geçirilen depresyonda tedavi alamayan gebelerin %15'inin intihar etmeye kalkıştığı belirtilmiştir (Çalık ve Aktaş, 2011). Gebelik döneminde depresyon tanısı almanın erken doğum riskini artırdığı bilinmektedir. Ayrıca yeni doğanın yoğun bakım ihtiyacında artma, kuvözde uzun süre kalma gibi risklere yol açtığı gösterilmiştir (Gentile, 2017). Yapılan bir çalışmada, ileri yaş gebelerin prenatal depresyon yaşama riskinin genç gebelere göre daha fazla olduğu ve uyku kalitesinin yetersiz olması prenatal depresyonun daha yüksek düzeyde olmasına neden olabileceği belirtilmiştir (Gao ve ark., 2019). Gebelik depresyonunun anne-bebek bağlanmasına etkisinin değerlendirildiği bir çalışmada ise depresyon düzeyinin artmasıyla bağlanmanın azalmasının arasında doğru orantılı ilişki olduğu belirtilmiştir (Tunçel ve Süt, 2019). Anne/bebek arasındaki ilişki ve bağlanmanın şekli sadece bebeklik dönemini değil, çocuğun hayatının geri kalanını da etkileyen ciddi bir faktördür. Prenatal dönem depresyonuna yönelik girişimler arasında ilaçların yan etkileri göz önünde bulundurularak, şiddetli olmayan depresyon tablolarında psikoeğitim ve psikoterapi gibi seçenekler gebelere sunulmaktadır. Ancak ağır depresyon tablolarında, annenin kendisine zarar verme olasılığı göz önünde bulundurularak, farmakolojik tedavi seçeneği devreye girmektedir (Savrun, 2008).

1.4.Gebelik Döneminde Karşılaşılan Stres, Anksiyete ve Depresyonla Başa Çıkma Yolları

Gebelik döneminin iyi bir şekilde devam edebilmesi için anne adayının yaşadığı sorunlarla baş etme gücünün bulunması gerekmektedir. Karşılaşılan sorunlarla etkin bir şekilde baş edebilmek için, bireyin durumunun bilinçlilik halinde olması, daha önce kullandığı stresle baş etme mekanizmaları, aile bireyleri-sosyal çevre desteğinin var olması ve niteliği önemlidir. Gebenin ruh sağlığı ve kendine has özellikleri, gebelikteki duygu ve düşünceleri, gebelikten beklentileri ile ilişkilidir. Gebelikte stresle baş edebilmek içim olumlu bir tutumun olması, gebenin ruh sağlığının korunması, yaşam kalitesinin artırılması, problem çözme becerilerinin geliştirilmesi, aile ve sosyal desteğin olması gerekmektedir (Vırıt ve ark., 2008; Babacan Gümüş ve ark., 2011). Gebelikte ruh sağlığının korunması için gebenin kendiyle ilgili pozitif düşünceleri olmalı, beslenme yeterli ve düzenli olmalı, uyku kalitesi yüksek

FULL TEXTS BOOK

olmalı, alkol/sigara/madde gibi zararlı alışkanlıklardan uzak durmalı, gebeliği riske atmayacak şekilde egzersiz yapmalı ve rutin kontrollerini aksatmamalıdır. Ayrıca gebeler stresin olumsuz etkileriyle baş edebilmek için bazı gevşeme tekniklerine yönlendirilebilirler (Sözeri ve ark., 2006; Baltaş ve Baltaş, 2014). Prenatal dönemde stres azaltmada kullanılan rahatlama ve gevşeme tekniklerinden birkaçı; gebelik yogası, masaj, kas gevşetme egzersizleri, hipnoterapi ve diyafram solunumudur (Bastani ve ark., 2005; Tragea ve ark., 2014). Gebelerin stresle başa çıkma yollarını belirlemek bu mücadelede ciddi adımlardan biridir çünkü kadınların bu dönemde stresle baş etme mekanizmalarının yeterli olmaması anne-bebek sağlığı olumsuz etkileyebilmektedir. Bu süreçte, gebenin baş etme mekanizmasında kullandığı yöntemlerin tanımlanması, yeni ve güncel baş etme stratejilerinin öğretilmesi ve etkisiz baş etme olan durumlarda bu becerilerinin geliştirilmesi oldukça önemlidir (Huizink ve ark., 2002; Dağlar ve Nur, 2014).

2.Gebelikte Bilinçli Farkındalık

2.1.Bilinçli Farkındalık Kavramı

Bilinçli farkındalık kavramı bireyin hissettiklerini, düşünce ve duygularını, bedenini, bilincini ve çevresini olduğu gibi kabul edip, yargılamadığı bir süreçtir (Hoffman,2018; Purser,2015). Bilinçli farkındalık, konsantrasyonun yüksek olmasıyla birlikte, içinde bulunduğu anın farkındalığını sürdürmeyi hem dış hem içsel, hoşa giden ve hoşa gitmeyen durumları izlemeyi açık, sevgi dolu bir şekilde algılamaktır (Huynh, 2019). Farkındalığın kökleri çok eskilere Uzakdoğuda Budist meditasyon geleneklerine dayanmaktadır. Farkındalık, zihinsel ve duygusal bir dikkatin fiziksel uygulama ile bireye kasıtlı olarak verilmesi, odaklanılması, anlık deneyimler ve gözlemler üzerine içsel deneyimler yaşatılması ile oluşturulur (Purser ve Milio, 2015; Schmidt, 2011; Atalay, 2018). Farkındalık temelli müdahalelerin amacı bireyi "otomatik pilottan" çıkararak, günlük rutinlerin farkına vararak ve anda kalarak devam etmeyi sağlamaktır (Baer ve ark., 2004). Birey, hayatın zorlu anlarında dikkat odaklı olma becerisini güçlü tuttuğu sürece içinde bulunduğu durumla o kadar kolay baş edebilecektir. Bilinçli farkındalığın artmasıyla bireyin sevgi, şefkat, kabul ve affetme duyguları beslenir ve bu şekilde birey duygu durumlarının olumsuzluğundan daha az şekilde etkilenir. Bilinçli farkındalık durumunda birey sakin, şefkatli, huzurlu, mutlu, hazır ve uyanıktır (Özyeşil, 2011). Bilinçli farkındalıkta üç önemli nokta vardır. Bunlar; dikkat, niyet ve tutum olarak sıralanmaktadır (Atalay, 2019). Bilinçli farkındalık tutumları da şu şekildedir; anda kalabilme, şefkat, yargıları fark etmek, kabul, başlangıç ruhu, sabır ve akışa bırakmak (Atalay, 2019). Bilinçli farkındalık temelli müdahalelerin bireylerin psikolojik iyi oluş hallerini artırmanın yanında fizyolojik olarak da tansiyon ve kan glukoz düzeyini düzenlediği, nabzı yavaşlattığı, yorgunluğu giderdiği ve fiziksel aktivite düzeylerini iyileştirdiği kanıtlanmıştır (Bishop, 2004; Hoffman, 2018; Shorey, 2019). Kadın ruh sağlığında da bilinçli farkındalık temelli müdahalelerin stres ve anksiyete düzeyini azaltarak iyi oluşu pozitif şekilde etkilediği, aynı zamanda fizyolojik sağlığı da iyileştirdiği kanıtlanmıştır.

2.2.Gebelikte Bilinçli Farkındalık Temelli Müdahaleler

Günümüzde, gebelik döneminde stres, anksiyete ve depresyonun tedavisinde kullanılan farmakolojik yöntemlerin gebelik ve gebelik sonrası dönemde anne-bebek sağlığını olumsuz etkilemesinden şüphe duyulduğu için medikal tedavi içermeyen müdahalelerin önemi giderek artmaktadır (Asford, 2016). Gebelik, annenin iyi oluşu, kendisi için pozitif tutum geliştirmesi ve farkındalığını arttırması için önemli bir süreçtir (Donegan, 2015). Bilinçli farkındalık kapsamındaki uygulamalar gebeliğe uyarlanarak, gebelik dönemindeki stresi azaltmak, doğum korkusunu aşabilmek, anksiyete ve depresyonun belirtilerini en aza indirgemek ve ebeveynlik duygusunu şefkatle kabul etmek hedeflenmektedir (Duncan ve Bardacke, 2010; Bardacke, 2012). Bilinçli farkındalık temelli müdahalelerin ana tekniklerinde meditasyon, beden taraması, yürüme meditasyonu, nefes meditasyonu ve farkındalık yogası yer almaktadır (Kabat-Zinn, 2003). Bilinçli farkındalık uygulamaları iki başlık altında

FULL TEXTS BOOK

toplanmıştır. Bunlar; formal ve informal uygulamalardır. Formal uygulamalarda daha çok meditasyon ağırlıklı beden taraması, hareket ederken farkında olma hali, oturma meditasyonu ve nefes meditasyonu yapılmaktadır. İnformal uygulamalarda daha çok bireyin günlük yaşam aktivitelerini (duş alma, yemek yeme, yürüme, okuma vb.) farkındalıkla yaparak günlük yaşamına dahil etmesi hedeflenmektedir (Cigolla ve Brown, 2011). Bilinçli farkındalık eğitimine katılmış olan gebelerin uygulama sürecince farkındalık seviyelerinde belirgin bir artma olduğu belirtilmektedir. Bilinçli farkındalık uygulamalarının, gebelerde değişim gözlemlenen fizyolojik ve psikolojik durumları onları değiştirmeden olduğu gibi kabul etmeyi ve gözlemleme kapasitesinin geliştiği bildirilmiştir (Beattie ve ark., 2014). Gebelerde bilinçli farkındalık temelli uygulamalar, onları rahatsız eden stres durumları ve tekrarlayan olumsuz düşünceleri zihninde fark edip nefese odaklanmayı bu şekilde nefes farkındalığı geliştirmeyi sağlar. Yine bu uygulamalardan biri olan beden taraması gebenin vücudundaki fiziksel duyumların farkına varmasını, ana bağlı kalmasını sağlayarak dikkatini fetüse, onun bedendeki varlığına ve hareketlerine odaklar. Bilinçli farkındalık, odağı öz şefkat olan, anne-bebek bağlanmasını olumlu etkileyen, doğum ve doğum sonrasında görülen zorluklara eşlik edebilmeyi içeren uygulamaları barındırır (Bardacke, 2012). Hulsboch ve ark.'nın prenatal dönemde algılanan stres düzeyini azaltmaya yönelik bilgisayar ortamı üzerinden online olarak yaptığı bilinçli farkındalık temelli müdahale programında prenatal stres düzeyini ve anksiyeteyi azalttığını belirtmişlerdir. Pan ve ark.'nın doğumda annenin öz-yeterliliğini artırmak için algılanan stres ve depresyon düzeyinin azaltılmasına yönelik farkındalık temelli doğum, doğum sonrası ve ebeveynlik programının etkinliğini kanıtlamak amacıyla yaptıkları çalışmada; gebelerin stres ve depresyon düzeylerinde azalma olduğu, farkındalık ve doğumda öz yeterlilik düzeylerinin artmış olduğu bulunmuştur. Bu sebeple, prenatal dönemde uygulanan bilinçli farkındalık temelli müdahale programlarının, gebelik dönemi ve sonrasında kadın ruh sağlığını iyileştirmek için etkisi oldukça önemli olan bir yaklaşım seçeneği olabileceği öne sürülmüştür. Bilinçli farkındalık temelli uygulamalar, gebeler ve henüz anne olmuş kadınlar için önemli olan kabiliyetlerin geliştirilmesinede imkan tanımaktadır (Hall ve ark., 2016).

