Data were collected by creating a survey package in Google Forms, which included all the instruments mentioned above. The online data collection method, held during the 2023-2024 Spring semester, was preferred because of its convenience, practicality, and ease of accessing a wider range of individuals from the targeted population. The participants were provided with information about the study's objectives and ethical considerations of anonymity, confidentiality, and the right to withdraw from the study. The only inclusion criterion was being above 18 years of age or older. No identifiable information was collected so as not to violate confidentiality.

Results

Preliminary Analysis

To conduct linear regression, several assumptions, including linearity, univariate-multivariate normality, and homoscedasticity, were checked, and no violation was observed except for multivariate normality. Seven individuals were excluded from the analysis due to the violation of multivariate normality. For the t-test, the assumptions of normality and Levene's test for homogeneity of variances were applied.

Main Analysis

A linear regression was applied using the JASP Team to test the study hypothesis (2019). Along with that, to investigate whether there is a statistically significant difference in suicidal thoughts among males and females, an independent samples t-test was utilized. To check the assumptions of the t-test, Levene's test for homogeneity of variances was applied, and the result was non-significant, F (1, 219) = .05, p >

FULL TEXTS BOOK

.05. The normality assumption was checked through skewness and kurtosis, which were found to be .03 and -1.29. Therefore, no violation has been found based on Hair et al.'s (2009) criteria.

Table 1 shows the results of linear regression analysis. The results indicated that the hypothesized regression model was significant, F (2, 218) = 31.06, $p < .05$, $R^2 = .22$. Additionally, religiosity significantly and negatively predicted suicidal thoughts ($\beta = -.46$, $p < .05$). Therefore, hypothesis 1 was supported. Gender did not have a significant impact on suicidal thoughts ($\beta = .09$, $p > .05$), although it was found that females reported relatively but not significantly higher scores in suicide ideation. Thus, hypothesis 2 was not supported. Religiosity explained 22% of the variance in suicidal thoughts. The results of the t-tests showed no significant difference between males ($M = 12.38$, $SD = 3.01$) and females ($M = 13.02$, $SD = 2.94$), in terms of their scores in suicide ideation, t (219) = 1.61, $p > .05$. For this reason, hypothesis 3 was not supported.

Table 1.

The Results of Linear Regression Analysis

	β	St. Error	t	p
gender	.09	.36	1.61	.11
religiosity	-.46	.04	-7.67	< .001*

Note: $p < .05$.

DISCUSSION AND CONCLUSION

The purpose of the current study was to investigate the effect of gender and religiosity on suicidal thoughts among a sample of university students. The predictor variables were gender and religiosity, and the outcome variable was suicidal thoughts. The findings revealed that religiosity was a significant predictor of suicidal thoughts, while gender was not.

The findings of the current study largely support the existing literature, indicating that divergent dimensions of religiosity have a protective role against suicidality. For instance, in a recent cross-sectional study conducted with 36,984 individuals, it was revealed that religiosity protects against suicide ideation and attempts after controlling the effect of various demographic variables such as age and gender (Saiz et al., 2021). In a similar vein, religiosity protects individuals against suicide ideation resulting from depression (Mosquerio et al., 2021), impulsivity (Caribe et al., 2015), and aggression (Ghossoub et al., 2022). It is well-known that religiosity is a multidimensional construct (Hayward, 2021). Some indicators of religiosity were reported to be participation in religious activities, degree of religious commitment, and importance of God in one's life. In a similar vein, suicide emerges as a multifaceted construct, encompassing suicide ideation, attempts, and completed suicides, all of which require different explanations (Klonsky et al., 2021). For instance, in a recent meta-analysis, religious affiliation and attending religious activities did not have a significant impact on suicide ideation, but religiosity has a protective role against suicide attempts (Lawrence et al., 2016).

Although the empirical evidence largely supports the buffering role of different dimensions of religiosity, it is important to understand by which means religiosity offers a protective role against suicidal behavior. With that respect, some argue that as Abrahamic religions put firm restrictions on suicide and the act is banned by fate (Gearing & Lizardi, 2008), individuals have a decreased inclination towards exhibiting suicidal behavior, including suicide ideation. Another explanation would be that religious communities offer a sense of belonging and social support (Cheng et al., 2000), the protective effect of religiosity might be an indirect one. Those studies imply that religion might prevent individuals from acting on suicidal thoughts by offering access to supportive communities, influencing beliefs and attitudes toward suicide, providing a source of hope, and providing alternatives for restructuring the

FULL TEXTS BOOK

suffering. Therefore, further research could delve into those mechanisms of how religiosity works within this relationship.

It is important to consider the complex relationship between religiosity and suicide, as the literature indicates that in some situations, religiosity is less likely to protect individuals against suicide (Zhao et al., 2012; Zhang et al., 2006). For instance, in some cases, adhering to a minority religion, being abandoned by the community or feelings of guilt as a result of religious doctrines might lead to social isolation (Lawrence et al., 2016). Within the scope of this study, all of the participants reported that they belonged to a majority religion. Therefore, one reason why religiosity has a protective role could be related to the fact that all participants did not suffer from feelings of exclusion as a consequence of any minority religion they believe in.

As previously argued under the term of 'gender paradox in suicide', the results of t-tests were in line with the literature indicating that women are more prone to engage in non-fatal suicidal behavior, such as suicide ideation (Canetto & Safinofsky, 1998), although the difference was not significant at the pre-determined probability level within the scope of this study. One reason behind this result could be the result of differences in the help-seeking behavior of men and women because females are more likely to seek help and share their thoughts, while men only seek help when they are in crisis (Freeman et al., 2017).

LIMITATIONS

Some limitations of the current study are worth mentioning. As the correlational method was used, causal inferences cannot be made. This limitation might partly be overcome by using experimental and longitudinal designs. The second limitation is related to generalizability, as the sample consisted of college students residing in two cities. Therefore, it is not possible to generalize the findings to college students in Turkey. Furthermore, as college students were the main data source, the findings cannot be generalized to other developmental periods. To overcome this, the same study can be designed using different samples. In addition, using self-report instruments might have invited social desirability bias.

MUSICAL IMPROVISATION, TURKISH MUSIC, AND SOCIAL STRUCTURE: A PHILOSOPHICAL DISCUSSION

Doç. Dr. Gönenç Hongur,
Van Yüzüncü Yıl Üniversitesi, Türk Müziği Devlet Konservatuvarı
ORCID NO: 0000-0002-5912-5460

ABSTRACT

Musical improvisation, the spontaneous creation of music within or beyond established frameworks, serves as a profound mode of artistic expression and social interaction. In Turkish music, improvisation plays a dormant yet powerful role, surfacing as a critical element of personal and cultural identity through practices such as taksim (instrumental improvisation) and gazel (vocal improvisation). This paper examines the philosophical dimensions of improvisation in Turkish music and its interplay with social structure.

The dormant role of improvisation in Turkish music reflects a balance between tradition and individual expression, where musicians navigate and renew cultural norms. This contrasts with the overt and communal nature of improvisation in other cultures. For example, in Indian classical music, raga improvisation emphasizes spiritual and emotional exploration, reinforcing social hierarchies within the guru-shishya (teacher-student) tradition. West African drumming involves communal improvisation that strengthens social bonds and collective identity. In jazz, improvisation signifies individual freedom and innovation within a collaborative context, often challenging and redefining social boundaries.

The paper also explores how improvisational training impacts various forms of intelligence. Emotional intelligence is developed through the expressive and responsive aspects of improvisation, fostering empathy and self-awareness. Social intelligence benefits from the collaborative nature of musical interaction, enhancing communication and teamwork skills. Cultural intelligence is cultivated by engaging with and internalizing diverse musical traditions, promoting respect and appreciation for cultural diversity. Creative intelligence is stimulated by the necessity to innovate within or beyond established frameworks, enhancing problem-solving abilities and original thinking.

The purposes of this paper are to: (1) analyze the dormant yet significant role of improvisation in Turkish music and its reflection of social structures; (2) compare the pedagogical approaches to improvisation across different cultures and their impact on emotional, social, cultural, and creative intelligence; (3) investigate the philosophical underpinnings of improvisational practices and their influence on individual and collective identities; and (4) explore the potential transformative effects of improvisational training on personal development and community cohesion.

Keywords: Musical Improvisation, Turkish Music, Social Structure, Cross-Cultural Comparison, Music Pedagogy.

INTRODUCTION

Musical improvisation is simply defined as the art of spontaneously creating and performing music or the art of composing on the fly. In other words, the improvising musician or musicians create and compose on the fly, consciously or unconsciously, drawing on a lifetime of theoretical knowledge and accumulated aural memories. Of course, learned theoretical knowledge and accumulated aural memory here means that there is a limit to the spontaneity of improvisational practice (Sawyer, 2006). In this respect, it is not a completely unproblematic concept; it is open to discussion, but thinking about what improvisation is not can be helpful at this point. In this respect, music with a notation, where the performer plays what has already been written by a composer or himself, is not considered improvisation. Nor can improvisation be defined as just any musical performance that is not performed from a notation, because although unwritten, there are songs in many musical traditions that are

FULL TEXTS BOOK

structured and have reached a certain standard in terms of the way they are performed. The performance of such songs, in which the performer and the listener are aware of the progression, also does not fall under the category of improvisation. Therefore, improvisation is a form of performance that has a certain degree of spontaneity, where there is very limited predictability about what will happen in the musical field and is shaped by the instant decisions of the performer or performers.

WORLD MUSIC CULTURES AND IMPROVISATION

Improvisation, which anthropologists and ethnologists today tend to view as a profound form of artistic expression and social interaction, still plays a very important role in a large part of the world's musical cultures and is recognized as a dynamic and integral component of musical expression, cultural identity and social interaction (Nettl, 1998). For example, in the music of Pakistan, Bangladesh and especially in the music of northern India, known as Hindustani as a cultural region (Indian Classical Music), performance is based almost entirely on improvisation. The idea that a piece of music is something that cannot be changed and must always be performed in the way the composer intended does not really apply in the music of this region (Clayton, 2000). For example, from the point of view of an Indian musician whose job it is to improvise within certain melodic and rhythmic rules, the way any piece of western music is performed is uninteresting because it takes away the opportunity to be creative, as it requires them to perform an existing piece exactly as it is notated and as it has been played many times before. In this musical culture it is very hierarchical in terms of the high level of authority of the master teacher called guru, but here improvisational performance is seen as a spiritual and emotional exploration that reflects the musician's inner journey and mastery of the art form. At the same time, the fact that composition is a form that can only be performed once can be considered one of the factors that increase musical diversity.

In Africa, especially in West African drumming traditions, improvisation is a collective activity that strengthens social bonds and collective identity. Drumming ensembles often include question-and-answer patterns in which the lead drummer improvises, and the rest of the ensemble responds, creating a dynamic and interactive performance (Locke, 1998). Again, within today's social science paradigm, anthropologists often state that this form of improvisation reflects social structure by emphasizing collaboration, communication and shared cultural values.

Although it has lost its effectiveness today, improvisational composition was an important part of formal music education in Europe, especially in the early modern era. For example, in music schools and conservatories in Naples in the 17th and 18th centuries, students were required to spend three years memorizing numerous melodies, known as *solfeggi,* to build the melodic aural memory necessary for future keyboard improvisation and composition lessons. These memorized melodies were transferred to improvisation and composition training through keyboard-based exercises called *partimenti* (Sainsbury, 1824).

Interestingly, a similar method, which once formed the basis of music pedagogy in western Turkey, is still used today in eastern Turkey, in Iran. Iranian Classical Music today, where the strict role of memorization is still emphasized, is largely improvisational and the compositional activity is based on the memorization by the musicians of short pieces or melodies (in Italy they were called *sofeggi*), called *gushe*, ranging from 15 seconds to two minutes in length, as in 17th and 18th century Italy. A song played in a modal system called *dastgah* begins with an introductory *gushe*, and then improvises in a specific order, moving through various *gushe* evoking different moods. Since musical performance is based on the idea of recreating tradition in a unique way, musicians never perform from sheet music because each performance is considered a spontaneous expression by the musician.

FULL TEXTS BOOK

In North America, jazz is a performance genre and a way of producing music that is dominated by improvisation from beginning to end, and in fact, it is this aspect that has managed to arouse curiosity all over the world and has become almost representative of world music today. In jazz music, which emerged in African-American communities and became a symbol of cultural resistance and creativity, musicians often develop motifs or short musical phrases during their solos, often use chord changes and chord extensions to add color and complexity to their performances, use a question-and-answer technique that creates a sense of dialogue by presenting musical phrases to each other as a way to create interaction and spontaneity within the group, and place accents on parts of the music that are not expected to be emphasized (syncopation), they can construct their improvisations by using multiple rhythms in which several contradictory rhythms are played at the same time, creating rhythmic variations aimed at creating a sense of surprise and excitement, exchanging solos between musicians every 4 or 8 measures to encourage listening and responding, spontaneously developing and structuring a theme during their solos, or applying spontaneous composition techniques that allow complete freedom to create music without following traditional harmonic or rhythmic structures, and many other techniques (Johnson-Laird, 2002). These improvisational techniques are an integral part of jazz, and according to music anthropologists, improvisation in jazz music allows musicians to express their individuality while contributing to the collective sound (Berliner, 1994). In this sense, jazz improvisation is interpreted as a way of balancing structure and freedom, tradition and innovation, individual expression and group interaction.

Jazz, which spread from North America to the rest of the world, led to the revival of musical improvisation, which had lost its importance in the pedagogical system in Europe, as a performance method in this continent after the second half of the 20th century. On the other hand, this improvisational wind blowing from the west, the east and across the Mediterranean has not yet reached the world of music production in Turkey and has not yet been felt enough to trigger the improvisational culture that already existed in Turkey's historical and cultural geography but was in a kind of hibernation.

IMPROVISATION IN TURKISH MUSIC

In classical Turkish music, improvisation has historically played a critical role through forms such as taksim (instrumental improvisation) and gazel (vocal improvisation). These practices have historically allowed musicians to delve deeper into the maqamal system and express their individuality, while providing a space for creativity and innovation. Despite this, the importance given to improvisation in contemporary Turkish music education has greatly diminished.

ALAN LOMAX AND CANTOMETRICS

This research assumes that the concept of musical improvisation can lead us to some important insights into the nature of individual action, social action and creativity, and aims to understand and generate ideas about the interaction between the social structure and the actual and potential role of improvisation in Turkish music. Another point of departure for the research is Alan Lomax's (musician, folklorist, ethnomusicologist, archivist, author, academic, political activist, oral historian and filmmaker) 1960s global project called 'Cantometrics', which defines music as a social behavior. According to Lomax, song is the measure of culture, and with his Cantometrics project, he argues that songs and song performances are consistent with performances in social relationships. According to him, the most popular song style of a culture gives a clear idea of the social structure and accepted behaviors of that culture.

Lomax's method begins by gathering samples from 400 different cultures from all over the world, collected by anthropologists and folklore researchers, of 10 different song performances that are considered to best represent that culture. Then a group of experts, trained by him, analyzes each song

FULL TEXTS BOOK

and performance sample according to 36 different parameters: melodic form, volume, ornamentation, vocal quality, rhythmic structure, choral and orchestral organization, the way the performers come together, lyrics, etc. As the table roughly shows, he categorizes the most popular song styles of the culture in terms of melodic form, loudness and softness, ornamentation, rhythmic structure, choral and orchestral organization, the way the performers come together, lyrics, etc. Using statistical analyses of this data, he generates theses about song structures and the social structures of the community that produces them. For example, he argues that the narrower and smaller the intervals between pitches in the music of a community, the more social stratification there is in that community. He bases this hypothesis on the following point: In the case of frequent references to higher and lower statuses, interpersonal interaction becomes more difficult and restricted, and therefore much more careful and small steps are taken. Lomax's ambitious and controversial method, which he put forward as a universal theory for understanding music and its relationship with society, was not well received in the late 1960s, as comparative methods were being abandoned and the idea that each culture had its own unique evolution was gaining ground. For this reason, in an academic environment dominated by research on the profound differences even within each culture, Lomax's method was criticized for being too generalizing.

Although ethnomusicologists and music anthropologists today do not necessarily agree with Lomax's view that the relationship between song style and social style is predictable, they do believe that music is a social behavior and that the relationship between music and other social behaviors can be demonstrated through rigorous ethnographic study. For example, the performance structure of North Indian classical music is in some ways like the hierarchical social system (caste system) of Indian society. In the musical tradition, some vocal singers come from a higher social group, while instrumental accompanists come from a lower social group. On the one hand, the soloist makes the concert arrangements and controls the organization and direction of the performance, on the other hand, he or she usually showcases his or her own talent and determines the remuneration of the accompanists.

However, after Lomax's death in 2002, there has been a revival of interest in Cantometrics and the possible parallelism between societies' musical practices and their social structures, and new kinds of studies have emerged. This study is one of them, and its main argument assumes that if social structure feeds and shapes music, music can feed and shape social structure, and in this context, it specifically examines the concept of musical improvisation. Despite the general acceptance that the relationship between social structure and musical improvisation is complex and multifaceted, recent studies on the possible relationships between musical improvisation and social structure, based on findings from various music workshops, case studies and projects, frequently mention the main effects of musical improvisation such as initiating constructive dialogues between people, creating an inclusive, heterogeneous approach, countering the dichotomy of 'inclusion' and 'exclusion' and facilitating collaboration processes, facilitating intercultural dialogue and fostering a sense of social inclusion (Schroeder et al. 2019).

MUSICAL IMPROVISATION AND SOCIAL STRUCTURE

This research, especially in the light of these studies, suggests that the relationship between musical improvisation practices and training and social structure in any society can be addressed under 4 main headings. For example, in many cultures, musical improvisation is transmitted through oral traditions and master musicians teach apprentices. This structure both reflects and reinforces existing social structures. On the other hand, improvisation often reflects the cultural values and social realities of a community (Cobussen, 2008). For example, improvisational forms in African American jazz express themes of freedom and flexibility, while improvisation in Indian classical music often explores spirituality and emotional depth. The research examines these points under the heading 'Cultural

FULL TEXTS BOOK

Context and Tradition'. On the other hand, in societies with hierarchical structures, the role of improvisation can be tightly controlled. For example, in classical Indian music, on the one hand improvisation is encouraged, but on the other hand strict adherence to rules within a system of melody and rhythm that reflects respect for tradition and authority is expected. In more egalitarian societies, improvisation allows all participants to contribute equally to the performance. This is seen in some folk traditions and in genres such as jazz, where collective improvisation often becomes a dialog between musicians. In terms of community and identity, improvisation can strengthen community bonds by enabling members to participate in a shared cultural practice. This is often seen in West African drumming practices where communal improvisation reinforces social cohesion and cultural identity. Improvisation also allows individuals to express their unique identities within a social context. In this improvisational practice, seen in many musical traditions, personal expression and individual creativity are balanced between collective performance and group dynamics. Finally, improvisation can be a vehicle for social change by challenging and transforming traditional practices. Musicians who innovate within or beyond established norms can influence broader cultural shifts. Also, as societies change, so do musical practices. Improvisation helps music adapt to new social realities through the incorporation of new technologies, blending different musical traditions or responding to political and social movements.

CONCLUSION: REDISCOVERING IMPROVISATION IN TURKISH MUSIC

Under these titles, when we consider how social norms, values and hierarchies shape musical practices and how they can be shaped by musical practices, the possible results of systematically reintegrating improvisation into Turkish music performance practices and education can be summarized as follows: The awakening of improvisation, which has been dormant in Turkish music, may mean the reawakening of the structure and values of society. Music is an important part of social and religious gatherings, and improvisation adds a personal touch and a layer of authenticity to these events. This reflects the social hierarchy where respect for tradition coexists with individual expression and innovation. Improvisation in Turkish music, as in many other musical traditions, is closely linked to notions of authenticity (Blum, 2001). The ability to improvise effectively within the framework of traditional forms is seen as a sign of a musician's deep understanding and mastery of the musical system. In this respect, this interplay between improvisation and authenticity may reignite the tension between preserving tradition and encouraging innovation. Improvisation training in Turkish music has profound transformative effects on both musicians and listeners. Musicians develop a deep understanding of the cultural and emotional nuances of music, developing a strong sense of identity and belonging. Listeners, in turn, experience a sense of connection and continuity with their cultural heritage. The effects of improvisation training on emotional, social, cultural and creative intelligence can have transformative potential for both individuals and communities. The practice of improvisation, which allows musicians to blend elements from different regional musical styles, can have significant potential to reflect the cultural, ethnic, religious and linguistic diversity in and around Turkey and the rich cultural heritage of the geography, enriching and enhancing intercultural dialogue.

ENDÜSTRİ ALANLARININ YENİDEN KULLANIMINA YÖNELİK BİR ÇALIŞMA : ZONGULDAK ÖRNEĞİ

Mertay ERSOY
Karabük Üniversitesi, Lisansüstü Eğitim Enstitüsü, Mimarlık Anabilim Dalı
Doc. Dr. Çiğdem BOGENÇ
Karabük Üniversitesi, Lisansüstü Eğitim Enstitüsü, Mimarlık Anabilim Dalı

ÖZET
Endüstriyel alanların endüstri mirasına dönüştürülmesi, kültürel değerlerin korunması ve gelecek nesillere aktarılması açısından hayati önem taşır. Bu dönüşüm, geçmiş sanayi devrimlerinin izlerini taşıyan yapıların yaşatılmasını sağlar. Ayrıca, turistik cazibe merkezleri olarak kullanılarak bölgeye turizm geliri getirir ve ekonomik canlandırmaya katkı sağlar. Zonguldak, Türkiye'nin en eski kömür madenciliği bölgelerinden biridir ve endüstriyel tarih açısından önemli bir mirasa sahiptir. Çalışma, bu alanların yeniden kullanımıyla ilgili stratejileri araştırarak, bölgenin ekonomik ve sosyal gelişimine katkıda bulunmayı amaçlamaktadır. Zonguldak'taki endüstriyel mirasın korunması ve sürdürülebilir bir şekilde değerlendirilmesi şehrin kalkınması ve gelişmesi için önemli bir adımdır. Zonguldak'ın endüstriyel mirasının korunması ve değerlendirilmesi, yerel halkın katılımı ve desteklenmesi ile daha etkili hale gelebilir. Bu alanların yeniden kullanımı, atıl durumda olan alanların ekonomik ve sosyal açıdan yeniden canlanmasını sağlayarak toplumun kalkınmasına da destek olmaktadır. Bu geçmişin hatıralarını canlı tutmanın yanı sıra turistik ve kültürel cazibe merkezleri oluşturarak bölgeye turist çekme potansiyelini artırır. Ayrıca, bu tesislerin yeniden kullanımıyla yeni iş imkanları yaratılabilir ve bölgenin ekonomik canlanmasına katkı sağlanabilir. Zonguldak'ın endüstriyel mirasını korumak ve gelecek nesillere aktarmak için yapılan çalışmaların etkisi ve başarısı, hem tarihi ve kültürel zenginliğin korunmasına hem de bölgenin turizm potansiyelinin artırılmasına katkı sağlayabilir. Bu çalışmaların sürdürülebilirliği, Zonguldak'ın endüstriyel mirasının uzun vadeli korunmasını sağlayacaktır.
Anahtar Kelimeler: Zonguldak, Endüstriyel Miras, Sürdürülebilirlik, Sanayi

ABSTRACT
Transforming industrial areas into industrial heritage is vital for preserving cultural values and transferring them to future generations. This transformation ensures that structures bearing the traces of past industrial revolutions are kept alive. Additionally, they are used as tourist attractions, bringing tourism income to the region and contributing to economic revitalization. Zonguldak is one of the oldest coal mining regions in Turkey and has an important heritage in terms of industrial history. The study aims to contribute to the economic and social development of the region by investigating strategies for the reuse of these areas. Preserving and sustainably utilizing the industrial heritage in Zonguldak is an important step for the development and development of the city. Preserving and utilizing Zonguldak's industrial heritage can become more effective with the participation and support of local people. The reuse of these areas also supports the development of society by ensuring the economic and social revitalization of idle areas. In addition to keeping memories of the past alive, this increases the potential to attract tourists to the region by creating tourist and cultural attractions. Additionally, by reusing these facilities, new job opportunities can be created and contribute to the economic revitalization of the region. The impact and success of the work carried out to preserve Zonguldak's industrial heritage and transfer it to future generations can contribute to both preserving the historical and cultural richness and increasing the tourism potential of the region. The sustainability of these works will ensure the long-term preservation of Zonguldak's industrial heritage.
Keywords: Zonguldak, Industrial Heritage, Sustainability, Industry

GİRİŞ

İnsanlar, yaşamları boyunca çeşitli nedenlerle bulundukları yerden başka yerlere taşınmışlardır. Bu hareketler bazen bir gereksinimden, bazen de merak ve keşif arzusundan, yeni yerler görme, bu yerler hakkında bilgi edinme ve belki de yeni yerler keşfetme isteğinden kaynaklanmıştır (Varlıklı 2023). Bu tür geziler ve seyahatler zamanla turizm olarak adlandırılmaya başlanmış ve niteliklerine göre çeşitli türlere ayrılmıştır (Uzun 2009).

Turizm sektörü birçok ülkede olduğu gibi Türkiye'de de işsizliğe, cari açığa ve diğer ekonomik sorunlara çözüm olduğu için ilgi duyulan sektörlerden biri haline gelmiştir Varlıklı 2023). Diğer ülkelere kıyasla Türkiye, bulunduğu coğrafi konumu, doğal kaynakları, tarihi yapısı ve aynı anda farklı iklim çeşitlerini ülke içerisinde barındırması nedeniyle turist çekme potansiyelinin en yüksek olduğu ülkeler arasına girmektedir (Aslan, 2014: 363-372). Günümüzde, insanların isteklerine, zamanlarına, ilgi alanlarına, kişiliklerine ve yaşlarına göre çeşitli turizm alternatifleri gelişmektedir. Turizmin çeşitlenmesi, Türkiye'deki mevcut ve gelecekte turizme açılacak alanların, doğal güzelliklerin değerlendirilmesi açısından büyük önem taşımaktadır. Bu temel hususlar etrafında, alternatif turizm kavramının anlamı duruma göre değişiklik göstermektedir. (Ulusan 2009).

Sanayi Devrimi'nin başlangıcı olarak kabul edilen 18. yüzyılda İngiltere'de başlayan ilerlemeler, kısa sürede dünyaya yayıldı. Ancak, 20. yüzyılın ikinci yarısından itibaren başlayan çevrecilik hareketi, eski sanayi tesislerinin çevreyi kirletme eğilimlerini azaltacak modern tesislere yer açmaya yönlendirdi. Bu yenilikçi hareket, birçok üretim tesisi ve fabrikanın kapanmasına neden oldu, ancak aynı zamanda daha sürdürülebilir üretim yöntemlerinin benimsenmesine de öncülük etti. (Ćurčić ve ark., 2015).

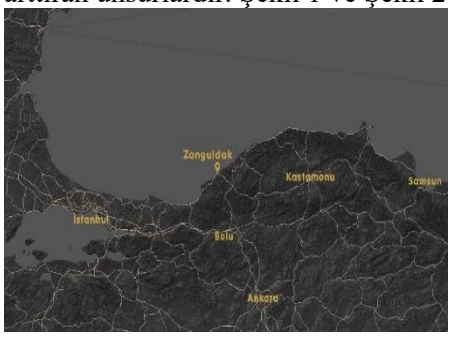
Endüstriyel miras, tarihi, teknolojik, sosyal, mimari ve bilimsel açıdan değer taşıyan endüstriyel kültür kalıntılarından oluşur. Bu kalıntılar, binalar ve makineler, atölyeler, imalathane ve fabrikalar, maden ocakları, işleme ve arıtma tesisleri, depo ve kilerler, enerji üretim, nakil ve kullanım alanları, taşıma altyapıları, çeşitli tarzlarda inşa edilmiş konutlar, ve endüstriyle ilgili sosyal etkinlikler için kullanılan ibadet ve eğitim yerleri olarak tanımlanabilir (TMMOB, 2006; Elhan, 2009:12).

Alternatif turizm faaliyetlerinden biri olan endüstriyel miras turizmi, atıl durumdaki endüstriyel varlıkların yeniden canlandırılması ve turizme kazandırılmasıyla sürdürülebilir turizm düşüncesini merkezine alan bir turizm türüdür (Xie, 2015). Son dönemde, endüstriyel miras alanlarına artan ilgiyle birlikte, endüstriyel miras turizmi önemli bir turizm şekli haline gelmiştir (Kaya & Yılmaz, 2018). Bu akım, kısa süreli yoğun turistik faaliyetlerin ortaya çıkmasına neden olurken, taşıma kapasitesinin aşılması gibi durumlar sebebiyle doğaya ve yenilenemeyen kaynaklara ciddi zararlar verdiği de zamanla anlaşılmıştır. Bu nedenle, destinasyonların taşıma kapasitesini aşmayan ve yıl boyunca devamlılık arz eden turizm faaliyetlerinin hedeflendiği sürdürülebilir turizm türlerine yönelik bir eğilim oluşmaya başlamıştır (Albayrak, 2013; Hacıoğlu & Avcıkurt, 2008).

Bu kapsamda, endüstriyel kentlerin turizm yoluyla yeniden canlandırılma olanaklarının tartışıldığı (Mansfeld, 1992), bu destinasyonların pazarlama politikalarına odaklanarak şehirlerarası kıyaslamaların yapıldığı (Bramwell & Radwing, 1994), endüstriyel turizm potansiyelinin sürdürülebilir turizm çerçevesinde ele alınarak spesifik alanlarda değerlendirmelerin yapıldığı ve endüstri mirasının özelliklerinin geliştirilmesine yönelik çalışmaların ağırlık kazandığı gözlemlenmektedir (McMahon, 1998; Pozo & Gonzalez, 2012).

MATERYAL ve METOT

Materyal



Zonguldak; Türkiye'nin Batı Karadeniz Bölümünde, Karadeniz'e kıyı olan ve Türkiye'nin sanayileşme sürecinde oldukça önem arz eden bir kenttir..

Zonguldak'ın endüstriyel tarihi, 1829'da taş kömürünün bulunması ve yaklaşık 1838 yıllında madencilik çalışmalarının başlamasıyla şekillenmiştir. Zengin taş kömürü yataklarının bulunması, demir-çelik endüstrisi ve madencilik faaliyetlerinin büyük ölçüde gelişmesini sağlamıştır. Zonguldak'ın köklü

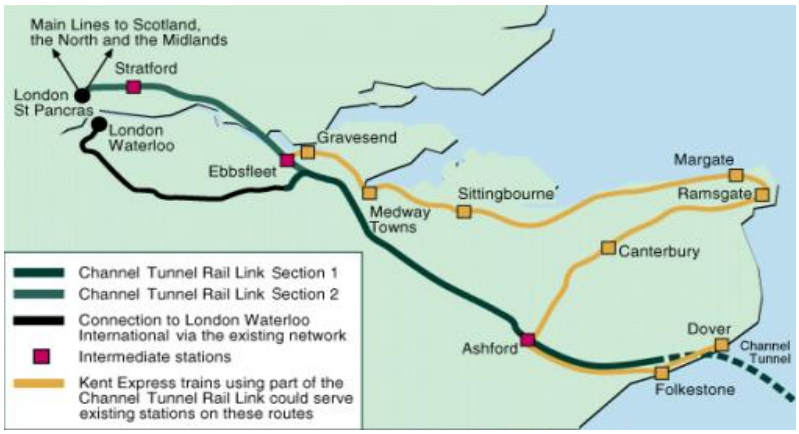
FULL TEXTS BOOK

endüstriyel geçmişini, kömür havzaları, kömür hazırlama ve yıkama tesisleri, yeraltı siloları, demir yolları, trenler, konveyör bantlardan oluşan ulaşım ağları, limanlar, maden ocakları, sanayi yapıları ve çeşitli üretim alanları açıkça ortaya koymaktadır (Köşker & Özbey, 2022).

Çalışma alanı Batı Karadeniz'de Bölgesinde bulunan Zonguldak ilinde, Zonguldak il merkezinde yer alan 'Lavuar Alanı' , 'Üzülmez Maden Ocağı' ve 'Asma Maden Ocağı' olarak görülmektedir. Lavuar alanı ise atıl alan olarak kalmaktadır. Bu kapsamda şehir merkezinde yer alan Üzülmez ve Asma ocakları aktif olarak çalışmaktadır. Şehir merkezinde yer alan bir diğer alan olan Lavuar Alanı atıl bir halde yer almaktadır. Bu seçilen alanların şehrin merkezinde bulunması, kolay erişimi olması, endüstriyel tarihi yapıların bulunması, yaşam alanlarına yakın olması ve turizm potansiyelinin olması; alanın önemini arttıran unsurlardır. Şekil 1 ve Şekil 2'de çalışma alanının konumu görülmektedir.

Şekil 1.

Şekil 2.



Metot

Çalışma alanı içerisinde yerinde gözlem ve araştırmalar yapılmıştır. Konu hakkında literatür taraması yapılarak bulgulara ulaşılmıştır. Ayrıca uzmanlar (mimar, mühendis, sanat tarihçi, şehir plancı)ile yüz yüze görüşmeler gerçekleştirilmiştir.

ARAŞTIRMA VE BULGULAR

1. Londra Kings Cross Bölgesi

İngiltere/London'da bulunan King's Cross bölgesinin 1850 yılında inşa edilen yapılar tarihi kömür depoları olarak hizmet vermekteydi. The Kings Cross/St. Pancras bölgesi, on dokuzuncu yüzyılın ortalarından beri Londra'nın merkezinden İngiltere'nin bir demiryolu ulaşım merkezi olmuştur. Manş Tünelinin duraklarından biri olan Kings Cross Demiryolu Durağı, yüksek hızlı demiryolu bağlantısı Avrupa Kıtasını Londra'nın merkezine bağlamak için 2001-2007 yılları arasında inşa edilmiştir. Yüksek hızlı demiryolu bağlantısı ile bölgenin yoğunluğu artarak bir kentsel dönüşüm projesine ihtiyaç duyulmuştur. Bölgenin eski itibarını kazanması ve şehir içinde kalan bir endüstriyel, tarihi mekân olan alanın yeniden insanların kullanımına kazandırılması için 2008 senesinde dönüşümüne karar verildi (Haynes & Savage, 2006).

Görsel 3. Londradan Manş Denizine Tren Hatları

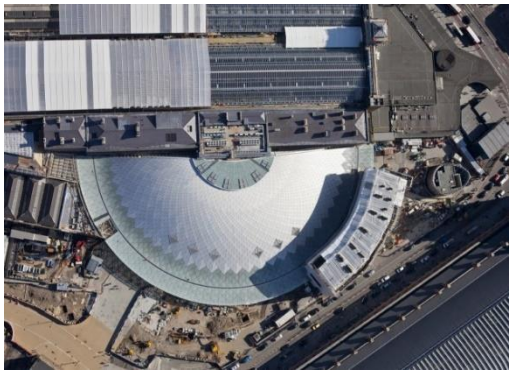
Görsel 4. Kings Cross Bölgesi

Görsel 5. Yerleşim Planı

King’s Cross Dönüşüm Projesi, Avrupa'da gerçekleştirilen en büyük ve en kapsamlı dönüşüm projelerinden biri olarak tanıtılmıştır. Proje, adını uygulandığı bölgeden almaktadır. Kentsel Dönüşüm Projesi'nin sloganı, "KX'a mümkün olan en iyi geleceği vermek" olarak belirlenmiştir(Öztürk 2010).



Görsel 6. Kings Cross Kentsel Dönüşüm Projesi

Sürecin uzaması , projenin sürekli değişmesi üzerine paranın, zamanın ve iradenin olduğu gelişmekte olan ülkelerde görülen tamamlanmamış inşaatları da hatırlatıyorlar. Projenin devam etme süresi çoktan doldu. Lakin proje yönetici firmalarının gücü İngiltere otoritesi ve onlar için çok büyük. Gelişmekte olan dünyaysa, geç modernizmin Avrupa toprağı için fazla otoriter olduğu düşünülen büyük planlarıdır (Ferguson, 2016).

FULL TEXTS BOOK

Yenilenmiş alanlar, yerel topluluğun ve ziyaretçilerin sosyal etkileşimlerine ve etkinliklerine ev sahipliği yapar hale gelmiştir. King's Cross bölgesinin endüstriyel dönüşümü, Londra'nın modern bir sembolü haline gelmiş ve şehirdeki diğer bölgeler için bir ilham kaynağı olmuştur. Bu dönüşüm, eski endüstriyel alanların yeniden canlandırılmasının ve şehir yaşamının çeşitlendirilmesinin mümkün olduğunu göstermiştir (Holgersen, 2007).

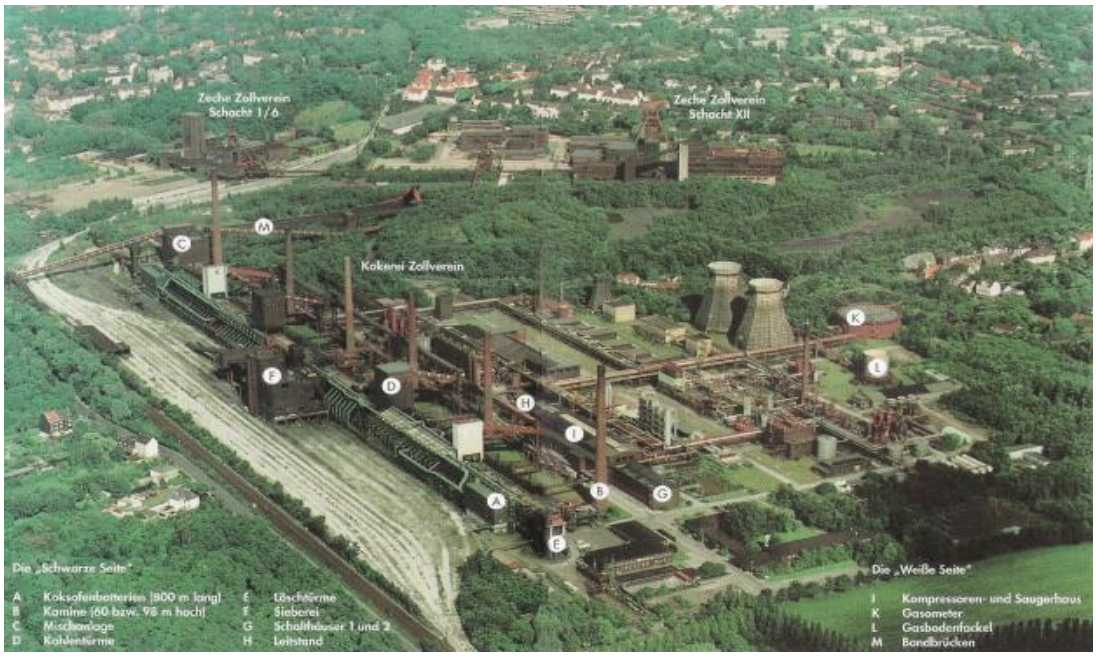
2. Ruhr Bölgesi

18. yüzyıl sanayi devrimi sonrasında hızlı bir şekilde gelişen Ruhr Bölgesi'nde bu süreç boyunca kömür alanları, madencilik ve çelik üretimi baş aktör olarak ön plana çıkmaktadır. Endüstriyel alanlar aynı zamanda Almanya için gelecekte ortaya çıkacak sorunlardan dolayı etkilerini çok hissedeceği göç gibi bir takım oluşumları da beraberinde getirmiştir. 19. yüzyıl boyunca Ostflucht göçü olarak bilenen Polonya başta olmak üzere Baltık kıyılarından (o dönem Batı Prusya) ve Silesia Bölgesi'nden (Çekoslovakya yakınları) aldığı işçi göçü 500.000 civarında olan nüfusunun 3,8 milyona yükseltmiştir (Haznedar 2008).

Görsel 11. Ruhr Sanayi Bölgesi / Essen Uydu Görüntüsü

FULL TEXTS BOOK

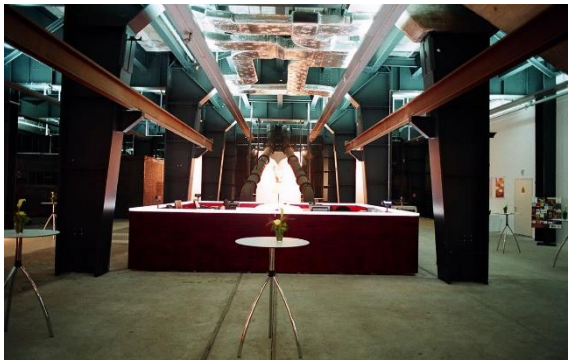


Essen kentinin kuzeyinde bulunan Zeche Zollverein, büyük ve işlevini yitirmiş bir kömür işleme endüstriyel kompleksidir. 100 hektarlık bir alanı kaplayan bu yapılar, 1847'de üretime başlamış ve büyük kömür kuyularını içermektedir. 1986 yılında son kömür ocağının kapanmasıyla birlikte, kompleks faaliyetlerine son vermiştir.

Maden kuyuları ve tesisleri, ana kok kömürü işleme tesisi, kömür siloları ve işçi yerleşkeleriyle 19. ve 20. yüzyıllarda kömürle faaliyet gösteren endüstrinin önemli kalıntılarından biri olan Zeche Zollverein, kömür ve çelik endüstrisinin hem sosyoekonomik hem de estetik açıdan belirleyici olduğu bir dönemi temsil etmektedir. Bu kompleks, bölgedeki kültürel dönüşümün önemli bir sembolü olarak günümüzde varlığını sürdürmektedir (Can et al., 2022)

Görsel 12. Zeche Zollverein Sanayi Tesisi Uydu Görüntüsü

Maden kuyuları ile Kokerei Zollverein bölümleri bu dönüşüm çalışması kapsamında ele alınan Schupp ve Kremmer'in imzasını taşıyan dönüşüm projesi ise Rem Koolhaas'ın master planı çerçevesinde hayata geçirilmiştir. Aynı zamanda alan içerisinde fabrika yapısının dışında yeni yapılar da kurgulanarak eğitim işlevinin de projeye dâhil edilmesi sağlanmıştır. Bu yeni eğitim yapıları arasında Avrupa'nın en iyi mimarlık okullarından biri olarak gösterilen Sanaa'nın tasarladığı Zollverein Okulu da bulunmaktadır (Haznedar 2008).



Görsel 13. Zeche Zollverein Endüstri Alanı Planı

FULL TEXTS BOOK

Zeche Zollverein kompleksi, kendisi başlı başına bir müze olmasının yanı sıra, içinde barındırdığı okul ve eğitim yapıları, sergi salonları, ofisler, restoranlar ve kültür merkezleri ile tarihle iç içe geçmiş bir ortam sunmaktadır. Bu rekreatif kullanım doğrultusunda oluşturulan yapılar, sadece bölgeye gelen ziyaretçiler için değil, aynı zamanda bölge sakinleri için de sıkça ziyaret edilen bir alan haline gelmiştir. Bölge, eski endüstriyel alanların rehabilite edilmesi ve yeşil alanlara dönüştürülmesi yoluyla çevresel iyileştirmeler yapmıştır. Ayrıca, yenilenebilir enerji kaynaklarına yönelik yatırımlar da artmıştır. Bu dönüşüm süreci, Ruhr Bölgesi'nin endüstriyel geçmişini geleceğe taşımayı ve bölgenin ekonomik ve sosyal yapılarını yeniden şekillendirmeyi amaçlamaktadır. Bölge, kültürel zenginliği, tarihi mirası ve yenilikçi yaklaşımıyla endüstriyel dönüşümün başarılı bir örneği olarak kabul edilmektedir (Dağ & Özberk, 2012).

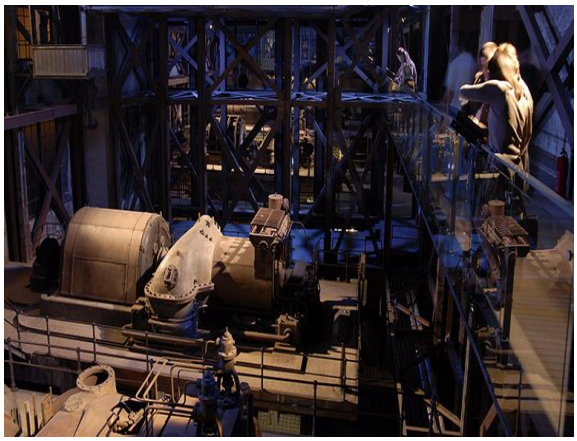
3. Silahtarağa Elektrik Santrali

1980'lerin sonlarına doğru boş kalarak kaderine terk edilen Silahtarağa Elektrik Santrali'nin bir Enerji Müzesine dönüştürülme uğraşı, 1990lı yıllarda Eyüp Belediyesi vasıtasıyla başlatılmıştır. Kültür Bakanlığı İstanbul I Numaralı Kültür ve Tabiat Varlıklarını Koruma Kurulu, 2532 sayılı ve 6.3.1991 tarihli kararıyla santral yapılarının tescil edilmesine ve koruma kapsamına alınmasına karar vermiştir. Bölgenin endüstri müzesi işlevi görmesi amaçlanmış, Eyüp Belediyesi'nin 10.01.2002 tarihli Kültür Tesisi (Endüstriyel Müze, Teknoloji ve Bilim Merkezi) önerisi İstanbul Büyükşehir Belediye Meclisi tarafından kabul edilmiştir



Görsel 20. Silahtarağa Elektrik Santrali, Haliç

2004 yılında Türkiye Cumhuriyeti Enerji ve Tabii Kaynaklar Bakanlığı tarafından 20 yıllığına İstanbul Bilgi Üniversitesi'ne tahsis edilen Silahtarağa Elektrik Santrali, 2005 yılında Koruma Kurulu onayını alarak, Birinci Ulusal Mimarlık Akımına uygun şekilde restorasyonu tamamlanmış ve 2007 yılında resmi olarak hizmete açılmıştır (Okandan, 2016, s. 40).

Silahtarağa Elektrik Santrali'nin restorasyon süreci, İstanbul Bilgi Üniversitesi'nin kurucuları arasında yer alan ve yönetim kurulunda yer alan iş insanı Oğuz Özerden tarafından başlatılmıştır (Kadak, 2005). 2004-2007 yılları arasında santral binasında kapsamlı yenileme çalışmaları yapılmış, yok olma tehlikesiyle karşı karşıya olan bu önemli yapı, İstanbul Bilgi Üniversitesi'nin katkılarıyla Türkiye'de kültür ve sanat alanında gerçekleştirilen oldukça kapsamlı dönüşüm projelerinden biri olarak insanların kullanımına sunulmuştur. Santralin açılışı 8 Eylül 2007'dir.

4. Hasanpaşa Gazhanesi

İstanbul'da modern hayatın ilk görünümü, 19. yüzyılın ortalarında, Dolmabahçe Sarayı için inşa edilen Dolmabahçe Gazhanesi ile sokakların aydınlatılmasına başlanmıştır. Kadıköy Kurbağalıdere'deki Hasanpaşa semtinde inşa edilmesi kararlaştırılan Hasanpaşa Gazhanesi, 1891'de tamamlanmış olup, İstanbul'un son gazhane yapısıdır. Gazhane yapısı, 1939 yılında İstanbul Büyükşehir Belediyesi'ne, ardından 1945 yılında İstanbul Belediyesi Elektrik Tramvay Tünel İdaresi Genel Müdürlüğü'ne (İETT) devredilmiştir (Kavut ve Selçuk, 2022).

Yaklaşık 130 yıllık tarihi ile Türkiye'nin önemli endüstriyel miraslarından biri olan bu örnek tarihi yapı, bir dönem İETT'nin otobüs garajı olarak kullanıldıktan sonra uzun yıllar kaderine terkedilmişti. Ancak,

FULL TEXTS BOOK

yıllar boyu süren kamu mücadelesi ile kurtarılan yapı, detaylı bir restorasyon sürecine tabi tutularak 9 Temmuz 2021 tarihinde İstanbul'a kazandırılan Müze Gazhane olarak yeniden açıldı.
Müze Gazhane, toplam 32 bin metrekarelik bir alan üzerine yayılmakta olup, İklim Müzesi, Karikatür ve Mizah Müzesi, Çocuk Bilim Merkezi, Afife Batur Kütüphanesi, Gazhane Galeri, geçici sergi alanı, sesli/sessiz çalışma alanları, İBB Şehir Tiyatroları'na ait iki tiyatro ve konser salonu, ve İstanbul Kitapçısı gibi birçok birimi barındırmaktadır. Ayrıca, kafe, restoran ve kapalı otopark gibi sosyal alanları da içermektedir. Tarihi alanın bahçesinde ise Haliç Tersanesi'nde atık materyallerden yapılmış heykelleriyle 7 heykeltıraşın eserleri ziyaretçileri karşılamaktadır [URL 2]. Hasanpaşa semti ve çevresindeki bölgelerden gelen ziyaretçiler için eğlence ve dinlenme alanı olarak kullanılan bu mekan, büyük kitlelerin katılımıyla gerçekleştirilen konser ve gösteri gibi etkinliklerde yoğun olarak kullanılmaktadır (Güneş, 2022).

SONUÇ VE ÖNERİLER

Zonguldak bölgesindeki endüstriyel yapılar, zamanla kullanımlarını tamamlayarak geçmişlerini yansıtmaktadır. Bazıları, tarihi ve kültürel değerlerin korunması için restore edilerek veya farklı amaçlar için yeniden kullanılarak bölgeye hizmet etmektedir. Örneğin, eski maden tesisleri müze veya turistik mekan olarak ziyaretçilere açılmıştır, böylece endüstriyel geçmişin yanı sıra bölgenin turizm potansiyelini de artırmıştır. Ancak, bazı yapılar bakımsızlık nedeniyle çürümeye terk edilmiş durumdadır ve bu durum hem bölgenin estetiğini olumsuz etkileyebilir hem de güvenlik riskleri doğurabilir. Bu yüzden, bu yapıların korunması ve uygun şekilde kullanılması, bölgenin kimliğinin ve geçmişinin bir parçası olarak büyük önem taşımaktadır.
Zonguldak il merkezinde atıl durumda bulunan Lavuar Alanı da bu potansiyel örneklerden biridir. Bu endüstriyel kalıntılar olan alanın düzenlenmesinde , endüstriyel miras kavramından yola çıkılarak yapılacak ağaıdaki iyileştirmeler öneri olarak sunulabilir;

- Halkın kullanımına açık peyzaj alanları
- Endüsri ürünleri ile iç içe, erişilebilir bir açık hava müzesi
- Tarihi demir yolu ve araçları ile ulaşım
- Deneyim merkezi oluşturulması
- Kömürün çıkarıldıktan sonraki kullanım aşamalarının kademeli olarak tanıtımı, yaşayan müze kavramından yola çıkılarak yapılacak bir müze
- Bölgede yapılacak çalışmalarla lansman toplantıları, kongreler, festivaller, konserler ve konferanslar

Sonuç olarak, Zonguldak'ta yer alan endüstriyel yapılar, bölgenin tarihini ve kültürünü yansıtan önemli unsurlardır. Bu yapıların korunması ve yeniden değerlendirilmesi, gelecek kuşaklara aktarılacak mirasın sürdürülebilirliği için kritik bir adımdır ve aynı zamanda turizm potansiyelini artırarak bölgenin ekonomik kalkınmasına katkı sağlayabilir.

BIOFEEDBACK EĞİTİMİNİN ATLETİK PERFORMANSA VE PSİKOLOJİK İYİ OLUŞA ETKİSİ

THE EFFECT OF BIOFEEDBACK TRAINING ON ATHLETIC PERFORMANCE AND PSYCHOLOGICAL WELL-BEING

ÖZET

Bu çalışma, biyolojik geri bildirim (BGB) yönteminin spor performansını artırmada etkili bir araç olarak kullanımını incelemektedir. BGB, elektronik cihazlar aracılığıyla vücut fonksiyonlarını izleyerek kişiye anlık geri bildirim sağlayan bir süreçtir. Bu süreç, sporcuların fiziksel ve zihinsel olarak optimal performans seviyelerine ulaşmalarına yardımcı olabilir. Araştırmalar, BGB'nin sporcularda stresi ve kaygıyı azaltarak otonom sinir sistemi dengesini geliştirebileceğini ve bu sayede atletik performanslarını artırabileceğini göstermektedir. BGB eğitimi, kas gerginliğini azaltmak, gevşemeyi kolaylaştırmak ve stresi optimum düzeyde tutmak gibi hedeflerle kullanılmaktadır. Bu eğitimlerde yaygın olarak elektromiyografik (EMG), elektrodermal aktivite (EDA) ve kalp hızı değişkenliği (KHD) gibi modüller kullanılmaktadır. Bu çalışma, BGB'nin sporcuların performansını artırmak ve kişisel gelişimlerini desteklemek için nasıl etkili bir şekilde kullanılabileceğini anlamamıza katkı sağlamaktadır. Sonuç olarak, BGB eğitimi, sporcuların hem fiziksel performanslarını hem de psikolojik iyi oluşlarını iyileştirmek için güçlü bir araç olarak değerlendirilmektedir. Bu yöntem, spor bilimleri ve psikoloji alanında daha fazla araştırmayı teşvik etmekte ve uygulamaların sporcuların genel iyilik halini artırma potansiyelini vurgulamaktadır.

Anahtar Kelimeler: Biyolojik Geri Bildirim, Performans, Spor

ABSTRACT

This study examines the use of biofeedback (BFB) as an effective tool for enhancing sports performance. BFB is a process that provides individuals with real-time feedback on their physiological functions through electronic devices. This feedback can help athletes achieve optimal physical and mental performance levels. Research indicates that BFB can reduce stress and anxiety in athletes, improve autonomic nervous system balance, and consequently enhance athletic performance. BFB training is employed with objectives such as reducing muscle tension, facilitating relaxation, and maintaining stress at optimal levels. Commonly used modules in these trainings include electromyographic (EMG), electrodermal activity (EDA), and heart rate variability (HRV). This study helps us understand how BFB can be effectively used to improve athletes' performance and support their personal development. In conclusion, BFB training is considered a powerful tool for enhancing both the physical performance and psychological well-being of athletes. This method encourages further research in sports sciences and psychology and highlights its potential to improve the overall well-being of athletes.

Keywords: Biofeedback, Performance, Sport

GİRİŞ

Sporcuların en iyi performanslarını gösterebilmeleri, özellikle olimpiyatlar gibi yüksek baskı altındaki durumlarda stres ve kaygılarını etkili bir şekilde yönetebilmelerine bağlıdır. Ancak bu tür stresli zamanlarda, yetenekli sporcular zaman zaman performans sorunları yaşayabilir ve gerçek potansiyellerini tam olarak ortaya koyamayabilirler (Davis ve Sime, 2005). Baskı altındayken

FULL TEXTS BOOK

sporcuların potansiyellerini başarıyla ortaya koymalarının temel faktörlerinden biri, kendi fizyolojilerini etkili bir şekilde kontrol edebilme yetenekleridir (Bertollo ve ark., 2013). Başarıya odaklı sporlar, uzun ve yoğun antrenman süreçleri nedeniyle sporcuların fiziksel ve fizyolojik stres düzeylerini artırarak, mental sağlık durumlarını olumsuz yönde etkileyebilmektedir. Bu süreçler, sporcuların zihinsel olarak da yıpranmasına ve bazı durumlarda psikolojik zorluklar yaşamalarına neden olabilir (Rice ve ark., 2016). Yüksek rekabetin yaşandığı sporlar, çeşitli iç ve dış faktörlerden kaynaklanan psikolojik stresi artırarak kaygı düzeyini etkileyebilir (Borkoles ve ark., 2018; Dziembowska ve ark., 2016). Bu sebeple, elit seviyede yarışan bir sporcu, performansını en üst düzeye çıkarmak için sadece yoğun antrenman yüklerinin etkilerine değil, aynı zamanda zihinsel ve psikolojik faktörlere de uyum sağlamayı öğrenmelidir (Walsh, 2018). Biyolojik geri bildirim yöntemi, çeşitli tekniklerin entegrasyonunu içermekle birlikte bu teknikleri EMG (Elektromiyografi), EEG (Elektroensefalografi) ve EKG (Elektrokardiyografi) gibi adlandırmak mümkündür ve spor ve egzersiz bilimlerinde bu yöntem perspektifinde farklı teknikler de kullanılmaktadır (Ash ve Zellner, 1978).

Son zamanlarda sporcular, atletik ve branşa özgü performanslarını geliştirmek için fiziksel antrenmanların yanında zihinsel antrenmanlardan da destek almaktadırlar (Rijken ve ark., 2016). Yapılan bu antrenmanlara BGB yöntemlerini de ekleyerek (deri ısısı, kalp aktivasyonu, EEG ölçümü) yapıldığı takdirde sporcuyu daha da teşvik edecektir (Shokri ve Nosratabadi, 2021). Belli bir seans sayısına ulaşıldığında "BGB antrenmanı" olarak adlandırılan bu teknik, klinik vakalarda olduğu kadar sporcularda da kaygı düzeyinin kontrolü, stres yönetimi ve atletik performansı geliştirmek için kullanılmaktadır (Deschodt-Arsac ve ark., 2018).

Bu çalışmada, biyolojik geri bildirimin ne olduğundan, spor ile ilişkisinden, bazı biyolojik geri bildirim araçlarından ve kullanım şekillerinden bahsedilmiştir. Son olarak da spor bilimleri alanında ne tür uygulamalar olduğu kısaca ele alınmıştır.

1. BİYOLOJİK GERİ BİLDİRİM (BİOFEEDBACK)

Geribildirim yani feedback kelimesi “Hatayı düzeltmek veya belirli bir isteğe uygun olarak çıkışı yeniden şekillendirmek için çıkışın kaynağa geri dönmesi veya karşılaştırma yapılması” anlamına gelmekle birlikte biyolojik geri bildirim, "Elektronik cihazlarla vücut fonksiyonlarını izleyen ve kişiye bilgi veren bir sistemdir. (Oğuz ve ark., 2004). Psikofizyoloji alanından benimsenen biyolojik geri bildirim yöntemi, kullanılacak olan tekniklerin düzgün bir biçimde uygulanmasıyla, sporcuların zihinsel ve fiziksel olarak optimal performans seviyelerine ulaşmalarına hazırlanabileceğine inanılmakta, bu uyum da sporcuların bedensel ve zihinsel olarak en iyi durumlarını elde etmelerini sağlar ve böylece performanslarını maksimize etmelerine yardımcı olur (Schwartz ve Andrasik, 2016). BGB'nin daha resmi olarak, 2008 yılında alanı temsil eden AAPB, BCIA ve ISNR tarafından onaylanarak; “BGB, bireyin sağlığı ve performansı geliştirmek amacıyla fizyolojik aktiviteyi nasıl değiştireceğini öğrenmesini sağlayan bir süreç” olarak tanımlanmıştır (Schwartz, 2010). Hassas cihazlar aracılığı ile kişinin fizyolojik aktivitesini ölçer. Bu cihazlardan sağlanan bilgiler kişiye, hızlı ve düzgün bir şekilde "geri bildirim" sağlar böylece kişide istenilen fizyolojik değişiklikler meydana gelir ve daha sonra kişi bunu benimseyerek cihaz olmadan istenilen durumu sürekli hale getirebilir (Schwartz, 2010).

Biyolojik geri bildirimin amacı, gönüllü kontrol veya biyolojik tepkilerin kendi kendini düzenlemesini teşvik etmek için stratejiler geliştirmek ve bu yeteneği günlük yaşamda herhangi bir cihaza ihtiyaç duymadan kullanabilmektir (Blumenstein ve ark., 1997). Bu amaç doğrultusunda da fizyolojik sinyal kaydı için çeşitli hassas elektronik cihazlar veya yöntemler kullanılarak geri bildirim alınır (Blumenstein ve Hung, 2016).

1960’lı yıllarda ortaya çıkan biyolojik geri bildirim kavramı, zihnin ve bedenin uyumunu incelemek adına oldukça önemlidir. İnsanların bedensel anlamda yapmış olduğu hareketlerden geri bildirim alarak davranışlarını değiştirmelerine yardımcı olmak için kullanılan bir yöntemdir ve uygulamalı psikofizyolojinin bir türü olarak görülebilir (Schwartz ve Andrasik, 2015). Yüzyılın sonuna doğru,

FULL TEXTS BOOK

insanların hem içsel hem de dışsal durumlarını gönüllü olarak kontrol edebilecekleri gözlemlenmiştir ve fizyoloji ile zihin/duygu arasında belirgin bir ilişki olduğu da saptanmıştır (Green ve ark., 1970). Bu keşifler, insanların duygusal ve fiziksel durumlarını yönetme yeteneklerine ilişkin anlayışımızı genişletmiştir (Green ve ark., 1970). Günümüze gelinceye kadar bu alanda oldukça geniş bir yelpazede araştırmalar yapılmış ve nörolojik geri bildirim ile de birleşerek klinik bir araç olduğu kanıtlanmıştır (Fisher ve ark., 2016).

1960'yılların sonlarında katılımcıların zihinsel aktivitesi (Kamiya, 1968), periferik deri sıcaklığı (Green, 1973), tek motorlu üniteler (Basmajian, 1972) bedenlerini ve zihinlerini istedikleri gibi yönlendirmeyi ve düzenlemeyi öğrenebilecekleri gösterilmiştir. Yapılan ilk araştırma çalışmalarında bazı EMG teknikleri kullanılarak kas gerginliğini düşürmeye yoğunlaşılmıştır (Croce, 1986; DeWitt, 1980; Zaichkowsky ve Kamen, 1978).

2000'li yılların başına kadar araştırmalar daha da genişletilerek çeşitli biyolojik geri bildirim metotları kullanılarak farklı spor branşlarının üzerinde çalışılmaya başlanmıştır ve sadece vücutta oluşan kas gerginliğine değil, derinin vermiş olduğu tepki, solunum ve kalp atım hızı da incelenerek çalışmalar genişletilmiştir (Blumenstein ve ark., 1995).

2. SPOR VE BİYOLOJİK GERİBİLDİRİM

Sporcular için oldukça yararlı olan BGB eğitimi, kişinin stres veya kaygı yaşadığında sempatik sinir sisteminin aşırı aktif hale gelmesini engelleyerek, otonom sinir sistemi dengesini geliştirmekle birlikte verilen bu eğitim, sporcuların sadece stres ve anksiyete ile başa çıkmakla kalmaz, aynı zamanda otonom ve somatik sinir sistemlerini etkili bir şekilde yönetmelerini öğrenmelerine de yardımcı olur (Paul ve Garg, 2012). Bu sayede, sporcular, zorlu rekabet ortamlarında daha sakin ve odaklanmış kalabilirler, performanslarını artırabilirler ve yaralanma riskini azaltabilirler.

Ülkemizde BGB eğitimlerinin spor performansı üzerinde etkisiyle ilgili çalışmalar sınırlıdır ancak dünya genelinde bu alandaki araştırmalar artmaktadır. Biyolojik geri bildirim eğitimleri kas gerilmelerini azaltmakla birlikte (Voerman ve ark., 2007), progresif antrenmanlarla gevşemeyi kolaylaştırarak (DeWitt, 1980) kaygı ve stresi optimum düzeyde tutmaya (Paul ve Garg, 2012) yardımcı olur. Bu açılardan bakıldığında öz-denetim ve öz-farkındalık için performansı olumlu yönde etkileyerek, bu becerilerin desteklenmesine katkı sağlar (Bar-Eli ve Blumenstein, 2004; Dupee ve ark., 2015; Morgan ve Mora, 2017; Perry, 2018).

Biyolojik geri bildirim, sporcu için psikolojik ve zihinsel durumun değerlendirilmesine katkı sağlar. Bir spor yarışması anında atletik performansın saptanmasında ve yapılan davranışın zihinsel ve duygusal yönlerinde önemi büyüktür. Araştırmalar, zihinsel hazırlığın olimpiyat sıralamasıyla güçlü bir istatistiksel ilişkiye kurduğunu göstermektedir (Bali, 2015). Ancak, yalnızca performans sporcuları tarafından değil, aynı zamanda rekreatif amaçlı spor yapan bireyler tarafından da kullanılmaktadır ve NGB'nin kazandırdığı öz bakım becerisi ve gelecekteki bakım ihtiyaçlarını kolaylaştırma potansiyeli, sadece bireylerin kendilerine değil, aynı zamanda potansiyel ailelerine de fayda sağlar (Kee ve Wang, 2008).

BGB eğitimlerinde, vücudun çeşitli noktalarına yerleştirilen sensörler veya elektrotlar aracılığıyla iç dinamiklere ilişkin veriler toplanarak kişinin hareketlerinin incelenmesi ve fizyolojik tepkilerin izlenmesi için kullanılır (Pusenjak ve ark., 2015). Elde edilen veriler, antrenörler ve sporcular tarafından analiz edilerek, sporcuların performanslarını anlık olarak izlemelerine ve hedeflerine ulaşmak için gerekli değişiklikleri yapmalarına yardımcı olur (Pusenjak ve ark., 2015). Yapılan bu uygulamada önemli olan, kişinin kendisiyle ilgili daha iyi bilgi edinmesi, farkındalığının artması ve içinde bulunduğu durumu dengeleyebilmesidir (Pusenjak ve ark., 2015). BGB ve NGB, her bedensel değişimin, zihinsel faaliyetler ve duygusal tepkilerle paralellik gösterdiği düşüncesine dayanılarak oluşturulur ve yapılan antrenmanlar ilerledikçe sporcular, hedefleri doğrultusunda kendi kendilerini düzenlemeyi

FULL TEXTS BOOK

öğrenebilirler (Levy ve Baldwin, 2019). Bu sebeple, sporcularda zihinsel antrenmanla birlikte BGB ve NGB sıkça tercih edilir (Blumenstein ve Orbach, 2018).

3. BİYOLOJİK GERİ BİLDİRİM ARAÇLARI

BGB eğitimi, sporcuların bedenlerinden ve zihinlerinden gelen bilgi veya geri bildirimlere dayanarak kendi performanslarını yönlendirme yeteneklerini geliştiren bir yöntem olmakla birlikte sporcuların hem fiziksel hem de zihinsel olarak kendi gelişimlerini takip etmelerine ve iyileştirmelerine olanak tanır, sporcuların kendi performanslarını değerlendirme ve gerektiğinde düzeltme becerisi, onların daha tutarlı ve etkili bir şekilde hedeflerine ulaşmalarını sağlar (Makaracı, 2022).

3.1 ELEKTROMİYOGRAFİK (EMG) GERİBİLDİRİM

Kas geribildirimi, kişinin kas aktivitesini gerçek zamanlı olarak ölçmek ve bu bilgiyi kullanarak kaslarını kontrol etmeyi öğrenmesini sağlayan bir biofeedback tekniğidir ve aşırı kas gerginliğinin azaltılması, stresin yönetilmesi ve gevşeme durumunun teşvik edilmesi gibi hedeflerle kullanılır (Sayın ve ark., 2010; Yılmaz ve ark., 2013). Bu eğitimde, genellikle elektromiyografi (EMG) sensörleri kullanılır. Bu sensörler, kaslardan gelen elektriksel aktiviteyi ölçer ve bu bilgi, kişinin geribildirim alması için bir görsel veya işitsel geribildirim aracılığıyla sunularak kişinin kaslarını istenilen düzeyde gerginleştirmeyi veya gevşetmeyi öğrenir (Van Deusen ve Angulo Kinzler, 2008).

Kas geribildirim eğitiminin temeli, bireylere belirli bir kas bölgesindeki gerginlik hakkında bilgi sağlamak ve bu kas gerginliğini kontrol etmeyi öğrenmelerini kolaylaştırmak amacıyla kişide oluşan aşırı ve uygun olmayan gerginliği gevşetmektir. Sensörler, değişimi hedeflenen kas üzerindeki deriye yerleştirilir ve vücudun farklı bölgelerindeki kaslar hedeflenebilir. Örneğin, alın ve üst omuz kas aktiviteleri, genel uyarılma ve kas gerginliğinin mevcut göstergeleridir (Arena ve Schwartz, 2003). Kaslardan yayılan sinyaller, aktivitenin yoğunluğuyla doğru orantılı olarak, görsel bir ekran veya sesli sinyal aracılığıyla kullanıcıya iletilir ve yorumlanarak poligrafik tarzda çizgi veya renklerle dönüt sağlar (Blumenstein ve ark., 2002). EMG eğitiminin hedeflerinden biri genellikle kriter belirlemektir. Örneğin, 2 mikro volt üzerindeki kas gerginliği gevşemiş olarak değerlendirilirken, 1 ile 2 mikro volt arasındaki değerler hafif gevşeme olarak kabul edilir ve 1 mikro volt altındaki değerler ise derin gevşeme olarak kabul edilir (Blumenstein ve ark., 2002).

3.2. ELEKTRODERMAL AKTİVİTE (EDA) GERİBİLDİRİM

Galvanik deri tepkisi veya deri iletkenliği olarak bilinen EDA, parmaklar üzerinden ölçülür ve derinin elektriksel iletkenliğini yansıtan bir ölçümdür (Blumenstein ve ark., 2002). Stres, duygusal uyarılmalar ve diğer psikolojik faktörler genellikle deri iletkenliğindeki değişikliklere neden olarak ter bezlerinden gelen sıvı miktarındaki artış veya azalışla ilişkilidir ve elektrodermal aktiviteyi ölçmek için kullanılan elektrotlar aracılığıyla algılanır (Blumenstein ve ark., 2002). Elektrodermal aktivite geri bildirimi, kişinin deri iletkenliğini görsel veya işitsel geri bildirim aracılığıyla izlemesine ve istenen bir duygusal durumu veya stres seviyesini elde etmeye çalışmasına yardımcı olabilir ve bu bağlamda, deri iletkenliğini ölçmek ve kişinin duygusal durumunu kontrol etmesine yardımcı olmak için kullanılır (Blumenstein ve ark., 2002).

EDA, mikro-Siemens biriminde ölçülür ve genellikle stresli zamanlarda artarken, gevşeme sırasında azaldığı gözlemlenir (Blumenstein ve ark., 2002). EDA sensörleri, genellikle tek başına kullanılmazlar, genellikle poligrafik yöntemlerde yardımcı parametre olarak kullanılırlar (Dolu ve ark., 2007). Biofeedback terapisinde ve duygusal durumun izlenmesinde, örneğin, bir kişi stresli bir durumdayken veya anksiyete hissettiğinde, deri iletkenliğinde artış gözlemlenebilir, EDA sensörü aracılığıyla ölçülerek kişinin stres seviyesini belirlemesine ve uygun stres yönetimi tekniklerini uygulamasına yardımcı olabilir (Blumenstein ve ark., 2002).

FULL TEXTS BOOK

Sporcuların uyarılma durumları arttığında, artan sempatik aktivite ter bezlerinde daha fazla nem salgılanmasına yol açar, bu da elektrodermal aktiviteyi arttırarak sporculardaki duygusal düzenleme yeteneğini belirlemek açısından etkilidir (Blumenstein ve ark., 2002). Bir sporcu duygusal durumunda değişiklik yaşadığında veya kaygı düzeyi arttığında, deri iletkenliği hızla etkilenebilir (Sime, 2003). Buradaki ani değişiklikler, performansı olumsuz etkileyebilecek şekilde deri iletkenliğini artırabilir (Blumenstein ve ark., 2002; Paul ve Garg, 2012).

3.3. KALP HIZI DEĞİŞKENLİĞİ (KHD) GERİBİLDİRİM

Sinüs hızının ani değişimleri veya ortalama kalp hızındaki dalgalanmaları belirli bir zaman diliminde açıklanabilen kalp hızı değişkeni, bu dalgalanmaların uyumlu bir şekilde olması şeklinde açıklanabilir (Ayyıldız, 2009). Bu uyum bazı durumlarda bozulabilmektedir. Buna ise, ritim bozukluğu denir (Kayacan, 2009). Kalp hızı değişkenliği (KHD) değerlendirmesinde en sık kullanılan ölçümler SDNN ve RMSSD'dir ve KHD genellikle kalp atış hızının yüksek seviyelerinde azalma gösterir, bu nedenle SDNN, RR aralığının bölünmesiyle bu etkiye karşı standart hale getirilebilir (Lehrer, 2012). Bir kişinin duygu durumunu stabil hale getirip sakinleştirilmesi sağlanılarak solunumu yavaşlatılabilir ve KHD arttırılabilir (Lehrer ve ark., 2013). Bu, sporcu için nefes alma hızını ve ritmini düzenlemeyi öğrenmeyi içerir, böylece daha fazla parasempatik sinir sistemi aktivasyonunu teşvik eder ve sempatik-parasempatik dengeyi iyileştirmeye yardımcı olur (Strack ve Gevirtz, 2011).

KHD, beyin ve kalp arasındaki koordinasyonu yansıtır, böylece beyin ve kalp arasındaki düzenleyici sinyallerin kalbin yanıt yeteneğini ölçmemize olanak tanır. (Berntson ve Cacioppo, 2004). BGB tekniklerinin kullanıldığı KHD eğitimi, sporcular için yarışma öncesi kaygıyı yönetme, stresi azaltma, özgüvenlerini artırma, duygusal dengeyi sağlama ve performanslarını iyileştirme konularında etkili olmaktadır (Edvardsson ve ark., 2012; Lagos ve ark., 2008; Sime, 2003).

Solunum Sensörü, insanın nefes hızını ölçerek ve hem karın hem de göğüs solunumunun göreceli derinliğini belirleyerek solunum aktivitesini detaylı bir şekilde izler ve kıyafetlerin üzerine giyilebilir (Grossman, 1991). Solunumun kalp atışlarını nasıl etkilediğini daha iyi anlamak ve solunumun stres seviyeleri, fizyolojik tepkiler ve duygusal durumlar gibi faktörlerle ilişkisini incelemek mümkündür.

3.4. TERMAL GERİBİLDİRİM

Termal geribildirim, genellikle parmaklar ve ellerdeki deri sıcaklığındaki değişimlerin işitsel veya görsel sinyallere dönüştürülmesidir (Blumenstein ve ark., 2002). Sensörler cilt bölgesine yerleştirildikten sonra sıcaklık verileri okunur ve anlık olarak yansıtılarak analizleri yapılı, işlenen veriler ise son olarak görsel veya işitsel olarak sunulur. Örneğin, bir ekranda renk değişiklikleri veya bir ses cihazından çıkan farklı sesler aracılığıyla kullanıcıya bilgi iletilir (Blumenstein ve ark., 2002). Ölçümde, stres halinde sempatik sinir sistemi aktivasyonuyla periferik damar daralmasına neden olabilir, böylece vücut sıcaklığı düşer ve deri ısısı değerleri belirli aralıklara ayrılır. Örneğin, 18-21 santigrat derece arası yüksek sempatik uyarılmayı temsil ederken, 32-35 santigrat derece arası düşük sempatik uyarılmayı temsil eder (Wilson ve ark., 2011).

4. TÜRKİYE'DE SPOR BİLİMLERİ ALANINDA UYGULANAN BİYOLOJİK GERİ BİLDİRİM

Sporun yüksek rekabet ortamı, maddi getirilerle doğrudan ilişkilendirilmiştir, bu da sportif başarının daha önce hiç olmadığı kadar büyük bir öneme sahip olduğunu göstermektedir. Dolayısıyla, sporcuların psikolojik dayanıklılıklarını ve zihinsel sağlamlıklarını artırmak, yapılan çalışmalarda sıklıkla vurgulanan bir gereklilik haline gelmiştir (Duppe, 2016). Spor ile ilgili yapılan çalışmalar, sık sık atletlerin sadece fiziksel becerilerini değil, aynı zamanda ruhsal dayanıklılıklarını da geliştirmelerinin önemini vurgular (Duppe, 2016).

FULL TEXTS BOOK

Sporcuların yaptıkları antrenmanların günümüzde daha bütünsel bir şekilde ele alınması gerekmektedir. Bu açıdan bakıldığında da yüksek teknolojinin de yardımıyla sporcuların biyolojik verilerinin elde edilmesi mümkündür (Fernandez, 2019). Algısal-bilişsel yetenekler, sportif başarı üzerinde dikkat ve bellek, zamanın algılanması, duyusal uyum gibi önemli bir etkiye sahiptir ve bu becerilerin yardımcıyla rakip atletlerin hamlelerini öngörmeyi, daha seri ve daha doğru kararlar almayı sağlayabilir. Bu tür yeteneklerin geliştirilmesi, sporcular açısından kaygıyı azaltarak rakip atletlerin stratejilerini önceden anlama ve uygun bir şekilde tepki verme yeteneği için hayati önem taşımakta olup bu beceri gelişimini, BGB girişimleriyle olanak sağlanabilir (Zadkhosk, 2018).

SONUÇ

Bu kapsamlı inceleme, biyolojik geri bildirimin spor performansı üzerindeki etkilerini ve uygulama yöntemlerini detaylı bir şekilde ele almaktadır. Biyolojik geri bildirim, sporcuların zihinsel ve fiziksel olarak optimal performans seviyelerine ulaşmalarına yardımcı olmak için kullanılan etkili bir araç olarak ortaya çıkmaktadır. Bu yöntem, sporcuların stresle başa çıkma, odaklanma becerilerini geliştirme, performanslarını artırma ve yaralanma riskini azaltma gibi pek çok fayda sağlamaktadır.

Biyolojik geri bildirim araçları arasında elektromiyografik (EMG) geri bildirim, elektrodermal aktivite (EDA) geri bildirim, kalp hızı değişkenliği (KHD) geri bildirim ve termal geri bildirim gibi çeşitli teknikler bulunmaktadır. Bu araçlar, sporcuların kas aktivitesini, duygusal durumlarını, stres seviyelerini ve vücut sıcaklığını izlemelerine ve kontrol etmelerine yardımcı olur. Sporculardaki duygusal ve fizyolojik durumların belirlenmesi, performanslarını daha iyi anlamalarına ve geliştirmelerine olanak tanır.

Türkiye'de spor bilimleri alanında biyolojik geri bildirim uygulamaları henüz yaygınlaşmamış olsa da sporcuların psikolojik dayanıklılığını artırmak ve performanslarını iyileştirmek amacıyla yapılan çalışmaların arttığı gözlemlenmektedir. Bu çalışmalar, sporcuların sadece fiziksel becerilerini değil, aynı zamanda zihinsel sağlamlıklarını da geliştirmelerini vurgulamaktadır. Biyolojik geri bildirim, sporcuların kişisel gelişimlerini desteklemek ve performanslarını optimize etmek için önemli bir araç olarak değerlendirilmektedir.

Sonuç olarak, biyolojik geri bildirim, sporcuların zihinsel ve fiziksel sağlığını iyileştirmek ve performanslarını en üst düzeye çıkarmak için güçlü bir araçtır. Bu yöntem, sporcuların bedensel ve zihinsel uyumlarını artırarak, daha tutarlı ve etkili bir şekilde hedeflerine ulaşmalarına yardımcı olabilir. Türkiye'de spor bilimleri alanında biyolojik geri bildirim uygulamalarının daha da yaygınlaşmasıyla, sporcuların performanslarını optimize etmeleri ve daha sağlıklı bir spor yaşamı sürdürmeleri beklenmektedir.

THE RIGHT OF WORKERS TO REINSTATMENT IN THE CASES OF UNLAWFUL TERMINATION: A COMPARATIVE APPROACH

MSc. Ilva Hamzaj (trainee judge)
School of Magistrates of Albania

ABSTRACT
The right to work is a fundamental socio-economic right, guaranteed by article 49 of the Constitution of the Republic of Albania. In addition to its constitutional protection, the right to work is also guaranteed by several international treaties to which Albania is a member. Due to the importance of the right to work, most international instruments guarantee the protection of workers from unlawful or unjust termination. According to the Convention no. 158 of the International Labour Organization, should an employee unlawfully terminate a worker, the latter has the right to compensation of the damages incurred or reinstatement. A similar provision is also stipulated by the Albanian Labour Code, which stipulated the right of workers employed in the public sector to reinstatement, with the amendments it incurred in 2003.
Whether there is a broader general right to seek reinstatement judicially (i.e., by means of filing a claim at the competent court or tribunal) has been subject to debate among Albanian scholars and courts alike during the last twenty years. Due to the relevance of this ongoing debate, this paper examines the aforementioned issue based on a comparative analysis of the case-law of the Albanian courts, the European Court of Human Rights, the Administrative Tribunal of the International Labour Organization, as well as the Court of Justice of the European Union, the principles set forth by which serve as guidance for the Albanian courts when interpreting unclear legal provisions.
Key words: the right to work, unlawful termination, the right to reinstatement, judicial remedies.