3.SONUÇ

Gebelik dönemi ruh sağlığı birey, aile ve toplum açısından oldukça önemlidir. Annenin prenatal dönemde ruh sağlığının iyi oluşu gebelik dönemi, anne-bebek ilişkisinin sağlıklı olması, eş ve çevre ile ilişkilerin iyi olması, postpartum döneme iyi bir başlangıç yapması, gelecekte sağlıklı bireylerin topluma kazandırılması, fizyolojik ve psikolojik değişimlerin değiştirilmeden kabulü noktalarında kolaylık sağlamaktadır. Bu dönemde aile bireylerinden sağlık personellerine kadar herkesin gebe ile ilgili sosyal desteği vermesi ve gebelik sürecini gözlemlemesi gerekmektedir. Bilinçli farkındalık çalışmalarının gün geçtikçe önemi artarken yararları da kanıtlanmaktadır. Temelinde bilinçli farkındalık barındıran müdahalelerin yaşamın stres kaynaklarıyla başa çıkabilme de etkin bir yöntem olduğu yapılan çalışmalarla kanıtlanmış olup elde edilen bu çalışmalar doğrultusunda gebelikte de yaygın kullanımının gebelikte kadın ruh sağlığını olumlu yönde etkileyeceği söylenebilir. Bu amaçla gebelerin daha yakın takibe alınması, hastanelerde, gebe okullarında, psikiyatri kliniklerinde bilinçli farkındalık temelli müdahalelerin uygulanabilirliği konusunda eğitimlere yer verilmesi oldukça önemlidir.

ABSTRACT
For the last several years, study on student's academic self-efficacy and performance has been a growing field. The primary goal of this study was to determine the effects of Self-efficacy on student's academic performance in Northeast, India among young adults of 18 to 27 years. The research objectives for the study were: To find out the effects of self-efficacy on student academic performance of university students in Northeast, India. To find out whether there is any significant difference in self-efficacy and academic performance of university students in Northeast, India. To find out whether there is any significant difference in self-efficacy and academic performance of university students in Northeast, India with respect to gender (Male, Female). Purposive sampling technique was used in the study to select a sample size. The sample size consists of 200 participants. Both male and female participants were included. Academic Performance Scale and General Self-Efficacy Scale (GSE) scales were used for collecting data in this study. The data after collection was processed and analysed in accordance with the purpose and objectives of this study. Data was entered into access database before being exported to Statistical Package for Social Science (SPSS) version 16.0 for analyses for quantitative data by using Pearson Correlation and t test. To test the hypothesis, t test was used. Findings stated that there is no significant difference on the self-efficacy and academic performance for male and female. Therefore, the hypothesis that there will be a significant difference between self-efficacy and academic performance with respect to gender was not supported. Results found that there is a moderately positive and significant correlation between academic performance and self-efficacy thus, the hypothesis that there was a significant difference between self-efficacy and academic performance was supported.
Keywords- self-efficacy, Academic Performance, Students

1. INTRODUCTION

1.1 INTRODUCTION

The term "self-efficacy" relates to a person's confidence in his or her capacity to execute behaviors necessary to produce specific performance attainments (Bandura, 1977, 1986, 1997). The belief in one's capacity to exercise control over one's own motivation, behaviour, and the social environment is known as self-efficacy.

Self-efficacy has a big effect on how much work people put in a job. When faced with obstacles, an individual who feels they are highly effective at a particular task will be resilient and persistent, whereas a person with insufficient confidence in one's own ability may withdraw or avoid the circumstance. It's significant that our degree of self-efficacy differs between domains. Several major sources of information serving as the basis for self-efficacy:

- Personal experience: People frequently use their prior performance on similar tasks when predicting their likelihood of success with a new assignment. It makes natural that this knowledge would

FULL TEXTS BOOK

significantly affect our emotions of self-efficacy: if you've done something before, chances are good that you'll think You're capable of doing it again.

➢ Observation: We assess our own abilities by observing others as well. Research demonstrates that when we witness someone else succeeding at a specific activity via labour rather than natural ability, our own self-efficacy for that activity is more inclined to rise as well.

➢ Persuasion: Other individuals may attempt to boost our self-efficacy from time to time by providing encouragement and support. As opposed to the effects of personal experience, this sort of persuasion does not always have a large impact on self-efficacy.

➢ Emotion: According to Bandura, negative sensations like fear and worry might make us feel less self-sufficient. Positive sensations, nonetheless, could heighten feelings of Self-efficacy.

Almost everyone is able to list their desired outcomes, changes they wish to see, and goals they want to achieve. Almost everyone is also conscious of carrying out these ideas is not really that easy. Self-efficacy has been linked to someone's approach to Goals, objectives, and challenges, as stated by Bandura and others.

Individuals with high levels of self-efficacy

- Interested about the events they engage in
- Develop a stronger sense of commitment to their pursuits and hobbies
- Quickly recover from setbacks and disappointments
- Consider difficult issues as tasks to be accomplished

Those with low self-efficacy:

- Avoid difficult tasks.
- Conceive difficult activities and circumstances are past their abilities
- Accentuate one's own transgressions and unfortunate results
- Rapidly lose confidence in one's own talents

Academic performance measures how successfully a student, instructor, or institution has met their immediate or long-term learning objectives. Academic researcher from several fields have been interested by the variables that affect student success. They have made an effort to recognise the elements that have both good and with adverse outcomes on student performance. Academics from a number of disciplines and locations have done investigations into this issue
(Garkaza et al. 2011, Tailab 2013, Sugahara and Boland 2014, Steenkamp and Baard 2009, Cheung and Kan 2002, Kruck and Lending 2003). According to Narad and Abdullah (2016), is the knowledge acquired that is evaluated by a teacher through marks and/or educational goals set by students and teachers to be attained during a specified a time frame. They declared that these the goals are measured through ongoing evaluations or test outcomes.

Background of the study:

Academic self-efficacy is grounded in self-efficacy theory (Bandura, 1977). According to self- efficacy theory, self-efficacy is an "individual's confidence in their ability to organize and execute a given course of action to solve a problem or accomplish a task" (Eccles & Wigfield, 2002, p. 110). According to self-efficacy theory, academic self-efficacy may vary in strength depending on the complexity of the activity; Some individuals may think they are most effective on challenging tasks, while others exclusively on simpler ones. Consequently, rather than being seen as a stable attribute, self-efficacy is thought to have a situational basis (Linnenbrink & Pintrich, 2002a). Students consistently distinguish the intensity of self-efficacy judgements in various academic fields, resulting a flexible hierarchy with multiple dimensions as a whole. Contrary to popular belief, Self-efficacy is distinct from self-esteem or self-concept. Self-efficacy is a task-specific assessment, whereas self-esteem and self-concept are indicators of more all-encompassing affective assessments of oneself (Linnenbrink & Pintrich, 2002a).

FULL TEXTS BOOK

Self-efficacy is thought to possess a causal impact on performance through its influence on task perceptions. Research indicates that an individual with strong self-efficacy approaches difficult tasks with a sense of calm or serenity, whereas someone lacking self-efficacy may perceive a task as more difficult it is actually, which can result in anxiety, stress, and a limited understanding of how to approach a problem or activity (Eccles, 2005). Furthermore, it is thought that how a person interprets a successfully completed mastery experience plays a role in how high their self-efficacy develops since people utilise these interpretations to form perceptions that they subsequently behave in accordance with. Additionally, studies show that seeing others accomplish tasks in an online capacity might help people develop a greater sense of self-efficacy, particularly when individuals are uncertain regarding their abilities or specific tasks and they perceive similar attributes with the observed model.

Academic expectation beliefs have been split in two broad kinds. Expectations for academic results are the notions held by a student that particular actions would result in particular results (for example, "If I finish my homework, my grades will improve"). Expectations for academic effectiveness are a student's convictions regarding their ability to engage in the actions required to bring about a particular result (for example, "I have enough drive to study hard for this test"). Since "individuals can accept that a given behaviour would generate a specific result (outcome anticipation), yet may not believe they can accomplish that behaviour (efficacy expectation)," It is essential to comprehend the distinguishing features of these two kinds of expectancy beliefs (Eccles & Wigfield, 2002, p. 111).

1.2 Research Question:

1. Is there significant difference in self-efficacy and student's academic performance?
2. Is there significant difference in self-efficacy and student's academic performance in relation to gender?

1.3 Hypothesis:

- There will be significant difference between self-efficacy and student's academic performance.
- There will be significant difference between self-efficacy and student's academic performance in relation to gender (Male, Female)

1.4 Objective of the study

- To determine the effects of self-efficacy on student academic performance of university students in Northeast, India.
- To compare whether there is any significant difference in self-efficacy and academic performance of university students in Northeast, India.
- To find whether there is any significant difference in self-efficacy and academic performance of university students in Northeast, India in relation to gender (Male, Female).

2. METHODOLOGY

2.1 DEBRIEFING ABOUT METHODOLOGY

This chapter defines about the methods used to collect and analyse the data for the study. Specifically, this chapter discusses the following: methods; operational definitions; research design; process of data collection; limitations of the research.

2.2 METHOD

A quantitative a technique was employed for this research study. This study uses survey method.

2.3 OPERATIONAL DEFINITION

Self-efficacy: "Self-efficacy means characteristics of an individual's belief in her or his capacity to execute behaviours necessary to produce specific performance attainments" (Bandura, 1977,1986, 1997).

FULL TEXTS BOOK

Academic Performance: "Academic Performance is the acquired information that is evaluated by a teacher using grades and/or educational objectives set by students and teachers to be accomplished over a predetermined period of time. The addition that These objectives are assessed through ongoing evaluation or test outcomes."(Narad et.al., 2016).

Student: a person who is formally learning, particularly one who is enrolled in school or college.

2.4 RESEARCH DESIGN

Quantitative research design was used to study how self-efficacy effect student academic performance in Northeast, India. 200 participants/respondents were randomly selected out of which 100 were male and 100 were female with an age range from 18 to 27. This study employed a Purposive sampling strategy.

Inclusion Criteria:

- Any student in Northeast, India
- Any academic field or major
- Students including male, female and others

Exclusion Criteria:

- Students studying outside Northeast, India

2.5 PROCESS OF DATA COLLECTION

The tools that were utilised for data collection were Academic Performance Scale and General Self-Efficacy Scale (GSE).

1. Academic Performance Scale: The scale was given by Carson, Emily, Sarah, Christopher which consists of 8 questions. The Academic Performance Scale is a Likert scale that assesses student's academic performance. To score the scale, "Strongly Agree" is scored (5); "Agree" is scored (4); "Neutral" is scored (3); "Disagree" is scored (2); and "Strongly Disagree" is scored (1). The scores range from 33 – 40 (Excellent Performance), 25 – 32 (Good Performance), 17 – 24 (Moderate Performance), 9 – 16 (Poor Performance), 0 – 8 (Failing Performance).

2. General Self-Efficacy Scale (GSE): The scale was given by Schwarzer, R., & Jerusalem, M. (1995) which consists of 10 questions. The overall score is calculated by finding the sum of the all items. For the GSE, a higher score denotes greater selfefficacy; the total score ranges from 10 to 40.

Reliability and Validity: Internal reliability for GSE = Cronbach's alphas ranging from .76 to .90. Emotion, optimism, and job satisfaction are all connected with the general self-efficacy scale. For worry, stress, concerns about one's health, burnout, and stress, negative coefficients were discovered.

Statistical Technique Used:

SPSS, or Statistical Packages for the Social Sciences version 16.0 will be use to analyse the collected quantitative data. Pearson's Correlation and t-test will be use to analyse the data.

2.6 Limitation of the study

- Making advantage of self-report questionnaires makes the likelihood of response bias more likely.
- Because of the small number of participants, results cannot be generalised.

3. FINDING & ANALYSIS

3.1 Data Interpretation

The responses of the participants were analysed using t-test to see the significance in Academic Performance and Self-efficacy among the sample of male and female students. Mean, standard deviation and descriptive data is presented in Table 1, Table 2 shows the Co-Relation Matrix, Table 3 shows the Independent Sample T-test, Table 4 represent the Scatter plot correlation, Figure 1 shows

FULL TEXTS BOOK

the distribution of gender, Figure 2 shows the distribution age group and Figure 3 shows the distribution of state wise.