1. INTRODUCTION

The right to work is a fundamental constitutional right pertaining to the category of social and economic rights, guaranteed by Article 49 § 1 of the Constitution of the Republic of Albania.[1] Besides constitutional protection, this fundamental right is also sanctioned as such by several conventions to which Albania is a party.[2] Although the right to work does not enjoy explicit protection under the European Convention on Human Rights ('ECHR'), it is indirectly guaranteed as a part of other Convention rights through the integrative method of interpretation adopted by the European Court of Human Rights ('ECtHR').[3] The right to work is also enshrined in Article 15 of the Charter of Fundamental Rights of the European Union ('EU Charter').
Due to its importance, most legal instruments in the field of labour law guarantee the protection of individuals against unjustified or unreasonable termination. The International Labour Organization ('ILO') has regulated the procedure and causes allowing the employer to unilaterally terminate an employment contract in the Termination of Employment Convention no. 158 ('Convention No. 158') . Article 10 of this Convention provides that in cases of unlawful termination, the employee is entitled to compensation and/or reinstatement. These provisions constitute international standards of labour law.[4]

[1] All relevant legal provisions concerning labour rights of the worker and the right to reinstatement referred in this paper shall be cited in the attached Appendix 'Relevant Provisions of the Albanian Legal Framework'.
[2] The right to work is specifically stipulated in Article 23 of the Universal Declaration of Human Rights, Article 6 of the International Covenant on Civil, Social and Cultural Rights, as well as the ILO Declaration of Philadelphia 'Concerning the aims and purposes of the International Labour Organisation' (1944).

FULL TEXTS BOOK

Therefore, although the Convention No. 158 has not been ratified by Albania, all law-enforcing institutions including courts, are inclined to comply with it. Indeed, the Convention No. 158 has served as inspiration for the 2015 amendments of the Albanian Labour Code ('ALC').[5] Meanwhile, Article 30 of the EU Charter stipulates that 'Every worker has the right to protection against unjustified dismissal, in accordance with Community law and national laws and practices'. Lastly, based on Article 13 of the ECHR, Member States also bear the positive obligation to enact an adequate legal framework which provides effective remedies for the restitution of the rights of workers in the event of unlawful termination, when the latter leads to a violation of their fundamental rights and freedoms.

In line with these standards, the ALC also stipulates that if an employer terminates the contract for abusive or unreasonable causes, they are liable be sued in judicial proceedings initiated by the employee, based on Article 146 § 3 or Article 155 § 3 of the ALC, whichever is applicable depending on the type of termination. Initially, workers enjoyed only the right to compensation, but with the 2003 amendments of the ALC, it was established that the court may order reinstatement if the employer is a public administration body.

Whether there is exists a general right to judicially seek reinstatement (i.e., by means of filing a claim at the competent court or tribunal) has been subject to debate among Albanian scholars and courts alike during the last twenty years. Due to the relevance of this ongoing debate, this paper seeks to address the aforementioned issue based on a comparative analysis of the case-law of the Albanian courts, the ECtHR, the Administrative Tribunal of the ILO, as well as the Court of Justice of the European Union ('CJEU'), the principles set forth by which serve to orient the interpretation of Albanian courts in cases of unclear provisions.[6]

2. ORDINARY AND *ULTIMA RATIO* TERMINATION

Articles 143-144 and 153 of the ALC respectively govern two separate procedures for the unilateral termination of an employment contract by the employer: the ordinary procedure and the extraordinary procedure *(ultima ratio)*.

Article 144 of the ALC stipulates as valid reasons for ordinary termination the insufficient competence of the worker, his inappropriate behaviour, or the operational requirements of the employer. Although the causes for ordinary termination may seem quite broad, Article 146 § 1 reduces the possibility for arbitrariness by providing an exhaustive list of causes that are considered unreasonable or abusive. This implies that the employer is prohibited from terminating the contract for one or more of these causes. If the employer violates this prohibition, the termination is null and void. In addition to abiding by the aforementioned procedural and substantial criteria, the employer should also the grant the notice term stipulated in Article 143 § 1 of the ALC to the worker. This term varies depending on the duration of employment. If the procedure for termination is violated or the causes motivating the termination are arbitrary, the worker has the right to sue the employer for damages and reinstatement, if the latter is applicable. Should the worker satisfy the burden of proof in regards of the arbitrariness, the court should order the employer to compensate the worker with an amount corresponding to the aggregate salaries of up to one year.

In some cases, the District Court of Tirana has maintained that for a termination to be considered unreasonable, the abusive cause must have been explicitly stated as a motivation for termination in the

FULL TEXTS BOOK

employer's decision for the dismissal of the worker. In different words, the employer must explicitly state that they are terminating the employment contract for one of the causes referred in Article 146 of the ALC.[7] I believe that this interpretation is very narrow and it would preclude any real possibility of the worker to seek redress based on Article 146 of the ALC. Considering that termination for unreasonable causes gives rise to the civil liability of the employer, it is hard to believe that they would state the real cause of termination should it be abusive. The need for courts to be able to uncover the objective truth was precisely the rationale leading to the adoption of Article 14 of the Albanian Code of Civil Procedure, which vests judges with the power to conduct a full and comprehensive examination of the case.[8] In wrongful dismissal cases, the court must not be take for granted the causes that have been formally listed by the employer in the dismissal decision, but rather investigate whether they seek to cover for one or more of the abusive reasons stated in Article 146 of the ALC.

The employer also has the right to terminate the employment contract immediately *(ultima ratio)* for the valid causes stipulated in Article 153 § 3 of the ALC, which include '*all grave circumstances that, in accordance with the principle of good faith, do not allow the continuation of the employment relationship',* specifically *'cases where the employee breaches their contractual obligations with grave culpability, as well as cases where the employee repeatedly breaches contractual obligations with negligence, despite previous warning issued in writing from the employer.'*[9] When the aforementioned valid causes for immediate dismissal exist, the employer is relieved from the obligation to respect the notice term for termination. However, they must still follow the procedure provided in Article 144 of the ALC. Unlike termination for abusive causes, immediate termination is valid even if it is motivated by causes other than those stipulated in Article 153 of the ALC, irrespective of its irregularity.[10] Based on the same provision, if the court considers that causes leading to the immediate termination of the worker are unjustified, the worker has the right to compensation with the equivalent of his aggregate salary for up to one year of work, in addition to the salary corresponding to the notice period. They also have the right to reinstatement if the employee is a public administration body. Should the court accept the claim, the employer is obliged to comply with this decision and therefore, reinstate the claimant to his previous job.[11]

The remedies available to the worker depend on the type of termination that was applied by the employer: (i) ordinary termination, the remedies for which are stipulated in Article 146 of the ALC or (ii) *ultima ratio* termination, the remedies for which are stipulated in Article 155 of the ALC. These provisions cannot be simultaneously applied as possible remedies for the termination of an employment contract. According to the consolidated case-law of the Albanian courts, when the employer has granted the notice term to the worker, the remedies for the unlawful dismissal shall be those provided in Article 146 § 3 of the ALC, whereas in cases of immediate termination (i.e., when the notice term has not been granted), Article 155 § 3 of the ALC will apply.[12] The rationale behind this approach is that the employee cannot be compensated twice for the same *causa petendi*. Although these two articles constitute different *causa petendi*-s, thus resulting in two different claims, their purpose is the same, namely, to provide restitution for the worker that has been unlawfully terminated, either by financially compensating him, reinstating him, or both.

7 See for example: District Court of Tirana (Albania), judgment no. 1487 of 10 March 2021
8 Article 14 of the Law No. 8116 of 29 March 1996 'The Code of Civil Procedure of the Republic of Albania', as amended, OJ 1996 L 9, 10, 11.
9 Article 153 §§ 2-3 of the ALC.
10 Supreme Court, Joint Chambers (Albania), unifying judgment no. 7 of 1 June 2011.
11 Articles 146 § 3 and 155 § 3 of the ALC.
12 See, among others: Supreme Court, Joint Chambers (Albania), ordinary judgment no. 1 of 30 June 2017; District Court of Tirana (Albania), judgment no. 5727 of 11 June 2018.

Nevertheless, as stated above, one must bear in mind that while article 146 § 3 of the ALC specifically provides that the termination for abusive reasons is void, Article 155 § 3 does not stipulate the same sanction regarding immediate unjustified termination. Based on an *a contrario* interpretation, the Albanian courts are often inclined to consider the latter type of termination valid, regardless of its irregularities, as the legislator has not sanctioned it with voidance and nullity.[13] Per this stance, even if the employer acts in violation of Article 153 of the ALC by terminating the employment contract for unjustified reasons, reinstatement of the employee does not enjoy legal protection, and the only remedy available for the worker shall be compensation, as provided by Article 155 of the ALC.

The most heated debate concerns the interpretation of Article 146 of the ACP. The cause of this debate lies in the theory of void and voidable legal actions, according to which, a legal action, when ascertained as void by a court, is deemed to have never existed. Based on Article 106 of the Albanian Civil Code, the remedy for voidance is *restitutio in integrum*, meaning that the parties should return to the same legal standing they enjoyed prior to the performance of the void action. Based on this provision, it would appear that reinstatement should be an available remedy for all abusive terminations stipulated by Article 146 of the ACP. However, that is not always the case. Therefore, the following section shall explore the question of whether reinstatement constitutes an available remedy for workers whose employment contract has been terminated for abusive reasons.

3. REINSTATEMENT ACCORDING TO THE CASE-LAW OF ALBANIAN COURTS

Scholars and judges alike have continuously been part of the debate on whether employees have the right to reinstatement when their employment contract is terminated for unjustified (abusive) reasons. The issue has been partially resolved regarding a specific category of workers. With the unifying judgment no. 31 of 14 April 2003 concerning the unjustified termination of the employment contract of a police officer, the Joint Chambers of the Supreme Court of Albania maintained that *'[t]he right to reinstatement does not enjoy judicial protection, whereas the right to compensation is a right that enjoys protection.'* As per the *ratio decidendi* of this judgment, its application should be confined to the cases when the employee is a police officer.

When discussing the current relevance of this judgment, one must bear in mind that the interpretation of Article 146 § 3 of the ALC adopted therein concerns the wording of the said article *prior* to its amendment. At the time of the judgment, Article 146 was formulated as follows: *'The employer, who has terminated the causes for unreasonable causes, is obligated to compensate the worker with the salary of up to one year, which is added to the salary that they would have received during the notice period'.* As apparent, it neither guaranteed the right to reinstatement, nor sanctioned dismissals contrary to its provisions as void.[14] These provisions were added with the amendments of the ALC. Additionally, the right to reinstatement was not sanctioned in the applicable *lex specialis* on the state police either. Therefore, the approach of the Supreme Court did not do much other than follow a literal interpretation of the relevant provisions in force. However, upon adoption of the Law no. 152/2013 "On Civil Servants", police officers were given the status of civil servants and therefore, their employment relationship would also be regulated by the relevant provisions of the law on civil servants in addition to the ALC, unless the lex specials on the state police provides otherwise.[15] Article 66/1 of the Law No.

[13] This approach is not unanimously applied by courts. However, it constitutes a consolidated approach embraced by most judges in the District Court of Tirana (Albania). To this effect, see: District Court of Tirana (Albania), judgments no. 5939 of 18 June 2018; no. 5727 of 11 June 2018; no. 8633 of 18 October 2017 and no. 13599/3543 of 1 February 2013.

[14] This provision has been amended by the law No. 9125 of 29 July 2013 "On some additions and amendments to the law no. 7961 of 12 July 1995 'The Labour Code of the Republic of Albania', as amended by the law no. 8085 of 12 March 1996' and still remains in force.

[15] Article 3 of the Law No. 152/2013 'On civil servants'.

152/2012 explicitly guarantees the right of civil servants to reinstatement. On the other hand, the *lex specialis* only provides the right to compensation and not the right to reinstatement. The question arose whether Article 66/1 alone gives rise to the right of reinstatement for police officers and whether with the adoption of the law No. 152/2013, the stance adopted by the Supreme Court in the aforementioned unifying judgment is *de facto* repealed. Regardless of these unresolved questions, this judgment continues to find a broad application in the case-law of lower courts.

Suspicions regarding its relevance are also supported by the fact that this judgment has been explicitly abrogated in the part where the Supreme Court maintained that employment contracts between private individuals and public bodies constitute public service contracts and fall within the scope of administrative law. This stance was reversed by the Supreme Court itself eight years later by virtue of the unifying judgment no. 7 of 1 June 2011, in which the Joint Chambers held that irrespective of whether the employer is a public or a private entity, the legal relationship between a worker and an employer cannot be deemed as having a purely administrative nature, as it is governed by the law of contracts.

Since 2020 and onwards, the Administrative Chamber of the Supreme Court has changed its stance regarding police officers. With judgment no. 00-2020-265 of 1 July 2020, the Administrative Chamber initially brought to attention the aforementioned amendments and the fact that the unifying judgment no. 31/2003 was issued at a time of *praeter legem* in respect of applicable remedies for unjustified terminations. According to the Administrative Chamber, as long as the right to reinstatement was guaranteed by the law no. 152/2013, police officers should benefit from it.[16] This judgment leads us to the conclusion that the stance maintained in the unifying judgment no. 31/2003 has somewhat lost its relevance, or at least ceased to be as absolutist as initially served.

In another judgment, the Administrative Chamber maintained that reinstatement does not stem from the provisions of the ALC *per se*, but from the provisions of the other applicable specific laws.[17] From this line of reasoning, one may extrapolate that if Article 146 § 3 or Article 153 § 3, whichever applicable, is not supported by another provision of the *lex specialis* governing the employment relationship of the claimant, the latter cannot benefit from the right to reinstatement. Although there have been implicit attempts by the chambers of the Supreme Court as well as the lower courts to amend this stance, these attempts only constitute a minority. This become more visible in 2017, when although the Supreme Court Chambers convened to change stance adopted in the case-law of the lower courts regarding reinstatement, among several other labour law issues, including, at the end of the proceedings, they were not able to reach the necessary quorum and therefore, revoked their decision on initiating the Joint Chambers proceedings. Instead of adopting a new or at least a modified stance, the Joint Chambers only reconfirmed the stance held in the previous unifying judgment that, despite of the legislative changes, reinstatement still does not enjoy legal protection, if exclusively based on the provisions of the ALC.[18]

[16] Specifically, the Administrative Chamber of the Supreme Court maintained that: 'the stance adopted in several cases, that the police officer that has been unlawfully terminated cannot be reinstated to his previous job even after the enactment of the law no. 152/2013 constitutes an incorrect interpretation of the legislation regulating this field … [i]f the officer of the State Police has been dismissed in breach of the law, the only consequence of this conclusion is the reinstatement of this officer to his previous job and the compensation of his salaries from the moment of dismissal'. This stance has been consequently maintained in the consequent case-law of the Administrative Chamber. See to this effect: Supreme Court, Administrative Chamber (Albania), judgments no. 00-2022-2255 (336) of 6 October 2022 and no. 00-2021-9 (3) of 11 January 2021.

[17] Supreme Court, Administrative Chamber (Albania), judgment no. 00-2021-10 (1) of 11 January 2021.

[18] Supreme Court, Joint Chambers (Albania), ordinary judgment no. 1 of 30 June 2017. It is worth bringing to attention that the four dissenting Justices maintained in their dissenting opinion that the amendments incurred by the ALC granted the right to reinstatement not only to the employees of the public administration whose work relationship was exclusively regulated by the ALC, but also to those employed in the private sector.

FULL TEXTS BOOK

However, the Tirana District Court held a different stance in 2018, by adopting a systematic interpretation of Article 146 § 3 of the ALC with articles 92 et seq. of the Albanian Civil Code, which regulate voidance and voidability of legal actions, as well as respective remedies. The District Court stated that 'as long as the termination was considered unreasonable (abusive), then according to the remedies that the provision itself prescribes, the options available to the worker are either claiming absolute invalidity of the termination and reinstatement, or claiming only pecuniary compensation, by deeming the termination valid regardless of its irregularities. In the first option of course of action, the termination is considered absolutely null and void, which – in the context of private law – means that the parties must return to their previous state.'[19] This reasoning in fact complies with the unifying judgment no. 7/2011 which characterizes employment relations as falling within the scope of contract law. Were we to adopt this interpretation, then we would have to agree that the employment contract, in addition to the provisions of the ALC, must also be governed by the general provisions of the Civil Code on the validity of legal actions. Therefore, based on article 92 (a) of the Civil Code, dismissal conducted in breach of Article 146 of the ALC is null and void as, not only it violates a binding provision of the law, but is also explicitly sanctioned as such by paragraph 3 of the said article.

Nevertheless, this line of reasoning has not found much support in practice, especially when the employer is a private legal entity, where courts have almost always awarded only compensation. I believe that the latter approach better represents the main socio-legal feature of all employment relations: the existence of mutual trust. Since this trust relationship is presumed to be broken upon the unilateral termination of the contract, regardless of the fact whether it is valid or not, it would be illogical to force the employer to reinstate the worker, as the newly restituted work relationship is destined to fail again.

4. REINSTATEMENT ACCORDING TO THE CASE-LAW OF INTERNATIONAL COURTS

Labour rights are not specifically guaranteed by the ECHR. However, by virtue of an integrative interpretation, the ECtHR has afforded indirect protection to the right to work by analysing it under Articles 6, 8, 10, 12, and 13 of the ECHR.[20] One of the most important ECtHR cases in labour law is *Pellegrin v France*,[21] where the applicant sought reinstatement in the civil service. The ECtHR concluded that the specific dispute did not fall within the scope of protection granted by Article 6 § 1 of the ECHR, reasoning that 'the only disputes excluded from the scope of Article 6 § 1 of the Convention were those raised by public servants whose duties typified the specific activities of the public service in so far as the latter was acting as the depositary of public authority responsible for protecting the general interests of the State or other public authorities. A manifest example of such activities was provided by the armed forces and the police.'[22]

On the other hand, in the previous case *Ruotolo v. Italy*,[23] whereby the applicant claimed reinstatement as well as damages for wrongful dismissal, the ECtHR, albeit not explicitly holding whether reinstatement could be considered as stemming from Articles 6 and 13 of the ECHR, did accept the allegations of the claimant for violation of his right to a fair trial due to the unreasonable length of the proceedings. By an *a contrario* interpretation, we could conclude that should the ECtHR have

[21] Application No. 28541/95, judgment of 8 December 1999.

[22] Cf. ECtHR. (9 December 1999). *Press Release Issued by the Registrar*. 698. Available at https://hudoc.echr.coe.int/app/conversion/pdf/?library=ECHR&id=003-68450-68918&filename=003-68450-68918.pdf. A similar stance has also been adopted in several previous cases. See for example: ECtHR, cases *Massa v. Italy*, application no. 14399/88, judgment of 24 August 1993, § 26 and *Niegel v. France*, application no. 18725/91, judgment of 17 March 1997.

[23] Application No. 12460/86, judgment of 27 February 1992.

FULL TEXTS BOOK

maintained that reinstatement does not enjoy protection as a remedy under the Convention, it would have declared the application inadmissible as it did in the case of *Pellegrin*. The fact that the ECtHR found a violation of Article 6 in respect of the unreasonable length of the judicial proceedings for reinstatement must be construed as meaning that, if the right to reinstatement is sanctioned by the domestic legislation as was the case with Italy, this right shall also enjoy judicial protection and must be afforded all guarantees under Article 6 of the ECHR.[24]

In *Heinisch v Germany*,[25] a landmark case in labour law, the ECtHR explicitly held that a dismissal of the reinstatement claim by domestic courts constitutes a violation of the ECHR. In this case, the applicant, an employee of a commercial company, had filed a criminal complaint against his employer acting as a whistle-blower. For this reason, the employer had immediately terminated the employment contract. The applicant had sought reinstatement before the German courts, but his attempts were unsuccessful. Heinisch claimed that the immediate termination of the employment contract motivated solely by his decision to file a criminal complaint, and the subsequent refusal of the domestic courts to order his reinstatement constituted a violation of his freedom of expression, guaranteed by Article 10 of the ECHR.[26] The ECtHR found that there indeed was a violation of the applicant's right to freedom of expression, arguing that the refusal of the domestic courts to reinstate the claimant indicates that they failed to strike a fair balance between the need to protect the employer's reputation on the one hand and the applicant's right to expression on the other.[27] A similar stance was held in the 2021 case of *Melike v Turkey*,[28] where the applicant was a hired employee of the Ministry of Education, who did not enjoy civil servant status and whose work relationship was exclusively regulated by the employment contract. Based on the above, one may conclude that, similarly to the Albanian courts, the ECtHR has been reluctant to grant automatic protection to the right to reinstatement, rather opting for examination on a case-by-case basis, leaving the decision of whether to sanction the right to reinstatement to the margin of appreciation of Member States.

This reluctance is also present in the case law of the CJEU, which also reviews the right to reinstatement separately for each case presented, depending on whether it is stipulated by the domestic legal frameworks. In the *Marshall* case,[29] the CJEU stated that, when an employee is dismissed for discriminatory reasons, the equality between the parties can only be restored through two alternatives: reinstatement or compensation. This stance was reconfirmed in 2015.[30] In the 2020 preliminary ruling on the case of *QH v the Supreme Court of Cassation of the Republic of Bulgaria*,[31] the CJEU confirmed that the provisions of national law stipulating reinstatement as a remedy for unfair dismissal are in

[24] Similarly, the ECtHR has also held that Article 6 applies when the worker seeks reinstatement judicially in the case *Buchholz v. Germany*, although it found no violations in this case (application No. 7759/77, judgment of 6 May 1961, § 52).

[25] Application No. 28274/08, judgment of 21 July 2011.

[26] Ibid, § 41.

[27] Ibid, §§ 94-95.

[28] ECtHR, case of *Melike v. Turkey*, application no. 35786/19, judgment of 15 June 2021. In this case, the applicant was dismissed by the Ministry of Education, because it had 'liked' several Facebook posts which were considered disturbing for the public. The applicant had claimed reinstatement, but this claim was dismissed by the domestic courts. She alleged before the ECtHR that her dismissal together with the decisions of the Turkish courts constituted a violation of her right to freedom of expression, guaranteed by Article 10 of the ECHR. The ECtHR accepted this argument, as the immediate termination of the contract was disproportionate to the motive alleged by the employer. Thus, the ECtHR has indirectly granted protection to the right to reinstatement.

[29] CJEU, case C-271/91 *Marshall v Southampton and South-West Hampshire Area Health Authority*, judgment of 2 August 1993, § 25

[30] CJEU, case C-407/14 *María Auxiliadora Arjona Camacho v Securitas Seguridad España SA*, judgment of 17 December 2015.

[31] CJEU, joint cases C-762/18 and C-37/19 *QH v Varhoven kasatsionen sad na Republika Bulgaria*, judgment of 25 June 2020, § 78

accordance with the EU law. Therefore, an employee who has been granted the right to reinstatement by a judgment which is yet to be enforced by the employer, should enjoy the right to compensation for annual leave until his effective reinstatement.

It is worth noting that scholars have consistently underlined that the only valid interpretation of Article 15, 30 and 47 of the EU Charter must lead to the conclusion that wrongful dismissal should give rise to an automatic right of workers to seek reinstatement, as it is the only remedy capable of fully restoring their rights.[32] However, the above judgments indicate that the *acquis* as interpreted by the CJEU grants protection to reinstatement only if it is stipulated by national legislation. This reluctance to expand the applicability of the right to reinstatement may be influenced by the impact of the principle of freedom to conduct business,[33] deeply entrenched in the case-law of the CJEU, which constitutes a direct barrier prohibiting courts from ordering a company to reinstate a former worker.[34]

Finally, it is also worth mentioning the relevant case law of the ILO Administrative Tribunal, as the ILO standards in labour law constitute standards of universal application. Article 10 of the ILO Convention No.158 provides that in cases of unlawful dismissal, the employee must be guaranteed either reinstatement or compensation. In a 2021 case, the Tribunal held that 'as a rule, an employee dismissed for disciplinary reasons, whose dismissal is annulled by the court, has the right to be reinstated. However, the Tribunal may refuse to make this order if reinstatement is no longer possible or when it is inappropriate. According to the Tribunal's jurisprudence, reinstatement is not granted when the employer has valid reasons for losing trust in the worker.'[35] This shows that both reinstatement and compensation are equally acceptable alternatives.

5. CONCLUSION

International organizations which Albania has adhered to or aspires to become a member to and their courts agree that every worker has the right to have their rights restituted when the employer unlawfully terminates the employment contract. Restitution can be achieved through either reinstatement or compensation. From the examined case-law, it appears that the ECtHR, the CJEU, or the ILO Administrative Tribunal have not expressly given prevalence to one remedy over the other. All three leave this choice to member states, upon the condition that, should the latter decide to enact the right to reinstatement in their legal framework, they must guarantee it.

The ALC guarantees the right of public administration employees to reinstatement in case of termination for unreasonable (abusive) causes (Article 146 § 3 of the ALC), as well as when the contract is immediately terminated for unjustified causes (Article 155 § 3 of the ALC). While termination in breach of Article 146 of the ALC is null and void, termination in breach of article 155 is not sanctioned as such. I believe that if the legislator had had the will to consider unjustified termination void, he would have stipulated so in the relevant Articles, because in similar cases such as that of Article 146 of the ALC, voidance this was explicitly stipulated. Therefore, I believe that in the case of immediate and unjustified termination of the contract, reinstatement does not constitute an available remedy to the worker, unless specifically provided by a separate law regulating the work relationship. The rationale behind this stance is that, irrespective of being irregular, the termination continues to be valid.

[32] See for example: Hepple, B. (1981). A Right to Work? *International Law Journal, 10:* 76-78 and Barnard, C. (2012). *EU Employment Law* (4th Ed.). Oxford: Oxford University Press.

[33] This right is also guaranteed by Article 16 of the EU Charter.

[34] Kenner, J. (2016). *Article 30 – Protection in the event of unjustified dismissal.* In: S. Peers et al, The EU Charter of Fundamental Rights – A commentary, p. 17, 2016, Hart Publishing. Also see: CJEU, case C-426/11 *Alemo-Herron and Others v Parkwood Leisure Ltd*, judgment of 18 July 2013.

[35] The Administrative Tribunal of the ILO, case *M. v Global Fund to Fight AIDS, Tuberculosis and Malaria*, no. 4579 of 21 October 2022.

Indeed, the Supreme Court of Albania has also maintained in the unifying judgment no.31/2003 that reinstatement does not enjoy judicial protection. This judgment continues to remain in force partially, with the amendment that when the employment relationship is regulated by another specific law which recognizes the right to reinstatement in addition to the ALC, the employee will enjoy the right to reinstatement. Since lower courts are bound by the unifying judgments of the Supreme Court, their case-law cannot diverge from this stance until the Supreme Court decides to change it, or the ALC itself is amended so as to provide a more favourable regulation.

Based on the general principles of public and private law, while agreeing with the stance held by the Supreme Court in the unifying judgment No. 31/2003 on most matters addressed therein, I – at the same time – hold a different opinion on several points. First, I also agree that reinstatement should not enjoy judicial protection when the employer is a private company. Since these relationships are built on the principle of mutual trust, with the termination of employment, such trust ceases to exist. Otherwise, the parties would not invest the court, but would renew their contract freely, without the need for judicial intervention. Therefore, regardless of the breach of the rules in force regulating *ultima ratio* termination, it would be a disproportionate burden for the employer to be obliged to reinstate the employee when trust no longer exists between them. This stance also satisfied the principle of freedom to contract, the only logical derivative of which is that if the employer unlawfully terminates the contract, they should only bear the obligation to compensate the damage incurred by the worker. If the court orders the company to reinstate the worker, the execution of this order would result in a *de facto* obligation of the employer to re-enter into a contract against their free will.

I believe the situation is different when the employer is a public body, regardless of whether the employment relationship is regulated by a specific law or not. This is the main point where I hold a different approach than that maintained in the unifying judgment no. 31/2003. The public body is a representative of state interests. To achieve these interests and to ensure the proper functioning of the state, the public administration apparatus makes use and operates through its employees. Therefore, I believe that when the termination of the employment contract is abusive, the principle of trust between the *State* and the employee is not broken. This is because the higher interest of the state is to ensure the principle of legality and the employment of the most competent persons to perform their corresponding duties, in the framework of guaranteeing the proper functioning of the state apparatus as to achieve the best interest of the public. Conversely, it is the person wo has carried out the unlawful termination the one who has broken the principle of trust. That is because the said official has acted in abuse of his powers to appoint and dismiss the personnel of the institution. Had there been a more competent person responsible, the terminated worker would not have been terminated. This conclusion applies to both civil servants and employees of the public administration the work relationship of whom is regulated based on the provisions of the ALC. Therefore, I believe that the laws by which the work relationship is regulated (i.e., if it is regulated exclusively by the ALC, or by additional specific laws) hold no relevance in respect of determining whether there is a right to reinstatement, especially since this right is explicitly guaranteed by Article 146 § 3 of the ALC for cases when the termination is ascertained as null and void by the court. As a consequence, I believe that it is the time for a change in the approach adopted by the Albanian courts, including the Supreme Court. This would serve to achieve a double-purpose: first, to ensure a better representation of the state interests, and second, to guarantee the legal certainty and equality among workers.

APPENDIX: Relevant Legal Provisions on the Rights of Workers

1. The Constitution of the Republic of Albania

Article 49: 1. Everyone has the right to earn the means of living by lawful work chosen or accepted by himself. He is free to choose his profession, place of work, as well as his own system of professional qualification.

2. Employees have the right to social insurance of work.

2. The European Convention on Human Rights

Article 6 § 1: In the determination of his civil rights and obligations or of any criminal charge against him, everyone is entitled to a fair and public hearing within a reasonable time by an independent and impartial tribunal established by law. Judgment shall be pronounced publicly but the press and public may be excluded from all or part of the trial in the interests of morals, public order or national security in a democratic society, where the interests of juveniles or the protection of the private life of the parties so require, or to the extent strictly necessary in the opinion of the court in special circumstances where publicity would prejudice the interests of justice.

Article 8: 1. Everyone has the right to respect for his private and family life, his home and his correspondence.

2. There shall be no interference by a public authority with the exercise of this right except such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others.

Article 10 § 1: 1. Everyone has the right to freedom of expression. This right shall include freedom to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers. This Article shall not prevent States from requiring the licensing of broadcasting, television or cinema enterprises.

Article 13: Everyone whose rights and freedoms as set forth in this Convention are violated shall have an effective remedy before a national authority notwithstanding that the violation has been committed by persons acting in an official capacity.

3. The Universal Declaration on Human Rights

Article 23 § 1: Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.

4. International Covenant on Economic, Social and Cultural Rights

Article 6 § 1: The States Parties to the present Covenant recognize the right to work, which includes the right of everyone to the opportunity to gain his living by work which he freely chooses or accepts, and will take appropriate steps to safeguard this right.

5. ILO Termination of Employment Convention No. 158

Article 10: If the bodies referred to in Article 8 of this Convention find that termination is unjustified and if they are not empowered or do not find it practicable, in accordance with national law and practice, to declare the termination invalid and/or order or propose reinstatement of the worker, they shall be empowered to order payment of adequate compensation or such other relief as may be deemed appropriate.

6. Charter of Fundamental Rights of the European Union

Article 15: 1. Everyone has the right to engage in work and to pursue a freely chosen or accepted occupation.

2. Every citizen of the Union has the freedom to seek employment, to work, to exercise the right of establishment and to provide services in any Member State.

3. Nationals of third countries who are authorised to work in the territories of the Member States are entitled to working conditions equivalent to those of citizens of the Union.

FULL TEXTS BOOK

Article 30: Every worker has the right to protection against unjustified dismissal, in accordance with Community law and national laws and practices.

7. Labour Code of the Republic of Albania

Article 143: 1. After the probation period, to terminate the contract of undefined duration, the parties shall respect a notice deadline of two weeks, when the employment relation has lasted up to six months, of a month, for the duration of over six months up to two years, of two months for the duration of more than five years.

2. Repealed.

3. The deadline notice to terminate the contract shall be extended up to the end of the month. The same rule shall be applied, when the notification deadline is suspended during the period of disability to work or pregnancy (dismissal at inappropriate moment).

4. When one of the parties terminates the contract without respecting the deadline notice, then the termination shall be considered as a termination of contract with immediate effect.

5. During the notification period, when the work contract is terminated by the employer, the employee benefits at least 20 hours of payable leave per week to look for a new job. The duration of the leave and the procedures for receiving and using it shall be stipulated in the collective or individual work contract.

Article 144: 1. After the probation period, when the employer thinks to terminate the contract of employment, he/she must inform the employee in writing at least 72 hours before the meeting, and talk with him/her.

2. The employer, during the conversation, shall present to the employee the reasons concerning the decision planned to be taken, and offer him/her the opportunity to express himself/herself.

3. The termination of the contract shall be made known to the employee within a time limit of 48 hours up to one week after the appointment. In the written notification, the employer stipulates the reasons for terminating the contract, which are related to the grounds such as the capability, the conduct of the employee or the operational request of the company. It shall be made in writing.

4. When the employer deems that that it is the case of fair motives of immediate dismissal, he can suspend the employee during the procedure.

5. The employer failing to respect the procedure provided for by this Article, shall be obliged to pay the employee a damage compensation equal to a salary of two months, which is added to other possible damage compensations.

5/1. It is up to the employer to prove that the procedure provided for by this Article has been respected.

6. This provision does not apply to the cases of collective dismissals from work, but the reasons in writing on the termination of the contract shall be given to the employee, according to the time limits provided for in paragraph 5, Article 148, of this Code

Article 146: 1. The termination of the contract by the employer shall be considered of no reasonable causes, when:

a) The employee has claims that result from the contract of employment;

b) The employee has fulfilled a legal obligation;

c) It violates the prohibition of discrimination according to the stipulations in this code and in the special law for the protection from discrimination;

d) It is done for motives that are connected with the employee's exercise of a constitutional right, which however does not lead to the violation of the obligations resulting from the contract of employment;

e) It is done for motives that are connected with the employee's being or not a member of Trade Unions created as defined by law, or because of his/her participation in Trade Union activities on the basis of law;

FULL TEXTS BOOK

f) The employee is a member of the steering body of the trade union and the employer does not have a motif to dismiss him;

g) The employee violates the rules for consultation with the trade union recognized as the representative, or with the employer on the transfer of the company and the collective dismissal;

gj) It is done in contradiction to the provision of paragraph 3, article 144 of this Code, related to the reasons for the termination of the work contract.

2. If the contract is terminated for no reasonable cause, then the employee has the right to sue the employer at the court within 180 days, starting from the day on which the notice deadline has expired.

3. The termination of the contract for unreasonable causes shall be invalid. The employer who has terminated the contract for unreasonable causes is obliged to pay the employee a damage that may amount up to the salary of one year, which is added to the salary he/she shall receive during the notice deadline. As concerns the employers of the Public Administration, where there is an irrevocable court decision on returning to the same workplace, the employer is obliged to execute this decision.

Article 153: 1. At any time the employer and the employee may immediately terminate their contract for justified grounds.

2. Justified grounds shall be considered all the serious circumstances that, in accordance of the principle of mutual trust, do not allow for asking the one who has terminated the contract to continue the labour relations.

3. The court decides itself whether there have been justified grounds for the immediate termination of the contract. Justified grounds shall be considered only those cases where the employee violates the contractual obligations of serious offence, as well as the cases where the employee repeatedly violates the contractual obligations of nonserious offence, regardless of the employer's written warning.

Article 155: 1. The employee enjoys the right to the salary that he/she would have gained if the labour relations had expired at the end of the notice deadline defined by law or contract or with the expiry of the contract of defined duration.

2. The employer may subtract from the salary the income that the employee has saved as a result of work interruption, the income from another job, or the income that he/she has deliberately waived.

3. In the cases of the immediate and unjustified termination of the contract of employment by the employer, the court, after having assessed all circumstances, shall decide to oblige the employer to pay the employee damages that equal to not more than the salary of a working year. With regard to the employees of the Public Administration, when there is an irrevocable decision on returning to the previous workplace, the employer is obliged to execute this decision.

4. If the contract is terminated without justified grounds, the employee is entitled to sue the employer at the competent court within 180 days from the day when the work relations are terminated. In the case when the unjustified motif is revealed after this time limit has expired, the employee submits a claim within 30 days from the day when this motif is revealed.

8. Civil Code of the Republic of Albania

Article 92: The invalid/void legal actions do not create any legal consequences. Such ones are those which: a) conflict with a binding provision of law; b) are performed to defraud the law; c) are performed by minors under the age of fourteen; d) are done in agreement between parties without aiming to bring legal consequences (fictive or simulated).

Article 105: The legal transaction declared invalid/void is considered as such from the moment it was performed.

9. Law No. 152/2013 'On Civil Servants'

Article 3 § 1: Police officers and officers of the external service are civil, towards whom this law shall apply, unless otherwise provided by the special laws.

Article 66/1 § 1: Final court judgments ordering the reinstatement of civil servants shall be immediately enforced by the responsible unit.

ABSTRACT
This study involved collecting dandelion plants (*Taraxacum officinale*) from the Sivas province of Türkiye during the months of May and June. Water extraction was then conducted on the root, stem, and flower sections of the plant. The resulting extract was tested for its DNA protecting ability. We conducted a study where we extracted water from different portions of the dandelion plant, including the flower, root, and stem. We then analyzed the chemicals acquired from the plant and recorded the presence of effective compounds, comparing our findings with existing literature on similar plants. The effectiveness of extracts obtained from root, stem, and flower sections in protecting DNA from UV and oxidative damage was determined using pBR322 plasmid DNA. The plasmid DNA underwent damage when exposed to H_2O_2 and UV radiation in the presence of the extracts. The imaging procedure was conducted using a 1.5% agarose gel. The data regarding the DNA protective activity of the plant indicated that the plant demonstrated varying levels of DNA protection at different concentrations and in different extracts of the plant. The plasmid DNA patterns, to which the extracts were applied, demonstrate the preservation of ocDNA and linDNA bands. Based on the observed band pattern in the gel picture, it is evident that the scDNA band is present in certain extract and dose groups. Based on the data, it was found that *Taraxacum officinale* plant extracts, which are significant in terms of ethnopharmacology, effectively safeguarded plasmid DNA from damage at high doses. However, the protective effect slightly diminished as the dose of diluted plant extract decreased. Upon examination of the gel image generated from this investigation, it is evident that the flower and stem extracts of *Taraxacum officinale* (dandelion) exhibit greater efficacy at lower concentrations compared to the root extract.
Keywords: *Taraxacum officinale*, DNA preservation activity, ethno-pharmacology.

INTRODUCTION
Throughout history, plants and their extracts have served as a valuable resource for human healing in various domains such as nourishment, rejuvenation, and illness treatment. Due to technological advancements, synthetic and semi-synthetic substances have quickly become popular in both the global and Turkish markets for medicinal purposes. The number of studies on the content analysis of plants used in the treatment of diseases is on the rise. While there may be plants of the same species in a given region, the plant content can be influenced by several circumstances, such as differences in crop covering. The focus of this study will be on *Taraxacum officinale*, a perennial medicinal plant belonging

FULL TEXTS BOOK

to the Asteraceae family. The plant exhibits a yellow-flowered structure with roots during the months of April to May. The herb, commonly utilized by the general population, possesses numerous qualities including diuretic, antidiarrheal, appetite-suppressing, edema-relieving, and stomach-discharge-regulating effects (Sarı et al., 2020; Sohail et al., 2014). Consistent with these attributes, coffee derived from the dehydration of the plant's root is currently utilized and commercially available in Türkiye as a herbal dietary supplement in pharmacies. The study assessed the DNA preservation capability of the extract by extracting water from the root, trunk, and flower components of the dandelion plant, which were taken from the province of Sivas during May-June. Not only were the floral sections of the plant, which are commonly recognized as a medicinal plant, extracted, but also the root and other components of the plant, as well as water extraction. The literature has extensively examined and recorded the analysis of plant-derived compounds and the identification of potent molecules. This study examines the capacity of the plant *Taraxacum officinale*, which holds ethno-pharmacological importance, to protect against DNA damage caused by harmful UV radiation and substances like H_2O_2. Agarose gel electrophoresis was employed to assess DNA damage in the plasmid pBR322 DNA, specifically in the dandelion plant sections, as a plasmid.

METHODOLOGY

Material

The specimen for the investigation was obtained from Sivas province between the months of May and June. The plant samples were desiccated in a shaded area at room temperature. The desiccated aerial components of the plant were pulverized using a domestic food processor and measured for the purpose of water extraction (Figure 1).

Figure 1. Dry leaf milled sample and weighing

Obtaining Plant Extracts

To extract water, 20 grams of herbal material from each plant part were weighed and placed in flasks. Then, 200 milliliters of hot distilled water were added, and the mixture was kept in a closed incubator for 10-15 minutes with periodic shaking. After the designated time, the extract was filtered, and another 200 milliliters of hot distilled water were added to the herbal materials once again. The procedure was iterated thrice, and the samples obtained after 24 hours were subsequently subjected to lyophilization to eliminate all traces of water. Following a 24-hour incubation period, the plant solutions (root, stem, and flower) were transferred to filter paper within a filtering system and subsequently filtered into sterile sample containers (Figure 2).

FULL TEXTS BOOK

Figure 2. Filtration of plant solutions after incubation

Using this technique, the pulp and the liquid component of the solution were effectively isolated. The sterile containers holding the filtered solutions were labeled with the date, solvent information, and location on their lids. Subsequently, the samples were preserved at a temperature of -80°C for a duration of three days. The frozen solution samples were subjected to sublimation of ice crystals using a lyophilizer equipment, which caused the frozen water (i.e. ice crystals) in the solution to transition from a solid state to a gaseous state by decreasing the ambient pressure (Figure 3). The cryogenic solutions were stored in the lyophilizer for a duration of roughly 3 days. The samples extracted from the lyophilizer were kept at a temperature of -20°C. The percentage yield was determined for the extracts collected from each individual section of the plant.

Figure 3. Plant extracts dried under pressure in a lyophilizer

Determination of the DNA Preservation Activity

The protective activity of extracts from the root, stem, and flower sections of the dandelion plant against DNA damage was assessed using pBR322 plasmid DNA. The pBR322 plasmid is a 4361 base pair long plasmid, which is one of the initial cloning vectors used in *E. coli*. The plasmid harbors two antibiotic resistance genes, specifically ampicillin and tetracycline (Watson, 1988). The plasmid DNA underwent damage when it was exposed to H_2O_2 and UV radiation in the presence of extracts. Imaging was conducted on a 1.5% agarose gel using the methodology outlined by Russo et al. (2000) (Figure 4).

FULL TEXTS BOOK

Figure 4. Agarose gel preparation

Control tubes were also produced to assess the effectiveness of diluted and undiluted stock plant extracts in preserving activity. The table below (Table 1) provides information on the contents and treatments of the experimental and control tubes. 3 µl of pBR322 plasmid, 5 µl of plant extract, and 1 µl of H_2O_2 were added to the Eppendorf tubes holding extracts, resulting in a total volume of 9 µl. The mixture was then exposed to UV light for a duration of 2 minutes. Four control groups were established, and the second and third control groups were subjected to ultraviolet (UV) radiation for a duration of 2 minutes, as indicated in Table 1. The ingredients were manufactured in accordance with the specified codes and quantities for all samples. The UV light source used was a UV transilluminator device (DNR-IS) that emitted light at a wavelength of 302 nm and had an intensity of 8000 µW.cm-1 at ambient temperature. Next, 2.0 µL of loading buffer (loading dye 6x) was introduced into the Eppendorf tubes and placed onto a 1.5% agarose gel (Figure 5). Following agarose gel electrophoresis with a concentration of 1.5%, the gel casting system (DNR-IS, MiniBIS Pro) was used to do imaging (Tepe et al., 2011).

RESULTS

This study examined the effects of water extracts from three different sections of the dandelion plant (root, stem, and flower) on the supercoiling of pBR322 plasmid DNA. This approach evaluates the capacity of plant extracts to inhibit DNA damage in the presence of DNA-damaging agents, namely hydrogen peroxide (H_2O_2) and UV radiation. The photographs depicting the protective impact of plant extracts on DNA damage revealed the presence of form I and form II bands of plasmid DNA on the gel. Additionally, in certain images, a form III band emerged accompanied by a decrease in the brightness intensity of both bands (Figure 6). The study found that dandelion plant extracts effectively safeguarded plasmid DNA from harm at high dosages, however the protective effect marginally diminished when the plant extract was diluted (Figure 6). Due to the combined effects of ultraviolet light damage and hydrogen peroxide application, the plasmid DNA in tube K4, which functioned as a control test tube, was fragmented. As a result, no band profile was detected in the agarose gel electrophoresis. Indeed, the presence of low-level swabs at certain wells where diluted plant samples were sprayed suggests that the DNA has undergone fragmentation. Observing bands 1-3, it is evident that the plasmid DNA bands are highly noticeable in the wells when concentrated doses (1mg/ml stock dose) of various portions of the dandelion plant were administered. The samples exhibit a noticeable disparity in brightness and intensity between the Form 1 band, which represents the supercoil form of pBR322 plasmid DNA, and the somewhat weaker Form 2 band. Additionally, a feeble line was detected between the Form 3 band (Figure 6). Upon analyzing the band profiles in wells 4-6, where the plant extracts were administered at a concentration of 0.1 mg/mL with a 10-fold dilution, it is evident that the intensity of the Form 1 band is rather low, although the Form 2 and Form 3 bands exhibit a minor increase in prominence. These findings indicate that the supercoil DNA (Form 1) structure of the plasmid DNA has transformed into the open circular (Form 2) structure as a result of minor fractures. Furthermore, in wells 7-9, when the plant samples were diluted by a factor of 100 at a concentration of 0.01 mg/mL, a noticeable DNA smear was visible throughout the gel. Additionally, the Form 1 band became extremely faint and completely disappeared in samples 8 and 9. This scenario signifies disturbances and discontinuities in the DNA structure (Figure 6). Upon further examination of the gel image, it is evident that the flower and stem extracts of Taraxacum officinale (dandelion) exhibit greater efficacy at lower concentrations compared to the root extract (Figure 6).

CONCLUSION AND DISCUSSION

Due to its geographical position and climate, Türkiye possesses a diverse and polymorphic floral abundance. Anatolia serves as both a source region and a hub for hybridization and transition of several species. Anatolia has served as a sanctuary for species from colder regions during glacial eras and as a pathway for species throughout non-glacial periods. Anatolia, located at the intersection of the Asian and European continents and adjacent to Africa, is a region with diverse climates. It plays a crucial role in hosting a significant portion of the world's plant species, as it is the only country where the Europe-Siberia, Mediterranean, and Iran-Turan geographical regions converge. Simultaneously, Anatolia is recognized as a region where old wisdom and natural remedies have been enhanced over time. The literature affirms that plants have been extensively employed in our country throughout history for a wide range of reasons, including food, health, and treatment. Today, with the advancements in technology and science, it is now possible to scientifically demonstrate and validate the biological activities and therapeutic effectiveness of the majority of plant species that have been traditionally used in medicine. This is achieved through experimental methodologies and processes. This approach allows for the scientific demonstration and standardization of the procedures used in traditional medicine treatments. Conversely, it is crucial to identify the specific molecules among the multitude found in

FULL TEXTS BOOK

plants that possess the primary therapeutic properties, and subsequently isolate and refine these compounds. The objective of this study was to determine whether *Taraxacum officinale* (dandelion) plant, which is commonly found in parks and gardens in Sivas province, possesses DNA molecule protective qualities against experimental DNA damage. The results demonstrated that water extracts of the dandelion plant exhibit DNA molecule protection ability against oxidative DNA damage at various doses. The various components of the dandelion plant possess varying degrees of efficacy in combating UV damage and protecting the DNA molecule from harm caused by free radicals like hydrogen peroxide. However, doing more extensive trials and verifying the issue using various methodologies would yield more precise results. This study is an exploratory study, and we anticipate that it will be highly valuable in strategizing future studies for assessing the plant's potential in domains such as healthcare, pharmaceuticals, cosmetics, and more.

ABSTRACT
The innovations brought by the digital age have radically changed the forms of political participation. In addition to traditional methods of political participation, digital platforms offer new ways of facilitating and diversifying individuals' participation in political processes. Digital political participation encompasses the ways in which individuals engage in political processes online. This takes place in various ways, such as online voting, social media campaigns, digital petitions and online discussion platforms. Digital tools make political participation more accessible, fast and effective. By removing geographical and physical barriers, these tools make it possible for everyone to participate in political processes. Digital preferences have significant impacts on political participation. In addition to traditional methods of participation, digital platforms enable wider audiences to engage in political processes. Digital tools increase the speed and interactivity of political participation and make processes more transparent and accountable. Platform X stands out as a platform that encourages and facilitates political participation in a digital environment. This platform aims to increase participation in political processes by offering its users various tools and opportunities. The X Platform offers features such as online surveys and referendums, training and information, events and discussion groups, and donation and support campaigns. Digitalisation offers new and diverse ways of participation in addition to traditional methods of political participation, enabling individuals to participate in political processes more easily and effectively. The aim of this study is to examine the effects of digitalisation on political participation and to explain how this process works through the example of X Platform. In addition, this study aims to define the forms of digital political participation, examine the characteristics and role of the X Platform, evaluate the effects of digital preferences on political participation, and identify the challenges faced by digital political participation.
Keywords: Political Participation, Digital Participation, Platform X, Digital Age.

INTRODUCTION
The innovations brought by the digital age have led to radical changes in forms of political participation. Traditional methods of political participation are gradually being replaced by forms of participation realised through digital platforms. This transformation has a profound impact not only on voting habits of voters but also on the way they are involved in political processes. The speed, accessibility and interaction opportunities provided by digital technologies redefine citizens' political participation.
This study analyses in detail the impact of the services offered by Platform X on political participation and the barriers to digital participation. It analyses the functioning of online surveys and referendums, training and information activities, events and discussion groups and how these processes shape democratic participation. In addition, threats to digital participation and suggestions on how these threats can be addressed are presented. This study aims to identify the necessary strategies for the X Platform to provide a more effective, secure and inclusive participation environment.
A deep understanding of the effects of digitalisation on political participation is critical for the development of modern democracies. This study aims to provide an important reference point for future

FULL TEXTS BOOK

studies and applications by revealing the dynamics of digital political participation through the example of Platform X.

CONCEPTUAL FRAMEWORK

The Concept of Political Participation

In the literature, it is necessary to include different definitions in order to correctly analyse the concept of political participation, the definition of which is not agreed among political scientists (Eser & Sarışahin, 2016: 39). According to Barber, political participation is a universal principle and is defined as "the masses acting with a sense of "we" sharing, discussing and contributing to certain facts together" (Barber, 1995: 195-200). Verba, Nie and Converse, on the other hand, take political participation in a broader sense and define it as the actions citizens take by directly influencing government decisions. In this sense, political participation is not limited to voting and campaigning, but also includes other legitimate actions that citizens may resort to. In addition, it is emphasised that participation in government "can also be achieved through other spheres of life such as family, school, associations and workplace" (Verba, Nie and Converse, 1989: 1-4).

Kalaycıoğlu, on the other hand, defines political participation as "the actions and activities carried out by individuals to influence those who will come to political decision-making positions or those who hold these positions as a result of the preferences and decisions they make autonomously", and unlike Verba, Nie and Converse, he includes not only legitimate actions and activities but all actions within the definition. According to him, even if the citizen actions that affect government decisions are assassination, coup d'état, rebellion and participation in revolution, the fact that he/she performs the action with his/her own will means political participation. (Kalaycıoğlu, 1998: 10-11). Finally, according to Gökçimen, "political participation is the individual's relationship with the political system". It manifests itself in different forms such as following social events and obtaining information, voting, becoming a candidate, and participating in political decision-making mechanisms (Gökçimen, 2008: 7).

Variables Affecting Political Participation

While performing political participation activities, some variables that voters have affect participation. These variables are grouped in different ways by political scientists (Silsüpür, 2021: 165).

According to Kışlalı, age, gender, family, education, occupation, occupation, income and settlement type are variables that affect political participation (Kışlalı, 1987: 358). Dursun, on the other hand, explains the variables affecting political participation from a broader perspective and categorises them as socio-economic, psychological and political factors (Dursun, 2004: 236). Age and gender, which are accepted as biological variables by Erdinç (Erdinç, 2020: 23), are the determinant variables affecting political participation.

Milbrath explains the relationship between political participation and age with the statement "Participation increases gradually with age, reaches a peak in the forties and fifties, and gradually declines over sixty" (Milbrath, 1965: 134). Quintelier explains the low level of political participation especially in the twenties with the life cycle. Factors such as the ongoing education process, the housing they do not own, and the marriage that has not yet taken place reduce the rate of political participation of young people (Quintelier, 2007: 166-177).

Studies have shown that men's political participation rates are higher than women's political participation rates in almost all societies (Burns, 2007: 113-117). The fact that women have the childbearing function pushes them to housework. For this reason, the social role attributed to women results in a decrease in interest in politics. Therefore, it also affects political participation (Kışlalı, 1987: 359).

There is a positive relationship between education, which is accepted as a socio-economic variable (Dursun, 2004: 236-237), and political participation. Verba, Schlozman and Brady have shown that individuals with higher levels of education have higher rates of political participation compared to

FULL TEXTS BOOK

individuals with lower levels of education. Education directly increases political participation by improving political skills. In addition, acquiring speaking and writing skills also provides knowledge on how to cope in an organisational environment (Verba, Schlozman and Brady, 1995: 305). In addition to skills, it has also been argued that education contributes to the increase in political competence (Persson, 2013: 690). In his article "Clarifying the Relationship between Education and Participation", Jackson stated that education increases both the potential voter's belief that he/she can influence what the government does and the potential voter's belief that he/she has the ability to understand politics and participate in politics (Jackson, 1995: 280).

In addition to the role of the family in the formation of the child's personality and identity during childhood, the opportunities it offers are considered to be very effective in terms of the internalisation of political participation. Family support facilitates participation, especially for young people who join political parties and become active in their youth (Erdoğan, 2007: 89).

By associating the occupations of individuals with their social status, it is explained how occupation affects political participation. According to Kalaycıoğlu, there is a directly proportional correlation between high social status and participation in public policies. Individuals with high social status are more likely to maintain this status and those whose occupation is related to politics show higher political participation (Kalaycıoğlu, 1984: 30-32).

Kislali states that there is a direct proportion between income level and political participation. As the income level increases, political participation increases, while political participation decreases as this level decreases (Kışlalı, 1987: 359). In addition, this relationship is maintained even if the level of education is not sufficient (Görücü, 2021: 169).

Baykal evaluated the relationship between settlement type and political participation and put forward the view that urbanisation increases political participation (Baykal, 1970: 66). Since cities offer wider educational opportunities, they are considered more advantageous than rural areas in terms of following political developments and participating in political decisions (Kalaycıoğlu, 1984: 21).

Levels of Political Participation

Robert Dahl states that political participation can be realised at different levels. He also categorises the levels of political participation as high, medium and low.

High level political participation refers to a type of participation in which individuals are involved in political processes and directly influence decision-making mechanisms. In addition to voting, individuals with a high level of participation are members of political parties and actively participate in campaigns. They also participate in rallies and protests and hold public office. According to Dahl, this type of participation is critical for the ideal functioning of democracy because the direct intervention of the people ensures that political decisions are more legitimate and in line with the needs of the people (Dahl, 2001: 45-48).

Moderate political participation is a level at which individuals participate in basic political activities. This type of participation usually includes actions such as voting and sometimes participating in political debates. Individuals who participate at the intermediate level may not directly influence political processes, but they still play an important role in the functioning of democratic processes. Dahl argues that moderate levels of participation enable large segments of society to be involved in the political process and thus the political system becomes more inclusive (Dahl, 2001: 49-52).

Low level political participation is a type of participation in which individuals are minimally involved in political processes. Individuals with this level of participation generally do not exercise even the most basic political rights such as voting. The reasons for low participation include factors such as lack of political knowledge, apathy, socio-economic barriers and educational level. According to Dahl, low levels of participation can weaken the effectiveness of democratic processes and lead to the exclusion of large segments of the population from political processes (Dahl, 2001: 53-56).

Historical Development from Web 1.0 to Web 4.0

FULL TEXTS BOOK

Technologies that are renewed in direct proportion to the development of the Internet provide great advantages in terms of the benefits they provide to people. Looking at the current development process since the development of web technology, each period has emerged with new features and opportunities. The formation process of these developments is changing day by day as the concept of the Internet and the relationship between people are shaped in different ways (Ersöz, 2020: 59).

The World Wide Web (www), first introduced by computer scientist Berns-Lee, is defined as "hypertext for linking and accessing various types of information as a network of nodes that the user can navigate as they wish" (Choudhury, 2014: 8096).

Web 1.0

Web 1.0, the first application of the Web, was created in 1989 (Choudhury, 2014: 8096). Web 1.0, which is quite primitive compared to today (Latorre, 2018: 2), is defined as a read-only, one-way network that users can only use to get information and cannot interact with the content (Nath & Iswary, 2015). In addition to being a network where only static information could be accessed, the content also had the disadvantage of not being compatible with machines (Choudhury, 2014: 8096).

Web 2.0

Web 2.0 (Latorre, 2018), which was first introduced as a concept by Tim O'Reilly's vice president Dale Dougherty in 2004, has a dynamic structure unlike Web 1.0 and has a collaborative structure by facilitating data sharing and interaction. So much so that it has brought along the development in social networks and enabled users to participate in the content production process. Websites such as Wikipedia, Facebook, Youtube, Twitter or Instagram and their accessibility via mobile phones have encouraged the participant to produce content and thus increased their participation (Almedia, 2017).

Web 3.0

The term Web 3.0 was first used in 2006 in an article by Jeffrey Zeldman, which was associated with technologies such as AJAX (Król, 2020: 44). With Web 3.0, user data in search engines were evaluated and managed, and the possibility of customisation was offered for user preferences. Basically, it is aimed to define data and support the creation of user profiles by enabling these data to connect with each other in order to be more effective (Ersöz, 2020: 61).

Web 4.0

Web 4.0, which is also called symbiotic or smart web, is stated by Nath and Iswary to be in a structure that can think and also make decisions about user searches and content (Nath & Iswary, 2015). With this innovation of the web, direct interaction between the human mind and machines has been achieved.

Web 1.0, Web 2.0, Web 3.0 and Web 4.0 Comparison

Feature	Web 1.0	Web 2.0	Web 3.0	Web 4.0
Time Interval	Early 1990s - early 2000s	mid-2000s - present	2020s and beyond	Near future (under development)
Basic Concept	Static web	Social web	Semantic web	Smart and connected web
User Engagement	Passive consumer	Active participant	Personalised user experience	Proactive, AI-powered user interaction
Content Type	Static pages, rarely updated content	User-generated content, blogs, social media	Semantic tagging, personalised content	Artificial intelligence, machine learning, contextual interactions
Technologies	HTML, GIF, frames	AJAX, Flash, JavaScript, RSS, social media platforms	RDF, OWL, SPARQL, semantic labelling, data integration	AI, IoT, big data analytics, augmented reality, virtual reality
Data Management	Static data, server-based	User-generated and shared data	Semantic data, machine-readable data	Contextualised and personalised data, integrated with smart devices
Interactivity	Low	Centre	High	Very high, rich and natural interaction
Examples	First websites, Yahoo! Directory, Britannica Online	Facebook, YouTube, Wikipedia, Twitter	Wolfram Alpha, Google Now, Siri	Smart assistants, IoT devices, personalised AR/VR experiences
User Interface	Simple and static pages	Dynamic and interactive pages	Personalised and contextual interfaces	Fully contextual, intuitive and natural user interfaces
Business Models	Advertising-based, e-commerce	Social networks, content sharing, adverts	Data-driven business models, smart services	Contextual services, smart business processes, business models based on personal data

Table 1: Historical Development of the Web

X Platform: Pioneer of Digital Political Participation

The digital age has given birth to new technologies and platforms to increase and diversify political participation. In this context, Platform X stands out as an innovative platform that encourages and facilitates political participation in the digital environment. It aims to increase participation in political processes through the various tools and opportunities it offers to its users. When the main features of the X Platform and the effects of these features on political participation are analysed, the prominent topics are Online Surveys and Referendums, Education and Information, Events and Discussion Groups, Donation and Support Campaigns.

Online Surveys and Referendums

Online surveys and referendums have become one of the most important tools of political participation in the digital age. These tools enable citizens to communicate their views quickly and effectively, while helping politicians to keep their finger on the pulse of the public. They can be easily organised through digital platforms and reach large audiences. It enables everyone to participate by eliminating geographical barriers (Trechsel & Vassil, 2003). For example, Estonia implemented an online voting system in a national election for the first time worldwide in 2005, enabling voters to vote faster and more securely (Vassil & Weber, 2011).

These tools are particularly popular among young people and groups with access to technology and can increase overall participation rates, leading to more inclusive and representative results (Boulianne, 2009). Online platforms can offer various incentives to encourage participation in surveys and referendums, which can further increase participation rates. They also facilitate large-scale data collection and analysis processes so that policy makers and researchers can better understand the views of the public (Couper, 2000). For example, surveys conducted through social media platforms offer the opportunity to collect and analyse users' instant feedback (Mossberger, Tolbert, & McNeal, 2008).

There are also important issues in terms of security and confidentiality. The protection of participants' data and the transparency of electoral processes increase the reliability of these tools. In this context,

FULL TEXTS BOOK

blockchain technology can be used to secure online voting systems (Noizat, 2016). The development of security protocols and encryption methods helps to protect the data of participants.

However, the digital divide may hinder the participation of individuals without internet access or with low digital literacy (Norris, 2001). Moreover, information pollution and misinformation on online platforms may affect the reliability of survey and referendum results (Allcott & Gentzkow, 2017). Therefore, it is important to increase digital literacy and promote reliable sources of information.

Training and Information

Platform X aims to increase political participation by providing its users with comprehensive information about political processes, elections and laws. This information and educational materials support users to participate in an informed way. Digital education tools increase political literacy and enable users to participate more effectively and consciously.

Online courses can be presented in various formats such as videos, infographics and interactive content (Anderson, 2008). For example, online courses allow users to gain in-depth knowledge about political systems, electoral processes and legislative activities (Means et al., 2010). Platform X provides its users with continuous training and updates, ensuring that they are always up to date on political processes. This helps users to quickly adapt to changing political conditions and new legal regulations. For example, constantly updated blogs, newsletters, and podcasts allow users to closely follow political developments (Mitchell et al., 2016).

Political literacy refers to the capacity of individuals to understand and act effectively within political systems. By increasing political literacy, digital platforms enable users to participate in political processes in a more informed and effective manner (Delli Carpini & Keeter, 1996). For example, a study conducted by the Pew Research Center reveals that individuals with high digital literacy show more active political participation through online platforms (Pew Research Center, 2018).

Digital platforms facilitate users' access to reliable sources of information. This enables users to make political decisions based on accurate and up-to-date information. For example, fact-checking sites such as FactCheck.org and Politifact play an important role in combating disinformation by providing users with access to accurate information (Graves, 2018). In addition, digital platforms facilitate users' access to various news sources, enabling them to obtain information from different perspectives (Fletcher et al., 2020). Official pages such as the Centre for Combating Disinformation of the Turkish Presidency of Communication also operate on Platform X in order to increase information reliability.

Events and Discussion Groups

Platform X has a structure that encourages users to participate in various political events and take an active role in discussion groups. Digital platforms play an important role in organising political events and increasing participation. Online events provide users with access to meetings, seminars and rallies that they cannot physically attend. For example, video conferencing tools such as Zoom and Microsoft Teams have played a major role in moving political events online during the pandemic (Wiederhold, 2020). Such platforms encourage widespread participation and offer the possibility to record events and watch them later (Morgan, 2020).

Online discussion groups enable users to exchange ideas about political issues and understand various perspectives. These groups can be organised through social media platforms, forums and private discussion rooms. For example, platforms such as Reddit are important digital spaces where users discuss political issues and reach large audiences (Massanari, 2015). Such platforms encourage the active participation of individuals, while raising political awareness and engaging them in democratic processes (Halpern & Gibbs, 2013). Platform X also allows people to share their ideas and participate through the communities tab and chat rooms.

Social media has become a central part of political debates and events. Platforms such as Facebook, Twitter and Instagram allow users to share, discuss and organise political content. The opportunities for interaction offered by social media enable political campaigns to reach large audiences and spread

FULL TEXTS BOOK

rapidly (Gil de Zúñiga, Molyneux, & Zheng, 2014). For example, the #MeToo movement generated wide participation and awareness through Platform X, and its political impact was felt on a global scale (Banet-Weiser, Gill, & Rottenberg, 2020).

Interactive discussion formats enable users to address policy issues in a more in-depth and structured way. Webinars, online panels and live broadcasts make it possible for participants to interact directly with experts and pose their questions. These formats increase the level of knowledge of participants and encourage democratic participation (Janssen & Kies, 2005). For example, the online debates organised by the Oxford Union provide a wide range of participation and interaction across the world (Coleman, 2013).

Digital events and discussion groups foster a sense of community and belonging among users. These platforms enable individuals with common interests to come together and form collective movements. This encourages individuals to participate more actively and willingly in political processes (Putnam, 2000). For example, online activism groups allow users to organise and take effective actions for a specific purpose (Shirky, 2011).

Donation and Support Campaigns

Digital platforms play an important role in increasing political participation by facilitating political donations and support campaigns. These platforms allow users to make online donations to their favourite politicians or campaigns, thereby financially supporting political movements.

Digital donation platforms enable more people to contribute to political campaigns by simplifying the donation process and expanding access. These platforms offer a variety of payment methods so that users can easily donate. For example, ActBlue is a platform that has enabled the collection of large donations for Democratic Party candidates in the United States (Karpf, 2012). The success of ActBlue demonstrates the impact of digital donation platforms on campaign finance (Bimber, 2014).

Micro-donations and crowdfunding enable the collection of small amounts of donations from large audiences through digital platforms. This model was used with great success in Barack Obama's 2008 and 2012 presidential campaigns. Obama's campaign raised large sums of money from millions of supporters who donated small amounts, which increased the financial strength of the campaign (Kreiss, 2012). Crowdfunding enables campaigns to reach wider audiences and gain grassroots support (Agrawal, Catalini, & Goldfarb, 2014).

Social media platforms play a critical role in publicising and disseminating donation campaigns to large audiences. Platforms such as Twitter, Facebook and Instagram allow users to share their donation campaigns and reach large audiences (Enli & Moe, 2013). The viral effect of social media enables campaigns to spread quickly and raise more donations. For example, Bernie Sanders' 2016 and 2020 presidential campaigns managed to raise large amounts of donations through social media (Bimber, 2014).

Digital donation platforms also offer significant advantages in terms of transparency and security. Users can easily track the financial status and expenditures of the campaigns they donate to. This transparency increases donor trust and encourages more people to donate (Strömbäck & Kiousis, 2011). Furthermore, innovations such as blockchain technology increase the security of donation processes, preventing fraud and abuse (Noizat, 2016).

Donation and support campaigns create a strong bond between participants and the campaign. Donors feel more responsible for the success of the campaigns they support, which increases political participation (Verba, Schlozman, & Brady, 1995). By establishing regular communication with donors, digital platforms keep them informed about campaign processes and ensure their continued participation (Howard & Parks, 2012).

Threats to Digital Participation on Platform X

While digital platforms have the potential to increase political participation and support democratic processes, they also face various threats and challenges. While digital tools such as Platform X enable

FULL TEXTS BOOK

users to participate in political processes more easily and effectively, it is crucial to be aware of the threats to digital participation and to take measures against these threats. The main threats to digital participation on Platform X are as follows:

-Digital Divide
-Information Pollution and Misinformation
-Cyber Security Threats
-Privacy Concerns
-Algorithmic Biases.

The digital divide is an important problem that hinders the digital participation of individuals without internet access or with low digital literacy. Individuals without internet access cannot access online surveys, referendums and other digital participation tools. This leads to inequalities in political participation and makes it difficult for certain groups to be represented (Norris, 2001). In addition, individuals with low digital literacy may not be able to use available digital tools effectively, which reduces participation rates.

Digital platforms also face the problems of information pollution and misinformation. Social media and other digital tools allow misinformation to spread rapidly. Misinformation prevents users from making the right decisions and makes it difficult for democratic processes to function properly (Allcott & Gentzkow, 2017). Disinformation campaigns can undermine users' trust and negatively affect political participation. Therefore, it is important to increase digital literacy and promote reliable sources of information.

Cyber security threats are one of the most significant threats to digital participation. Online voting, surveys and other digital participation tools can be vulnerable to cyber attacks. Such attacks can lead to the theft, manipulation or destruction of data. Innovations such as blockchain technology can play an important role in enhancing cyber security (Noizat, 2016). However, such technologies need to be widely adopted and implemented.

Digital platforms collect users' personal data and the privacy of this data is a major concern. When users are concerned about the protection of their personal information, they may be reluctant to participate digitally. The development of security protocols and encryption methods can help protect user data (Acquisti, Brandimarte, & Loewenstein, 2015).

Algorithms used on digital platforms determine how content appears and with whom it is shared. These algorithms can favour certain political views and suppress others. Algorithmic biases ensure that users are exposed to certain content and are not aware of other content, which can lead to information asymmetry and polarisation (Noble, 2018). Algorithmic transparency and accountability play an important role in solving this problem.

CONCLUSION and DISCUSSION

Innovations and technological developments brought by the digital age have radically changed the forms and dynamics of political participation. As one of the pioneers of this transformation, the X Platform stands out as an innovative tool that encourages and facilitates political participation in the digital environment. With the various tools and opportunities it offers to users, it aims to increase participation in political processes and strengthen democratic participation.

Platform X offers many advantages by digitalising various aspects of political participation. Online surveys and referendums reach large audiences, enabling citizens to communicate their views quickly and effectively. This enables politicians to better keep their finger on the pulse of the public. Education and information activities increase users' political literacy, leading to more informed participation. Events and discussion groups foster a sense of community and belonging among users and encourage active participation in democratic processes. Donation and support campaigns provide financial support for political movements and help build strong ties between participants and campaigns.

FULL TEXTS BOOK

However, threats to digital participation should not be ignored. The digital divide prevents digital participation of individuals without internet access or with low digital literacy, leading to inequalities in political participation. Information pollution and misinformation prevent users from making the right decisions and make it difficult for democratic processes to function properly. Cyber security threats can jeopardise the security of online voting, polls and other digital participation tools. Privacy concerns may lead users to be reluctant to participate in digital participation due to concerns about the protection of their personal data.

Algorithmic biases can favour certain political views and suppress others, leading to information asymmetry and polarisation. To reduce the digital divide, it is necessary to expand internet access and increase digital literacy. Governments and the private sector can collaborate to expand internet access by investing in infrastructure. In addition, digital literacy trainings can be provided in schools and community centres to enable individuals to use digital tools effectively.

In order to combat information pollution and misinformation, tools that facilitate users' access to reliable information sources should be developed. Platform X can provide accurate and up-to-date information to its users by cooperating with verification websites and reliable news sources. It can also prevent the spread of misinformation by developing disinformation detection systems on the platform.

Advanced security protocols and encryption methods should be used against cyber security threats. X Platform can ensure the security of user data by adopting innovative solutions such as blockchain technology. It can also continuously improve the security of the platform by conducting regular security audits and updates.

To address users' privacy concerns, transparency should be provided about how data is collected, used and protected. Platform X can increase user trust by providing detailed information to its users about its data policies and implementing data protection measures. It can also reduce privacy concerns by providing tools for users to control their data.

To reduce algorithmic bias, there should be transparency about how algorithms work and they should be regularly audited. Platform X can reduce information asymmetry and polarisation by taking measures to promote diversity and inclusion in algorithmic decision-making. It can also ensure that the platform is fair and balanced by providing options for users to have control over the algorithms.

In line with these recommendations, it is possible for Platform X to promote digital inclusion in a more secure, transparent and egalitarian environment. Reducing the digital divide, combating information pollution, strengthening cybersecurity measures, addressing privacy concerns and reducing algorithmic biases will be key steps in achieving these goals. In this way, the sustainability and effectiveness of political participation in the digital age can be enhanced.

INVESTIGATION OF FATIGUE LIFE TESTS IN A CRUCIFORM STRUCTURE WITH WELDED JOINT

Osman Bahadır ÖZDEN
Necmettin Erbakan University, Faculty of Engineering, Konya
Barış GÖKÇE
Necmettin Erbakan University, Faculty of Engineering, Konya

ABSTRACT
In this study, the results of six different tests performed for fatigue life estimation were examined. Fatigue is a complex process that causes materials to become damaged and ultimately break under repetitive loads. Therefore, fatigue tests are critical to evaluate material performance and predict life. The tests performed include cyclic testing of various material samples under certain loads. Each test was carried out in accordance with standard testing protocols and was designed to determine the fatigue strength of the material. Loads were applied sinusoidally between 50 kN and 0 kN. The stress ratio value is defined as 0. As a result of the tests, it was determined that the materials reached the fatigue limit in an average of 20,000 cycles. This finding is an important factor in material selection and engineering design processes. During the measurement and analysis processes, the initial and propagation stages of fatigue cracks were examined in detail. The results enabled the fatigue behaviour of different materials to be compared and the most suitable materials to be selected for specific applications. The data obtained in this context also formed a basis for evaluating the accuracy of existing models used in fatigue life prediction and for developing new models. In conclusion, the findings of this study can contribute to the development of strategies to increase material life in engineering applications.
Keywords: Welded Joints, Fatigue Life, Structural Safety, Fatigue Test.

INTRODUCTION
Material fatigue, particularly in welded joints, is a critical concern in engineering and structural applications. Fatigue refers to the progressive and localized structural damage that occurs when a material is subjected to cyclic loading. Over time, even stresses well below the material's ultimate tensile strength can cause the formation of cracks, leading to catastrophic failure. Understanding the fatigue behaviour of welded connections is essential for ensuring the safety, reliability, and longevity of various structures, including bridges, buildings, pipelines, and vehicles.

Fatigue is important for structural safety, especially in structures manufactured with steel construction. In particular, the lower FAT classes of welded connections and the use of welding in many structures show the importance of examining welded connections in detail. Fatigue also becomes important in terms of life safety at stresses below the yield strength. For this reason, fatigue life predictions must be made with correct values. There are widely used IIW recommendations for welded joints in the literature. These recommendations include nominal stress, hotspot stress, effective notch and linear elastic fracture approaches (Hobbacher, 2016; Niemi et al., 2018). There are many studies in the literature that use and validate these approaches. In finite element analysis, there are studies not only for the determination of stress in welded connections but also in many engineering applications and different applications. Different types of weld modelling can be found in finite element analyses (Gökçe & Özden, 2023; Özden, 2018; Özden & Gökçe, 2023a, 2023b, 2023c, 2024a, 2024b, 2024c; Özden et al., 2022; Özden & Savrukoğlu, 2024). It may also vary depending on the approach chosen in shell and solid modelling techniques. For this reason, modelling techniques applied together with the chosen approach also gain importance. Optimization algorithms are used in many applications in the literature (Büyüköz & Haklı; Faouri & Kasap, 2023; Ünlü & İlhan, 2023). Such optimization algorithms can be used in fatigue life predictions.

FULL TEXTS BOOK

This study focuses on the fatigue behaviour of welded joints, exploring the factors that influence their durability and the mechanisms that lead to their eventual failure. The research involved conducting six different tests designed to evaluate the fatigue performance of welded connections under various conditions. These tests aim to provide a comprehensive understanding of how welded joints respond to cyclic stresses and to identify the critical parameters that affect their fatigue life. In this study, 6 fatigue tests were carried out. These tests are designed to simulate real-world conditions that welded joints might encounter in service. By analysing the results, this study aims to identify the key factors that contribute to fatigue failure in welded connections and to develop strategies for enhancing their fatigue resistance. The insights gained from this research will inform the design and maintenance practices for structures that rely on welded joints, ultimately contributing to improved safety and performance. In conclusion, the fatigue behaviour of welded joints is a complex phenomenon influenced by a variety of factors, including loading conditions, material properties, environmental influences, and joint configurations. This study's comprehensive approach to testing and analysis provides valuable data that can be used to enhance the understanding and management of fatigue in welded connections. The findings are expected to have significant implications for the fields of structural engineering, materials science, and industrial design, guiding future efforts to mitigate fatigue-related failures and extend the service life of critical structures.

MATERIAL AND METHOD

In the study, 6 cruciform structure samples were prepared with fillet welds. S960QL was used as the main material and workpiece. Aristorod89 material was used as welding filler wire. The geometry measurements of 6 samples are shown in Figure 1. The dimensions used are different from many fatigue test studies carried out for cruciform structures in the literature. The width is set to 20 mm in geometric dimensions. The reason for this is that the capacity of the fatigue tester is 100 kN. In this way, the tension became higher and thus higher frequency values were reached.

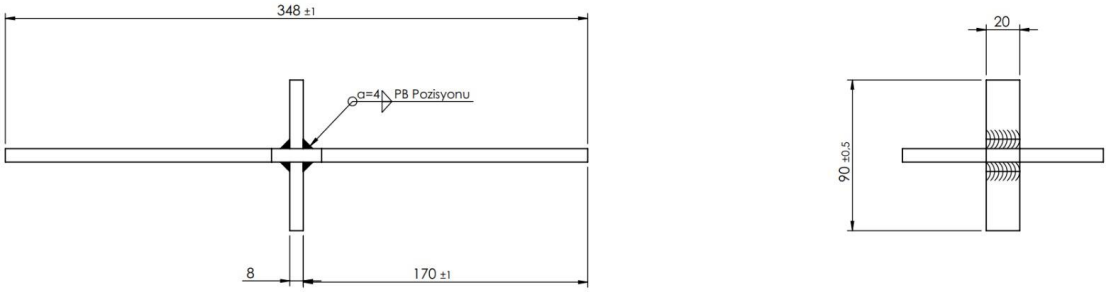

Figure 1. Geometric dimensions of the samples

The welding process was carried out at average values of 23 volts and 220 amperes. It was carried out with automatic robot MAG welding and M20 gas group, 80% Argon and 20% CO2 protective gases were used. The feed rate was welded at 20 cm/min. Thus, a weld seam with an average weld thickness of 4 mm was obtained. The weld thickness was checked with a welding calliper and the average weld thickness was determined. The mold used to avoid distortion during the welding process is shown in Figure 2.

FULL TEXTS BOOK

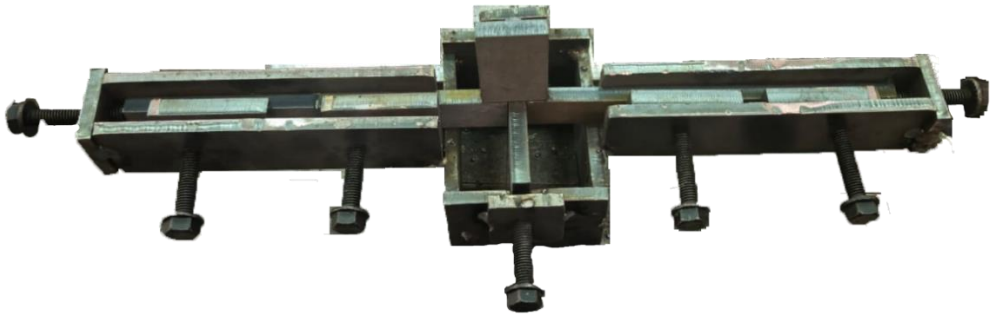

Figure 2. Mold used during the welding process

The chemical compositions of S960QL and Aristorod89 materials used in the welding process and samples are stated in Table 1 and Table 2 (Özden et al., 2023).

Table 1. S960QL Chemical compositions

C %	Si %	Mn %	P %	S %	Cr %	Ni %	Mo %	V %	Ti %	Cu %
0.17	0.22	1.24	0.01	0.001	0.2	0.06	0.597	0.04	0.002	0.02

Table 2. Aristorod89 Chemical compositions

C %	Si %	Mn %	Cr %	Ni %	Mo %
0.17	0.80	1.75	0.41	2.22	0.53

S960QL The mechanical properties of the S960QL material were also examined. Yield strength 1027 MPa, elasticity modulus 203.4 GPa, tensile strength 1066 MPa, percent elongation value 16%, and Poisson's ratio 0.33 values were examined.

In this study, 6 fatigue tests were carried out. Shimuz brand fatigue test device was used. Sinusoidal forcing was applied by defining the maximum force as 50 kN and the minimum force as 0 kN. The stress type was set by taking the stress ratio value specified in the Equation 1 formula to 0. When connecting to the fatigue test device, it was connected to the holders of the device at a distance of up to 50 mm from the corners. In this way, the piece is prevented from slipping. The average room temperature during the tests was 22.4 C0. After connecting to the device, a 15 mm stroke size was defined in the software, and when it exceeded this value, the device detected that it was broken and stopped the system. All 6 tests were applied in this way. Figure 3 shows the device used in the fatigue test.

$$R = \frac{\sigma_{min}}{\sigma_{max}} \quad (1)$$

FULL TEXTS BOOK

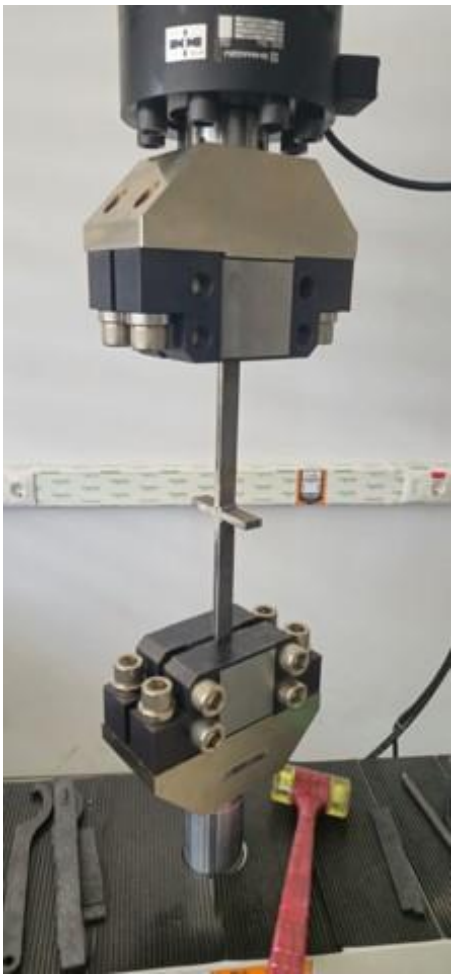

Figure 3. Connecting the devices and samples used in fatigue testing

The fatigue test device works with hydraulic equipment. It can reach a load capacity of 100 kN with the valve that can go up to a maximum of 50 Hz. There is a cooler to cool the hydraulic oil. In this way, more efficient tests are carried out. Different loading conditions can be defined as desired in the software interface, and sinusoidal forcing type was preferred in this study. This type of forcing has been used in many studies in the literature.

RESULTS AND DISCUSSION

Fatigue tests were carried out for samples prepared according to the specified geometric dimensions. All 6 samples were forced below their yield strength, causing fatigue damage. It was damaged by 50 kN and 0 kN sinusoidal stress. After the damage occurred, the device stopped itself and gave a warning. The number of cycles was determined from the software of the fatigue test device. The damages started and progressed with a crack forming at the weld tip. It was broken instantly and the cycle numbers were obtained. Before starting the tests, finite element analysis was performed with the effective notch method. In the analysis, the weld modelling was modelled as 4 mm thick and a 1 mm radius was opened at the weld tip. The finite element analysis result is shown in Figure 4.

FULL TEXTS BOOK

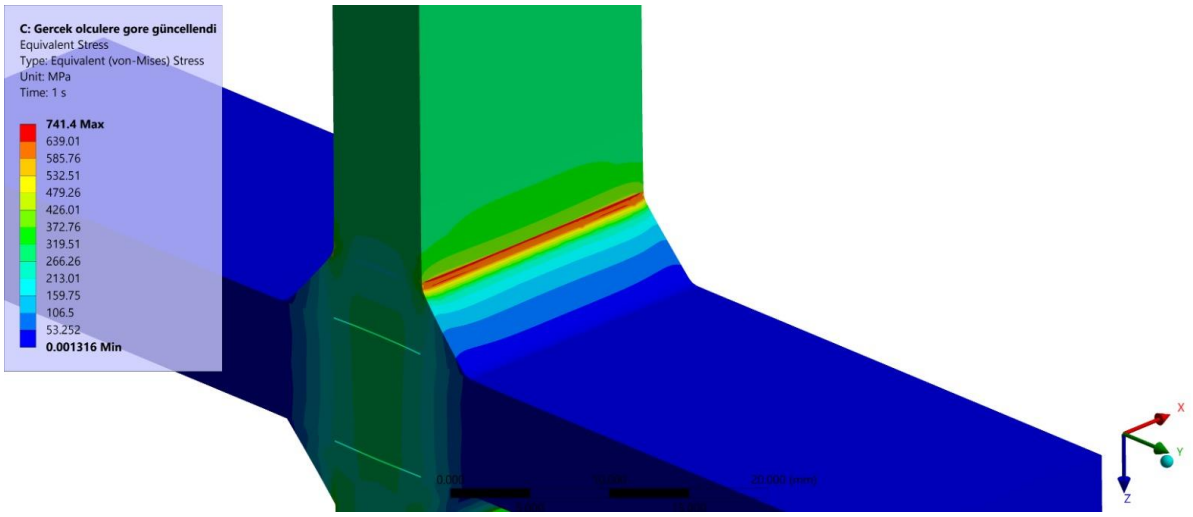

Figure 4. Finite element analysis stress results

Attention has been paid to the meshes applied in this modelling technique. Hexagonal mesh type and quadratic mesh type were preferred whenever possible. Evaluations were also made according to mesh quality criteria. Element quality values, which are among the mesh quality criteria, were examined and an average element quality value of 0.92 was determined in the analysed structure. The mesh size value is defined as 0.1 mm in the welded connection region and 2 mm in other regions. After the finite element analyses were carried out, it was determined that the tests would be carried out with a stress ratio of 0 between 50 kN and 0 kN Tests have been carried out and the results show damage at 21210, 20520, 19810, 18250, 17250, 18560 cycles. The damages occurred at the weld end and the results were evaluated. Figure 5. shows that crack formation occurs at the weld end of a damaged sample.

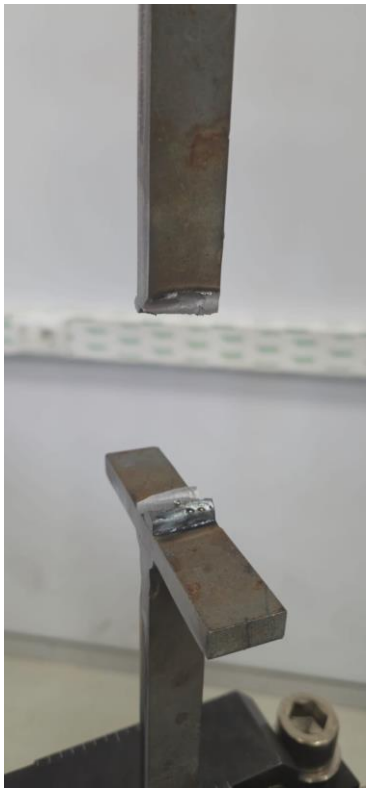

Figure 5. Fatigue damage occurring at the weld end of the sample damaged in 20520 cycles

The results were compared with the Basquin slope of 3 according to the FAT 80 class recommended by the International Welding Institute. It is seen that it is quite high in this S-N curve created according to

FULL TEXTS BOOK

the 95% probability value. Figure 6. shows the S-N curve created according to the tests and FAT 80 class.

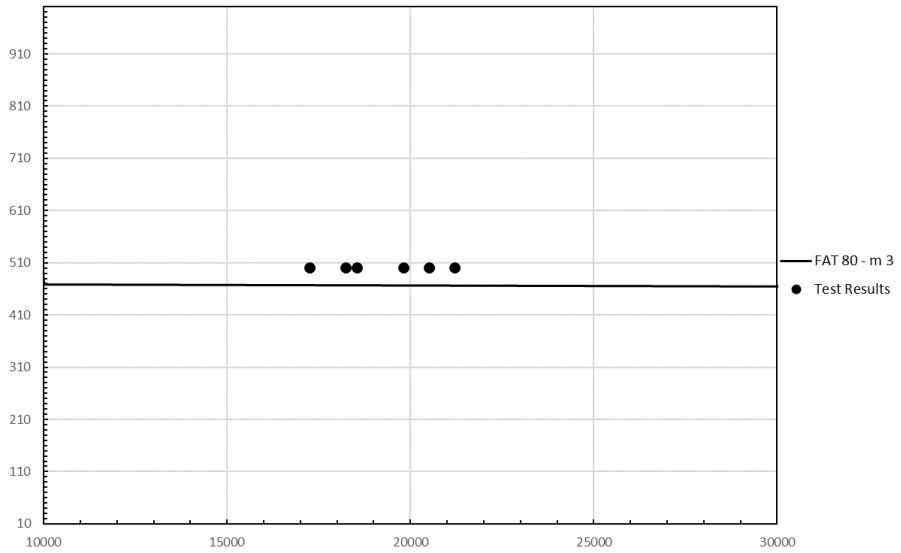

Figure 6. IIW FAT 80 Fatigue class and fatigue test results

Quite a few tests were performed in this study. Performing more than 20 fatigue tests to obtain the new Basquin equation will result in very accurate results. However, when the methodology and results used in this study were compared to the FAT 80 class, it was seen that correct results could be obtained. In the literature, new S-N curves are created by creating the Basquin equation by performing multiple fatigue tests.

CONCLUSION

In this study, 6 samples were prepared using S960QL material and a 4 mm thick weld seam was obtained with the appropriate filler wire. Fatigue test results were made for comparison purposes at FAT 80 IIW fatigue class value. Before the tests, the stresses occurring at the weld tip were determined using the effective notch method. The cycle values corresponding to this stress were found as 21210, 20520, 19810, 18250, 17250, 18560, and the structures subjected to fatigue damage were examined. When the damages were examined, it was observed that cracks appeared at the weld end. It was observed that it was above the line in the FAT 80 class, which was prepared according to the 95% probability value. In future studies, it is planned to prepare more than 80 samples and determine the new Basquin slope and FAT value. It is also planned to make comparisons with weld tip forging and burr grinding processes performed after welding.

ABSTRACT
In this work, it is aimed to investigate the ballistic performance of alumina (Al_2O_3) based sandwich composites containing 0.8vol% samarium oxide (Sm_2O_3) and 5vol.% zirconia (ZrO_2) additives. For the ballistic tests, the samples with hexagonal geometry which have an edge length of 25 mm were prepared by dry pressing followed by cold isostatic pressing. The bulk densities of the samples after sintering were determined via volumetrically and the Archimedes method. The samples were analyzed by X-ray computed tomography (XCT) to determine the cracks and defects in the samples before the ballistic tests and to examine the deformation caused by the bullet in the backing plate after the ballistic test. The ceramic composite samples were placed on a polycarbonate backing plate, and their ballistic performance was determined by a depth of penetration (DOP) test according to the STANAG 4569 Level 1 standard. During the DOP tests, a 7.62 x 51 mm NATO ball bullet was fired toward the samples from a distance of 15 meters with a velocity of 839 ± 10 m/s. Consistent with the density results, the highest density (99.8%) was obtained in the sandwich samples that have Al_2O_3+5vol.%ZrO_2 composition in the middle layer. As a result of the ballistic tests, it was observed that the sandwich structured samples (outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layer: Al_2O_3+5vol.%ZrO_2 and outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layers: Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3) exhibited better ballistic performance than the samples with Al_2O_3-0.8vol.%Sm_2O_3 composition. The residual depth of penetration was measured as 13.87 mm for the Al_2O_3+0.8vol.%Sm_2O_3. It was observed that the deformation was lower in the sandwich-structured samples compared to the Al_2O_3+0.8vol.%Sm_2O_3 sample and the residual depth of penetration was determined as 4.44 mm in the sandwich-structured samples with the middle layer of Al_2O_3+5vol.%ZrO_2. The ballistic efficiency factor was calculated as 3.7 for the samples with the middle layer of Al_2O_3+5vol.%ZrO_2. It was observed that the impact energy was absorbed more efficiently due to the interlayer cracking effect of the layers in the sandwich structured samples.
Keywords: Al_2O_3, Composite, Sandwich Structure, Ballistic Test.

INTRODUCTION
Laminated ceramics/composites are formed by layering at least two layers of ceramics on top of each other. The residual compressive stresses caused by the thermal expansion difference of the ceramic layers can effect the mechanical properties positively. In addition, the laminated structures can be used as armor components effectively and there are many studies about the impact behavior of these materials (Huang & Chen, 2016b, 2016a)

FULL TEXTS BOOK

The most commonly used armor ceramics are Al_2O_3, silicon carbide (SiC), and boron carbide (B_4C). Among these, Al_2O_3 is the most preferred ceramic as armor material due to its low cost. Although fracture toughness and bending strength of alumina are low with high specific gravity, its high hardness, wear resistance, and low cost are the reasons why it is widely preferred as an armor material (Krishnan et al., 2021).

The determination of ballistic performance in ceramic materials is a complex problem. Many parameters should be evaluated together such as projectile velocity, projectile geometry, type of ceramic, dimensions and geometry of ceramic, firing distance, impact angle, and thickness and type of support material etc. (Madhu et al., 2005). Also, there are many different test methods (ballistic limit velocity, non-deforming penetration, semi-infinite penetration, depth of penetration) to evaluate ballistic performance. The depth of penetration (DOP) test is a simple and easy method commonly used to determine and compare the ballistic performance of ceramic materials (Dresch et al., 2021; Madhu et al., 2005; Savio & Madhu, 2018). During the DOP test, the penetration of the projectile is measured with and without the ceramic material. The ballistic performance of the ceramic material is determined by comparing the difference between these two penetrations. This method enables a lot of data to be collected quickly in a short time (Dresch et al., 2021).

In literature research, studies on the ballistic performance of Al_2O_3 ceramics have been observed. Cura et al. produced laminated ceramics (Al_2O_3, SiC, and B_4C) in different geometries (hexagonal and square) and determined their ballistic performance compared to the monolithic structures by DOP test. As a result of the tests, it was observed that the ballistic performance of monolithic structures was higher compared to the laminated structures (Cura et al., 2024). Appleby-Thomas et al. studied the ballistic performance of Al_2O_3 ceramics produced in different thicknesses by the DOP test (Appleby-Thomas et al., 2020). Carton et al. carried out DOP testing of Al_2O_3 ceramics produced in hexagonal form. During the tests, different projectiles and velocities (7.62 mm APM2 - 800 m/s and 7.62 mm AP8 - 900 m/s) were used and ballistic performance was evaluated (Carton et al., 2019).

It has been observed that there are only a few studies in the literature to investigate the ballistic performance of laminated structures. In this study, the densification and ballistic performance of Al_2O_3+0.8vol.%Sm_2O_3 ceramics and layered samples with a sandwich structure (outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layer: Al_2O_3+5vol.%ZrO_2 and outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layers: Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3) were evaluated. The effect of the sandwich structure on ballistic performance was analyzed. The ballistic performance of the samples was compared by measuring the deformation caused by the projectile on the support plate with the DOP test.

MATERIALS AND METHOD

In this study, α-Al_2O_3 (Alfa Aesar, 99.95% purity, 0.25-0.45 μm), Sm_2O_3 (Nanography, 99.95% purity, 50 nm) and 3 mol% yttria stabilized ZrO_2 (MSE Technology, <0.5 μm) ceramic powders were used. As a dispersant, polyacrylic acid was employed (Darvan 821A, MSE Tech Co. Ltd.). Glycerol (plasticizer; Sigma Aldrich) and polyvinyl alcohol (binder; Sigma Aldrich) were used to make the binder solution.

Firstly, Al_2O_3+0.8vol.%Sm_2O_3, Al_2O_3+5vol.%ZrO_2, and Al_2O_3+5vol.%ZrO_2+0.8vol. %Sm_2O_3 composite powders were prepared to be used in the ballistic sample production. The mixture containing ceramic composite powder, dispersant, and Al_2O_3 balls were mixed in distilled water for 24 hours in a ball mill. A binder solution was added to the prepared powder mixture consisting of 2 wt% polymers (polyvinyl alcohol and glycerol). The powder was prepared for shape after it had been dried and sieved. The prepared powder (52 grams) was poured into a hexagonal die and pressed first in a uniaxial press under 35 MPa pressure and then in a cold isostatic press under 200 MPa pressure. During the production of the sandwich samples, the powders were poured sequentially into the die to ensure a thickness ratio of 1:6 between the surface/center layers. After all the layers were poured in order into the die, uniaxial dry pressing was performed at a pressure of 80 MPa. The samples were then cold isostatically pressed

FULL TEXTS BOOK

at a pressure of 200 MPa. After the forming process, all the samples were subjected to the binder burn-out that was performed for 1 hour at 200°C, 2 hours at 250°C, 1 hour at 450°C and 1 hour at 600°C with a heating rate of 1°C/min. The samples were pressureless sintered at 1550°C (2°C/min heating rate) in an air environment. The sample compositions produced are presented in Figure 1.

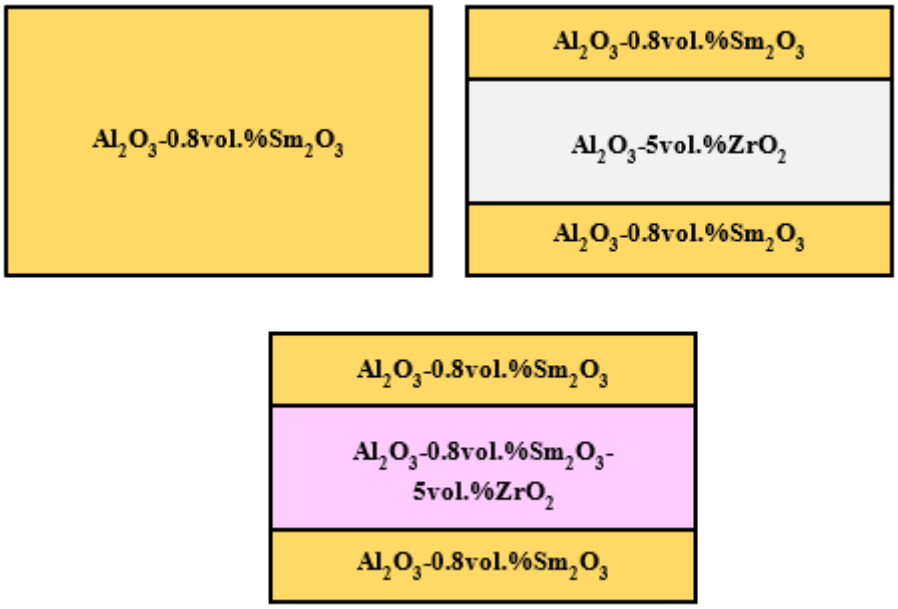

Figure 1. The produced compositions for the study.

The bulk density values were determined both volumetrically from the sample dimensions and by the Archimedes method. For the evaluation of ballistic performance, the DOP test schematized in Figure 2 was performed. In the DOP test, the projectile propagation in the support plate is determined without ceramic material and with a ceramic material of a certain thickness. By comparing the difference between these two penetration depths, the ballistic performance of the ceramic armor was evaluated.
The ballistic performance of the produced samples was compared with the help of the differential efficiency factor (Δec) equation given in Equation 1.

$$\Delta ec = \frac{\rho_b.(P_0 - P_b)}{\rho_c.t} \quad \textbf{(1)}$$

In this equation, ρ_b is the density of the support material, ρ_c is the ceramic composite material density, t is the thickness of the ceramic composite, P_0 is the penetration depth in the support material without ceramic composite material and P_b is the penetration depth in the support material in the presence of the ceramic composite material.

FULL TEXTS BOOK

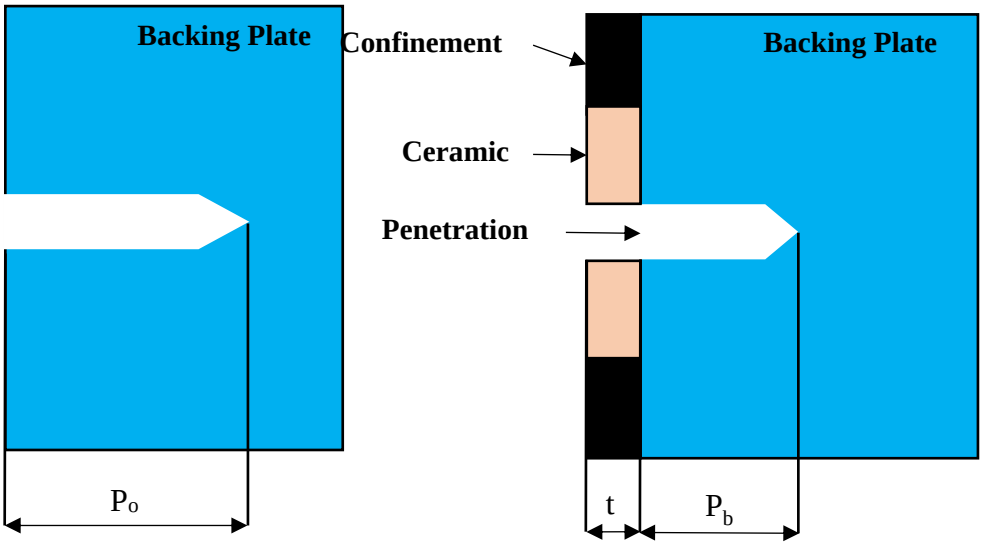

Figure 2. Schematic representation of the DOP test.

The DOP test was carried out at Kayseri Advanced Materials Industry and Technology Inc. (KIM TECHNOLOGIES) by STANAG 4569 Level 1 standard. Polycarbonate was used as the backing plate material during ballistic tests. When placing the samples, 7 samples were used, one was placed in the center and the other six were placed around it. The ceramic composite samples were placed on the backing plate by using polymer adhesive. Then the samples were covered with a fibre glass coating to prevent the samples from spreading during the shot. The adhesive was allowed to dry for three days before the ballistic test. Figure 3 displays the placement of the samples.

Figure 3. The placement of the samples

In the DOP tests, a 7.62x51 mm NATO Ball projectile was fired at a distance of 15 meters with a velocity of 839 ± 10 m/s, towards to the sample in the middle region. Laser alignment was made to ensure that the shots hit exactly the center. In order to provide the specified velocity, 2634 g of gunpowder was used.

The DOP test was conducted both prior to and following XCT scanning. Before the ballistic tests, invisible cracks and defects in the samples were detected by XCT scanning. After the ballistic tests, a 3D XCT scan was performed to determine the penetration depth in the samples.

FULL TEXTS BOOK

RESULTS AND DISCUSSIONS

The bulk densities of the samples were determined both volumetrically and through the Archimedes method. The obtained density results are presented in Table 1. Since the measurement technique is sensitive to the volumetric method, the results obtained with the Archimedes method were taken into account. When the values were analyzed, it was seen that the density was 98.8% in the Al_2O_3+0.8vol.%Sm_2O_3 samples and 98.5% in the sandwich samples that have Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3 composition in the middle layer. The relative density value is an important parameter for ceramic armor materials. A ceramic material to be used as an armor material is required to have high densification after sintering.

Table 1. Relative density values of the samples after sintering.

Composition	Relative Density (Archimedes)(%)	Relative Density (Volumetrically)(%)
Al_2O_3+0.8vol.%Sm_2O_3	98,8 ± 0,2	98,9 ± 0,4
Middle layer Al_2O_3+5vol.%ZrO_2 sandwich	98,7 ± 1.2	99,8 ± 0,1
Middle layer Al_2O_3+0.8vol.%Sm_2O_3+5vol.%ZrO_2 sandwich	98,5 ± 0,1	99,0 ± 0,4

Figure 4 presents the XCT scan images before the ballistic tests. When the images were examined, it was observed that some samples had cracks and pores due to the production process. During the DOP tests, the sample placed to the center of the mechanism should have a high density and not contain cracks or pores. These cracks and pores in the structure of the samples would negatively affect the ballistic performance and cause early damage to the ceramic armor so the samples containing large cracks were not used in the ballistic tests.

FULL TEXTS BOOK

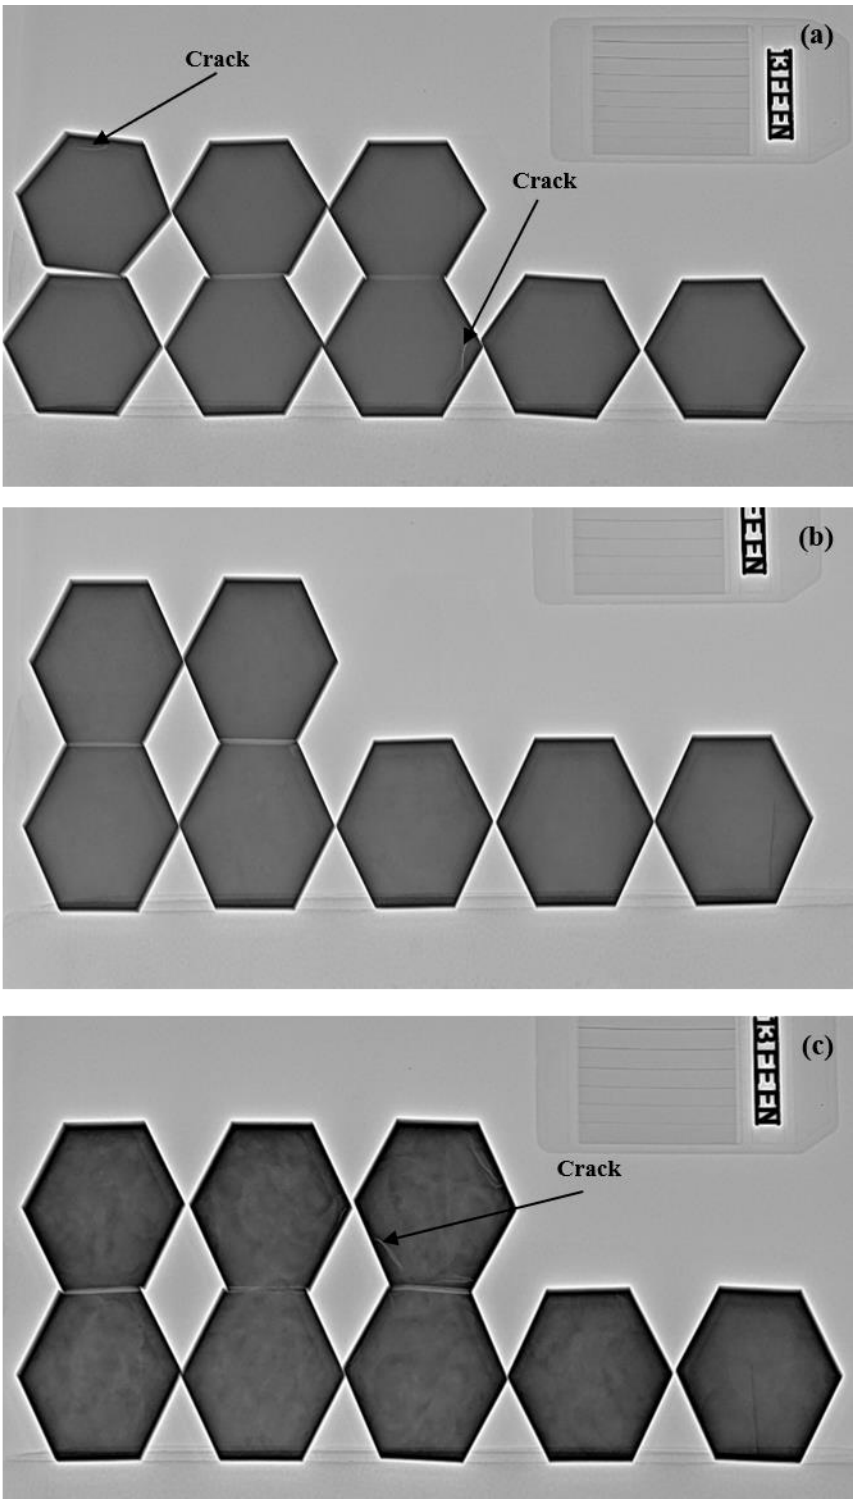

Figure 4. (a) X-ray image of Al_2O_3+0.8vol.%Sm_2O_3 samples, (b) X-ray image of layered samples with the middle layer Al_2O_3+5vol.%ZrO_2, (c) X-ray image of layered samples with the middle layer Al_2O_3+0.8vol.%Sm_2O_3+5vol.%ZrO_2

Although the impact caused a deformation on the support plate, the bullet did not spread during the testing and instead bounced back after deforming the ceramic material. The ballistic performance was evaluated by measuring the amount of this deformation and the diameter of the crater caused by the impact at the point of bullet penetration. Figure 5 demonstrates the 3-D XCT scan images after the DOP tests. The residual depth of penetration caused by the bullet is clearly visible in the images. The highest

FULL TEXTS BOOK

residual depth of penetration (13.87 mm) was observed in the Al_2O_3+0.8vol.%Sm_2O_3 composite samples. In comparison to the Al_2O_3+0.8vol.%Sm_2O_3 composite sample, it was seen that the bullet propagated less in the sandwich structure samples, and the sandwich structure enhanced the ballistic performance. The sandwich samples with the middle layer Al_2O_3+5vol.%ZrO_2 composition (4.44 mm) had a lower residual depth of penetration compared to the sandwich samples with the middle layer Al_2O_3+0.8vol.%Sm_2O_3+5vol.%ZrO_2 composition (6.74 mm) and exhibited the highest ballistic performance.

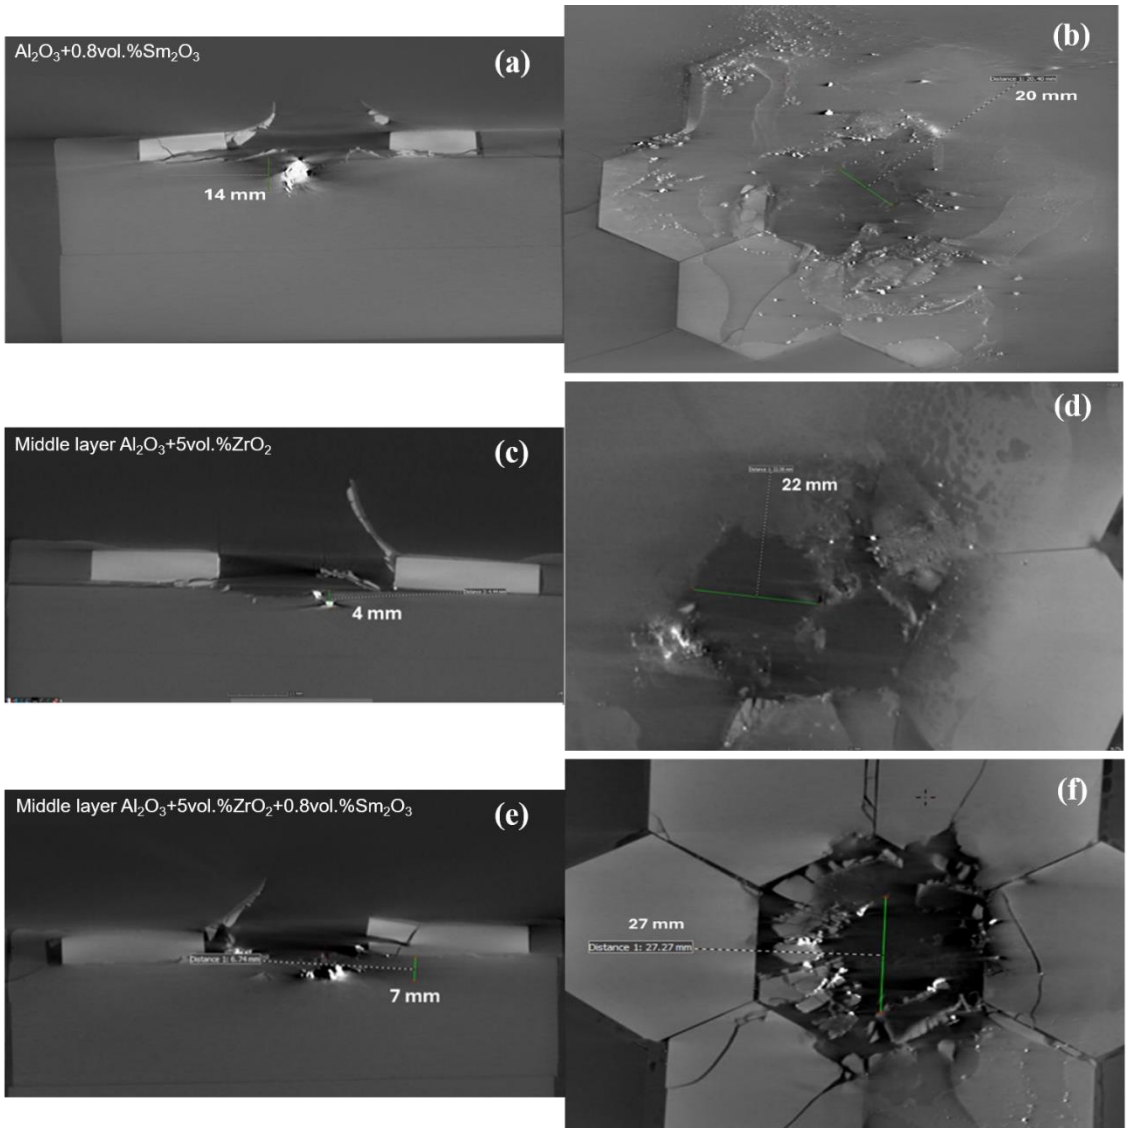

Figure 5. 3D XCT scan images after DOP test: (a) P_b of the Al_2O_3+0.8vol.%Sm_2O_3 sample, (b) crater diameter of the Al_2O_3+0.8vol.%Sm_2O_3 sample, (c) P_b of the layered sample with middle layer Al_2O_3+5vol.%ZrO_2, (d) crater diameter of the layered sample with middle layer Al_2O_3+5vol.%ZrO_2, (e) P_b of the layered sample with middle layer Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3, and (f) crater diameter of the layered sample with middle layer Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3

During the DOP tests, laser alignment was performed to ensure that the bullet hits the middle area of the mechanism. Since the required velocity (839 ± 10 m/s) could not be set precisely, the bullet velocities showed variations. The velocity was measured in each test and found to be within the determined tolerances. The bullet velocities during the tests are given in Table 2. Based on the residual depth of penetration of the samples, the differential efficiency factor was calculated according to Equation 1 and

FULL TEXTS BOOK

the data obtained are presented in Table 2. It is seen that the ballistic efficiency factor is higher in the sandwich samples compared to the Al_2O_3+0.8vol.%Sm_2O_3 composite samples. The highest ballistic efficiency factor value (3.7) was calculated in the sandwich samples with a middle layer of Al_2O_3+5vol.%ZrO_2 composition. The data were consistent with the residual depth of penetration determined after the ballistic test.

Table 2. The sample properties, DOP test datas, and the calculated differential efficiency factor values.

Composition	Bullet Velocity (m/s)	t (mm)	(Po) (mm)	Pb (mm)	Density of ceramic (g/cm^3)	Δec
Al_2O_3+0.8vol.%Sm_2O_3	825.5	8.0	98.39	13.87	3.97	3.2
Middle layer Al_2O_3+5vol.%ZrO_2	835.0	7.5	98.39	4.44	4.09	3.7
Middle layer Al_2O_3+0.8vol.% Sm_2O_3+5vol.%ZrO_2	842.5	7.5	98.39	6.74	4.04	3.6

The fracture surface SEM images taken from the impacted areas of the samples are seen in Figure 6. Al_2O_3-%0.8Sm_2O_3 sample had almost completely cleavage fracture character, a transition in fracture mode due to compositional transition was also observed in sandwich samples. It is thought that this situation plays a role in reducing the energy of the bullet. In three-layer sandwich structures with compositional changes, the upper and middle layers were tightly bounded diffusionally. In the images, the layers can be easily recognized from each other due to the grain size difference. In the outer layers, a large-grained microstructure was formed and the cleavage fracture character was observed to be dominant. In the middle layers, a fine-grained microstructure was observed and a mixed fracture characteristic was observed.

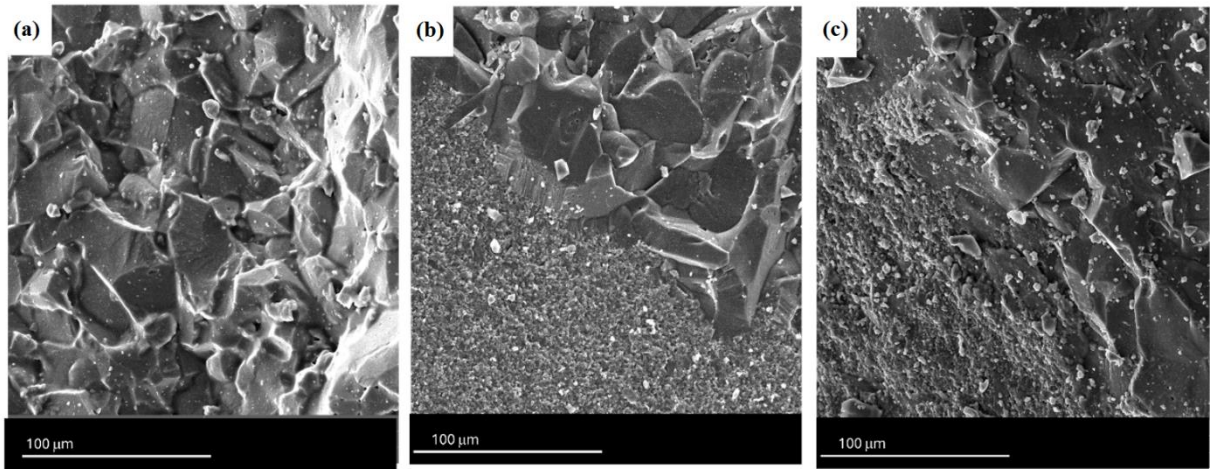

Figure 6. SEM images of fracture surface after ballistic test (a) Al_2O_3+0.8vol.%Sm_2O_3 (b) sandwich samples with the middle layer of Al_2O_3+5vol.%ZrO_2 composition (c) sandwich samples with the middle layer of Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3 composition

Figures 7 and 8 show close-up photographs of the damaged areas for the sandwich samples. Photographs were taken after the middle sample pieces that were hit by the bullet were removed. Figure 7 reveals that the desired layered structure was achieved in the samples. The presence of gradual cracking zones in both compositions is seen in the samples located on the side of the sample hit by the bullet. It is thought that these layers were forced to separate during the impact, and that the grain sizes of the

FULL TEXTS BOOK

compositions forming the layers were different and therefore their fracture characteristics are different (cleavage on the surface, mixed fracture mode in the middle region) and that more energy can be absorbed. The interlayer cracking ensures that the impact energy can be absorbed more effectively during the ballistic test. This condition has a positive effect on the ballistic performance.

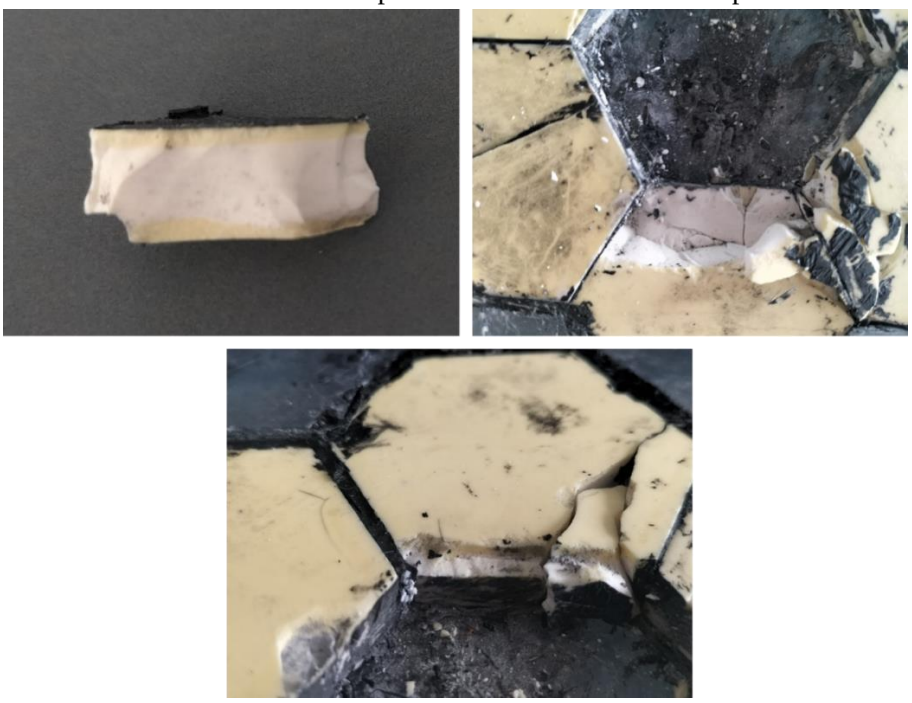

Figure 7. Fracture zone and layering in the cross-sectional view of sandwich samples with the middle layer of Al_2O_3+5vol.%ZrO_2 composition after DOP tests

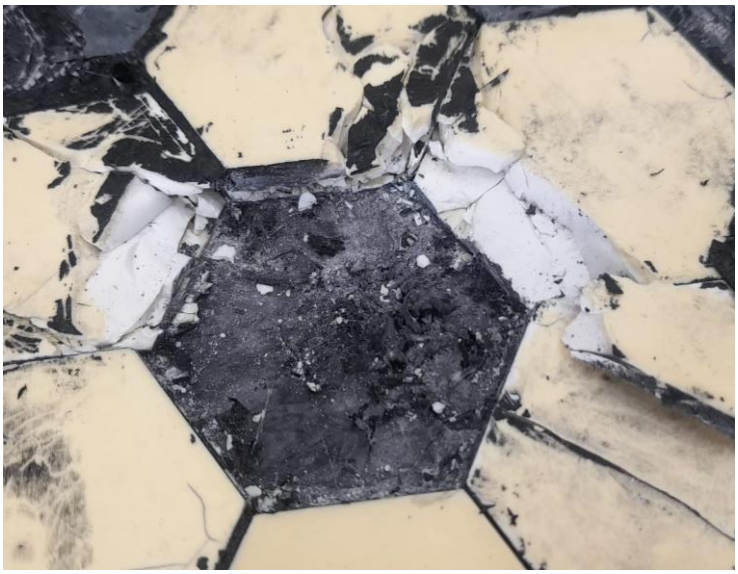

Figure 8. Fracture zone of sandwich samples with the middle layer of Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3 composition after DOP test.

CONCLUSION

In this research, the ballistic performance of Al_2O_3+0.8vol.%Sm_2O_3 samples and the sandwich-structured layered samples (outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layer: Al_2O_3+5vol.%ZrO_2 and outer layers: Al_2O_3+0.8vol.%Sm_2O_3, middle layers: Al_2O_3+5vol.%ZrO_2+0.8vol.%Sm_2O_3) were compared. The DOP tests were performed to evaluate the ballistic performance and the results were

FULL TEXTS BOOK

compared. It was observed that the ballistic performance of sandwich-structured layered samples was better than Al_2O_3+0.8vol.%Sm_2O_3 samples. The lowest residual depth of penetration (4.44 mm), the highest density (99.8%), and the highest ballistic efficiency factor (3.7) were achieved in the sandwich structure sample with the middle layer of Al_2O_3+5vol.%ZrO_2 composition. In the samples with compositional transition, a tight diffusion bond was formed between the layers. It is thought that the ballistic performance has improved as more energy can be absorbed with the separation of this bond by the impact effect. Besides, the grain size difference between the layers in the sandwich samples and the different fracture characteristics of the layers also positively affected the ballistic performance.

ABSTRACT
Feedback remains a pivotal topic within foreign language didactics and language teaching/learning research, as well as among foreign/second language teachers. Questions regarding the functions, forms, effectiveness, and other side effects of feedback—such as corrective feedback/error correction or instructional feedback aimed at guiding learners—regularly surface. Giving and receiving feedback are fundamental activities in any teaching-learning setting and must be reflected upon concerning teachers' role understanding, particularly within teacher education.
Educational science studies present new perspectives on feedback in pedagogical contexts. From a didactic standpoint, a culture of feedback is considered significant. Changing conditions for teaching and learning foreign and second languages, especially against the backdrop of digitalization and the instrumentalization of language learning, prompt renewed questions. Feedback, as a term, can be related to the teaching-learning culture and the overall school environment. All participants—learners, teachers, parents, and school administrators—engage in giving and receiving feedback. The goal of feedback is to generally and desirably improve the quality of teaching, learning performance, and processes.
Historically, feedback in teaching/learning situations originated from the behaviorist learning theory of the 1960s as positive reinforcement or an "impulse for behavior change". However, the perception of teacher feedback has since shifted significantly, aligning now with a competency-oriented understanding of evaluation.
The aim of this article is to explore the multifaceted roles and impacts of feedback in foreign language teaching, examining both traditional and contemporary approaches. It seeks to provide a comprehensive overview of current research, discuss practical applications, and offer insights into developing an effective feedback culture that enhances both teaching and learning experiences.
Keywords: Feedback, Foreign language teaching, Corrective Feedback, Instructional Feedback, Teaching-Learning culture

1. What is Feedback?

Feedback is a crucial component in our society, frequently discussed in research over recent years. Its meaning often varies, thus this text aims to clarify its understanding. Feedback is an important tool for formative assessment, primarily used to evaluate how successfully a task is completed. Learning, whether physical, social, or intellectual[36], requires practice in a supportive environment, typically provided by teachers in schools. Teachers know what needs to be learned and how to recognize and improve performance (Sadler, 1989).

[36] Types of Learning: Learning can be of various types - physical, social, or intellectual.
Physical Learning: This involves acquiring and refining motor skills and physical abilities, such as learning a sport or developing coordination.
Social Learning: This pertains to developing social skills and behaviors, such as learning how to interact effectively with others, understanding social norms, and building relationships.
Intellectual Learning: This involves the acquisition of knowledge and cognitive skills, such as understanding academic subjects, problem-solving, and critical thinking.
Each type of learning requires specific methods and environments to be effective, highlighting the diverse nature of the learning process.

FULL TEXTS BOOK

Ramaprasad defines feedback as information about the gap between the current and reference levels of a system parameter, used to alter the gap (Ramaprasad, 1983). Hattie and Timperley (2007) add that feedback should address understanding or performance areas to close knowledge gaps. Information about the gap between actual and reference levels is considered feedback only if it is used to change the discrepancy. Otherwise, it remains ineffective, as often seen in schools where grades are given without actionable feedback (Hattie & Timperley, 2007).

It is crucial that learners understand feedback from teachers to avoid misunderstandings. Clear, precise feedback is essential, along with communication that allows for clarification. Effective feedback requires collaboration between learners and teachers, involving discussions to analyze and understand performance, both retrospectively and prospectively. This process helps in overcoming obstacles and making decisions on further learning. Teachers must provide criteria and tools for self-assessment, demonstrating dialogic assessment methods, such as learning journals[37] (Jürgens & Lissmann, 2015).

Hattie's (2014) meta-study differentiates between various types and levels of feedback, with differing effect sizes, making some types more effective than others.

2. Types of Feedback

Feedback can be categorized in various ways. This work attempts to name the most common types and delve deeper into their specifics. The simplest distinction is between oral and written feedback. Oral feedback typically occurs during lessons, while written feedback in schools often takes the form of grades received at the end of a term. Grades provide a comparison of a learner's performance with their peers but do not offer insights into individual strengths, weaknesses, or strategies for improvement (Harks et al., 2014).

Summative and formative feedback are important distinctions. Summative feedback summarizes performance, such as in the evaluation of a test, and has traditionally been dominant in education. In contrast, formative assessment, introduced in the mid-1990s, integrates evaluation into the learning process to empirically assess learning gains (Maier, 2019). Hattie (2014) advocates for formative feedback, emphasizing its benefits in improving learning processes and outcomes.

This work utilizes Narciss's (2006) classification of feedback, which includes informative feedback provided after task completion. This type of feedback informs learners about the gap between their current state and the desired state and suggests ways to bridge this gap. Other forms include motivational feedback, which uses rewards or punishments but has minimal impact on learning outcomes.

Informative feedback can be further divided into various types:

- *Knowledge of Performance (KP):* Summative feedback on performance after task completion.
- *Knowledge of Result/Response (KR):* Information on whether an answer is correct or incorrect.
- *Knowledge of the Correct Response (KCR):* Demonstrating the correct answer.
- *Answer Until Correct (AUC) or Multiple Try Feedback (MTF):* Providing KR with opportunities for retrying until the correct solution is found.
- *Elaborated Feedback (EF):* Providing additional information along with KR or KCR to aid future tasks.

Different types of elaborated feedback can be distinguished, highlighting content or functional aspects, such as explanatory, directive, and supervisory feedback (Narciss, 2006).

[37] A learning journal is a tool where students record their reflections, experiences, and progress during the learning process. It helps develop self-assessment and critical thinking skills by encouraging students to think critically about their learning experiences.

FULL TEXTS BOOK

3. Impact of feedback on learning performance

Feedback's impact on learning performance has been established in numerous studies and research texts. For feedback to be effective, it is crucial to recognize the learner as an individual and to select the appropriate type and level of feedback at the right time (Butler et al., 2012; Hattie, 2014; Huber, 2010). This analysis considers three factors: the teacher, the feedback, and the learner.

The teacher plays a central role by providing feedback content and knowledge about learning strategies. According to Reich (2010), the teacher's goal should be to support all leaners in the classroom. Teachers must master and convey strategies and methods to the learners. Feedback is essential for evaluating learners' successes, and effective measures must consider the individual. Standardized support concepts measured against a comparison norm are not effective. Constructivist didactics, as introduced by Reich (2010), emphasize evaluating, reflecting, and adapting teaching actions to enhance learning outcomes. Teachers act as both facilitators and researchers, actively participating in the learning process.

Effective feedback significantly impacts performance and motivation when it focuses on task performance and understanding and regulation processes. It should inform learners about their current learning and performance levels relative to their goals, provide tailored learning strategies, and address the causes of failures. Common forms of feedback, such as grades, often lack these beneficial characteristics (Harks et al., 2014).

Research on feedback reception shows how feedback can achieve the desired effects (Kluger & DeNisi, 1996; Helmke, 2009; Hattie & Timperley, 2007). Helmke's (2010) psychological framework divides the reception process into four steps: reception, reflection, action, and evaluation. (Bushi/ Kristo 2021) Learners must first receive and understand the feedback (reception), then analyze and reflect on it (reflection). Next, they implement the decisions and plans (action). Finally, they evaluate the actions' effectiveness to facilitate learning (evaluation). The process sequence is flexible, allowing different entry points (Helmke, 2010).

Reflection often reveals errors or faulty actions. How one addresses these errors is crucial for further learning. Errors can be seen as personal failures or as challenging learning opportunities. The latter is preferred in practice and research and should be communicated to learners. Good teaching includes a culture that embraces errors as part of learning (Helmke, 2009; Spychinger, 2003, 2006). Reflection-oriented didactics ensure room for errors without negative connotations (Spychinger, 2010).

4. The role of feedback in foreign language learning (German): An empirical study

This empirical study aims to investigate the role of feedback in the teaching and learning process of foreign languages, specifically German, in secondary schools. Feedback is a critical component in the educational process, helping learners understand their current performance and areas for improvement. This study involves a sample of 30 learners from three different secondary schools in Albania and uses a questionnaire to gather data on their experiences and perceptions of feedback in learning German as a foreign language.

Research Questions

1. How do learners perceive the feedback they receive from their German language teachers?
2. What types of feedback do learners find most effective in learning German?
3. How does feedback influence learners' motivation and performance in learning German?

4.1. Methodology

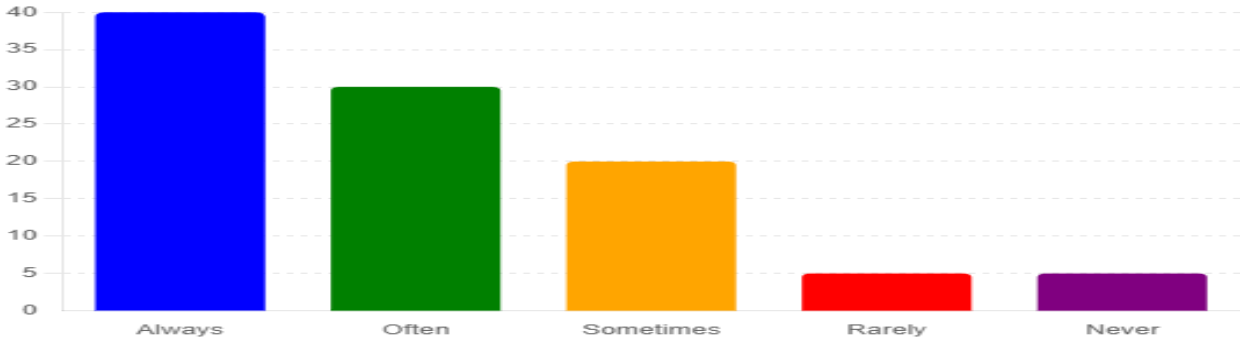
Sample

The sample consists of 30 learners from three secondary schools where German is taught as a foreign language. The demographic details are as follows:

- 10 male and 20 female learners
- Ages ranging from 15 to 18 years old

FULL TEXTS BOOK

- Diverse socio-economic backgrounds



Data Collection

A questionnaire with 10 questions was designed to collect data on learners' perceptions of feedback. The questions included both closed and open-ended items to capture quantitative and qualitative data.

4.2. Results of the questionnaire

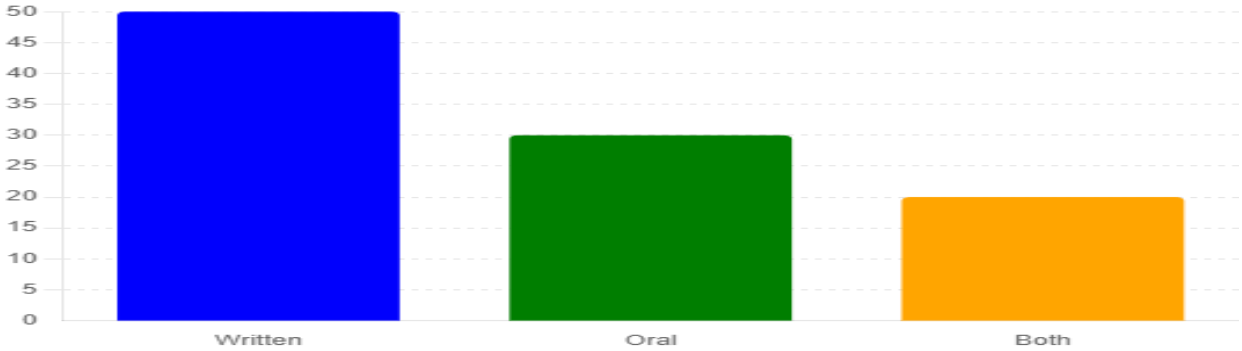
4.2.1. How often do you receive feedback from your German teacher?

- Always
- Often
- Sometimes
- Rarely
- Never

Frequency of Receiving Feedback from German Teacher

Always (40%): A significant portion of learners (40%) receive feedback from their German teacher on a consistent basis. This high frequency suggests that teachers are actively engaging with learners and providing regular input on their progress.

Often (30%): 30% of learners report receiving feedback often, indicating that they receive periodic but not constant feedback.



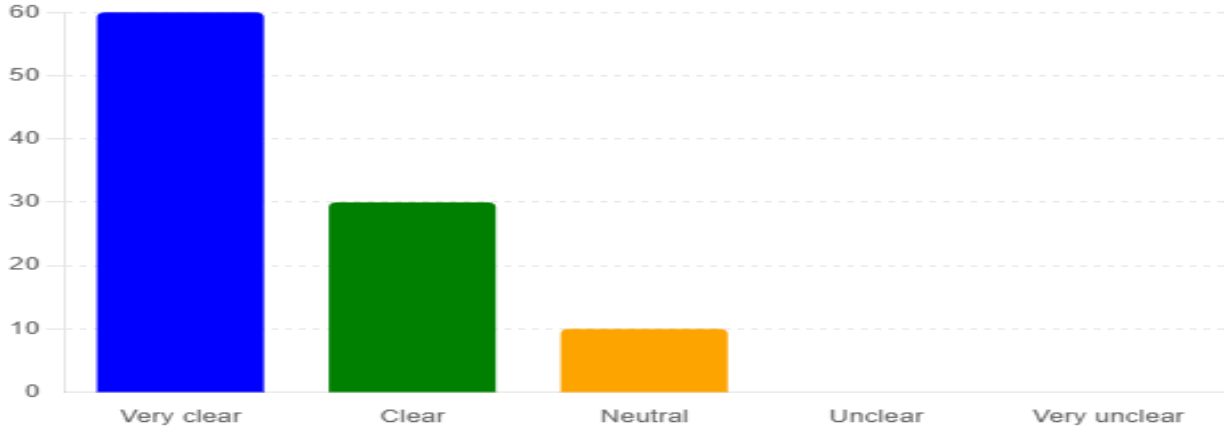
Sometimes (20%): 20% of learners receive feedback only occasionally. This sporadic feedback may not be sufficient to guide learners effectively in their learning process.

Rarely (5%): A small percentage (5%) of learners rarely receive feedback. This lack of regular feedback can hinder their ability to understand their progress and areas needing improvement.

Never (5%): Another 5% of learners never receive feedback. This absence of feedback can severely impact their learning outcomes as they lack the necessary guidance to improve.

4.2.2. What type of feedback do you find most helpful in learning German?

- Written
- Oral
- Both

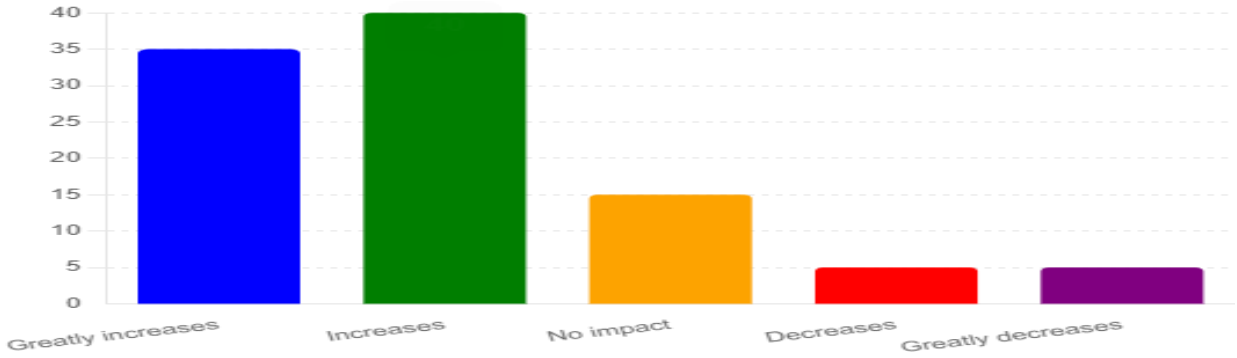


FULL TEXTS BOOK

Written (50%): Half of the learners (50%) find written feedback most helpful in learning German. Written feedback provides a tangible record that learners can refer back to, allowing them to review specific comments and suggestions at their own pace.
Oral (30%): 30% of learners prefer oral feedback. Oral feedback allows for immediate clarification and interaction, enabling learners to ask questions and receive instant responses.
Both (20%): 20% of learners find both written and oral feedback equally helpful. This group appreciates a combination of both types of feedback, leveraging the strengths of each method.

4.2.3. How clear is the feedback you receive from your German teacher?

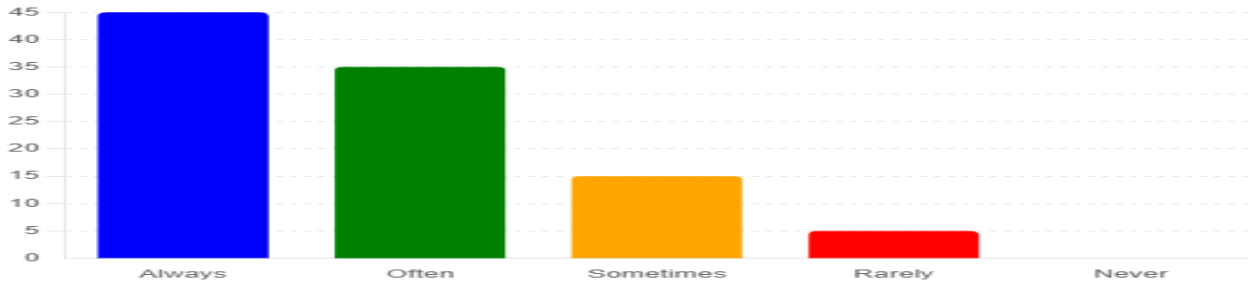
- *Very clear*
- *Clear*
- *Neutral*
- *Unclear*
- *Very unclear*



Clarity of Feedback from Teacher
Very Clear (60%): A majority of learners (60%) find the feedback from their German teacher to be very clear. This high percentage suggests that most learners can easily understand and interpret the feedback they receive, which is crucial for effective learning.
Clear (30%): 30% of learners find the feedback clear. While not as emphatic as "very clear," this indicates that a significant portion of learners still find the feedback understandable and useful.
Neutral (10%): A small percentage (10%) of learners are neutral about the clarity of feedback. These learners may sometimes find the feedback helpful but other times may struggle to understand it fully.
Unclear (0%) and Very Unclear (0%): None of the learners find the feedback unclear or very unclear. This indicates that the current feedback methods are effective for the vast majority of learners.

4.2.4. How does feedback from your teacher impact your motivation to learn the language?

- *Greatly Increases*
- *Increases*
- *No Impact*
- *Decreases*
- *Greatly Decreases*



FULL TEXTS BOOK

Greatly Increases (35%): Feedback greatly increases motivation for 35% of learners. This suggests that for a significant portion of the class, feedback is a powerful motivator and plays a crucial role in their learning process.
Increases (40%): For 40% of learners, feedback increases their motivation to learn German. This group finds feedback helpful and motivating, though not to the same extent as the first group.
No Impact (15%): 15% of learners feel that feedback has no impact on their motivation. These learners may not see the relevance of feedback to their learning or may need different types of feedback to feel motivated.
Decreases (5%): For 5% of learners, feedback decreases their motivation. This is a concerning response as it indicates that feedback may be perceived negatively or as discouraging by these learners.
Greatly Decreases (5%): Another 5% of learners feel that feedback greatly decreases their motivation. This indicates a significant issue where feedback might be demoralizing or counterproductive.

4.2.5. How often do you use the feedback from your teacher to improve your work?

- *Always*
- *Often*
- *Sometimes*
- *Rarely*
- *Never*

Always (45%): A significant portion of learners (45%) always use the feedback from their German teacher to improve their work. This indicates that nearly half of the learners consistently integrate feedback into their learning process.
Often (35%): 35% of learners often use the feedback they receive to enhance their work. This shows that a majority of learners are regularly applying feedback, even if not every time.
Sometimes (15%): 15% of learners sometimes use feedback to improve their work. This suggests that while these learners recognize the value of feedback, they may not always act on it.
Rarely (5%): A small percentage (5%) of learners rarely use feedback to improve their work. This indicates a minimal level of engagement with the feedback provided.
Never (0%): None of the learners report never using feedback. This is a positive sign that all learners recognize feedback to some extent.

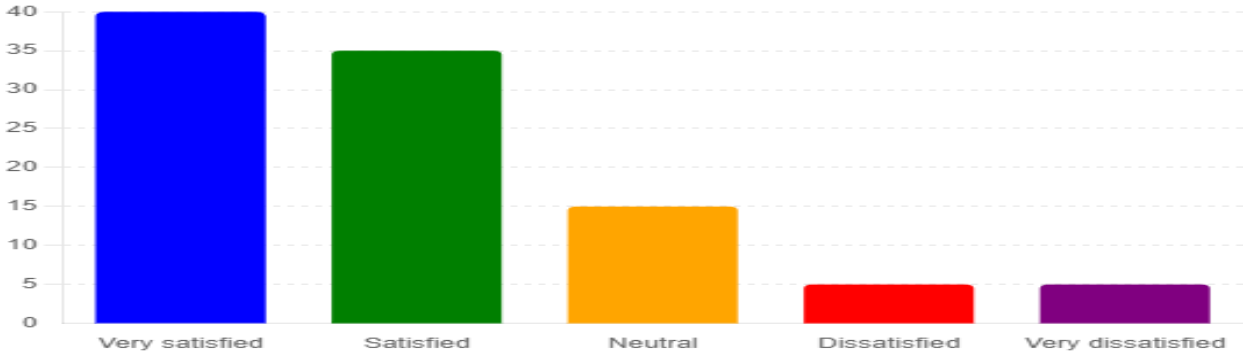
FULL TEXTS BOOK

4.2.6. What specific type of feedback helps you the most in learning German?

- *Detailed written feedback (including grammar corrections, vocabulary suggestions, and sentence structure improvements)*
- *Verbal explanations and clarifications*
- *Examples and sample sentences*
- *Interactive feedback (like one-on-one sessions, group discussions)*
- *Peer feedback (feedback from classmates)*

Detailed written feedback (40%): A significant portion of learners (40%) find detailed written feedback most helpful. This type of feedback likely provides learners with clear, precise information that they can refer back to and review multiple times.

Verbal explanations and clarifications (25%): 25% of learners prefer verbal feedback. Verbal explanations allow for immediate clarification and interaction, enabling learners to ask questions and receive instant responses.



Examples and sample sentences (15%): 15% of learners benefit most from examples and sample sentences. This type of feedback helps learners understand the practical application of rules and concepts.

Interactive feedback (10%): 10% of learners find interactive feedback most beneficial. Interactive feedback involves active participation and can include one-on-one tutoring or group discussions.

Peer Feedback (10%): Another 10% of learners value feedback from their peers. Peer feedback can provide a different perspective and promote collaborative learning.

4.2.7. How satisfied are you with the feedback you receive from your German teacher?

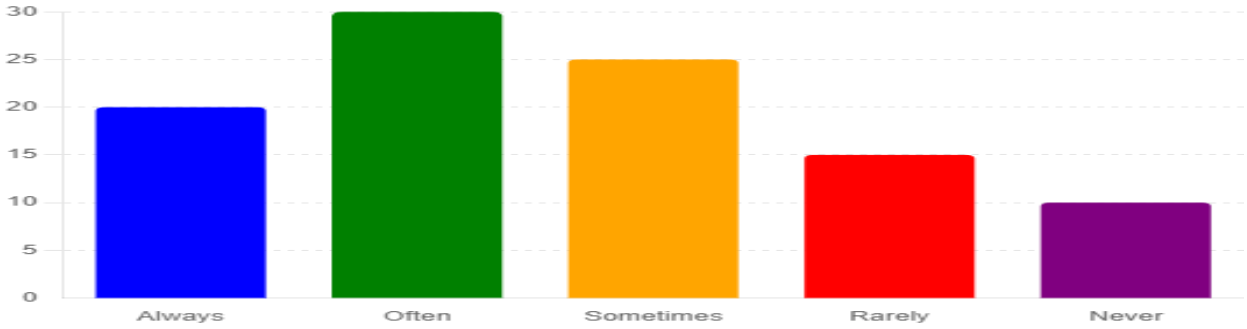
- *Very satisfied*
- *Satisfied*
- *Neutral*
- *Dissatisfied*
- *Very dissatisfied*

FULL TEXTS BOOK

Very Satisfied (40%): A significant portion of learners (40%) are very satisfied with the feedback they receive from their teacher. This high level of satisfaction suggests that the feedback provided is perceived as highly effective, clear, and valuable in aiding their learning process.
Satisfied (35%): 35% of learners are satisfied with the feedback. While they generally find the feedback useful, there may be some aspects that could be improved to elevate their experience to a higher level of satisfaction.
Neutral (15%): 15% of learners feel neutral about the feedback they receive. This indicates that the feedback does not have a significant positive or negative impact on their learning experience.
Dissatisfied (5%): A small percentage (5%) of learners are dissatisfied with the feedback. This suggests that the feedback may not be meeting their expectations or needs.
Very Dissatisfied (5%): Another 5% of learners are very dissatisfied with the feedback they receive. This indicates significant issues with the feedback process.

4.2.8. Do you prefer individual feedback or group feedback in your German class?

- *Individual*
- *Group*
- *Both*



Individual Feedback (70%): The majority of learners (70%) prefer individual feedback in their German class. This preference indicates that learners value personalized, one-on-one feedback that addresses their specific needs and learning progress.
Group Feedback (20%): 20% of learners prefer group feedback. This preference suggests that some learners find value in feedback that is shared with the entire class, possibly because it allows them to learn from the mistakes and successes of their peers.
No Preference (10%): A small percentage (10%) of learners have no preference between individual and group feedback. These learners may find both types of feedback equally beneficial.

4.2.9. How often do you seek feedback from your German teacher?

- *Always*
- *Often*
- *Sometimes*
- *Rarely*
- *Never*

FULL TEXTS BOOK

Always (20%): 20% of learners always seek feedback from their German teacher. This group likely views feedback as an essential component of their learning process and consistently looks for ways to improve.
Often (30%): 30% of learners often seek feedback. These learners regularly engage with their teacher for feedback but may not do so as consistently as the "always" group.
Sometimes (25%): 25% of learners seek feedback sometimes. These learners may seek feedback when they feel it is necessary or when they encounter specific challenges.
Rarely (15%): 15% of learners rarely seek feedback. These learners might not see the value of feedback, may lack confidence in approaching the teacher, or might be unsure how to use the feedback effectively.
Never (10%): 10% of learners never seek feedback from their German teacher. This indicates a potential disengagement or a lack of understanding of the feedback's importance.

4.2.10. What changes would you suggest to improve the feedback process in learning German?
More detailed feedback (25%): Learners expressed a need for more detailed and specific feedback. They want to understand not just what was wrong but also how to improve and why certain mistakes were made.
Timely feedback (20%): Timeliness of feedback was a concern for some learners. They indicated that receiving feedback promptly after assignments or tests helps them understand and correct their mistakes while the material is still fresh in their minds.
Personalized feedback (15%): Some learners suggested that feedback should be more personalized to address their individual learning needs and styles. They feel that generic feedback is less helpful.
Interactive feedback sessions (15%): Learners expressed interest in having interactive feedback sessions where they can discuss their performance and receive immediate clarification and guidance.
Positive reinforcement (10%): Some learners highlighted the importance of positive reinforcement in feedback. They believe that acknowledging what they did well can motivate them to continue improving.
Use of technology (10%): A few learners suggested the use of technology to enhance the feedback process. This includes using online platforms for quicker feedback, and digital tools for tracking progress and areas of improvement.
Regular Feedback (15%): Some learners mentioned that feedback should be more regular and consistent throughout the course, rather than just at major assessment points.

5. Conclusions
The results indicated that most learners receive regular feedback from their teachers. Specifically, 35% of the learners reported always receiving feedback, while 30% stated they often receive it. This high frequency of feedback underscores its importance in the learning process and suggests that it is an integral part of classroom instruction.
When it comes to the type of feedback, 50% of the learners expressed a preference for a combination of written and oral feedback. This preference highlights the need for diverse feedback formats to address different learning styles and needs effectively.

FULL TEXTS BOOK

Clarity of feedback is another critical factor. The survey revealed that most learners find the feedback from their teachers to be clear (40%) or very clear (30%). Clear feedback is essential as it helps learners understand their progress and areas that need improvement.

Feedback also significantly impacts learners' motivation to learn German. According to the survey, 40% of the learners said that feedback increases their motivation, and 35% reported that it greatly increases their motivation. This demonstrates that constructive feedback can be a powerful motivator, encouraging learners to engage more deeply with their studies.

In terms of utilizing feedback, 30% of the learners indicated that they often use the feedback they receive to improve their work, and 20% stated that they always use it. This shows that feedback is not only given but also actively used by learners to enhance their learning outcomes.

Interestingly, a significant majority of learners (70%) prefer individual feedback over group feedback. This preference suggests that personalized feedback is perceived as more effective and valuable, allowing learners to receive specific guidance tailored to their individual needs.

The survey also found that learners are proactive in seeking feedback, with 30% often and 25% sometimes asking for feedback from their teachers. This proactive approach indicates that learners recognize the importance of feedback and are eager to use it to improve their learning.

When asked for suggestions to improve the feedback process, learners emphasized the need for more detailed, timely, and personalized feedback. They also recommended interactive feedback sessions and the use of positive reinforcement and technology to enhance the feedback experience.

Regarding satisfaction with the feedback they receive, 35% of the learners reported being satisfied, and 40% were very satisfied. However, a small percentage of learners expressed dissatisfaction, indicating that there is still room for improvement in the feedback process.

Overall, the survey results highlight the crucial role that feedback plays in motivating and guiding learners in learning German. Regular, clear, and personalized feedback is highly valued and actively used by learners to improve their performance. However, it is essential to continuously refine feedback methods to ensure that all learners benefit from this critical educational tool.

ÖZET
Okul yöneticileri etkili okul kavramının en önemli unsurlarından biridir. Bu önemine rağmen ülkemizde okul yöneticilerinin seçilme, yetiştirilme ve görevlendirilmesine ilişkin tartışmalar yıllardır sürmektedir. Eğitim kurumlarına yönetici seçme ve görevlendirmelerine ilişkin öğretmen ve okul yöneticilerinin görüşlerini belirlemeyi amaçlayan bu çalışma, tarama deseni kullanılarak yapılmış nitel bir çalışmadır. Araştırma kapsamında görüşme yapılacak katılımcıların belirlenmesinde tabakalı amaçsal örnekleme stratejisi tercih edilmiştir. Araştırma verileri yarı yapılandırılmış görüşme formu kullanılarak katılımcılarla yapılan yüz yüze görüşmelerle toplanmıştır. Araştırmaya Balıkesir ili Altıeylül ve Karesi ilçelerinde görev yapan, 9 öğretmen, 7 müdür yardımcısı ve 4 okul müdürü katılmıştır. Araştırmaya katılan öğretmen ve yöneticilere, araştırmanın amacı, kapsamı ve veri toplama yöntemi hakkında bilgilendirme yapılmıştır. Görüşmelerde elde edilen veriler yazılı hale getirildikten sonra betimsel ve içerik analizi yöntemleriyle analiz edilmiştir. Araştırmada, yöneticilerin seçilmesine ilişkin ölçüt ve yöntemlerin gözden geçirilmesi, yöneticilerin eğitim ihtiyacı, mevcut haliyle yönetici seçiminin sağlıklı yapılmadığı yönünde bulgulara ulaşılmıştır. Araştırma sonucunda, okul yöneticiliğinin meslekleşmesi için gerekli çalışmaların yapılması, seçme ve görevlendirme süreçlerinin liyakat ilkesine uygun olarak düzenlenmesi, yönetici eğitimlerine önem verilmesi gibi önerilere yer verilmiştir.

ABSTRACT
School administrators are one of the most important elements of the effective school concept. Despite this importance, discussions regarding the selection, training and assignment of school administrators have been continuing for years in our country. This study, which aims to determine the opinions of teachers and school administrators regarding the selection and assignment of administrators to educational institutions, is a qualitative study conducted using the screening pattern. Stratified purposive sampling strategy was preferred in determining the participants to be interviewed within the scope of the research. The research data were collected through face-to-face interviews with participants using a semi-structured interview form. Nine teachers, seven assistant principals and four school principals working in Altıeylül and Karesi districts of Balıkesir province participated in the research. Teachers and administrators who participated in the research were informed about the purpose, scope and data collection method of the research. The data obtained from the interviews was transcribed and analyzed using descriptive and content analysis methods. In the research, findings were reached regarding the review of the criteria and methods for the selection of managers, the training needs of managers, and the fact that the selection of managers is not done properly in its current state. Because of the research, suggestions were made such as carrying out the necessary studies for the professionalization of school administration, organizing the selection and appointment processes in accordance with the principle of merit, and giving importance to administrator training.

GİRİŞ

Yönetim, en genel haliyle örgütlerin amaçlarına ulaşması için sahip olduğu maddi kaynaklarla insan kaynağını etkili şekilde kullanabilmektir. Eğitim yönetimi de aynı şekilde eğitim sistemi içerisinde yer alan madde ve insan kaynağını verimli şekilde kullanmayı amaçlar. Yönetim biliminin eğitime uyarlanmış hali olan eğitim yönetiminin en somut şekli ise okul yönetimidir. Dolayısıyla okul yönetiminin, eğitim yönetiminin okula uyarlanmış biçimi olduğu söylenebilir (Bursalıoğlu, 2022).

Okul yöneticileri, okulun etkililiğinde hayati bir rol oynarlar ve bu etkililik doğrudan okul yöneticisinin liderlik davranışlarıyla ilişkilidir (Balcı, 2022). Bugün, okul müdürlerinden, okuldaki çeşitli paydaşlarla (öğrenciler, öğretmenler, veliler vb.) işbirliği içinde karmaşık kararlar almaları beklenmektedir. Bu durum ise okul yöneticilerinin görevlerini, yetkilerini ve sorumluluklarını eskiye göre daha karmaşık ve zorlu hale getirmiştir. Zira okul yöneticilerinden beklentiler ve okulların öğrencilere kazandırmayı hedeflediği beceriler, eski döneme göre ciddi şekilde farklılaşmıştır (Öztabak, 2015).

Okul yöneticilerinin eğitim sistemi içerisinde yukarıda bahsedilen önemlerine rağmen, ülkemizde yönetici yetiştirilmesi konusunda ciddi ve tutarlı bir politikanın varlığından bahsetmek oldukça zordur. Bu hususta, yapılan mevzuat değişikliklerine bakmak yeterli olacaktır. Son yirmi yılda yönetici atamalarına ilişkin yönetmelik on üç kez tamamen değiştirilmiştir. Son kez 2021 yılında yayınlanan yönetmeliğin de önümüzdeki günlerde tamamen değiştirileceği Milli Eğitim Bakanlığı yetkilileri tarafından açıklanmıştır (MEB Yönetici Atama Yönetmeliği Değişiyor, 2023). Hal böyleyken eğitim kurumlarına yönetici seçme ve atama uygulamalarının tutarlı bir politika dâhilinde sürdürüldüğünü söylemek oldukça zorlaşmaktadır.

Bu çalışmada, uygulamanın içerisinde yer alan okul yöneticileri ve öğretmenlerin yönetici seçme ve görevlendirme uygulamalarına ilişkin görüşleri derlenerek incelenmiş, yönetici seçme ve görevlendirme uygulamalarına ilişkin bir vizyon ortaya konulmaya çalışılmıştır.

Araştırmanın Amacı

Bu çalışmanın amacı, Milli Eğitim Bakanlığı'na bağlı eğitim kurumlarına yönetici seçme ve görevlendirme uygulamalarına ilişkin okul yöneticilerinin ve öğretmenlerin görüşlerini ortaya koymaktır.

Araştırmanın Modeli

Eğitim kurumlarına yönetici seçme ve görevlendirme uygulamalarına ilişkin okul yöneticilerinin ve öğretmenlerin görüşlerini değerlendirmeyi amaçlayan bu araştırma tarama modelindedir. Tarama modelleri geçmişte var olan veya mevcut durumu olduğu şekilde betimleyen araştırma yaklaşımıdır. Araştırma konusu olan birey veya nesne doğal koşulları içerisinde tanımlanır ve herhangi bir şekilde değiştirilme çabası gösterilmez. Önemli olan araştırma konusunu var olduğu şekilde gözlemleyip belirleyebilmektir (Karasar, 2023).

Araştırmanın Çalışma Grubu

Çalışmada ulaşılan bulgular ve çıkarılan sonuçların genellenmek istendiği araştırmanın çalışma evreni, 2023-2024 eğitim öğretim yılında Balıkesir ili, Altıeylül ve Karesi ilçelerindeki ilkokul, ortaokul ve liselerde görev yapan okul yöneticileri ve öğretmenlerden oluşturulmuştur.