Table3.1: Mean, Standard Deviation of all variables, N=200

	Gender	Academic Performance	Self-efficacy
N	Female	100	100
	Male	100	100
Mean	Female	29.1700	29.1500
	Male	28.9900	29.6200
Standard Deviation	Female	4.87313	4.00599
	Male	4.63856	4.81114

Table 3.2: Correlation of all Variables

Correlation	.368''
P-value	0.01

Table 3.2.1: Scatterplot Correlation between Academic Performance and Self-efficacy

FULL TEXTS BOOK

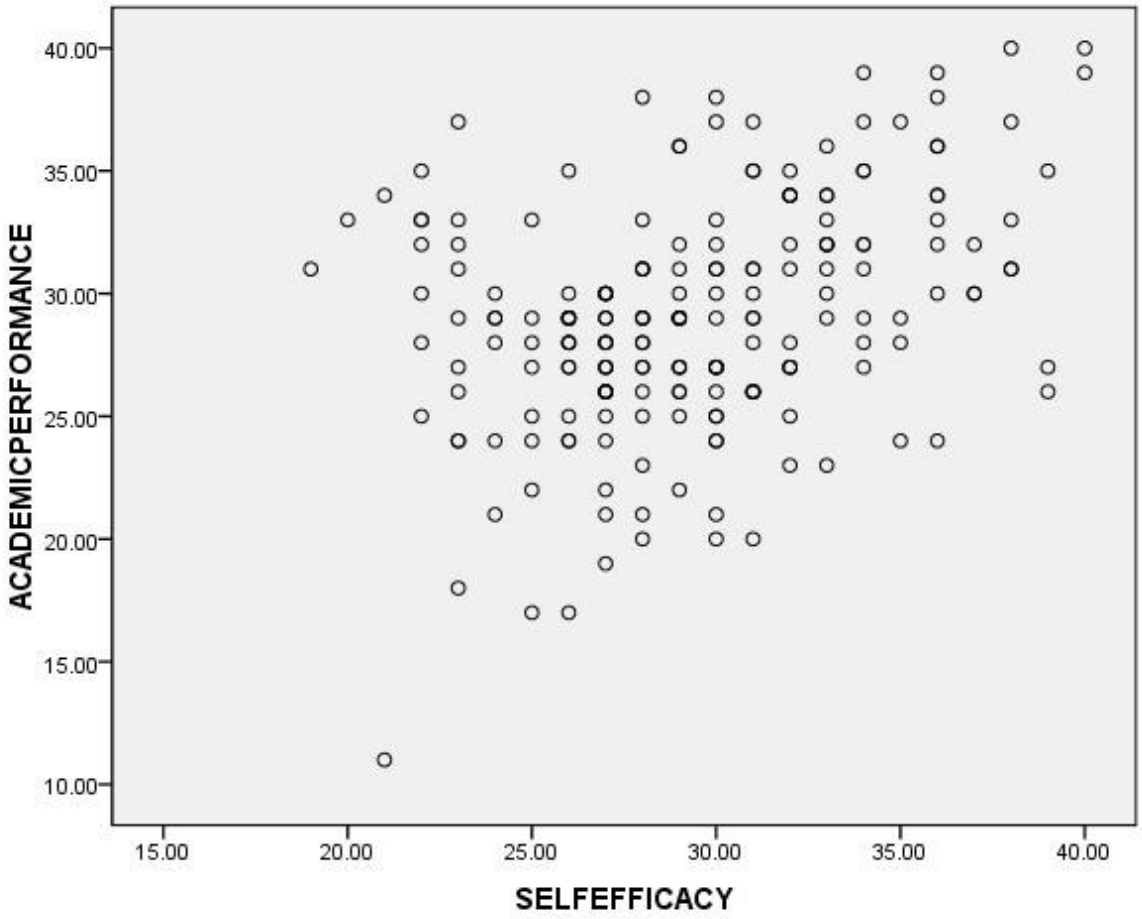

Table 3.3: T-test for male and female students

	Group	N	Mean	SD	"t" Value	DF	Significant Level
Academic Performance	Female	100	29.1700	4.87313	- .268	198	.789
	Male	100	28.9900	4.63856			
Self-efficacy	Female	100	29.1500	4.00599	.751	198	.454
	Male	100	29.6200	4.81114

3.2 Discussion

In many aspects, a higher level of self-efficacy fosters human achievement and well-being. Self-efficacy is seen as a reliable indicator of performance and a crucial cognitive ability that guarantees attainment in life. According to the literature that is currently available, the relationship relating self-efficacy to students' academic performance has been extensively used in this study. Correlation of students' academic performance and self-efficacy was found to be moderately positive and statistically significant ($r = .368$, $p < .001$) thus, the hypothesis which there is significant difference between self-efficacy and academic performance was supported. An independent sample t-test was conducted to compare the self-efficacy for male and female where the result shows no significant differences ($t(198) = .751$, $p = .454$) and the independent t-test for academic performance and male and female shows no significant differences ($t(198) = -.268$, $p = .789$). Therefore, the hypothesis that there will be a significant difference between self-efficacy and student's academic performance with respect to gender (Male, Female) was not supported.

The current study offered understanding of the connection between self-efficacy and students' academic performance in Northeast, India. Students who have confidence in themselves showed better performance in learning and thinking and additionally it ought to function better. in evaluative level of learning. Academic success is positively connected with self-efficacy. Freshmen with higher self-efficacies about their ability to do well in college tend to adapt to their first year in college better to those who have lower self-efficacies (Chemers, Hu, & Garcia, 2001). Alyami et al. (2017) conducted a study on 214 college students and revealed that academic self-efficacy has a strong and positive impact effect on their academic performance. Students who have better abilities outperform those people with lower abilities. The students with better academic standing self-efficacy however, outperform anyone who has lower self-efficacy in a number of students having the same precise degree of academic ability. Schools should enhance classroom procedures for higher academic performance. Teachers should try to offer their lessons in a way that gives students the best chance to feel mastery. Teachers ought to advocate for cooperative learning. Students will learn as much as possible from their lecturers and from one another.

FULL TEXTS BOOK

Students who have confidence in their ability to do well academically tend to be more motivated in school (Schunk, 1991). When self-efficacious students reaching the goals they set, they set even more challenging goals (Schunk, 1990). This can all lead to better performance in school in relation to higher grades and taking more challenging classes (Multon, Brown, & Lent, 1991). The teachers' level of self-efficacy has a bearing on students' academic performance as well. Self-efficacious teachers encourage parents to take a more active role in their children's learning, leading to better academic results (Hoover-Dempsey, Bassler, & Brissie, 1987). Students that have strong self-efficacy also frequently have high optimism levels, and this combination produces a multiple benefits including improved academic achievement, more effective personal adjustment, improved stress management, better health, and increased overall contentment and commitment to continue in school. (Chemers, Hu, & Garcia, 2001). Earlier investigations in large numbers have revealed that a learner's Academic self-efficacy is closely related to academic achievement(e.g., Robbins et al., 2004; Richardson et al., 2012; Honicke and Broadbent, 2016). According to the findings, higher ASE scores more inclined to translate into greater grades of academic achievement. Furthermore, Robbins et al. (2004) established that academic motivation for accomplishment performance. Richardson et al. (2012) found that similar to ASE, grade objectives and effort management play a significant role in academic achievement. According to Honicke and Broadbent (2016), the connection between ASE and Because academic success has been modified by effort regulation, deep processing techniques, and goal orientation. As previously mentioned, two out between three meta-analyses indicated that effort control and goal-related elements, such as grade targets and a focus on goals, are the most powerful influences on academic performance. A greater ASE improves academic performance longitudinally and vice versa, according to the most current meta-analysis, Nevertheless, there are not many longitudinal research on the association between ASE and academic performance (Talsma et al., 2018). ASE is currently believed to be among the most significant elements or determinants of learning achievement for students. This may imply that improving a student's ASE may enable them to attain better academic outcomes.

Nowadays, it is crucial to support students in growing self-efficacy. Other practise procedures should be implemented additional to building a positive school image. Teachers can do this by imposing strict requirements on their pupils and recognising their accomplishments. Helping struggling students with low self-efficacy to encourage them to exert enough effort and persevere in difficult tasks must methodically foster high amount of self-efficacy in these students.

3. CONCLUSION

3.1 Recommendation

Considering the research on how self-efficacy effects students' academic achievement in northeast India, the present research found a there is a strong link between the two so it is recommended that,

- The stakeholders in educational institutions should make sufficient efforts to significantly increase student academic self-efficacy by having Group discussions and workshops need to take place in institutions because of this.
- Parents may also have a responsibility to ascertain whether their children have good self-confidence in their abilities. If not, suitable action should be made because a student's academic self-efficacy is crucial to the ability to handle academic challenges.

3.2 Conclusion

Considering the research findings showing self-efficacy has a beneficial impact on students' academic performance, it is conceivable that pupils with high produce better academic results. Given that one the majority significant influences on learning is self-efficacy, it would appear essential for educators to support their students in increasing their self-efficacy. Students' emotional and psychological states influence their sense of self-efficacy because they typically interpret both good and negative

FULL TEXTS BOOK

psychological states—such as stress, anxiety, despair, and bad moods and positive psychological states as indicators of personal competence. Thus, enhancing pupils' well-being and minimising unfavourable emotional states helps them feel more effective. Accordingly, setting goals that are reasonably simple to reach and thereby allowing students to experience success would help develop and enhance the self-efficacy of the students. Also providing students with particular examples of how individuals are expected to behave under specific circumstances is likely to have positive influence on their self-beliefs about their own abilities and performances (Komarraju & Nadler, 2013). Liem et al (2008) examined self-efficacy, task value and achievement goals in English language ability with a group of secondary school students. It is found that self-efficacy is a predictor to English test scores. Purzer (2011) did a sequential mixed methods study to investigate the connection between team discourse, self-efficacy and achievement. Results showed that self-efficacy is positively and substantial correlation between academic achievement. Louise and Mistele (2011) reported reportedly stated that despite their differences in level of self-efficacy by gender in young adolescents taking mathematics and science, self-efficacy is still considered as a good predictor of the achievement scores. Teachers can raise students' efficacy levels through a number of practical teaching methods. Students who consistently succeed in learning have stronger self-efficacy than those who repeatedly fail. They can help students by motivating students to try, giving compliments and encouraging others is crucial, but it must be credible, Use moderately- difficult tasks. Specify short-term targets that are difficult for the pupils but nonetheless regarded as attainable (Schunk and Pajares, 2002), Encourage pupils to describe their plan for a certain learning technique. Ask students to record their progress and describe the following procedures as they complete the assignment. (Schunk and Pajares, 2002), Instead than contrasting one student with another or with the other students in the class, compare each student's performance to the establish objectives for them. (Bandura). As a result, giving students' a wide range of experiences and developing positive beliefs in them is essential for students to grow in their belief in self-efficacy.

ABSTRACT
Asthma is a lung disease that can be persistent and explained by similar symptoms such as chest tightness, shortness of breath, cough, and wheezing. In an asthma attack, airflow to the lungs is blocked due to muscle contraction, bloating, and an excessive number of mucous membranes. It is estimated that this lung disease affects approximately 235 million people worldwide. In the study, a new Reduced Rule-Based (RRB) Medical Expert System (MES) was developed for use in the diagnosis of asthma and determining its severity. The RRB, which we use in the system we developed, processes 4096 conditions created over 7 symptoms and 12 input values of these symptoms, which we determined based on the doctor's opinions. Through the 52 conditions obtained at the end of this process, both the need to check 4096 rules one by one disappears and it becomes possible to quickly determine the diagnosis and severity (mild, moderate, and severe) of the asthma disease in emergency services where there is a pandemic-induced density or lack of personnel. The tests of the system were made by comparing the system and the doctor's decisions over the data set (Cronbach's $\alpha>=0.7$), which was compiled by a specialist doctor from studies on asthma and similar diseases. As a result of this comparison, it was seen that the system decisions were similar to the doctor's decisions at the rate of 93.3% in mild asthma, 96.6% in moderate asthma, 91.6% in severe asthma, 87.9% in other conditions, and 90.8% in total. It is thought that our system, which has an accuracy of 93.6% in the diagnosis of asthma, can be installed on smart devices and used as a subsidiary decision support system in emergency services and in environments where there is a shortage of personnel due to the pandemic. Thus, the burden of healthcare workers can be reduced.
Keywords: Asthma, Boolean Function Minimization, Early Diagnosis, Medical Expert System, Reduced Rule Base, Risk Factors for Asthma.