Araştırmanın çalışma grubunu, araştırma evreninde görev yapan 9 öğretmen, 7 müdür başyardımcısı/müdür yardımcısı ve 4 okul müdürü oluşturmaktadır. Araştırma 2023-2024 eğitim ve öğretim yılının ikinci döneminde gerçekleştirilmiştir.

Veri Toplama Aracı

Bu çalışmada veri toplama yöntemi olarak yarı yapılandırılmış görüşme tekniği kullanılmıştır. Bu yöntem ne tam yapılandırılmış görüşmeler kadar katı ne de yapılandırılmamış görüşmeler kadar esnektir; iki uç arasında yer almaktadır (Karasar, 2023). Araştırmacıya bu esnekliği sağladığı için yarı yapılandırılmış görüşme tekniği kullanılmıştır. Araştırmaya katılanlar ile yüz yüze görüşülmüş, katılımcıların verdikleri cevaplar yazılı olarak kayıt altına alınmıştır.

FULL TEXTS BOOK

Verilerin Analizi ve Yorumu

Nitel araştırma yaklaşımı doğrultusunda tasarlanan bu araştırmada betimsel analiz ve içerik analizi yöntemi kullanılmıştır. Betimsel analiz, araştırma sonucunda elde edilen verilerin belirli temalara uygun olarak düzenlenmesi ve yorumlanması yaklaşımıdır. Betimsel analizde araştırma katılımcılarının görüşlerini doğru şekilde aktarabilmek için katılımcıların görüşlerinden doğrudan alıntılar yapılır. Analiz neticesinde tespit edilen bulgular ise düzenlenip yorumlanarak sunulur. İçerik analizinde ise benzer veriler belli kavramlar ile temalar etrafında bir araya getirilir ve okuyucuya yorumlanarak aktarılır (Yıldırım ve Şimşek, 2021).

ARAŞTIRMA BULGULARI

Yöneticiliğe Görevlendirilmek İçin Gerekli Eğitime İlişkin Bulgular

Araştırmaya katılanların yöneticiliğe görevlendirilmek için gerekli eğitim seviyesine ilişkin görüşleri aşağıdaki tabloda gösterilmiştir.

Tablo 1

Yöneticiliğe görevlendirilmek için gerekli eğitimle ilgili görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür Yardımcısı	Müdür
Eğitim Seviyesi	Lisans	3	2	2
	Yüksek Lisans	6	5	2

Yukarıdaki tablo incelendiğinde, araştırmaya katılan 9 öğretmenden 3'ünün yöneticiliğe görevlendirilebilmek için lisans seviyesinde eğitim görülmüş olmasının yeterli olacağını, 6 öğretmenin ise yöneticiliğin en az yüksek lisans seviyesinde eğitim gerektirdiğini ifade ettiği görülmektedir. Araştırmaya katılan müdür yardımcılarında ise 2 müdür yardımcısı lisans seviyesinde, 5 müdür yardımcısı yüksek lisans düzeyinde eğitim şartı aranması gerektiğini ifade etmişlerdir. Müdürler arasında, 2 okul müdürü lisans eğitiminin yeterli olacağını belirtirken 2 okul müdürü ise en az yüksek lisans eğitiminin gerekli olduğunu belirtmiştir.

Yukarıda özetlenen görüşler birlikte değerlendirildiğinde, gerek öğretmenlerin gerekse de okul yöneticilerinin önemli bir bölümünün (f=13) eğitim kurumları yöneticiliğinin en az yüksek lisans seviyesinde eğitim gerektirdiğini ifade ettikleri görülmektedir. Elde edilen bulgular bu alanda daha önce yapılmış çalışmalarla paralellik göstermektedir (Ulusoy, 2023; Polat ve Kurtgöz, 2022; Öztabak, 2015; Akbaşlı ve Balıkçı, 2013; Özmen ve Kömürlü, 2010; Şen ve Tankutay, 2021; Sezer ve Engin, 2021).

Yöneticiliğe Görevlendirilmek İçin Gerekli Kişisel Özelliklere İlişkin Bulgular

Araştırma katılımcılarının eğitim kurumlarına yönetici olarak görevlendirileceklerin sahip olmaları gereken kişisel özelliklere ilişkin görüşleri aşağıdaki tabloda gösterilmiştir.

Tablo 2

Yöneticiliğe görevlendirilmek için gerekli kişisel özelliklerle ilgili görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür	Müdür
Kişisel Özellikler	Adalet	8	5	4
	Liderlik	6	6	3
	Etkili İletişim	7	6	2
	Sabır	6	4	2
	Problem Çözme	6	3	3
	Empati	5	4	2
	Özgüven	3	4	3

FULL TEXTS BOOK

Çatışma	3	4	3
Dürüstlük	5	3	1
Ahlaklılık	3	2	1
Demokrat Olma	4	2	-
Cesaret	2	1	2
Kriz Yönetebilme	3	-	1

Tablo incelendiğinde, araştırmaya katılan öğretmenlerin en önemli bulduğu kişisel özelliklerin adalet, etkili iletişim, liderlik, problem çözebilme becerisi, dürüstlük ve empati olduğu görülmektedir. Bu özelliklerin genel olarak iletişim becerileri (etkili iletişim, empati) ve yönetsel tavır ve beceriler (adalet, dürüstlük, liderlik, problem çözme) ile ilgili olduğu; dolayısıyla görevlendirilecek yöneticilerin iletişim ve yönetsel becerilerinin önemli bir nitelik olduğunu düşündükleri söylenebilir. Müdür yardımcıları açısından tablo incelendiğinde, öne çıkan özelliklerin liderlik, etkili iletişim ve adalet olduğu; öğretmen katılımcılarına benzer şekilde iletişim becerilerinin önemli görüldüğü söylenebilir. Araştırma katılımcısı müdürler açısından tabloya bakıldığında, adalet duygusunun ön plana çıktığı, bunun dışında liderlik, özgüven ve problem çözme becerilerinin de önem verilen özellikler arasında bulunduğu dikkati çekmektedir.

Alanyazında yapılmış bazı çalışmalarda da araştırma katılımcılarının dile getirdikleri kişisel özelliklere benzer sonuçlar elde edilmiştir (Yıldız vd., 2022). Akbaşlı ve Diş (2019) tarafından yapılan öğretmenlerin görüşlerine göre lider okul yöneticilerine ilişkin bir çalışmada da adil, güvenilir olma, demokratik, anlayışlı, bütünleştirici olma gibi kişisel özellikler ortaya çıkmıştır.

Yönetmeliğin Doğru Yöneticileri Seçme Başarısına İlişkin Bulgular

Araştırmaya katılanların mevcut yönetmeliğin "doğru" okul yöneticilerinin seçimi hususunda ne kadar başarılı olduğuna ilişkin görüşleri aşağıdaki tabloda gösterilmiştir.

Tablo 3

Yönetmeliğin doğru yöneticileri seçme başarısına ilişkin görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür Yardımcısı	Müdür
Yönetmeliğin Doğru Yöneticileri Seçme Başarısı	Başarılı	2	3	2
	Kısmen Başarılı	3	3	2
	Başarısız	4	1	-

Katılımcıların cevapları incelendiğinde; katılımcı öğretmenlerin 2'sinin yönetmeliği başarılı, 3'ünün kısmen başarılı ve 4'ünün başarısız bulduğu görülmektedir. Genel olarak bakıldığında; öğretmenlerin yaklaşık yarısı, yönetmelik doğrultusunda yapılan yönetici görevlendirmelerini başarılı ve kısmen başarılı bulduklarını ifade ederken diğer yarısının ise doğru yönetici seçimi hususunda yönetmeliği yetersiz ve başarısız bulduklarını ifade etmişlerdir. Bu oran, araştırma evreni ölçeğinde değerlendirildiğinde, ciddi sayıda öğretmenin mevcut yönetmeliğin en azından uygulanmasından memnun olmadıkları sonucunu ortaya koyar ki bu durum işyeri barışı ve okul iklimi bakımından önemli sorunların doğmasına yol açabilir. Müdür yardımcılarından araştırmaya katılanların görüşlerine bakıldığında ise 3'ünün başarılı, 3'ünün kısmen başarılı ve 1'inin başarısız bulduğunu ifade ettiği görülmektedir. Genel olarak bakıldığında, müdür yardımcılarının büyük çoğunluğunun yönetmeliği başarılı bulduğu dikkati çekmektedir. Ancak, mevcut yönetmelik ile görevlendirilmiş müdür yardımcılarından sadece 3'ü yönetmeliği tamamen başarılı bulduğunu ifade ederken diğer 3'ünün kısmen başarılı, dolayısıyla kısmen de başarısız bulmuş olmaları dikkat çekicidir. Araştırmaya katılan okul müdürlerinin verdiği cevaplar incelendiğinde de benzer bir durum göze çarpmaktadır. Araştırmaya

FULL TEXTS BOOK

katılan 4 okul müdüründen 2'si yönetmeliği başarılı bulduğunu ifade ederken diğer 2'si kısmen başarılı bulduğunu, dolayısıyla kısmen de başarısız bulduklarını belirtmişlerdir. Katılımcı müdürlerin de mevcut yönetmelik ile görevlendirildikleri unutulmamalıdır. Araştırma katılımcılarının bazı görüşlerine aşağıda yer verilmiştir.

Katılımcıların görüşleri birlikte değerlendirildiğinde; halen sürdürülen görevleri farklı olsa da okullarda görev yapan eğitimcilerin önemli bir bölümünün yönetmelikten ya da en azından yönetmeliğin uygulanış biçiminden rahatsız oldukları dikkati çekmektedir. Öyle ki yönetmelikle görevlendirilen okul yöneticilerinin dahi önemli bir bölümü tam anlamıyla yönetmeliği başarılı bulduklarını dile getirmemişlerdir. Hal böyleyken, bakanlık, eğitim sendikaları, üniversiteler, sivil toplum örgütleri gibi eğitimin bütün paydaşlarının üzerinde uzlaşabileceği, aceleye getirilmeyen, kapalı kapılar ardında değil kamuoyu önünde tartışılarak olgunlaştırılan, bütün paydaşların sahip çıkabileceği, dolayısıyla her yıl yenilenmek zorunda kalınmayan bir yönetmelik ihtiyacının bulunduğu aşikârdır.

Üçlü Seçme Sisteminin (Yazılı Sınav – Ek-1 Değerlendirme Formu – Sözlü Sınav) İlk Defa Yönetici Görevlendirilmesinde Liyakatli Yöneticileri Seçme Başarısına İlişkin Bulgular

Araştırma katılımcılarının yazılı sınav, Ek-1 Değerlendirme Formu ve sözlü sınav aşamalarından oluşan üçlü seçim sisteminin ilk defa yönetici görevlendirilmesinde liyakatli yöneticilerin seçimindeki başarısına ilişkin görüşleri aşağıdaki tabloda gösterilmiştir.

Tablo 4
Üçlü seçim sisteminin başarısına ilişkin görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür	Müdür
Üçlü Seçim Sisteminin Başarısı	Başarılı	-	1	1
	Kısmen Başarılı	2	2	1
	Başarısız	7	4	2

Eğitim kurumlarına ilk defa yönetici görevlendirilmesi için öngörülen yazılı sınav, değerlendirme formu ve sözlü sınavdan oluşan üçlü seçim sisteminin liyakatli yöneticilerin seçiminde ne kadar başarılı olduğuna ilişkin öğretmen görüşleri incelendiğinde; araştırmaya katılan öğretmenlerden 2'sinin kısmen başarılı, 7'sinin ise başarısız olarak değerlendirdiği görülmektedir. Başarılı olarak değerlendiren öğretmen ise bulunmamaktadır. Katılımcı öğretmenlerin görüşlerine bakıldığında, eleştirilerin büyük kısmının sözlü sınav kaynaklı olduğu görülmektedir. Müdür yardımcılarından araştırmaya katılanların görüşlerine bakıldığında ise 4 müdür yardımcısının üçlü seçim sistemini başarısız, 2'sinin kısmen başarılı ve 1'inin başarılı bulduğu görülmektedir. Araştırma katılımcısı müdürlerin ise 2'si bu yöntemi başarısız bulduğunu ifade ederken, 1'i kısmen başarılı ve 1'i başarılı bulduğunu ifade etmiştir.

Araştırma katılımcılarının görüşlerine bütün olarak bakıldığında; üçlü seçim sisteminin yazılı sınav kısmının bütün katılımcılar tarafından olumlu olarak değerlendirildiği dikkati çekmektedir. Farklı görevler üstlenen katılımcıların, yazılı sınavın adil bir seçim yöntemi olduğuna ilişkin fikir birliği içerisinde oldukları, Ek-1 Değerlendirme Formu ile formun öngördüğü puanlama ölçütlerine ilişkin eleştirilerinin bulunduğu, sözlü sınav uygulamasına ilişkin ise katılımcıların çok büyük çoğunluğunun (18/20=% 90) çekinceleri bulunduğu görülmektedir.

Katılımcıların Ek-1 Değerlendirme Formuna ilişkin eleştirileri; yüksek lisans veya doktora eğitimine verilen puanların yetersizliği, ödüllerin adil dağıtılmamasına karşın ödüllere puan verilmesi, öğretmen adaylarının yapacakları öğretmenlik uygulaması kapsamında uygulama öğretmeni olarak görev yapmaya puan verilmesi ve il/ilçe zümre başkanlığına puan verilmesi başlıklarında toplanmıştır. Sözlü sınava ilişkin eleştiriler ise değerlendirmenin objektif yapılmaması, siyasal/sendikal tercihlerin

FULL TEXTS BOOK

belirleyici olması, kayırmacılık yapılması başlıklarında yoğunlaşmıştır. Bu konuda bazı katılımcı görüşleri aşağıda yer almaktadır.

Yönetmelikte öngörülen yazılı sınav – Ek-1 Değerlendirme Formu – sözlü sınav aşamalarından oluşan seçim sistemine ilişkin katılımcı görüşleri, yazılı sınav yapılması gerektiğine ilişkin görüş birliğini ortaya koymaktadır. Bununla birlikte Ek-1 Değerlendirme Formu'na ilişkin, 1 Mart 2024 tarihinde yapılan düzenlemelere rağmen, eleştiriler devam etmektedir. Sözlü sınav hususunda ise farklı görevlerde bulunan birçok katılımcı çekincelerini belirtmiş ve uygulamanın adil olmadığını öne sürmüştür. Alanyazında yapılan birçok çalışmada da (Öztabak, 2015; Şen ve Tankutay, 2021; Sezer ve Engin, 2021) benzer sonuçlara ulaşılmıştır. Bu sonuçlar ışığında, Ek-1 Değerlendirme Formu'nun eğitim paydaşları ile müzakere edilerek güncellenmesi ile sözlü sınav uygulamasının adalet duygusunu zedelemeyecek şekilde, öğretmen atamalarında yapılan düzenlemelere benzer şekilde (Ntv, 2024), yeniden düzenlenmesi ihtiyaçlarının bulunduğu değerlendirilmektedir.

Ek-2 Değerlendirme Formu'nun Yeniden Yönetici Görevlendirilmesinde Liyakatli Yöneticileri Seçme Başarısına İlişkin Bulgular

Yönetmeliğin yeniden yönetici görevlendirilmesinde öngördüğü Ek-2 Değerlendirme Formu'nun liyakatli yöneticileri seçme başarısına ilişkin katılımcı görüşleri aşağıdaki tabloda gösterilmiştir.

Tablo 5

Ek-2 Değerlendirme Formu'nun başarısına ilişkin görüşler

Tema	Kod	Frekans(f)		
		Öğretmen	Müdür Yardımcısı	Müdür
Ek-2 Değerlendirme Formu Başarısı	Başarılı	3	2	1
	Kısmen Başarılı	3	3	2
	Başarısız	3	2	1

Ek-2 Değerlendirme Formu'na ilişkin katılımcı görüşleri incelendiğinde; öğretmen katılımcılarından 3'ünün formu başarılı, 3'ünün kısmen başarılı ve 3'ünün ise başarısız bulduğu görülmektedir. Müdür yardımcıları katılımcılarından formu başarılı bulan sayısı 2 iken, 3 katılımcı kısmen başarılı ve 2 katılımcı ise başarısız olduğunu ifade etmiştir. Müdür olarak görev yapan katılımcılardan ise 1'i formu başarılı olarak değerlendirirken 2'si kısmen başarılı ve 1'i ise başarısız olarak değerlendirmiştir.

Katılımcıların görüşlerine bakıldığında genel olarak eleştirilerin bazı puanlama kriterleri üzerinde yoğunlaştığı görülmektedir. Bu puanlama kriterleri; yüksek lisans ve doktora eğitimine verilen puanların yetersizliği, yapılan son değişiklik (01/03/2024) ile farklı alanlarda yapılan yüksek lisans ve doktora eğitimlerine puan verilmemesi, ödüllerin adil dağıtılmadığından bahisle ödüle puan verilmesi, il/ilçe zümre başkanlığına puan verilmesi ve hizmet içi eğitim faaliyetlerinde eğitim yöneticiliğine puan verilmesi olarak tespit edilmiştir.

Araştırma katılımcılarının görüşleri genel olarak değerlendirildiğinde, katılımcıların yaklaşık 2/3'ünün (14/20=% 70) Ek-2 Değerlendirme Formu'nu başarısız ya da kısmen başarılı olarak niteledikleri görülmektedir. Oranın büyüklüğü göz önüne alındığında, ilgili değerlendirme formunda 1 Mart 2024 tarihinde yapılan düzenlemelerin yetersiz kaldığı, bazı hususlarda yeni rahatsızlıklar oluşturduğu, bu nedenlerle demokratik katılımcı bir yöntemle yeniden düzenlenmesinin uygun olacağı düşünülmektedir.

Yönetici Seçimi İçin Sınav Yapılmasına İlişkin Bulgular

Araştırmaya katılanlara, yönetici seçimi için sınav yapılması gerekip gerekmediği sorulmuştur. Katılımcıların görüşleri aşağıdaki tabloda gösterilmiştir.

FULL TEXTS BOOK

Tablo 6
Yöneticilik için sınav gerekliliğine ilişkin görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür Yardımcısı	Müdür
Sınav Gerekliliği	Evet, gereklidir.	9	7	3
	Hayır, gerekli değildir.	-	-	1

Tabloda görüldüğü üzere katılımcıların 1'i hariç tamamı yönetici seçimi için sınav yapılmasının gerekli olduğunu ifade etmişlerdir. Sadece 1 katılımcı sınavın gerekli olmadığı şeklinde görüş bildirmiş olup görüşlerinin bir kısmına aşağıda yer verilmiştir.
Katılımcılar, çok büyük oranda (19/20=% 95) yönetici görevlendirilmelerinde sınav yapılması gerektiğini ifade etmişlerdir. Sınavın tarafsızlığı sağlayacağını, sisteme olan güveni artıracağını, adaleti sağlayacağını, adam kayırmayı önleyeceğini, vasıfsız adayları eleyebileceğini görüşlerinde dile getirmişlerdir. Bunun üzerine katılımcılara yapılacak sınavın türü ve niteliği ile ilgili düşünceleri sorulmuştur. Katılımcıların verdiği cevaplar aşağıda gösterilmiştir.

Tablo 7
Yöneticilik için yapılması gereken sınava ilişkin görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür	Müdür
Sınav Türü ve Niteliği	Yazılı Sınav	6	3	1
	Sözlü Sınav/ Mülakat	-	1	2
	Yazılı Sınav ve Sözlü	3	3	1

Katılımcı öğretmenlerden 6'sı yazılı sınavın yeterli olacağını ifade ederken, 3 öğretmen ise hem yazılı hem de sözlü sınav/mülakat yapılması gerektiğini ifade etmiştir. Müdür yardımcılarından ise 3'ü yazılı sınavın yeterli olacağını belirtirken, 1'i sözlü sınav/mülakatın yeterli olacağını, 3'ü hem yazılı sınav hem de sözlü sınav/mülakat yapılması gerektiğini savunmuştur. Müdür katılımcılarından 1'i yazılı sınav, 2'si sözlü sınav/mülakat ve 1'i de hem yazılı sınav hem de sözlü sınav/mülakat yapılması gerekliliğinden bahsetmişlerdir.
Araştırma katılımcılarının görüşleri bir bütün olarak değerlendirildiğinde, katılımcıların neredeyse tamamının (19/20=% 95) mutabık oldukları nokta sınavın gerekli olduğudur. Katılımcılara sınavın türü ve niteliği ile ilgili görüşleri sorulduğunda ise büyük çoğunluğu (17/20=% 85) yazılı sınav yapılması gerekliliğinden bahsetmiştir. Yazılı sınavın adam kayırmayı önleyen, adil bir seçim mekanizması olduğu hususunda görüş birliğinin var olduğundan bahsedilebilir. 7 katılımcı (7/20= % 35) ise yazılı sınavın tek başına yetersiz olacağından bahisle sözlü sınav/mülakatın da yapılması gerektiğini savunmuşlardır. Sadece 3 katılımcı ise tek başına sözlü sınav/mülakatın yeterli olacağını ifade etmiştir. Alanyazında yapılan çeşitli çalışmalarda da benzer sonuçların ortaya konulduğu görülmektedir (Şen ve Tankutay, 2021; Eğer, 2018; Sezer ve Engin, 2021; Kiraz vd., 2022; Yılmaz vd., 2022; Konan vd., 2017; Arabacı vd., 2015).

Eğitim Kurumları Yöneticilerinin Seçim Yöntemine İlişkin Bulgular
Araştırmaya katılanlara eğitim kurumlarına yönetici seçiminin nasıl yapılması gerektiğine ilişkin görüşleri sorulmuş, alınan cevaplar aşağıdaki tabloda gruplandırılarak gösterilmiştir.

FULL TEXTS BOOK

Tablo 8
Eğitim kurumları yöneticilerinin seçimine ilişkin görüşler

Tema	Kod	Frekans(f) Öğretmen	Müdür	Müdür
Eğitim Kurumu Yöneticilerinin Seçimi	Yazılı Sınav	3	2	-
	Sözlü Sınav/Mülakat	-	1	2
	Yazılı Sınav ve Sözlü	2	1	-
	Yüksek Lisans ve Yazılı Sınav	3	3	1
	Yüksek Lisans, Yazılı Sınav ve Sözlü Sınav/Mülakat	1	-	1

Tablo incelendiğinde, araştırmaya katılan öğretmenlerden 3'ünün yazılı sınav yapılarak yöneticilerin seçilmesi gerektiğini ifade ettiği, 2 öğretmenin yazılı sınav ile birlikte sözlü sınav/mülakatında yapılması gerektiğini, 3 öğretmenin yüksek lisans yapanlar arasında yazılı sınav yapılması gerektiğini, 1 öğretmenin ise yüksek lisans yapanlar arasından yazılı sınav ve sözlü sınav/mülakatla seçim yapılması gerektiğini ifade ettikleri görülmektedir. Katılımcı müdür yardımcılarının verdikleri cevaplar incelendiğinde 2'sinin yazılı sınav ile 1'inin sözlü sınav/mülakat ile 1'inin yazılı sınav ve sözlü sınav/mülakat ile ve 3'ünün yüksek lisans yapanlar arasından yazılı sınav ile seçilmesi gerektiğini beyan ettikleri dikkati çekmektedir. Müdür katılımcılarından 2'si sözlü sınav/mülakatla seçim yapılabileceğini, 1'i yüksek lisans yapanlar arasından yazılı sınavla, 1'i ise yüksek lisans yapan adaylar arasından yazılı sınav ve sözlü sınav/mülakatla seçim yapılması gerektiğini belirtmişlerdir. Bu görüşlerin yanı sıra bazı katılımcılar (f=8) yönetmelik eki Ek-1 Değerlendirme Formu'nun da yönetici seçim sürecinde kullanılabileceğini belirtmişlerdir.

Araştırmaya katılanların görüşleri genel olarak değerlendirildiğinde katılımcıların tamamına yakınının yönetici seçim sürecinde adaletin ancak yazılı sınav yoluyla sağlanabileceği hususunda hemfikir olduğu görülmektedir. Bunun yanı sıra katılımcıların eğitim yönetimi alanında lisansüstü eğitime önem atfettikleri de dikkat çeken bir başka husustur. Bu yaklaşım eğitim yöneticiliğinin uzmanlaşması gerektiğine ilişkin anlayışın yaygınlaşmakta olduğunun bir göstergesi olarak kabul edilebilir. Katılımcıların sözlü sınav/mülakata yaklaşımları genelde olumsuz olmakla birlikte bu olumsuz tutumun sözlü sınav/mülakatı gerçekleştiren komisyonların yanlı seçimlerinden, seçim yeterliliğine sahip olmamalarından kaynaklandığı görülmektedir. Bazı katılımcılar, mesleki tecrübe, eğitim seviyesi ve mesleki başarıların da seçim kriteri olarak değerlendirebileceğini, Ek-1 Değerlendirme Formu'nun bu hususları objektif olarak değerlendirmek üzere kullanılabileceğini ifade etmişlerdir. Alanyazında yapılan farklı çalışmalarda da benzer sonuçlara ulaşıldığı görülmektedir (Altın ve Vatanartıran, 2014; Baş ve Şentürk, 2017; Yılmaz vd., 2022; Türkmenoğlu ve Bülbül, 2015; Sezer ve Engin, 2021).

Yöneticilerin Aynı Kurumdaki Görev Sürelerine İlişkin Bulgular

Araştırma katılımcılarına, eğitim kurumu yöneticilerinin aynı kurumdaki görev sürelerinin sınırlandırılmasına ilişkin düşünceleri ile sınırlandırılması gerektiğini düşünüyorlarsa bu sürenin ne kadar olması gerektiği sorulmuştur. Katılımcıların tamamı aynı kurumdaki yöneticilik süresinin sınırlandırılması gerektiğini ifade etmiştir. Katılımcıların verdikleri cevaplar aşağıdaki tabloda gösterilmiştir.

FULL TEXTS BOOK

Tablo 9
Yöneticilerin aynı kurumdaki görev sürelerine ilişkin görüşler

Tema	Kod	Frekans (f) Öğretmen	Müdür Yardımcısı	Müdür
Aynı Kurumdaki Görev Süresi	4+4 yıl	6	3	2
	5+5 yıl	1	2	2
	Diğer	2	2	-

Tabloya göre, öğretmen katılımcılarının 6'sı mevcut yönetmelikte öngörülen 4+4 yıllık görev süresinin uygun olduğunu ifade ederken 1 öğretmen 5+5 yıl, 1 öğretmen 5 yıl ve 2 öğretmen ise daha farklı sürelerin uygun olacağını ifade etmiştir. Müdür yardımcılarından ise 3'ü 4+4 yıllık sürenin, 2'si 5+5 yıllık sürenin ve 2'si daha farklı sürelerin uygun olacağını belirtmiştir. Müdür katılımcılarından 2'si 4+4 yıllık süreyi uygun görmüş, 2'si ise 5+5 yıllık sürenin yeterli olacağını öne sürmüştür.
Katılımcı görüşleri birlikte değerlendirildiğinde, mevcut yönetmelikte yer alan 4+4 yıllık yöneticilik süresinin katılımcıların çoğunluğu tarafından (f=11) kabul gördüğü dikkati çekmektedir. 5+5 yıllık yöneticilik süresi de katılımcılar tarafından öne sürülen (f=5) bir başka görüştür.
Alanyazındaki farklı çalışmalarda da yöneticilerin aynı kurumdaki görev süreleri ile ilgili benzer sonuçlara ulaşılmıştır. (Yeloğlu, 2008) tarafından yapılan çalışmada yöneticilerin aynı kurumda çalışma süresinin en az 5 en fazla 8 yıl olması görüşü öne çıkmış, (Yıldız vd.,2022) tarafından yapılan diğer bir çalışmada da 4+4 yıllık çalışma süresinin yeterli olduğuna dair görüşler ağırlık kazanmıştır. Her iki çalışma sonuçları bu araştırmanın sonuçlarıyla paralellik göstermektedir.

Yöneticilerin Hizmet Öncesi/Hizmet İçi Eğitim İhtiyacına İlişkin Bulgular
Araştırmaya katılanlara eğitim kurumu yöneticilerinin zorunlu olarak hizmet öncesi/hizmet içi eğitim almasına ilişkin görüşleri sorulmuştur. Katılımcıların tamamı eğitim kurumu yöneticilerinin hem hizmet öncesi hem de hizmet içi eğitim alması gerektiği konusunda görüş bildirmişlerdir. Bunun üzerine katılımcılara hangi konuda/konularda hizmet öncesi/ hizmet içi eğitim verilmesi gerektiği sorulmuş olup katılımcıların görüşleri aşağıda gösterilmiştir.

Tablo 10
Yöneticilerin hizmet öncesi/hizmet içi eğitim ihtiyacına ilişkin görüşler

Tema	Kod	Frekans (f) Öğretmen	Müdür	Müdür
Hizmet Öncesi / Hizmet İçi Eğitim	İletisim	9	6	3
	Liderlik	8	6	2
	Çatışma Yönetimi	7	4	1
	Teknoloji Okuryazarlığı	6	4	2
	Kurum Kültürü/Okul İklimi	4	3	-
	Problem Çözme Becerileri	3	3	-
	Mali Kaynak Yönetimi	-	3	2
	Yönetim Bilişim Sistemleri	-	4	1
	Toplantı Yönetimi	-	2	1
	Stresle Baş Etme	-	2	1
	Denetim	-	-	2
	Soruşturma Teknikleri	-	-	2
	Protokol Kuralları	-	-	2

Tablo incelendiğinde, öğretmen katılımcıların eğitim kurumu yöneticilerine, iletişim, liderlik, çatışma yönetimi, teknoloji okuryazarlığı, kurum kültürü/ olumlu okul iklimi oluşturma ve problem çözme becerileri konularında eğitim verilmesi gerektiğini ifade ettikleri görülmektedir. Müdür yardımcısı katılımcıların ise en çok eğitim düzenlenmesi gerektiğini ifade ettiği konular, iletişim ve liderlik (f=6)

FULL TEXTS BOOK

olmuştur. Bunların yanı sıra çatışma yönetimi, teknoloji okuryazarlığı, kurum kültürü/olumlu okul iklimi oluşturma, problem çözme becerileri, mali kaynak yönetimi, yönetim bilişim sistemleri, toplantı yönetimi ve stresle baş etme eğitim verilmesi önerilen diğer konular arasındadır. Araştırmaya katılan müdürler ise en çok iletişim (f=3) konusunda eğitim düzenlenmesi gerektiğini belirtirken, liderlik, teknoloji okuryazarlığı, mali kaynak yönetimi, denetim, soruşturma teknikleri, protokol kuralları, yönetim bilişim sistemleri, toplantı yönetimi ve stresle baş etme gibi farklı alanlarda geniş bir yelpazede eğitim ihtiyacından bahsetmişlerdir.

Katılımcı görüşleri birlikte değerlendirildiğinde, en çok düzenlenmesi önerilen hizmet öncesi/hizmet içi eğitimlerin iletişim, liderlik, çatışma yönetimi ve teknoloji okuryazarlığı olduğu görülmektedir. Söz konusu dört eğitim, her görevden en az 1 katılımcının düzenlenmesine dair görüş beyanıyla diğer alanlardan ayrılmaktadır.

Araştırma katılımcılarının görüşleri bir bütün olarak değerlendirildiğinde, katılımcıların tamamının hizmet öncesi/ hizmet içi eğitimlere olumlu yaklaştığı görülmektedir. Bütün katılımcılar, eğitim ihtiyaçlarına ilişkin görüşler farklılık gösterse de eğitimlerin zorunlu olarak düzenlenmesini, yöneticilerin bu eğitimlere ihtiyaç duyduğunu ifade etmektedir. Katılımcıların en çok düzenlenmesi gerektiğini ifade ettiği eğitimler, iletişim (f=18), liderlik (f=16), çatışma yönetimi (f=12) ve teknoloji okuryazarlığı (f=12) olmuştur. Okul örgütünün insan temelli bir örgüt olduğu düşünüldüğünde, önerilen eğitimlerin kişilerarası ilişkiler alanında olması şaşırtıcı değildir. Zira insani ilişkilerin en yoğun olduğu örgütlerde görev yapan okul yöneticilerinin başarılı olmasının insani ilişkileri iyi yönetmesine bağlı olduğu muhakkaktır. Alanyazında bu hususta yapılan farklı çalışmalar incelendiğinde, elde edilen sonuçların diğer çalışma sonuçlarına benzediği dikkati çekmektedir (Demirtaş ve Özer, 2014; Kılıç, 2014; Baloğlu, 2007).

Yöneticiliğin İkinci Görev Olarak Yürütülmesine İlişkin Bulgular

Araştırmaya katılanlara eğitim kurumu yöneticilikleri için kadro ihdas edilmeden, yöneticiliğin "ikinci görev" olarak öğretmenler tarafından yürütülmesi hakkındaki düşünceleri sorulmuştur. Katılımcıların verdiği cevaplar aşağıdaki tabloda gösterilmiştir.

Tablo 11

Yöneticiliğin ikinci görev olarak yürütülmesine ilişkin görüşler

Tema	Kod	Frekans (f)		
		Öğretmen	Müdür Yardımcısı	Müdür
Yöneticiliğin İkinci Görev Olarak Yürütülmesi	Olumlu	4	1	-
	Olumsuz	5	6	4

Tabloya bakıldığında, öğretmen katılımcılarından 4'ünün eğitim kurumu yöneticiliğinin ikinci görev kapsamında yürütülmesine olumlu, 5'inin ise olumsuz yaklaştığı görülmektedir. Bu hususta müdür yardımcılarından ise 1'i olumlu görüş bildirmiş, 6'sı ise olumsuz görüş beyan etmiştir. Araştırmaya katılan müdürlerin ise tamamı yöneticiliğin ikinci görev olarak yürütülmesi hususunda olumsuz görüş bildirmişlerdir.

Araştırmaya katılanların görüşleri birlikte değerlendirildiğinde, katılımcıların büyük ölçüde (f=15) yöneticiliğin ikinci görev olarak yürütülmesine ilişkin olumsuz görüş beyan ettiği görülmektedir. Özellikle halen yönetici olarak görev yapmakta olan müdür ve müdür yardımcılarının 1'i dışında tamamı yöneticiliğin ikinci görev olarak yürütülmesinin doğru olmadığını ifade etmişlerdir.

Katılımcı görüşlerinden hareketle, yöneticilik görevinin ikinci görev olarak yürütülmesinin özellikle halen bu görevde bulunan yöneticiler tarafından desteklenmediği söylenebilir. Okul yöneticileri,

FULL TEXTS BOOK

görevlendirme uygulamasının özlük haklarıyla ilgili kayıplarına neden olduğu gibi yarınının belli olmamasının da yöneticiler üzerinde baskı oluşturabileceğini ifade etmişlerdir. Alanyazında yapılan farklı çalışmalarda da eğitim kurumu yöneticiliğinin ikinci görev olarak sürdürülmesinin yöneticiler tarafından olumsuz değerlendirildiğine ilişkin çeşitli araştırma bulguları mevcuttur (Yıldız vd., 2022; Türkmenoğlu ve Bülbül, 2015; Memişoğlu, 2016; Arabacı vd., 2015).

Yöneticiliğin Meslekleşmesine İlişkin Bulgular

Araştırmaya katılanlara eğitim kurumu yöneticiliklerinin öğretmenlikten tamamen ayrılarak ayrı kadroya sahip bir meslek olarak örgütlenmesi hakkında ne düşündükleri sorulmuştur. Katılımcıların cevapları aşağıdaki tabloda gösterilmiştir.

Tablo 12
Yöneticiliğin meslekleşmesine ilişkin görüşler

Tema	Kod	Frekans (f) Öğretmen	Müdür	Müdür
Yöneticiliğin Meslekleşmesi	Olumlu	6	6	4
	Olumsuz	3	1	-

Tablo incelendiğinde, öğretmen katılımcılarından 6'sının yöneticiliğin ayrı kadroya sahip bir meslek olarak örgütlenmesine olumlu baktığı, 3'ünün ise olumsuz yaklaştığı görülmektedir. Müdür yardımcılarından 6'sı olumlu yaklaşırken sadece 1 müdür yardımcısı olumsuz fikir bildirmiştir. Müdür katılımcıların ise tamamı olumlu görüş bildirmiştir.

Katılımcıların görüşleri birlikte değerlendirildiğinde, katılımcıların çok büyük bölümünün (f=16) yöneticiliğin ayrı bir meslek olarak örgütlenmesine olumlu görüş bildirdiği görülmektedir. Halen yöneticilik yapan katılımcılardan sadece 1'i olumsuz görüş bildirirken öğretmen katılımcıların da önemli kısmı (6/9= % 66) bazı çekinceleri olsa da olumlu görüş bildirmiştir.

Genel olarak bakıldığında, öğretmen kökenli olması kaydıyla, katılımcıların çok büyük ölçüde (f=16) eğitim kurumu yöneticiliğinin ayrı kadroya sahip bir meslek olarak örgütlenmesini desteklediği görülmektedir. Alanyazında yapılan birçok çalışmada da bu paralelde sonuçlar elde edildiği görülmektedir (Yıldız vd., 2022; Türkmenoğlu ve Bülbül, 2015; Memişoğlu, 2016; Arabacı vd., 2015).

Öğretmenlik Dışı Alanlardan Yönetici Görevlendirilmesine İlişkin Bulgular

Araştırma katılımcılarına eğitim yöneticiliği ayrı kadroya sahip bir meslek olarak örgütlendiği takdirde, öğretmenlik dışı alanlarda eğitim almış kişilerin eğitim yöneticisi olarak görevlendirilmesi hakkındaki görüşleri sorulmuştur. Katılımcıların soruya verdikleri cevaplar aşağıdaki tabloda gösterilmiştir.

Tablo 13
Öğretmenlik dışı alanlardan yönetici görevlendirilmesine ilişkin görüşler

Tema	Kod	Frekans (f) Öğretmen	Müdür	Müdür
Öğretmenlik Dışı Alanlardan Yönetici Görevlendirilmesi	Olumlu	1	1	-
	Olumsuz	8	6	4

Tablo incelendiğinde, araştırmaya katılan 9 öğretmenden sadece 1'inin olumlu görüş bildirdiği, diğer 8 öğretmen katılımcının ise olumsuz görüş bildirdiği görülmektedir. Aynı şekilde araştırmaya katılan müdür yardımcılarından sadece 1'inin olumlu, diğer 6 katılımcının ise olumsuz görüş beyan ettiği

FULL TEXTS BOOK

görülmektedir. Müdür katılımcılardan ise soruya olumlu görüş bildiren olmamış 4 katılımcının tamamı olumsuz görüş beyan etmiştir.

Katılımcıların görüşleri birlikte değerlendirildiğinde, araştırma grubunda yer alan 20 katılımcıdan sadece 2'sinin öğretmenlik dışı alanlardan yönetici görevlendirilmesine olumlu yaklaştığı, 18 katılımcının ise bu yaklaşıma karşı çıktığı görülmektedir. Katılımcıların, çekinceleri farklı olsa da, öğretmenlik yapmayan kişilerin eğitim kurumlarına yönetici olarak görevlendirilmesine katı şekilde karşı çıkmaları dikkat çekicidir.

Genel olarak değerlendirildiğinde eğitim kurumlarına öğretmenlik dışı alanlardan yönetici görevlendirilmesi katılımcılar tarafından kabul edilebilir bulunmamıştır. Katılımcıların bu konuda, öğretmen olmayanların sınıf içi tecrübesi olmadığı için okul sorunlarına doğru yaklaşamayacağı, olayları, öğretmen ve öğrenci duygularını doğru okuyamayacağı, okulların Taylorist bakışla yönetilemeyeceği gibi çeşitli çekinceleri bulunmaktadır.

SONUÇ, TARTIŞMA VE ÖNERİLER

Araştırma Sonuçları ve Tartışma

Katılımcıların eğitim kurumları yöneticilerinin lisansüstü eğitim görmüş olmasının okul yönetimlerinin niteliğini artıracağına ve lisansüstü eğitimin önemine yönelik olumlu bir tutuma sahip oldukları görülmüştür. Alanyazında da lisansüstü eğitimin yöneticiliğe atanmada bir koşul olması gerektiğine dair çok sayıda çalışma bulunmaktadır (Yıldız vd.,2022; Türkmenoğlu ve Bülbül, 2015; Konan vd., 2017; Akbaşlı ve Balıkçı, 2013; Demirtaş ve Özer, 2014). Araştırma sonucunda elde edilen bulgular, alanyazında daha önce yapılmış çalışma sonuçları ile örtüşmektedir.

Araştırmada elde edilen bir başka sonuç ise yöneticilerin sahip olması beklenen özelliklerin çoğunlukla iletişim ve davranışla ilişkili olduğudur. Katılımcıların çoğunlukla üzerinde durduğu kişisel özelliklere bakıldığında, adalet, liderlik, iletişim ve problem çözme gibi özelliklerin yer aldığı görülmektedir. Kişiler arası ilişkilerin yoğun olduğu örgütler olarak okul örgütü yöneticilerinin iyi birer iletişimci olması, aynı zamanda kişiler arası ilişkileri iyi yönetebilmesi gerekeceği muhakkaktır. Katılımcıların en çok önem verdikleri bir başka özellik ise adalet duygusu olmuştur. Adil bir yönetimin iş barışının ön şartı olduğu tartışılmaz bir gerçektir. Kişisel özellikler arasında dikkat çeken bir başkası ise liderliktir. Günümüzde okul yöneticilerinden beklenen sadece yönetmek değil okul örgütüne her bakımdan liderlik etmeleridir. Ancak mevcut katı merkeziyetçi yapının okul yöneticilerine liderlik yapacak fazla alan bırakmadığı da gözden kaçırılmamalıdır. Alanyazında yapılan farklı çalışmalarda benzer sonuçlara ulaşıldığı görülmektedir. Şen ve Tankutay (2021) tarafından yapılan araştırmada, okul yöneticisinde aranan en önemli özelliğin adalet duygusu olduğu belirlenmiştir. Yıldız vd. (2022), okul yöneticilerinin görevlerini yerine getirirken çoğunlukla iletişim becerisine ihtiyaç duyacağını ifade etmektedir.

Araştırma kapsamında, katılımcılardan mevcut yönetmelikte öngörülen yöntemler ile yapılan görevlendirmelerin ne kadar başarılı olduğunu değerlendirmeleri istenmiştir. Katılımcıların çok büyük bölümü, yazılı sınav yapılmasını doğru ve gerekli olarak tanımlamışlar, yazılı sınavın adil bir seçim yöntemi olduğunu ifade etmişlerdir. Buna karşın katılımcıların önemli bir kısmı mevcut yönetmelik ile yapılan görevlendirmelerin başarılı olmadığı görüşünü savunmuştur. Bu noktada katılımcıların eleştirilerine bakıldığında iki nokta üzerine yoğunlaştığı görülmektedir. İlki sözlü sınav/mülakat uygulamasıdır. Pek çok katılımcı sözlü sınav/mülakat uygulamasını gerekli görmekle birlikte, mevcut uygulama pratiğinin adalet duygusunu zedelediğini, kayırmacılığa yol açtığını, kişisel, siyasal veya sendikal ilişkilerin belirleyici hale gelerek liyakat esasından uzaklaşılmasına neden olduğunu belirtmektedir. Sözlü sınav/mülakat hakkında dile getirilen bir başka sorun ise sözlü sınav/mülakatı gerçekleştiren komisyonların yetersizliği üzerine yoğunlaşmaktadır. Katılımcıların üzerinde durduğu bir diğer nokta ise yönetmelikte öngörülen değerlendirme formları ile ilişkilidir. Birçok katılımcı formlarda yer alan puanlama kriterlerinin adil olmadığını ve yönetici adayları arasında fırsat eşitsizliğine neden olduğunu ifade etmiştir. Her ne kadar 01/03/2024 tarihli yönetmelik değişikliği ile değerlendirme

FULL TEXTS BOOK

formlarında yer alan kriterler değiştirilse de halen bazı ölçütlerle ilgili eleştiriler varlığını sürdürmektedir.

Her iki sorunla ilgili benzer eleştirilere alanyazında yapılmış farklı çalışmalarda da rastlamak mümkündür. Yıldız vd. (2022) çalışmalarında sınav uygulamasının adaletli olduğunu, ancak sözlü sınava ilişkin olumsuz bir algının bulunduğunu, liyakat ilkesinin uygulanmasında eksiklikler bulunduğunu tespit etmişlerdir. Memişoğlu (2016), sözlü sınav şeklindeki düzenlemenin liyakat ilkesini göz ardı ettiğini belirtmektedir. Polat ve Kurtgöz (2022), çalışmalarında yönetmelik eki değerlendirme formlarındaki bazı kriterlerin yönetici adayları için adil olmadığını ve fırsat eşitsizliğine neden olduğunu belirtmişlerdir. Aktepe (2014), eğitimcilerin çoğunun merkezi sınav ile atamayı desteklediğini ifade etmektedir. Öztabak (2015), mülakat sınavının yapılmaması gerektiğini, eğer yapılacaksa da bakanlık ve üniversitelerden oluşturulacak karma komisyonlarca yapılması gerektiğini belirtmektedir.

Araştırmaya katılanlara sorulan bir diğer soru ise yöneticilerin seçimi için nasıl bir model önerdikleridir. Katılımcıların önerileri incelendiğinde temel olarak sınava dayalı bir seçim mekanizması öne sürüldüğü görülmektedir. Hemen hemen tüm katılımcılar adil bir seçim yöntemi olduğunu belirterek yazılı sınav önermişlerdir. Yazılı sınav dışında lisansüstü eğitim, asgari öğretmenlik deneyimi, stajyer yöneticilik, kademeli ilerleme ve sözlü sınav gibi diğer kriter ve yöntemler de öneriler arasında yer almaktadır. Baş ve Şentürk (2017)'ün yaptıkları araştırma sonucu geliştirdikleri modelde, lisans eğitimi mezunları için en az 5 yıl deneyim ve eğitim yönetimi yüksek lisansı, eğitim yönetimi lisans mezunları içinse staj şartı öngörülmüş, devamında yazılı sınav, uzman komisyonda sözlü sınav, yönetici yardımcılığı, en az 5 yıl hizmeti müteakip yöneticilik ve her 5 yılda bir yeterlilik sınavı şartı önerilmiştir.

Altın ve Vatanartıran (2014) ise yaptıkları araştırmaya dayalı olarak üç aşamalı bir model geliştirmişlerdir. Modelin ilk adımında yetiştirme, ikinci adımında seçme ve üçüncü adımında geliştirme aşamaları yer almaktadır.

Her iki modelde de, bu araştırmada katılımcıların önerdiği seçim, yetiştirme ve görevlendirme kriter ve yöntemlerinin benzerlerine yer verildiği dikkati çekmektedir. Yazılı sınav, lisansüstü eğitim, asgari öğretmenlik deneyimi, stajyer yöneticilik gibi hususlar her iki modelde de yer almaktadır.

Araştırmada yer alan bir başka soru ise yöneticilerin hizmet öncesi ya da hizmet içi eğitim ihtiyaçları ile ilgilidir. Alanyazında yöneticilerin yetiştirilmesi için gerek hizmet öncesi gerekse de hizmet içi eğitimlerin önemini vurgulayan birçok çalışma yer almaktadır. Şen ve Tankutay (2021), yönetici adaylarının göreve başlamadan önce iletişim becerileri ve uygulamaya yönelik eğitim yönetimi programı düzenlenmesinin gerekli olduğunu vurgulamaktadır. Sezer ve Engin (2021), yönetici adaylarının tecrübeli müdürler yanında uygulamalı işbaşında eğitim yoluyla yetiştirilebileceğini, ihtiyaç duyulan hizmet içi eğitimlerin uygulamalı olarak yürütülmesinin lider okul yöneticilerinin yetişmesine katkıda bulunacağını ifade etmektedir. Baş ve Şentürk (2017), bir okul yöneticisinin okulunu etkili olarak yönetebilmesi için eğitim almasının kaçınılmaz olduğunu belirtmektedir. Okçu (2011), eğitim yöneticilerinin ciddi bir hizmet içi eğitimden geçmelerini zorunlu görmektedir. Araştırma sonuçları, alanyazındaki diğer çalışmaların sonuçları ile uyumlu şekilde yöneticilerin hizmet öncesi ve hizmet içi eğitim ihtiyaçlarını ortaya koymuştur. Şüphesiz ki öğretmenlik ve yöneticilik farklı beceriler gerektiren mesleklerdir. Dolayısıyla gerek öğretmenlikten yöneticiliğe geçiş gerekse de yöneticilik sürecinde ihtiyaç duyulan becerileri kazandıracak hizmet öncesi ya da hizmet içi eğitimlerin düzenlenmesi bir zarurettir. Ancak mevcut durumda, gerek öğretmenlikten yöneticiliğe geçiş esnasında gerekse de yöneticilik sürecinde herhangi bir eğitim düzenlenmemektedir. Her ne kadar yönetmelikte Eğitim Yönetimi Sertifika Programı'ndan bahsedilmekteyse de bugüne kadar bu konuda düzenlenmiş herhangi bir eğitim bulunmamaktadır.

Araştırma kapsamında cevap aranan bir başka soru ise aynı kurumdaki yöneticilik süresinin ne kadar olması gerektiğidir. Kaya ve Hoşgörür (2024) yaptıkları çalışmada, yöneticilerin dört yıllık çalışma süresinin kurumların gelişimi için yeterli olmadığını, dört yıl sonundaki değerlendirmeyle görev yaptıkları kurumların değişebilme ve yerlerine başka yöneticilerin gelebilme ihtimalinin

FULL TEXTS BOOK

motivasyonlarını olumsuz etkilediğini ortaya koymuştur. Mutlusoy (2019) ise çalışmasında mevcut görev süresinin yetersizliğinden bahisle yöneticilerin kuruma aidiyetlerini zayıflattığını, uzun vadeli plan ve proje üretmelerine engel olduğunu ifade etmektedir. Bir başka çalışmada Seçkin (2019), yöneticilerin dört yıllık sürelerle görevlendirilmelerinin eğitimde istikrar sorununa neden olduğu sonucuna ulaşmıştır. Alanyazında yer alan farklı çalışmalarda ulaşılan sonuçlara benzer şekilde, mevcut araştırmadaki katılımcı görüşleri, 4+4 ve 5+5 yıllık görevlendirme süreleri üzerinde yoğunlaşmıştır. Dört yıllık görevlendirme süresinin kısa oluşuyla ilgili yukarıda zikredilen çalışmalarda yer verilen görüşlere benzer görüşler, bu araştırmada yer alan bazı katılımcılar tarafından da dile getirilmiştir. Gerek bu çalışmada elde edilen bulgular, gerekse de alanyazındaki diğer çalışma sonuçları düşünüldüğünde, yöneticilerin aynı kurumdaki çalışma süresinin 5+5 olarak düzenlenmesinin uygun olacağı değerlendirilmektedir. Birinci beş yıllık görev süresinin sona ermesini müteakip yapılacak değerlendirmenin, objektif şekilde okul gelişimini ölçebilecek kriterler belirlenerek yapılması da yöneticilerin duydukları kaygıyı azaltarak motivasyonlarını artıracaktır.

Araştırma kapsamında son olarak yöneticiliğin meslekleşmesi hakkında katılımcı görüşlerine başvurulmuştur. Katılımcılar, yöneticiliğin ikinci görev olarak yürütülmesine olumsuz yaklaşmakta, yöneticiliğin geçici bir görev olarak nitelenmesine karşı çıkmakta, bunun yerine ayrı kadrosu olan, görev, yetki ve sorumlulukları net olarak tanımlanmış bir meslek olarak düzenlenmesi fikrine olumlu yaklaşmaktadır. Alanyazında yıllardır yapılan birçok çalışmada yöneticiliğin ayrı bir meslek olarak düzenlenmesi önerisi getirilmesine (Akyıldız vd., 2019; Altın ve Vatanartıran, 2014), Milli Eğitim Şuralarında tavsiye kararları alınmasına rağmen bu konuda henüz bir adım atılmış değildir. Türk eğitim sistemindeki hâkim anlayış, "Meslekte esas olan öğretmenliktir." ve "Öğretmenlikte başarılı olan yöneticilikte de başarılı olur." anlayışıdır. Ancak bu anlayış farklı değerleri barındıran öğretmenlik ve yöneticilik rollerinin karışmasına ve eğitim yöneticilerinin yıpranmasına neden olmuştur (Bursalıoğlu, 2003 akt. Akbaşlı ve Balıkçı, 2013). Eğitim yöneticiliği meslekleşemediği için de yetiştirilmesi, görevleri, yetkileri ve sorumlulukları net olarak tanımlanamadığı gibi yöneticilik yeterlilikleri de belirlenmemiştir. Mevcut araştırma bulgularından hareketle, alanyazında yapılan diğer çalışmalara paralel şekilde, eğitim yöneticiliğinin profesyonel bir meslek olarak tanınmasına, yöneticilik için öğretmenlikten ayrı kadro ihdas edilmesine, mesleki yeterliliklerin belirlenerek yetiştirilme programlarının oluşturulmasına, görev-yetki dengesinin sağlanmasına ve özlük haklarının tanımlanmasına ihtiyaç duyulduğu söylenebilir.

Öneriler

Eğitim kurumu yöneticileri, eğitim sisteminin temelini oluşturan okulların etkililiğini belirleyen temel unsurlardan biridir. Bu nedenle "doğru" eğitim kurumu yöneticilerinin seçimi, yetiştirilmesi ve görevlendirilmesi büyük önem arz etmektedir.

Bu araştırma kapsamında, öğretmen ve yöneticilerin görüşleri ışığında eğitim yöneticilerinin seçme, yetiştirilme ve görevlendirilme süreçleri değerlendirilmiştir. Araştırma bulgularından hareketle, eğitim yöneticiliğinin bir meslek olarak tanınması ihtiyacının olduğu, ikinci görev gibi yarı öğretmen-yarı yönetici modelinin başarısız olduğu görülmektedir. Bu nedenle öncelikle, eğitim yöneticiliğinin meslek olarak tanımlanması için gerekli yasal ve idari düzenlemeler, eğitim paydaşlarının da sürece katılması sağlanarak yapılmalıdır. Eğitim yöneticileri, okul yöneticiliğinin meslek olarak kabul edildiği ülkelerde olduğu gibi, eğitim yönetimi alanında lisansüstü eğitim yapan öğretmenler arasından seçilmeli, lisansüstü eğitim bir önkoşul olarak tanımlanmalıdır.

Seçim sürecinde yazılı sınava mutlaka yer verilmeli, ilaveten yetkin komisyonlarca sözlü sınav ya da mülakat uygulamaları yapılmalıdır. Sözlü sınav ya da mülakat uygulamasında, adayların temsil kabiliyeti, algı ve muhakeme yeteneği, psikolojik sağlamlığı, iletişim ve problem çözme becerileri, ikna ve motivasyon kabiliyeti, kişisel gelişimi değerlendirilmelidir. Seçilen adaylar mutlaka hizmet öncesi

FULL TEXTS BOOK

eğitime alınmalı, eğitimi tamamlayanların mentör yöneticilerin yanında belirli bir süre yetişmeleri sağlanmalıdır.

Eğitim yöneticilerinin yetkileri, görev ve sorumluluk dengesine uygun olarak genişletilirken özlük hakları da geliştirilmelidir. Eğitim yöneticiliğinin yeterlilik ve standartları belirlenmeli, yöneticilerin bu yeterlilik ve standartları karşılayabilecek donanıma sahip olmaları hizmet öncesi/hizmet içi eğitimlerle temin edilmelidir.

Yöneticilerin hizmet süresince değerlendirmeleri objektif kriterlerle yapılmalı, adalet duygusu zedelenmemelidir. Yöneticilerin aynı kurumdaki çalışma süreleri, hem yönetsel körlüğe fırsat vermeyecek hem de yöneticilerin projelerini gerçekleştirebileceği sürelerle kısıtlanmalıdır. Mevcut yönetmelikte öngörülen değerlendirme formlarında yer alan ve fırsat eşitsizliğine yol açan hususlar düzeltilmelidir.

ÖZET

Adölesan dönem; fiziksel, psikolojik ve sosyal yönden büyüme, gelişme ve olgunlaşmayla karakterize ve çocukluk çağından yetişkinlik çağına geçişin başladığı, bebeklik çağından sonraki ikinci hızlı gelişmenin olduğu dönemdir. Biyolojik maturasyon vücut dokularında, organlarda ve sistemlerde meydana gelen olgunlaşmaya verilen isimdir. Zamanlama ve tempo olarak iki komponent olacak şekilde değerlendirilmektedir. Zamanlama, değişimin başlangıcını, tempo değişim oranını anlatmaktadır. Zamanlama; menarş yaşı, büyüme atağı periyodu ve sekonder cinsiyet karakterlerinin görülmeye başladığı zaman gibi değişimin başlangıç zamanını göstermektedir. Zamanlamaya göre biyolojik maturasyon erken, zamanında ve geç şeklinde görülmektedir. Tempo ise; değişimin hızını ve sürecini göstermektedir. Adölesan dönemde biyolojik maturasyon her zaman takvim yaşıyla paralel şekilde ilerlememektedir. Puberte ve biyolojik maturasyon genetik ve çevresel etkenlerden etkilenen dinamik süreçlerdir. Fiziksel aktivite biyolojik maturasyonu etkileyen önemli çevresel faktörlerden biridir.
Biyolojik maturasyon takvim yaşı, boy yaşı, kemik yaşı, büyüme atağı, Tanner evre ve antropometrik ölçümler ile değerlendirilmektedir.
Yapılan çalışmaların sonuçları incelendiğinde Orta Doğu'daki genç erkek elit futbolcularda iskelet olgunluğu ile kas-iskelet sistemi yaralanmaları arasındaki ilişkiyi araştıran çalışmaların yetersiz olduğu gözlenmektedir. Bu literatür derlemesi, Orta Doğu ve Asya'daki elit genç futbolcularda iskelet olgunluğu ile yaralanmalar arasındaki ilişkileri inceleyen ilk epidemiyolojik çalışmadır. Kas-iskelet sistemi yaralanma modelleri ve yaralanma riskleri, oyuncuların iskelet olgunluğuna bağlı olarak değiştiği gözlenmektedir. Erken olgunlaşan oyuncuların en büyük genel sakatlık riskine sahip olduğu kaydedilmiştir.. En sık görülen TLI türlerinin kontüzyonlar, burkulmalar ve büyümeye bağlı yaralanmalar olduğu belirtilmiştir. Analizlere göre, erken olgunlaşan oyuncuların en yüksek sakatlık riskine sahip olduğu vurgulanmıştır. Bilek kısmı iskelet açısından olgun olan oyuncuların alt ekstremite apofiz yaralanması açısından en düşük riske sahip olduğu ancak, pubik apofizin yüksek prevalansını içeren kalça ve pelvis çevresindeki apofiz yaralanmalarına karşı savunmasız olduğu rapor edilmiştir.

FULL TEXTS BOOK

Sonuç olarak, Sporcularda antrenman programları oluşturulurken iskelet olgunluğunun göz önünde bulundurulması, yaralanmaların önlenmesi ve oluşabilecek yaralanmalarda tedavi yönetiminin belirlenmesinde sporcuya katkı sağlayacağı düşünülmektedir.
Anahtar Kelimeler: Adölesan Sporcular, Maturasyon Düzeyi, Yaralanma

ABSTRACT
Adolescence is a period characterized by physical, psychological and social growth, development and maturation and the transition from childhood to adulthood begins, the second period of rapid development after infancy. Biological maturation is the maturation of body tissues, organs and systems. It is evaluated as having two components: timing and tempo. Timing refers to the beginning of the change and tempo refers to the rate of change. Timing indicates the time of onset of change, such as the age of menarche, the period of growth spurt and the time when secondary sex characteristics begin to appear. According to timing, biological maturation is seen as early, on time and late. Tempo shows the speed and process of change. Biological maturation in adolescence does not always progress in parallel with calendar age. Puberty and biological maturation are dynamic processes influenced by genetic and environmental factors. Physical activity is one of the important environmental factors affecting biological maturation.
Biological maturation is evaluated by calendar age, height age, bone age, growth spurt, Tanner stage and anthropometric measurements.
When the results of previous studies are examined, it is observed that there is a lack of studies investigating the relationship between skeletal maturity and musculoskeletal injuries in young male elite soccer players in the Middle East. This literature review is the first epidemiologic study to examine the relationship between skeletal maturity and injuries in elite youth soccer players in the Middle East and Asia. Musculoskeletal injury patterns and injury risks appear to vary depending on the skeletal maturity of players. Early maturing players were noted to have the greatest overall injury risk. The most common types of TLIs were contusions, sprains and growth-related injuries. According to the analysis, it is emphasized that early maturing players have the highest risk of injury. It was reported that skeletally mature players at the wrist had the lowest risk of lower extremity apophysis injury, but were vulnerable to apophysis injuries around the hip and pelvis, including a high prevalence of pubic apophysis.
In conclusion, it is thought that considering skeletal maturity while creating training programs in athletes will contribute to the athlete in preventing injuries and determining the treatment management in injuries that may occur.
Keywords: Adolescent Athletes, Maturation Level, Injury

ADÖLESAN SPORCULARDA MATURASYON DÜZEYİ VE YARALANMA İLİŞKİSİ

1. ADÖLESAN DÖNEM NEDİR?

Adölesan dönem; çocukluk çağından yetişkinlik çağına geçişin başladığıhayat döngüsü içerisinde ikinci hızlı gelişmenin olduğu dönemdir. Sürekli büyüme özelliği çocukları yetişkinlerden ayıran en önemli özelliklerden bir tanesidir. Fiziksel, psikolojik ve sosyal yönden büyüme, gelişme ve olgunlaşmayla karakterize olup yetişkinliğe adımdır. Aktif bir adölesan bireyin günlük ortalama enerji ve besin öğeleri gereksinimi 2300-3000 kkal arasında değişmektedir. Buna göre bireyin, besin ve sıvı ihtiyacı da artmaktadır.(1)

2. ADÖLESANLARDA FİZİKSEL BÜYÜME

Bu dönemde görülen en hızlı değişim fiziksel büyümedir. Bu dönemde adölesan erkek bireylerde vücut ağırlığı 6-12.5kg/yıl artarken kızlarda 5.5-10kg/yıl şeklinde artar. Erkek çocuklarda boy, vücut ağırlığı ve kas parametrelerinde eş zamanlı büyüme gözlenirken kız çocuklarda ilk olarak boy uzaması görülürken ağırlıkta artış ise 6 ay sonra görülmektedir.(2) Yetişkin dönemdeki boy uzunluğunun %20-

FULL TEXTS BOOK

25'i, total kemik kütlenin %37'si ve vücut ağırlığının %50'si bu süreçte kazanılmaktadır.(3) Hem kız hem erkek cinsiyette de adölesan dönemin ilk yıllarında deri altındaki yağ dokusu azalmaktadır.Ancak en az düzeyine büyüme patlaması yaşanılan dönemde ulaşmaktadır.Daha sonra ise kızlarda daha fazla olmak şartıyla her iki cinsiyette de yağ kitlesinde artış gözlemlenmektedir.(3)Erkek bireylerde kas dokusundaki artış kızlardan daha fazla olmakla beraber büyüme hızıyla de eş zamanlı şekilde ilerlemektedir.(3) Adölesan dönemde biyolojik maturasyon her zaman takvim yaşıyla beraber paralel şekilde ilerleme göstermemektedir.

3. BİYOLOJİK MATURASYON

Vücut dokularında,sistemlerinde ve organlarda meydana gelen olgunlaşmaya biyolojik maturasyon denir. "Zamanlama" ve "tempo" olacak şekilde iki komponent olarak değerlendirilmektedir.(4)Değişimin başlangıç zamanını'' zamanlama göstermektedir. Zamanlamaya göre biyolojik maturasyon erken, zamanında ve geç olacak şekilde görülmektedir.Değişimin hızını ve sürecini ise tempo göstermektedir.(5) Biyolojik maturasyon takvim,boy ve kemik yaşı, büyüme atağı, Tanner evre ve antropometrik ölçümlerle değerlendirilmektedir.

Genetik ve çevresel faktörlerden etkilenen dinamik süreçlere puberte ve biyolojik maturasyon denmektedir.Fiziksel aktivite biyolojik maturasyonu etkileyen önemli çevresel etmenlerden biridir.Bazı çalışmalarda fiziksel aktivite düzeyi yetersiz olan erkek adölesan bireylerin erken maturasyon riskinin zamanında maturasyon gösteren yaşıtlarından iki kat daha fazla olduğu (6), bazı çalışmalarda da fiziksel aktivite düzeyi yüksek olan erkek adölesan bireylerin zamanında veya geç matür olan yaşıtlarına nazaran daha erken dönemde matürasyon gösterdiği tespit edilmiştir (7). Bununla beraber; çocuklar ve adölesan bireylerde düzenli aralıklarla yapılan fiziksel aktivite kısa ve uzun vadede kardiyovasküler sistem, kemik, kas ve ruh sağlığı için oldukça faydalıdır. (8)

4. MATURASYON DEĞERLENDİRMESİ

4.1. Takvim Yaşı (Kronolojik yaş)

Hesaplanan zamanda doğum zamanının çıkarılmasıyla sonuç bulunur. Spor bölümleri kronolojik yaşa göre belirlenmektedir.Birbirine eş kronolojik yaştaki grupların farklı ölçülerde biyolojik matürasyon sonuçları olabilir.

4.2. Boy Yaşı

Seçilmiş boydaki bireylerin yaşlarının toplamının kişi sayısına oranına denmektedir.Olması gereken kütleyi hesaplamak için de boy yaşı hesaplanabilir. Boy yaşı bireyin boy uzunluğunun 50p'de ki değerine karşılık gelmekle beraber ve 50p'deki kütle boy yaşının değeri için olması gereken ağırlıktır. Kişinin normal kütlesinin olması gereken kütleye bölünmesi halihazırdakivücut kütlesinin olması gereken kütleye oranını belirtmektedir.

4.3. İdeal Vücut Ağırlığı

Olması gereken vücut ağırlığı,vücut proporsiyonunu ve beslenme durumunu belirten bir yöntemdir.Persentil tablosunda horizontal eksende uzunluğun 50p'ne eşit olan vertikal eksendeki 50p'deki ağırlık oranıdır.Yetişkinlik evresinde olması gereken vücut ağırlığının yaklaşık olarak yarısı adölesan dönemde elde edilir. Erkek adölesan bireylerde puberte zamanında yıllık yaklaşık 9kg. kütle artışıyla beraber puberte dönemindeyse yaklaşık 23,7kg (7-30kg) oranında artış gösterirler (9).

4.4. Ağırlık Yaşı

Kilogram olarak belirtilen vücut kütlesine karşılık olarak gelen ortalama yaşa ''ağırlık yaşı'' denir.Bireyin vücudunun gelişim düzeyini belirtmektedir.(10)

4.5. Kemik Yaşı

Bireyin büyümesini sağlayan en önemli olay iskelet büyümesidir. İskeletin olgunlaşması standartta sol el bileğin radyografik açıdan incelenmesiyle belirlenir.Kemik yaşını hesaplamak için üç yöntem kullanılır.Bunlar Greulich-Pyle (GP) (11) Tanner-Whitehouse (TW)(12) ve Fels (13) olarak adlandırılır.

FULL TEXTS BOOK

Klinikte diğer değerlendirme yöntemlerinden daha çok kullanılan,güvenilirliği yüksek ve uygulaması kolay olan yöntem GP'dir.

Kemik yaşı<Takvim yaşı olması durumu; konstitüsyonel boy kısalığı, malnutrisyon, kronik hastalık durumlarında meydana gelebilir.Kemik yaşı=Takvim yaşı ise ; genetik olarak boy kısalığı ve iskelet displazisini düşündürebilmektedir.Erkeklerde 18 yaş ile beraber epifizlerdeki büyümenin durmasıyla büyüme sonlanır. (14).

4.6. Tanner Evrelemesi

Sekonder cinsiyet özelliklerinin puberte dönemindeki farklılaşmasını gözlemlemek amacıyla oluşturulmuştur. Erkeklerde fallus, skrotum ve testis volümlerinin;kızlarda meme olgunlaşmasını;her iki cinsiyette ise pubik kıllanmayı belirtir. (15),(16) Tanner evreleri biyolojik maturasyonun göstergeleridir.Fiziksel ve laboratuvar olaylarla özel olarak ilişkilendirilir.

Erkeklerde cinsel gelişimin evreleri (Tanner sınıflaması)

4.7. Büyüme Hızı

Büyüme zamanında bireyin boy uzunluğu,düzenli aralıklarla her ay olacak şekilde kontrol edilmelidir.Düzenli boy ölçümü büyüme değerlerini belirtir.Bunun sonucuna büyüme hızına ulaşılır.

İncelenmesi gereken büyüme hızları:

- 2-4yaş <5.5 cm/yıl
- 4-6 yaş <5cm/yıl
- 6yaş-puberte; erkeklerde <4cm/yıl, kızlarda <4.5cm/yıl olmasıdır.

Boyu kısa olan çocuklarda büyüme hızı kesim noktasının üzerindeyse patolojik kaynaklı olmadığı, ailesel veya yapısal sebeplerden dolayı büyüme gecikmesi olduğu düşünülür.Ancak kesim noktasının altında ise patolojik boy kısalığı olduğu kanısına varılır ve araştırılması gerekir (17).

4.8. Büyüme Atağı

En üst düzeyde boy uzamasının görüldüğü dönemdir. Büyüme patlaması olarakta adlandırılır. Hedef boya ulaşana kadar artış gösterir daha sonrasında azalarak ve geç adölesan dönemde son haline ulaşır.Genetik ve çevresel faktörlerden yaş,cinsiyet ve pubertel gelişimden,beslenmeden ve psikososyal faktörlerden etkilenebilmektedir.Büyüme patlaması düzeyinin yüksek veya düşük olması sistemik veya kronik bir rahatsızlığı,yetersiz beslenmeyi ve endokrin sistemde bozukluğu göstermektedir.Klinisyenler için normal büyümeyi,anormal büyümeyi ve pubertal maturasyonu ayırt etme konusunda yardımcı olmaktadır.(18).Büyüme atağı kızlarda ortalama 11- 12 yaş aralığında,erkeklerde ise 13-14 yaş aralığında görülmektedir.Popülasyonlara ve bireylere bağlı olarakta farklılık göstermektedir.(19, 20).

4.9. Hedef Boy

Ulaşılması beklenen erişkin boya hedef boy denmektedir.Bireyin genetiği,somatik büyüme ve biyolojik matürasyon gibi değişik faktörlerden etkilenmektedir. Bayley ve Pinneau metodu, Roche-Wainer-Thissen metodu, Khamis-Roche ve Tanner- Whitehouse metodu gibi farklı metodlar ile de hedef boy hesaplaması yapılabilmektedir.Ancak,kesin bir hedef boy değerine ulaşmamızı sağlayan metod bulunmamaktadır.(21)Bireyin tahmini hedef boyu biyolojik ailesindeki boy uzunluğu,bireyin kendi büyümesi ve iskelet gelişimine bakılarak hesaplanmaktadır.Kız bireylerde,biyolojik babanın boyunun uzunluğundan 13cm çıkartılarak annenin boy uzunluğu ile ortalamasının -+8,5cm değeri,erkek bireylerde annenin boyunun uzunluğuna 13cm eklenip, babanın boy uzunluğu ile ortalamasının -+8,5cm değeri olarak hesaplanır.13cm sabit değer olarak alınmasının sebebi erkek ve kadın bireyler arasındaki 13cmlik boy farkından kaynaklıdır(22).Çocuklar erişkin dönemde hesaplanmış olan hedef boylarının %92'sine ulaşmaktadırlar.Sonuç olarak hedef boyun hesaplanması hem çocuğun o andaki biyolojik maturasyonu hem de büyüme seviyesinin yeterli olup olmadığı hakkında bizlere fikir vermektedir(23).

4.10. Vücut Proporsiyonu

Vücudun üst segmentinin (ÜS) alt segmentine (AS) oranının iki kol arasındaki mesafeye oranına vücut proporsiyonu denir.Üst-alt vücut segment oranı kısa ve uzun boyun bağlı olduğu sebepleri ve disproporsiyonu ayırt etme açısından önem arz etmektedir(24). Üst segment/alt segment oranları:

FULL TEXTS BOOK

Doğumda- 1.7 , 3yaş- 1,33 , 5yaş- 1,17 , 10yaş- 1,0 , >10 yaş - <1,0 ÜS/AL oranının artması rikets, akondroplazi, Turner Sendromu vb. alt segmenti kısa bırakan bozukluklarda;ÜS/AL oranının azalması ise Marfan Sendromu gibi alt segmentin uzun olduğu bozukluklarda gözlemlenir (25).

4.11. Boya Göre Ağırlık

Boya göre ağırlık 2,3-97,7p değer aralığında değişmektedir. 2,3p'in altında olması beslenme düzeyinin yeterli olmadığını, 97,7p'in üzerinde olması ise obeziteyi göstermektedir (26).

4.12. Deri Kıvrım Kalınlığı

Deri kıvrım kalınlığın ölçülmesi bireyin vücut kompozisyonu hakkında bilgi vermektedir. Deri kıvrım kalınlığı kaliper (çap ölçer) kullanarak non-invaziv olarak ölçülmektedir.Bireye sağladığı avantajlarından bir tanesi maliyet açısından uygun olmasıdır(27). Deri kıvrım kalınlığı uzun dönemde vücut kompozisyonunu ve enerji dengesini optimal olarak gösterir(28).Triceps deri kıvrım kalınlığı genel ve periferal obeziteyi; subskapular ve suprailiak deri kıvrım kalınlıkları ise gövde ve santral vücut yağını göstermektedir (29,30)

4.13. Vücut Kitle İndeksi (VKİ)

5th85th persentil normal,85th'den sonrası kilolu,95th sonrası obez olarak sınıflandırılmaktadır (31). VKİ obeziteyi tanımlamak için oldukça spesifik bir parametreyken adipozitenin derecesini tanımlama açısından az sensitiftir.Çocuklarda ve erişkin bireylerde kardiyovasküler hastalıkların risk faktörlerini değerlendirme açısından VKİ önem arz etmektedir(32, 33).

4.14. Biyoelektriksel İmpedans Analiz (BIA)

BIA temeli yağ dokusunun su içermediği ve yağ haricindeki diğer dokularda su miktarının sabit olduğu varsayımına dayanmaktadır.Elektrotlar aracılığıyla dokuya değişik frekanslarda alternatif akım verilmekte ve akımın voltajındaki düşme impedans olarak tespit edilir.Dokunun elektrik akımına gösterdiği dirence impedans denir.Sıvılar elektrik akımına daha az direnç gösterirken yağlar ve kemiklerde bu oran daha fazladır (34).

5. ADÖLESAN DÖNEM VE FİZİKSEL AKTİVİTE

Klinik ve epidemiyolojik açıdan yapılan çalışmalar düzenli aralıklarla yapılan fiziksel aktivitenin bireyin genel sağlığı olumlu anlamda etkilediğini ve kronik hastalıklardan koruduğunu desteklemektedir.Düzenli olarak yapılan fiziksel aktivitenin sağlığa yararı yapılan aktivitenin tipine ve yoğunluğuna bağlı olarak değişiklik göstermektedir.Örneğin; aerobik egzersiz stresi ve depresyonu azaltır,endokrin sistem fonksiyonlarını ve oksijen transport sistemini iyileştirir, kandaki yüksek dansiteli lipoprotein oranını arttırırken düşük dansiteli lipoprotein oranını azaltmaktadır. (35)

Erken adölesan dönem (10-13yaş) fiziksel büyümenin ve motor becerilerin hızlı değişimi ile karakterize olan bir süreçtir.Kas kitlesinin, kuvvet ve kardiyopulmoner dayanıklılıkta artış puberte döneminde diğer yaşlara oranla daha fazladır. Bu dönemde futbol, basketbol ve tenis gibi birden fazla kişinin katılımıyla yapılan sporlara başlamak uygun görülmektedir.(36)Orta adölesan dönemde (14-16yaş) kas kitlesi, kuvvet ve kardiyopulmoner dayanıklılıkta artış devam etmektedir(37). 14-24yaş aralığındaki yarışmacı sporcuların incelendiği bir çalışmada (38); quadriceps kasının dinamik kuvvetinin vücut ağırlığı, koşu yılı, futbol yılı ve haftalık basketbol oynama süresi ile pozitif anlamda ilişkisinin olduğu gösterilmiştir.

6.ÇOCUK VE ADÖLESANLARDA SPOR YARALANMALARI

Günümüzde sporu kazanma odaklı gören,bir yaşam stili olarak kabul eden ve bir spor dalında özelleşerek üst düzey başarıyı amaçlayan adölesanların sayısı giderek artmaktadır.(39-42) Bu amaca ulaşmak için antrenmanların yoğunluğu, süresi ve sıklığı da artmakta; yüksek yoğunlukluktaki antrenmanlar sık aralıklarla yapılmakta ve dinlenme aralıkları kısa süreli tutulmaktadır. Bütün bunların sonucunda adölesan sporcularda spor yaralanmalarının görülme olasılığı da artmaktadır.(39-41)

Gelişme çağındaki (adölesan dönem) sporcularda, akut bir travma ya da aşırı kullanıma bağlı oluşan tekrarlayıcı mikro travmalar spor yaralanmalarına sebebiyet vermektedir. (43,44)

FULL TEXTS BOOK

Tek spor dalında özelleşmeyle beraberinde adölesan sporcularda aşırı kullanıma bağlı yaralanma riski de artmaktadır.Özellikle amatör ve profesyonel düzeydeki sporcularda; antrenman sayısının, süresinin ve yoğunluğunun artmasıyla beraber bu tip yaralanmaların görülme oranıda oldukça sıktır.Adölesan sporcularda aşırı kullanıma bağlı oluşan yaralanmalar özellikle büyüme plağına etki etmektedir.(45)

6.1. Spor Yaralanması Tanımı

Antrenman veya müsabaka neticesinde meydana gelen en az bir gün olacak şekilde spora katılımı engelleyen ve bireyi tıbbi destek almaya ihtiyaç duyuran fiziksel şikayete spor yaralanması denir.(46)Genç sporcu sayısının ve erken yaşlarda sporda özelleşmenin artması ile akut ve aşırı kullanıma bağlı gelişen yaralanmaların sayısınında artış söz konusudur(47). Çocuklarda ve adölesanlarda immatür kas-iskelet sistemi, obezite, antrenman türü gibi yaralanmayı gerçekleşme ihtimalini arttıran faktörler vardır.

6.2. Büyüme Plağının Aşırı Kullanım Yaralanmaları

Osteokondritis Dissekans: 11-14yaş aralığındaki erkek sporcularda sıklıkla diz, ayak bileği ve dirsekte görülmektedir.

Apofizyal bölge yaralanmaları:Tendonun kemiğe yapıştığı apofizyal bölgede inflamasyon meydana gelmesiyle oluşur.

Fiz yaralanmaları: Sheuermann (torakal vertebra) ve Blount (proksimal tibia) önem arz eden fizyal yaralanmalardandır.Fizyal yaralanmalar erken tanı koyulup takip eden süreçte tedavi edilmezlerse bireyde büyüme-gelişme bozukluğuna yol açabilmektedir.

6.3. Üst Ekstremite Yaralanmaları

Stres kırıkları: Tenis, jimnastik, yüzme, voleybol, atıcılık gibi spor dallarında görülür.

Omuzun çok yönlü instabilitesi

Proksimal humerus epifiziti

Medial epikondiler apofizit (Little League Elbow)

Radial epifizit (Jimnastikçi El Bileği): 12-14 yaş aralığındaki jimnastikçilerde sıklıkla görülür.

6.4. Alt Ekstremite Yaralanmaları

Stres kırıkları: Sıklıkla adölesan koşucularda görülmektedir.

Medial tibial stress sendromu

Freiberg hastalığı: Metatars başının osteokondral yaralanmasına denir ve 11- 17 yaş aralığındaki sporcularda ön ayak ağrısına sebebiyet verir.

Osgood-Schlatter: Tibial tüberkülün traksiyon apofizitidir. 8-15 yaş aralığındaki sporcularda görülür.