INTRODUCTION
Asthma is a chronic disease that affects a large portion of the population. Although environmental factors causing asthma are not fully understood, using early prevention methods has increased significantly in recent years. Thus, societies suffer less from this disease today. As shown in Figure 1, asthma is generally detected by the symptoms of wheezing, coughing, and unpredictable blockage of airflow [1].

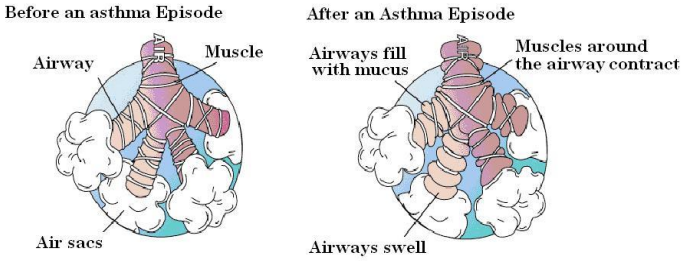

Figure 1. Previous and Next stages of the airways in asthma

FULL TEXTS BOOK

In most developed countries, which have environmental pollution, asthma is effective with allergic reactions like Dermatophagoides pteronyssinus and other environmental allergens. Although asthma can appear at any age, it usually occurs in childhood [2]. Asthma, which usually occurs in childhood, recovers by itself in adolescence, but it may relapse later on [3]; asthma in adults is accelerated together with declining lung function and becomes a chronic disease throughout a lifetime [4]. Respiratory inflammation along with wheezing has a tendency to decrease lung function in children [5], which usually recovers in a few years [6], and it is called asthma or bronchitis.

Although deaths that are caused by asthma are not now common, in the past, there were cases of asthma-related deaths in adults and young children because of using random high-dose formulations of β-agonist drugs [6, 7].

Unfortunately, there is no standard explanation for asthma. Common explanations of asthma studies end in guiding statements, which refer to variable blocking of airflow over short periods, sometimes in connection with indicators of airway hyper-responsiveness; but cannot ensure acknowledged rate for evidence of asthma to clinical results. When certain studies on the diagnosis and classification of asthma and similar lung diseases were examined, it was seen that Gurbeta et al. worked on automatic diagnosis of asthma and Chronic Obstructive Pulmonary Disease (COPD) diseases with the telehealth system they developed [8], Sharif et al. worked on determining the severity of asthma in emergency services by developing a fuzzy rule-based expert system [9], Samad-Soltani et al. tried to determine the severity of COPD by designing a fuzzy decision support system [10], Kukreja worked on the development of algorithms (such as Back-propagation, Context Sensitive Auto-Associative Memory Neural Network, C4.5 Algorithm, Bayesian Network and Particle Swarm Optimization) for the diagnosis of asthma through the symptoms and clinical data of asthma [11], Lee et al. examined data mining methods (Pattern Based Decision Tree (PBDT) and Pattern Based Class-Association Rule (PBCAR)) in their study to observe and prevent asthma disease [12], Spathis et al. examined clinical decision support systems related to the prevention, diagnosis and treatment of diseases such as asthma and COPD in their studies and in their studies where they used machine learning methods (Naive Bayes, Logistic Regression, Neural Networks, SVMs, K-Nearest Neighborhood, Decision Trees and Random Forest) they compared the diagnosis of asthma and COPD disease [13], and Rao et al. used the Support Vector Regression [14] for observing and diagnosing asthma severity.

The reasons for using a reduced rule base in this study, which aims to determine the diagnosis and severity of asthma through the medical expert system are all relevant situations and expert opinions are fully included in the system while creating the decision-making mechanism [15, 16], low computational complexity [17-19], high ability to produce a logical solution [20] and opportunity to update the rules when needed [21] as well as to transfer our knowledge and experience gained in our previous studies to this field.

When the medical expert systems designed using a reduced rule base were examined, it was seen that Selek et al. designed an expert system to be used in the diagnosis of malaria using 7 symptoms [15], Başçiftçi et al. designed an expert system to be used in the diagnosis of 4 different types of cancer using 13 symptoms [22], Isnanto et al. designed an expert system to be used in the diagnosis and management of diabetes using 12 symptoms [23], Cizmeci et al. designed an expert system to determine the life expectancy of intensive care patients using 10 symptoms [17].

In this study, which we carried out based on these studies and which is the continuation of our study in [15], an expert system was designed using 7 symptoms and 12 rules to be used in the diagnosis and determination of the severity of asthma to assist healthcare professionals in health units where situations such as lack of personnel, patient density or pandemics are experienced.

The tests of the designed system were carried out comparatively, as in the studies in [8-14], on the data set compiled by the specialist doctor from the studies and data sets in [24-35]. The adequacy and usability of our system were examined through the results obtained from this comparison and presented

FULL TEXTS BOOK

in the results section together with the data obtained from the reliability analysis of the data set we compiled.

MATERIAL AND METHOD

The Definition, Factors, Diagnosis, and Classification of Asthma

Although there is no standard definition for asthma, asthma is a disease in which various cells and cellular elements play a role, leading to chronic inflammation of the airways [36, 37]. This chronic inflammation is characterized by recurrent cough especially at night or in the morning, chest tightness, and wheezing. The diagnosis rate of this disease, which does not have a standard definition, is approximately 7.6% in adult patients aged 20–44 years and more than 10% in pediatric patients [38, 39].

Provocative Factors for Asthma

The triggering factors that are commonly known for asthma are physical efforts, allergens, chemicals, environmental pollution, and sudden changes in environmental factors such as temperature, etc. While some of these factors seldomly trigger asthma, some others frequently trigger asthma, but other factors trigger asthma attacks. These factors can include medicines, food additives, and food allergies (eggs, soy, etc.) [40, 41].

Some materials in the workplace can trigger an asthma attack because of specific sensitivity, and in European countries, occupational asthma accounts for up to 12% of asthma in young adults [42]. Although the fundamental factors that cause asthma attacks are not completely understood, the most possible asthma-triggering factors [43] include:

- House dust, mites like indoor allergens.
- Pollens, moulds like outdoor allergens.
- Smoke.
- Various chemicals.

Other factors that can trigger asthma include physical exercises, cold air, and extreme emotional conditions like anger or fear. Usage of aspirin, beta-blockers, and non-steroid anti-inflammatory drugs can even trigger asthma attacks in some people [43, 44].

World Health Organization states that 339 million people experience asthma badly. Although asthma cannot be fully cured in some cases, it can be kept under control with the usage of an adequate life management plan. Children who suffer from the mild manner of asthma eliminate asthma symptoms while they are growing [44, 45].

Definitive Diagnosis of Asthma and Spirometry

Patients with respiratory symptoms like coughing, wheezing, and chest tightness must first suspect asthma and alternative diagnostic methods should be applied. Spirometry-like lung function tests must be used to verify airway suffocation and to realize the reversibility of this blockage [46, 47]. Between periods of asthma attacks, there might be no signs of asthma, so physical examinations might give normal results, but the defectiveness of asthma signs does not point that the patient has normal lung functions. Based on this reason, full-capacity tests with complete medical history must be done with patients [48, 49]. As indicated before, the tests must include the full medical history of patients with past and current state of respiratory signs and symptoms associated with asthma, and these results must be combined with the variable airflow obstruction tests. The variable airflow obstruction is explained in below [50, 51] as;

- Obstruction does not necessarily appear at all times,
- It may change over time,
- It may vary depending on asthma triggers and treatment.

Spirometry measures the FVC (Forced Vital Capacity) and the FEV1 (Forced Expiratory Volume), and the FEV1/FVC (Forced Expiratory Volume in 1 second /Forced Vital Capacity) ratio is shown in Table

FULL TEXTS BOOK

1 [52]. The patient takes a breath as deep as possible and after that seals his-her lips around the mouthpiece of the spirometer and blows the air out as fast and fully as possible inside the spirometer [53].

Classification of Asthma Symptoms

Based on the NAEPP EPR-3 [37], asthma symptoms are stated in three main types. These are labeled as mild, moderate, or severe types [54]. These asthma symptoms indicate wheezing attacks, nocturnal symptoms, β2-agonist use, and daily symptoms.

Table 1. Asthma Symptom Intensity Results with Individual Variables

Individual Variables on the Asthma Symptoms	Mild	Moderate	Severe
Wheezing attacks (in the last 12 mo.)	84 (71.2)	23 (19.5)	11 (9.3)
+ Sleep disturbance (Due to wheezing in the last 12 mo.)	81 (68.6)	26 (22.0)	11 (9.3)
+ Daily β_2-agonist use in the last 2 weeks.	66 (66.9)	41 (34.8)	11 (9.3)
+ Daily symptoms (In the last 2 weeks.)	64 (54.2)	43 (36.4)	11 (9.3)
ICS use (Regular)	7 (10.9)	16 (37.2)	5 (45.5)
Symptom severity adjusted for regular ICS use	57 (48.3)	34 (28.8)	27 (22.9)
FEV_1 % (predicted)	106 (89.8)	11 (9.3)	1 (0.9)
FEV_1/FVC	75 (63.5)	22 (18.6)	21 (17.8)
$FEF_{\%25-\%75\,\%}$ (predicted)	102 (86.4)	12 (10.2)	4 (3.4)
Combined symptoms/ β_2-agonist use/ICS use +			
FEV_1 % (predicted)	50 (42.4)	40 (33.9)	28 (3.7)
FEV_1/FVC	42 (35.6)	38 (32.2)	38 (32.2)
$FEF_{\%25-\%75\,\%}$ (predicted)	52 (44.1)	36 (30.5)	30 (25.4)
FEV_1 and FEV_1/FVC % (Predicted)	38 (32.2)	42 (35.5)	38 (32.2)

In defining the severity of asthma, the percentage of predicted FEV1, FEF, and FEV1/FVC is used as the main decision factors, and according to these factors [55, 56], FEV1 is described as;

- 80% or more is described as a mild form of asthma,
- 60% or more and less than 80% are described as a moderate form of asthma,
- And less than 60% is described as severe form.

For predicted FEF25% -75% at mild, moderate, and severe levels, the severity of asthma [57, 58] is defined as;

- The mild form of asthma is defined as 65% or more,
- A moderate form of asthma is defined as 50% or more,
- The severe form of asthma is defined as less than 65% and less than 50%.

For FEV1/FVC at mild, moderate, and severe levels of asthma [58-60], it is defined as;

- the mild form of asthma is defined as 80% or more,
- a moderate form of asthma is defined as 75% or more and less than 80%,
- the severe form of asthma is defined as less than 75%.

The Structure of Asthma Dataset

When we first started our study, our primary goal was to use our system on real patient data simultaneously. For this purpose, as a result of our correspondence with the relevant health institutions,

FULL TEXTS BOOK

we were informed that we would not be able to access patient data both during and after the examination due to the pandemic, social distance, and shortage of personnel.

In our study, we compiled and used the data of patients with asthma and similar diseases (COPD, bronchitis, etc.) including data from studies in SPIROLA [24], NACAP [61], and other datasets [34, 35] and [25-33] as specified in NAEPP EPR-3 [37, 62] for diagnosis of asthma disease.

In this review, the data were obtained by compiling according to NAEPP EPR-3 and doctor's opinions. These data include the data of 296 adult patients specified in Table 1 and do not include the personal data (name, surname, age, gender, nationality, address, etc.) of the patients. Doctor opinions were sought in grouping the data of these 296 patients according to the severity of asthma and it was decided that N = 296 (N = Total number of patients); n1 = 60 (n1 = Mild Asthma), n2 = 60 (n2 = Moderate Asthma), n3 = 60 (n3 = Severe Asthma), and n4 = 116 (n4 = Other (COPD, etc.)). In addition to these, the data of these patients were presented based on Wheezing, ICS Use, and Daily Symptoms in Figure 2. a FEV1, FVC, and FEF in Figure 2. b, and FEV1/FVC in 3. c.

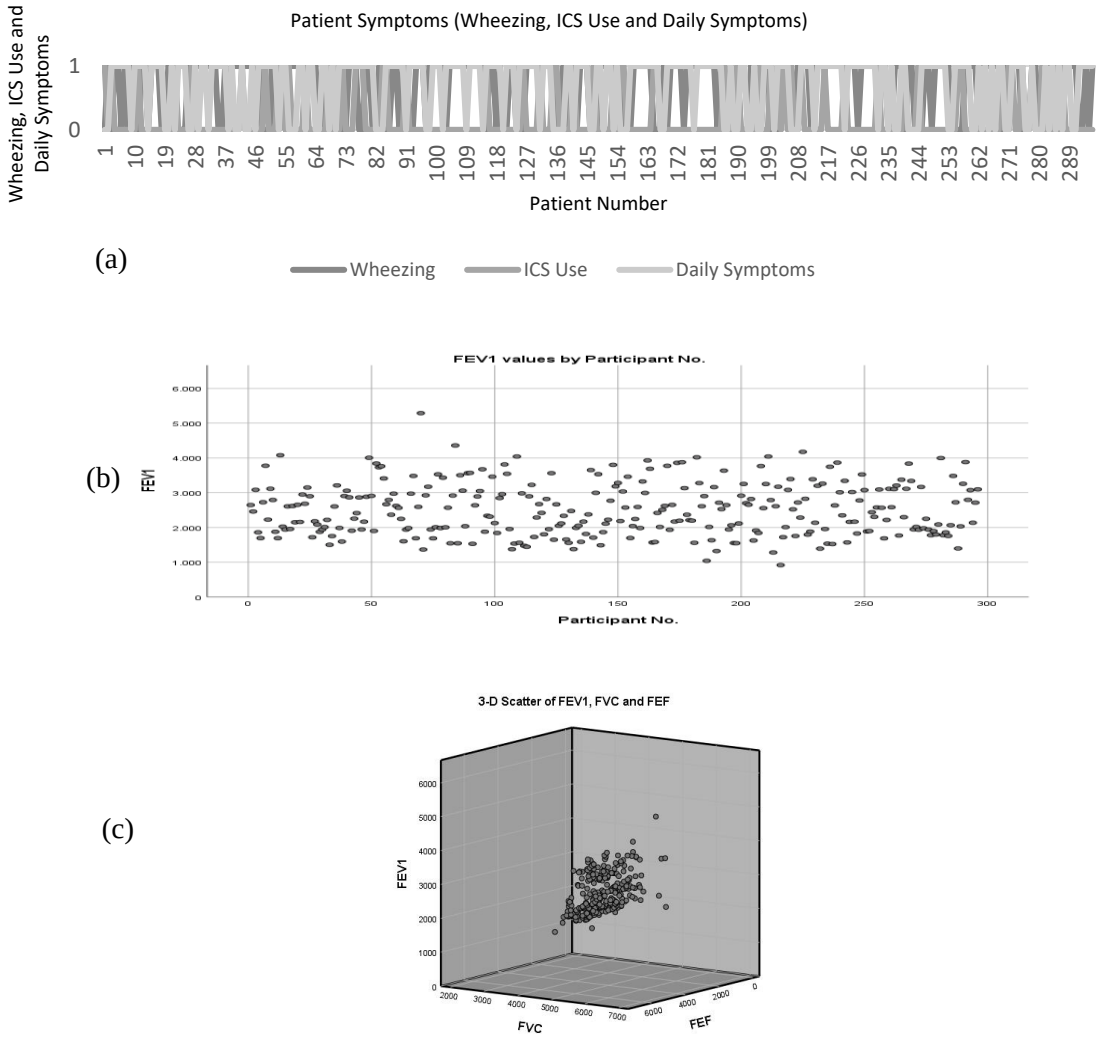

Figure 2. Patient Data Used in Dataset, (a) Wheezing, ICS Use, and Daily Symptoms, (b) FEV1, FVC, and FEF, (c) FEV1/FVC.

Although our data were compiled from previous studies, data reliability is an important issue in the use of data sets [63-65]. Data reliability in data sets is examined through components such as the distribution of the data used, their relations with each other, reliability, and the collected data range [66, 67]. One of

FULL TEXTS BOOK

the most preferred methods for this purpose is Cronbach's α method [68-70]. We also used this method in our study as it was used in studies in the field of asthma [71-75]. As shown in (1), Cronbach's α method is used to examine the reliability of the generated data set [70, 76].

$$\alpha = \frac{k}{k-1} * \left[1 - \left(\frac{\sum \sigma^2 i}{\sigma^2 T}\right)\right] \quad (1)$$

Here, k = number of items on the test, σ^2i = i. item measurement variance, $\Sigma\sigma^2$i = i. the sum of item measurement variances, and σ^2T = the variance of total test measurements. We examined the reliability of the data set we compiled in our study, using the α value obtained through the SPSS (Trial version - IBM SPSS Statistics 26) program using Cronbach's α method, as was done in the studies in [77-79]. The values obtained from Cronbach's α method are analyzed as follows [76, 80-82];

- If the value of α is between $0.00 \leq \alpha < 0.40$, the dataset is unreliable,
- If the α value is between $0.40 \leq \alpha < 0.60$, the dataset is of low reliability,
- If the α value is between $0.60 \leq \alpha < 0.80$, the dataset is quite reliable,
- If the value of α is between $0.80 \leq \alpha < 1.00$, the dataset is highly reliable.

The Structure of MES

The structure of the Medical Expert System (MES), which is one of the sub-branches of artificial intelligence and machine learning, is based on the transformation of the meaning and decision-making mechanisms of an individual/individuals related to their field of expertise by copying them into rule structures [17, 83-85]. This copying process is called the transfer of expert knowledge [15, 86, 87]. For this reason, it is often utilized in medical, sports, process control, logistics, and engineering areas. In addition to these, the opinions and knowledge obtained from the expert(s) in the specific field(s) must be impartial [84, 88, 89].

Since ES is designed depending on the needs of the users, it directs the users depending on these needs and requests during their use. For this reason, the knowledge database, one of the most important parts of ES, should be created from expert knowledge in line with the user's needs during design, and it should be updated when required through logical tests [90]. The workflow of the designed MES is shown in Figure 3.

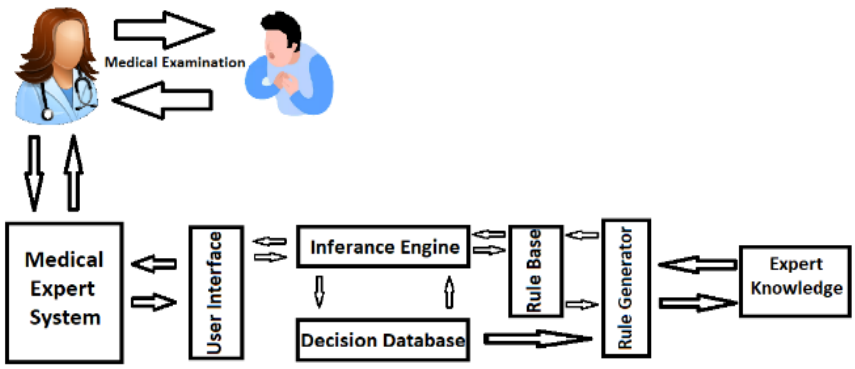

Figure 3. Block Diagram of Designed Medical ES

The system works as follows;

- The doctor enters the data obtained from the patient consultation.
- These data are first processed in the Inference Engine (IE).
- The rules required for processing patient data in IE are drawn from the Rule Database (RB).

The rule structures used in RB are "if-then" structures. These rules used in RB are produced in the Rule Generator (RG). A simple example of these generated rules is shown below;

If (One or more condition == True) then (Corresponding result)

FULL TEXTS BOOK

While designing an "If-Then" structure, if more than one condition is required, it can be combined using "Or" and "And" phrases according to the situation. A simple example of this situation for asthma is shown below;

if (Wheezing when breathing both in and out= True and (80% > FEV1 or 60% ≥ FEV1/FVC)) then ''Patience status = Severe asthma''.

"If-Then" structures used in RB are obtained through the Minimization of Boolean Functions (MBF) of asthma symptoms as expressed in [15, 17, 22]. In our study, we preferred the use of MBF, as it was used to write programs that work more effectively and faster, as stated in [91, 92]. Instead of using all rules created with expert opinion in MBF, the Reduced Rule Base (RRB) obtained by the MBF method was used [15, 91].

In IE, instead of all the rules that are stated from expert opinions, RRB was checked, and formed with MBF. Seven risk factors were used in this study (Wheezing when breathing both in and out, Daily symptoms ICS use (Regular), FEF%25-%75 (%predicted), FEV1/FVC, and FEV1) (See Table 3). Instead of evaluating 212 = 4096 output rules from these risk factors RR was analyzed. Thus, asthma disease was identified. These factors are shown in Table 2 with their symbols and outcome values of different conditions.

Table 2. Input and Output Values

Inp. no	Inp. symbols	Inp. names	Out no	Out. symbols
1	Z1	Wheezing when breathing both in and out,	1	Y
2	Z2	Daily symptoms,	2	
3	Z3	ICS use (Regular),	3	
4	Z4	$FEF_{\%25-\%75\ \%} \geq 65\%$	4	
5	Z5	$65\% > FEF_{\%25-\%75\ \%} \geq 50\%$	5	
6	Z6	$50\% > FEF_{\%25-\%75\ \%}$	6	
7	Z7	$FEV_1/FVC \geq 80\%$	7	
8	Z8	$80\% > FEV_1/FVC \geq 60\%$	8	
9	Z9	$60\% > FEV_1/FVC$	9	
10	Z10	$FEV_1 \geq 80\%$	10	
11	Z11	$80\% > FEV_1 \geq 75\%$	11	
12	Z12	$80\% > FEV_1$	12	

According to Table 2, all conditions were expressed as 0 and 1 as in [22, 93, 94] (See Table 5). However, in this form, to express the input and output values given in Table 2 with Boolean values "0 and 1", the relevant value ranges should be determined by examining. For example, if the FEV1 value was higher than 60%, it would be expressed with the Boolean value of 1. Boolean values for 12 different input and output variables are shown in Table 3.

Table 3. How to Define Input and Output Variables

No	Input and output cases	Description
1	Z1	Wheezing when breathing both in and out (1/0)
2	Z2	Daily symptoms (1/0)
3	Z3	ICS use (Regular) (1/0)
4	Z4	FEF%25-%75 % ≥ 65% (1/0)

FULL TEXTS BOOK

5	Z5	65% > FEF%25-%75 % ≥ 50% (1/0)
6	Z6	50%> FEF%25-%75 % (1/0)
7	Z7	FEV1/FVC ≥ 80% (1/0)
8	Z8	80% > FEV1/FVC ≥ 60% (1/0)
9	Z9	60% > FEV1/FVC (1/0)
10	Z10	FEV1 ≥ 80% (1/0)
11	Z11	80% > FEV1 ≥ 75% (1/0)
12	Z12	75% > FEV1 (1/0)

In Table 3, all risk factors are expressed in Boolean values (0 and 1) according to their real values in Table 1. As a sample, real values (a) and Boolean values (b) corresponding to these risk factors values are shown in Table 4.

Table 4. Real Values and Expressions as Boolean Values

Z1	Z2	Z3	Z4	Z5	Z6	Z7	Z8	Z9	Z10	Z11	Z12
(a) Real Values											
Yes	Yes	No	35 %	35%	35%	65%	65 %	65 %	72 %	72 %	72 %
No	No	No	80%	80%	85%	85 %	85 %	55 %	75 %	75 %	75 %
No	No	Yes	70%	70%	70%	80 %	80 %	80 %	85%	85 %	85 %
(b) Boole values											
1	1	0	0	0	1	0	1	0	0	0	1
0	0	0	1	0	0	1	0	0	0	1	0
0	0	1	1	0	0	1	0	0	1	0	0

To put it explicitly, the seven input variables, based on these risk factors, used in this table as Boolean values and conditional truth table were created with 4096 input conditions for 12 inputs according to 7 risk factors. In addition to these, these 4096 input cases were analyzed together with the values used as input, taking into account the expert opinion. As a result of this analysis, the truth table expressed in Boolean values is presented in Table 5.