Sinding-Larsen-Johansson: Traksiyon apofizitidir. 10-13 yaş aralığındaki sporcularda görülür.

Sever Hastalığı: Apofizyal yaralanmadır. 8-12 yaş aralığındaki kız ve 14-15 yaş aralığındaki erkek sporcularda topuk ağrısına sebebiyet verir.

Pelvik apofizitler

Bursitis

6.5. Bel Bölgesi Yaralanmaları

Spondilolizis;Jimnastik,halter ve Amerikan futbolu gibi spor branşlarında sıklıkla görülmektedir.

Skolyoz

7. ADÖLESAN SPORCULARDA MATURASYON DÜZEYİ VE YARALANMA İLİŞKİSİNE DAİR ÖRNEK ÇALIŞMALAR

2023 yılında yapılan bu çalışmada aynı kronolojik yaştaki genç futbolcularda olgunluk evresine göre antropometri, vücut kompozisyonu (BC) ve somatotip farklılıklarının araştırılması amaçlanmıştır. Erken olgunlaşanlar dengeli ektomorflardı, zamanında ve geç olgunlaşanlar ise mezomorf-ektomorf özelliklere sahipmiş. U15 seviyesindeki erkek futbolcuları araştıran bu çalışma, daha dengeli bir ektomorfik somatotip ile ortaya çıkan erken olgunlaşanların daha iyi performans gösterdiği sonucuna varmıştır.(48)

FULL TEXTS BOOK

Elit akademi futbolunda yaralanma modellerini ve iskelet olgunluğuyla ilişkili görülme sıklığını ileriye dönük olarak araştırma amacıyla yapılan bu araştırmada aynı zamanda hem genel olarak hem de alt ekstremite apofiziyle ilgili iskelet olgunluk durumuyla ilişkili yaralanma risklerini belirlemek amacıyla yapılmış.Sonuç olarak kas-iskelet sistemi yaralanma paternleri ve yaralanma riskleri,oyuncuların iskelet olgunluk durumuna bağlı değişmekteymiş.Erken olgunlaşanlar daha fazla yaralanma riskine sahipmiş ve bilek kısmı iskelet açısından olgun olan oyuncular en düşek riske sahipmiş.(49)

Diğer bir çalışmada Erken olgunlaşanlarda, normal olgunlaşanlar ve geç olgunlaşanlara kıyasla anlamlı olmayan daha yüksek yaralanma insidansı bulunmuş. Erken ve normal olgunlaşanlarda tendinopati insidansı ise daha yüksekmiş.Erken olgunlaşan grupta müsabaka esnasında sakatlanma vakalarının en fazla olduğu görülmüş.Biyolojik olgunluk ise durumu önemli ölçüde değiştirmemiş.(50)

Bu çalışmanın amacı: büyüme faktörleri ve maruz kalma süresinin yaralanma riski üzerine etkisini değerlendirmek. U16 yaş grubundaki yaralanma yükü diğer tüm yaş gruplarından daha düşük bulunmuştur. Büyüme hızı (cm/yıl) ile tahmini yaralanma olasılığı arasında doğrusal bir ilişki bulunmuştur.(51)

Bu çalışmanın amacı, adolesan erkek futbolcularda büyüme atağı öncesi, zamanı ve sonrasında biyolojik maturasyonla yaralanma ilişkisini, sağlıklı düzenli spor yapmayan akranlarından farklılıklarını araştırmaktır. Çalışmada yaralanmaların değerlendirilmesinde TFF(Türkiye Futbol Federasyonu) Elit Kulüpler Yaralanma Formu kullanılmış. Futbolcularda yaralanmaların en sık yaralanma olanların olmayanlara göre uzun boylu, kilolu, vücut yağ yüzdesi yüksek ve büyüme hızının daha önde olduğu görüldü. Kontrol grubunda ise yaralanma olanların olmayanlara göre zayıf, kısa boylu ve yağ yüzdesinin daha düşük olduğu bulunmuş (52).

TÜRKİYE YÜZYILI MAARİF MODELİ SOSYAL BİLGİLER DERSİ ÖĞRETİM PROGRAMININ VATANDAŞLIK OKURYAZARLIĞI AÇISINDAN İNCELENMESİ

Doç. Dr. Melehat GEZER,
Dicle Üniversitesi, Ziya Gökalp Eğitim Fakültesi

ÖZET

Araştırmada sosyal bilgiler dersi kapsamında geliştirilmesi amaçlanan vatandaşlık okuryazarlığı becerisine Türkiye'de 2024-2025 eğitim-öğretim yılı itibariyle uygulanması planlanan Türkiye Yüzyılı Maarif Modeli Sosyal Bilgiler Dersi Öğretim Programında (4–7. sınıflar) nasıl yer verildiğinin ortaya konulması hedeflenmiştir. Bu çalışma betimsel türde bir araştırmadır. Çalışmada doküman analizine başvurulmuştur, taslak program doküman olarak incelenmiştir. Araştırma sonucunda 2018 sosyal bilgiler dersi öğretim programında doğrudan yer almayan vatandaşlık okuryazarlığı yeni programda ilk kez farklı başlık altında ve disiplinler üstü bir yapıda her öğrenme alanıyla ilişkilendirilerek ortaya konulmuştur. Bu program kapsamında öğrencilere; cumhuriyet, demokrasi, etkin vatandaşlık, milli egemenlik, katılım, çoğulculuk, hukukun üstünlüğü, demokratik devlet, genel oy ilkesi, hukuk devleti, kuvvetler ayrılığı/birliği, laik devlet, siyasi parti, sosyal devlet, yasama, yürütme ve yargı kavramlarının öğretilmesi hedeflenmiştir. Sıralanan bu kavramlar doğrudan vatandaşlık okuryazarlığının bilişsel temelini oluşturmaktadır. Programın içerik çerçevesi incelendiğinde birlikte yaşamak ve yaşayan demokrasimiz öğrenme alanının doğrudan vatandaşlık okuryazarlığı ile ilişkili olduğu sonucuna ulaşılmıştır. Ayrıca programda vatandaşlık okuryazarlığı ile ilgili kazanımlara yönelik hem sınıf içi hem sınıf dışı öğretim tekniklerine ilişkin etkinlik örnekleri sunulmuştur. Bu becerinin söz konusu etkinlikler yoluyla işlenmesinin öğrencilerin daha çok ilgisini çekebileceği, günlük yaşamla bağlantı kurma deneyimi sağlayabileceği düşünülmektedir. Bu çalışmada sosyal bilgiler öğretim programı vatandaşlık okuryazarlığı ile olan doğrudan ilişkisi bakımından incelenmiştir. Yapılacak ileri araştırmalarda sosyal bilgiler öğretimi programı dolaylı ilişkiler ve ekolojik, dijital, küresel, demokratik ve aktif vatandaşlık gibi vatandaşlık okuryazarlığının bileşenlerine yer verilme durumu açısından da analiz edilebilir. Buna ek olarak araştırma, yalnızca sosyal bilgiler öğretim programının vatandaşlık okuryazarlığı açısından incelenmesi ile sınırlı olduğundan yeni ders kitaplarının vatandaşlık okuryazarlığı açısından incelenmesi de önerilebilir.

Anahtar Kelimeler: Vatandaşlık, Vatandaşlık Okuryazarlığı Becerisi, Türkiye Yüzyılı Maarif Modeli Sosyal Bilgiler Dersi Öğretim Programı.

ABSTRACT

In this study, it is aimed to reveal how the financial literacy skill, which is aimed to be developed within the scope of social studies course, is included in the Social Studies Course Curriculum (4th-7th grades) of the Turkey Century Education Model, which is planned to be implemented as of the 2024-2025 academic year in Turkey. This study is a descriptive research. Document analysis was used in the research, and the draft curriculum was examined as a document. As a result of the research, citizenship literacy, which was not directly included in the 2018 social studies curriculum, was introduced for the first time in the new curriculum under a different title and in a multidisciplinary structure by associating it with each learning area. Within the scope of this program, it is aimed to teach students the concepts of republic, democracy, active citizenship, national sovereignty, participation, pluralism, rule of law, democratic state, universal suffrage principle, rule of law, separation of powers, unity of powers, secular state, political party, social state, legislative, executive and judiciary. These concepts directly constitute the cognitive basis of citizenship literacy. When the content framework of the program was examined, it was concluded that the learning area of living together and our living democracy was directly related to citizenship literacy. In addition, examples of activities related to both in-class and out-of-class

FULL TEXTS BOOK

teaching techniques for the objectives related to citizenship literacy are presented in the curriculum. It is thought that teaching this skill through these activities may attract students' attention more and provide them with the experience of making connections with daily life. In this study, the social studies curriculum was analyzed in terms of its direct relationship with civic literacy. In future research, the social studies curriculum can be analyzed in terms of indirect relationships and the components of citizenship literacy such as ecological, digital, global, democratic and active citizenship. In addition, the study is limited to examining only the social studies curriculum in terms of civic literacy. Therefore, it can be recommended to examine the new textbooks in terms of citizenship literacy.
Keywords: Citizenship, Citizenship Literacy Skills, The Century of Turkey Education Model Social Studies Course Curriculum.

GİRİŞ

Vatandaşlık, genellikle bireyin bir devlete ya da siyasi birime karşı olan üyeliği/bağlılığı şeklinde tanımlanır. Bu tanımda vurgulandığı gibi vatandaşlık bir ulus devlete üyeliğin kazanılmasıyla başlar. Zaman içerisinde vatandaşlık kavramı değişime uğramış, kapsamı genişlemeye devam etmiş ve yeni boyutlar kazanmıştır. Özellikle küreselleşme ve teknolojinin ilerlemesiyle beraber bir ulus devlete olan üyeliğin ötesine geçerek hem ulusal hem uluslararası bir nitelik kazanmıştır. Yaşanan küresel çevresel problemler, dijital okuryazarlığa duyulan ihtiyacın artması, etnik çatışmalar, azınlık hakları konusunda yaşanan sorunlar, savaş tehdidi ve güvenlik risklerinin artması gibi krizler vatandaşlardan beklenen yeterliklerin değişmesine neden olmuştur (Gezer, 2024). Bu anlamda vatandaşlık okuryazarlığı kavramı ileri sürülmüştür.

Karadağ ve Kapusızoğlu'na göre (2022) vatandaşlık okuryazarlığı, bireylerin sahip olduğu bilgileri, eyleme dönüştürebilmesi ve vatandaşlık bağına karşı duyduğu ilgi ile bağın kendisine verdiği hak ve ödevlere sahip çıkabilme yetkisidir. Vatandaşlık okuryazarlığı, demokratik toplumlara katılım için gereken sosyal öğrenmeleri, siyasi ve hukuki temel bilgilere sahip olmayı, bireysel hak ve ödevleri bilmeyi (Faiz, 2018), sosyal adalet kavramını öğrenmeyi ve adil bir toplumun oluşması için kaygı duymayı (Hart, 2006), yaşadığı ülke ile dünyada yaşayan bütün bireylerin/canlıların refahını düşünme ve sorumluğunu üstlenmeyi, yerel, bölgesel ve küresel boyutta çevresel, toplumsal, hukuki sorun ve krizlere karşı farkındalık geliştirmeyi ve bu problemlerin çözümü için harekete geçmeyi, bireysel ve kolektif kimlik oluşturmayı kapsar. Diğer bir anlatımla vatandaşlık okuryazarlığı, bireylerin devletle olan hukuki ve yasal bağı ile toplumla arasındaki ilişkileri kapsar. Bireylerin; sosyal, politik, kültürel haklar ile düşünce konuşma özgürlüğü, demokrasi, eşitlik, adalet gibi temel hakları bilmesi ve bunları doğru biçimde kullanması, hem devlete hem de içinde bulunduğu topluma karşı yükümlülüklerini bilmesi ve gereğini yerine getirmesi, kamu yararını gözetmesi, toplumun refahı için çalışması, devlet, anayasa, hukuk sistemi gibi hukuki ve politik konularla ilgili bilgi sahibi olması, sivil ve siyasi örgütlenmeleri tanıması ve işlevlerini bilmesi, bilinçli ve demokratik yollarla toplumsal sorunların çözümüne aktif katılım sağlaması gibi aktif/etkin vatandaşlık için gereken bilgi, beceri ve davranışlar vatandaşlık okuryazarlığını oluşturur (Silva & Vaz, 2013). Bu tanımlarından da anlaşılacağı üzere vatandaşlık okuryazarlığı esasında ekolojik vatandaşlık, dijital vatandaşlık, küresel vatandaşlık, aktif vatandaşlık ve demokratik vatandaşlık boyutlarının tamamını içerisinde barındıran bir okuryazarlık türüdür.

Vatandaşlık okuryazarlığının öğrencilere kazandırılmasına yönelik stratejilerde öğretim programları ön plana çıkmaktadır. Leahey'e göre (2011) vatandaşlık okuryazarlığının temeli, öğrencilere öğretim programları aracılığıyla öğrenme ortamları, medya ve hakim kültür gruplarında var olan yapıları, şemaları sorgulamayı öğretmekten geçer. Türkiye'de uygulanan öğretim programları vatandaşlık okuryazarlığı gözden geçirildiğinde sosyal bilgiler dersi öğretim programları ön plana çıkmaktadır. Sosyal bilgiler dersi öğretim programında vatandaşlık okuryazarlığı öğrencilere kazandırılması gereken yeterlikler arasında gösterilmiştir. Programda bilgi, dijital, finansal, görsel, kültür, veri,

FULL TEXTS BOOK

sürdürülebilirlik, sanat okuryazarlıkları ile vatandaşlık okuryazarlık becerilerinin geliştirilmesi hedeflenmiştir. İçerik çerçevesinde yer alan *Birlikte Yaşamak* ve *Yaşayan Demokrasimiz* öğrenme alanları doğrudan vatandaşlık okuryazarlığı ile ilişkilendirilebilir. Birlikte yaşamak öğrenme alanında öğrencilerin yaşadıkları toplumsal hayatı tanıması; sosyal bilgiler dersi hakkında fikir sahibi olması; dâhil olduğu ve olacağı grup, rol, hak ve sorumluluklar, etkili iletişim, bireysel ve kültürel farklılıklara saygı, yardımlaşma ve dayanışmanın toplumsal birlik açısından önemi ve Türk toplumunun ulusal konular karşısındaki tutumu hakkında bilgi sahibi olması hedeflenmiştir. Yaşayan demokrasi öğrenme alanında ise Millî Mücadele Dönemi'nde bir lider olarak Mustafa Kemal Atatürk'ün ve Türk milletinin gösterdiği toplumsal dayanışmaya, cumhuriyetin hayatımıza katkıları, cumhuriyet ve demokrasinin temel nitelikleri, demokrasi ve cumhuriyet kavramı arasındaki ilişki, demokratik katılımın önemi, etkin vatandaşın özellikleri, toplumsal sorunlara temel hak ve sorumluluklar çerçevesinde çözüm üretilmesi, toplumsal hayatta karşılaşılabilecek sorunlara, yönetimin karar verme sürecine etki eden faktörlere, toplumsal hayattaki düzenin sürdürülmesinde hakların ve sorumlulukların önemi, dijitalleşme ve teknolojik gelişmelerin vatandaşlık haklarının kullanımına etkileri, Türkiye Cumhuriyeti Devleti'nin yönetim yapısı, ülkemizde demokrasinin geçmişten günümüze gelişimi ve bu süreçte karşılaşılan sorunlara değinilmiştir. Sosyal bilgiler dersi kapsamında geliştirilmesi hedeflenen vatandaşlık okuryazarlık becerisinin Türkiye Yüzyılı Maarif Modeli Sosyal Bilgiler Dersi Öğretim Programında yer verilme durumunun incelenmesi bu araştırmanın motivasyon kaynağı olmuştur. Bu anlamda araştırmada Türkiye'de 2024-2025 eğitim-öğretim yılı itibariyle uygulanması planlanan sosyal bilgiler dersi öğretim programında (4–7. sınıflar) vatandaşlık okuryazarlığı becerisine nasıl yer verildiğinin ortaya çıkarılması hedeflenmiştir.

YÖNTEM

Bu çalışma, herhangi bir müdahale olmaksızın mevcut durumun ortaya konulmasına odaklıdır. Bu yönüyle araştırma betimsel türde bir çalışmadır. Araştırma verilerinin elde edilmesinde doküman analizi kullanılmıştır. Çalışmada 2024-2025 eğitim-öğretim yılı itibariyle uygulanacak olan Türkiye Yüzyılı Maarif Modeli Sosyal Bilgiler Dersi Öğretim Programı doküman olarak incelenmiştir. Söz konusu programın yapısı önceki öğretim programlarından farklı kurgulanmıştır. Programda; *programlar arası bileşenler* (kavramsal beceriler ve alan becerileri, eğilimler, sosyal-duygusal öğrenme becerileri, değerler ve okuryazarlık becerileri), *öğrenme çıktıları* (beceri, tutum ve davranışlar), *öğrenme kanıtları* (ölçme ve değerlendirme araçları), *içerik çerçevesi* (konu başlıkları), *öğrenme-öğretme uygulamaları* (strateji, yöntem ve teknik) ve *farklılaştırma* (alternatif öğrenme uygulamaları) bölümleri yer almaktadır. Çalışmada bu bölümler vatandaşlık okuryazarlığı açısından incelenmiştir.

BULGULAR

Araştırma kapsamında ilk olarak yeni programın temel yaklaşımı ve özel amaçlarına bakılmış ve bilgi, dijital, görsel, kültür, finansal, veri, sürdürülebilirlik, sanat ve ***vatandaşlık okuryazarlığı*** becerilerinin kazandırılmasının hedeflendiği görülmüştür. Ayrıca öğrencilerde; öz farkındalık, öz yansıtma, tarihsel empati, kanıta dayalı sorgulama, araştırma, iletişim, iş birliği, sosyal farkındalık, sosyal katılım, esneklik, açık fikirlilik, sorumlu karar verme, eleştirel düşünme, analitik düşünme becerileri ile adalet, özgürlük, çalışkanlık, vatanseverlik, duyarlılık, yardımseverlik, dürüstlük, saygı, sevgi ve sorumluluk değerlerinin öğretimi hedeflenmiştir. Söz konusu değer ve beceriler vatandaşlık okuryazarlığı ile doğrudan ilişkilidir. Araştırmada ikinci olarak programın içerik çerçevesi vatandaşlık okuryazarlığı bakımından incelenmiş ve programda yer alan *birlikte yaşamak* öğrenme alanının doğrudan vatandaşlık okuryazarlığı ile ilişkili olduğu tespit edilmiş ve bu öğrenme çıktıları Tablo 1'de sunulmuştur.

Tablo 1. 2024 Sosyal Bilgiler Dersi Öğretim Programı Birlikte Yaşamak öğrenme alanında vatandaşlık okuryazarlığı ile ilgili öğrenme çıktıları (MEB, 2024)

FULL TEXTS BOOK

Sınıf Düzeyi	Öğrenme Çıktıları
4. sınıf	SB.4.1.2. Bireysel özelliklere saygı duymanın önemine ilişkin çıkarım yapabilme.
	SB.4.1.3. Toplumsal birliği sürdürmeye yönelik fikir üretebilme.
5. sınıf	SB.5.1.1. Dâhil olduğu gruplar ve bu gruplardaki rolleri arasındaki ilişkileri çözümleyebilme.
	SB.5.1.2. Kültürel özelliklere saygı duymanın birlikte yaşamaya etkisini yorumlayabilme.
	SB.5.1.3. Toplumsal birliği sürdürmeye yönelik yardımlaşma ve dayanışma faaliyetlerine katkı sağlayabilme.
6. sınıf	SB.6.1.1. Dâhil olduğu grupların ve bu gruplardaki rollerinin zaman içerisinde değişebileceğine ilişkin çıkarım yapabilme.
	SB.6.1.2. Kültürel bağlarımızın ve millî değerlerimizin toplumsal birliğe etkisini yorumlayabilme.
	SB.6.1.3. Toplumsal hayatta karşılaşılan sorunlara yönelik çözüm önerilerini müzakere edebilme.
7. sınıf	SB 7.1.1. Dâhil olduğu gruplarda ve sosyal hayatta etkili iletişimin önemini sorgulayabilme.
	SB.7.1.2. Özel gereksinimli bireyler için fırsat eşitliğini sürdürmeye yönelik fikir üretebilme.
	SB.7.1.3. Türk toplumunun millî meseleler karşısında gösterdiği tutum ve davranışlara ilişkin çıkarım yapabilme.

Tablo 1'de görüldüğü gibi birlikte yaşamak öğrenme alanı kapsamında dördüncü sınıfta öğrencilere toplumsal birliktelik, toplum içindeki rollerimizin neler olduğu, belirlenen roller çerçevesinde toplumsal birliği sürdürmek için neler yapılabileceği, üstlendiğimiz rollere ilişkin sorumlulukları yerine getirmenin önemi, birbirine karşı adil olmanın toplum içindeki güven duygusunu arttıracağı ve toplumsal birlikteliği sürdürmeye yönelik katkı sağlayacağı üzerinde durulmuştur. Beşinci sınıfta öğrencilerden yakın çevrede, okulda ve sınıfta dâhil oldukları grupları belirlemesi ve bu gruplardaki rollerin getirdiği hak ve sorumlulukları bilmesi, yardımlaşma ve dayanışmanın toplumsal birliktelik için önemini öğrenmesi ve bunlara katılmasının sağlanması amaçlanmıştır. Altıncı sınıfta zaman içinde değişen gruplar ve roller, kültürel bağlarımızın ve millî değerlerimizin toplumsal birlikteliğe etkisi toplumsal sorunlar ve çözüm önerilerinin neler olduğunun öğretilmesi hedeflenmiştir. Yedinci sınıfta ise gruplarda ve sosyal hayatta iletişimin önemi, özel gereksinimli bireyler için fırsat eşitliği, millî meseleler karşısında Türk toplumunun tutumu ve davranışları konu alınmıştır. Araştırmada 4–7. sınıf düzeyinde *yaşayan demokrasimiz* öğrenme alanının vatandaşlık okuryazarlığı becerisi ile ilişkili olduğu saptanmış ve bu öğrenme çıktıları Tablo 2'de sunulmuştur.

Tablo 2. 2024 Sosyal Bilgiler Dersi Öğretim Programı Yaşayan Demokrasimiz öğrenme alanında vatandaşlık okuryazarlığı ile ilgili öğrenme çıktıları (MEB, 2024)

	SB.6.4.2. Toplumsal düzenin sürdürülmesinde temel hak ve sorumlulukların önemini yorumlayabilme.
	SB.6.4.3. Vatandaşlık haklarının kullanımında dijitalleşme ve teknolojik gelişmelerin etkilerini sorgulayabilme.
7. sınıf	SB.7.4.1. Türkiye Cumhuriyeti'nin temel niteliklerini özetleyebilme
	SB.7.4.2. Türkiye Cumhuriyeti Devleti'nin yönetim yapısını çözümleyebilme
	SB.7.4.3. Ülkemizdeki demokrasinin gelişimini, demokrasinin temel ilkeleri açısından yorumlayabilme
	SB.7.4.4. Demokrasinin uygulama sürecinde karşılaşılan sorunları özetleyebilme

Tablo 2'den de anlaşılacağı üzere yaşayan demokrasimiz öğrenme alanı kapsamında dördüncü sınıfta Mustafa Kemal Atatürk'ün, diğer kahramanlarımızın ve Türk milletinin gösterdiği toplumsal dayanışma, cumhuriyetin hayatımıza katkıları konusuna vurgu yapılmış, öğrencilerin demokratik katılım ve karar alma süreçlerinin önemine ilişkin farkındalığının artırılması amaçlanmıştır. Beşinci sınıfta öğrencilere cumhuriyet, demokrasi, etkin vatandaşlık, milli egemenlik, katılım, çoğulculuk, hukukun üstünlüğü kavramlarının öğretimi hedeflenmiştir. Bu doğrultuda demokrasi ve cumhuriyet kavramının temel nitelikleri, etkin vatandaşın özellikleri ve önemi, temel haklar, sorumluluklar ve önemi, ihtiyaç durumunda veya sorunların çözümünde başvurulabilecek kurumların neler olduğu bilgisinin kazandırılması beklenmektedir. Altıncı sınıfta yönetimin karar alma sürecini etkileyen unsurlar, temel hak ve sorumlulukların toplumsal düzenin sürdürülmesindeki önemi, pasif ve aktif vatandaşın özellikleri, sorumlulukları yerine getirmenin önemi, dijitalleşme ve teknolojik gelişmelerin vatandaşlık hak ve sorumluluklarına etkileri (vatandaşlık haklarının kullanımında dijitalleşme ve teknolojik gelişmelerin olumlu ve olumsuz yönleri) ele alınmıştır. Yedinci sınıfta ise demokratik devlet, genel oy ilkesi, hukuk devleti, kuvvetler ayrılığı, kuvvetler birliği, laik devlet, siyasi parti, sosyal devlet, yasama, yürütme ve yargı kavramlarının öğretilmesi hedeflenmiş olup Türkiye Cumhuriyeti'nin nitelikleri, Türkiye Cumhuriyeti'nin yönetim yapısı ülkemizde demokrasinin gelişimi, demokrasinin uygulanma sürecinde karşılaşılan sorunlar işlenmiştir.

TARTIŞMA VE SONUÇ

Araştırma sonucunda yeni programda vatandaşlık okuryazarlığı becerisine ilk kez farklı başlık altında ve disiplinler üstü bir yapıda her öğrenme alanıyla ilişkilendirilerek yer verildiği görülmüştür. Okuryazarlık becerileri, sosyal bilgiler öğretim programında ilk olarak 2015 programında yer almıştır. Ancak hem 2015 hem 2018 programında okuryazarlık becerilerine özel bir alan ayrılmamış, beceriler bünyesinde yer verilmiştir. Yeni programdan, 2018 programında olan medya, harita ve politik okuryazarlık becerileri çıkartılmış yerine sanat, veri, görsel ve vatandaşlık okuryazarlığı gibi yeni beceriler eklenmiştir (Yıldırım & Çalışkan, 2024). Böylelikle vatandaşlık okuryazarlığı doğrudan programda karşılık bulmuştur. Nitekim Çiydem ve Kaymakcı (2021) sosyal bilgiler dersi öğretim programının 21. yüzyılın öngördüğü demokratik yaşama becerilerine sahip insan tipini yetiştirmeye

FULL TEXTS BOOK

yönelik düzenlenmesi ihtiyacına işaret etmiş ve içerik ile okuryazarlıkların beceri ve değer temelli kurgulanması gerekliliğini vurgulamıştır.

Yeni programda öğrencilere; cumhuriyet, demokrasi, etkin vatandaşlık, milli egemenlik, katılım, çoğulculuk, hukukun üstünlüğü, demokratik devlet, genel oy ilkesi, hukuk devleti, kuvvetler ayrılığı, kuvvetler birliği, laik devlet, siyasi parti, sosyal devlet, yasama, yürütme ve yargı kavramlarının öğretilmesi amaçlanmıştır. Bu kavramlar doğrudan vatandaşlık okuryazarlığının bilişsel temelini oluşturmaktadır. Programın içerik çerçevesi incelendiğinde birlikte yaşamak ve yaşayan demokrasimiz öğrenme alanının doğrudan vatandaşlık okuryazarlığı ile ilişkili olduğu sonucuna ulaşılmıştır. Ayrıca programda vatandaşlık okuryazarlığı ile ilgili kazanımlara yönelik hem sınıf içi hem sınıf dışı öğretim tekniklerine ilişkin etkinlik örnekleri sunulmuştur. Bu becerinin söz konusu etkinlikler yoluyla işlenmesinin öğrencilerin daha çok ilgisini çekebileceği, günlük yaşamla bağlantı kurma deneyimi sağlayabileceği düşünülmektedir. Bu çalışmada sosyal bilgiler öğretim programı vatandaşlık okuryazarlığı ile olan doğrudan ilişkisi bakımından incelenmiştir. Yapılacak ileri araştırmalarda sosyal bilgiler öğretimi programı dolaylı ilişkiler ve ekolojik, dijital, küresel, demokratik ve aktif vatandaşlık gibi vatandaşlık okuryazarlığının bileşenlerine yer verilme durumu açısından da analiz edilebilir. Buna ek olarak araştırma, yalnızca sosyal bilgiler öğretim programının vatandaşlık okuryazarlığı açısından incelenmesi ile sınırlıdır. Dolayısıyla yeni ders kitaplarının vatandaşlık okuryazarlığı açısından incelenmesi önerilebilir.

ÖZET
Levent Vadisi, Malatya'nın Akçadağ ilçesi sınırları içinde bulunan çok sayıda jeosit, kültürel yapı ve somut olmayan kültürel miras unsuru barındıran nadir güzellikte bir doğal alandır. Ayrıca vadinin sahip olduğu jeomorfolojik değerler sıra dışı bir estetik içermektedir. Bu çalışma, insanlık için önemli olduğunu düşündüğümüz bu vadinin doğal miras, kültürel miras envanterlerini çıkarmak, koruma, sürdürülebilirlik, tanıtım stratejilerini belirlemek ve bir jeopark yönetim planı önerisi hazırlayarak Levent Vadisi'nin UNESCO Küresel jeoparkları ağına dahil edilmesine katkı sağlamak amacıyla yapılmıştır. Bu amaçla alanı ilgilendiren farklı disiplinlerde bir çalışma ekibi oluşturulmuştur. Çalışma ekibinin alanda yaptığı ortak amaca dönük çalışmalar bir araya getirilmiştir. Levent Vadisi için sürdürülebilir koruma, kalkınma ve tanıtım stratejileri oluşturulmuş ayrıca kamu yararı gözetilerek çok ortaklı, şeffaf, evrensel değerlere uygun bir yönetim planı taslağı üretilmiştir. Bu kılavuz belgenin Levent Vadisi Jeopark önerisinin örnek ve lider jeoparklardan biri olması için bilimsel sürdürülebilirliğin ilke ve stratejileri de oluşturulmuştur. Tüm bunların yanı sıra bu çalışma, jeoloji ve sanat ilişkisini jeo-estetik kavramı üzerinden tartışmakta ve bir jeopark projesi için kritik öneme sahip olan koruma farkındalığı ve sahiplenme kavramlarına sanat disiplininin yapacağı katkıları sorgulamaktadır. Çalışma alanının içerdiği çok yönlü miras değerlerinin planlı şekilde gelecek kuşaklara aktarılması oldukça önemlidir. Sonuç olarak Levent Vadisi'nin mutlak korunması gerek bir insanlık mirası olduğu düşünülmektedir.
Anahtar Kelimeler: Levent Vadisi, Jeopark, Sanat.

ABSTRACT
Levent Valley is a rare beauty natural area located within the borders of Akçadağ district of Malatya, containing numerous geosites, cultural structures and intangible cultural heritage elements. In addition, the geomorphological values of the valley include an extraordinary aesthetic. This study was conducted to create natural heritage and cultural heritage inventories of this valley, which we believe is important for humanity, to determine protection, sustainability and promotion strategies and to contribute to the

[1] Bu çalışma, İnönü Üniversitesi, Bilimsel Araştırma Projeleri birimi tarafından desteklenen 3250 ID numarasıyla güdümlü proje türünde desteklenen "Levent Vadisi Jeoparkı Miras Envanterinin Çıkarılması ve Koruma, Sürdürülebilirlik, Tanıtım Stratejileri ile Jeopark Yönetim Planı Hazırlanması" isimli Bilimsel Araştırma Projesi kapsamında hazırlanmıştır.

inclusion of Levent Valley in the UNESCO Global Geoparks network by preparing a geopark management plan proposal. For this purpose, a working team from different disciplines related to the field was formed. The common purpose studies of the working team in the field were brought together. Sustainable protection, development and promotion strategies were created for Levent Valley and a multi-partner, transparent and universal value-compliant management plan draft was produced considering the public interest. In order for the Levent Valley Geopark proposal of this guide document to be one of the exemplary and leading geoparks, the principles and strategies of scientific sustainability were also created. In addition to all these, this study discusses the relationship between geology and art through the concept of geo-aesthetics and questions the contributions of the art discipline to the concepts of conservation awareness and ownership, which are of critical importance for a geopark project. It is very important to transfer the multifaceted heritage values contained in the study area to future generations in a planned manner. As a result, it is thought that Levent Valley is a human heritage that absolutely needs to be protected.
Key Words: Levent Valley, Geopark, art.

GİRİŞ

Bu çalışmanın ana amacı hem jeolojik ve kültürel değerleri hem de sıra dışı estetik değerleri ile Türkiye'de UNESCO'nun küresel jeopark ağına aday, önemli doğal alanlardan biri olan Levent Vadisi'nin korunmasına ve yönetilmesine katkı sağlayacak stratejik belgeleri akademik bir yaklaşımla ortaya koymaktır. Bu amaca yönelik en etkili sonucun konuyla ilgili bilimsel disiplinlerin bir araya getirilerek alınabileceği düşünülmüş bu nedenle sanat, jeoloji, coğrafya, arkeoloji, sanat tarihi disiplinlerinde, Levent Vadisi ile ilgili deneyim sahibi akademisyenlerden oluşan bir çalışma ekibi oluşturulmuştur. Çalışma ekibi sahada birlikte araştırmalar yürütmüş ve bu araştırmaların sonuçları düzenli aralıklar ile tartışılarak amaca uygun bilimsel çıktılara dönüştürülmeye çalışılmıştır.

Levent Vadisi ve çevresinde, Üst Kretase-Pliyosen yaş aralığında çeşitli litostratigrafik birimler yüzeylenmektedir. Levent Vadisi içinde, çoğunlukla killi kireçtaşı litolojisine sahip kayaçlarda bulunan mağaraların ilk oluşumları jeolojik süreçler sonucunda meydana gelmiştir. Vadiyi kesen ana fay hattına dik yönde gelişen faylar üzerindeki çatlak sistemleri üzerinde küçüklü büyüklü çok sayıda mağara bulunmaktadır. Çalışma süresince mağaralar, fosil yatakları, volkanik birimler ve çeşitli jeolojik nedenlerle meydana gelmiş jeomorfolojik yapılardan oluşan nadir güzelliğe sahip çok sayıda jeosit tanımlanmıştır. Ayrıca yine çok sayıda arkeolojik alan ile kültürel yapı incelenmiş ve değerlendirilmiştir. Levent Vadisi'nde yer alan mahallelerde devam eden yaşamın somut olmayan kültürel miras değerleri incelenmiş ve değerlendirilmiştir. Çalışma içerisinde Levent Vadisi'nin, hidrografya, klimatoloji, biyocoğrafya açısından değerlendirilmesi devam etmektedir.

Ayrıca çalışma kapsamında çalışma ekibi tarafından, halkın koruma bilincinin gelişmesi, sahiplenme, aidiyet duygularının pekişmesi ve alanın estetik değerlerinin görünürlüğünün artırılması amacıyla çeşitli eğitimler verilmiştir. Tüm bu sonuçlar dikkate alındığında Levent Vadisi'nin oldukça yüksek bir jeoturizm potansiyelinin olduğu söylenebilir. Son yıllarda dünyada jeoturizm ve ekoturizm alanlarında yaşanan talep yoğunluğu göz önünde bulundurulduğunda bu çalışmanın sonuçları itibariyle bölgede kültürel ve sosyal kalkınmanın yanı sıra ekonomik kalkınmaya da katkı sağlayacağı söylenebilir.

Levent Vadisi'nin barındırdığı doğal ve beşerî unsurlar, çalışmanın sanat disiplinindeki bileşenleri tarafından ele alınmış bu nadir güzellikteki doğa parçasının mağaralara resimler yapan üst Paleolitik çağ sanatçılarının kullandıkları sanat yaratma zeminlerine benzerliği özellikle değerlendirilmiştir. Doğa ve insan arasında ve de elbette insanoğlunun en kadim etkinliği olan sanat arasında çok güçlü bağlar olduğu bilinen bir gerçektir. Doğanın kendine özgü estetiği insan zihninde kendine güçlü temeller yaratırken insan zihninin bir ürünü olarak sanat, doğadakine alternatif bir estetik evreni meydana getirmektedir. Buradan hareketle Levent Vadisi'nin sıra dışı jeomorfolojisi ile estetik rezervinin; her iki estetik evren arasındaki bağları tanımlamak ve güçlendirmek için son derece elverişli bir zemin yarattığı sonucuna

FULL TEXTS BOOK

varılmıştır. Alandaki jeolojik oluşumların plastiğinin yeni estetik yaklaşımlar yaratma konusunda ilham verici bir kaynak olduğu söylenebilir. Ayrıca insan, jeoloji ilişkisinin nadide örneklerini sergileyen vadi halkının kendine özgü yaşamı ve bu yaşamın ürünleri güncel sanat pratikleri açısından oldukça önemli bir birikim olarak değerlendirilmektedir.

Disiplinler arası iş birliği ile yürütülen bu çalışma sonucunda Levent Vadisi'nin, barındırdığı bütün değerler ve bileşenleri ile çok güçlü bir jeopark potansiyeli taşıdığı, her şartta korunması ve yaşatılması gereken önemli bir Dünya Mirası olabileceği (olduğu) kanısına varılmıştır.

Levent Vadisi'nin Jeolojik İmkanları

Levent Vadisi Türkiye'nin Doğu Anadolu bölgesinde, Malatya ilinin Akçadağ ilçesi sınırları içerisinde yer almaktadır. Levent Vadisi'nin Anadolu'da oluşu Türkiye'nin genel jeolojik özelliklerini sergilediği anlamına gelmektedir. Günümüzden yaklaşık 300 milyon yıl kadar önce Avrupa ortalarından Asya'nın içlerine kadar uzanan Tetis denizi bu günkü Anadolu kara parçasını da örtmekteydi. Jeolojik süreçte meydana gelen tektonik olaylar sonucu, karaların yükselmesi ile Tetis denizi çekilmiştir. Anadolu kara parçasının temelini bu denize ait sedimentlerin oluşturduğu, bundan sonra jeolojik devirler boyunca, Anadolu yarımadasının jeolojik erozyon ve sedimentasyon olayları sonucu günümüzdeki jeolojik yapısını kazandığı bilinmektedir (Sönmez v.d. 2016). Elbette vadi kendine has biricik jeolojk özellikleri ile öne çıkmaktadır. Genel jeolojik yapısını Toros Orojenik kuşağı ve kenar kıvrımlarına ait birimlerin oluşturduğu Levent Vadisi'nde Üst Kretase yaşlı birimler Derinboğaz köyü çevresi, Ozan Kanyonu ve Dipsiz kanyonu kuzeydoğusunda yüzeylenir. Vadide Üst-Orta Eosen yaşlı birimler içinde çalkantılı sığ denizel ve sakin derin self alanı ortamında çökelmiş bol nummulitli (bozuk para şeklindeki fosiller) kireçtaşlarına ve Yalınkaya Köyünün 1 km kuzeybatısında deniz kabuğu fosillerine rastlanır (Eren ve Önal, 2003: 29; Akbulut&Ünsal, 2013: 330) ve bu birimin üzerine Alt Miyosen yaşlı fliş karakterli kumtaşı, kiltaşı, marn ve kireçtaşı ardalanması gelir (MTA, 2008: 3). Üst Miyosen yaşlı volkanik birimler ve Pliyosen birimler Alt Miyosen birimleri yer yer örter. Sahanın en birimleri ise Kuvaterner yaşlı alüvyonlardır (Akbulut&Ünsal, 2012). Levent Vadisi ve civarında Üst Kretase- Piliyosen (65 Milyon yıl ile 2 milyon yıl arasında) yaşlı kayaçlar yüzeylenmektedir. En altta Üst Kretase (Meastrihtiyen) yaşlı Ulupınar Formasyonu yer almaktadır. Ulupınar Formasyonunun üzerine Eosen (Lütesiyen) yaşlı, iki farklı üyeden oluşan Tohma Formasyonu gelmektedir. Üst Oligosen yaşlı Çavuş Formasyonu ve iki üyeden oluşan Alt Miyosen Yaşlı Ansurçay formasyonu bu istifin en üstündeki Sedimanter kayaçlardır. Tüm bunların üzerine ise Pliyosen yaşlı, iki üyeden oluşan Yamadağ Volkanitleri gelmektedir. Tektonik Kontrollü açılmış bir kanyon vadidir. Vadi, Akçadağ ilçesine bağlı Develi köyünün kuzeyinden başlayıp, Kuzeyde Tohma Çayı ile birleşmektedir. Proje alanındaki önemli yerleşim yerleri, Develi, Levent, Bağköy, Kırıklar, Yanıklar, Taşyapı, Kozalak, Kolköy ve Küçükkürne köyledir. Bu ana vadiye dik gelen derin yarılmış vadiler ve bu vadileri çevreleyen yüksek zirveler vadinin gelen morfolojik görüntüsünü oluşturmaktadır. Yığılıçakıl Tepe (1927 m.), Huk Tepe (1950 m.) Aygörmez Dağı (2015 m.), Kandil tepe (1822 m.), Kalecik Kayası (1429 m.), Çay Tepe (1505 m. Ağaçlı Dağı ((1789 m) ve Kale Tepe (1746 m) bölgedeki önemli yükseltilerdir. Yapılan saha çalışmalarında 27 adet jeosit tanımlanmıştır (Güngör vd., 2012). Jeosit, jeoparklarda bulunan, yer kabuğunun oluşumu veya evrimi sırasındaki bir olayı, bir süreci veya bir oluşumu ortaya koyan kayaç-mineral-fosil topluluğu, istif, yer şekli, jeolojik yapı, doku türünden, bilimsel belge niteliği, bazı durumlarda görsel güzelliği bulunan doğal varlıklardır (Kazancı vd. 2015). Bu jeositler kendilerine has nitelikleri ile dünyanın jeolojik mirası açısından oldukça dikkat çekici özelliklere sahiplerdir. Bunlar, farklı jeolojik süreçlerde oluşmuş irili ufaklı mağaralar, mikro-makro karstik şekiller, volkanik birimler, fosil yataklarıdır. Ayrıca Levent Vadisi sahip olduğu zengin kültürel rezervi, mikro klimatik özellikleri kendine has fauna ve florası ile küresel jeopark olma özelliğine sahip ender alanlardan birisidir. (Akbulut, 2014)

FULL TEXTS BOOK

Levent Vadisi'nin Kültürel İmkanları

Malatya Yukarı Fırat Kültür havzasının önemli bir parçasıdır. Malatya Coğrafi konum itibariyle tabii yollar üzerinde bulunmaktadır. Malatya'nın tarihi geçmişi hakkında kapsamlı bir araştırma yapılmamış olunmakla beraber ön tarihinin Paleolitik çağa kadar indiği, Ansır (buzluk) ve İn Deresi mevkiinde bulunan mağaralardan anlaşılmıştır. Karakaya Baraj Gölü kurtarma kazıları kapsamında Cafer Höyük ve Pirot Höyükte yapılan çalışmalarda neolitik izlere rastlanılmış ve bu bölgenin yerleşik yaşamının en eski örneklerinin bu bölgede yer aldığı düşünülmüştür. Bu ilk yerleşimlerin insan kaynağının Levent Vadisi'nden söz konusu ovaya geldiği öngörülmektedir. Akçadağ ilçesi sınırları içerisinde kalan Levent Vadisi Jeopark alanı kültür katmanları açısından oldukça zengindir. Bu alan özellikle sarp kayalık alanları ve mağara sistemleri ile erken dönem yerleşimleri için güvenlik bakımından ideal niteliktedir. Üst Paleolitik çağda ve devamında su kaynakları açısından bugünkünden daha zengin olduğu düşünülmektedir. Bunların yanı sıra Jeopark alanı içerisinde tarıma elverişli toprakların varlığı neolitik dönem ve sonrası için bölgeyi cazip hale getirmiş olmalıdır. Üst Paleolitik ile demir çağı arasındaki zaman aralığına ilişkin incelemeler devam etmekle birlikte "2020 Yılı Malatya İli Bronz Çağı ve Demir Çağı Yüzey Araştırması: Akçadağ Yüzey Araştırması'nın yayınlanmış sonuçlarına göre (Dönmez, 2022; 43); Akçadağ-Nurhak Dağlarında yapılan araştırmalarda neredeyse tamamı savunma merkezi özelliğine sahip Demir Çağı yerleşimlerinin çoğu sarp kayalık alanların üzerinde, taş duvarların sarp kayalarla birleştirilmesiyle oluşturulmuş yerleşimlerdir. Akçadağ'da, höyük ve kale yerleşimlerinin çoğunda, özellikle Kuzeydoğu Anadolu etkisini taşıyan seramik materyalin yoğunluğu, bölgenin kuzey-güney yönünden en önemli geçiş güzergâhı olduğuna işaret etmektedir. Yüksek bölgelerdeki kale yerleşimlerinde ele geçen ve Geç Bronz Çağı II- Erken Demir Çağı özelliği taşıyan seramikler, bölgede Orta Anadolu etkisinin devam ettiğini göstermektedir. Akçadağ-Nurhak Dağlarında bulunan seramik örneklerin büyük bir kısmı elde yapılmış, saman ve mineral katkılı yüksek yayla kültürlerine ait parçalardan oluşmaktadır. Bu kapsamlı araştırma sürecinde bölgede çok sayıda arkeolojik buluntu envantere dahil edilmiştir. Ayrıca bölgedeki medeniyet izlerine dair güçlü ipuçları da bu araştırma içerisinde yayınlanmıştır. Örneğin jeopark alanı ile komşu Sultansuyu Havzası içerisinde Erken Demir Çağı seramikleri bulunmuş ve buradan hareketle bölgenin Kuzeydoğu Anadolu ve Yukarı Dicle Havzası'ndaki yüksek yayla kültürlerinin önemli bir kültürel etkileşim sahasını oluşturduğu aynı zamanda Sultansuyu Havzası içerisinde Assur etkili seramik materyallerin saptanması, bölgenin geçiş

FULL TEXTS BOOK

güzergâhı ve demir madeni kaynakları açısından Assur için önemine işaret ettiği sonucuna varılmıştır (Dönmez, 2022; 43).

Ansır mağaraları ve İnderesi mağaraları yanında, Levent Vadisinde bulunan doğal ve sonradan insan eliyle şekillendirilen mağaraların kapladığı geniş alan ve tarihi yerleşimler kıyas edilemeyecek derecede büyüktür. Yapılan alan çalışmalarında Paleolitik izlerin yanısıra vadide yaşamın neolitik sonrasında da devam ettiği, vadi boyunca çok sayıda somut örnekleri tespit edilen Hitit, Roma ve Bizans dönemlerine ait kültürel izlerden anlaşılmaktadır. Ayrıca selçuklu dönemine ait yerleşim alanlarında çok sayıda seramik serpintisi tespit edilmiştir. Geç Osmanlı dönemine ait kültür katmanlarının somut izlerini de vadi boyunca görmek mümkündür. Bu döneme ait olduğu tespit edilen çok sayıda mezar taşının yanı sıra sivil mimari örneklerinde de Osmanlı izleri açıkça görülmektedir. Günümüzde araştırma alanı içerisinde çok sayıda mahallenin varlığı göz önünde bulundurulduğunda Levent Vadisi'nin binlerce yıldır kesintisiz bir yaşam alanı olduğu söylenebilir. Araştırma sürecinde vadide devam eden yaşamdan kaynaklı olarak Somut olmayan kültürel miras öğelerinin de oldukça zengin olduğu tespit edilmiştir. Gelenekler, görenekler, halk söylenceleri bu zenginliğin önemli öğelerini oluşturmaktadır. Bölgeye has bir dokuma türü olarak Akçadağ halısı yapım bilgisi ve içerdiği biçimsel değerlerle Coğrafi işaret belgeli önemli bir somut olmayan kültürel miras öğesidir. Vadi gastronomi açısından da önemli unsurlar barındırmaktadır. Yine coğrafi İşaret belgeli Akçadağ Pilavı ve Akçadağ kömbesi bu unsurlara örnek olarak verilebilir. Tüm bu unsurlar araştırma ekibi tarafından kayıt altına alınmış ve envantere dahil edilmiştir.

Levent Vadisi'nin Estetik İmkanları

Doğa ve insan arasında aracısız bir bağ vardır, aslında. Bu insanın içine doğduğu doğayı içinde var olduğu yaşamı zihni ile yeni bir gerçeklik zeminine taşıyana kadar böyledir. Ancak insan için, doğayı kendisi olarak görebilmek var olduğu ve zihinsel akışın başladığı andan itibaren imkânsız hale gelmektedir. Zihin kendisi için yeni bir gerçeklik yaratmaya ve doğayı öteki olarak algılamaya başlamaktadır. İnsan, en hassas zihinsel dokusundan sanatın diliyle öteki olarak tanımladığı doğaya alternatif bir estetik evren inşa etmektedir. Bu sezgilerle şekillenmiş yeni bir dildir ve bilhassa insanın kendisi ile kurduğu iletişimde kullanılır. Bu estetiğin yeni zihinsel gerçeklikle bağları çok güçlüdür. Söz konusu estetik dilin doğayla bağı ne kadar zayıflar ise o kadar güçlü hale geldiği söylenebilir. Bu yoğun bir yaratıcı zihinsel sürecin sonucu gerçekleşebilir. İşte insanı doğadan ayıran ve ayrı kalmasına neden olan bu gücün adı soyutlamadır. Bu ayrılık insanı doğa karşısında bir gözlemci haline getirir ve yarattığı her şeyi oraya nasıl dahil edeceğini tasarlayıp duran bir varlığa dönüştürür. İnsan bunu yaparak muhtemelen ya varoluşu için bir kanıt bulmak istemektedir ya da varoluşun kendiliğindenliğine baş kaldırmak istemektedir. Bernard Shaw'ın dediği gibi, "Sanat var olmasaydı, gerçeğin kabalığı dünyayı katlanılmaz kılardı." Sanatçılar çoğu zaman, insanın zaman, amaç ve varlık hakkındaki sorularına temel cevaplar verebilmek ve doğayı anlamak için, gözlemci ve yorumcu rollerini kullanmışlardır (Matilsky, 1992). Doğanın estetiğinin ilham verici olduğu sıkça kullanılan bir argümandır. Ancak anlaşılması gereken şey bu argümanın, doğayı algılayan insan zihninin onu yeni bir gerçeklik yaratırken kendinden ayrı tutmasından kaynaklanan bir illüzyon olduğudur. Bir ağaç ve ürettiği oksijen nasıl doğanın ayrılmaz bir parçası ise insan ve yarattığı gerçeklik te doğanın bir parçasıdır. Bu olguyu anlamımızın önündeki en büyük engel sanattır. Çünkü insan soyutlama yetisini kullanarak yarattığı sanat eserinde gerçekten de doğadan ayrı duran bir evreni bizimle paylaşmaktadır ve bu oldukça ikna edicidir. Çünkü sanat eserinde insan gerçeğe kendini ve kendinde olan her şeyi de dahil etmiştir. Hegel bu durumu doğadan tine yükselme çabası olarak açıklar ve ideal olanın arayışında sorgulamaktadır. Hegel mutlağın en yüksek tanımının tin olduğunu ve tinin özünün de kavramda olduğunu Güzel Sanatlar Üzerine Dersler adlı yapıtında sık sık dile getirmiş, doğa güzelliğini sanatsal güzellikten yani ideal olan güzellikten aşağı görmüştür (Dilmaç, 2019; 117). Hegel gibi birçok düşünür farklı yorumlar yapsa da bu çalışma insanın doğaya dahil olduğu savını sürdürmek istemektedir. Çünkü insan doğayı kendinden ayrı gördükçe

FULL TEXTS BOOK

kendini doğanın üzerinde bir yere yerleştirdikçe onu hükmedilmesi gereken ve hatta aşılması gereken bir zemin olarak algıladıkça doğaya ve kendisine zarar vermeyi de sürdürecektir. Bu çalışmanın nihai amacı koruma bilinci geliştirmek ve doğa insana hizmet etmek onun ihtiyaçlarını gidermek için vardır fikrinin aksine; yaşamı ve yüzbinlerce yıllık birlikteliğimizi nasıl sürdürülebilir hale getirebiliriz sorusuna cevap aramaktır. Bu amaca dönük olarak irdelediğimiz jeoloji insan ilişkisini estetik birikim ve sanatsal algı ile ilişkilendiren bir tartışmayı daha sonra geliştirilmek üzere başlatmakta fayda görüyoruz.

Doğa ve sanat arasındaki estetik ilişki, felsefi düşüncenin önemli bir alanını oluşturmaktadır. Doğanın estetiği, insan müdahalesi olmaksızın ortaya çıkan ve kendiliğinden var olan güzellikleri kapsamaktadır. Bu unsurlar varoluşundan beri insan zihninde, doğrudan ve derin bir estetik deneyim yaratmıştır. İnsan için yeryüzü alabildiğine büyük bir zemin iken insan zihni birçok evreni bünyesinde barındırabilecek kadar güçlüdür. Belki de bu tezatlıktan dolayı insan için doğa hem anlamlandırmaya çalıştığı yaşamın zemini hem de anlaşılması zor bir öteki olarak aşılması gereken bir zemindir. Yüce, güzel ama kavranmadığında ürkütücü, anlaşılmadığında korku veren bir zemin. Hatta Kant ve Edmund Burke'de, doğanın estetiği üzerine düşünürken onu yüce ve güzel kavramları üzerinden ele almıştır. Doğanın büyüklüğünün ve görkeminin insan üzerinde hayranlık ve saygı uyandıran bir etki yarattığını belirtmişlerdir. Kant için yüce, ussal bir kavramın sergilenişinde kendini göstermekte ve vardığı nokta itibariyle koşulsuz bir haz sunmaktadır. Kant, yücenin uyandırdığı hazzın, ciddi ve güçlü olanın duygusu olarak kimi zaman doğada kimi zaman akılda kimi zaman ise hayal gücünde bulunduğunu ifade etmektedir (Koşar, 2021). Kant'ın yücesi, Burke'te olduğu gibi, doğadaki sınırsız büyüklüğü ve alt edilemez gücü değerlendiren yargılar üzerinden tin duygusu ile ilişkilenmektedir. O, yüceyi her ne kadar tinsellik duygusuyla tarif etse de güzel gibi estetik bir kategori olarak konumlandırmış ve yüce duygusunun insanın zihin bütünlüğü içindeki gerekli ve genel temelini araştırmıştır (Altuğ, 2007, den aktaran, Koşar, 2021;153). Levent Vadisi tamda bu iki düşünürün bahsettiği yüce kavramıyla özdeşleşen görünümleri ve varlık haliyle haz duygusu yaratmaya elverişli estetik deneyimler sunmaktadır. Jeoloji bilgisiyle bu görünümleri algıladığınızda ve vadi tabanından itibaren yaklaşık 150 metre yüksekliğindeki milyar yıllık kaya duvarlarına, milyon yıllık mağara oluşumlarına ve milyon yıl öncesi biyolojik yaşamın kanıtları olan fosillere insan ömrünün sınırlılıkları ile baktığınızda zihninizde oluşan yüce duygusunun, estetik yargılarınızdaki gelişmenin Kant'ı ve Burke'yi doğrular nitelikte olduğu söylenebilir.

Sanatın estetiği ise, insan yaratıcılığının ve ifade gücünün bir yansımasıdır. Sanat eserleri, sanatçının bilinçli bir şekilde oluşturduğu ve estetik bir deneyim yaratmayı amaçladığı çalışmalardır. Sanatın estetik deneyimi, genellikle sanatçının niyeti, kullanılan malzemeler ve eserin izleyici üzerindeki etkisi gibi unsurlar üzerinden değerlendirilir. Sanat eserleri, estetik algıyı yönlendirir ve izleyicinin duygusal ve düşünsel tepkilerini şekillendirir. Immanuel Kant, sanatın estetiği üzerine düşüncelerinde, estetik yargının öznelliğini ve güzellik deneyiminin bireyselliğini vurgulamıştır. Kant fenomenal nedensellik dünyası ile numenal özgürlük dünyası arasındaki boşluğu, zorunluluğu ve özgürlüğü aynı anda içeren estetik deneyimle kapatmaya çalışmıştır (Bowie, 2003'den aktaran, Güngör, 2018; 72). Beğeni yargısı estetiktir, bununla da beğeni yargısının belirlenim zemininin sadece öznel olduğunu anlarız (Kant 2011, s. 53). Ancak, doğanın estetiği ve sanatın estetiği arasındaki bu ayrım, birbirlerini dışlayan kategoriler olarak görülmemelidir. Aksine, doğa ve sanat, estetik deneyimlerin zenginliğini ve çeşitliliğini ortaya koyan iki temel alan olarak algılanmalıdır.

Sanat yoluyla kendi iç dünyası ile ilişkilerini geliştiren ve haz duygusu üzerinden bir estetik inşa eden insanın ilk birikimleri bizzat parçası olduğu doğaya aittir, denilebilir. Aslında sanat ve jeoloji arasındaki ilişki sanatın ilk var olduğu an kadar eskidir. Sanatın ilk var edildiği zemin milyonlarca yılda oluşan yer yer marn ve kumtaşları içermesine rağmen, egemen litolojisi Killi kireçtaşı ve resifal kireçtaşı olan mağaraların duvarları olmuştur. Bunlar kendine özgü estetik değeri olan son derece özgür yüzeylerdir. Mağara resimlerini kendinden sonraki tüm sanatlardan ayıran tarafı ile bu jeolojik yüzeyler bir sınır ya

FULL TEXTS BOOK

da çerçeve içermezler. Sanatta bu devrim niteliğindeki başlangıçların ardından sanayi devrimine kadar her geçen zaman aralığında insan, zamana ve zemine uygun olarak estetik değerler yaratmıştır. Ancak Sanayi devrimi ile beraber insan, modern bir dünyayı son 300 yıl içerisinde inşa ederken ait olduğu doğadan kendi fiziksel varlığını koparmaya başlamıştır. Modern dünya binlerce yıldır devam eden tarıma dayalı sistemleri ve toprağa bağlı yaşam tarzını ortadan kaldırarak insanlık için yeni bir ekonomik sitem, yeni yönetme yönetilme biçimleri, yeni bilimsel paradigmalar, yeni teknolojiler ve yeni felsefi düşünüşler önermekteydi. Ancak başlarda doğanın sınırsız bir kaynak olmadığı fikri egemen değildi. Bugünkü yaklaşımına ve eylemlerine bakıldığında; insanın ancak 20. Yüzyılda ve 21. yüzyılın ilk çeyreğinde kendisine ve doğaya nasıl hoyratça yaklaştığını anlayabildiği ya da anlamaya başladığı söylenebilir. Bu süreçte, sanat sınırsız bir kaynak olarak bu sorun karşısında yeni estetik yaklaşımlarla insanın ruh dünyası için yeni biçimsel değerler yaratmaya başlamıştır. 20. yüzyılın estetik ve plastik yargısında özellikle devrim niteliğinde üç eğilimin ön plana çıktığını görmekteyiz. Soyut sanat, hazır nesne, kavramsal sanat. Bu üç yaratıcı eğilimin çağdaş sanatın doğasında da oldukça etkin olduğu söylenilebilir. Özellikle iki büyük dünya savaşının yıkıcı etkilerinin ardından sanatta bir öze dönüş hareketini gözlemlemek mümkündür. Doğa ve içindeki ile yeniden iş birliği yapmanın önemini kavrayan insan bu barışı sağlamanın estetik yollarını aramaya başlamıştır. 1960 sonrasında dönemin sosyal yapısında meydana gelen değişimle beraber, galeri ve kurumlar için sergi nesneleri üretmeyi reddetmek amacıyla ortaya çıkan sanatsal hareketlerin devamında sanat-doğa arasındaki ilişki de farklı bir boyut kazanmaya başlamıştır. Açık alanlarda yapılan çalışmalar, amaçlarına göre "Yer Sanatı", "Arazi Sanatı", "Yeryüzü Sanatı", "Çevresel Sanat", "Ekosanat", "Ekolojik Sanat" gibi üst başlıklar altında tanımlanmıştır. Bu başlıklar, doğada açık alanları kullanmaktan, doğal materyallerin kullanımına, çevresel farkındalığı arttırmaya, restorasyon, geri dönüşüm, yenilenme, mekâna özgü projelere kadar farklı uygulamaları içermektedir (Aydın vd. 2013; 53). Tüm bu çabaların 20. Yüzyıl boyunca sanat algısında ve estetik yargılarda devrim niteliğinde değişimler meydana getirmesi gayet doğal bir sonuç olarak değerlendirilmektedir. Bu değişimlerin etkisi güncel sanat anlayışı içerisinde de görülmektedir. Doğa ve insan arasındaki estetik ilişkinin irdelendiği bu özetten sonra yaklaşık 28 km uzunluğunda tektonik bir vadi olan Levent Vadisi'nin güncel sanat için oldukça elverişli bir zemin olduğunu söylemek mümkündür. Jeomorfolojik olarak yatay yüzeylenen kayalık alanların oldukça estetik ve biricik bir görünüme sahip olması vadiyi çekici kılan başlıca özelliklerinden birisidir. Jeo-estetik değerler açısından son derece zengin bu alan içerisinde doğa ve sanat arasında yeni ve güçlü bağların kurulabileceği sanatsal eylemler planlanmıştır. Ayrıca, bildirinin yazarları tarafından sürdürülen "Çizginin Arkeolojisi ve Levent Vadisi Mağaralarında Güncel Sanata Yönelik Sezgisel Algoritmalar" başlıklı bir sanatta yeterlik tezi hazırlanmaktadır. Bu tezin içeriğinin de yapılan bu araştırmalara katkı sağlayacağı öngörülmektedir. Bu bağlamda, Levent Vadisi'nin Land Art, video art, enstalasyon ve benzeri güncel sanat uygulamaları için benzersiz bir mekân haline gelebileceği düşünülmektedir. Vadinin doğal ve tarihi yapısı, sanatçılara eserlerini sunma ve ifade etme biçimlerinde yeni perspektifler sunması beklenmektedir. Özellikle, mağaraların tarihi dokusu ve doğal akustiği, ses ve ışık tabanlı sanat eserleri için ideal bir ortam sağlayabilir. Ayrıca, projenin müzik alanındaki bileşenleri tarafından vadinin kümülatif estetiğinden beslenen oda müziği eserleri formunda trio ve Quartet olarak bestelenmektedir. Vadinin sanat uygulamaları ile daha geniş bir kitleye tanıtılabileceği ve sürdürülebilir turizme katkı sağlayabileceği öngörülmektedir.

SONUÇ

İçerdiği değerlerin çeşitliliği bakımından Levent Vadisi İçin çok yönlü bir koruma stratejisi üzerinde durmak gerekmektedir. Levent Vadisi Jeopark projesi kapsamında korunacak alan, sadece jeolojik oluşumların değil, aynı zamanda biyolojik çeşitliliğin, kültürel mirasın ve toplumsal yapının da sürdürülebilir bir şekilde korunması anlamına gelmektedir. Levent Vadisi benzersiz jeolojik özellikleri ile doğanın milyonlarca yıllık tarihini gözler önüne seren nadir güzellikte bir doğal alandır. Alan,

FULL TEXTS BOOK

tektonik yapılanmalar, fosil yatakları, volkanik yapılar, karstik oluşumlar ve mineral yatakları gibi çeşitli jeolojik miras unsurlarını barındırmaktadır. Jeolojik süreçlerin anlaşılması ve bu süreçlerin insan yaşamı üzerindeki etkilerinin farkındalığının artırılması, korunma stratejimizin temel amaçlarındandır. Ayrıca vadinin çok zengin arkeolojik ve kültürel mirası süregiden insan yaşamı dikkate alındığında bu alandaki koruma tedbirlerinin önemi daha çok artmaktadır. Levent Vadisi aynı zamanda ekolojik açıdan da büyük bir öneme sahiptir. Bu alan, nadir bitki ve hayvan türlerine ev sahipliği yapmaktadır. Biyolojik çeşitliliği korunması bu anlamda önemlidir. Levent Vadisi'nin biyolojik çeşitliğinin korunmasının, ekosistemlerin dengeli bir şekilde devam etmesine olanak tanıyacağı ve iklim değişikliği gibi küresel çevresel sorunlarla mücadelede kritik bir rol oynayacağı düşünülmektedir. Koruma alanlarına ilişkin literatürde çeşitli tanım ve bu tanımlar çevresinde sınıflandırılmalar yapılmışsa da kabul görmüş ve uluslararası geçerliliği olan tanımlar IUCN'a aittir. Bununla birlikte devletler yönetsel açıdan kendi konjonktürel yapılarına göre çeşitli sınıflandırmalara gidebilmektedirler. Söz konusu tanım ve sınıflandırmalar Dünya Doğa ve Doğal Kaynakları Koruma Birliği (IUCN) tarafından ilk kez 1962'de Seattle'da yapılan kongre ile gündeme gelmiştir (Koç vd. 2020: 90). 1978'de ve son olarak 1994 yılında üzerinde fikir birliğine varılan koruma alanı tanımı şu şekildedir: "Uzun vadede doğanın ve onunla ilişkili olarak ekosistem kaynakları ile kültürel değerlerin, yasal ve etkili bir şekilde korunduğu, açıkça bilinen ve özel olarak yönetilen coğrafi (karasal ve/veya denizel) mekânlardır (IUCN, 2012'den aktaran, Koç vd. 2020).

Levent Vadisi Jeopark projesi kapsamında ayrıntılı bir doğal miras ve kültürel miras envanteri çıkarılmış ve arkeolojik alanlar belirlenmiştir. Öncelikli olarak korunması gereken 27 adet jeosit belirlenmiş ve koruma çerçeveleri proje içerisinde belirtilmiştir. Kültürel miras öğeleri ve arkeolojik alanlar içinde tescilli olmayanları tescile önerilmiştir. Koruma bağlamında yasal prosedürleri takip etmenin dışında alanın farkındalığı yüksek insan unsuru ile daha güçlü korunacağı fikrinden hareketle eğitimler planlanmış ve bir kısmı uygulanmış bir kısmı ise takvime bağlanmıştır. Ayrıca bu eğitimlerin bir uzantısı olarak alan içerisindeki tüm değerlere ilişkin görünürlük çalışmaları kapsamında bilgi ve yön levhaları ile basılı materyaller için özetlenmiş sadeleştirilmiş bilgi notları hazırlanmıştır. Levent Vadisi'nin eko turizm potansiyeli ele alınmış ve koruma kullanma dengesi başlığı altında yönetim planı içerisinde bir alt başlık olarak ziyaretçi yönetimi ele alınmış ayrıntılı şekilde irdelenmiştir. Biyo-çeşitliliğin korunması ve sürdürülebilir doğal yaşam için gerekli tedbirlere de yönetim planında yer verilmiştir. Levent Vadisi'nin estetik rezervinin ise ancak sanatçı zihniyle teması ve onların üreteceği sanat eserleri ile korunabileceği düşünülmüş bu doğrultuda sıra dışı bir sanat mekânı olarak vadide sanatsal aktiviteler planlanmıştır. Bu konu aynı zamanda tanıtım stratejilerinin de önemli bir bileşeni olarak düşünülmüş ve vadinin diğer değerleri ile eşdeğer olarak stratejiler geliştirilmiştir.

İyi bir yönetim planı bu alanların korunmasında ve sürdürülebilir kalkınmasında kritik öneme sahiptir. "Sürdürülebilir Kalkınma" kavramı, 1983 yılında Birleşmiş Milletler Dünya Çevre ve Kalkınma Komisyonu'nun oluşturulması ve 1987 yılında Brundtland Raporu olarak bilinen "Ortak Geleceğimiz" adlı raporu yayınlamasıyla küresel ölçekte popüler olmuştur. Sürdürülebilirlik "Günümüz gereksinimini karşılarken; mevcut kaynakları, gelecek nesillerin kendi gereksinimini karşılamasını engellemeden, tüketilmeden kullanılmasını sağlayan bir gelişmedir" şeklinde tanımlanmaktadır (İbiş, 2018). Sürdürülebilir Kalkınma, insan yaşamının gereksinimleri ve doğal kaynakların sürdürülebilirliği arasında bir denge kurularak ekonomik, çevresel ve toplumsal boyutlarıyla bugünden geleceğe uyumlu bir planlama yapılmasını amaçlayan bütünsel bir yaklaşımdır (Ulaş 2019: 133). Bölgenin kalkınmaya dönük iki ana ekseni olarak turizm ve tarım belirlenmiştir. Birbirine tezat ilkeler içeren bu ekonomik kavramlar Levent Vadisi özelinde ele alınmış multi-disipliner yaklaşımın olumlu katkısıyla dengeli bir ekonomik kalkınma stratejik planı hazırlanmıştır. Yönetim planının önemli bir diğer çıktısı da sürdürülebilirlik ilkeleri başlığı altındaki bilimsel araştırmaların sürekliliği ve izleme programları şeklinde belirlenmiştir. İzleme, gerektiğinde stratejilerin revize edilmesine olanak tanıyacak izleme faaliyetlerini, alanın durumunun sürekli bilimsel kriterle izlenerek ve koruma stratejilerinin etkinliğinin değerlendirilmesini temel alan bilimsel uygulamalar olarak tanımlanmıştır. Bu başlık altındaki

FULL TEXTS BOOK

eylemlerin sürdürülebilirliği için disiplinler arası bir bilim kurulunun yönetim içerisinde yer alması önerilmiştir. Son olarak tüm bu hedeflerin gerçekleştirilmesi için Yerel toplulukların bu alanların korunmasına aktif olarak katılmasının teşvik edilmesi gerekmektedir. Toplulukların Levent Vadisi ile ilgili sahiplik duygusu geliştirmesi, koruma çabalarının sürdürülebilir olmasına katkı sağlayacağı düşünülmektedir.

İnsan ve doğa arasındaki ilişki, birçok düşünürün insanlık tarihi boyunca üzerinde durduğu derin ve karmaşık bir konudur. Doğayı, insandan ayrı ve öteki bir varlık olarak algılamak, doğru bir ontolojik tanımlama yapamamak insanın en kadim düşünme özürlerinden biridir. Bu algı, düş ve gerçeklik alanları arasında bir bölünme yaratarak, insanın kendisini doğanın üstünde bir konuma yerleştirmesiyle sonuçlanmıştır. Bu hiyerarşik düzen, insanın kendisini özne, doğayı ise insana hizmet eden bir nesne olarak görmesiyle pekişmiştir. Bu durum, tarih boyunca doğaya karşı geliştirilen aşağılayıcı ve düşmanca tavırların normal, hatta ideal ve haklı olarak kabul edilmesine yol açmış olabilir. Bu kibirli yaklaşım, günümüzde karşı karşıya olduğumuz ekolojik krizlerin temel nedenlerinden biridir. İnsan, bilhassa son 150 yılda kendisini de içinde barındıran aslında ontolojik bir ayrılmazlık içinde olduğu doğaya ve imkanlarına oldukça hoyrat davranmış, böylelikle yaşam alanlarında kendisi için hayati öneme sahip birçok unsura ciddi zararlar vermeye başlamıştır. Bu durum, insanın doğa ile olan ilişkisinde derin bir yarılma yaratmıştır. Bu yarılma, insanın kendisini keşfetme sürecini olumsuz etkilemiştir. Yaşamı anlama ve anlamlandırmada ki gecikme ve yanılsamaların yol açtığı bu zihinsel ayrılık fikri de git gide derinleşmiştir. İnsanın sormakta geciktiği temel soru; bu ayrımın, ontolojik bir zorunluluk mu, yoksa tarihsel süreçte gelişen bir yanılsama mı? olduğudur. İnsanın doğa ile olan ilişkisini yeniden düşünmesi gerektiği açıktır. Doğa ile insan arasındaki ayrım, tarihsel bir sürecin ve insan merkezli bir bakış açısının sonucudur. Bu ayrımın zorunlu olup olmadığı sorusu, insanın kendisini ve doğayı nasıl algıladığını yeniden değerlendirme gerekliliğini ortaya koymaktadır. İnsanın bu düşünüşte sanatın yaratıcı argümanlarından faydalanması çözüm olanaklarını zenginleştirecektir. Yaşamın zeminin yaratan jeolojinin estetik imkanları yaratıcı zihinler için çok önemli bir kaynak olarak görülmektedir. Bu projenin temel amacı doğayı insanın olumsuz etkilerinden korurken nasıl insanlık için daha yararlı hale getirebileceğimize cevaplar aramaktır. Bu ironik arayışta farklı bilimsel disiplinlerin bilgi evreninden faydalanılmaya çalışılmıştır. İnsanın doğa ile olan ilişkisini yeniden tanımlaması, doğayı kendisinin bir parçası olarak görmesi ve doğa ile uyum içinde yaşaması, sürdürülebilir bir geleceğin inşası için hayati öneme sahiptir. Jeolojik değerlerin korunması yaşamın iyileştirilmesi insan ve jeoloji arasında sürdürülebilir ve uyumlu bir ilişkinin geliştirilebilmesi ile mümkündür. İnsanın doğa ile kuracağı yeni ilişki biçimi, gelecekteki ekolojik krizlerin önlenmesi ve sürdürülebilir bir yaşam biçiminin inşası için temel bir adım olacaktır.

Bu proje, istisnai değere sahip doğal miras alanı olarak Levent Vadisi'nin sunumu, erişimi ve bu alanı olumsuz etkileyen doğal riskler, insana bağlı riskler yanlış arazi kullanımı ve yağmacılık gibi tehditler karşısına bütünleşik koruma ve yönetim tedbirlerini tasarlamak için hayata geçirilmiştir. Alan yönetimi bir veya mekânsal ilişkili birden fazla alanın tekil bir yönetim sistemi altında ele alınmasıdır. Miras alanı olarak Levent Vadisi'nin yönetilmesini gerektiren temel sebeplerden biri bu alanın korunarak gelecek kuşaklara aktarılmasını temin etmek bir diğeri ise dünya ekonomisinin önemli bir parçası olan turizmdir. Ayrıca Levent Vadisi'nin jeolojik, arkeolojik ve kültürel açıdan içerdiği evrensel bilgi değeri ve estetik imkanları da bu alanın korunması için önemli unsurlardır. Önerilen yönetim planı evrensel değerler ve doğa insan ilişkisi dengesinde insan odaklı bir anlayışta tasarlanmaktadır. Somut olmayan kültürel miras açısından bu alanda yerleşik yaşam sürdüren insan guruplarının ve geçici olarak alanın yaşamsal değerlerini deneyimlemek isteyen insanların Levent Vadisi'ndeki tüm değerler birikiminin bir parçası olduğu, olacağı fikrinden hareketle projenin bilimsel çıktıları, Levent Vadisi'ne ilişkin ulusal ve uluslar arası farkındalıkları artırmak bir evrensel değer olarak insan odaklı yönetim yaklaşımıyla uluslararası toplumda karşılıklı değerbilirliği sağlamak ve güçlendirmek hedefiyle oluşturulmaya çalışılmıştır. Kamu yararı gözetilerek hazırlanan yönetim planı taslağı, üniversiteler, yerel yönetimler, kamu

FULL TEXTS BOOK

kurumları, sivil toplum örgütleri ve sektörel öğeleri arasında uzlaşma ve iş birliğine dayalı yapısıyla paydaşların belirleyeceği ilkeler çerçevesinde sürekliliği olan özgün yapısıyla öne çıkacağı beklenen kılavuz belge niteliğindedir. Söz konusu kılavuz belgede jeopark alanının ekonomik, sosyal, kültürel ve eğitsel amaçlı nasıl kullanılacağına dair özgün ip uçlarına yer verilmiştir. Bölgenin sınırlarının tarihi, sosyal, kültürel, coğrafi, doğal ve sanatsal bir bütünlük içinde geçiş alanları ve bu unsurlarla ilişkili bağlantı noktaları bağlamında değerlendirilmesi, bölgenin korunması, geliştirilmesi ve değerlendirilmesi açısından doğru şekilde belirlenmesi için multidisipliner bir anlayışla yürütülen bilimsel çalışmaların sonuçları titizlikle harmanlanmıştır. Özellikle ziyaretçi yönetimi, finansman, sunum ve yorum konusunda yapılan önerilerin hayata geçirilmesi alanın değerlerini yükseltme ve yaşatma konusunda kritik öneme sahiptir. Önerilen bu plan taslağı UNESCO'nun Dünya miras alanları için geliştirdiği yönetim planı normlarına uygun olarak tasarlanmıştır. Tüm araştırma çıktıları Levent Vadisi'nin Evrensel belleğimizin önemli bir parçası olarak Küresel Jeopark ağının içinde yer alması gerektiğini düşündürtmektedir.

AN EFFICIENT SOCIAL COOPERATIVE IN HUNGARY

Katalin Lipták [1] **–** ***Tamás Pirger*** [2]
[1]*University of Miskolc, Faculty of Economics*
[2]*University of Sopron, Alexandre Lámfalussy Faculty of Economics*

ABSTRACT
Since 1 July 2006, it has been possible to set up social cooperatives in Hungary. A social cooperative is a special form of social enterprise. A common feature of social enterprises is that their activities are aimed at addressing and solving a social need or problem, and their business objectives are linked to these primary objectives. In 2013, the Bébic Food Production, Service and Trade Start Social Cooperative was launched in the municipality of Ukk, Hungary, to make the agricultural project of the public employment Start Work model programme of the municipality self-sustainable. With a population of just under 300 people, the social cooperative is a key element in the operation of the village. The social cooperative processes the raw materials grown on the sea buckthorn, raspberry and beetroot plantations in the municipal areas into high quality jams and drinks. In the long term, the cooperative supports the local population through gradual improvements and job creation, with a view to a healthy lifestyle and environmental awareness. It will describe the circumstances of the establishment and operation of the cooperative using the field research method.

Introduction

In order to reduce unemployment, the economic actors cannot be expected to provide effective help, so it is reasonable to rely on non-profit organisations to find more perspective solutions than the current ones (Neamtan, 2002). One way to do this could be to support the employment initiatives of non-profit organisations, i.e. to create jobs outside the mainstream of the labour market. In the most common economic model today, three economic sectors coexist. The third sector, the so-called social economy, is dominated by social enterprises and cooperatives (Moulaert-Ailenei, 2005; Csoba, 2007). The conceptual scope and definitions are often blurred, with the French and Italian literature suggesting that the core values are solidarity, equity and dialogue (Birkhölzer, 2000, Borzaga - Defourny, 2001; Borzaga et al, 2008; Allard et al, 2008; Monzón - Chaves, 2008). Social enterprises serve the community and their aim is not to maximise profit but to solve existing social problems (G. Fekete, 2007).
In Hungary, it has been possible to establish social cooperatives since 2006 (Ferencz, 2015). More and more municipalities are setting up social cooperatives, which take over the management and organisation of public employment from the municipality and are thus able to sell the products produced by the public employees (Finta - Póla, 2020). The law on cooperatives in Hungary was amended in July 2019. After the amendment, a distinction was made between social cooperatives established on the basis of public employment and traditional cooperatives. The former should be called "start social cooperative". A social cooperative requires a minimum of seven founding members, of which at least one must be a local or national government or an association of such a government with legal personality. Social cooperatives operate on a profit-oriented basis and their main decision-making body, the general assembly, decides to distribute the profits among the members (Birkhölzer, 2000; Defourney - Nyssens, 2010). In all cases, a social cooperative must have a registered office, a name that refers to the main activity of the social cooperative and includes the designation 'social cooperative'. Each social cooperative must have a statute setting out its objectives, the main rules governing its operation and the principles on which it is based.

FULL TEXTS BOOK

Presentation of the socio-economic background of the municipality of Ukk

The large cities of the Central Transdanubian region, with their favourable transport connections and outstanding endowments, play an important role in the socio-economic space of Hungary. One of the most important spatial characteristics of the region is that, due to its proximity to Budapest and the historical characteristics of the urban network and the northern part of the Transdanubian region, it does not have a single growth pole of national importance or with multi-regional implications. Its urban population has a balanced structure and is one of the most urbanised areas in the country. It is the most densely populated and most populous region in Hungary. Its dominant industries are computer and communications equipment, vehicle and vehicle parts manufacturing, in which foreign capital investment has played a major role. Tourism is also of particular importance in the region. It is the third most developed region in the country.

The economic development of Veszprém County owes much to the fact that its infrastructure background is of a higher standard than that of the country. The county is characterised by a dense network of roads connecting important industrial hubs and tourist resorts.