In this study, the minterm minimization analysis was performed after obtaining Table 5. In this minterm minimization analysis, output functions "Q" was obtained by prime implicants "PI" in (3), and PI selection procedure in (4) [93, 95-98]

$$Q_{PI}(x) = \{PI(x)\}_{n=1}^{M} \quad (3)$$

$$PI_m(x) > PI_n(x) \leftrightarrow |Q_{ON} \cap PI_m(x)| > |Q_{ON} \cap PI_i(x)| \quad for\ all\ n \neq m \quad (4)$$

FULL TEXTS BOOK

In (3) minterms were selected by PI(x). In minterm and PI simplification, the Near-Minimal Cover Algorithm was used which is shown in Algorithm 1[93, 95].

Algorithm 1. Near-Minimal Cover

```
NMC_Algorithm (X, Y)
Begin
    While (x)
        F = X1;
        T = Expand (F, y);
        G = Cover (T);
        Prime = Complement(1-G);
        Foreach (Element in Prime)
        {
            N = Ratio (X - Element);
            If (N < N2)
                N2 = N;
                PI = Element;
}
All_PI = All_PI + PI;
X = X – PI;
    End While
    Return All_PI;
End
```

In this algorithm, firstly, the implicant containing the most minimum is selected. For this process, first of all, as (X, Y) (1/0-On/Off) is the minterm set, the first element of the "1" (On) minterm set is taken (F=X1) and expanded with the "0" (Off) minterm set as shown in (5).

$$z = x \otimes y \; and \; z_i = x_i \otimes y_i \quad (5)$$

After this expansion operation, the coverage operation is performed and only the prime minterm set (Prime) is detected as shown in (6).

$$x \wedge (x \vee y) = x \vee (x \wedge y) = x \quad (6)$$

In this coverage operation, if "xi=1" for minterms with "yi=1" for "x" and "y", the coverage operation is performed. Afterward, the result set that is made prime is removed from the full set as shown in (7). Thus, the set of implicants covering the minterm (Prime) is determined.

$$f(z_i) : (x_i =\rightarrow y_i \Longrightarrow x \wedge y = \emptyset \Leftrightarrow x \ominus y = x) \quad (7)$$

Then, in this overlying set of implicants, the "1" minterms covered by the implicants are counted (N), and the implicant that covers the most minterms (N < N2) is selected as PI (PI = Element) and added to the PI set (All_PI = All_PI + PI). The "1" minterms covered by the PI are removed (X = X – PI), and the simplification process continues until the set of "1" Minterms remains empty.

As a result of this algorithm, fifty-two rules emerged according to the truth table of these factors, and are shown in Table 5. Three of the obtained are shown in Table 6. In this table, while "1" means that the related symptom exists, "0" means that the related symptom is latent, and "u" means that the related symptom is unimportant. The If-Then version of the first two rules is shown in Table 7.

Table 6. Sample Output Values

Table 7. Two of The Fifty-Two Reduced Rules Shown Using If–Then Constructs

Symbolic display	Real display
001xx1xx1xx1	**if** "Wheezing when breathing both in and out is No and Daily symptoms are Unimportant and ICS (Regular) use is Yes and $FEF_{\%25-\%75}$ % ≥ 65% is No and 65% > $FEF_{\%25-\%75}$ % ≥ 50% is No and 50% > $FEF_{\%25-\%75}$ % is Yes and FEV1/FVC ≥ 80% is No and 80% > FEV1/FVC ≥ 60% is No and 60% > FEV1/FVC is Yes and FEV1 ≥ 80% is Yes 80% > FEV1 ≥ 75% is No and 75% > FEV1 is Yes" **then** "The patient may have severe asthma" **else "Further investigation needed"**
001x1xx1xx1x	**if** "Wheezing when breathing both in and out is Unimportant and Daily symptoms are Unimportant and ICS (Regular) use is Yes and $FEF_{\%25-\%75}$ % ≥ 65% is No and 65% > $FEF_{\%25-\%75}$ % ≥ 50 % is Yes and 50% > $FEF_{\%25-\%75}$ % is No and FEV1/FVC ≥ 80% is No and 80% > FEV1/FVC ≥ 60% is Yes and 60% > FEV1/FVC is No and FEV1 ≥ 80% is No 80% > FEV1 ≥ 75% is Yes and 75% > FEV1 is No" **then** "The patient may have moderate asthma" **else "Further investigation needed"**

These rules, produced in the RG and stored in the RB, were used in the inference engine. According to the data obtained as a result of the consultation in IE, the relevant rules were created as feed-forward [15, 86]. Obtained inference results were both presented to the user in the UI and stored in the database. In addition to keeping the inference results, the database also presented its data to RG to update the RRB with new rules.

RESULTS

Reliability analysis of the compiled data set

In Cronbach's α analysis conducted by using SPSS, "Wheezing when breathing both in and out", "Daily symptoms", and "ICS use (Regular)" columns were used by being converted from yes/no to 1/0 for ease of processing the data. The object statistics, one of the first data we obtained from the analysis of our compiled data set, are presented in Table 8.

Table 8. Object Statistics of Dataset

Symptoms	Mean	Std. Deviation	N
Wheezing	0.65	0.477	296
ICS Use	0.18	0.387	296
Daily Symptoms	0.68	0.466	296
FEV1	2522.96	744.270	296
FVC	4266.67	813.399	296
FEV1/FVC	58.36	9.094	296
FEF	2903.09	1064.489	296

In this table, the mean and standard deviation values of the data we used in the data set are shown separately according to the column names.

Table 9 presents the Item-Total Statistics data we obtained. The data we present underlined in these data (Cronbach's Alpha if Item Deleted) shows the change in the reliability of the data set when one of the columns we specified in the data set is deleted.

Table 9. Item-Total Statistics of Dataset

Symptoms	Scale Mean if Item Deleted	Scale Variance if Item Deleted	Corrected Item-Total Correlation	Squared Multiple Correlation	**Cronbach's Alpha if Item Deleted**

FULL TEXTS BOOK

Wheezing	9751.95	5995900.149	-0.132	0.175	**0.730**
ICS Use	9752.42	5995638.703	-0.025	0.173	**0.730**
Daily Symptoms	9751.92	5995432.915	0.069	0.087	**0.730**
FEV1	7229.64	3045132.820	0.923	0.991	**0.493**
FVC	5485.93	3050313.662	0.804	0.977	**0.536**
FEV1/FVC	9694.24	5963700.469	0.716	0.972	**0.727**
FEF	6849.51	2280614.533	0.803	0.720	**0.560**

When the table is examined, it is stated that there will be an increase in the reliability of the data set when the first three data columns “Wheezing, ICS Use, Daily Symptoms” and the sixth column “FEV1/FVC” are deleted separately. However, since it is stated that these data columns are important in the studies conducted and in the diagnosis of asthma disease, these columns were preserved as they were in the data set. In addition to these, when the "FEV1/FVC" and "FEF" columns are removed, it is seen that the reliability of the data set will decrease.

Finally, the reliability rate obtained from the data set analyzed with Cronbach's α method is presented in Table 10 in comparison with similar studies.

Table 10. Comparison of Reliability of the Data Set with Other Studies

Reliability Statistics		
Datasets	**N of Items**	**Cronbach's Alpha**
[71]	5	**0.77**
[72]	17	**0.802**
[73]	6	**0.8**
[74]	5	**0.74**
[75]	23	**0.8**
Our dataset	7	**0.71**

When Table 10 is examined, it is seen that the data set we compiled in our study is a reliable dataset, as stated in the studies in [69, 70, 76, 79, 81], when analyzed in terms of both the number of objects (n=7) and Cronbach's α value (α=0.71).

The Accuracy and Reliability of the System

The accuracy and adequacy of the results we obtained from our system were checked first by comparing the system's decisions with the doctor's decisions. While making this comparison, the asthma dataset, which we compiled according to doctors' opinions, was used as an input in our system. The results obtained from the system and the results obtained from the doctor's decisions are presented in Table 11.

Table 11. Comparison of System Decisions with Doctor Decisions

Type of Lung Disease	**Asthma Severity and Number of Patients**	**Decisions**		**Similarity Rate**
		Doctor	**System**	
Asthma	Mild (n=60)	**60**	**56**	**93,3%**
	Moderate (n=60)	**60**	**58**	**96,6%**
	Severe (n=60)	**60**	**55**	**91,6%**
	Asthma Average	**180**	**163**	**93.83%**
COPD, Cystic Fibrosis vs.	Others (n=116)	**116**	**102**	**87,9%**
Overall Average				**90,86%**

When Table 11 is examined, it is seen that the decisions we obtained from our system show similarity to the doctor's decisions at the rate of 93.3% for mild asthma, 96.6% for moderate asthma, 91.6% for severe asthma, 87.9% for other conditions, and 90.86% overall.

FULL TEXTS BOOK

The comparison of the accuracy of the decisions regarding the diagnosis and classification of asthma disease obtained from our system with other studies is shown in Table 12.

Table 12. Comparison of the System's Accuracy Rate with Other Studies

Study No.	Methods Used	Accuracy Rate
[8]	Fuzzy Rule Base	97.32%
[9]	Fuzzy Rule Base	100%
[10]	Fuzzy Rule Base	92%
[11]	Associative Memory Model	94.2%
[12]	Data Mining	87.52%
[13]	Random Forest classifier	80.3%
[14]	Support Vector Regression	77.7%
Our System	Reduced Rule Base	93.83%

When Table 12 is examined, it is seen that the expert system we designed using the reduced rule base has a higher accuracy than the studies in [10, 12-14] and that our system can be used in the diagnosis and classification of asthma disease, like the systems in [8, 9, 11], with an accuracy rate greater than 93%.

CONCLUSION

Our study consists of two parts. In the first part, a new Reduced Rule-Based (RRB) Medical Expert System (MES) was developed for use in the diagnosis and determination of asthma severity (mild, moderate, and severe). In the second part, a data set based on doctor's opinions was compiled to be used in the tests of this system.

The RBB we used in the system we developed consists of 52 rules. These rules were obtained by processing 4096 conditions created over 7 symptoms and 12 input values of these symptoms, which we determined according to doctors' opinions, by minimizing boolean functions. Through the 52 conditions obtained at the end of this process, the need to check 4096 rules one by one is eliminated, and it becomes possible to diagnose and determine the severity (mild, moderate, and severe) of asthma disease. The test results of our system were compared with the doctor's decisions (Table 11), and in these results, our system showed 93.83% similarity with the doctor's decisions in diagnosing asthma. In comparison with other systems (Table 12), it is thought that it can be used in the diagnosis and classification of asthma with a high accuracy rate of >90%. The data set we compiled according to the doctor's opinions seems to be a reliable dataset, as in similar studies, in terms of both the number of objects (See Table 8, n=7) and Cronbach's α value (See Table 10, α=0.71).

As a result, it is thought that our system can be installed on smart devices and used as a subsidiary decision support in emergency services or polyclinics where situations such as pandemics, density, or lack of personnel are experienced. Thus, the burden of healthcare workers can be reduced.

In our next study, we plan to integrate our system with image processing systems that can process data obtained from CT (Computerized Tomography), MRI (Magnetic Resonance Imaging), and similar imaging examinations to use it in the diagnosis of asthma and other lung diseases such as COPD, bronchitis, mesothelioma, and emphysema.

Acknowledgment

We would like to thank Mr. Dr. Ulaş SAYIN (Family Health Center No. 2 in Ermenek / Karaman) for the support he gave to us in our work.

ABSTRACT

In our study, buffalo yogurt and milk used as materials were obtained from the Dairy Products Technologies Application and Research Center Directorate of Burdur Mehmet Akif Ersoy University in December 2023. The counts of anaerobic bacteria and microorganisms belonging to the *Lactobacilli* species in raw buffalo milk and yogurt samples were to be in the range of 5.65-5.87 and 7.88-8.12 log CFU/mL; 2.10-2.17 and 5.11-5.18 log CFU/g, respectively. Among from 36 isolates, 12 possible *Lactiplantibacillus* strains were selected as a result of phenotypic tests. Selected lactic acid bacteria (LAB) were identified using MALDI-TOF MS in the species level. The results of the study revealed that the EPS production levels of the cultures varied depending on the species and highest EPS production was detected in *Lactiplantibacillus plantarum* LB6 and *Lactobacillus bulgaricus* LB12 strains. Accordingly, 4 *Lactobacillaceae* family strains with high EPS production value selected from 12 *Lactobacillaceae* strains was evaluated for their features organic acid and antimicrobial activity. It was found that the strains with high EPS production also produced malic, pyruvic and acetic acids in addition to lactic acid and exhibited high antimicrobial levels against four different pathogens. This study suggests that LAB isolated from buffalo yogurt with high EPS and antimicrobial properties have potential for widespread use in probiotic foods, and in health fields such as intestinal microbiota adherence.