The municipality of Ukk is a small village in Veszprém County, the main activities of the population being agriculture and livestock breeding. The municipality covers an area of 13.87 km2 and its population has been decreasing over the last 22 years, reaching 284 inhabitants at the end of 2022. The change in the permanent population is illustrated in the graph below:

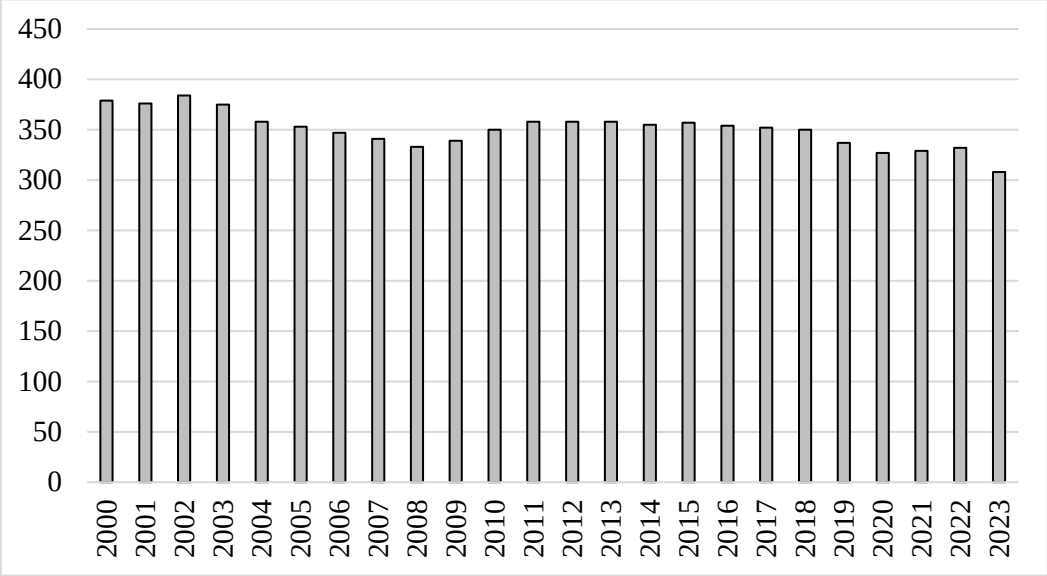

Figure 1. Change in the permanent population of Ukk (2000-2023)
Source: Own editing based on Hungarian Statistical Office's data

The factors influencing the permanent population are the number of births, the number of emigrants, the number of deaths and the number of emigrations (Figure 1). During the period under review, there was a slight increase in the population between 2010 and 2018, due to an increase in the number of emigrants. The change in the population is not the result of natural factors but rather of migration. The reasons for the changes in population are summarised in Figure 2.

FULL TEXTS BOOK

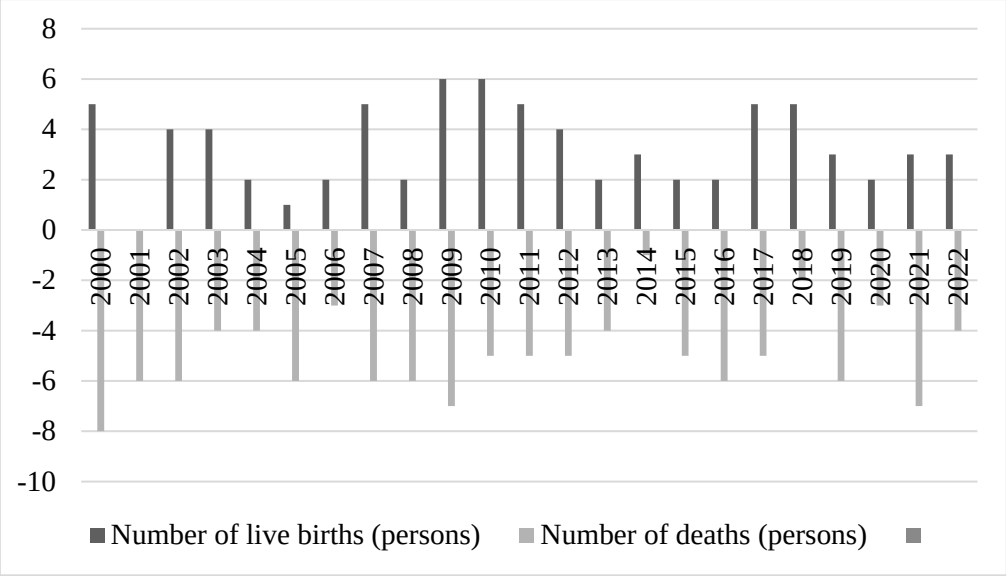

Figure 2. Number of live births and deaths in the municipality of Ukk
Source: Own editing based on Hungarian Statistical Office's data

Despite the overall decline in the population of the municipality, the fact that the proportion of working-age people remains unchanged is certainly positive. An analysis of the dependency ratio shows that, in line with the trend in Hungary, the number of elderly people (65 and over) is increasing, with a parallel decrease in the number of young people (0-14 years old). Unfortunately, this has a negative impact on the future of the municipality.
In relation to the working age population, the number of jobseekers and long-term unemployed increased significantly after the economic crisis of 2008 (Figure 3). After the crisis, a steady decline was observed until the period of the coronavirus epidemic.

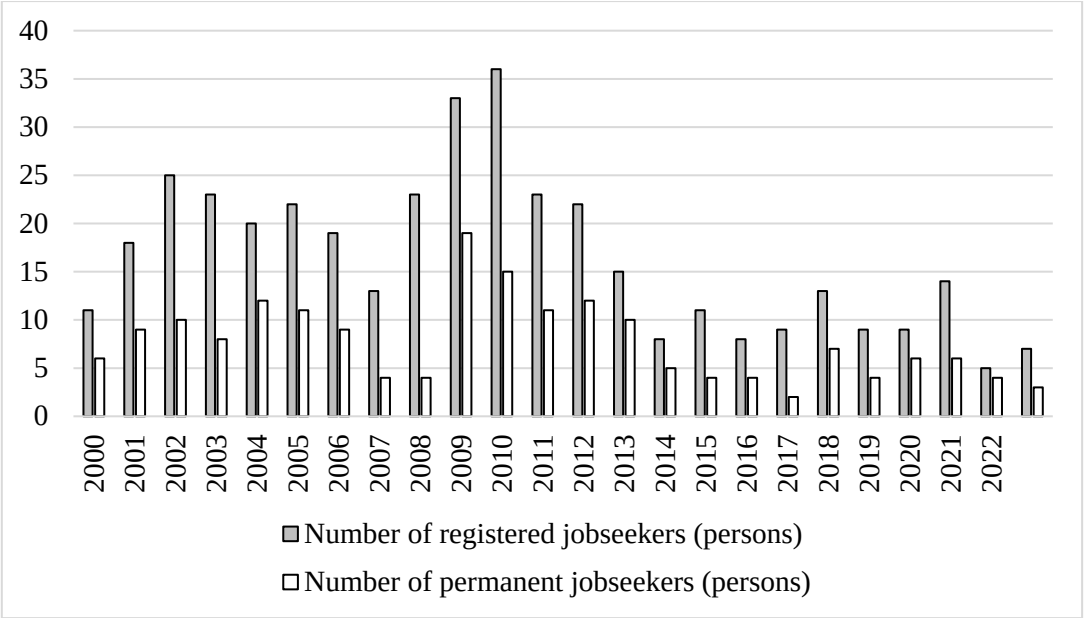

Figure 3. Number of registered job seekers and long-term job seekers in the municipality of Ukk

FULL TEXTS BOOK

40% of the school-educated population have completed at most the 8th grade of primary school, 28% have completed secondary education without a school leaving certificate and 24% have passed a school leaving certificate. The share of residents with tertiary education is 8%. The data suggest that the resident population is predominantly undereducated.

Public employment in Ukk in the framework of the Bébic Social Cooperative

The centuries-old public employment system in Hungary has undergone a major overhaul since 1 January 2011. Public employment has been brought under the policy remit of the Ministry of the Interior. The available resources have increased significantly and the budget for public employment has become open from the top. Municipalities received, on average, more funding for public employment than for public assistance. One change was the virtual disappearance of part-time public employment from 2011, the average duration of public employment contracts was extended and employment became more evenly spread over time, while remuneration was exempted from the general regulation. Refusal to accept the offer of public employment entailed the loss of entitlement to the replacement employment allowance, so that its acceptance was essentially compulsory. The municipality of Ukk has been participating in public employment programmes since the beginning, in 2012, thus providing the community with continuous job opportunities and infrastructure improvements.

The number of people employed in the different types of public employment schemes is shown in the table below:

	Longer-term public employment	National public employment	Total district programmes	Total public employment, persons
2013	4	0	9	**13**
2014	3	1	11	**15**
2015	1	2	9	**12**

Table 1. Number of public employment between 2013 and 2022 by type of programme in the municipality of Ukk

Source: Own editing based on Ministry of Interior data

Over the past three years, the environment of the buildings that provide the main services of the municipality has been improved and its value, the national wealth, has been significantly increased through investments made with the support of the district's Start Work model programme and from own resources. On average, 6 public employees have been involved in cleaning green areas and agricultural roads owned by the municipality. In terms of construction works, from 2019, the accident-prone pavement alongside the main road 84 was renovated, a safety barrier was built and the pavement of the bus stop in the centre of the village was rebuilt, ensuring safe pedestrian and barrier-free transport for the population. This was followed by the paving and accessibility of the car park adjacent to the multi-purpose building of the Mayor's Office and the paving of the grass/grass area adjacent to the social facilities for public employees and the community square. Building on the success of previous years,

FULL TEXTS BOOK

the 2022 programme of construction and renovation work has been continued with a focus on health promotion and pre-school education.

The Multifunctional Health Centre of the municipality serves not only the population of Ukk village but also the needs of the surrounding villages with GP and nurse services, which has resulted in a significant number of cars parked on the roadside, making road traffic difficult. To address this problem, the programme has provided parking for 8 cars and a bench for waiting passengers.

In connection with the completion of the work begun in the previous year on the multi-purpose building of the Mayor's Office, the steps leading to the entrances of the building were paved. In the centre of the town, along the road, stands the 18th century Baroque Szalay Mansion, which currently hosts the Kindergarten and outdoor events organised by the municipality, and plays an important role in the recreation of the inhabitants of the town. The fence on the street front was missing a gate, the material and labour for which was built at the direct cost of the public employment programme, primarily for the safety of the children and to prevent unauthorised access to the courtyard.

The gravel, uneven (accident-prone) area between the new playground in the courtyard and the building was paved with Barabás bricks, purchased by the municipality and provided by the public employment programme, to match the building's patina.

Infrastructural improvements through tenders, own resources and the possibilities offered by the District Start Work model programme are helping to increase the population retention capacity of the municipality. As well as creating tangible value for the municipality through their public employment programmes, they are proud of the experience they have gained through this work, which helps to integrate the municipality's public employees into the competitive sector.

Bébic Social Cooperative

The Bébic Social Cooperative was founded in 2013 in the municipality of Ukk, of which the local government is a member. On 27 September 2014, the fruit and vegetable processing plant of the municipality of Ukk was completed, which was built, mechanised and equipped within the framework of the agricultural project of the Start Work model programme in 2013 and 2014. The social cooperative processes the raw materials grown on the municipal areas' sea buckthorn, raspberry, black cherry, beetroot and other vegetable plantations into high-quality jams and drinks. The high quality of its products is certified by compliance with the regulations of the Quality of the Countryside - for the Balaton Highlands. The right to use the Quality of the Countryside - Protecting the Lake Balaton Highlands Trademark has also increased its market access opportunities.

Further activities and objectives:

- Encouraging local farmers and families to grow fruit and develop horticulture.
- Organising conferences and camps to showcase the successes of public employment and social cooperatives in Ukk, while promoting healthy lifestyles and local products.
- Launching training courses to promote the integration of disadvantaged people and entrepreneurship.
- To support the marketing activities of trademark producers and promote the high quality products of the Lake Balaton region.
- To establish national cooperation between social cooperatives engaged in similar activities in order to promote more efficient operation.

The Co-operative's philosophy has a social mission in addition to its economic objectives, and so public welfare activities are of paramount importance, with a particular focus on helping disadvantaged people into work and promoting the integration of people of different ethnicities. At the same time, it carries out its activities and services in full harmony with nature, in the hope of preserving and protecting the environment and health, and of promoting alternative energy sources to as many people as possible,

FULL TEXTS BOOK

while ensuring that its members can work continuously and with equal workloads, providing security and a secure future for their members and families.

At the end of 2013, the cooperative was set up to make the agricultural project of the municipality's public employment Start Work model programme self-sustaining. The founding members are the Municipality of Ukk and three public employees. The Social Cooperative was founded with 13 members, and on 28 February 2020 it had 18 members. On 15 September 2014, the first lease contract was signed with the local municipality, which provided the material basis for the cooperative's operation. In 2014, the Bébic Social Cooperative produced sample products (raspberry juice, tomato juice, beetroot juice) from raw materials produced in the municipal areas. The cooperative has been promoted in several forums in order to gain access to the market.

On 26 January 2015, the members of the Social Cooperative for the Development of Ukk and the Bébic Social Cooperative decided in an extraordinary general meeting that the Social Cooperative for the Development of Ukk will merge with the Bébic Social Cooperative. The Veszprém County Court registered the merger on 2 July 2015. In September 2015, a new lease loan contract was signed with the Municipality of Ukk, which transferred the products of the investment (warehouse renovation, shelving system, furniture, pasteurisation equipment, Opel Combo used truck, stove, dryer, tanks) for use to the cooperative within the framework of the Start-up Work Model Programme 2015. The contract expired on 30 September 2017. The third lease contract was signed on March 8, 2018, in which the assets included in the second lease contract, a truck and real estate, were transferred again.

In 2017, the Co-operative submitted the FOCUS application, which was successful. The tender was implemented from 01.11.2017 to 31.10.2020. The continued employment obligation was fulfilled for 8 persons during the period 01.11.2020 - 30.04.2020. The main objective of the tender was to build sales and market access. Currently 9 people are employed.

In 2018, the cooperative added a new activity, poultry farming, by renting a poultry house in Dabas and keeping geese on a leased basis. The necessary permits, registrations and notifications were obtained at the end of 2017. In 2019, the Bébic Social Cooperative opened a shop in Budapest, where its own and other social cooperatives' products are sold.

The main goal is to create a multi-legged profit-oriented enterprise with the help of the municipality's membership in the Start Work model programme, the real estate provided by the municipality and by taking advantage of the opportunities for tenders. In the long term, it can be expanded through gradual development and job creation, with a focus on healthy living and environmental awareness. The production of fruit and vegetable products remains the main profile, but the long-term profit-oriented operation should be based on trade with a self-run product shop in Budapest.

The employment will be spread between Ukk and its surroundings and Budapest. Rural employees are mainly involved in product production, while employees in Budapest are involved in marketing and running the Budapest store.

Summary

Bébic Social Cooperative is located in the third most developed region of the country. Agriculture is still the main source of livelihood for the inhabitants of Ukk, a municipality with a centuries-old history. Its population has declined by almost 25% over the last 20 years, but the working age population has not declined in proportion. In terms of education, the population is considered under-educated, with 40% of the population self-reporting primary education. This is why public employment is so important in the life of the municipality.

In the last 10 years, the municipality has seen employment in almost all types of public employment programmes, with several pillars of longer-term, national and district start model programmes. The number of people in public employment has been decreasing year by year, mainly due to the decrease in the population. In implementing the public employment programmes, the municipality has placed

FULL TEXTS BOOK

great emphasis on value-added work, and in order to facilitate this, the municipality has supplemented the resources used in the programmes with its own resources in all cases. Thanks to this outstanding approach, the municipal leaders have succeeded in transforming the municipality into a small, vibrant and picturesque community of exemplary value.

The Bébic Social Cooperative was founded in 2013 with the membership of the municipality. An important objective for the Cooperative is to produce its products using healthy ingredients grown on municipal land using its own resources. The Cooperative is growing year by year, with new areas being added to the production process and new tools being acquired for the production of the products. By promoting environmental awareness and healthy eating, they are not only targeting people in the region, but thanks to their webshop, their products are now accessible to everyone. Their products have won numerous awards and recognitions. In the long term, the cooperative plans to serve the local population through gradual improvements and job creation, with a focus on healthy living and environmental awareness.

ABSTRACT

Communication is the main form of human existence. Communication, which is a form of social existence, exists in and accompanies all types of human activity. However, there are a number of professions where communication becomes a professionally important category in the nature of the profession. Such professions include the teaching profession. At this time, communication is not seen as a common form of human interaction, but as a functional category. Pedagogical communication is a multifaceted process of organization, construction and development of communication, mutual understanding and interaction between teachers and students, which is created by the goals and content of their joint activities. Communicative (information exchange between communication parties), interactive (organization of mutual activity) and perceptive (perception of each other by communication partners and establishment of mutual understanding) sides are implemented in pedagogical communication. The article deals with the formation of the correct communication style of university teachers. Because pedagogical communication plays a leading role in the professional activity of a university teacher, as it is the main form of social interaction between people. The analysis of the modern university experience shows that the success of the pedagogical activity of professors and teaching staff and the educational activity of students mostly depends on the efficiency of the pedagogical communication process between teachers and students. The goals and objectives of the educational process aimed at training high-quality specialists in universities and, ultimately, the transfer of professional experience. İt is done due to proper communication process between teacher and students. Teachers with effective pedagogical communication style not only convey a certain amount of information to students, but also shape their professional and moral position and bring their experience to a high level of development. High demands are placed on the psychological climate of the department, faculty, and the university as a whole, which is realized in daily pedagogical communication in the higher school. The formation of a personal communication style with students is associated with the development of the creative individuality of professors, associate professors and teachers. The exchange of scientific traditions and scientific information is carried out in the most effective way thanks to the establishment of close relations between teachers and students, and active cooperation according to their interests. At the same time, the article also clarified the negative trends that lead to a decrease in the effectiveness of pedagogical communication in modern conditions. At the same time, attention was drawn to the results of university students' neglect of acquiring knowledge in the direction of their profession. Thus, without the concept of partnership in the activities of university students, it is difficult to involve students in independent work, to instill in them professional taste, and to educate the professional direction of the individual as a whole. The most productive process of university education and training is provided by a system of relations established reliably at the university level. The article also includes the essence, content and functions of the formation process of the university teacher's communication style, the factors of the pedagogical communication process, the role of the pedagogical communication style in increasing the efficiency of the pedagogical activity, and the issues of pedagogical interaction of educational subjects. All this indicates the necessity of organizing the process of formation of pedagogical communication style among university teachers in the interests of increasing the efficiency of the specialist training process. Thus, the subject of the research is the essence

FULL TEXTS BOOK

and content of the process of formation of pedagogical communication style among university teachers, as well as ways of increasing its efficiency. The purpose of the research is to justify the essence, content and characteristics of the formation of the pedagogical communication style among university teachers based on the results of the theoretical analysis and pedagogical experiment, and to determine the ways of the formation of the pedagogical communication style in modern conditions. Thus, it is possible to increase the efficiency of the process of formation of pedagogical communication style by increasing the level of psychological and pedagogical training of professors and teachers of higher education institutions, by improving the pedagogical technique of higher school teachers, and by strengthening the moral-aesthetic component.
Keywords: Pedagogical communication, teacher, university, student, style.

Pedagogical communication is a special form of communication that has its own characteristics and at the same time is subject to the general psychological laws inherent in communication as a form of interaction between people, including communicative, interactive and perceptual components. Pedagogical communication is a set of tools and methods that ensure the realization of the goals and tasks of education and training, and determine the nature of interaction between the teacher and students. The problem of communication, along with individual and group problems, is one of the main problems of social pedagogy and psychology in its various aspects. It is interdisciplinary in nature. Furthermore, from a modern human perspective, communication is a concept used in various aspects of human life. The main goal of every university is to form the future professional personality of students. Teacher-student communication should also serve this purpose. In this communication, cooperative relations between teacher and student are very important. Because without the concept of cooperation, it is difficult to involve students in independent work and increase their interest in their profession. A productive learning process at a university depends on well-established relationships. Teacher-student relations gradually develop depending on the personal life, knowledge level, worldview, social experience, activity of the faculty, the department, and the professionalism of the university teacher. The university teacher is the initiator and organizer of the communication process. Pedagogical communication is a creative process. Because in this process, educational problems are solved or relationships are organized. A modern university teacher includes four people: 1. The teacher - transfers knowledge to students, stimulates student activity, forms knowledge and skills in students. 2. Educators take care of comprehensive development of personality of students, form professional and psychological qualities in students. 3. A scientist conducts scientific research in the field of the subject he teaches. 4. The manager organizes the audience, stimulates and supervises the independent work of students. According to thinkers, an ideal teacher should be patient, loving students, kind and fair, sympathetic to his profession and responsible. At the same time, he should be demanding and diligent. But above all, he must have a high moral quality. In addition, the teacher should be optimistic and have a sense of humor. The teacher's communication style plays a very important role in the teaching process. The communication style depends on the features of the teacher's communication capabilities, as well as the characteristics of the student body. The communication style embodies the social and ethical attitudes of the society and the university. It also reflects the personal and pedagogical level of the teacher, his emotional and psychological characteristics. A communication style is, in essence, a set of repeated, fixed ways of carrying out the communication process itself. Each person's various communicative attitudes, knowledge, skills, and habits form a relatively stable unity through which one person's communication differs from another's. It is more correct to separate the styles according to the types of contact in communication. It is necessary to emphasize the personal, cognitive, emotional and action characteristics of the communication style. In terms of content, communication style usually means a form of communication based on one or other methods of influencing the interlocutor. According to this definition, two types of communication are noted: authoritarian and democratic based on subjective

FULL TEXTS BOOK

communication. The subjective style of pedagogical communication creates positive emotional reactions without any effort on the part of the teacher, while the authoritarian style of communication creates tension and causes the manifestation of negative emotional states. Of course, emotional states affect teachers and students differently. The style of pedagogical communication in the university is determined not only by the individual typological characteristics of the teachers, but also by the requirements of the situation. In this regard, three communication styles are distinguished according to the degree of readiness of teachers for a certain situation: 1. Ritual - the main task of partners in this communication is to maintain relations with society, to strengthen their opinion about themselves as a member of society. In such communication, the individual characteristics and wishes of the partner are not taken into account. Ritual communication is just a prologue to manipulative communication. 2. Manipulative communication style - this is a communication in which the partner is perceived as a means to achieve a goal beyond him. In such communication, it is important to demonstrate knowledge of the conditions and factors that will help the interlocutor to achieve the desired goal. 3. Humanistic communication style - this communication is aimed at meeting the needs of understanding, sympathy and empathy. As it can be seen, pedagogical communication is a very subtle type of interaction that affects the intentions and desires of students due to the teacher's communication style. The individual characteristics of the style reflect the manifestations of the socio-psychological or individual pedagogical characteristics of the teacher's personality. Depending on the purpose, parties, process and result of communication, many style options arise. So, some contrasting styles can be noted; truthful or deceptive style, business or casual style, formal or informal style, masculine or feminine style, etc. some of these styles, especially formal, sly, arrogant, indifferent, etc., styles are unacceptable in the communication environment. Others are adequate in some communication environments and inadequate in others. Meanwhile, it is appropriate to emphasize the individual characteristics of pedagogical communication styles. Thus, cognitive characteristics reflect his evaluations in terms of information richness, completeness, accessibility, relevance of presentation, adequacy of using communication tools. In this sense, we can call understandable and incomprehensible, undeveloped, detailed, clear and foggy, semi-literate and literate, abstract and concrete business communication styles. Ambiguous, incomprehensible styles are unacceptable among them. Various forms, techniques, and methods of communication developed by experts serve, first of all, to provide adequate information and also to achieve normal cognitive contacts between teachers and students. Cognitive contact is a common understanding between communication partners about the phenomena of nature, society and mental activity that constitute the subject area of the direct communication act. This type of communication reflects what is important in communication, especially its content side, and consists in removing semantic barriers in relation to the subject area of communication, the means of transmitting this content, and the cognitive capabilities of the communication partner. Each type of semantic barriers has its own characteristics, because the levels of understanding of the field and means of communication, as well as the possibilities of this understanding, may be different for different communication partners. The emotional features of the communication style are its emotional intensity, emotional tone, emotional positions, etc. reflect assessments. For example: emotional-calm, unbalanced-balanced, insincere-sincere, angry-friendly, serious-non-serious, etc. communication styles can be listed. According to the methods of influencing the student's consciousness and will, according to the assessment of the communication style, according to his practical activity, the characteristics of the teacher's activity are noted, especially convincing and commanding, diplomatic and honest, mild and categorical, hesitant and decisive styles are noted. A comparison of different characteristics of communication style allows to note that some of them have stable positive ratings, for example, styles that are interesting, understandable, sincere, honest, respectful, persuasive and regulatory, etc. Comparing the individual style of pedagogical communication with the generally accepted style allows us to distinguish three types of their relationship. 1. An individual style characterized by a contradiction to generally accepted

FULL TEXTS BOOK

style norms. Typical features of this communication style are; excessive originality, grammatical and logical "fallacy", indifference and disrespect for a specific communication partner. 2. The speed extraction style, which reflects the mechanical assimilation of generally accepted normative standards of communication by an individual. Often this style occurs in the activities of inexperienced teachers. This style has a standard and formal character. 3. The optimal style that manifests itself within the norms of generally accepted behavioral norms of an individual. The most acceptable is the optimal style because it is social and individual at the same time. (Egides A.P. Psychological correction of conflict communication // Psychological journal. 1984. No. 5. P.52-62.). It is clear that the optimal pedagogical communication style of a university teacher cannot be considered as something frozen and unchanging. Of course, the communication style is constantly changing and improving due to experience, training, and self-improvement. The ability of a university teacher to master communication tools is important. A number of expressions are often encountered, especially during pedagogical communication. for example: "I didn't express myself like that", "I didn't mean it like that", "You misunderstood me", "I really meant it", etc. these expressions reflect semantics. In general, it is conditionally possible to distinguish ideal and realistic levels of skills in commonly accepted means of communication. The level of practical skills in communication tools is usually divided into high, medium and low. Discrepancies at these levels usually lead to semantic barriers, which are sometimes called language or linguistic barriers. The most important regulatory requirements for the correct construction of the teacher's speech, determined by the laws of students' cognitive processes, are the intelligibility, comprehensibility, meaningfulness, accuracy and regularity of expressions. The understanding of expressions is characterized by the selection of sensory means in accordance with the laws of perception, memory, thinking, speech, and imagination. The use of sufficient voice power, the presence of pauses, intonations and logical accents prevent phonetic barriers in perception. The content of the teacher's speech is also important here. When students are repeatedly told about topics they already know by heart, the student's attention is distracted. Including confused, unsystematic speech also causes a decrease in students' cognitive activity. The ambiguity of expressions leads to a kind of sophistry barrier that prevents understanding the content of the speech itself and its direction. It should also be noted that the distorted presentation of thoughts causes a kind of chaos barrier, which disrupts all cognitive activities of students and leads to the disruption of cognitive contacts. In the process of pedagogical communication, there are barriers of laconism and expressiveness that prevent mutual understanding between teachers and students. When any of the obstacles that we have listed arise, in order to achieve a more successful pedagogical communication, there is a need to restructure the communication, and at this time special methods are applied. In these cases, clarifications, clarifications, paraphrases, repetitions, explanations, and direct appeals to the interlocutor are used more in terms of the form or essence of information presentation. Special difficulties in pedagogical communication are caused by the individual, gender and age characteristics of students, especially the type of memory, mentality, type of perception, type of speech. It is not always possible to predict these features, therefore, during pedagogical communication, if necessary, it is possible to determine the individual-typical features of the cognitive activity of the communication partner and make appropriate adjustments in time during the conversation. Experts note that there cannot be complete communication between the teacher and students without emotional contact. The search for truth has never been and cannot be without human emotions. Neither personal nor cognitive connection occurs without some emotional basis. In some cases, the student's emotional state can be predicted in advance based on knowledge of stable personality traits, in particular, his outlook, beliefs, ideals, tendencies, needs, interests, habits, will, temperament, and character traits. When dealing with a strong, determined, emotionally balanced person, the content of the conversation comes first, and emotional subtleties can be ignored beforehand. If the person being taught is indecisive, emotional and easily excited, then the teacher will first of all have to think about how to influence his will, prevent emotional outbursts, how to keep him under the influence of the

FULL TEXTS BOOK

content of the conversation. Also, in the process of pedagogical communication, in addition to taking into account stable characteristics, it is recommended to the teacher to study the student's emotional relationships, his mood, and his state of health caused by a number of events. It often happens that due to some events in the family, school or work, the student may not want to talk about the discussed topic, under these circumstances, for this purpose, with this teacher. In general, the process of forming the pedagogical communication style of a university teacher is a complex set of techniques and methods of the teacher in order to establish personal, cognitive, emotional and action relationships simultaneously or sequentially, as well as to study the requirements. At this time, external and psychological factors affecting pedagogical communication should be taken into account. All these techniques and methods are not born, but are formed on the basis of pedagogical communication experience and in certain social conditions. The nature of the teacher's pedagogical communication style is dual. On the one hand, the style is determined by the characteristics of pedagogical activity, on the other hand, by the personal qualities of the teacher.Since the teacher's pedagogical communication style is determined by the conditions of pedagogical activity and personal qualities, it is formed by pedagogical tools that give direction, purposefulness, control and systematicity to the formation process. In the process of forming the pedagogical communication style of a university teacher, it is necessary to develop the teacher's pedagogical skills, personal qualities, communicative behavior habits, value orientations, and the motivation field of personality. The process of formation of the pedagogical communication style of the university teacher takes place under the influence of a number of factors. For example: the level of development of general psychology and pedagogic science; Opinions of the heads of higher educational institutions on the training and staffing of professors and teachers; the state of university education and universities' need for teachers with certain levels, profiles and preparatory qualifications; the level of development of the theory and practice of teacher education in the country; High-quality composition of teachers who prepare students for pedagogical activity in universities, etc. note that in some cases teachers try to solve problems themselves during interaction with students and only after failure turn to more experienced colleagues or management; In most cases, various difficulties in pedagogical communication between teachers are solved by trial and error; There are a number of contradictions in the formation of the pedagogical communication style of the university teacher: 1. the contradiction between the increasing demands for teacher training and the lowering of the level of scientific and pedagogical potential of universities; 2. the contradiction between the need for fundamental pedagogical training of teachers and the lack of scientific-theoretical bases for its organization; 3. the contradiction between the radical reform of the education system as a whole and the incomplete measures in the reconstruction of its most important subsystem - psychological-pedagogical retraining of teachers; 4. The contradiction between the integration of higher education into the multi-level educational structure adopted in the country and the invariant approach to the organization of teaching staff training, etc. The work of managing the process of formation of pedagogical communication style of a university teacher is based on special principles. 1. activity and initiative of teachers in the teaching process of the univ3. diagnostic - the teacher's actions are based on the results of observing the students' educational activities; 4. division of teaching material into organizational and content teaching units that are suitable for students' capabilities; 5. consideration of students' perceptual characteristics in the teaching process; 6. Using various forms of group and individual work; 7. The responsibility of teachers in the teaching process of the university; 8. Development of self-esteem, personal and cultural identity of teachers in the teaching process, etc. It defines the methods by which the university teacher can achieve the development of the most optimal style of pedagogical communication in the process of formation of the pedagogical communication style: 1. general didactic methods (lecture method; independent work method; discussion of teaching material in seminars, class-group and practical exercises; demonstration; exercises; research method and practical work method); 2. active methods (Socratic method, ("brainstorming"), analysis of specific situations, solving pedagogical problems, discussion of content,

FULL TEXTS BOOK

professional games, organizational and action games, learning by research, round table method, "intellectual exchange", etc.); 3. psychological training methods (exercises (debates, discussions), participation in classes, trial lectures, development of didactic materials, development of personal methods, development of pedagogical technologies). The aspect that reveals the objective difficulties of the pedagogical communication process is of great importance for the optimal course of the process of formation of the pedagogical communication style of the university teacher. Considering this aspect is important for the teacher's self-esteem. These difficulties are: 1. inability to communicate with students; 2. misunderstanding of the student's position; 3. difficulties in managing communication during training; 4. Lack of ability to build and rebuild relationships depending on pedagogical tasks; 5. Difficulties in conveying one's attitude to the presented educational material; 6. Difficulties in controlling one's emotions in communication. The structure of the university teacher's pedagogical communication style formation process consists of the dialectic unity of the following components: motivational component; stable personal experience; orientation in the conditions of the situation of pedagogical communication; non-verbal means of pedagogical communication; executive actions; control and evaluation of actions; activity correction.ersity; 2. Dialogic pedagogical communication, that is, cooperation with requirements.

Conclusion: The process of forming the pedagogical communication style of a university teacher is a contradictory and multi-factorial pedagogical process that develops the teacher's pedagogical skills, personal qualities, communicative behavior habits, value orientations, and the sphere of personal motivation. In the university, the teacher is the person who provides the conditions of pedagogical activity in the most adequate way. The analysis of higher schools shows that in the process of forming the pedagogical communication style of teachers, it is possible to form a pedagogically appropriate communication style that increases the efficiency of their teaching process. However, the formation of pedagogical communication style among university teachers today has not been fully reflected as a problem in scientific research. However, this is one of the most important issues in modern society. Because we already have a youth living dependent on various social networks and internet platforms, and they are more inclined to virtual communication. Therefore, effective pedagogical communication process in higher education institutions faces many obstacles. Attention should be paid to the formation of pedagogical communication style of university teachers. Serious steps should be taken in this direction. So, to improve the professionalism of university teachers, work should be done to organize improvement courses.

ABSTRACT
Translanguaging pedagogies have become an alternative pedagogy to the traditional bilingual education, emphasizing that emergent bilinguals possess a single, unified linguistic repertoire rather than two distinct language systems (Garcia & Wei, 2014). Consequently, teaching pedagogies should be revised to reflect this understanding. This meta-synthesis study aims to explore the how the implementation of translanguaging pedagogy at early childhood education affects children. To achieve this, twelve (N=12) peer-reviewed full-length articles published between 2014 and 2023 were included from a search of three electronic databases: Web of Science, ERIC, and SCOPUS. The synthesis of these articles revealed that the use of this bilingual pedagogy in both multilingual and monolingual preschool contexts have enabled teachers to design a more inclusive and conducive learning environment. Additionally, the studies provide some evidence for the development of children in different aspects. Specifically, translanguaging practices were found to enhance students' problem-solving strategies and metalinguistic awareness, enabled them to make cross-cultural comparisons, and increase their emotional development.
Key Words: Translanguaging, Bilingual Education, Multilingual Education, Meta-synthesis

INTRODUCTION

Translanguaging, as an emerging and alternative pedagogy for multilingual and bilingual education, refers to flexible instruction strategies where students and emergent bilinguals are asked to use their full linguistic repertoire to make meaning (Wei, 2011). Coined by Wales (1994, as cited in Baker, 2003) and later extended by Garcia (2009), the term 'translanguaging' emphasizes a bilingual education approach in which languages are integrated rather than kept separate. Within the context of early childhood education (ECE), it can be claimed that it has generally followed traditional approaches to English language learning, ignoring the importance of real-world interactions and language use in fostering exposure to the language to the point where children may pick it up gradually. On the other hand, translanguaging allows children to use of multiple languages in more authentic and meaningful contexts, which poses a challenge to the traditional language education in ECE. In terms of the potentials of translanguaging pedagogy in this context, Garcia, Johnson, and Seltzer (2017) suggest that it strengthens the home-school links, supports children's bilingual identity, and helps children comprehend academic contents better.

The purpose of this study is to explore and determine the impact of translanguaging as a pedagogical practice on emergent bilingual children at various pre-school contexts by following a qualitative meta-synthesis approach. The findings of this study can be used to increase clarity about how the teachers' use of translanguaging as a pedagogical possibility play a role in the development of children at early childhood education.

FULL TEXTS BOOK

METHODOLOGY

This study follows a qualitative meta-synthesis approach which aims to combine the results of twelve (n=12) individual translanguaging studies to draw a general picture about the effects of this pedagogy on preschoolers. As Rosenthal and DiMatteo (2001) state, meta-synthesis studies "allow researchers to arrive at conclusions that are more accurate and more credible than can be presented in any one primary study" (p. 61). A qualitative meta-synthesis approach was chosen for the present study as it allows for a comprehensive synthesis of qualitative findings of multiple research, giving a deeper understanding in what ways translanguaging pedagogy has effected emergent bilinguals at various bilingual preschool contexts. According to Levitt (2018), the synthesis of findings from qualitative studies:

'can assist researchers in meeting a variety of goals such as developing broadly-based theoretical understandings, cataloging sets of findings, developing measures, conducting comprehensive assessments of the state of a body of literature, forming principles to guide in-session practice, o examining the methods and methodologies employed within a field (p. 367).

In this sense, a qualitative meta-synthesis study comprises of some components which are the hypothesis suggested by researcher, the researcher's inclusion and exclusion criteria, a data collection process, analysis of the emerging themes, and a report on the findings (Borenstein et al., 2009; Levitt, 2018; Lipsey & Wilson, 2001).

Hypotheses

- The study hypotheses that the translanguaging pedagogies in these bilingual preschool settings affect emerging bilingual preschoolers positively because these pedagogies activate children's entire linguistic repertoire, creating a more supportive and inclusive learning environment.
- The study also hypotheses that the translanguaging pedagogies in early childhood years foster children's intercultural awareness because they encourage students to understand and appreciate diverse culture.
- Another hypothesis suggested by the study is that translanguaging practices also contribute to the preschoolers' identity construction because they affirm the children's culture coming from diverse ethnic background. In this sense, the researchers are interested in to see in what ways translanguaging practices have a role in shaping identity in early childhood years.

Eligibility Criteria

In parallel to the aim of this meta-synthesis study, search string was generated by the related key terms: TITLE-ABS-KEY ("translanguaging" OR "bilingual education") AND ("preschool" OR "pre-school" OR "kindergarten" OR "early childhood"). As for the databases for the query, Web of Science, The Education Resources Information Center (ERIC), and SCOPUS were chosen. Lastly, the pre-defined eligibility criteria determined the relevant studies for analysis. The following table shows the inclusion and exclusion criteria before starting to the investigation:

Table 1. Eligibility Criteria

Inclusion Criteria	Exclusion Criteria
● articles published in the last ten years	● articles published before 2014
● articles published in English	● articles published in other languages
● peer-reviewed full-length primary research articles	● secondary research articles including proceedings, unpublished dissertations, reviews, chapters, *etc*.
● translanguaging in preschool contexts	● translanguaging in other education levels
● emergent bilingual speakers	● non-emergent bilingual speakers

FULL TEXTS BOOK

After the process of eligibility criteria, the final twelve (n=12) studies are shown in the following table:

FINDINGS AND DISCUSSION

As shown in table 2, all but one of the twelve studies were conducted in the USA, which comes from the multicultural reality of this country. This linguistic and cultural diversity creates a rich environment for researchers to explore how translanguaging can be implemented and what outcomes it produces. The table also demonstrates that all studies followed a qualitative research design. Studies on translanguaging pedagogy are still a new area of research, especially when it comes to early childhood education. Qualitative research is a well-suited design for exploratory studies with the intention of gaining comprehensive insights into a phenomenon (Creswell, 2007). For this reason, to investigate how translanguaging is experienced in the classroom, the researchers probably employed qualitative methodologies.

As for the impacts of translanguaging pedagogy on the development of children at preschool period, the meta-synthesis analysis of the studies suggests that it contributes to children's cultural and bilingual identity constructs as translanguaging is a way to affirm the multiple languages and cultural backgrounds present in a child's life, fostering a sense of pride and confidence in their multilingual abilities (Alamillo, Yun & Bennet, 2017; Arreguin-Anderson, Salinas-Gonzales & Alanis, 2018; Bengochea & Gort, 2022; Bengochea, Sembiante & Gort, 2020; Escamilla, Alanis & Meier, 2023; Gort & Sembiante, 2015). For example, children were invited to tell their personal stories on their home lives by bringing some photos or drawings in the study of Escamilla, Alanis, and Meier (2023). The study suggests that these kinds of activities which allow emergent bilingual preschoolers to express their stories in their mother tongue create a sense of pride in their bilingual identities. Some further studies should be conducted to explore the long-term effects of such translanguaging practices on children's academic performance, social integration, and emotional well-being.

The impacts of translanguaging pedagogy on preschoolers were also discussed from cognitive perspectives in the reviewed articles. To illustrate, some articles indicate that translanguaging pedagogies were successful in encouraging young learners to intentionally compare syntactic, semantic, and phonological features across languages, which increases their metalinguistic awareness (e.g., Axelrod & Cole, 2018). Similarly, Dikilitaş, Bahrami & Erbakan (2023) state in their study that improving metalinguistic awareness is difficult at an early age because they are still in the process of

FULL TEXTS BOOK

developing their cognitive skills. However, they suggest that translanguaging practices enable emergent bilingual children to develop this skill.

The meta-synthesis analysis also shows that children develop a language-based agency as they are allowed to switch between the languages at preschool period. In this sense, it is claimed that emergent children benefit from flexibility in language switching because it makes them more strategic language users who can adapt their language to fit the situation and their interlocutors (e.g. Axelrod, 2014; Garrity, Aquino-Sterling & Day, 2015; Sembiante, Bengochea & Gort; 2020).

CONCLUSION

In conclusion, the meta-synthesis study of research on this subject reveals that preschoolers' development is significantly benefited by translanguaging pedagogy. Translanguaging practices support children's bilingual identity, their cognitive development, and their language-based agency. Overall, it can be suggested that translanguaging pedagogy is a useful strategy to nurture the holistic development of bilingual preschool children.

ABSTRACT

This study aims to investigate the structural, morphological, and luminescence properties of the SiO_2 compound, commonly known as sand, and its potential application in passive radiation dosimetry. SiO_2 powder samples were prepared in powder form and morphological characterization of the powder surfaces was conducted using Scanning Electron Microscope (SEM) analysis, revealing homogeneous structures at the micro surface level. The luminescence properties were examined using Thermoluminescence (TL) and Optically Stimulated Luminescence (OSL) methods. The results indicated that the luminescence signals were adequate for dosimetric purposes. Among the five TL peaks identified at 100°C, 200°C, 300°C, 400°C, and 500°C, the peaks at 100°C and 300°C were found to be responsible for the OSL signals. The reusability of the OSL signals, combined with a near-linear dose-response over a wide range, suggests that SiO_2 is a promising candidate for OSL dosimetry applications. These findings highlight the potential of SiO_2 materials for effective and reliable passive radiation dosimetry, offering a cost-effective and accessible option for radiation measurement and monitoring.

Keywords: Thermoluminescence, SiO_2, Passive Dosimetry, Radiation Measurements, Optically Stimulated Luminescence

INTRODUCTION

Using radiation-sensitive materials to measure the radiation dose exposure of people working with or exposed to radiation and to perform retrospective dose estimation after a nuclear or radiological emergency fall into the field of passive dosimetry and is a very common research subject. These types of materials are called dosimetric materials and are desirable to find easily, abundantly and cheaply. Especially in accident dosimetry, dose measurements from easily accessible samples will save significant time for security forces and accelerate the measures to be taken after the accident. Sand is a natural material that meets these conditions and is easily accessible. Although the natural composition of sand varies depending on environmental conditions, its main component, SiO_2, is very important to investigate using Thermoluminescence (TL) and Optically Stimulated Luminescence (OSL) methods in the fields of environmental dosimetry, retrospective dosimetry and dating. Revealing the luminescence identity of this material will also reveal its dosimetric properties.

In TL and OSL methods, the process begins with the valence electrons gaining energy after radiation exposure of the materials and trapping them in the defects in the material structure. An external excitation source is needed for the electrons to be released from the traps. In the TL method, luminescence is obtained as a result of heat stimulation, and in OSL, light stimulation. In a simple approach, information about the radiation dose can be obtained by measuring the luminescence efficiency (Bøtter-Jensen, McKeever, & Wintle, 2003; S. McKeever & Chen, 1997; S. W. S. McKeever, 2001; Yukihara & McKeever, 2011).

Although there are a few studies on the luminescence of SiO_2 in the literature, these generally include the luminescence properties of the new formation obtained as a result of doping the material with rare earth elements or transition metals in the laboratory environment (Barve, Patil, Moharil, Bhatt, & Kulkarni, 2016; Okada, Kasap, & Yanagida, 2016; Patil, Barve, Moharil, Kulkarni, & Bhatt, 2014;

FULL TEXTS BOOK

Wintle & Adamiec, 2017). Although the processing of natural sand minerals and their luminescence for dosimetric purposes have been carried out in a few studies (Afouxenidis et al., 2007; Aydaş & Aydın, 2015; Preusser et al., 2009), they generally focused on the TL properties of the material.
In this study, the morphological, TL and OSL properties of Sand (i.e. SiO_2) powders purchased from Sigma Aldrich were examined in detail and their trap structures were revealed. Moreover, some important dosimetric properties, dose response and reusability, were also studied.

MATERIAL AND METHODS

Sand Powders and Structure

In this study, white quartz (Sand, Silicon dioxide, SiO_2) with a particle size of 50 - 70 mesh, numbered CAS:14808-60-7, was purchased from Sigma-Aldrich. Morphological and luminescence measurements were carried out directly without exposing the samples to any heat treatment. The silicon atom is coordinated tetrahedrally with four oxygen atoms surrounding a central Si atom. In SiO2, each silicon atom is covalently bonded to four oxygen atoms, forming a three-dimensional network solid.

Morphological Analysis

The surface morphology and grain sizes of the SiO_2 powder materials were examined by the Scanning Electron Microscope (SEM) analysis. For this purpose, Zeiss Supra 55 FE-SEM (Field Emission Scanning Electron Microscope) was used. Micrographic images were obtained by FE-SEM with a spectral slit width of 1.5 nm at room temperature. The presented micrographic images were taken at 5000x direct magnifications, 20 kV, and 2.5 dot size.

Luminescence Techniques

Thermoluminescence (TL) and Optical Stimulated Luminescence (OSL) techniques, which are well-known passive dosimetry methods, were used to perform luminescence characterizations of the material. Irradiations were carried out using a ^{90}Sr-^{90}Y beta radiation source, and a bialkaline model 9235 QA photomultiplier tube (PMT) was used to obtain luminescence signals. Blue LED ($\lambda \sim 470$ nm) is used for Light Stimulation and the system is known as DA-20 model Risø TL/OSL reader system. Hoya U-340 nm filter was used for measurements in the UV region. In OSL measurements, SiO2 powders were irradiated with beta doses of 1 Gy and preheated at 120 °C for 10 seconds. OSL readings were generally made using 100-second blue light stimulations. TL measurements were made by heating 1 Gy irradiated samples from room temperature to 650 °C with a heating rate of 3 °C/s without preheating.

RESULTS AND DISCUSSIONS

Morphological Study

In order to investigate surface morphology of the sand powder samples, SEM micrograph was obtained and presented in Figure 1. In the figure, spherical particles with a homogeneous small size distribution were observed in the SEM photograph, and the average particle size was observed in the range of 300-500 nm. It is evident from the OSL signals that the homogeneous distribution of the surface has a positive effect on the luminescence efficiency (discussed later).

FULL TEXTS BOOK

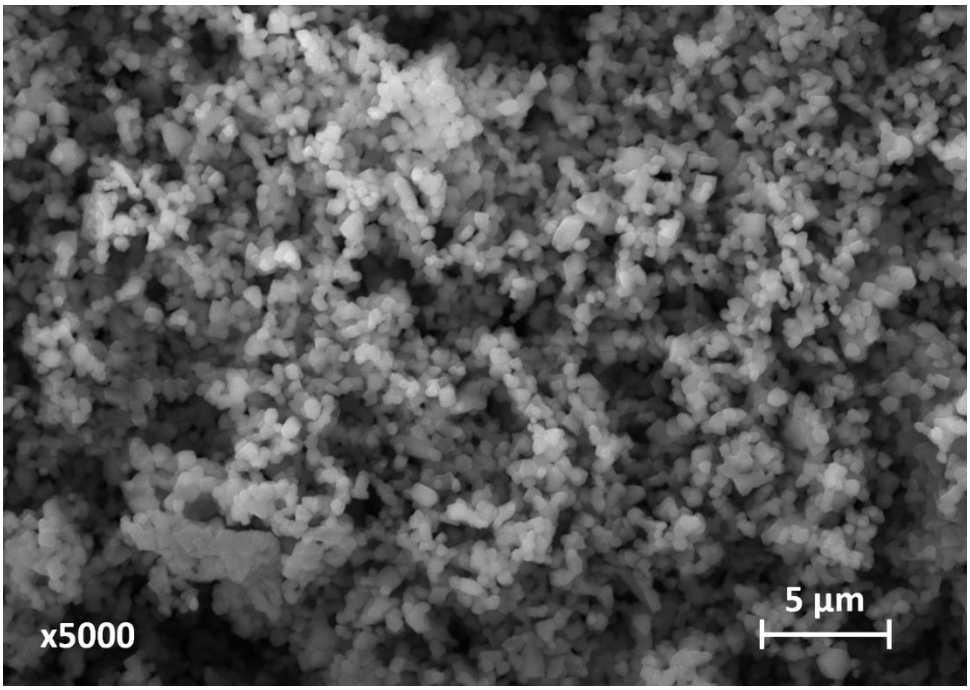

Figure 1. SEM photograph of SiO_2 powders at x5000 magnification.

Luminescence Study

Figure 2 shows the simple TL glow curve obtained by heating samples exposed to 1 Gy of beta radiation to 650 °C. As can be seen from the figure, while the TL glow curve of SiO_2 is dominated by a very sensitive low temperature peak, there are 4 different trap regions located around 75, 175, 350 and 475 °C in the TL glow curve drawn on the logarithmic axis given in the inset figure. In general terms, it can be said that TL trap structures are suitable for dosimetric use in terms of sensitivity and temperature. It should be noted that the results are similar to the findings in the literature.

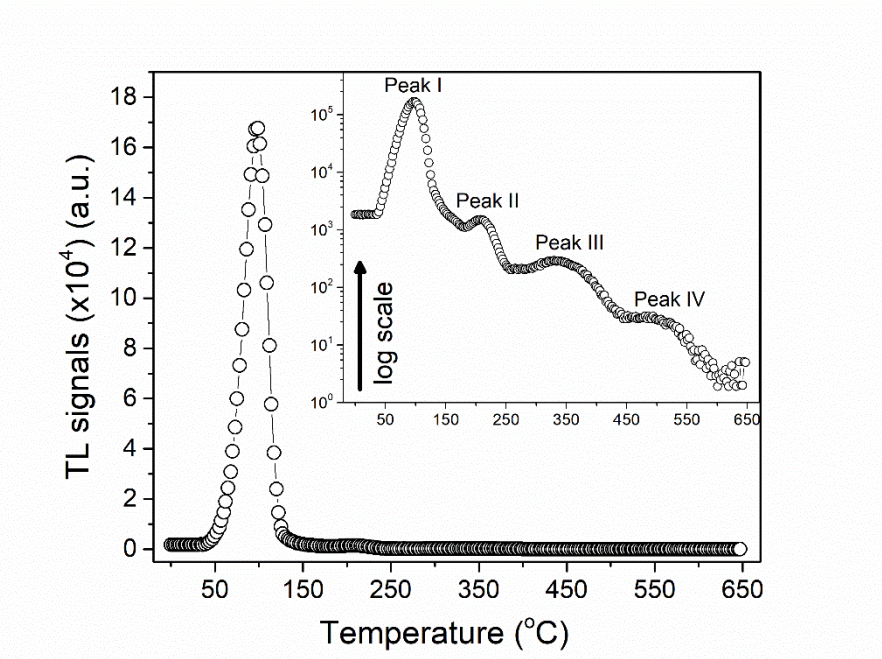

Figure 2. TL glow curve of SiO_2 powders previously irradiated with 1 Gy beta-radiation. The inset figure represents a logarithmic representation of the TL sensitivity scale for better representation of deep traps.

FULL TEXTS BOOK

On the other hand, to check whether the OSL signals of the sample were suitable for dosimetric use, OSL signals were obtained with 100 s of blue light LED stimulation after a radiation dose of 1 Gy and are presented in Figure 3. As can be seen from the figure, OSL signals fall to the background level and are exhausted in approximately 2-3 seconds. This indicates that OSL signals generally originate from shallow traps that fall in the low temperature region of the TL glow curve and have low lifetimes.

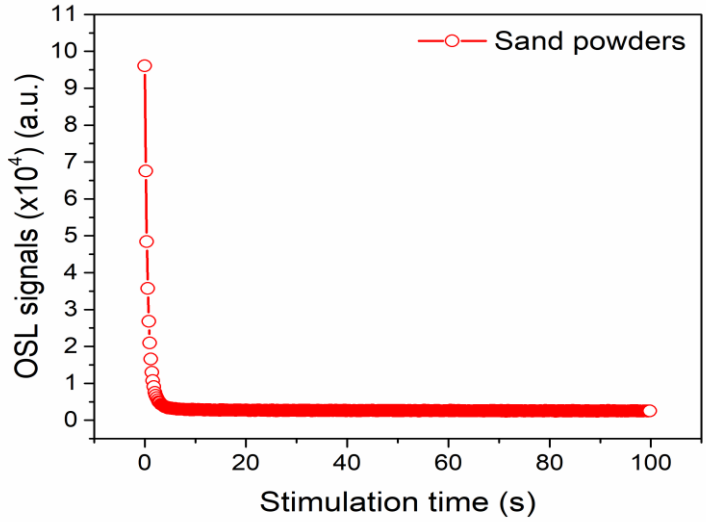

Figure 3. OSL decay curve of SiO_2 powders previously irradiated with 1 Gy beta-radiation.

In order to see this closely, OSL signals were well fitted to the combination of two time-decreasing exponential components based on the first-order kinetics approach in the Origin program and are presented in Figure 4. This Fit method was given with model equations in our previous studies (Altunal, Guckan, & Yegingil, 2023; Altunal, Jain, Hayat, Guckan, & Yegingil, 2022). As can be seen from the figure, OSL signals are well represented by two-time decay functions, and it can be concluded that there are two trap regions responsible for OSL traps in SiO_2. To prove this, TL after OSL and Step annealing experiments were carried out, which provide detailed information about the relationship between TL and OSL traps.

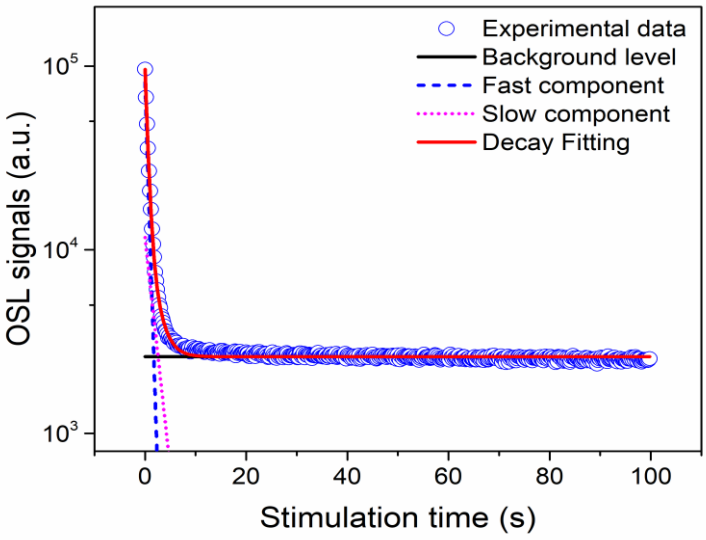

Figure 4. OSL decay components of SiO_2 powders previously irradiated with 1 Gy beta-radiation.

FULL TEXTS BOOK

To take a closer look at the relationship between TL and OSL traps, after taking the TL curves (Direct TL) of the SiO_2 samples after a 1 Gy radiation dose, the samples were reset and exposed to the same dose again. Then, the sample was exposed to 100 s of blue light stimulation and TL curves were obtained again after OSL stimulation (TL after OSL). The aim here is to reveal the TL trap areas affected by light. Basically, OSL traps are emptied with OSL stimulation and the remaining TL signals are examined. Figure 5 shows the TL glow curve obtained from the samples, the "TL after OSL curve" and the Bleached TL (i.e. Residual TL) curve obtained by calculating the difference between these two curves. As can be seen from the figure, each peak observed in the residual TL curve shows the TL trap regions affected by light, and three peaks are observed around 75, 175 and 325 °C. These three peaks can be considered as trap regions responsible for OSL signals in SiO2, but to prove this, OSL trap levels affected by temperature must also be examined in detail. In this context, OSL signals were obtained from samples exposed to preheating conditions at different temperatures after a 1 Gy radiation dose. Preheating conditions were carried out in 10-degree increments from 50 °C to 200 °C, and in 20 °C increments from 200 °C to 560 °C, and OSL signals were obtained after each preheating process. In Figure 6, the step annealing curve obtained from SiO_2 samples and the residual curve obtained in the TL after OSL experiment are presented. As can be seen from the figure, OSL signals initially decreased sharply up to 100 °C, then remained stable until approximately 270 °C, and after this temperature, they decreased again and faded at 350 °C. While the first decrease occurred with the discharge of the 75 °C TL peak, called the shallow trap, the second decrease occurred with the discharge of the 350 °C TL traps. The results proved that 75 °C and 350 °C TL traps were responsible for the OSL traps of SiO_2, and TL and OSL traps had the same recombination process.

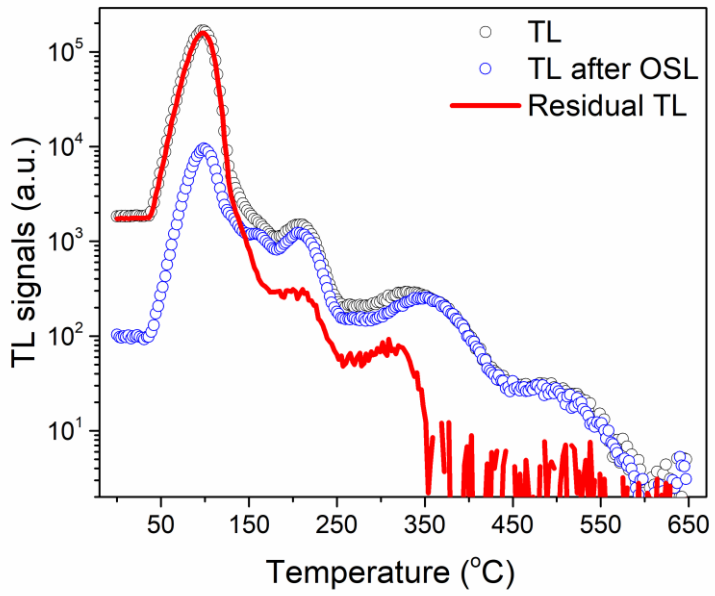

Figure 5. TL, TL after OSL, and Residual TL curves of the SiO2 powder samples after 1 Gy irradiation.

FULL TEXTS BOOK

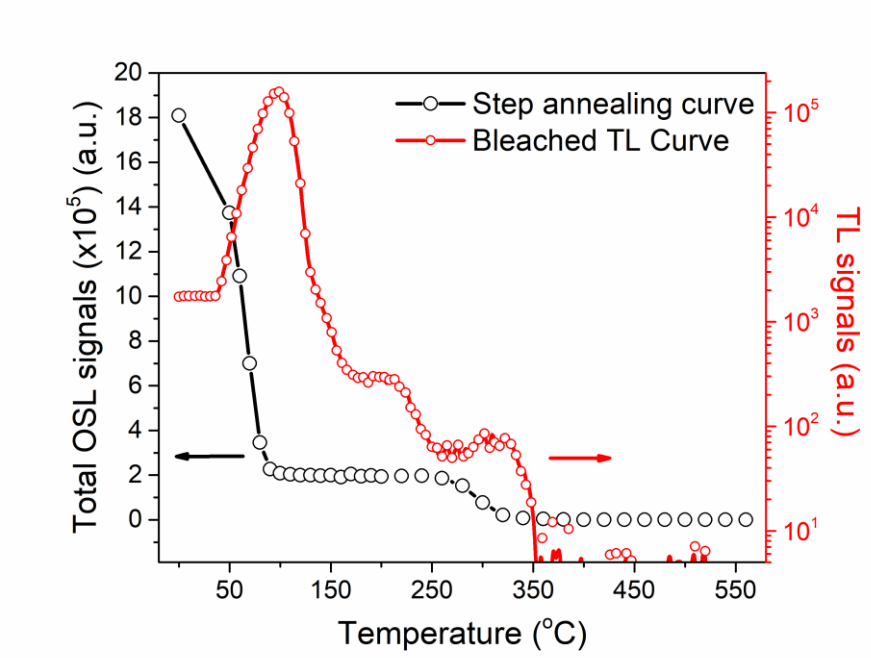

Figure 6. Step annealing and Residual TL curves of the SiO2 powder samples after 1 Gy irradiation. Arrows represent axes.

Dosimetric Study

In order to take a closer look at whether the OSL signals obtained from the material are suitable for dosimetric use, reusability and dose-response experiments, which are well-known dosimetric methods, were carried out. In order for luminescence signals of luminescent emitting materials to be used in dosimetric applications, it is desirable for the signals to exhibit similar sensitivity under repeated conditions. In this study, OSL signals were obtained from three fresh samples after a 1 Gy radiation dose and a 10 s preheating treatment at 120 °C. After each measurement, possible residual doses were erased with TL readings, and OSL readings were performed in 10 repeating experimental cycles. The total values of the OSL signals obtained as a result of the experiments were calculated and the deviations compared to the first reading were examined. Figure 7 shows the variation of total OSL signals across experimental cycles. As can be seen from the figure, OSL signals have deviated from the acceptable limits of maximum + 4.1% compared to the first reading.

FULL TEXTS BOOK

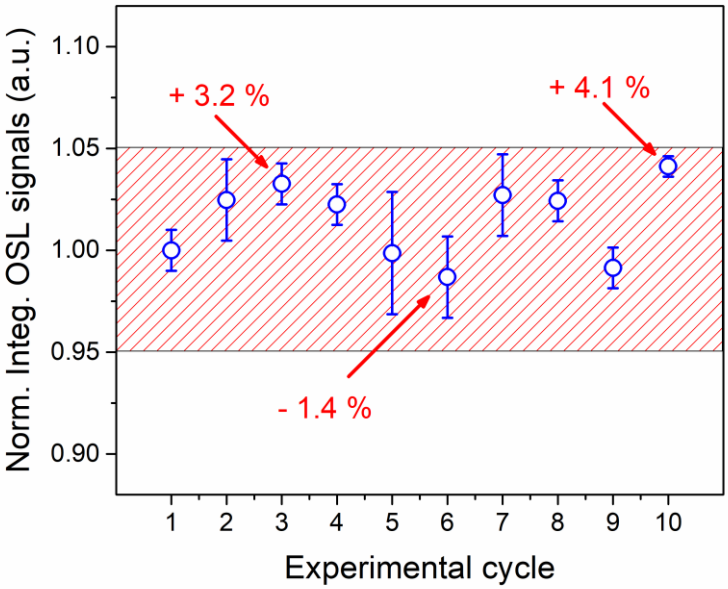

Figure 7. Total OSL signal variation against the repeated experimental cycles.

On the other hand, having a linear dose response of luminescence signals is important for radiation dose calculations and application areas. For this reason, three fresh samples were taken and OSL signals were examined at increasing doses. After irradiation, preheating was selected for 10 s at 120 °C, while OSL signals were obtained with 50 s of light stimulation. In Figure 8, the total OSL signals obtained between 0.1 Gy and 20 Gy were well fitted to a linear function, and the slope value was found to be 0.941. The fact that the slope value is below 1 indicates that the material exhibits sublinear characteristics in this range.

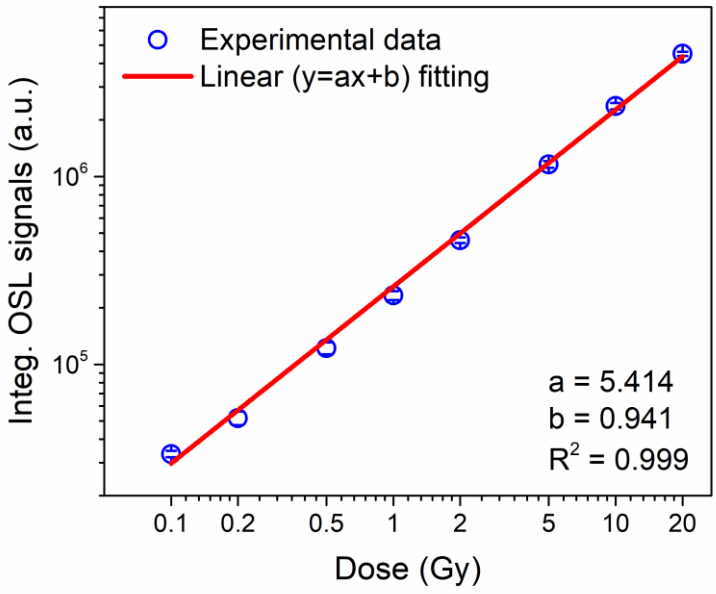

Figure 8. Total OSL signal variation against increasing radiation doses.

FULL TEXTS BOOK

CONCLUSION

In this study, the morphological, thermoluminescence (TL), optically stimulated luminescence (OSL), and dosimetric properties of SiO_2 (sand), a readily accessible material for accident dosimetry, were comprehensively examined. The results indicate that SiO_2 holds potential for use in accident dosimetry; however, it is premature to make definitive recommendations at this stage. It is essential that OSL signals undergo further rigorous dosimetric evaluation, including studies on signal fading, light effects, and energy response. The current research highlights the promising dosimetric characteristics of SiO_2's OSL signals, warranting detailed and thorough analysis.

MODEL FOR THE PREDİCTİON OF FEDERAL GOVERNMENT'S EXPENDITURE AND REVENUE IN NIGERIA

[1]Abdullahi, A., [2]Jamilu Hussaini and [1]Babayemi, A. W.

ABSTRACT

This project analyzed the financial data of the Nigerian Federal Government between 2000 and 2020, focusing on the relationship between revenue and expenditure. It found a significant connection, with revenue playing a crucial role in influencing government spending. The study revealed that, on average, government expenditure consistently exceeded revenue during this period, a critical insight for budgeting and financial planning. A regression analysis provided a statistical equation demonstrating the positive impact of total revenue on total expenditure, highlighting the importance of revenue management. Moreover, there was a moderate positive correlation (0.60) between expenditure and revenue, indicating that as spending increased, revenue tended to rise as well. The trend of rising expenditure, sometimes surpassing revenue, could be attributed to financial challenges and unexpected events like the 2019-2021 pandemic. Recommendations included stricter budgeting, diversified revenue sources, and the establishment of a contingency fund to align government finances and enhance economic stability.

Keywords: Total expenditure, Economic stability and Financial planning.

1.0 Introduction

The connection between government spending and revenue is a crucial aspect of a nation's financial well-being. Nigeria's significance in Africa's economic landscape adds intrigue to this relationship. This project, "Analyzing Federal Government Expenditure and Revenue in Nigeria (2000-2020) using Simple Linear Regression," aims to unveil insights into Nigeria's economic journey over two decades. Adeleke and Salawu (2017) research underscores the importance of looking closely at sectors and revenue sources, essential for understanding Nigeria's financial complexities. However, research conducted by Olofin and Emmanuel (2016) highlighted how government spending affects Nigeria's economic growth, providing insights into effective fiscal policies. Meanwhile Anyanwu and Erhijakpor (2014) accentuates the relevance of understanding financial dynamics within African contexts, which aligns with the focus of this project. Their study provides insights into the impact of international remittances on poverty and emphasizes the importance of contextual factors. This echoes the significance of studying government expenditure and revenue in Nigeria's unique fiscal landscape to gain comprehensive insights into economic dynamics. This study's importance lies in its potential to inform policies, guide economists, and contribute to fiscal policy discussions. By meticulously analyzing Nigeria's government spending and revenue from 2000 to 2020, the research aims to shed light on the connections between these aspects, unveiling factors that have shaped Nigeria's fiscal performance.

2.0 Literature Review

The relationship between a government's expenditure and revenue is a crucial area of study in economics and public finance. The application of simple linear regression in analyzing the connection between the Federal Government's expenditure and revenue in Nigeria from 2000 to 2020 offers valuable insights into fiscal policies and economic stability. One of the earliest studies in this context is the work of Iyoha and Oriakhi (2004), who examined the relationship between government expenditure and revenue in Nigeria using time series data. Their findings indicated a positive correlation between these two variables, suggesting that as government revenue increased, expenditure also tended to rise. However, the study also highlighted the need for efficient fiscal management to ensure sustainable economic

FULL TEXTS BOOK

growth. In a similar vein, Agbaeze and Nwani (2016) explored the determinants of Nigeria's government revenue and expenditure dynamics. Their research incorporated variables such as oil prices, exchange rates, and inflation. The study utilized a regression model to analyze the impact of these factors on government finances. The findings emphasized the vulnerability of Nigeria's economy to fluctuations in global oil prices, underscoring the importance of diversification to reduce dependency on oil revenue. An examination of fiscal discipline and its influence on the relationship between government expenditure and revenue was conducted by Ogbulu and Okafor (2018). Their study delved into the period from 1980 to 2016 and revealed that strict adherence to fiscal discipline was essential for maintaining a sustainable balance between expenditure and revenue. The study advocated for effective budgetary controls and transparent financial management to ensure optimal allocation of resources. Furthermore, the study by Olabisi and Omisakin (2019) assessed the impact of government revenue on economic growth in Nigeria. While not directly focused on the linear regression of expenditure and revenue, their findings showcased the significant role of revenue generation in stimulating economic development. The study highlighted the importance of efficient revenue collection mechanisms to support government expenditure on critical sectors like infrastructure and social services.

3.0 Methodology

3.1 Source of data

Secondary data was used in this study. The relevant data for this study have been obtained from the Central Bank of Nigeria Statistical Bulletins of various years, Central Bank of Nigeria (CBN) Annual Report and Statement of Accounts.

3.2 Simple linear regression

The simple linear regression model involves a single predictor variable and is written as

$$Y = \beta_0 + \beta_1 X_1 + \varepsilon \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (3.1)$$

Where Y is the response, X is the predictor variable, β_0 and β_1 are unknown parameters, and ε is an error term. The model parameters or regression coefficients β_0 and β_1 have a physical interpretation as the intercept and slope of a straight line, respectively.

3.3 Measure of linear correlation

For a quantitative measurement of the degree of correlation between the variable say X and Y we use a parameter which is called the correlation coefficient donated by Greek letter ρ. For which X and Y will be represented as ρ_{xy} and its sample estimate is r_{xy} .

$$r = \frac{n\sum xy - (\sum x)(\sum y)}{\sqrt{n\sum x^2 - (\sum x)^2}\sqrt{n\sum y^2 - (\sum y)^2}} = \frac{S_{xy}}{\sqrt{S_{xx}}\sqrt{S_{yy}}} \quad \ldots\ldots\ldots\ldots\ldots (3.15)$$

when $X_1 = \bar{X}$ and $Y_1 = \bar{Y}$ the formula can be computed as

$$r_{(x,y)} = \frac{\sum_{i=1}^{n} x_i y_i}{\sqrt{\sum_{i=1}^{n} x_i^2}\sqrt{\sum_{i=1}^{n} y_i^2}} \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (3.16)$$

3.4 Coefficient of multiple determination (R^2)

The coefficient of multiple determinations is similar to the coefficient of determination used in the case of simple linear regression. It is defined as:

$$R^2 = 1 - \frac{SS_E}{SS_T} \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (3.21)$$

FULL TEXTS BOOK

R^2 Indicates the amount of total variability explained by the regression model. The positive square root of R^2 is called the multiple correlation coefficient and measures the linear association between Y and the predictor variables, $x_1, x_2, \ldots, x_k$.

3.5 Discussion of the result

Table 3.1 Descriptive Statistics

	Minimum	Maximum	Mean	Std. Dev	Variance
Total Expenditure	1731.84	11116.85	6732.52	3100.73	9614496.80
Total Revenue	701.06	9714.84	3895.70	2421.94	5865773.85

Table 3.1 Summarized key financial statistics for Total Expenditure and Total Revenue. It revealed substantial variability in both metrics, with expenditure exceeding revenue on average. These insights are vital for budgeting, financial planning, and risk assessment.

Table 3.2 Results of Computation and Significance Test of Individual Regression Parameters.

Model	B	Std. Error	t	$p-value$
Constant	2882.427	850.774	3.388	.003
Total Revenue	.988	.187	5.293	.000

Table 3.2 presented the estimates of regression parameters using ordinary least squares method. The result reveled that Total Revenue's coefficient (0.988) is statistically significant ($p < 0.05$). however, the results suggested that Total Revenue has a positive and significant impact on the Total Expenditure. The estimate regression equation can therefore be fitted as follows.

$$Y(\text{Total Expenditure}) = 2882.427 + 0.988(\text{Total Revenue})$$

Table 3.3 Results of Computation of Simple Correlation Coefficients and Coefficient of Determination Between the Total Expenditure and Total Revenue

		Total Expenditure	Total Revenue	R^2
Total Expenditure	Pearson Correlation	1		
	Sig. (2-tailed)			0.60
Total Revenue	Pearson Correlation	0.772	1	
	Sig. (2-tailed)	0.000		

The table displays correlation coefficients between Total Expenditure and Total Revenue. It reveals a moderate positive correlation (0.60), indicating that as Total Expenditure increases, Total Revenue tends to increase as well.

FULL TEXTS BOOK

Figure 3.1 Trend of Total Expenditure and Total Revenue in Nigeria from 2000 to 2020.

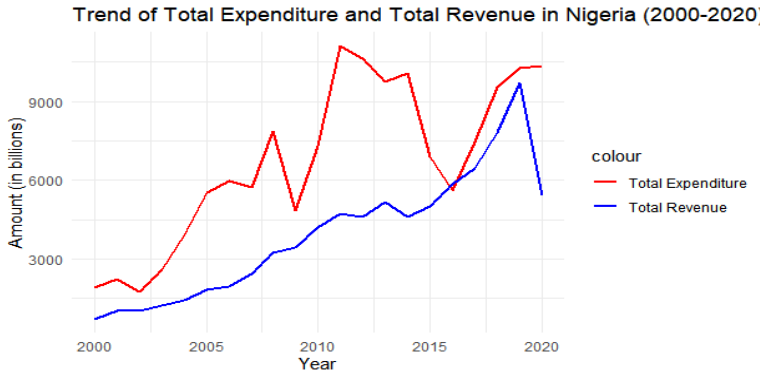

Figure 3.1 shows the trend of total expenditure and total revenue in Nigeria from 2000 to 2020. The trend indicated that spending increased significantly after 2010, sometimes surpassing income, suggesting financial difficulties and responses to global events

4.0 Conclusion

This project investigated the relationship between the Federal Government's expenditure and revenue in Nigeria over the period from 2000 to 2020. The study revealed that there is significant variability, with expenditures consistently exceeding revenue on average. These statistics are essential for budgeting, financial planning, and risk assessment. The regression analysis reveals the importance of total revenue, as it has a statistically significant positive impact on total expenditure, as indicated by the regression equation provided. Additionally, a moderate positive correlation of 0.60 is observed between total expenditure and total revenue, suggesting that as expenditure increases, revenue tends to rise as well. Over the years, there has been a noticeable trend of increasing expenditure, occasionally surpassing revenue, possibly due to financial challenges and the 2019, 2020 and 2021 pandemic. Moreso, the estimated regression equation can therefore be fitted as: $Y(\text{Total Expenditure}) = 2882.427 + 0.988(\text{Total Revenue})$.

MOTİVATİON OF FOREİGN LANGUAGE ADULT LEARNERS OF TODAY

Dr. Vjollca Tabaku Hoxha
Department of English Language, Faculty of Foreign Languages
University of Tirana, Albania

ABSTRACT
The way we live, work and learn has been drastically transformed over the past years. Technology and the new inventions have influenced our lives and this ever-changing globalizing world in which we live. Socio-economic factors and health problems offer new challenges. All these have had an impact on learners and we, professional educators have noticed that learners of today have changed. In a time when learning languages is no longer only for the privileged, but essential for all, they seem less focused, more stressed and less motivated. Why do our students seem less motivated? How can educators keep their motivation high? What do we have to keep in focus and change in the way we deliver learning of foreign languages in order to motivate them more and longer? In this study we will try to answer these questions and provide insights into improving learners' motivation in this 21st century.
Key words: motivation, adult learner, lack of motivation, foreign language learners, 21st century

1. Introduction

Life in the 21st century has brought lots of challenges for us. The way we live, work and learn has been drastically transformed over the past years. Having lots of insecurities, our lives are characterized by fear of the future. Year 2024 has started "against a backdrop of unprecedented devastation, division, and instability as 27 regions experience massive violence and political insecurity"[2] War in Ukraine started two years ago, in early 2022 following Russia's annexation of Crimea in early 2014. And ever since the world has been under eminent threat of a nuclear war. After that the Palestinian militant group Hamas launched a surprise land, sea, and air attack on Israel on 7 October, 2023 which led to Israel declaring war on the Gaza Strip. "The world's eyes are again sharply focused on what might come next."[3]

Climate change is another concern we are facing that has a tremendous effect on our lives and our economies. What scientists had long predicted is now happening: we are facing intense heat waves and temperatures will continue to increase due to human-made greenhouse gases. High temperatures are causing glaciers to melt, sea level to rise, periods of draughts, wildfires and extreme rainfall. "2023 experienced extreme weather conditions, including the hottest summer on record since 1880 leading to devastating wildfires, floods, and draughts worldwide. These events have direct economic impacts, such damage to infrastructure, agriculture, and livelihoods. Studies have predicted substantial losses to the global economy due to climate change."[4]

World economy in its turn goes on facing multiple crises. "Tight financial conditions also pose increasing risks to global trade and industrial production."[5] Global GDP growth is expected to slow down to 2.4% in 2024 from 2.7 % on 2023. While global inflation has been a concern of crucial importance over the past two years. All world's countries, but especially developing economies are still

FULL TEXTS BOOK

fighting to recover from losses caused by the Covid-19 pandemic, many of which are facing with high debt and slowdown in investment growth.

Apart from economic consequences the Covid-19 pandemic has had shocking health and social consequences as well. People have been suffering from the illness and loss of life of their dear ones. Social distancing measures and lockdowns have had a great impact on individuals, families, and businesses. Vaccination was found from a study of more than 99 million people from different countries to have side effects. There were links between Pfizer and Modena vaccines and the rare side effects of myocarditis and pericarditis. While Guillain-Barré syndrome and cerebral venous sinus thrombosis are rare side effects linked to AstraZeneca, together with acute disseminated encephalomyelitis.[6]

Technology and the new inventions have influenced our lives and this ever-changing globalizing world in which we live. Apart from all the positive effects people are also experiencing some negative emotions connected with these inventions. From the 1980s we have had "computerphobia", "computer anxiety" and "technostress". Now with the rapid growth of AI technology people are concerned about the fact how it will influence their career, privacy or their safety. Some are even experiencing what is called AI-nxiety, feelings of uncertainty about AI's potential.[7]

All these issues mentioned above have had an impact on learners and professional educators have noticed that learners of today have changed. In a time when learning languages is no longer only for the privileged, but essential for all, they seem less focused, more stressed and less motivated.