Keywords: Buffalo yogurt, Lactic acid bacteria, Exopolysaccharide, MALDI-TOF MS, *Lactiplantibacillus*

INTRODUCTION

Fermented foods generally contain beneficial flora that support the regularity and health of the human digestive system. The flora in fermented foods primarily consist of lactic acid bacteria (LAB), which produce lactic acid by metabolizing fermentable sugars. Lactic acid fermentation is considered a common and effective method for food preservation (Kumari et al., 2024). Additionally, most lactic acid bacteria can produce organic acids, hydrogen peroxide, diacetyl, and bacteriocins substances with various properties, including the ability to inhibit the growth of pathogenic microorganisms. Consequently, contemporary food production methods often incorporate microorganisms with these characteristics (Ertürkmen, 2024). Furthermore, many compounds produced by LAB, such as antimicrobials, lactic, acetic, formic, phenylacetic, and caproic acids, as well as carbon dioxide, hydrogen peroxide, diacetyl, ethanol, and bacteriocins like reuterin, play a crucial role. These antimicrobial substances can prevent mold spoilage, and other LAB-produced compounds such as sugar polymers, sweeteners, aromatic compounds, and useful enzymes enhance health properties (Choi et al., 2018). These significant features of LAB starter cultures contribute to ensuring food safety and maintaining the technological quality of fermented products (Ertürkmen, 2024).

In today's food industry, EPS are of great interest as stabilizers, thickeners, gelling agents, and emulsifiers, and for their potential use in food packaging (Nguyen et al., 2020; Moradi et al., 2021). Microbial exopolysaccharides (EPS) are biological polymers synthesized by various microorganisms, including some bacteria, microalgae, yeasts, and fungi (Nguyen et al., 2020; Shankar et al., 2021). LAB

FULL TEXTS BOOK

are among the EPS-producing bacteria and are the subject of many studies due to their EPS production capabilities. Particularly, genera such as *Fructilactobacillus*, *Lacticasseibacillus*, *Lactiplantibacillus*, *Lactobacillus*, *Lactococcus*, *Latilactobacillus*, *Lentilactobacillus*, *Leuconostoc*, *Limosilactobacillus*, *Pediococcus*, and *Streptococcus* can synthesize EPS. LAB are considered "generally regarded as safe (GRAS)" and are classified as consumable bacteria, thus they are used in foods as starter cultures or probiotics. Due to their presence in various foods, LAB can produce a wide range of different EPS structures (Daba et al., 2021; Maajid et al.2022).Due to their beneficial effects on the host immune system and their contribution to the adhesion and survival of lactic acid bacteria, EPS also have applications as prebiotics in foods.

Consumers have recently shown increased interest in the relationship between health and fermented foods. Although cow's milk is often preferred as the raw material for yogurt production, buffalo milk, with its high dry matter content and unique nutritional composition, is emerging as a more suitable product for yogurt production. Buffalo yogurt is a good example of naturally preserved food items acidified by various LAB species (Terzioğlu et al., 2023). In this study, the antimicrobial activity and organic acid production of lactic acid bacteria isolated from buffalo yogurt and milk, which have many positive characteristics and high EPS production, were determined. These new groups of microorganisms are added to yogurt milk during production, resulting in yogurt with more distinctive flavor and aroma characteristics. Additionally, the exopolysaccharides produced by these bacteria impart functional properties to the product. Thus, it is possible to produce buffalo yogurt of higher quality in terms of both sensory attributes and nutritional value.

METHODOLOGY

Microbial counts of samples and lactic acid bacteria isolation

For anaerobic bacteria and Lactobacilli counts of buffalo yogurt and milk samples were diluted in separate test tubes with sterile 0.1% (w/v) ringer solution for each dilution. Additionally, 100 µL from each serial dilution was spread on Reinforced Clostridial Medium (RCM, Merck, Darmstadt, DE) to cultivate following 48 hours of anaerobic incubation at 37 °C. Lactobacilli counted De Man Rogosa and Sharpe (MRS) at 30ºC for 2 days (Harrigan ve Mc Cance, 1966). In this study, 12 potential LAB strains, characterized as Gram-positive, catalase-negative, non-spore-forming, and non-hemolytic, were isolated from Buffalo yogurt and milk samples. The isolation and selection procedures followed the methods described by Schillinger and Lücke (1989). The strains were identified using MALDI-TOF MS (Bruker Daltonics, Autoflex Speed, Germany) based on mass spectrum analysis.

Exopolysaccharide production

To determine the exopolysaccharide production of isolates using different carbohydrate sources, the MRS medium was modified and used. For this purpose, both standard MRS medium and MRS medium containing fructose, lactose, and sucrose at 2% instead of glucose were used. Firstly, to identify potential EPS-producing strains, the cultures were incubated on solid MRS medium containing different sugars at 30°C for 3 days. At the end of the incubation, isolates forming mucous colonies were selected as potential exopolysaccharide producers. The selected colonies were transferred to liquid MRS medium prepared with the same sugar composition and incubated again at 30°C for 3 days. At the end of the incubation, the samples were boiled for 10 minutes at 100°C. Then, 900 µl of 85% trichloroacetic acid (TCA) and 900 µl of sample were added to pre-weighed 2 ml centrifuge tubes and centrifuged at 10,000 rpm for 25 minutes. After centrifugation, 500 µl of the supernatant was taken, and 1500 µl of cold ethanol was added and left overnight at -18°C. The next day, the samples were centrifuged again at 10,000 rpm for 25 minutes. After centrifugation, the supernatant was discarded, and the ethanol was removed by leaving the tubes at 60°C overnight. The dried tubes were weighed again at the end of the period, and the results were calculated as mg/L (Feng et al., 2012).

FULL TEXTS BOOK

Antimicrobial activity

The antimicrobial activity of the LAB isolates was evaluated against indicator bacteria, namely *Staphylococcus aureus* ATCC 25923, *Listeria monocytogenes* ATCC 19115, *Escherichia coli* ATCC 25922, and *Salmonella typhimurium* ATCC 14028, using the agar well-diffusion technique. LAB cultures in MRS broth and indicator bacteria in CASO broth were activated at 37 °C for 18 hours. Subsequently, the indicator microorganisms were added to sterilized Nutrient agar medium at a ratio of 1 mL per 100 mL of medium, mixed homogeneously, and poured into sterilized petri dishes in approximately 25 mL volumes, ensuring a thickness of 4 mm. Once the medium solidified, 8 mm diameter wells were created on the agar at specific intervals using a cork borer. LAB cultures activated in MRS broth were pipetted into the wells at a volume of 100 µL and incubated at 37 °C for 24 hours. Following incubation, the diameters of the inhibition zones around the wells were measured (Ertürkmen et al., 2024).

Determination of organic acids produced by lactic acid bacteria

The method of determining organic acids was modified from the work of Kaminaids (2007). Organic acids were determined at YETEM (Application and Research Center for Innovative Technologies) center of Süleyman Demirel University by Thermo Scientific Ultimate 3000 HPLC device.

CONCLUSION AND DISCUSSION

The microscopic appearance, Gram reaction, and catalase activities of the strains subjected to purity control were examined. Isolates that were cocci-shaped, Gram-positive, and catalase-negative were evaluated as potential enterococci and lactococci. Isolates that were rod-shaped, Gram-positive, and catalase-negative were evaluated as potential lactobacilli. In this study, Among from 36 isolates phenotypic characterictied, 12 possible *Lactiplantibacillus* strains were used (Figure1).

Figure 1 Phenotypic characterization of strains

The selected strains were identified at the species level (score value >2.00) using the MALDI-TOF MS BioTyper System. Seven isolates were identified as *L. plantarum*, two as *L. paracasei*, and two as *L. bulgaricus* by the MALDI-TOF MS BioTyper System, while one could not be identified. (Table 1).

Table 1 Identification of strains

Strain code	Phenotypic diagnosis	MALDI-TOF MS BioTyper system	Scor value
LB1	*Lactobacillus spp.*	*L. plantarum*	2.125±0.10
LB2	*L. plantarum*	*L. plantarum*	2.003±0.00
LB3	*Lactobacillus spp.*	*L. plantarum*	2.014±0.09
LB4	*Lactobacillus spp.*	*L. plantarum*	2.129±0.03
LB5	*Lactobacillus spp.*	-	
LB6	*L. plantarum*	*L. plantarum*	2.171±0.11
LB7	*Lactobacillus spp.*	*L. paracasei*	2.147±0.01
LB8	*Lactobacillus spp.*	*L. paracasei*	2.142±0.01
LB9	*Lactobacillus spp.*	*L. plantarum*	*2.056±0.12*
LB10	*Lactobacillus spp.*	*L. bulgaricus*	2.365±0.00
LB11	*L. plantarum*	*L. plantarum*	2.268±0.08
LB12	*Lactobacillus spp.*	*L. bulgaricus*	2.243±0.04

The counts of anaerobic bacteria in raw buffalo milk and yogurt samples were to be in the range of 5.65-5.87; 2.10-2.17. Studies have linked the presence of high spore counts of thermophilic bacteria such as *Clostridium* in dairy products to silage feeding (Garde et al., 2011; Reindl et al., 2014). The pH of the feed plant used in silage production plays an important role in the activity of *Clostridium* species microorganisms (Jakob, 2011). The counts of microorganisms belonging to the *Lactobacilli* species in raw buffalo milk and yogurt samples were to be in the range of 7.88-8.12 log CFU/mL and 5.11-5.18 log CFU/g (Figure2).

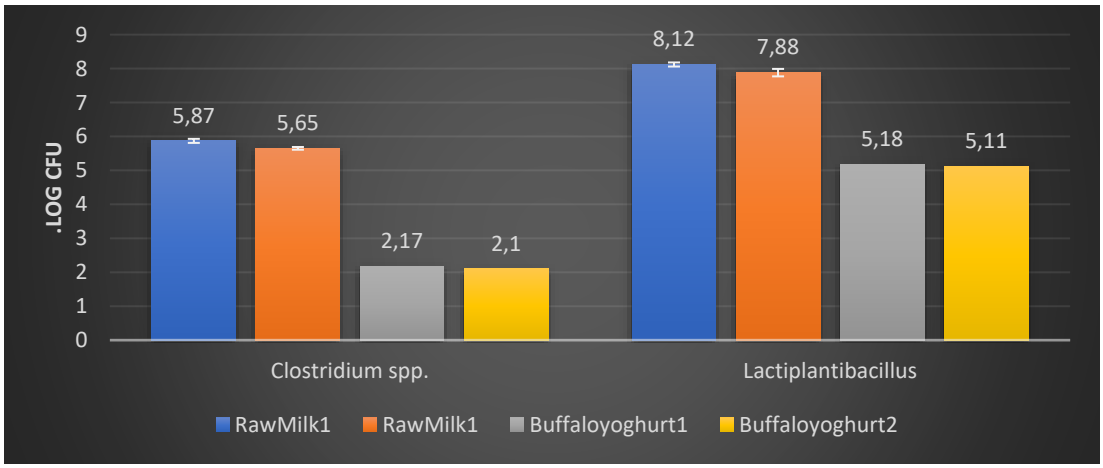

Figure 2 Microbial counts of samples

In the analysis conducted to determine exopolysaccharide production, the strains produced a shiny, mucous structure on MRS solid medium. Accordingly, 4 *Lactobacillaceae* family strains with high EPS production value selected from 12 *Lactobacillaceae* species was evaluated for their features organik acid and antimicrobial activity (Table 2). In the analyses conducted, the highest EPS production was detected in LB12 *L. bulgaricus* with 10.9 mg/L and in LB6 *L. plantarum* with 9.1 mg/L. The presence of lactic acid, pyruvic acid, acetic acid and malic acid was examined in the microorganisms studied. As a result of the study, the microorganisms predominantly produced lactic acid. Additionally, they were found to produce pyruvic acid, acetic acid, and malic acid. Organic acid production, such as lactic acid, can vary between different LAB species as well as between individual strains within a species (Peev et

FULL TEXTS BOOK

al. 2017). This variability is also noteworthy in our study. When the organic acid contents of the strain groups were examined separately, the most common organic acids were lactic, acetic and malic acid. Kaminarides et al. (2007) determined the organic acid content of yogurt samples with different fat contents and found that in yogurt with 6.6% fat, pyruvic acid had the lowest amounts among the acids. In this study, trace amounts of pyruvic acid were detected in the strains isolated from yogurt samples, which was thought to result from the conversion of glucose by lactic acid bacteria.