2. Literature Review

"Knowledge is the theoretical paradigm, the what to do and the why. Skill is the how to do. And desire is the motivation, the want to do."[8] Motivation is the driving force of every human activity. It is what makes us to get up to start the day and continue throughout it. And it is one of the most important factors that determines our success in life, in school or when learning new things. "Without sufficient motivation, even individuals with the most remarkable abilities cannot accomplish long-term goals, and neither are appropriate curricula and good teaching enough on their own to ensure student achievement."[9] However it is difficult to find an agreed definition of what motivation is. The very fact that we in essence are trying to explain why humans behave as they do makes it complicated because different psychological views on human behavior are connected with a different theory of motivation. And when considering motivation in foreign language learning it becomes more complicated due to the nature and roles of language itself.[10] According to different theories of learning, motivation is seen differently: behaviorists consider motivation as the anticipation of reward and our acts are seen as a response to external factors; from a cognitive perspective motivation is influenced by underlying needs (need for exploration, manipulation, activity, stimulation, knowledge and ego enhancement[11]) or drives or forces such as instinct or will; constructivists say each person is motivated differently and acts uniquely with his actions being influenced by the cultural and social context in which they happen.[12] Whereas current cognitive approaches regard motivation as individual's thoughts, beliefs and emotions

FULL TEXTS BOOK

that are transformed into action. Dörnyei argues that none of the above theories could provide a complete definition of motivation which he himself sees as "a process whereby a certain amount of investigation force arises, initiates action, and persists as long as no other force comes into play to weaken it and thereby terminate action, or until the planned outcome has been reached."[13]

Rod Ellis on the other hand tells us that it is not clear how motivation affects learning and we do not know if it is motivation that produces successful learning, or successful learning increases motivation.[14]

In social psychology two theories prevail: the theory of reasoned action by Ajzen and Fishbein (1980) and the theory of planned behavior by Ajzen (1988). In the first one the actions of a person are driven by his/her intention to perform a particular behavior and the latter is connected with how the person perceives the social pressure exerted on him/her to perform the behavior at issue. Whereas in motivational psychology we find three influential theories: expectancy-value theories, goal theories and self-determination theory. Expectancy-value theories maintain that motivation to perform various tasks derives from individual's expectancy of success of a given task and the value that he/she connects to success in that task. According to goal theories it is the goal that leads to action. But goals have to be possible and important so as to commit people to action. And self-determination theory maintains that the action of engaging in an activity with the desire to do so and full agreement is crucial to intrinsic motivation.[15]

3. Students' motivation

Motivation is a multifaceted factor and there is no theory available to cover it in its total complexity. In an unpredictable world, uncertainty can feel overwhelming and this can lead to confusion, anxiety or lack of motivation. As educators we need to change our ways of teaching and behaving in order to fuel their motivation in a world full of concerns and distractions. We have to shift into the new 21st century holistic educator. Such an educator needs to have knowledge on professional coaching, neuroscience, heart science, neuroeducation, emotional intelligence, psychology, language and communication and the science of empathy and compassion.

Why do our students seem less motivated? How can educators keep their motivation high? What do we have to keep in focus and change in the way we deliver learning of foreign languages in order to motivate them more and longer?

3.1. Knowledge on the brain

Our brain is very important; it is the hardware of our very essence as human beings. The way our brain works dictates our well-being. Thus, we can start with this very important information with our students. We have to explain to them that "your brain patterns help you (or hurt you) with your marriage, parenting, skills, work, and religious beliefs, along with your experiences of pleasure and pain."[16] Some of the problems such as being anxious, depressed, prone to anger, having difficulties to concentrate or being easily distracted are not always psychological. Research has shown that they are related to the physiology of the brain and that physiology can be changed. These studies have been made possible by the use of SPECT (single photon emission computed tomography) and information from research has shown that without optimal brain function it is difficult to be successful in any aspect of life, schooling included. Our brain patterns influence if we will fail in school or have the ambition to reach our goals.

[15] Dörnyei, Z. Conceptualizing motivation in Foreign Language Learning. Language Learning/Volume 31/Issue 03/July 1998, pp 117-135

[16] Amen, G., A. (2000) Change your brain change your life, New York: Three Rivers Press

The part of the brain that modulates motivation (as well as sets the tone of the mind, stores highly charged emotional memories, promotes bonding, processes the sense of smell, etc.) is the deep limbic system. It is this system that makes us get out of bed in the morning and get going through the day. When deep limbic system is less active, we have a general positive and hopeful state of mind. When it is overactive, negativity predominates and we experience a lowered motivation and drive. The limbic system is where our emotions are stored and the emotional tone of our mind is determined based on the sum of our positive or negative experience. Sleep and appetite are also controlled in this area. Thus, in order to have a positive outlook on the world, feel good and be motivated we have to take care of our limbic system.

3.2. Languages and the brain

Information that might motivate learners is knowing that learning languages helps keeping the brain healthy. With brain degenerative illnesses being increased in incidence this is very beneficial. Studies have found out that bilingualism is linked to an increase of the gray matter density in certain areas of the brain and this was bigger in learners who started earlier (before the age of five) compared to those who started late in their lives. Learning languages is found to be connected to "changes in cortical thickness in those brain areas linked to language, as well as changes in the architecture of the white matter tracts that interconnect them."[17] These changes happen in adults as well, even if they trained in language learning for shorter periods of time. However, once they stopped learning the brain returned to its previous state. Learning a second language has also neuroprotective effects and may reduce the risk of Alzheimer's disease and other neurodegenerative conditions even when learning happens later in life. Another benefit that comes from learning languages is that they exercise executive functions such as reasoning, problem solving, task switching because bilingualism requires switching from one language to another all the time.[18] Whereas Patsy Lighbrown and Nina Spade refer to other studies to assert that "developmental psychologists have found convincing evidence that bilingualism can have positive effects on abilities that are related to academic success, such as metalingustic awareness."[19]

3.3. Neuroscience

"Current neuroscientific theory tells us that the brain is organized to reflect everything we know in our environment. All the information we have been exposed to throughout our lives, in the form of knowledge and experiences, is stored in the brain's synaptic connections."[20] But neuroscience has also proven that we can change our brain (which means our behaviors, attitudes, and beliefs) just by thinking in a different way.[21] "Through mental rehearsal (repeatedly imagining performing an action), the circuits in the brain can recognize themselves to reflect our objectives. We can make our thoughts so real that the brain changes to look like the event has already become a physical reality. We can change it to be ahead of any actual experience in our external world."[22] This is information we need to know and transmit to our students if they appear unmotivated because of prior experience. Thus, student's prior experience of learning in general and that of learning languages is stored in their brains and in their bodies (in the form of emotions and feelings). If this memory is not a positive one due to different factors, such as material overload, teacher's inexperience etc. and they feel unmotivated, we have to work with these beliefs and make students rewire their brains. They have to think and feel in a different way.

FULL TEXTS BOOK

Neuroscience can be incorporated in the learning process in different ways, but enhancing metacognition is what is connected directly to motivation. Paling mentions a study of the 2019 where teaching metacognition at schools "involved self-regulated learning, thinking skills and learning to learn and benefitted primary to university students as well as disadvantaged and struggling learners. The results demonstrated better performance, improved outcomes and a positive motivation cycle – "greater motivation leads to improved metacognition which leads to greater motivation"."[23]

It seems like today we have learners with busy brains. Technology is greatly contributing to keeping our brains busy; we are always reachable through phones, always influenced by the beeping sound of a message or notification. Educators strive to win and keep their attention as phones are kept near even during classes. Apart from that learners today live in a world where everything is instant or ready-made and we want instant fixes like our communicative technology. But neuroscience equips us with the knowledge that the brain learns through creation of new pathways and repetition which helps consolidate those pathways over time.[24]

3.4. Neurolanguage coaching

Considering all the turmoil in the world, all the insecurities, fear and uncertainty people are now living in stress. When faced with the profusion and confusion of stimuli that the external world causes, we retreat into survival mode and produce the chemicals of stress. Those stress reactions act like disruptors for the brain and scramble the brain's signals.[25] Apart from stress in the outer world, learners face stress in the classroom as well. The same process happens, the same chemicals of stress are produced and the learner puts himself in a "fight or flight mode". This information is what neurolanguage coaching is based on. "Neurolanguage coaching is the efficient and fast transfer of language knowledge and skills from the Language Coach to the Language Coachee with sustainable effects facilitated by brain-based coaching and coaching principles and neuroscience"[26]

Studies say that: teachers can motivate students into the lesson by making the right remarks about the forthcoming activities at the opening stages of the lesson; varying activities, tasks, and materials increases students' interest levels instead of routines which decrease attention and motivation[27]; goals and goal setting helps student's motivation to achieve long-term goals by focusing on short-term goals, easy to achieve so as they are motivated to achieve long-term goals; the learning environment has to be inspiring and decorated with visual materials, use of music, position of furniture so as to be motivating.[28]

Now, this is what exactly neurolanguage coaching does: the teaching session is opened with a set of questions where you must discover as much as possible about the learner and design a unique roadmap. Empowered with the individual's characteristics the coach then sets up the goals, activities, and the way of learning. Based on the belief that not two brains are the same and that our brains change throughout our lifetime through experience, the neuro-educators assist the learners to discover how their brains like to learn.[29] "Coaching conversations leave clients invigorated, inspired, and ready for action."[30]

Motivation is a very important element in neurolanguage coaching. In this approach the learner is helped

FULL TEXTS BOOK

to connect with their inner motivation and keep it high from the beginning to the end, assisting the learner in their own independent learning which in turn leads them to faster and successful benefits.[31]
"Physiological research has demonstrated that when people find their own goals, they are more likely to achieve them. That is the essence of coaching."[32]

3.5. Holistic education

Our educational model is now moving from a scientific-industrial paradigm to a paradigm that works based on the holistic vision. In the holistic vision the reality is comprehended as a function of an undivided whole, it is not fragmented. Their vision is based on the fact that everything is interconnected and "we are united with all the others and with the non-human forms surrounding us in a complex network of life."[33] Among a lot of beneficial knowledge connected to education being revised in this holistic approach, (such as children cannot learn on their own and as a result teachers should assume a leading role, deciding what and how children should learn- leading to passive human beings; or all children learn in the same way and same pace which kills the child's individuality and creative differences) we can distinguish comparison which "destroys the love of learning"[34] In holistic education comparison is not practiced as a concept with the purpose of creating a culture where everyone is a winner.[35]
Students seem to be less motivated when they are ridiculed for their mistakes, when their performance goes unnoticed, when they are weary of being compared or when they are over preoccupied with personal problems.

3.6. Working with yourself

We have to show interest for our students. As Adler has said "It is the individual who is not interested in his fellow men who has the greatest difficulties in life and provides the greatest injury to others."[36] If you want to be successful with people, you have to be interested in people. If you want them to love your classes, if you want them to enjoy coming to your classes, you have to have a genuine interest in them. You have to love your audience; you have to love your students. You can "win the attention and time and cooperation of …people by becoming genuinely interested in them."[37]
Teachers should be able to provide positive bonding. The attitude of others is contagious and they can influence us a lot. Thus be a person who can instill confidence in your students, uplift them and encourage them with their plans and dreams. Use a positive way of speaking avoiding words such as never, always, labeling or blaming which would damage their self-esteem and their motivation.
Among the list of what people want more you can find "a feeling of importance". They need to be appreciated for their work, their efforts, and their achievements. Nothing kills their ambitions more than criticism from their superiors. Appreciation has to be sincere and from the heart, so as not to be confused with flattery.[38]
Be someone your students like. Research in cognitive neuroscience at Lund University has shown that our brains are wired to learn more from people we like and less from those we don't like. "We are more

FULL TEXTS BOOK

inclined to form new connections and update knowledge from information presented by groups we favor."[39]

3.7. Motivating teachers

Being a teacher in this 21st century is an exceptionally challenging task. Besides school work such as daily teaching, checking and grading class work and homework, educators also work to further qualify themselves, to keep up to date with new theories and inventions, to manage student behaviors, family issues and a lot of other concerns. Therefore sometimes it is difficult even for teachers to keep themselves motivated. But a motivated teacher means motivated students. Thus, teachers have to work to keep themselves motivated as well. "Culture is how employees' hearts and stomachs feel about Monday morning on a Saturday night."[40] This is also connected with the institution's policy which has to consider keeping the teaching staff motivated as a crucial task.

4. Conclusion

To sum up, this study looks at motivation and ways of motivating learners from another perspective, one which is in line with life in the 21st century. Not all learners come with strong motivation or are able to keep it for extended periods of time. Teacher's attitude and behavior are very important in this respect. Although they cannot control all aspects of motivation, they are a key factor in the process. Employing a holistic view of the world and education can bring about changes that will benefit people as human beings, as well as learners. We have to consider incorporating holistic education, neuroscience, coaching and neurolanguage coaching concepts in our schools and educational institutions as they offer us exceptional tools of motivating our learners.

ABSTRACT
The article is devoted to the study of the main features of organizational conflicts that arise against the background of the struggle for the expansion of personal opportunities, the clash of different interests, interests, thoughts, and views among people operating in an organization governed by different principles. In the article, the specific characteristics of organizational conflicts, the possibilities of influencing the development of the enterprise, various scientific approaches to it, its source, causes, stages of development, typology, solution methods, and tools are extensively analyzed. In modern organizations, the importance of analyzing and studying conflicts for the organization, its positive and negative sides, the importance of conflict resolution for the organization, and the assessment of their role are very important and relevant. Conflicts in organizations are an indispensable element of organizational life. Because each of the people in organizations are people who grew up in different environments and cultures, have different personalities and characters, different goals and interests. Organizational conflict has several specific characteristics. Among them, the following can be mentioned: although the conflict may appear as a disagreement between individuals or groups in the organization at the previous stage, it may manifest itself in the form of hostility in the advancing stages; conflict can originate from both inside and outside the organization; Conflict in organizations can be resolved through persuasion or problem-solving, or political or bargaining techniques. There are different scientific approaches to organizational conflict. Among them, one can distinguish the approaches of the theorists of the Scientific management and administrative school, the faces of the "Human Relations" school, and modern points of view that differ radically from them. The main causes of the conflict are based on the limitation of resources and their distribution. A broader classification of the causes of conflicts was presented by M. Meskon, M. Albert, and F. Kheduori. According to the obtained results, organizational conflicts are related to the renewal of human relations in the production enterprise, the expansion and strengthening of their competitive opportunities, the development of new decisions, etc. has a great role in solving issues. If the conflicts in the organization are not properly managed, they can worsen the human relations in the organization, and the socio-psychological environment, and lead to the loss of people's position.
Keywords: organizational conflict, deficit resource, causes of organizational conflict, organizational conflict solution

ÖZET
Makale, kişisel fırsatların genişletilmesi mücadelesinin arka planında ortaya çıkan örgütsel çatışmaların temel özelliklerinin, farklı yönetimler tarafından yönetilen bir kuruluşta faaliyet gösteren insanlar arasındaki farklı çıkarların, çıkarların, düşüncelerin ve görüşlerin çatışmasının incelenmesine ayrılmıştır. prensipler. Makalede örgütsel çatışmaların kendine özgü özellikleri, işletmenin gelişimini etkileme olasılıkları, buna yönelik çeşitli bilimsel yaklaşımlar, kaynağı, nedenleri, gelişim aşamaları,

tipolojisi, çözüm yöntemleri ve araçları kapsamlı bir şekilde analiz edilmektedir. Modern organizasyonlarda çatışmaları analiz etmenin ve çalışmanın organizasyon için önemi, olumlu ve olumsuz yönleri, çatışma çözümünün organizasyon için önemi ve rollerinin değerlendirilmesi çok önemli ve konuyla ilgilidir. Örgütlerdeki çatışmalar örgütsel yaşamın vazgeçilmez bir unsurudur. Çünkü örgütlerdeki kişilerin her biri farklı çevre ve kültürlerde büyümüş, farklı kişilik ve karaktere sahip, farklı amaç ve ilgi alanlarına sahip kişilerdir. Örgütsel çatışmanın çeşitli spesifik özellikleri vardır. Bunlar arasında şunlar sayılabilir: Çatışma, önceki aşamada örgütteki kişi veya gruplar arasında bir anlaşmazlık olarak görünse de, ilerleyen aşamalarda düşmanlık şeklinde kendini gösterebilir; Çatışma örgütün hem içinden hem de dışından kaynaklanabilir; Örgütlerdeki çatışmalar ikna, problem çözme, politik veya pazarlık teknikleri yoluyla çözülebilir. Örgütsel çatışmaya farklı bilimsel yaklaşımlar vardır. Bunlar arasında Bilimsel yönetim ve yönetim ekolü teorisyenlerinin yaklaşımları, "İnsan İlişkileri" ekolünün yüzleri ve onlardan kökten farklılaşan modern bakış açıları ayırt edilebilir. Çatışmanın temel nedenleri kaynakların sınırlılığı ve dağılımına dayanmaktadır. Çatışmaların nedenlerine ilişkin daha geniş bir sınıflandırma M. Meskon, M. Albert ve F. Kheduori tarafından sunulmuştur. Elde edilen sonuçlara göre örgütsel çatışmalar, üretim işletmesinde insan ilişkilerinin yenilenmesi, rekabet olanaklarının genişletilmesi ve güçlenmesi, yeni kararların geliştirilmesi vb. konularla ilgili sorunların çözümünde büyük rol oynamaktadır. Örgütteki çatışmalar doğru yönetilmediği takdirde örgütteki insan ilişkilerini, sosyo-psikolojik ortamı kötüleştirebilir, kişilerin konum kaybına yol açabilir.
Anahtar Kelimeler: örgütsel çatışma, kaynak açığı, örgütsel çatışmanın nedenleri, örgütsel çatışma çözümü

INTRODUCTION

Struggle for expansion of personal opportunities, and conflict of different interests, interests, thoughts, and views among people operating in an organization governed by different principles is inevitable, a real reality. These contradictions develop over time and manifest themselves in the form of organizational conflicts.

In modern organizations, the importance of analyzing and studying conflicts for the organization, its positive and negative sides, the importance of conflict resolution for the organization, and the assessment of their role are very important and relevant.

Organizational conflicts are the conflict between subjects (employees) and groups operating in the organization as a result of differences of opinion in the struggle for obtaining and maintaining resources, a clash of their goals, interests, or positions.

MAIN DIRECTIONS OF RESEARCH

Conflicts in organizations are an indispensable element of organizational life. Because each of the people in organizations are people who grew up in different environments and cultures, have different personalities and characters, different goals and interests. The object and subject of organizational conflicts are quite complex and broad, like other social conflicts. The object of organizational conflicts is the social reality that both attracts the attention of social subjects and causes them to come to conflicting relations (conflict) by setting them against each other. The object of organizational conflicts can include all elements in the material world and social reality that specifically affect the interests of the individual, collective, or management. The object of conflict is considered a deficit resource when viewed from both sides. Indeed, compensation for the deficit resource may resolve the dispute. However, lack of resources does not always become the object of conflict. This object may also be a problem of wealth belonging to one or another group. In some cases, the conflict may not have a visible object, which is called a false conflict. The subject of the organizational conflict is the conflict itself, which the subjects entered into the conflict and tried to resolve. In this case, the subject of organizational conflict

FULL TEXTS BOOK

may be the struggle for resources (position), the desire to have this or that material value, and an attempt at primacy and equality. (Abbasbeyli and others, 2006)

The analysis of social conflicts and their solutions, the importance of investigating and studying social conflicts in modern organizations for the organization, their effective and negative aspects, the necessity of conflict resolution for the organization, and the evaluation of their role are of great importance.

The main characteristics of organizational conflict

Organizational conflict has several specific characteristics. Among them, the following can be noted:

- although the conflict may appear as a disagreement between individuals or groups in the organization at the previous stage, it may manifest itself in the form of hostility in the advancing stages;
- conflict can originate from both inside and outside the organization;
- conflict in organizations can be resolved through persuasion problem-solving methods, or political or bargaining techniques. (Shahbazov and others, 2014)

Several factors have a special effect on the development of organizational conflict. Among them, the following are considered the most important factors:

❖ socio-cultural values and norms of the external environment;

❖ the state of the organization's internal environment;

❖ the presence of mediators, and their interest in mitigating or aggravating the conflict. (Shahbazov and others, 2005)

Different scientific approaches to organizational conflict

Organizational conflict has been interpreted in different ways in the history of management thought, and it has been considered in different prisms.

The theorists of the scientific management school and the administrative school (Taylor, Weber, etc.) considered the conflict as an unpleasant event for the organization. According to those authors, it is necessary to try to avoid conflict in the organization or to solve it without delay. It was believed that these types of mechanisms mainly eliminate the conditions that lead to the emergence of conflict and can be used to solve the problems that have arisen.

The members of the "Human Relations" school also believed that conflict should be avoided. They accepted the conflicts that occurred within the organization, but they considered the conflict to be an element of the ineffective functioning of the organization or a negative management system. According to the school leaders, the improvement of mutual relations in the organization can prevent the emergence of conflict.

The modern point of view is that such conflicts are possible and even necessary and desirable in terms of development in organizations with an effective management system. This is due to the paradox of the organization itself. On the one hand, the organization should be instrumental due to its structure, and on the other hand, all its management tools are not clearly defined and all aspects of its activity are not formalized. The guidelines do not and cannot cover everything that happens in the organization. In addition, trying to put everything in order leads to a decrease in work efficiency. Regulation is replaced by subjective characteristics and attitudes. Within each organization, some sections have instrumental and subjective properties (for example, the activity of the author during the educational process is limited by the educational guidelines of the Higher School). Therefore, the organization has departments whose mutual activity conflicts with each other. (Aksenova, 2009)

Of course, conflict is not always positive. In some cases, it can create an obstacle to meeting the needs of a particular person or achieving the goals of the organization in general. Sometimes the collective has to agree to what a person says, making a wrong decision in advance to avoid unpleasant events and to calm the conflicted person.

FULL TEXTS BOOK

Sources and causes of organizational conflict

Conflicts between formal and informal relationships, instrumentality, and subjectivity are indicated in the scientific literature as the main sources of organizational conflicts.

Every conflict in an organization has several causes. The main causes of the conflict are based on the limitation of resources and their distribution. A broader classification of the causes of conflicts was presented by M. Meskon, M. Albert, and F. Kheduori. They mention the following factors among the causes of conflicts in the organization: allocation of resources; interdependence of duties; differences in goals; differences in life experience and behavior; improper transmission of information; unsatisfactory communication etc.

According to the opinion of some conflict experts, in the most general case, the conflicts that arise in the organization can arise from these three groups of reasons:

- Related to labor process;
- Regarding the psychological characteristics of people's mutual relations; sympathies and antipathies, cultural and ethical differences of people, with the activity of the leader;
- Related to personal qualities of group members; for example, inability to control one's emotional state, aggressiveness, impoliteness, and inability to communicate. (Zaxarov, 2006)

Stages of conflict development

To facilitate the theoretical analysis of the conflict, its development stages are usually noted. It is noted in the literature that the dynamics of organizational conflict, as in other social conflicts, consists of three stages:

- pre-conflict stage;
- conflict stage;
- post-conflict stage.

The formula for any conflict is as follows

Conflict situation+incident= Conflict

The conflict situation is the superimposed contradictions that contain the real cause of the conflict.

An incident is the creation of circumstances that are a pretext for a conflict.

Conflict is an open conflict arising from a clash of interests and positions. (Svetlov and others, 2005)

Typology of conflicts in organizations

The typology of conflicts plays not only a methodological but also a practical role. In our modern era, there are many typologies and classifications of organizational conflicts. All these express the views and positions of different authors. All conflicts occurring in the organization are divided into two types according to their communicative direction: vertical and horizontal conflicts.

Horizontal conflicts - occur when employees are not subordinate to each other (coordinating relations). Vertical conflicts are more common in organizations (up to about 70-80% according to studies). Conflicts of this type occur based on power relations. Employees of the organization are subordinate to the authorities. There is a form of coercive relationship in the relations of every manager-subordinate employee pair. On the one hand, the existence of potential coercion indicates that the goals of the manager and the employee do not coincide, and on the other hand, it creates a conflict situation.

Researchers indicate two types of conflict according to the possibilities of adjustment in the organization:

- Agonist (prone to reconciliation);
- Antagonist (irreconcilable).

Sociologists have identified 5 main types of conflict in the organization:

a) conflicts between groups;

b) conflicts between a person and a group;

FULL TEXTS BOOK

c) conflicts between individuals;
d) personal conflicts of a person;
e) linear-hierarchical conflicts between employer and employee (intrapersonal). (Çağlayan, 2006)

Directions of conflict regulation and resolution in organizations

Conflict management in organizations goes through four stages:

- Institutionalization;
- Legitimation;
- Structuring;
- Reduction.

The institutionalization of the conflict means the elimination of disorganization and the application of certain principles and rules to the course of the event. This makes the development of the conflict predictable. Legitimization of the conflict (legitimization) makes it possible to voluntarily choose the proposed solution method. Determining the structure of groups in conflict, that is, structuring conflicts is an important step in their management. Reduction is based on the further weakening of the conflict during the transition to another stage.

There are several effective methods of conflict management in an organization. They can be divided into two groups. These are structural and interpersonal methods.

Structural methods. There are four structural methods of conflict resolution:

1. clarifying the need for work;
2. using coordinated and integrated methods;
3. using organizational complex goals;
4. Using the reward system.

Methods of solving interpersonal conflicts. It should be noted that the methods of solving interpersonal conflicts are compatible with the style of behavior of people in conflict. These are Refusal or conflict avoidance, accommodation, coercion, confrontation, compromise, cooperation, and problem-solving.

CONCLUSION

Renewal of human relations in the production enterprise of organizational conflicts, expansion, and strengthening of their competitive opportunities, development of new decisions, consideration of socio-psychological factors, application of modern standards in the organization, an increase of labor productivity, management's attention to the initiatives of subordinates, an increase of literacy level of personnel, etc. have a great role in solving issues. If the conflicts in the organization are not properly managed, they can worsen the human relations in the organization, and the socio-psychological environment, and lead to the loss of people's position.

ABSTRACT

Flotation is a well-known and reliable process used to separate the light particles and oils from wastewater. There are various configurations of air flotation systems, such as induced, dissolved, electrical air floatation, depending on the microbubble formation and equipment used in the process. Among the various flotation technologies, Dissolved Air Flotation (DAF) is one of the most widely used techniques for removing oils and dissolved organic matter from wastewater in the world. It works by dissolving air under pressure and then releasing fine air bubbles into the water at atmospheric pressure. Dissolved air bubbles adhere to suspended solids and float to the surface for skimming. Small diameter microbubbles are particularly preferred to increase contact area and maximize collision probability between microbubbles and oil droplets. Therefore, in the new generation of DAF flotation units, a microbubble generating pump is used to generate microbubbles of 20 to 50 µm in size. A compressor, a saturation vehicle, various control systems can also be eliminated in the new generation of DAF systems, which makes the system modest, compact, and economic.

There are several studies on classical and new generation DAF systems in the literature. However, most of the studies have been carried out in a laboratory scale and operated synthetically prepared wastewater. In the presented study, a pilot scale experimental set-up was used to remove oil & grease from dairy industry wastewater. The volume of the polypropylene pilot scale DAF unit was about 1.5 m^3. It consisted of contact, flotation, and sedimentation sections, and was operated as both a classical pump DAF (CP-DAF) and a microbubble pump DAF (MB-DAF) using appropriate piping and equipment to compare performance. The effects of inflow, pump type and pressure were investigated in the experiments. The results showed that the CP-DAF system had lower oil and grease removal efficiency than the MB-DAF systems. It was found that the optimum operating pressure in both systems was 4 bar, and the highest performance was obtained at 1m^3/h. The results showed that the DAF systems were particularly effective at removing dissolved oils. The appropriate operating pressure was determined to be 4 bar, and it was found that the treatment efficiency decreased at pressures above 4 bar. The treatment efficiency of the CP-DAF system was found to be lower than that of the MB-DAF systems. At optimum operating conditions (4 bar pressure), the MB-DAF systems showed approximately 15% higher performance.

Keywords: Dissolved Air Flotation, Industrial wastewater, Removal efficiency, Microbubble pump, Wastewater treatment, Oil&grease removal, Dairy wastewater.

INTRODUCTION

Air flotation is widely used and recommended as an effective pre-treatment alternative for oily wastewater generating from petroleum refineries, metal finishing and coating processes, ships (bilge and ballast wastes), slaughterhouses, dairy industries, paper mills, etc. (Ng et al. 2022; Han et al. 2021; Thorat et al. 2022; Falletti et al. 2015; Kim et al. 2015; Liu et al. 2010). There are two basic methods to disperse air bubbles in waste streams: induced air flotation (IAF) and dissolved air flotation (DAF). In

FULL TEXTS BOOK

IAF, the air is either dispersed mechanically in the liquid or sparged through a distributor into the separation vessel yielding relatively large bubbles (typically 1000 μm). The IAF units can be characterized by a high liquid flow with low retention times (4- 10 min) in comparison to the DAF unit which has a high retention time (15-30 min) (Hanafy & Nabih, 2007). In DAF technique, air is pressurized and dissolved in the effluent stream. The air solubility decreases as the pressure is released by the waste entering the tank through an orifice. As a result, microscopic air bubbles are formed and air/oil bubbles rise and collide with oil droplets, accelerating their recovery at the surface. The size of the bubbles produced can vary from 10 to 120 microns in size. These bubbles are effective in removing even smaller oil droplets, but require a long residence time of 20 to 30 minutes for efficient separation. It has been shown that the bubble size plays an important role in the flotation efficiency. As the bubble size decreases the probability of particle-bubble collision (and hence flotation separation) increases (Matis and Peleka, 2010). Therefore, in recent years, it has been observed that traditional DAF systems have begun to be replaced by a new generation of flotation systems that produce microbubbles. The new generation DAF systems are more efficient in removing oil&grease as they produce a high quantity of smaller size bubbles (Al-Dulaimi and Al-Yaqoobi 2021; Khuntia et al. 2012). There is no pressure tank and no compressor in the new generation of DAF systems. A pressurized water-air mixture is delivered to the system by a single pump (microbubble pump). This pump circulates 30-40% of the treated water to the system, while mixing the wastewater with air taken from the atmosphere, producing microbubbles of 20-50 microns in size (Özdemir et al., 2024). Since it consumes less energy and equipment, operational costs are reduced (Muñoz-Alegría et al. 2021; Xiao et al. 2019); and depending on generating microbubbles, oil&grease removal is increased.

In the present study, conventional and microbubble generating DAF technologies were used to remove oil from dairy (milk production) wastewater. The effects of operating parameters such as flow rate and pressure on the efficiency were investigated using both classical and microbubble DAF systems on a pilot scale. Dairy wastewater was obtained from a dairy industry located in Foca, Izmir, for 12 months in 2022/2023. Treatment performances of each systems were evaluated by the oil&grease parameter.

METHODOLOGY

In this study, a pilot scale DAF unit made of polypropylene material was constructed to investigate the performance of DAF with conventional pump and DAF with microbubble pump. The dimensions of the pilot scale DAF unit are 100-150-155 cm (width-length-height), and it has a volume of about 1.5m^3. The pilot unit shown in Figure 1 consists of contacting, floating and precipitating sections. The unit has sampling taps at the inlet and outlet. To discharge sludge that accumulates on the bottom over time, there is a sludge removal valve.

FULL TEXTS BOOK

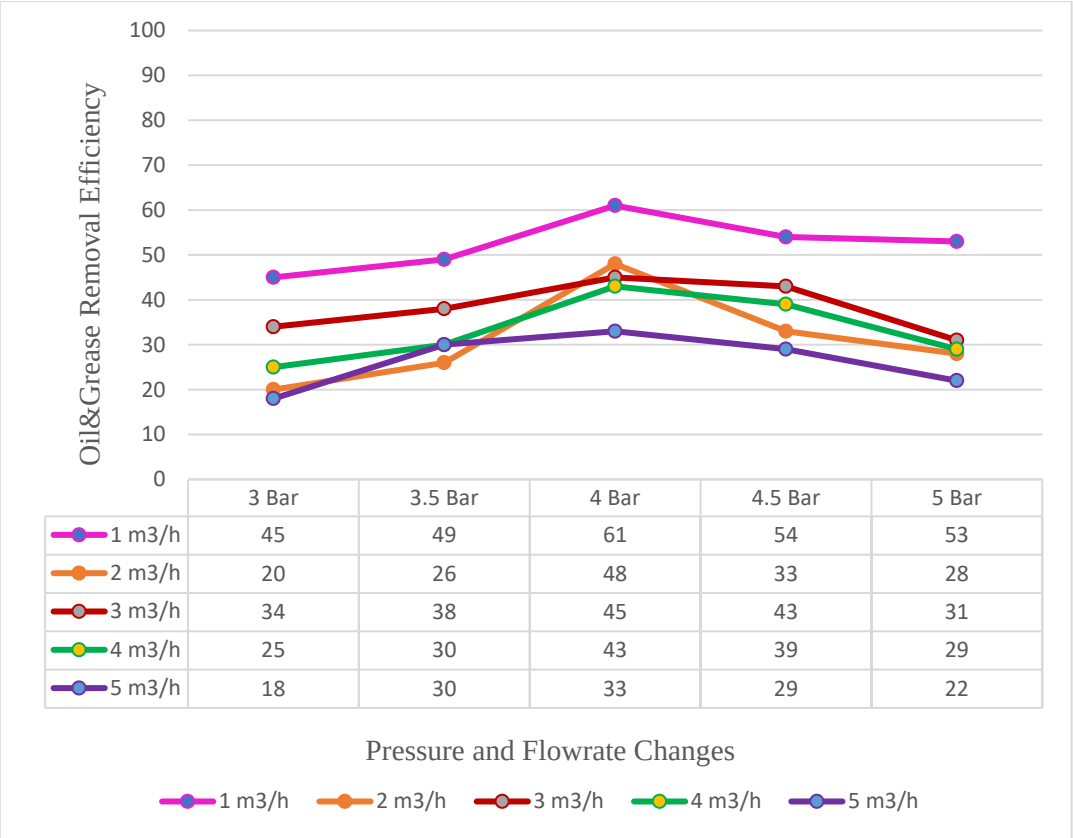

Figure 1. Pilot DAF Unit

During the study, the pilot DAF was used as a conventional (CP-DAF) and microbubble pump (MB-DAF) with appropriate piping and instrumentation. After installing each DAF unit, the system was run at by clean water as first to check the piping and instrumentation. The flow rate of each unit was measured with a flow meter, and the pressure adjustments were also made with a monometer. After checking the system, the experimental studies were started using dairy wastewater. The inlet flow rates were varied between 1 and 5 m^3/h. The pressures were varied between 3 and 5 bar. The performance of each system was determined by oil&grease, suspended solids, and COD analyses. Temperature and pH were measured for control purposes. Inlet and effluent samples were collected from the M-01 and M-02 water taps. CP-DAF and MB-DAF systems were operated at five different inflow rates (1-2-3-4-5 m^3/h) and five different pressures (3-3.5-4-4.5-5bar). Effects of variables on treatment performance were determined separately.

CONCLUSION AND DISCUSSION

In the experiments where the pilot CP-DAF system was operated with dairy wastewater, the pH of the influent was between 7.3 and 8.5 whereas the temperatures varied between 26.6-32C^o. The solid particle concentrations varied from 485 mg/L to 1.350 mg/L. The concentration of the oil&grease ranged from 262 mg/L to 102 mg/L

5 m3/h	18	30	33	29	22

Figure 2. Effect of pressure and flow rate on the efficiency of oil&grease removal in CP-DAF System

At 1 m^3/h flow rate, 45-61% oil&grease removal was achieved. The effluent concentration of the oil&grease ranged from 262 mg/L to 102 mg/L The highest oil removal was obtained at 4 bar pressure. (see Figure 2). At a flow rate of 2 m^3/h, oil removal was 20-48%. Maximum removal was obtained at 4 bar where concentration was decreased from 114 mg/L to 75 mg/L. A decrease in oil removal was observed at higher or lower pressure conditions. Increasing flow rates generally caused a decrease in efficiency. At a flow rate of 3 m^3/h, the oil&grease removal efficiency was 31-45%. The maximum efficiency was obtained at 4 bar and the oil/grease content decreased from 114 to 79 mg/L. Oil&grease was removed by 25 to 43% and maximum efficiency was obtained at 4 bars. At higher or lower pressures, the efficiency decreased. The lowest performance was achieved at 5m^3/h (removal efficiency ~ 18-33 %). The maximum efficiency was obtained at 4 bar and the efficiency decreased with increasing and decreasing pressures.

In the experiments carried out by MB-DAF system, inflow pH varied from 7.11 to 8.75 whereas temperature changed from 23.5 to 30.7°C. Suspended solid (SS) concentrations were between 500mg/L to 1.200mg/L. The oil&grease content was ranged from 110 to 676 mg/L. At low flow rate (1m^3/h) 58-70% of the oil&grease was removed. The highest efficiency was obtained at 4 bar pressure. At 4 bar pressure, the oil&grease content decreased from 196 to 59mg/L. At a flow rate of 2 m^3/h, there was a slight decrease in oil removal, and 53-65% of oil was removed. At pressures higher or lower than 4 bar, oil removal decreased. Increasing flow rates caused a decrease in the removal of both oil&grease and SS parameters (see Figures 3)

FULL TEXTS BOOK

	3 Bar	3.5 Bar	4 Bar	4.5 Bar	5 Bar

2 m3/h	53	57	65	57	55
3 m3/h	45	48	63	53	22
4 m3/h	40	42	60	50	46
5 m3/h	20	40	44	34	25

Figure 3. Effect of pressure and flow rate on the efficiency of oil&grease removal in MB-DAF system

At flow rate of 3 m^3/h, the oil concentration was reduced from 176 mg/L to 66 mg/L, resulting in 63% removal; and maximum efficiency was achieved at 4 bars. When the flow rate was increased to 4 m^3/h, 40 to 60% of the oil was treated. The lowest performance was at 5m^3/h, removing only 20-44% of the oil.

Consequently, the results have shown that new generation DAF systems were more efficient than classic pumped DAF systems for oil-grease removal from milk and dairy products wastewater. Besides that, although the investment costs of the new generation DAF system are higher than traditional DAF systems, its' operating costs is lower due to lesser energy consumption. It has been reported that approximately 50% less energy is consumed when a microbubble pump is used. On the other hand, in traditional DAF systems, especially the electricity consumption of the pump and compressor is high. Therefore, when the new generation DAF Systems are used, the total electrical energy consumption for unit volume of treated wastewater is lower which is resulted a decrease in operating costs. Considering these advantages, it has been expected to use widely as an effective pre-treatment alternative before the biological treatment stage especially for industrial wastewater containing oil-grease, SS and organic pollutants.

THE ROLE OF CITY ADMINISTRATIONS IN SOLVING GLOBAL CLIMATE CHANGE PROBLEMS

Assoc. Prof. Dr. Ömer Faruk TEKİN
Selçuk University

ABSTRACT
Global climate change is one of the most important problems on the agenda of governments and international organizations. Thanks to international meetings and negotiations, the level of knowledge and awareness about the climate change problem is gradually increasing. As the importance of the issue is understood, the number of states and international actors supporting climate change convention decisions is increasing. However, it will not be enough for actions and practices to minimize the negative effects of climate change to remain only at the international level. These policies need to be adopted at the national and local levels, and especially local action plans need to be put into effect.
This problem, which is described as global because it affects the whole world, is essentially closely related to local factors. The amount of production and consumption increases in crowded residential areas where human and economic activities are intense. More intensive use of resources leads to an increase in both environmental pollution and greenhouse gas emissions.
This study aims to reveal the role and importance of cities in the emergence of the global climate change problem and in solving the problems. In the study, firstly, a brief theoretical framework for the global climate change problem is presented. Information is provided about meetings held by states and other international actors to discuss climate change issues. Finally, the role and importance of city governments in the emergence and solution of climate change problems are analysed. It is emphasized that this issue should be addressed on a local/urban scale and local policies regarding climate change should be developed.
Keywords: Environment, Cities, City Administrations, Global Climate Change

INTRODUCTION

As it is known, one of the most important problems on the agenda of governments and international organizations is global warming and climate change. The problem of climate change is one of the critical issues discussed at international meetings, like other environmental problems. As the issue's importance is understood, the number of states and other international actors supporting climate change convention decisions is increasing.
However, it does not seem sufficient for actions and policies to mitigate the negative effects of climate change to remain only at the international level. These policies need to be adopted at the national and local levels, and especially local/urban policies and action plans need to be produced. This problem, which is often called global because it affects the entire planet, is essentially closely related to local/urban factors.
The amount of production and consumption increases in crowded urban areas where human and economic activities are intense. More intensive use of resources leads to an increase in both environmental pollution and greenhouse gas emissions. This study emphasizes the role of cities in revealing the negative effects of global climate change and reducing these effects.

1. GLOBAL CLIMATE CHANGE

Climate is generally defined as the average weather in a particular location, including temperature, precipitation, humidity, and wind. In a more specific definition, climate refers to the average status and variability of these features over a long period of time. Both definitions accept that the weather is constantly changing due to an unstable atmosphere. Climate change here is the periodic change of the

FULL TEXTS BOOK

Earth's climate as a consequence of interactions between the atmosphere and chemical, biological, geological, and geographical factors in the Earth's system, and changes in the atmosphere. The climate, resulting from the physical properties and movement of the atmosphere, changes at every conceivable time scale (Rafferty, 2011). The change referred to here are changes in the state, mean, and characteristics of the climate over decades and can be identified using statistical tests. That is, climate change can result from external forcings such as volcanic eruptions, modulations of solar cycles, and permanent anthropogenic (human-induced) changes in the composition of the atmosphere or land use, or from natural internal processes. Climate change, which has turned into a global environmental problem and needs to be taken care of, indicates changes arising from factors other than natural causes (IPCC, 2022). In the United Nations Framework Convention on Climate Change (UNFCCC, Article 1), climate change means a climatic change that is directly or indirectly attributed to human activities that alter the composition of the atmosphere, besides natural climate variability observed over comparable timeframes (UN FCCC, 1992).

The problem of global climate change has been discussed in the international meetings of the UN since the late 1980s. The first of these meetings is the Intergovernmental Panel on Climate Change (IPCC) (UNEP and WMA, 1988). At the Rio Earth Summit held in 1992, the UN FCCC was opened for signature. The Kyoto Protocol was adopted in 1997 (UN FCCC, 1997). There were two important developments in 2015. The first is the announcement of the UN 2030 Agenda and the Sustainable Development Goals (UN, 2015). The other is the Paris Climate Agreement (UN FCCC, 2015).

The European Union has included principles on climate change in its environmental action programs since 1973. On May 2, 2022, the 8th Environment Action Program entered into force. This program is the legally accepted common agenda of the EU for environmental policy until 2030 (T.C. Dış İşleri Bakanlığı, 2022). The European Green Deal, announced by the European Commission, is a new growth strategy. It aims to make Europe the first climate-neutral continent in the world, where greenhouse gas emissions (compared to 1990) are reduced by 55% by 2030 and are net zero until 2050 (European Commission, 2019; European Commission, 2022).

International conferences and talks are gradually expanding and deepening[1]. As the importance of the problem is understood, national and international actors supporting the climate change convention are increasing. However, it will not be enough to keep the actions and practices that will minimize the negative effects of climate change at the international level. These policies should be adopted at the regional, national, and local levels, and especially local action plans should be put into effect.

The threat of global climate change has become one of the most important scientific and political problem areas of our time. With the onset of the 1990s, the need to take action to reduce greenhouse gas emissions came to the fore. The relative responsibilities of different countries, the measures to be taken, how to act and the tools to be used have been the subject of fierce debate. Due to the global nature of the problem, the answers to these questions have been sought in the negotiation processes between governments. However, it is becoming increasingly clear that governments cannot meet their international commitments to climate change unless they take responsibility more explicitly through sub-national action. As it is known, greenhouse gas emissions arise from human activities and production processes carried out in certain places. It is increasingly argued that the local is the most appropriate political jurisdiction to achieve the necessary reduction in these emissions. Many local governments have significant powers over land use planning and waste management. It can play an important role in transport problems and energy consumption. In addition, local governments are working to achieve the policy objectives determined in the national and international arena; they also

[1] It is beyond the scope of this study to describe in detail the international efforts on global climate change. For detailed information, see Tuğaç, 2019.

FULL TEXTS BOOK

try new policies by taking the initiative. This shows that they represent a critical area for the governance of global environmental issues (Betsill and Bulkeley, 2006).

2. THE ROLE OF CITIES IN SOLVING CLIMATE CHANGE PROBLEMS

Human mobility due to social, economic, and political reasons (international and internal migration) constantly changes the center of gravity of the world in favor of cities (UN ECOSOC, 2018). It can be said that the future of the world is urban, it is shaped by cities. The proportion of people living in cities in the world's total population is increasing. According to the United Nations, while 55% of the world's population lived in cities in 2018, it is estimated that this rate will exceed 60% in 2030 and 68% in 2050 (UN DESA, 2019). In terms of reducing the negative effects of climate change, cities stand out for the following reasons (IFC, 2018):

- Today, there is an age of cities, where more than half of the population lives in urban areas. Cities are also significant actors in the global economy. They contribute more than 80% of the global gross domestic product (GDP). Cities are centers of innovation and prosperity. As with the problems of inadequate infrastructure, population growth, environmental pollution, and social and economic inequality, the solution to climate change will be with cities.
- Cities are hotspots on the issue of climate change. While they consume about 70% of the world's energy, they generate more than 70% of global carbon emissions. In addition, as 90% of the world's urban areas are located on coastlines, cities face devastating climate risks such as rising sea levels and mega-storms on the coasts.
- Limiting global warming to a certain degree will require rapid and far-reaching transitions and investments in energy, soil, urban, infrastructure, and industrial systems. Cities also have a spate of policy options (such as green buildings and infrastructure, green transportation, sustainable land, water, and waste management) they can use to mitigate risks to health, livelihoods, living space, food, water, and economic growth in urban areas.
- Decisions taken by city administrations are effective on more people. It can have a more direct and rapid impact than national or international policies.
- The essential urban services that make cities attractive and valuable are increasingly at risk from climate disasters.
- An ever-increasing urban population will place additional demands on resources and services, especially in large cities that lack essential services and are increasingly facing climate risks and disasters. The situation is getting worse, especially in underdeveloped countries with growing cities, where the unregistered settlement population is gradually increasing.
- Approximately 60% of the areas expected to be urbanized by 2030 in the World are waiting to be built. Cities, especially in developing countries, will do more to meet the needs of their growing populations and tackle challenges such as air pollution, population density and energy access. However, they can take a historic step towards urbanization by diverting their scarce resources to clean transportation, zero-carbon buildings, and educating people to provide green infrastructure. It is of great importance to provide an integrated approach to city planning and to invest in smart city projects in terms of climate.

If the source of global climate change problems is human activities, the solution to the problem should also start from the settlements where the population is concentrated. In solving this problem, which has global consequences, local causes should not be ignored. For this reason, cities where the majority of the world's population lives are of great importance as the places where the problem begins and where the solution should begin.

City administrations are authorized and responsible for the implementation of regulations regarding spatial planning, public transportation, construction, and production. This provides great efficiency and advantage in implementing policies and programs aimed at reducing climate change problems. City

FULL TEXTS BOOK

administrations can also set quite ambitious targets for reducing greenhouse gas emissions. The concentration of human and economic activities and therefore the population in cities brings cost and innovation advantages related to smart city systems, integrated waste management, water management, public transportation and joint heating systems, and energy production. This concentration seen in big cities provides an opportunity for the rapid spread of new ideas in technical, social, and behavioral solutions. In addition, cities are quite suitable for research and development studies carried out to develop new technologies. In recent years, studies have been carried out to find smart and practical solutions that are as environmentally friendly and sustainable as they are smart to reduce the negative consequences of climate change. Efforts to reduce greenhouse gas emissions in cities bring other urban benefits and advantages such as environmentally and climate-friendly transportation. This reduces air pollution, reduces costs, and is safe and healthy for pedestrians while reducing traffic congestion (Dodman, 2009).

The idea of including city governments in global, regional, and national efforts to reduce greenhouse gas emissions is increasingly expressed day by day. It should be noted here that cities follow different paths to develop and, of course, they develop at different levels. Likewise, cities contribute to global warming at different levels. Carbon emissions per capita in cities in low- and middle-income countries are very small compared to rich urban areas. In this respect, the priority of city governments regarding the environment is not just about reducing carbon emissions. However, it is unacceptable for urban areas with low carbon emissions to take a passive stance towards this global concern. On the contrary, they need to plan with climate change motivation to promote sustainable city models and urbanization strategies. They need to make consumer goods, public services, and energy-efficient means of production accessible to more people without endangering people's livelihoods, natural resources, and ecosystems at local, national, and global levels (Romero Lankao, 2007).

CONCLUSION

In the last three or four decades, the world has been experiencing much more intense urbanization than in previous periods. This phenomenon, which has led cities to develop and seek new paths, has also brought about social and economic change. The urban development path adopted by cities also determines energy needs, preferences, and measures. This is also an important factor that determines local air pollutants and greenhouse gas emissions and affects urban carbon sinks. Urban development paths also determine whether cities are sensitive or resistant to climate problems. In this respect, the relationship between climate change and cities is not simple. In order to find appropriate solutions to the problems, it is necessary to explain the factors that explain such paths. Cities primarily focus on local issues. For this reason, it is very difficult for cities to take precautions against climate change and produce policies to reduce its effects (Dhakal, 2008).

Climate change is causing many factors such as temperature increases, sea level rise, extreme weather events, and ecosystem changes worldwide. Climate change, one of the most urgent environmental and social problems of our day, directly affects urban areas. These effects are especially more pronounced in urban areas that are densely populated and the center of economic activity.

Climate change, whose effects are becoming more visible, poses an increasingly greater threat to our planet and humanity. This requires re-evaluating policies and strategies, development programs and action plans to be developed at global, national and local levels. In order to solve climate problems, in addition to global and national policies aimed at reducing greenhouse gas emissions, local policies aimed at eliminating the root causes of climate change are also important. Cities have a leadership role in solving climate problems, which have now become the subject of spatial planning, not just urban policy (Galderisi and Colucci, 2018).

FULL TEXTS BOOK

Urban administrations, which are of vital importance in combating climate change, play a critical role in mitigating and adapting to these effects. The role of cities in solving climate change problems can be summarized under three headings:

- Cities are a significant source of greenhouse gas emissions. City administrations can develop various strategies to reduce emissions. Increasing energy efficiency, using renewable energy, and ensuring sustainability in transportation systems are among these strategies. For example, developing and encouraging urban public transportation systems can reduce carbon emissions by reducing individual vehicle use.
- City administrations can make cities more resilient by developing strategies to adapt to climate change. Applications such as increasing green areas, infrastructure improvements, sustainable water management, and flood risk reduction projects can be evaluated within this scope. For example, applications such as green roofs and vertical gardens in cities can mitigate the effects of temperature increases.
- City administrations play an important role in informing the public about climate change and encouraging participation. Education programs, awareness campaigns, and involving local people in decision-making processes can help increase social support in the fight against climate change.

City administrations play a central role in mitigating and adapting to the effects of climate change. Policies and projects in areas such as energy efficiency, renewable energy, sustainable infrastructure, and public awareness will help cities become more resilient to climate change. The development and implementation of effective strategies by city administrations for climate change will create a butterfly effect not only at the local level but also at the national and global levels.

ÖZET
Bu araştırma akademisyenlerin bakış açılarına göre Karabük Üniversitesi'nin örgütsel DNA özelliklerini ortaya çıkarmak amacıyla gerçekleştirilmiştir. Analizlerde kullanılan veri, örgüt DNA'sı ölçeği kullanılarak anket yoluyla 198 akademisyenden sağlanmıştır. Verilerin analizinde t-testi ve ANOVA analizi gerçekleştirilmiştir. Analizler sonucunda, katılımcılara göre Karabük Üniversitesi'nin DNA özelliklerinden en yüksek ortalamaya sahip olanın rastgele örgüt olduğu, en düşük ortalamaya sahip olanın ise tam-zamanında örgüt olduğu tespit edilmiştir. Bununla birlikte, demografik özellikler açısından örgütsel DNA'nın farklı boyutları incelendiğinde, cinsiyet, yaş, medeni durum, unvan, eğitim seviyesi ve kurumda çalışma süresi açısından farklılıklar bulunduğu belirlenmiştir. Araştırma bulgularının, Karabük Üniversitesi çalışanlarına ve yöneticilerine yol göstermesi açısından önemli olduğu düşünülmektedir.
Anahtar Kelimeler: Örgütsel DNA, Akademisyen, Karabük Üniversitesi.

ABSTRACT
This study aims to reveal the organizational DNA characteristics of Karabük University from the perspectives of its academicians. The data used in the analyses was obtained through a survey from 198 academics using the organizational DNA scale. Data were analysed using t-tests and ANOVA analyses. The analysis results indicated that, according to the participants, the characteristic with the highest average for Karabük University's DNA was an fits and starts organization, while the characteristic with the lowest average was just-in-time organization. Furthermore, when examining the different dimensions of organizational DNA in terms of demographic characteristics, differences were found based on gender, age, marital status, position, educational status and tenure. The findings of this research are considered important for guiding Karabük University's employees and administrators.
Keywords: Organizational DNA, Academician, Karabük University.

GİRİŞ

Örgütsel DNA kavramı; örgütleri yaşayan birer canlı gibi değerlendirir ve bu yaklaşımla örgütlerin de canlılar gibi eşsiz kimlik, kişilik ve karaktere sahip olduğunu benimser. Bu yapı örgüt kültüründen değerlerine, liderlik özellikleri ve yönetim tarzlarına kadar birçok unsuru da kapsamaktadır. Örgütler bu özellikleri sayesinde diğer örgütlerden ayrılmaktadır. Örgütsel DNA'nın analizi, örgütün güçlü ve zayıf yönlerini, fırsatlarını ve tehditlerini daha iyi anlamaya yardımcı olabilir ve böylece stratejik yönetim süreçlerinde örgütlerin daha bilinçli kararlar alınmasında farkındalık yaratabilir.

Bu kapsamda bu araştırma, Karabük Üniversitesi'nde çalışmakta olan akademisyenlerin çalıştıkları kurumun örgütsel DNA özelliklerine bakış açılarını değerlendirmektedir. Çalışmanın amacı, akademisyenlerin örgütsel DNA algılarının demografik değişkenler açısından farklılaşıp farklılaşmadığını belirleyebilmektir.

KAVRAMSAL ÇERÇEVE

Örgütsel DNA

Çetin ve Döş (2014) canlıların DNA'sı farklı olsa da canlının tüm parçaları aynı DNA'yı taşır fikrinden yola çıkarak her örgüt, farklı örgütsel DNA'ya sahip olsa da aynı örgütte çalışan bireylerin aynı örgüt DNA'sını paylaştığını belirtmiştir.

Baskin (1998), varlığını uzun yıllardır sürdüren başarılı işletme örnekleri incelendiğinde, bu örgütlerin çağımızın gerekliliklerine uygun şekilde ekonomik ve sosyal koşullara canlı bir varlık gibi uyum sağladıklarını ve kendilerine özel genetik özelliklerinin olduğu, bu örgütlerin özelliklerinin de kendilerinin DNA'sında bulunduğunu ifade etmiştir.

Örgütsel DNA; örgütler hakkında bir analiz, ideoloji, imaj, kimlik ve düşünme yöntemini ifade etmektedir.

Örgütsel DNA Boyutları

Booz Allen Hamilton tarafından 2003 yılında geliştirilen "Org DNA Profiler" adlı anket aracılığıyla örgütsel DNA özellikleri için 7 alt boyut belirlenmiştir.

Esnek Örgüt, bir örgütün zorluklar, beklenmedik durumlar ve çatışmalar karşısında hızla yeni duruma uyum sağlama, toparlanma ve devam edebilme yeteneğini ifade etmektedir. Esnek örgütler, stratejilerini koruyarak, karşılaştıkları engeller karşısında daha akılcı ve çözüm odaklı tepkiler verebilirler. Bu tepkiler, örgütün iç yapısının daha da sağlıklı ve güçlü olmasına olanak sağlar. Bu örgüt türü, belirsizliklere ve değişimlere karşı dayanıklılığıyla öne çıkar ve genellikle en sağlıklı örgüt yapısı olarak kabul edilir (Çetin ve Döş, 2014, s.563).

Askeri Örgüt, genellikle daha küçük ve uzmanlaşmış bir ekip tarafından yönetilen işletmeleri ifade eder. Bu tür organizasyonlarda, başarıya ulaşmak için üst yönetimin etkin bir yürütme yeteneği ve işleyiş modeline sahip olması gerekmektedir. Askeri yapılı organizasyonlarda herkes kendi görevlerini bilir ve bu görevleri dikkatli bir şekilde uygulayarak tutarlı yürütme etkisi gösterebilir. Bu örgüt tipinin belirgin özelliği, yüksek düzeyde hiyerarşi ve kontrollü bir yönetim modeline sahip olmasıdır (Onay ve Ergüden, 2012, s.207).

Tam-Zamanlı Örgüt, işletmenin bütünüyle dış çevredeki ani değişimlere hızlı ve etkili bir şekilde yanıt verebilen bir yapıya sahiptir. Bu tür organizasyonlarda çalışan kişiler motive olmuş ve yetenekli kişilerdir. Örgüt içinde çalışanlar, genellikle şirketlerinden aldıkları değer ve gururla daha fazla motive olduklarını düşünürler. Aynı zamanda, bu tarz örgütler çalışanlar için öğrenmeye ve gelişmeye uygun iş ortamları sunar (Telli ve Özdaşlı, 2020, s.969).

Rastgele Çalışan Örgüt, zeki, motivasyonu yüksek ve yetenekli çalışanlardan oluşan, ancak bu çalışanların ortak bir amaç için bir araya gelemedikleri bir örgüt yapısını ifade eder. Bu tür organizasyonlardaki temel sorun ise, çalışanların aynı anda aynı yöne bakamaması ve birlikte ortak bir amaç için hareket edememesidir. Üst yönetim tarafından güçlü bir yönlendirmenin olmaması sonucu kontrol zorlaşır, organizasyon disiplinden uzak bir yapıya bürünür (Bostancı vd., 2017, s. 5695)

Yönetim Ağırlıklı Örgüt, diğer örgütlere göre nispeten yavaş ve tepkisel davrandıkları, fırsatları geç fark etmekte ya da rakiplerine göre daha az enerjik takip ettikleri gözlenmektedir. Gereğinden fazla yönetim ağırlıklı örgütlerde, boşa harcanan çok fazla çaba ve gereksiz bilgi bulunmaktadır.

Pasif-Saldırgan Örgüt; örgüte dışarıdan bakıldığında herkesin birbiriyle iyi anlaştığı ve çatışmaların yaşanmadığı ancak içeride birtakım uyuşmazlıkların olduğu örgüt tipidir. Değişimleri uygulamak zordur. Bu örgütün çalışanları merkezden gelen talimatlara uymama eğilimindedir. En sık rastlanan örgüt tipidir.

Fazla büyümüş Örgüt; Örgüt, küçük bir üst yönetim grubuyla yönetilemeyecek kadar çok geniş ve karmaşık bir yapıdadır ve yönetimini demokrasiden uzaktır. Güç; tepe ve tepeye yakın yerlerde tutulduğundan, fazla büyümüş örgüt pazardaki gelişmelere yavaş tepki vermeye meyillidir ve genellikle kendi yolunun dışına çıkamamaktadır.

FULL TEXTS BOOK

METODOLOJİ

Bu bölümde araştırmanın hipotezlerine, evren ve örneklemine, veri toplama ve analiz yöntemine ilişkin bilgilere yer verilmektedir.

Hipotezler

Bu araştırma Karabük Üniversitesi'nde çalışan akademisyenlerin bakış açılarına göre çalıştıkları kurumun örgütsel DNA özelliklerini ortaya çıkarmak amacıyla gerçekleştirilmiştir. Bu amaç için aşağıdaki sorulara cevap aranmıştır.

1. Akademisyenlerin bakış açılarına göre Karabük Üniversitesi'nin örgütsel DNA özellikleri nasıldır?
2. Akademisyenlerin bakış açılarına göre Karabük Üniversitesi'nin örgütsel DNA özellikleri akademisyenlerin demografik özelliklerine (cinsiyet, yaş, medeni durum, unvan, eğitim seviyesi, kurumda çalışma süresi) göre anlamlı bir farklılık göstermekte midir?

Bu sorulara yönelik oluşturulan hipotezler şu şekildedir:

- H1: Karabük Üniversitesi DNA özellikleri (H1a: esnek örgüt, H1b: askeri örgüt, H1c: tam-zamanında örgüt, H1d: rastgele örgüt, H1e: yönetim ağırlıklı örgüt, H1f: pasif-saldırgan örgüt) cinsiyete göre farklılaşır.
- H2: Karabük Üniversitesi DNA özellikleri (H2a: esnek örgüt, H2b: askeri örgüt, H2c: tam-zamanında örgüt, H2d: rastgele örgüt, H2e: yönetim ağırlıklı örgüt, H2f: pasif-saldırgan örgüt) yaşa göre farklılaşır.
- H3: Karabük Üniversitesi DNA özellikleri (H3a: esnek örgüt, H3b: askeri örgüt, H3c: tam-zamanında örgüt, H3d: rastgele örgüt, H3e: yönetim ağırlıklı örgüt, H3f: pasif-saldırgan örgüt) medeni duruma göre farklılaşır.
- H4: Karabük Üniversitesi DNA özellikleri (H4a: esnek örgüt, H4b: askeri örgüt, H4c: tam-zamanında örgüt, H4d: rastgele örgüt, H4e: yönetim ağırlıklı örgüt, H4f: pasif-saldırgan örgüt) unvana göre farklılaşır.
- H5: Karabük Üniversitesi DNA özellikleri (H5a: esnek örgüt, H5b: askeri örgüt, H5c: tam-zamanında örgüt, H5d: rastgele örgüt, H5e: yönetim ağırlıklı örgüt, H5f: pasif-saldırgan örgüt) eğitim seviyesine göre farklılaşır.
- H6: Karabük Üniversitesi DNA özellikleri (H6a: esnek örgüt, H6b: askeri örgüt, H6c: tam-zamanında örgüt, H6d: rastgele örgüt, H6e: yönetim ağırlıklı örgüt, H6f: pasif-saldırgan örgüt) çalışma süresine göre farklılaşır.

Evren, Örneklem ve Ölçüm Aracı

Araştırmanın evreni 2023-2024 eğitim öğretim yılında Karabük Üniversitesi'nde tam zamanlı çalışan 1167 akademisyendir. Anketlerin uygulanması için Karabük Üniversitesi Sosyal ve Beşeri Araştırmaları Etik Kurulu'ndan 29.05.2024 tarih ve 2024/06 sayılı etik kurul izni alınmıştır. Araştırmada evrenin tamamına tam sayım yöntemiyle anketler online olarak gönderilmiş ve Google forms üzerinden hazırlanan ankete katılımları istenmiştir. Toplamda 198 akademisyen araştırmaya katılmış ve dolayısıyla araştırmanın örneklemini 198 akademisyen oluşturmaktadır. Veri toplama süreci 1-30 Haziran 2024 tarihleri arasında gerçekleştirilmiştir. Verilerin analizinde t-testi ve ANOVA analizi gerçekleştirilmiştir.

Örneklemin demografik dağılıma ilişkin bulguları Tablo 1'de gösterilmiştir.

Tablo 1. Örneklemin demografik özellikleri

Değişkenler	Kategori	Frekans	Yüzde
Cinsiyet	Erkek	115	41,9
	Kadın	83	58,1
Yaş	30 Yaş ve Altı	47	23,7
	31-40 Yaş	94	47,5
	41 Yaş ve Üstü	57	28,8

FULL TEXTS BOOK

Medeni Durum	Bekar	70	35,4
	Evli	128	64,6
Unvan	Arş. Gör.	52	26,3
	Öğr. Gör.	29	14,6
	Dr. Öğr. Üyesi	68	34,3
	Doçent	28	14,1
	Profesör	21	10,6
Eğitim Seviyesi	Lisans	21	10,6
	Yüksek Lisans	47	23,7
	Doktora	130	65,7
Kurumda Çalışma Süresi	1 Yıldan Az	22	11,1
	1-5 Yıl	54	27,3
	6-10 Yıl	49	24,7
	11-20 Yıl	56	28,3
	21 Yıl ve Üzeri	17	8,6

Tablo 1'e göre araştırmaya katılan akademisyenlerin %58,1'i kadın ve %41,9'u erkektir. Yaş dağılımı incelendiğinde; katılımcıların %23,7'si 30 yaş ve altı, %47,5'i 31-40 yaş arası ve %28,8'i 41 yaş ve üstüdür. Araştırmaya katılan akademisyenlerin %35,4'ü bekar, %64,6'sı evlidir. Katılımcıların %26,3'ü Araştırma Görevlisi, %14,6'sı Öğretim Görevlisi, %34,3'ü Dr. Öğretim Üyesi, %14,1'i Doçent ve %10,6'ı Profesör'dür. Katılımların eğitim seviyeleri incelendiğinde çoğunluğun Doktora mezunu olduğu görülmektedir (%65,7). Karabük Üniversitesi'ndeki akademisyenlerin kurumda çalışma sürelerine bakıldığında; %11,1'inin 1 yıldan az, % 27,3'ünün 1-5 Yıl arası, %24,7'sinin 6-10 yıl arası, %28,3'ünün 11-20 yıl arası ve %8,6'sının 21 yıldan fazla olduğu görülmektedir.

Çalışmada kullanılan örgüt DNA'sı ölçeği, Booz Allan Hamilton Co. (2003) tarafından geliştirilmiş, Çetin ve Döş (2014) tarafından Türkçe'ye uyarlanmıştır ve 28 sorudan oluşmaktadır. Örgüt DNA'sı ölçeğinde 6 alt boyut bulunmaktadır. Değerlendirme ölçeğinde esnek örgüt profili için 4 madde, askeri örgüt profili için 4 madde, tam zamanında örgüt için 4 madde, rastgele örgüt profili için 6 madde, yönetim ağırlıklı örgüt için 6 madde, pasif saldırgan için örgüt için 4 madde bulunmaktadır. Örgüt DNA'sı ölçeğinin ifadeleri 1=Kesinlikle Katılmıyorum, 2=Katılmıyorum, 3=Kararsızım, 4=Katılıyorum, 5=Kesinlikle Katılıyorum şeklinde oluşan 5'li likert tipi sorulardır.

BULGULAR

Araştırmanın bulguları kapsamında öncelikle tanımlayıcı istatistikler incelenmekte, daha sonra ise güvenilirlik analizi ve hipotez testlerine yer verilmektedir.

Tanımlayıcı İstatistikler

Tanımlayıcı istatistikler, analiz verisinin özet şekilde yorumlanmasına imkan vererek verinin daha iyi ve kolay anlaşılmasını sağlamaktadır. Tanımlayıcı istatistikler kapsamında araştırma değişkenlerine ilişkin ortalama ve standart sapma değerlerine yer verilmektedir.

Örgütsel DNA özellikleri kapsamında elde edilen ortalama ve standart sapma değerleri Tablo 2'de gösterilmiştir.

Tablo 2. Ortalama ve Standart Sapma Değerleri

Değişkenler	Ortalama	Std. Sapma
Rastgele Örgüt	3,189	1,021

FULL TEXTS BOOK

Askeri Örgüt	3,158	0,835
Yönetim Ağırlıklı Örgüt	3,064	1,073
Pasif-Saldırgan Örgüt	3,011	1,060
Esnek Örgüt	2,990	1,108
Tam-Zamanında Örgüt	2,865	1,089
ÖRGÜTSEL DNA (GENEL)	3,058	0,385

Tablo 2'ye göre katılımcılar Karabük Üniversitesi'nin en fazla rastgele örgüt profiline sahip olduğunu düşünmektedir (Ort=3,189). Bununla birlikte sırasıyla askeri örgüt (Ort=3,158), yönetim ağırlıklı örgüt (Ort=3,064), pasif saldırgan örgüt (Ort=3,011), esnek örgüt (Ort=2,990) yapısına sahip olduğunu belirtmekte, en az olarak da tam zamanında örgüt (Ort=2,865) yapısına sahip olduğunu ifade etmektedir.

Güvenilirlik Analizi

Araştırmada hipotez testleri öncesinde kullanılan ölçeklerin güvenilirlikleri araştırılmıştır. Bu çerçevede, örgütsel DNA boyutlarını oluşturan esnek örgüt, askeri örgüt, tam-zamanında örgüt, rastgele örgüt, yöntemi ağırlıklı örgüt, pasif-saldırgan örgüt ve genel olarak örgütsel DNA değişkenlerinin Cronbach Alfa (α) değerleri hesaplanmıştır. Sonuçlar Tablo 3'te gösterilmektedir.

Tablo 3. Ölçeklerin Güvenilirlik Değerleri

Değişkenler	**İfade Sayısı**	**Cronbach Alfa (α) Değeri**
Esnek Örgüt	4	0,930
Askeri Örgüt	4	0,733
Tam-Zamanında Örgüt	4	0,921
Rastgele Örgüt	6	0,923
Yönetim Ağırlıklı Örgüt	6	0,932
Pasif-Saldırgan Örgüt	4	0,894
ÖRGÜTSEL DNA (GENEL)	28	0,715

Güvenilirlik analizi sonucunda örgütsel DNA ölçeğinin Cronbach Alfa değerleri; esnek örgüt boyutu için 0,930, askeri örgüt boyutu için 0,733, tam-zamanında örgüt boyutu için 0,921, rastgele örgüt boyutu için 0,923, yönetim ağırlıklı örgüt boyutu için 0,932 ve pasif-saldırgan örgüt boyutu için 0,894 olarak hesaplanmıştır. Ayrıca genel olarak örgütsel DNA değişkeni için hesaplanan Cronbach alfa değeri 0,715 şeklindedir. Elde edilen bulgu, Örgütsel DNA ölçeği ve alt boyutları için hesaplanan güvenilirlik değerlerinin 0,70'in üzerinde olduğu ve dolayısıyla ölçeklerinin güvenilir ölçekler olduğu anlamına gelmektedir (Nunnally ve Bernstein, 1994, s. 265).

Hipotez Testleri

Hipotez testleri çerçevesinde, araştırmaya katılan akademisyenlerin örgütsel DNA algılarının ve alt boyutlarının demografik faktörler açısından farklılaşıp farklılaşmadığı araştırılmaktadır. Bu amaçla T-testi ve ANOVA analizinden yararlanılmıştır.

İlk hipotez, akademisyenlerin örgütsel DNA algılarının cinsiyete göre farklılaşıp farklılaşmadığını belirlemeye yöneliktir. Gerçekleştirilen t-testi sonuçları Tablo 4'te gösterilmektedir.

FULL TEXTS BOOK

Tablo 4. Cinsiyete Göre Örgütsel DNA Algısı

Değişken	Cinsiyet	Ort.	Std. Sapma	t-değeri	Sig. (p)
Esnek Örgüt	Kadın	2,768	1,022	-2,421	**0,016***
	Erkek	3,150	1,144		
Askeri Örgüt	Kadın	3,367	0,820	3,064	**0,002****
	Erkek	3,007	0,816		
Tam-Zamanında Örgüt	Kadın	2,602	0,985	-2,935	**0,004****
	Erkek	3,054	1,125		
Rastgele Örgüt	Kadın	3,363	1,015	2,055	**0,041***
	Erkek	3,064	1,010		
Yönetim Ağırlıklı Örgüt	Kadın	3,257	1,017	2,172	**0,031***
	Erkek	2,925	1,093		
Pasif-Saldırgan Örgüt	Kadın	3,157	0,979	1,645	0,102
	Erkek	2,906	1,107		
ÖRGÜTSEL DNA (GENEL)	Kadın	3,118	0,392	1,883	0,061
	Erkek	3,014	0,374		

* p<0,05; ** p<0,01; N=Kadın:83, Erkek:115

Araştırmanın ilk hipotezi kapsamında akademisyenlerin bakış açılarına göre genel olarak Karabük Üniversitesi'nin örgütsel DNA özelliklerinde cinsiyete göre farklılık bulunmamaktadır. Ancak örgütsel DNA'nın alt boyutlarına bakıldığında; esnek örgüt, askeri örgüt, tam zamanında örgüt, rastgele örgüt, yönetim ağırlıklı örgüt cinsiyete göre farklılık göstermektedir. Analiz bulguları kapsamında; kadın akademisyenlere göre Karabük Üniversitesi'nin askeri örgüt boyutu diğer alt boyutlara göre daha yüksektir. Erkek akademisyenlere göre ise esnek örgüt boyutu diğer alt boyutlara göre daha yüksektir. Bu durumda H1a, H1b, H1c, H1d, H1e kabul edilirken H1f reddedilmiştir.

İkinci hipotez, akademisyenlerin örgütsel DNA algılarının yaşa göre farklılaşıp farklılaşmadığını belirlemeye yöneliktir. Gerçekleştirilen ANOVA analizi sonuçları Tablo 5'te gösterilmektedir.

FULL TEXTS BOOK

Tablo 5. Yaşa Göre Örgütsel DNA Algısı

	31-40 yaş arası[2]	3,083	1,057			
	41 yaş ve üstü[3]	2,737	1,032			
Pasif-Saldırgan Örgüt	30 yaş ve altı[1]	3,527	0,978	10,908	**0,001****	1-2, p=0,012*
	31-40 yaş arası[2]	3,005	1,051			1-3, p=0,001**
	41 yaş ve üstü[3]	2,597	0,966			2-3, p=0,044*
ÖRGÜTSEL DNA (GENEL)	30 yaş ve altı[1]	3,241	0,327	9,640	**0,001****	1-2, p=0,011*
	31-40 yaş arası[2]	3,048	0,405			1-3, p=0,001**
	41 yaş ve üstü[3]	2,923	0,335			

* p<0,05; ** p<0,01; N=30 yaş ve altı:47, 31-40 yaş arası:94, 41 yaş ve üstü:57

Tablo 5 incelendiğinde Karabük Üniversitesi'nin hem örgütsel DNA alt boyutlarında hem de genel olarak yaşa göre farklılık bulunmaktadır. Örgütsel DNA'nın alt boyutlarına bakıldığında; esnek örgüt, askeri örgüt, tam zamanında örgüt, rastgele örgüt, yönetim ağırlıklı örgüt, pasif- saldırgan örgüt yaşa göre farklılık göstermektedir. 30 yaş altı ve 31-40 yaş arası akademisyenler, Karabük Üniversitesi'nin örgütsel DNA profilinde rastgele alt boyutunun en yüksek olduğunu ifade etmektedir. 41 yaş üzerinde olan akademisyenler ise esnek örgüt olduğunu düşünmektedir. Analiz bulgularına göre; H2a, H2b, H2c, H2d, H2e ve H2f kabul edilmiştir.

Üçüncü hipotez, akademisyenlerin örgütsel DNA algılarının medeni duruma göre farklılaşıp farklılaşmadığını belirlemeye yöneliktir. Gerçekleştirilen t-testi sonuçları Tablo 6'da gösterilmektedir.

FULL TEXTS BOOK

Tablo 6. Medeni Duruma Göre Örgütsel DNA Algısı

	Evli	3,005	0,371		

* p<0,05; ** p<0,01; N=Bekar:70, Evli:128

Tablo 6'ya bakıldığında; akademisyenlerin bakış açısına göre Karabük Üniversitesi'nin örgütsel DNA özellikleri genel olarak medeni duruma göre farklılık göstermektedir. Örgütsel DNA'nın alt boyutlarına bakıldığında; esnek örgüt, askeri örgüt, tam zamanında örgüt, yönetim ağırlıklı örgüt, pasif-saldırgan örgüt medeni duruma göre farklılık göstermektedir. Buna karşılık rastgele örgüt medeni duruma göre farklılık göstermemektedir. Evli akademisyenlerde esnek örgüt daha yüksek ortalamaya sahipken, bekar akademisyenlerde askeri örgüt profili daha yüksek ortalamaya sahiptir. Analiz bulgularına göre; H3a, H3b, H3c, H3e, H3f kabul edilirken H3d reddedilmiştir.

Dördüncü hipotez, akademisyenlerin örgütsel DNA algılarının unvana göre farklılaşıp farklılaşmadığını belirlemeye yöneliktir. Gerçekleştirilen ANOVA analizi sonuçları Tablo 7'de gösterilmektedir.

Tablo 7'de akademisyenlere göre Karabük Üniversitesi'nin örgütsel DNA özelliklerinde tam zamanında örgüt alt boyutu dışındaki örgütsel DNA boyutlarında hem de genel olarak unvana göre farklılık bulunmaktadır. Örgütsel DNA'nın alt boyutlarına bakıldığında; esnek örgüt, askeri örgüt, rastgele örgüt, yönetim ağırlıklı örgüt, pasif- saldırgan örgüt unvana göre farklılık göstermektedir. Akademik unvanlar açısından bakıldığında araştırma görevlilerinde ve doktor öğretim üyelerinde rastgele örgüt, öğretim görevlileri ve profesörlerde esnek örgüt, doçentlerde tam zamanında örgüt en yüksek ortalamaya sahiptir. Analiz bulgularına göre; H4a, H4b, H4d, H4e ve H4f kabul edilmiştir, H4c ise reddedilmiştir. Beşinci hipotez, akademisyenlerin örgütsel DNA algılarının eğitim seviyesine göre farklılaşıp farklılaşmadığını belirlemeye yöneliktir. Gerçekleştirilen ANOVA analizi sonuçları Tablo 8'de gösterilmektedir.

Tablo 8. Eğitim Seviyesine Göre Örgütsel DNA Algısı

Tablo 9'daki verilere göre Karabük Üniversitesi'nin örgütsel DNA özellikleri genel olarak kurumda çalışma süresine göre farklılık göstermektedir. Bununla birlikte Örgütsel DNA'nın tüm alt boyutları da çalışma süresine farklılık göstermektedir. Karabük Üniversitesi'nde 1 yıldan az süredir çalışanlar çalıştıkları kurumun örgütsel DNA özelliklerini askeri örgüt, 1-5 yıl arası ve 6-10 yıl arası çalışanlar

FULL TEXTS BOOK

rastgele örgüt, 11-20 yıl arası ve 21 yıl ve üzeri çalışanlar esnek örgüt olarak belirtmişlerdir. Analize göre; H6a, H6b, H6c, H6d, H6e ve H6f kabul edilmiştir.

SONUÇ VE TARIŞMA

Analizler sonucunda, katılımcılara göre Karabük Üniversitesi'nin DNA özelliklerinden en yüksek ortalamaya sahip olanın rastgele örgüt olduğu, en düşük ortalamaya sahip olanın ise tam zamanlı örgüt olduğu tespit edilmiştir. Bununla birlikte, demografik özellikler açısından örgütsel DNA'nın farklı boyutları incelendiğinde, cinsiyet, yaş, medeni durum, unvan, eğitim seviyesi ve kurumda çalışma süresi açısından farklılıklar bulunduğu belirlenmiştir.

Araştırma bulgularına göre; Karabük Üniversitesi'nde zeki, yetenekli ve girişimci akademisyenlerin bulunduğu ancak yönetimin akademisyenleri ortak bir amaç ve örgütsel değerler altında birlikte hareket etmelerini sağlamakla zorlandığı, üst yönetimde koordinasyon eksikliği olduğu ortaya çıkmıştır. Bu bulguların; Karabük Üniversitesi çalışanlarına ve yöneticilerine yol göstermesi açısından önemli olduğu düşünülmektedir.