Table 2 EPS, antimicrobial and organic acid levels of selected strains

		The inhibition zone diameters of pathogen bacteria (mm)				**Organic acids peak height (µg/mL)**			
Strain	***EPS mg/L***	***E. coli***	***S. Enteritidis***	***L. monocytogenes***	***S. aureus***	**Pyruvic acid**	**Malic acid**	**Lactic acid**	**Acetic acid**
LB1 *L. plantarum*	8.6	25.66	34.00	35.66	44.00	34.637	40.401	1541.807	68.180
LB6 *L. plantarum*	9.1	40.33	34.33	44.33	44.33	21.035	34.575	1530.548	52.041
LB10 *L. bulgaricus*	8.4	35.00	54.66	35.33	40.33	35.209	21.353	1574.417	67.162
LB12 *L. bulgaricus*	10.9	33.00	44.66	41.00	47.00	30.032	23.514	1630.808	51.045

The antimicrobial activity between various groups of microorganisms like lactic acid bacteria and pathogens is widely known in nature and their these abilities are based on their organic acids, carbon dioxide, and specific antibiotic substances synthesize (Tsugkiev et al. 2018). In this study, antimicrobial activity against various pathogen bacteria (Table 2). It has been observed that the same strain may have different antimicrobial activity different pathogens. Against *E. coli*, the largest zone (40.33 mm) and the lowest zone (25.66 mm) were showed respectively LB6 *L. plantarum*, and LB1 *L. plantarum* . Compared to other pathogens zone diameters against *S. aureus* were larger among all tested bacteria, giving the largest zone by *LB12 L. bulgaricus* (47.00 mm).These differences in the antimicrobial efffect of lactic bacteria were thought to be due to their ability to synthesize organic acids, carbon dioxide, and certain antimicrobial substances.

CONCLUSION

In this study, strains were identified at the species level using the MALDI-TOF MS BioTyper System, which is frequently used in clinical microbiology. The antimicrobial analysis results were consistent with other studies. The presence of lactic acid, pyruvic acid, acetic acid and malic acid in strains with high EPS production levels was investigated. The study found that microorganisms primarily produced lactic acid. Additionally, the production of pyruvic acid, acetic acid, and malic acid was also detected. Furthermore, the strains showed high antimicrobial activity against four different pathogens. It is

FULL TEXTS BOOK

believed that LAB isolated from buffalo yogurt and milk, which exhibit high EPS and antimicrobial properties, could have widespread potential for use in health-related fields such as probiotic food and intestinal microbiota colonization.

THE EFFECT OF GENDER AND RELIGIOSITY ON SUICIDE IDEATION IN A SAMPLE OF TURKISH MUSLIM-MAJORITY YOUTH

Dr. Berkan Demir
Bartın University, Faculty of Education
OrcID: 0000-0002-3944-1650

ABSTRACT
Suicide is a significant global health problem for several compelling reasons, including its devastating effects on individuals and communities as well. It becomes even more alarming for specific developmental periods, such as young and emerging adulthood. Religiosity has been identified as a unique contextual protective factor that helps prevent various behaviors associated with suicidality, including suicide ideation, attempts, and completed suicides. Therefore, the purpose of this study was to examine to what extent religiosity and gender explain suicidal thoughts among a conveniently selected sample of 221 college students (55.66% female). The results showed that while religion significantly and negatively predicted suicide ideation, gender did not have a significant effect. Overall, religiosity explained 22% of the variance in suicidal thoughts. There was no significant difference between males and females in terms of the scores in suicide ideation, although females reported relatively higher scores. Findings were discussed in the light of the relevant literature.
Keywords: suicide; religiosity; gender; protective; Türkiye.

INTRODUCTION
Across the globe, suicide remains one of the leading causes of death, casualty, and premature mortality for individuals of all ages (WHO, 2021). Particularly, suicide is the second and third leading cause of death among the age periods 10-24 and 15-44 (WHO, 2021). As suicide is believed to have a ripple effect, 135 individuals, including family members, friends, and colleagues, are affected by one completed suicide (Cerel et al., 2019), which occurs every 40 seconds across the globe (WHO, 2021). Given that, because of its prevalence and impact on communities, it is essential to address suicide as a public health crisis and to bear a multifaceted approach, including revealing both risk and protective factors related to suicidal behavior.

Suicide has been associated with a wide range of psychiatric conditions, including depression, anxiety, and substance use disorders. Although traditional endeavors in exploring the psychiatric risk factors are extremely valuable, solely focusing on those factors might be an impediment in understanding the concept of suicide from an integrative perspective. Therefore, along with psychiatric conditions, it is crucial to include contextual factors as they also play a prominent role in the spectrum of suicidal behaviors. Based on the biopsychosocial model, the joint contribution of both distal (long-term) and proximal (acute) risk factors prepare for the onset of suicidal behavior (Turecki et al., 2019).

Religiosity, one of the distal factors that hypothetically protect individuals against suicidal behavior, can be defined as the degree of religious devotion and engagement in religious practices. It has long been a subject of interest in the field of suicide. Both concepts are assumed to have a complex structure as suicide encompasses ideation, attempt, and completion, and religiosity includes affiliation, participation in religious activities, and doctrine. Empirical evidence suggests that religiosity is a distal protective factor and is related to suicidal behavior across different contexts (Wu et al., 2015; Rasic et al., 2009; Rasic et al., 2011). However, some studies reported religious attendance only protects individuals from suicide attempts (Rasic et al., 2011). Apart from that, religious belief and community support received from religious officials play a crucial role in the bereavement process of survivors of suicide attempts (Vandercreek & Mottram, 2009).

FULL TEXTS BOOK

Along with significant associations between suicide and religiosity, there are studies where the two were not associated (Lawrence et al., 2016) and even inversely related (Zhao et al., 2012). Based on Koeing's (2012) work, as religiosity is related to improved psychological stability, hope, feelings of empowerment, social networking opportunities, and adoption of healthy lifestyle habits, it protects individuals against suicidal behavior. Similarly, as higher levels of religiosity is associated with lower rates of psychopathology (Dervic et al., 2004; Levav et al., 2008; Vitorino et al., 2018), which is one robust predictor of several behaviors within the spectrum of suicidality (e.g., suicide ideation, attempt, completed suicides), it is reasonable to argue that religiosity provides a buffering effect on suicidality through indirect means. In a similar vein, a meta-analysis study consisting of 1000 empirical studies indicated that the relationship between religiosity and suicide creates several pathways, including through major risk factors such as low level of depression, hopelessness, alcohol, and substance use (Koeing, 2012). This finding implies that there is an indirect relationship between religiosity and suicidality.

In Türkiye, most of the citizens were initially (inborn) recorded as Muslim. In Muslim-majority countries, suicide is often seen as a taboo because it is banned by fate (Pritchard & Amanullah, 2007). Therefore, in countries where Muslims make up the majority of the population, there is a shortage of studies and there are challenges in systematic reporting on suicides (Lester, 2006). In addition, around 80% of the completed suicides occur in middle-low-income countries, and most of the Muslim-majority countries belong to this scale (WHO, 2023), although an overwhelming majority of around 94% of empirical studies were conducted in high-income countries (Bantjes et al., 2016). Therefore, the impact of religiosity on suicidality remains a topic of profound intrigue and scholarly interest, especially in Muslim-majority countries.

Gender is another peculiar variable that has been associated with suicidal thoughts. Known as the 'Gender paradox in suicide' (Canetto & Safinofsky, 1998), females tend to exhibit non-fatal suicidal behaviors such as suicide ideation and attempts, while males tend to engage in fatal suicidal behaviors such as suicide attempts. One potential explanation for this phenomenon is that although men are more likely to suffer from externalizing disorders, women are more prone to experience internalizing disorders. Another potential reason could be that males tend to perceive that expressing emotions and vulnerabilities points out a state of powerlessness, desperation, and misery (Möller-Leimkühler, 2003). Therefore, it becomes crucial to address unique challenges faced by both men and women to make efficacious intervention programs. In a meta-analysis conducted by Miranda-Mendzibal et al. (2019), it was concluded that while females bear a higher risk for suicide attempts, males are more likely to be responsible for suicide deaths. In Türkiye, similar trends were reported (Atay et al., 2012; Göktaş & Metintaş, 2019).

Within those lines, the current study aimed to investigate the effect of religiosity and gender on suicide ideation among college students. Therefore, the following hypotheses were formed:

H1: The religiosity will negatively and significantly predict suicide ideation.

H2: There will be a significant effect of gender on suicide ideation.

H3: Females will report significantly higher scores in suicide ideation than males.

METHODOLOGY

Participants

221 individuals (123 female, 55.66%) residing in five different cities in Turkey participated in the study. The age of the participants ranged from 18 to 34, with a mean of 19.66 and a standard deviation of 1.81. The mean score for individual religiousness was 16.11 (*SD* = 4.69), and it was 12.74 (*SD* = 2.98) for suicidal thoughts. More than half of the sample was recruited from the Faculty of Education (n = 163, 73.76%), followed by the Faculty of Arts and Sciences (n = 52, 23.53%) and other faculties (n = 6, 2.71%). The first-grade students consisted of 44.34% (n = 98), the second-grade students consisted of

32.13% (n = 71), the third-grade students consisted of 14.48% (n = 32), and the fourth-grade students consisted of 9.05% (n = 20) of participants. Most participants (n = 217, 98.19%) indicated that they believe in a religion, and all believers reported that they believe in Islam.

Measures

Demographic Information Form

The demographic information form prepared by the researcher was used to collect more in-depth information about the sample studied. In line with the purposes of the current study, the demographic variables of age, gender, the city resided, faculty, grade level, the status of religious belief (i.e., Do you believe in a religion?), and what religion they believe in were asked to depict a more thorough picture of the sample studied.

Individual Religiousness Scale (IRS)

Developed by Zagumny et al. (2012), the IRS is a 6-item Likert-type scale where 1 and 5 represent 'not suitable to me at all' and 'completely suitable for me', respectively. Therefore, the minimum and maximum scores that can be obtained from the scale were 6 and 30. Higher scores represent higher levels of individual religiousness. In this study, the reliability evidence was ensured by calculating Cronbach's alpha, which was found to be .89.

Suicide Probability Scale (SPS)

The scale developed by Cull and Gill (1988) to measure suicide risk is a 4-point Likert-type scale and consists of 4 subscales and 36 items in total. The scale consists of 4 subscales: hopelessness, suicidal ideation, negative self-evaluation, and hostility. The lowest and highest scores obtained from the scale are 36 and 144, respectively. High scores on the scale indicate a high risk of suicide. The scale was adapted into Turkish by Batıgün and Şahin (2018). Exploratory factor analysis and confirmatory factor analysis procedures were applied for the validity evidence. The Cronbach's alpha coefficient of the Turkish form of the scale was found to be .74. The Turkish version of SPS consisted of four subdimensions: self-perception, impulsivity, hopelessness, and suicide ideation. Within the scope of this study, only the sub-dimension of suicide ideation, which contains 7 items on a 4-point Likert-type scale (i.e., 0%, 30%, 70%, and 100%), will be used. In this study, the Cronbach's alpha coefficient was found to be .71 for the suicide ideation subscale.