ÖZET
Bu çalışmanın amacı; öğretmenlerdeki örgütsel sessizliğe sebep olan bireysel, örgütsel ve yönetsel nedenlerin neler olduğunu belirlemektir. Bu amaç gözetilerek yapılan araştırmada tarama modeli kullanılmış olup nitel veri toplama yöntemlerinden görüşme tekniği kullanılmıştır. Araştırmanın çalışma grubunu, Isparta İli Eğirdir İlçesinde İlkokullarda çalışan 20 İlkokul öğretmeni oluşturmuştur. Araştırmacı tarafından hazırlanan, dokuz sorudan oluşan görüşme formu, çalışma grubundaki öğretmenlere uygulanarak gerekli bulgular elde edilmiştir. Toplanan verilerden içerik analizi yapılarak bulgular başlıklar halinde belirtilmiş, her başlık bulgulardan yararlanarak yorumlanmıştır. Yapılan araştırma sonucunda öğretmenlerin kendilerini korumak amacıyla bilinçli olarak sessizlik davranışında bulundukları tespit edilmiştir. Öğretmenlerde sıklıkla oluşan örgütsel sessizlik davranışını ortaya çıkaran sebepler bireysel nedenler, örgütsel nedenler ve yönetsel nedenler olarak ortaya çıkmış olup; bireysel nedenler, korku, güvensizlik, iletişim kuramama ve içe kapanma olarak belirlenmiştir. Örgütsel sessizliğe neden örgütsel sebepler; örgüt kültürü, adaletsizlik, sendikal sebepler, takdir edilmeme olarak belirlenmiştir. Yönetsel nedenler ise; katı hiyerarşik yapı, yöneticilere güvenmeme, liyakatsizlik, zorlayıcı güç olarak belirlenmiştir. Örgütsel Sessizliğin önüne geçmek için örgütlerde çalışanların güvende hissedeceği ve fikirlerini özgürce ifade edebileceği çalışma ortamları oluşturulmalı, okul yöneticileri her çalışana adil davranarak eşitlik ilkesinden ayrılmamalıdır. Çalışanlar da üzerine düşen görev sorumlulukları zamanında yerine getirerek örgütün amaçlarını gerçekleştirmek, verimliliği arttırmak için düşüncelerini dile getirmekten çekinmemelidir.
Anahtar Kelimeler: Örgüt, örgütsel sessizlik, öğretmen, yönetici

ABSTRACT
The purpose of this study is to determine the individual, organizational and administrative reasons that cause organizational silence in teachers. In the research conducted with this purpose in mind, the scanning model was used and the interview technique, which is one of the qualitative data collection methods, was used. The study group of the research consists of 20 primary school teachers working in primary schools in Eğirdir district of Isparta province. The interview form consisting of nine questions prepared by the researcher was applied to the teachers in the study group and the necessary findings were obtained. Content analysis was performed on the collected data and the findings were stated under headings, and each heading was interpreted using the findings. As a result of the research, it was determined that teachers consciously exhibit silence behavior in order to protect themselves. The reasons that frequently occur in teachers' organizational silence behavior were revealed as individual reasons, organizational reasons and administrative reasons; individual reasons were determined as fear, insecurity, inability to communicate and introversion. The organizational reasons causing organizational silence were determined as organizational culture, injustice, union reasons and not being appreciated. The administrative reasons were determined as rigid hierarchical structure, lack of trust in managers, incompetence and coercive power. In order to prevent organizational silence, working environments should be created in organizations where employees feel safe and can express their ideas freely, school

FULL TEXTS BOOK

administrators should treat each employee fairly and not depart from the principle of equality. Employees should not hesitate to express their opinions in order to fulfill their duties and responsibilities on time and to achieve the organization's goals and increase efficiency.
Keywords: Organization, organizational silence, teacher, manager

GİRİŞ

Örgütler ortak bir amacı gerçekleştirmek amacıyla çalışan, birlikte hareket eden insanlardan oluşmuş bir yapıdır. Ortak bir amaca ulaşırken örgütte bulunan herkesin bu amacı benimsemesi ve işbirliği yapması gerekir. Örgütler belli bir düzende çalışmalarını sürdürebilmek için belli normlar, kurallar ve sorumluluklar, liderlik şekilleri meydana getirirler. (Lusthaus, Adrien, Anderson, Carden ve Montalvan, 2002) çalışmalarında da ortaya koyduğu üzere örgüt yapısı itibariyle insan ilişkilerinin önemli olduğu bir düzene sahiptir. Çalışmaların verimli olması için çalışanlar iletişim içinde olmalıdır. Örgütlerin sahip oldukları kültür, değer yargıları, başarılı olmak için uyguladığı politika ve örgüt çalışanlarına karşı gösterdiği tutum aynı zamanda çalışanlarında örgüte karşı bağlılığını ve örgüte karşı davranışlarını da şekillendirir.

Bir örgütteki en önemli unsur çalışanlardır. Örgüt çalışanları ne kadar işbirliği içinde olursa, karar alma süreçlerine dâhil olarak duygu ve düşüncelerini rahatça ifade edebilme fırsatı bulursa örgüt çalışmaları da o kadar verimli olur. Çalışanların gerekli dayanışmayı sağlamasının sonucunda örgütsel bağlılığın oluşması ve örgütte verimliliğin arttırılması beklenir(Lepak ve Snell, 1998).

Çok çeşitli örgüt türleri vardır. Fakat bunlar için de eğitim öğretim örgütü olan okulların yeri çok ayrıdır. Okullar bulundukları toplumun kültürel etkilerinden ve küresel gelişmelerden, değişikliklerden de oldukça hızlı etkilenir. Okullar toplumları şekillendiren geleceğe yön veren bir görev yüklenir. Okul örgütü içinde meydana gelecek tüm olumsuz etkilerin topluma yansıması da kaliteyi düşürücü etki yaratacaktır. Bu bağlamda ele alacak olursak okul içinde verimi düşürecek çalışanların motivasyonunu düşürecek tüm engeller olabildiğince ortadan kaldırılmalıdır. Özellikle alan yazında da oldukça yer edinen örgüt çalışanlarının sessizliğe bürünmesine neden olacak yanlış uygulamaların önüne geçilmeli, ifade özgürlüğü sağlayacak çalışma ortamları oluşturulmalıdır.

KAVRAMSAL ÇERÇEVE

Örgütsel Sessizlik Nedir?

(Morrison ve Millliken, 2000; 2003; Henriksen ve Dayton, 2006; Fletcher ve Watson, 2007; Zheng ve diğerleri, 2008) yaptıkları çalışmalar sonucunda örgütsel sessizliği iş görenlerin çalıştıkları örgütün verimini arttırmaya yönelik fikirlerini bilinçli olarak gizlemesi şeklinde tanımlamıştır. Pinder ve Harlos (2001) çalışmalarına bakıldığında sessiz kalma davranışı iş görenlerin çalıştıkları örgütle ilgili bilgi, duygu ve düşüncelerini örgüt yöneticisine ifade etmemesidir. Sessizlik türlerinin hepsi edilgin bir davranış olarak ifade edilemez. (Scott, 1993). Bu nedenle yapılan açıklamalarda örgütsel sessizlik bilerek, bilinçli olarak, isteyerek yapılan sessiz kalma davranışı olarak karşımıza çıkar (Bogosian, 2012). Tanımlardan yola çıkarak sessizlik davranışı bilinçli olarak gerçekleştirilen ve çalışanın sahip olduğu bilgiyi paylaşmaması, farklı fikirlerin ortaya çıkması sürecinde pasif rol oynayarak gelişimin önünde engel yaratması olarak kendini göstermektedir.

Sessizlik Türleri Nelerdir?

Örgütsel Sessizlik türleri araştırıldığında Kabullenici Sessizlik, Savunmacı (Koruma Amaçlı) Sessizlik ve Örgüt Yararına Sessizlik/Koruma Amacıyla (Prososyal) Sessizlik şeklinde üç tür literatürde sıkça geçmektedir.

Kabullenici Sessizlik

Sessizliğin ilk türü kabullenici sessizliktir. Bu sessizlik türünde çalışanların ilgisiz olması, olaylara karşı kayıtsız görünmesi ve kabullenici tavırlarından dolayı sahip oldukları bilgileri, hissettiği duyguları

FULL TEXTS BOOK

kimseyle paylaşmak istemezler. Pasif,durgun ve çekingen davranışlar sergiledikleri gözlemlenmiştir (Pinder ve Harlos, 2001). Bu anlayıştaki kişiler çevrelerinde olan olaylar karşısında hiçbir fikir belirtmez ve olumsuz bir durumla karşılaşsa bile durumu olduğu gibi kabul ederler. Sorunlarla ilgili konuşmakta ilgisiz ve bilinçli olarak pasif davranırlar. Çalışanların sessiz kalmasının nedeni ‘’konuşsam ne olur konuşmasam ne’’ şeklinde düşündükleri için olabilir (Çakıcı, 2010). Kabullenici sessizlik davranışı sergileyen insanlar gözlemlendiğinde; söylediklerinin fark yaratmayacağı, dikkate alınmayacağı ya da iş arkadaşları tarafından alay edileceği düşüncesiyle çalışma ortamında sorunların çözümüne ilişkin gördüğü farklı çözüm yollarını kimseyle paylaşmak istemez, her zaman pasif kalır ve çoğunlukla bulunduğu kurumdan ayrılmak ve yer değiştirmek için tayin isteme görülür. Çalışanların bu sessizlik davranışlarının kaynağı gelişmelere, çevresindeki değişen şartlara karşı tepki göstermemesidir (Kulualp ve Çakmak, 2016).

Kabullenici sessizlik örgüt hayatında "boş yere konuşup durma değişen bir şey yok" " boşuna uğraşma" Çeneni boşa yorma" gibi ifadelerle ortaya konulmaktadır (Çakıcı, 2010: 33).

Savunmacı (Korunma Amaçlı) Sessizlik

Sessizliğin diğer türü de Savunmacı Sessizlik olarak karşımıza çıkmaktadır. Van Dyne ve diğerlerinin görüşlerine göre korunmacı sessizlik çalışanların kendilerini çevreden gelecek olumsuz durumlara karşı korumak amacıyla korkudan kaynaklı olarak fikirlerini, duygularını sahip oldukları bilgi ve görüşlerini esirgemesidir diye ifade edilmiştir (Durak, 2012: 56). Kişilerin söylediklerinin sonucunda oluşacak olumsuz durumlardan kaçınmak amacıyla bilinçli olarak sessizliği seçmesi şeklinde savunmacı sessizliği ifade etmiştir (Pinder ve Harlos 2001). Korunma amaçlı sessizlik, çalışanın kendisini çevreden gelebilecek tehditlerden (korkudan kaynaklanarak) savunmak amacıyla fikirlerini, görüşlerini paylaşmak istememesi şeklinde belirtilmektedir. Savunmacı sessizliğe bürünen kişilerde problemlere karşı gözlerini kapatma yaptıkları yanlışları saklama ve düşündüklerini gizleme davranışı görülür (Çakıcı, 2010). Çalışanlar fikirlerini yöneticileriyle paylaşırken özellikle olumsuz durumlarla ilgili konularla ilgili bilgi paylaşımında bulunurken bu durumun kendisine faydadan çok zarar getireceği düşüncesine girmektedir. Örgütle ilgili ortaya çıkan problemleri ve ya aksaklıkları anlatırken ifadelerindeki olumsuz kavramları olabildiğince azaltmaya çalışmakta konunun yaratacağı olumsuz etkileri de en aza indirmeye çalışmaktadır. Sessizliğin bu boyutuyla alakalı yapılan araştırmalarda da çalışanların yöneticilerine bilgi verirken olumsuz bilgiyi asgari düzeye indirgeyerek konuyu farklılaştırdıkları gözlemlenmiştir (Karacaoğlu ve Cingöz, 2008).

Bu şekilde davranış sergilemenin en önemli nedeni de çalışan paylaştığı olumsuz bilgilerden dolayı kendisinin sorumlu tutulacağını düşünerek kendince önlem almakta ve çevresindekilerin suçlayıcı tutumlarından dolayı korunacağını düşünmektedir.

Örgüt Yararına Sessizlik/Koruma Amaçlı (Prososyal) Sessizlik

Diğer bir sessizlik türü de Örgüt Yararına Sessizlik /Korunma Amaçlı (Prososyal) sessizliktir. Bu sessizlik türünde çalışanlar bildiklerini, gördüklerini ya da duyduklarını iş arkadaşlarının, çalıştığı örgütün olumsuz etkileneceğini düşündüğü için onların faydasını gözeterek paylaşmamaktadır. Savunmacı Sessizlik anlayışından farklı olarak Koruma Amaçlı sessizlikte korkudan ziyade başkalarını korumak ve örgütün yararını gözetmek esastır (Taşkıran, 2011). Prososyal Sessizlik çalışanın başkalarını korumak amacıyla bilinçli ve istekli olarak bilgi ve görüşlerini paylaşmaması olarak tanımlanmaktadır.

Prososyal Sessizlikte önemli olan kişinin örgütün ve iş arkadaşlarının faydasını düşünmesi, bu amaçla diğerleriyle işbirliği içinde bulunması ve fedakârlık davranışı göstermesi beklenmektedir. Kişinin kendini feda ederek başkalarını koruması bu anlayışın temelidir. Savunma amacıyla sessizlik davranışında görüldüğü üzere açık açık konuşmaktan kaynaklanan sorunlardan korunmaktan ziyade

FULL TEXTS BOOK

örgüt yararına sessizlikte kendinden başkalarının iyi olması amaçlanmaktadır. Planlı ve isteyerek yapılan sessizlik davranışıdır (Çakıcı, 2010).

Örgütsel Sessizlik İle İlgili Yapılan Araştırmalar

Morrison ve Milliken (2000)' nın yaptıkları çalışmalarda gösteriyor ki Örgütsel Sessizlik çalışanlar üzerinde stres, aidiyet kuramama ve güvensizlik yarattığı gibi işten ayrılmaların artması sonucu sürekli personel değişimi olmaktadır.

Çakıcı (2007) araştırmalarına göre yöneticiler kaygılarını ya da yaşadığı sorunları anlatan çalışanlarını samimiyetle dinleyerek desteklediğini gösterirse çalışan için güvenli bir çalışma ortamı sağlayabilirler.

Tangirala ve Ramanujam (2008) 'ın araştırmalarına göre bilinçli olarak sessiz kalan çalışanların stres düzeyleri artacak ve psikolojileri bozulacaktır.

Poopanit (2008) yaptığı araştırmaya göre çalışanların örgüt içinde mutlu olabilmesinin en önemli etkeni çalışanlar arasındaki ilişkinin iyi olmasıdır. Çalışanların mutluluğunu sağlamanın yolu sağlıklı iletişimden geçmektedir.

Bildik (2009) da yaptığı çalışmalar sonucunda Örgütsel Sessizliğin nedenlerini örgütsel nedenler ve yönetsel nedenler olarak belirlemiştir.

Liu, Wu ve Ma (2009)' nın yaptıkları çalışmalar sonucunda ''yöneticilerin örgüt çalışanlarının düşüncelerini açıklaması için nasıl cesaretlendireceğini ve çalışanlardaki sessizliğe bürünme davranışlarının nasıl önleneceğini'' belirlemeye yönelik kamu çalışanları üzerinde yapılan araştırma sonucunda, çalışanlar arasında etkili iletişimi arttırmakla birlikte kişisel ve psikolojik yönlerini geliştirmeye yönelik çalışmalar yapmanın etkili olacağı belirtilmiştir. Farklı liderlik yaklaşımlarının da sessizlik davranışını gösteren çalışanları olumlu yönde düşünmeye sevk edeceği ifade edilmiştir.

Gül ve Özcan (2011) yaptıkları araştırma da örgütsel sessizliğin sebeplerini çalışma arkadaşlarıyla aralarındaki ilişkinin bozulacağı korkusu, güvensizlik, örgütte dışlanacaklarına dair oluşan yargılar şeklinde belirtmişlerdir.

Alioğulları (2012) yaptığı çalışmalar sonucu eğitim düzeyi yükselen kişilerin sahip oldukları tecrübelerin artması sonucu sessizliklerinin azaldığı sonucuna ulaşmıştır.

Cinsiyet değişkeni üzerinde yapılan araştırmalara da bakıldığında farklı sektörlerde farklı sonuçlara ulaşıldığı dikkat çekmektedir. Şehitoğlu (2010) ve Kılınç (2012) yaptıkları çalışmalar sonucunda kadınların erkeklere oranla daha çok sessizlik davranışı gösterdikleri sonucuna ulaşırken, Kolay (2012) ve Kutlay (2012) Eğitim sektöründe çalışanlar üzerinde yaptıkları çalışmalar sonucunda erkeklerin kadınlara kıyasla sessizlik davranışını daha çok gösterdikleri sonucuna ulaşmışlardır.

Samadi ve diğerleri (2013) yaptıkları araştırmada çalışanların örgütsel öğrenme konusundaki bilgileri arttıkça örgütsel sessizlik davranışında azalma olacağını sonucuna varmışlardır. Örgüt üyelerinin ortak bir amaca ulaşmak için işbirliği içinde öğrenmeyi gerçekleştirmesi aralarındaki iletişime de katkıda bulunacaktır.

Moaşa (2013) yaptığı çalışmalar sonucunda örgütün sahip olduğu özelliklerin örgüt çalışanlarının sessizlik davranışı gösterip göstermemesinde etkili olduğu sonucuna ulaşmıştır. Eğer örgütte sessizlik davranışı daha çok onay görüyorsa çalışanlar sessiz kalabilir, farklı fikirleri destekleyerek yeniliklere açık bir yapı gösterirse çalışanlarda düşüncelerini özgürce dile getirebilir.

Demir (2014)'in yaptığı araştırmada sessiz kalmanın kariyerle ilgili yapılan planların da oldukça etkilendiği sonucuna varmıştır. Sessizlik davranışını benimseyen çalışanlar zamanla durağanlığa düşerek gelişimlerini destekleyecek faaliyetlerin dışında kalacak, yeni fikirler üretme çabasında da bulunmayacaktır.

Yaman ve Ruçlar (2014) yaptıkları araştırmanın sonucunda sık sık konuşarak yaşanılan problemleri ifade eden çalışanların ''her şeyden şikâyetçi'' şeklinde etiketlenmesi, çalışma arkadaşlarıyla ilişkilerinin bozulmasına, işini kaybetme korkusu oluşmasına, güvensizlik duygusuna yol açtığı sonucuna ulaşmışlardır.

FULL TEXTS BOOK

Ayduğ, Himmetoğlu ve Turhan (2017) yaptığı araştırmada sessizliğin yayılmacı bir yapı gösterdiğini zamanla örgütte bulunan çalışanların çoğunu etkileme gücüne sahip olduğu için giderek tüm örgütü kontrol edebileceğini belirlemiştir.

Ege (2018) tarafından yapılan çalışmalarda sessizlik davranışı ve mutlu olmak arasındaki ilişkiyi belirlemeye yönelik çalışmalar yapmıştır. Yaptığı araştırmalar sonunda sessizlik ve mutluluk arasında negatif bir korelasyon olduğunu belirlemiştir. Bu da gösteriyor ki örgüt içinde iletişim arttıkça mutluluk düzeyi de buna bağlı olarak artış gösterecektir.

Hashımı (2019) yaptığı araştırma da göstermektedir ki okullarda öğretmenler arasında bireysel iletişim oldukça önemlidir. Sessizlik davranışının ortaya çıkması bireyler arası ilişkileri olumsuz etkileyeceği gibi örgüt verimini de düşürebilir.

Başka bir araştırma da (Amah ve Okafor, 2008, s.1) tarafından gerçekleştirilmiş, örgütlerde çalışanların sessiz kalmaları nedenlerinin ifade ettikleri düşüncelerinin çalışma arkadaşları tarafından beğenilmediği ve ya değer verilmediği düşüncesi olduğu gibi fikirlerini ifade ettiğinde olumsuz bir eleştiriyle karşılaşacağını düşünmesi olarak belirtilmiştir.

YÖNTEM

Araştırmada; Isparta İli Eğirdir İlçesi İlkokullarda görev yapan öğretmenlerde örgütsel sessizliğe neden olan bireysel, örgütsel ve yönetsel faktörler belirlenmeye çalışılmıştır. Bu araştırmada tarama modeli kullanılmış nitel bir araştırma olup, nitel araştırma tekniklerinden görüşme tekniği kullanılmıştır. Nitel araştırma olayları bütün olarak ele alan ve yapılan araştırmaya konu olan problemi olağan ortamında yorumlamayı esas alan bir yöntem olarak bilinir. Bu yaklaşım, araştırma konusunu herhangi bir değişiklik yapmadan, değişenlerden etkilenmeden açıklamaya çalışır. (Karasar, 2014)

Çalışma Grubu

Araştırmada elde edilen veriler ve ulaşılan sonuçlardan genelleme yapılarak çalışmanın evreni, 2023-2024 eğitim ve öğretim yılında Isparta ili Eğirdir İlçesi ilkokullarında çalışan öğretmenlerden oluşturulmuştur. Araştırmalarda sık sık evren değerine ulaşılmanın zor olması, çalışma evreninden örneklem grubunun seçilmesini gerektirir. Çalışma evrenindeki tüm üyelere erişimin zor olması sebebiyle evreni temsil edecek yeterlilikteki yine evrenden seçilmiş daha küçük grup örneklemi oluşturur (Karasar, 2014). Araştırmaya katılan iki katılımcının hizmet süresi 0-5 yıl arası, beş katılımcı 6-10 yıl arası, yedi katılımcının 11-15 yıl arası, altı katılımcının ise 16 yıl ve üzeridir. Katılımcıların tamamı ilkokulda görev yapmaktadır. Görüşme Formundaki soruları yanıtlayan İlkokulda görev yapan öğretmenlerin demografik bilgileri Tablo.1 de gösterilmektedir.

Tablo **1**:İlkokul Öğretmenlerine Ait Demografi

Veri Toplama Aracı

Yapılan çalışmada araştırmayı yapan tarafından geliştirilen "İlkokullarda görev yapan öğretmenlerin örgütsel sessizlik nedenlerine ilişkin görüşleri'' başlıklı yarı yapılandırılmış görüşme formu kullanılmıştır. Veri toplama aracını oluştururken alan yazın incelemesi yapılmış olup önceki çalışmalarda kullanılan ölçekler incelenmiştir. Soru ifadelerinin açık ve anlaşılır olmasına ve kesin ve net ifadelerden oluşmasına dikkat edilmiştir. Görüşme formundaki birinci bölümde görüşme formunu dolduracak katılımcılara ait kişisel bilgilerin (cinsiyet, kıdem, öğrenim durumu) olduğu bölüm bulunmaktadır. Görüşme formunun ikinci bölümünü ise katılımcılara sorulan sorular bulunmaktadır.

Verilerin Analizi ve Yorumu

Verilerden güvenilirliği ve geçerliliği yüksek sonuçlara ulaşabilmek için elde edilen verilerin analizi yapılmıştır. Bu kısımda elde edilen veriler muhtemel sınırlar dâhilinde olma durumu incelenmiştir ve verilerin uygulanan tekniklerle varsayımların değerlendirmesi yapılmıştır. Değerlendirmeye alınan veriler analiz edilerek yorumlaması yapılmıştır.

ARAŞTIRMA VE BULGULAR

Birinci Alt Probleme Yönelik Bulgular

Tablo 2: Örgütsel Sessizliğe Sebep Olan Bireysel Faktörlere İlişkin Katılımcı Görüşleri

Alt Problem	Elde Edilen Bulgular	Kişi Sayısı	Katılımcılar(Ö)
Bireysel Faktörler	Korku	4	Ö5, Ö7, Ö11, Ö14
	Güvensizlik	4	Ö1, Ö3, Ö8, Ö20
	İletişim Kuramama	6	Ö2, Ö4, Ö10, Ö15, Ö17, Ö19
	İçe Kapanma	6	Ö6, Ö9, Ö12, Ö13, Ö16, Ö18

Tablo 2 incelendiğinde katılımcılardan 4 kişinin Korku, 4 kişinin Güvensizlik, 6 kişinin İletişim Kuramama, 6 kişinin de İçe Kapanma gibi duygular yaşadığı görülmüştür. Örgütsel Sessizliğe neden olan Bireysel Faktörlere bakıldığında katılımcıların tamamının olumsuz düşüncelerini ifade ettiği, bu durumun oluşmasının nedeni ise kişisel özellikleri ile çevrelerindekilerle ve yaşadıkları olaylarla ilgili olumsuz tutumları olabilir.

Tablo 2 incelendiğinde 4 katılımcının sessizliğin nedeni olarak korku yanıtını verdiği görülmüştür. Bu durumun oluşmasına bulunduğu örgütte dışlanma korkusu, ilişkilerinin zarar görmesi korkusu, işini kaybedeceği korkusu, herhangi bir disiplin cezası alacağına dair yaşadığı korku neden olmuş olabilir. Örgütsel sessizliğe neden olarak korku yönünde görüş bildiren **Ö5, Ö7, Ö11, Ö14** şunları belirtti; ''Uzun yıllar farklı okullarda çalışma imkânı buldum. İnsanlar kendileriyle aynı görüşleri paylaşmayan, farklı fikirler sunan kişilere karşı ön yargılı olabiliyor. Zamanla örgütten dışlanmaktan,

FULL TEXTS BOOK

yalnızlaşmaktan korktuğum için toplantılarda düşüncelerimiz sorulduğunda sessiz kalmaya çalıştım''(Ö5 Görüşü)

''15 Temmuz darbe girişiminden sonra yapılan görevden almalar beni oldukça etkiledi. Birlikte çalıştığımız arkadaşlardan, komşulardan ihraç edilenler, açığa alınanlar oldu. Bu durum ister istemez yanlış mı anlaşılırım, bana da bir şey olur mu, işimden alınır mıyım gibi korkular oluşturduğu. Her adımımı daha da düşünerek atmaya, her düşündüğümü açıklamamaya başladım. Artık bir konuyla ilgili fikrim sorulduğunda sessiz kalmayı tercih ettim.''(Ö11 Görüşü)

'' Artık sınıf içinde düzeni sağlamaya yönelik öğretmenlerin hiçbir yaptırımı kalmadı. Velisi tarafından şımartılan öğrenciler herhangi bir olumsuz söz duyduğunda olayları abartarak ailesine anlatıyor. Veli de öğretmeni dinlemeden çocuğunun sözüyle ya okul idaresine ya da daha da ileriye giderek CİMER e şikâyet ediyor. Sonucunda disiplin cezası ile karşılaşan arkadaşlarımız bile oldu.''(Ö7 Görüşü)

Tablo 2 incelendiğinde 4 katılımcının örgütsel sessizliğin bireysel nedenlerinden olarak Güvensizliği belirttiği görülmektedir. Öğretmenlerin diğer meslektaşlarıyla ilişkilerinde yaşadığı olumsuz deneyimler ya da okul yöneticilerine karşı gelişen güven problemi bu durumun ortaya çıkmasına sebep olabilir. Güvensizlik konusunda görüş bildiren (Ö3 ve Ö8 şunları söylemiştir:

'' Dersten çıktığımızda öğrencilerle alakalı bir problem olduğunda, velilerle ya da okul yöneticileriyle alakalı sorunla karşılaşınca, ya da özel hayatımızla ilgili iş arkadaşımızla dertleşme ihtiyacımız oluyor. İçimizi dökmek istiyoruz. Güven problemi yaşayınca tüm iş arkadaşlarımıza karşı da tereddüt oluşuyor. Kimseye bir şey anlatmak hiçbir şeyimi paylaşmak istemiyorum. Dersten teneffüse çıkınca fotokopi işleri sınıfla ilgili yapılacakları tamamlayıp kimseyle fazla sohbet etmeden derse giriyorum.''(Ö3 Görüşü)

'' Geçen yıl müdür bey okul aidatlarıyla ilgili velilere duyuru yapmamızı istedi. Bazı veliler bunun zorunlu olmadığını gerekirse şikâyet edecekleri belirttiler. Konuyu konuşmak üzere Okul Müdürüne gittiklerinde benim haberim yok öğretmen kendisi söylemiş, diyerek konuyu inkâr edince okul yönetimine karşı güvensizlik yaşadım. Artık hiçbir konu da fikrimi söylemiyorum ve mümkün olduğu kadar işimi tamamlayıp etkinliklerden ve diğer organizasyonlardan uzak durmaya çalışıyorum.''(Ö8 Görüşü)

Tablo 2 incelendiğinde örgütsel sessizliğe neden olarak 6 katılımcının (Ö2, Ö4, Ö10, Ö17, Ö19) iletişim kuramama görüşünü belirttikleri görülmüştür. Buna sert tutumlu, liyakatsiz yöneticilerin, kendini diğer öğretmenlerden daha üstün gören egosu yüksek öğretmenler, farklı sendikalarda olduğu için görüş farklılıklarından meydana gelen çatışmalar neden olabilir. Bu konuda görüş bildiren katılımcılar Ö2 ve Ö10 şöyle demiştir:

''Yaşadığım yere 90 km uzaklıkta bir okulda çalışıyordum.2 otobüs değiştirerek okula gidip geliyordum.7 aylık da bebeğim var. Müdür bey Sene Başı toplantısı yapılacağını duyurdu. Akşamüstü geç çıkacağımdan eve dönüşüm 9 u bulacaktı. Sabahta 6.30 da evden çıkmıştım. Durumu müdür beye anlatarak bebeğin emdiğini toplantıdan biraz erken çıksam olur mu diye izin almaya çalıştım. Gayet sert bir üslupla '' Hocam bebek başının çaresine baksın bugün ''dedi. Böyle bir idareciyle iletişim kurulamayacağını anladığımdan hiçbir düşüncemi dile getirmemeye özen gösterdim.''

Tablo 2 incelendiğinde örgütsel sessizliğin bireysel nedeni olarak 6 katılımcının İçe Kapanmayı (Ö6,Ö9,Ö12,Ö13,Ö15,Ö16) belirttiği görülmüştür. Bu duruma kişilerdeki özgüven eksikliği, yanlış anlaşılma korkusu, geçmiş yaşantılardan edindiği olumsuz izlenimler neden olmuş olabilir. Bu konuda görüş bildiren katılımcı (Ö9) şunları söylemiştir:

'' Okulda beraber çalıştığım bir öğretmen arkadaşım var. Teneffüs olduğunda öğretmenler odasına gelir fakat kimseyle konuşmaz, hiçbir şey paylaşmaz sürekli boş zamanlarını telefonla geçirerek tamamlar ve

FULL TEXTS BOOK

dersine girer. Hep içine kapanıktır. Okulla ilgili yapılacak etkinliklerde görev almak istemez, fikri sorulduğunda genelde sessiz kalır. Kendine güvenmez. İçe kapanıktır.'' Ö9 görüşü

İkinci Alt Probleme Yönelik Bulgular

Tablo 3 Örgütsel Sessizliğe Sebep Olan Örgütsel Faktörlere İlişkin Katılımcı Görüşleri

Alt Problem	Elde Edilen Bulgular	Kişi Sayısı	Katılımcılar
Örgütsel Faktörler	Örgüt Kültürü	3	Ö3, Ö5, Ö9
	Adaletsizlik	5	Ö6, Ö12, Ö15, Ö18, Ö20
	Sendikal	4	Ö7, Ö10, Ö14, Ö19
	Sebepler	3	Ö8, Ö11, Ö16
	Onay/Takdir Edilmeme		

Tablo 3 incelendiğinde Öğretmenlerin Örgütsel Sessizliğin oluşmasına sebep olan örgütsel faktörlere ilişkin 3 katılımcının örgüt kültürü, 5 katılımcının adaletsizliği, 4 katılımcının Sendikal sebepleri ve 3 katılımcının da onay/takdir edilmeme şeklinde görüşlerini belirttiği görülmektedir. Bu görüşlerin oluşmasında öğretmenlerin çalıştıkları kurumlarda kendilerini rahat ifade edememeleri, farklı sendikalara üye olan kişiler arasında fikir ayrılıklarından kaynaklanan çatışmalar, sürekli aktif olup çeşitli etkinlikler yapan öğretmenlerin çalışmalarının görülmeyip, desteklenmemesi olabilir.

Tablo 3 incelendiğinde Örgütsel sessizliğe neden olan örgütsel nedenlere ilişkin 3 katılımcının Örgüt Kültürünün etkili olduğu yönünde görüş belitmiş olduğu görülmektedir. Bu durumun oluşmasına: Örgütün sahip olduğu kültürel yapı, hiyerarşik katı kurallar, sessizlik davranışı kabul görmüş bir kurum kültürü, okul yöneticilerinin çalışanlara karşı ilgisiz olması ve dinlememesi sebep olmuş olabilir. Örgüt kültürünü neden olarak gösteren katılımcılar Ö3 ve Ö5 şunları söylemiştir;

''Daha önce çalışmış olduğum kurumda Öğretmenler Kurulu Toplantısında okulla ilgili kararlar alınacağında hevesle söz alıp fikrimi söylerdim hemen diğer arkadaşlar tarafından eleştiri yağmuruna tutulurdum. Müdür bey ortaya fikir atıp kabul edenler etmeyenler diye sorar, çoğunluk kabul etse dahi kabul edilmemiştir diyerek, geçiştirirdi'' Ö3 görüş

''Bazen çok fazla paylaşmak istediğim fikirlerim oluyor. Ama toplantı başlamadan arkadaşlarım kendi aralarında hiç kimse yorum yapmasın, erken bitirip gidelim, diyorlar. Hal böyle olunca çoğunluğa uymak ve çıkıntılık yapmamak için mecburen susuyorum.''Ö5 görüşü

Tablo 3 incelendiğinde 5 katılımcının örgütsel sessizliğin örgütsel nedenlerine ilişkin adaletsizlik olarak görüş bildirdiği görülmüştür. Bu duruma sebep olarak yoğun rekabet ortamının oluşması, farklı gruplaşmalar, adaletsiz uygulamalara çoğu kez şahit olunmuş deneyimler gösterilebilir. Adaletsizlik görüşünü ortaya atan katılımcı Ö6,Ö15 şunları söyledi.

''Değerler Eğitimi kapsamında her ay bir değerle ilgili farklı ve özgün etkinlikler tasarlıyorduk. İlçe Milli Eğitim Müdürlüğü de bu konuda titiz çalışıyor oluşturduğu denetim ekibi her ay etkinliklerimizi gözlemlemek için okulu ziyaret ediyordu. Okulda yapılan çoğu etkinlik beğenilmiş İlçe Milli Eğitim Müdürü Başarı Belgesi vermek için okul müdürümüzden iki öğretmenin ismini bildirmesini istedi. Müdür bey etkinliklerle hiç ilgisi olmayan hiçbir çalışmaya katılmamış özel eğitim ve İngilizce Öğretmeninin ismini vermiş bizlere de açıklama olarak kimseye haksızlık olmasın diye onları söyledim demişti. Bu şekilde emeği geçen herkese daha çok Adaletsizlik yapıldığını anlatamadık. '' Ö6 Görüşü

''Okul dışındaki hayatıyla okul hayatını birbirine karıştırmamak gerek. Okul müdürümüz bizim okuldaki bir bayan öğretmen ve başka okulda görev yapan eşiyle ailecek haftada 3 gün görüşüyorlar.

FULL TEXTS BOOK

Sıkı bir dostluk ilişkisi var. Ama okul içinde de bunu göstermekten geri durmuyor. O öğretmen arkadaş tarafından önerilen her fikri kabul edip bizleri yapmamız yönünde zorluyor. Fikrimiz dahi sorulmuyor.'' Ö15 Görüşü

Tablo 3 incelendiğinde Örgütsel Sessizliğin oluşmasına sendikal sebepleri neden olarak gösteren 4 katılımcının olduğu görülmüştür. Bu görüşün ortaya çıkmasında sendika yöneticilerinin sık sık kurum ziyaretlerinde bulunarak sendikası olmayan veya farklı sendikalara üye olan öğretmenlere fazla ısrarcı olmaları olabilir. Öğretmenler odasında gerçekleştirilen sohbetlerde farklı sendikalara üye olan öğretmenler arasında fikir çatışmaları yaşanması ve sonucunda oluşan tartışmalar, sosyal medyada sendikal konulara ilişkin öğretmenleri kışkırtan söylemlere çok sık yer verilmesi, okul yöneticilerinin kendi sendikalarından olanlara karşı daha olumlu yaklaşması neden olabilir. Sendikal sebepleri görüş olarak bildiren katılımcı Ö7, Ö19 şunları söylemiştir:

'' Uzun zamandır hiçbir sendikaya üyeliğim yok. Okul müdürü sürekli kendi sendikasına geçmem için ısrar ediyor fakat kabul etmeyince de davranışlarının değiştiğini fark ediyorum.''Ö7 görüşü
'' Üyesi olduğum sendikanın zamanla görüşlerime uymadığını fark ettiğim ve yanlış uygulamalarına da şahit olduğum için tepki olarak üyelikten çekildim. Bu durum çalışma arkadaşlarımın tepkisine neden oldu. Günlük konuşmalarımızda doğal olarak mesleki sorunlara değindiğimiz oluyor. Hemen eleştirmeye başlıyorlar sendikanı sattın, yarı yolda bıraktın diye. Görüşler zamanla değişebilir herkesle aynı fikirde olmak mümkün değil. Ama her görüşe saygı duymak lazım.'' Ö19 görüşü

Tablo 3 incelendiğinde örgütsel sessizliğe neden olan örgütsel nedenlere ilişkin 3 katılımcının onay/takdir edilmeme şeklinde görüş belirttiği görülmektedir. Bu duruma önemsenmeme, destek görememe, rekabet ortamının yoğunluğu, kendini gösterememe sebep olabilir. Takdir edilmemeyi sebep olarak gösteren Ö11 şunları söylemiştir.

'' Elbette yaptığım çalışmaları birileri beni görsün ödül versin diye yapmıyorum. Hangi çalışma öğrencilerime ne fayda sağlar diyerek günlük etkinlik hazırlıyorum. Bu çalışmaları bazen sınıfta bazen de okul genelinde sergiliyorum. Doğal olarak iyi veya kötü yorum yapılması kendimi geliştirmek için katkı sağlayacağı gibi olumlu yorumlar da motivasyonumu daha da arttıracak. Hiçbir şekilde ne idarecilerimiz ne de çalışma arkadaşlarım emeğimi görmüyor. Şevkimin kırıldığını artık yorulmaya başladığımı hissediyorum.'' Ö11 görüşü

Tablo 4 Örgütsel Sessizliğe Neden Olan Yönetsel Faktörlere İlişkin Katılımcı Görüşleri

Alt Problem	Elde Edilen Bulgular	Kişi Sayısı	Katılımcılar(Ö)
Yönetsel Faktörler	Katı Hiyerarşik Yapı	6	Ö1, Ö3, Ö8, Ö12, Ö15, Ö19
	Yöneticilere Güvenmeme	5	Ö4, Ö6, Ö10, Ö11, Ö14
	Liyakatsizlik	5	Ö2, Ö7, Ö16, Ö18, Ö20
	Zorlayıcı Güç Kaynağı	4	Ö5, Ö9, Ö13, Ö17

Tablo 4 incelendiğinde, örgütsel sessizliğe neden olan yönetsel faktörler konusunda görüş bildiren 6 katılımcının (Ö1, Ö3, Ö8, Ö12, Ö15, Ö19) katı hiyerarşik yapı cevabını verdikleri görülmüştür. 5 katılımcının (Ö4, Ö6, Ö10, Ö11, Ö14**)** yöneticilere güvenmeme, 5 katılımcın (Ö2, Ö7, Ö16, Ö18, Ö20) liyakatsizlik, 4 katılımcının da (Ö5, Ö9, Ö13, Ö17) zorlayıcı güç kaynağı şeklinde cevap verdikleri görülmektedir. Tablo 4 incelendiğinde öğretmenlerin demokratik bir okul ortamı istedikleri, fikirlerini, düşüncelerini özgürce ifade edemedikleri, disiplin yaptırımı, belki de mobingge uğrama korkusuyla istemedikleri çalışmaları yapmak zorunda kaldıkları için sessizlik davranışı göstermiş olabilir.

FULL TEXTS BOOK

Tablo 4 incelendiğinde 6 katılımcının Örgütsel Sessizliğin Yönetsel nedeni olarak katı hiyerarşik yapı görüşünü ortaya attığı görülmüştür. Bu durumun oluşmasında öğretmenlerin iletişim konusunda okul yöneticilerine yeteri kadar yakın mesafeye yaklaşamaması, kendilerini ifade etme özgürlüğü tanınmaması olabilir. Katı Hiyerarşik Yapı görüşünü dile getiren katılımcı Ö1,Ö3,Ö15 şunları söylemiştir:

'' Evrak işleriyle ilgilenmekten konuları yetiştirmeye ders öncesi hazırlık yapmaya fırsatım kalmıyor. Haftada en az 3 kere İlçe Milli Eğitim tarafından raporlaştırmayla ilgili bir yazı geliyor. Zaten hazırlamak zorunda olduğumuz zümreler, veli toplantıları, yılsonu dönem sonu işleri, rehberlikle alakalı evraklar, BEP'li öğrencilerin dosyaları derken mesleğime odaklanamıyorum.'' Ö1 görüşü

'' Okulumuz konumu itibariyle Kaymakamlığa, Milli Eğitime ve diğer resmi kurumlara çok yakın. Protokole de oldukça önem veriliyor. Sık sık ziyarete gelen amirler ve diğer ziyaretçiler olduğunda tek tek dersten çağrılıyoruz. Öğrenciler kontrolsüz kalıyor, ders dağılıyor. Tekrar toparlamakta zorlanıyoruz.''Ö3 görüşü

'' Resmi törenleri kutlama görevi okullara her sene başında dağıtılıyor. Zamanla bu kutlamalar kim daha iyi yapacak yarışına döndüğü için aylar öncesinden hem öğrenciler hem de biz çalışmalar yüzünden hem geriliyoruz hem de stres yüzünden meslektaşlarımızla tartışmalar yaşıyoruz. Okul içinde hep bir huzursuzluk hâkim oluyor. Amirler katıldığı törenleri beğendiğinde tebriklerini dile getiriyor ama beğenmediğinde hiçbir şey demeden gidiyorlar. Görevli olduğumuz tören günü yaklaşınca inanılmaz gerginlik hissediyorum.'' Ö15 görüşü

Tablo 4 incelendiğinde 5 katılımcının Örgütsel Sessizliğe Neden olan Yönetsel faktörlere sebep olarak Yöneticilere Güvenmeme görüşünü ortaya atmıştır. Bu duruma öğretmenlerin yaşadığı geçmiş tecrübeler, yöneticilerin öğretmenlere eşit davranmadığı düşüncesi sebep olmuş olabilir. Yöneticilere Güvenmeme görüşünü dile getiren katılımcı Ö6,Ö11 şunları söylemiştir:
'' Okulda iki müdür yardımcısıyız. Birimiz ilkokulla ilgili işlemleri takip ederken diğeri ortaokul işleriyle ilgileniyor. Bunun dışında her iki kademenin de ortak yapması gerekenler var. Okul aile birliği işleri, Taşımalı Eğitimle ilgili puantajlar, yoklamalar denetimler vs. nöbet, sivil savunma işlemleri, faturalar gibi. Müdürün eşit davranıp iş bölümünü adil yapması gerekirken tüm ortak işlerin sorumluluğunu bana bırakıyor. Haksızlığa uğradığımı biliyor ama bir şey yapamıyorum.''Ö6 görüşü

''Önceki yıllarda 4.sınıfları okuturken her ders için sınav yapıyorum. Öğrencim Din Kültürü sınavından çok düşük almış. Diğer dersleri de yüksek değildi zaten. Veli ile görüş farklılıklarımız olduğu için öğrenciye haksızlık yaptığımı belirterek okul yönetimiyle konuşmak istedi. Sınav kâğıtlarını çıkardık durumu anlattık. Hiçbir haksız işlem olmadığı anlaşıldığı halde Müdür Bey özür dilememi bu veliye çok değer verdiğini ifade etti. Tabi karşı çıktım kendimi savunmak istedim. Okul yönetimiyle karşı karşıya geldik ve mobingge uğradım. Bilgim olmadan e okul sisteminden öğrenci notları da değiştirilmiş. En iyiyi hiçbir şeye karşı çıkmadan bu düzene uymak yoksa sıkıntı yaşıyorum.''Ö11 görüşü

Tablo 4 incelendiğinde Örgütsel Sessizliğin Yönetsel Faktörlerine sebep olarak 5 katılımcının Liyakatsizlik şeklinde görüş belirttiği görülmüştür. Bu duruma yapılacak işlerin sekteye uğraması, öğretmenlerin uygulamaya dönük sorularına tatmin edici cevaplar alamaması, egosu yüksekokul yöneticileri sebep olabilir. Yapacağı işin gerektirdiği donanıma sahip olmayan yöneticiler örgütte düzen ve verimli bir çalışma ortamı sağlayamadığından öğretmenlerde zamanla boş vermiş bir tutum içine

FULL TEXTS BOOK

girebilir ve sessizliğe bürünebilirler. Liyakatsizlik görüşünü ortaya atan katılımcı Ö7, Ö16 şunları söylemiştir:

‘‘Önceki çalıştığım okulda yeni atanan idareci bir milletvekilinin yakınıydı. Kadrosu farklı bir yerde olmasına rağmen idareci olarak okulumuza atanmış. İlk geldiği haftalarda akşam 20:00 da okul aile birliği toplantısı yapacağını söyledi. Herkes çocukları bırakacak yeri olmadığını saatin biraz öne alınmasını istedi. Fakat Müdür Bey katılımın zorunlu olduğunu, gelmeyenlerle alakalı tutanak tutacağını söyledi. Mecburen 1 kişi hariç hepimiz katıldık. Gelmeyen arkadaşımızla ilgili tutanak tutarak bizleri de imzalamaya zorladı. Bu olaydan sonra arkasının da sağlam olduğunu bildiğimiz için hak aramaya kalkamadık olan bize olurdu. Mecburen gördüğümüzü görmezden. Duyduğumuzu duymazdan geldik.’’Ö7 görüşü

‘’ Okul yöneticileri aynı zamanda iyi bir lider ve yol gösterici olmalıdır. Bilimsel yaklaşımlardan haberi olmayan pedagojik bilgisi eksik kişiler okul yöneticisi yapılmamalıdır. Aksi halde okullarda eğitimin kalitesi düşüyor, okul kültürü de bu durumdan olumsuz etkileniyor.’’ Ö16 görüşü

Tablo 4 incelendiğinde Örgütsel Sessizliğin Yönetsel Faktörlerine sebep olarak 4 katılımcının Zorlayıcı Güç görüşünü ifade ettiği görülmüştür. Bu duruma sahip olduğu yetkiyi kullanarak baskıcı bir yönetim anlayışı oluşturulması sebep olabilir. Böyle bir çalışma ortamında kişiler arası ilişkiler olumsuz etkilenebilir ve işbirliği sağlamak zorlaşır. Zorlayıcı Gücü sebep olarak gösteren Ö5,Ö13 şunları söylemiştir.

‘’ Okul bahçesinde bir öğretmen arkadaşımla tartışma yaşadık. Olayın hemen üzerine Okul Müdürü ikimizi de odasına çağırarak konuşup çözmemizi istedi. İkimizde hala çok sinirliydik. Öğretmen arkadaş parmağını sallayarak konuşmaya başlayınca sinirim iyice zıpladı ve birbirimizin üzerine yürüdük. Sesler dışarıya çıkınca gelenler oldu ve bizi ayırdılar. Böyle bir duruma düşürüleceğimize sakinleşmemizi bekleseydi zaten konuşup orta yolu bulurduk. Şimdi ipler iyice koptu.’’

‘’ Okul resmi bir kurum olduğu için tabi ki belli normlara kurallara uyulması gerekir. Aksi takdirde düzen bozulur ve herkes kafasına göre iş yapar. Ama bazı okul yöneticileri sahip olduğu yetkiyi kendi istediklerini yaptırmak için kullanıp diğer fikirleri hiçe sayıyor.’’ Ö13 görüşü

TARTIŞMA VE SONUÇ

Bu araştırmanın amacı İlkokullarda Örgütsel Sessizliğe neden olan bireysel, örgütsel ve yönetsel faktörlerin sebeplerini ortaya koymaktır. Araştırmanın amacına ulaşmak amacıyla İlkokullarda görev yapan 20 öğretmene daha önce hazırlanmış görüşme soruları sorulmuş ve alınan cevaplar analiz edilerek sonuca ulaşılmıştır.

Araştırmanın sonucunda öğretmenlerin kendilerini korumak amacıyla isteyerek yani bilinçli olarak sessizlik davranışı gösterdiği anlaşılmaktadır. Öğretmenlerde sık görülen sessizlik davranışının bireysel nedenlerine bakıldığında ilişkilerin zarar göreceğine dair oluşan korku, iş arkadaşlarına karşı oluşan güvensizlik, iletişim kuramama olarak ortaya çıkmaktadır. Örgütsel nedenlere bakıldığında örgüt kültüründen kaynaklanan nedenler, sendikal sebepler, adaletsizlik ve takdir edilmeme şeklinde ortaya çıkmaktadır. Yönetsel nedenlere gelince liyakatsizlik, yöneticilere karşı güvensizlik, katı hiyerarşik yapı ve zorlayıcı güç karşımıza çıkmaktadır. Özgan ve Külekçi’ nin (2012) araştırma sonuçlarına bakıldığında; örgütsel sessizliğe sebep olarak bireysel, yönetsel ve örgütsel nedenlerden kaynaklandığını bu durumun çalışanlar açısından olduğu kadar örgüt açısından da sorunlara neden olacağını belirtmesi araştırma sonuçlarıyla örtüşmektedir.

FULL TEXTS BOOK

Araştırmadan elde edilen sonuçlardan öğretmenlerin bireysel olarak çalışma arkadaşlarıyla uyumlu olmak, sorun çıkaran olarak görünmemek için, kendilerini korumaya yönelik sessizlik davranışı gösterdikleri söylenebilir. Yaşadıkları olumsuz tecrübelerde iş arkadaşlarına karşı güven problemi yaşamalarına sebep olmuş, kendilerini rahatça ve özgürce ifade etme konusunda baskı altında hissettikleri görülmüştür. Araştırmanın sonucunda bireysel nedenlere bütün olarak bakıldığında öğretmenlerin konuştuklarında olumsuz bir durumla karşılaşmaktan korktukları ve kendilerini korumak amacıyla sessizliği tercih ettikleri görülmüştür. Yalçın ve Baykal (2012) yaptıkları araştırmanın sonucunda, öğretmenlerin sessizlik davranışlarının nedenlerinde ilk sırayı konuştuklarında hiçbir şey fark etmeyeceğini düşünmeleriyle birlikte bireysel açıdan örgütte sorunlar oluşmasına yönelik korkular geliştirdikleri ifade edilmiş, bu durum araştırmanın sonucuyla örtüşmektedir. (Kahveci 2010) yaptığı araştırmanın sonuçlarına bakıldığında da öğretmenlerdeki örgütsel sessizliği algılama düzeylerinin yüksek, örgütsel bağlılıkla ilgili algılama düzeyleri orta düzey olduğunu belirlemesi, öğretmenlerinde açıkça konuşmaktan çekindikleri bundan dolayı sessiz kalmayı tercih ettikleri sonucuna ulaşması, araştırmanın sonucuyla örtüşmektedir.

Araştırmanın örgütsel nedenlerden kaynaklanan sonuçlarına bakıldığında örgüt kültürünün sessizlik davranışının üzerinde etkili olduğu görülmektedir. Bazı örgütlerde sessizlik davranışı kabul görmekte sürekli kendini ifade etmeye çalışan olumlu ve ya olumsuz durumlara karşı sahip olduğu fikirleri savunmaya çalışan öğretmenlerin o örgütte kabul edilmediği ve uzak durulmaya çalışıldığı anlaşılmaktadır. (Runge ve Hames, 2004: 412) yaptığı araştırma sonucunda, Örgüt içinde hakim olan kültür, sert ve baskıcı bir yapıya sahipse sessiz kalma davranışı kabul görecektir. Şayet örgütte herkesin katılımı teşvik ediliyor karar alma süreçlerinde tüm çalışanların fikirleri değer görüyorsa sessizlik iklimi önemini yitirecektir, sonucuna ulaşması araştırmanın sonucuyla benzeşmektedir.

Öğretmenlerin çalıştıkları kurumda adil bir yönetim anlayışının olmadığını düşünmesi verimliliğin düşmesine neden olacaktır. Eşit şartlarda eşit işleri yapan çalışanlar arasında herhangi bir ayrımcılığa yer verilmemeli herkese eşit yaklaşılmalıdır. Yapılan araştırma sonucu öğretmenlerin örgütteki adalet anlayışı ile örgüte karşı geliştirdikleri sessizlik davranışı arasında doğru orantı olduğunu ortaya koymuştur. Örgütteki adaletsizlik yaklaşımı iş görenlerin sessiz kalmalarına sebep olan önemli bir etkendir (Karacaoğlu ve Cingöz, 2009; Pillai, Schriesheim ve Williams, 1999; Greenberg, 2001; Pinder ve Harlos, 2001) sonucuna ulaşılmıştır. Yöneticilerin olumlu dönüt vermesi, öğretmenleri desteklemesi önemlidir. Yaptıkları çalışmaların görüldüğünü, onaylandığını hisseden bir öğretmen kendini daha değerli hissedeceğinden örgüte olan bağlılığı da özgüveni de daha da artacaktır. (Premeaux ve Bedeian, 2003, s.1537) yapmış oldukları araştırmanın sonucunda, çalışanların sessiz kalma kararını vermeleri algılanan örgütsel destekten önemli sayılabilecek ölçüde etkilenmektedir, şeklinde ulaşmış oldukları sonuç araştırmanın sonucuyla benzeşmektedir.

Öğretmenlerin ve okul yöneticilerinin karşılıklı olarak birbirlerine güvenmeleri gerekir. Okul yöneticileri herkese eşit mesafede durabilmeli, yapılan çalışmalarda ödüllendirmeye gidileceğinde herkesin emeğini gözetebilmeli, veli-öğretmen ilişkileri arasında köprü vazifesi görürken meslektaşını ezdirmemeye çalışmalıdır. Siyasi ya da sendikal sebepler adam kayırmacılığa sebep olmamalıdır. Aksi halde öğretmenler haksızlığa uğradığını yönetici tarafından korunmadığını, dikkate alınmadığını hissettiğinde güvensizlik yaşayabilir. Aynı şekilde öğretmen de dersine geç girdiğinde, verilen nöbet görevini gerektiği gibi tutmadığında, okulla ilgili kendine verilen sorumlulukları yerine getirmediğinde de yönetici tarafından güvensizlik oluşabilir. Güvensizlik iki tarafta da yaşanabilir. Sonucunda da okul kültürü bu durumdan olumsuz etkilenebilir ve okula olan bağlılık azalır çalışmalar verimsizleşir. (Morrıson ve Mıllıken, a.g.e.) tarafından yapılan araştırma sonucunda, çalışanların örgütte güvensizlik hissettiklerinde sessizlik davranışında artma olacağı sonucu yapılan araştırma sonucuyla benzeşmektedir.

FULL TEXTS BOOK

Okul yöneticilerinin kullandıkları zorlayıcı güç de öğretmenlerin sessiz kalma nedenlerinden biridir. Araştırma sonucuna göre öğretmenlerin '' her şeyin en iyisini ben bilirim'' tavrındaki idarecilerle iletişim kurmada zorluk yaşadıkları, fikirlerini rahatça ifade edemedikleri görülmüştür. Baskı altında hissettikleri için çalışmalarında da özgür olamadıkları dikkati çekmektedir. Botero ve Dyne (2009) tarafından yapılan araştırma sonucunda, yönetimde güç kullanımının çalışanlarda sessizlik davranışı oluşturduğu, güç kullanmaktan kaçınan idarecilerle çalışanların kurduğu olumlu ilişki sonucunda ise çalışanların fikirlerini daha açık şekilde ifade ettikleri sonucuna ulaşması araştırma sonucuyla örtüşmektedir. Apak (2016) ' ın yaptığı araştırma sonuçlarına bakıldığında; yöneticiler zorlayıcı güç kullandıklarında çalışanların sessiz kalma davranışlarında artış olduğu sonucuna varması araştırmanın sonuçlarıyla benzeşmektedir

Araştırmanın diğer sonucu da katı hiyerarşik yapının sessizlik davranışını ortaya çıkardığı görülmüştür. Mevzuat ve yasal zorunluluklar nedeniyle öğretmenlere yüklenen artı iş yükü, Eğitim sisteminin yapısı gereği yukarıdan aşağı doğru ilerleyen hiyerarşik yapı nedeniyle öğretmenler fikirlerinin önemli olmadığını, değersiz olduklarını hissedebilir. Alınacak kararlarda öğretmenlere de düşüncelerini sormak, görüş ve önerilerini almak sessizlik davranışını önleyebilir. (Afşar, 2013) yaptığı araştırma sonucunda kararlar alınırken çalışanlarının fikrinin alınması, karar alınırken çalışanların katılının teşvik edilmesi sessizliğin önüne geçecektir sonucuna ulaşılmış, araştırma sonucuyla benzeşmektedir.

Öneriler

1. Öğretmenlerde korku duygusunu engellemek için okul yöneticileri tarafından desteklenmelilerdir.
2. Okullarda güven ortamını oluşturmak için okul yöneticileri herkese eşit davranmalı, tutarlı olmalı, öğretmenler de üzerine düşen görev ve sorumlulukları zamanında yerine getirmelidir.
3. Örgütte alınan kararlara tüm çalışanların katılımı teşvik edilmelidir.
4. Yapılan çalışmalar desteklenmeli ve gerekli olduğunda ödüllendirilmelidir.
5. Okul Yöneticilerinin görevlendirilmesinde liyakat ön planda tutulmalıdır.
6. Olumlu bir örgüt kültürü oluşturmak amacıyla tüm çalışanların katılımıyla okul içi ve okul dışı etkinlikler düzenlenmelidir.
7. Öğretmenlerin motivasyonunu arttırıcı önlemler alınmalıdır.
8. Zorlayıcı güç yerine ödül gücü kullanılmalı öğretmenlerin değerli hissetmesi sağlanmalıdır.
9. Okul yöneticileri kendilerini geliştirici seminer ve hizmet içi eğitimlere katılmalıdır.
10. Örgütte verimli çalışmaların sayısını artırmak için öğretmenler fikirlerini açıkça söylemeleri konusunda cesaretlendirilmelidir.
11. Demokratik bir çalışma ortamı oluşturulmalıdır.
12. Yönetici ve öğretmen arasında yukarıdan aşağı iletişim yerine yatay iletişim daha çok tercih edilmelidir.
13. Adalet ve hakkaniyet ihmal edilmemeli, hiç kimseye ayrımcılık yapılmamalıdır.

CLIMATE CHANGE AND ITS IMPACT ON AGRICULTURE IN INDIA: A REVIEW STUDY

Dr. Neha
Associate Professor, Swami Vivekannad Subharti University, India

ABSTRACT

Agriculture sector is of the utmost importance to the economy of a country and incidentally it is also most vulnerable to global climate change. Climate change is taking a toll on India's agricultural production and productivity. Intergovernmental panel on climate change (IPCC) has projected that by the end of 21st century temperature in India is likely to increase by 3-4°C which would lead to a loss of 3-26% in net agricultural revenues. Aggravated climatic factors will ultimately decline plant productivity, which will result in increased prices and unaffordable rates for the common population. The absence of mitigation and adaptation measures may result in lower farm income by 12-40% in the coming years. This issue is an important concern for livelihood, economic development and ensuring food and job security of an agrarian nation like India. The causes that ultimately are contributing to increase in greenhouse gases, deterioration of soil and water ecology must be identified and rectified. Crop productivity in the countries of southern hemisphere is expected to decrease by as much as 20 per cent, with less developed countries suffering the greatest negative effects according to IPCC report 2007. Hence, adaptation to current agricultural scenario must be undertaken at once to avoid the risks incurred and tackle complications arising due to global climate change. How quickly Indian farmers are able to adjust in their farming practices to adapt to climate change and what policies or technologies will enable rapid adaptation are issues that merit attention of everyone. However, a rapid adaptation is less possible in a developing country like India, where availability to information and capital is limited among the majority of farmers.

Over the past several decades, the international and national research communities have developed a progressively clearer picture of how and why Earth's climate is changing and of the impacts of climate change on a wide range of human and environmental systems. Varyingclimate has resulted in quality and quantity of food, soil degradation, depletion of ozone layer, increasing air and marine pollution etc. Changes which occurs beyond the average atmospheric conditions which is caused either by natural events such as sun's temperature, volcanic eruptions, crustal movements and human activities accelerates to global climate change but natural causes contributes very little compared to anthropogenic activities such as deforestation, emission from factories, vehicles, power stations, burning of fossil fuel releases huge amount of carbon dioxide and suspended particulate matter (SPM) into atmosphere. Every year 35 billion metric tons of carbon dioxide is emitted into the atmosphere through human activities. Future climate change extent relies on what all measures we adopt toreduce the emission of greenhouse gases. The more we release the larger

FULL TEXTS BOOK

future alterations will be. There is no doubt that human activities has are adding fuel to the global climate change. Human-induced climate change and its impacts will continue for many decades and in some cases for many centuries. Climate change can be warming or cooling of the climate. Emission of CO_2 from human activities is more than 100 times as compared to natural processes. Climateis warmed by 0.7· In 2019, the average temperature across global land and ocean surfaces was recorded to be 1.71°F (0.95°C) making it the second-warmest year on record. Global warming is a prominent cause of climate change which occurs due to the increased concentration of several gases such as carbon dioxide (CO_2), chlorofluorocarbons (CFCs), hydrogen (H), sulphur dioxide (SO) and nitrous oxide (N_2O) into the atmosphere and causingdepletion of ozone layer. Anthropological activities are root cause of climate change which is affecting the earth's temperature, rainfall distribution pattern and hydrological cycles and posing severe threat to agricultural production, hence food security. Incidentally agricultural production is a major emitter of greenhouse gases contributing about 18% of the total GHGs emissions in India which eventuate at the primary production state. Weather condition is altered by Climate change which has direct, indirect and biophysical effect on agricultural production. Climate change might have positive or negative impact on human population and crop production. Increase in temperature can lead to reduced yield of crops, increased incidence of pest and disease outbreak. Heat waves can cause more mortality in plants. Heat extremities results in reduced photosynthesis, reduced growth rate, increased leaf abscission and photo oxidative stress and humans in shorter time span than any other climatic phenomenon.

Agriculture sector is highly vulnerable to climate change. High temperature favors infestation of pest and obnoxious weeds. When the temperature is less than or equal to 25°C, there is no spread of rust fungus which acts like a cancer but as soon as the temperature increases the climate becomes hot and dry, fastening the breeding process, covering and destroying entire crop/plantation which are more vulnerable to the temperature. Increased temperature can reduce crop duration, increased vapor-transpiration, crop respiration rate, rapid mineralization of nutrients, decreased nutrient use efficiency, breeding, survival and outbreak of any pest is greatly affected. Increase in temperature and reduction in rainfall adversely affects non-irrigated areas compare to irrigated areas. Increased or reduced rainfall has impaired the soil fertility and productivity. Rainfall over India is likely to increase by 15-40%, by the 21st century end Such changes will hugely impact agricultural activities and will increase the pressure on Indian agriculture. It can disrupt food availability, affect nutritional quality of some foods and reduced access to food.

Keywords: Climate change, food security, mitigation, production, temperature, India.

Introduction

Climate change has emerged as one of the most significant environmental challenges of our time, with profound implications for agricultural productivity and food security, particularly in a developing country like India. This review study aims to analyze the impacts of climate change on agriculture in India, highlighting the multifaceted effects on crop yield, soil health, water resources, and the socio-economic fabric of agrarian communities. By synthesizing current research and policy frameworks, this paper provides a comprehensive overview of the adaptive strategies and mitigation measures being adopted to combat the adverse effects of climate change on Indian agriculture. India's agricultural sector is a cornerstone of its economy, providing livelihood to nearly 58% of the population (FAO, 2020). However, the sector is highly vulnerable to climate change due to its dependence on the monsoon and climatic conditions. This review examines the extent of climate change impacts on Indian agriculture and explores the adaptive measures being implemented to ensure sustainability.

FULL TEXTS BOOK

India is an agrarian country with agriculture playing a crucial role in its economy and the livelihoods of its people. It contributes around 17% to the national GDP and provides employment to nearly 58% of the population. The agricultural sector in India is highly dependent on climatic conditions, especially the monsoon, which accounts for about 70-80% of the annual rainfall. This dependency makes agriculture particularly vulnerable to climate variability and change. Climate change refers to long-term alterations in temperature, precipitation patterns, and other climatic factors, primarily driven by anthropogenic activities such as deforestation, industrial emissions, and extensive use of fossil fuels. The Intergovernmental Panel on Climate Change (IPCC) has indicated that global temperatures have risen by approximately 1.2°C above pre-industrial levels, and further increases are projected unless substantial mitigation measures are implemented (IPCC, 2021).

India has experienced significant climatic changes over the past few decades, including increased temperatures, altered precipitation patterns, and a rise in the frequency and intensity of extreme weather events such as droughts, floods, and cyclones. These changes pose a significant threat to the agricultural sector, impacting crop yields, soil health, water resources, and the socio-economic conditions of farming communities.

Objectives

1. **To review the existing literature on the impacts of climate change on agriculture in India**: This involves a comprehensive analysis of how various climatic factors affect different aspects of agriculture, including crop yield, soil health, and water resources.
2. **To assess the socio-economic implications of these impacts on agrarian communities**: Understanding the broader socio-economic effects, such as food security, income levels, and migration patterns, is crucial for developing effective adaptation strategies.
3. **To evaluate the effectiveness of adaptive and mitigation strategies in Indian agriculture**: This includes examining current practices, technological innovations, policy frameworks, and community-based approaches that aim to enhance agricultural resilience to climate change.

Literature Review

Impact of Climate Change on Crop Yield- Changes in temperature, precipitation patterns, and increased frequency of extreme weather events are affecting crop productivity in India (Lobell et al., 2011). For instance, rice and wheat, which are staple crops, have shown significant yield reductions under changing climatic conditions (Aggarwal et al., 2019).

Soil Health and Fertility- Climate change affects soil health through alterations in soil moisture content, organic matter decomposition, and erosion rates. Increased temperatures and irregular rainfall can lead to soil degradation, reducing its fertility and, consequently, crop yield (Lal, 2013).

Water Resources- Water scarcity is a critical issue exacerbated by climate change. The alteration in precipitation patterns and the decline in glacier mass in the Himalayas are impacting the availability of water for irrigation (Shah & Gulati, 2018). The over-extraction of groundwater has also led to a decline in water tables, further stressing agricultural practices.

FULL TEXTS BOOK

Socio-Economic Implications- The socio-economic fabric of rural communities is closely linked to agricultural productivity. Climate change-induced crop failures and reduced yields can lead to food insecurity, increased poverty, and migration (Patnaik & Narayanan, 2015).

Climate Change and Its Effects

Climate change manifests through various phenomena, including:

1. **Temperature Changes**: Rising temperatures can affect crop growth cycles, reduce yields, and increase the prevalence of pests and diseases. Crops such as wheat and rice are particularly sensitive to temperature changes, with even slight increases potentially leading to significant yield reductions.
2. **Altered Precipitation Patterns**: Changes in the timing, intensity, and distribution of rainfall can disrupt the agricultural calendar, affect sowing and harvesting times, and lead to water stress during critical growth stages of crops. Erratic rainfall patterns also contribute to increased soil erosion and reduced soil fertility.
3. **Extreme Weather Events**: The increased frequency and severity of extreme weather events such as droughts, floods, and cyclones pose direct threats to agricultural productivity. These events can cause immediate crop damage, reduce land suitability for farming, and lead to long-term degradation of natural resources.
4. **Sea Level Rise**: Coastal agriculture is threatened by rising sea levels, which lead to salinization of soil and water resources, adversely affecting crop production. States like West Bengal and Odisha, with extensive coastal agriculture, are particularly vulnerable.
5. **Glacial Melting**: The melting of Himalayan glaciers, which are crucial for the perennial river systems in northern India, affects the availability of water for irrigation. Reduced glacial flow during summer months can lead to water shortages, impacting crop irrigation.

Importance of Addressing Climate Change in Agriculture

Climate change in the context of agriculture is critical for several reasons:

1. **Food Security**: Agriculture is the backbone of food security in India. Climate change-induced disruptions in agricultural productivity can lead to food shortages, price volatility, and increased hunger and malnutrition.
2. **Economic Stability**: The agricultural sector supports a significant portion of the Indian population. Declines in agricultural productivity can lead to economic instability, increased poverty, and social unrest in rural areas.
3. **Sustainable Development**: Achieving sustainable development goals (SDGs) related to poverty, hunger, and environmental sustainability is closely linked to the health of the agricultural sector. Climate-resilient agriculture is essential for meeting these goals.
4. **Biodiversity and Ecosystem Services**: Agriculture is interconnected with biodiversity and ecosystem services. Sustainable agricultural practices can help preserve biodiversity, enhance ecosystem services, and contribute to climate change mitigation efforts.

Adaptive Strategies

Farmers can adapt to droughts through a variety of strategies aimed at enhancing water use efficiency, conserving soil moisture, and building resilience to water scarcity. Here are several effective adaptation measures:

1. Water Management Practices

- **Drip Irrigation and Sprinkler Systems**: These methods use water more efficiently compared to traditional flood irrigation by delivering water directly to the plant roots.
- **Rainwater Harvesting**: Collecting and storing rainwater for use during dry periods helps ensure a consistent water supply.
- **Conservation Tillage**: Reducing tillage helps maintain soil structure and moisture, reducing evaporation and runoff.

FULL TEXTS BOOK

- **Efficient Water Use**: Scheduling irrigation based on crop needs and soil moisture levels can minimize water waste.

2. Crop Management

- **Drought-Resistant Crops**: Planting drought-tolerant crop varieties that require less water and can survive prolonged dry periods.
- **Crop Diversification**: Growing a variety of crops can reduce the risk of total crop failure and spread the risk associated with drought.
- **Adjusting Planting Dates**: Shifting planting dates to align with expected rainfall patterns can help optimize water use and improve crop resilience.

3. Soil Management

- **Mulching**: Applying organic or inorganic mulch helps retain soil moisture by reducing evaporation and moderating soil temperature.
- **Cover Crops**: Planting cover crops during the off-season can improve soil health, reduce erosion, and enhance water retention.
- **Soil Organic Matter**: Increasing organic matter in soil through composting and green manures enhances soil structure and water-holding capacity.

4. Technological Solutions

- **Weather Forecasting Tools**: Utilizing weather forecasts and climate models to plan agricultural activities more effectively.
- **Soil Moisture Sensors**: Using sensors to monitor soil moisture levels can inform precise irrigation practices.
- **Mobile Applications**: Leveraging mobile technology to receive timely information and advice on water management and drought conditions.

5. Financial and Institutional Support

- **Insurance Schemes**: Crop insurance can provide financial support to farmers in the event of crop failure due to drought.
- **Subsidies and Incentives**: Governments can offer subsidies for adopting water-efficient technologies and practices.
- **Training and Education**: Providing farmers with training on sustainable farming practices and water conservation techniques.

6. Community-Based Approaches

- **Water User Associations**: Forming local groups to manage and allocate water resources more efficiently.
- **Collective Action**: Encouraging collective efforts to implement large-scale water conservation projects, such as watershed management.

7. Long-Term Strategies

- **Integrated Water Resource Management (IWRM)**: Promoting a holistic approach to managing water resources that considers the interconnections between different water uses and the environment.
- **Infrastructure Development**: Investing in infrastructure such as dams, reservoirs, and canals to improve water storage and distribution.
- **Policy Advocacy**: Advocating for policies that support sustainable water use and provide incentives for drought-resilient farming practices.

By combining these strategies, farmers can build resilience to drought conditions, maintain productivity, and ensure the sustainability of their agricultural operations.

FULL TEXTS BOOK

Technological Innovations

The adoption of climate-resilient crop varieties, improved irrigation techniques, and precision agriculture can help mitigate the adverse effects of climate change (Jat et al., 2020). For example, the use of drought-tolerant rice varieties and efficient water management practices has shown promising results.

Policy Frameworks

Government policies play a crucial role in supporting adaptive measures. Initiatives such as the National Mission for Sustainable Agriculture (NMSA) and Pradhan Mantri Krishi Sinchai Yojana (PMKSY) are aimed at enhancing agricultural resilience to climate change (GoI, 2018).

Community-Based Adaptation

Community-based adaptation strategies, including knowledge sharing, collective resource management, and participatory decision-making, are essential for building resilience at the grassroots level (Reid et al., 2009).

Mitigation Measures

Reducing Greenhouse Gas Emissions

Agriculture is both a victim and a contributor to climate change. Strategies to reduce greenhouse gas emissions from agricultural practices, such as optimizing fertilizer use and promoting organic farming, are vital (Smith et al., 2014).

Agroforestry

Integrating trees into agricultural landscapes can sequester carbon, improve soil health, and enhance biodiversity, making agroforestry a viable mitigation strategy (Mbow et al., 2014).

Case Studies

Punjab and Haryana: Green Revolution and Its Aftermath

The Green Revolution significantly boosted agricultural productivity in Punjab and Haryana. However, the intensive use of chemical inputs has led to soil degradation and water scarcity, highlighting the need for sustainable practices (Singh, 2018).

Andhra Pradesh: Climate-Resilient Agriculture

Andhra Pradesh has implemented various climate-resilient agricultural practices, such as the Zero Budget Natural Farming (ZBNF) initiative, which promotes chemical-free farming and enhances soil health (Reddy, 2020).

Discussion

Challenges and Opportunities

1. **Unpredictable Weather Patterns**

The increasing unpredictability of weather patterns poses a significant challenge for Indian agriculture. Erratic rainfall, unseasonal storms, and temperature fluctuations disrupt traditional farming calendars, making it difficult for farmers to plan their activities effectively. The reliance on monsoons means that any deviation in rainfall patterns can lead to droughts or floods, severely affecting crop yields (Gadgil & Gadgil, 2006).

2. **Water Scarcity**

Water scarcity is a critical issue exacerbated by climate change. Decreased rainfall and over-extraction of groundwater have led to a decline in water tables. This is particularly problematic in regions like Punjab and Haryana, where intensive agriculture practices demand high water usage (Shah & Gulati, 2018). The availability of water for irrigation is crucial for sustaining crop production, and its scarcity threatens agricultural productivity.

3. **Soil Degradation**

Soil health is deteriorating due to increased temperatures, irregular precipitation, and extreme weather events. These factors contribute to soil erosion, loss of soil organic matter, and nutrient depletion. The

FULL TEXTS BOOK

excessive use of chemical fertilizers and pesticides, driven by the need to maximize yields under challenging conditions, further degrades soil quality (Lal, 2013).

4. **Increased Pest and Disease Incidence**

Climate change alters the habitats and life cycles of pests and diseases, leading to increased incidence and intensity. Warmer temperatures and higher humidity levels create favorable conditions for pests like the pink bollworm in cotton and diseases like rust in wheat (Chakraborty & Newton)

While climate change presents significant challenges to agriculture in India, it also offers unique opportunities for innovation and transformation in the sector. By leveraging advancements in technology, policy, and sustainable practices, India can enhance agricultural resilience and productivity. Here are several opportunities that arise from the intersection of climate change and agriculture:

1. Development of Climate-Resilient Crop Varieties

- **Genetic Engineering and Biotechnology**: Advances in genetic engineering can be utilized to develop crop varieties that are more tolerant to drought, heat, and salinity. These genetically modified crops can sustain yields under adverse climatic conditions.
- **Traditional Breeding Techniques**: Leveraging traditional breeding methods to select and cultivate native crop varieties that are inherently more resilient to local climate variability.

2. Adoption of Precision Agriculture

- **Digital Farming Technologies**: Implementing precision agriculture technologies such as satellite imagery, GPS, and IoT devices can optimize resource use, improve crop management, and increase efficiency.
- **Data-Driven Decision Making**: Using big data and analytics to predict weather patterns, pest outbreaks, and soil health can help farmers make informed decisions and reduce risks.

3. Expansion of Sustainable Farming Practices

- **Organic Farming**: Promoting organic farming practices that reduce reliance on chemical inputs, improve soil health, and enhance biodiversity.
- **Agroforestry**: Integrating trees and shrubs into farming systems to improve soil fertility, provide shade, and act as windbreaks, thereby enhancing the resilience of agricultural landscapes.
- **Conservation Agriculture**: Encouraging practices such as minimal tillage, crop rotation, and cover cropping to maintain soil health and reduce erosion.

4. Enhancing Water Management Techniques

- **Efficient Irrigation Systems**: Scaling up the use of drip and sprinkler irrigation systems to conserve water and improve irrigation efficiency.
- **Integrated Water Resource Management**: Implementing holistic water management strategies that include rainwater harvesting, watershed management, and the use of recycled water.

5. Leveraging Renewable Energy

- **Solar-Powered Irrigation**: Utilizing solar energy to power irrigation pumps, reducing dependence on fossil fuels and ensuring a sustainable energy source for agricultural operations.
- **Bioenergy Production**: Converting agricultural waste into bioenergy can provide an additional income stream for farmers and contribute to energy security.

6. Strengthening Policy and Institutional Frameworks

- **Climate-Smart Agriculture Policies**: Developing and implementing policies that promote climate-smart agricultural practices, provide financial incentives, and support research and development.
- **Farmer Support Programs**: Establishing programs that offer technical assistance, training, and financial support to farmers adopting innovative practices and technologies.

7. Promoting Market Access and Value Addition

- **Supply Chain Improvements**: Enhancing supply chains to reduce post-harvest losses, improve market access, and ensure fair pricing for farmers.

FULL TEXTS BOOK

- **Value-Added Products**: Encouraging the production of value-added agricultural products, which can increase farmers' income and create new market opportunities.

8. Fostering Community-Based Initiatives

- **Farmer Cooperatives**: Strengthening farmer cooperatives and organizations to improve bargaining power, share knowledge, and access resources collectively.
- **Participatory Research**: Involving farmers in research and development processes to ensure that innovations are practical, culturally appropriate, and address local challenges.

9. Education and Capacity Building

- **Farmer Training Programs**: Providing ongoing education and training programs to equip farmers with the skills and knowledge needed to adapt to climate change.
- **Extension Services**: Enhancing agricultural extension services to deliver timely information and support to farmers in remote areas.

While significant progress has been made in adopting adaptive measures, several challenges remain. These include the need for greater investment in research and development, improved infrastructure, and more robust policy frameworks. However, opportunities exist in leveraging technology, enhancing community participation, and promoting sustainable practices.

Conclusion

Climate change poses a significant threat to the agricultural sector in India, which is crucial for the country's food security and economic stability. This review has highlighted the various ways in which changing climatic conditions are impacting agriculture, including alterations in temperature, precipitation patterns, and the frequency of extreme weather events. These changes are affecting crop yields, soil health, water availability, and pest dynamics, thereby posing a multifaceted challenge to the agricultural community.The evidence indicates that rising temperatures and shifting rainfall patterns are leading to reduced crop productivity and increased vulnerability of crops to pests and diseases. Regions dependent on monsoon rains, in particular, are experiencing increased unpredictability, which complicates planting schedules and harvesting processes. Additionally, extreme weather events such as droughts and floods are becoming more frequent and severe, further exacerbating the risks to agricultural productivity and food security.To mitigate these impacts, it is essential to adopt a multi-pronged approach. This includes the development and dissemination of climate-resilient crop varieties, improved irrigation practices, and the adoption of sustainable agricultural techniques. Policymakers must also focus on enhancing the adaptive capacity of farmers through education, access to technology, and financial support. Furthermore, integrated water management practices are crucial to address the issues of water scarcity and ensure efficient water use in agriculture.

In conclusion, while climate change presents formidable challenges to agriculture in India, strategic interventions and adaptive practices can help mitigate these impacts. Continued research, along with robust policy frameworks and proactive measures, is essential to safeguard India's agricultural future and ensure food security in the face of an evolving climate.

ABSTRACT
The European Union's law provides the legal basis for the legal framework of its Member States. This article analyzes the principle of direct effect of European Union (EU) law, a concept upheld by the case law of the Court of Justice of the EU (the Court of Justice), which gives individuals the rights that can be upheld in national courts.
The principle of direct effect is one of the most important principles of EU law, as it allows private subjects to rely on EU treaties and regulations in their national courts. This improves the effectiveness and consistency of EU law across Member States legal systems. In addition to discussing its implications in the Member States' legal systems, this article examines the development, importance and impact of direct effect in promoting legal integration within the EU through the jurisprudence of the Court of Justice. The *Van Gend en Loos* judgment of the Court of Justice is the focus of this paper's examination of the history, development and implications of direct effect of EU law.
In order to analyze the subject matter of this article, both descriptive and case study analysis methods were used.
Keywords: direct effect, principle, jurisprudence, EU law, Van Gend en Loos.

1. Introduction

Van Gend en Loos[2] is the judgment that has established the fundamental principles upon which almost every significant development in EU law has been based. In a reference to Article 177 of the Treaty of the European Economic Community (TEEC) at the time, the Dutch court sought the opinion of the Court of Justice as to whether an article of the Treaty, specifically Article 12 of the TEEC, would have direct application within the territory of a Member State. Considering this, it is pertinent to inquire whether the citizens of a Member State may invoke this article to seek the protection of their individual rights.[3]
From the outset, the Dutch government has maintained that the Court of Justice lacks the requisite jurisdiction to adjudicate this case. The government's position is based on the premise that the case does not pertain to the interpretation of the Treaty, but rather to its application in accordance with the constitutional law of the Netherlands. The government asserts that the Court is not empowered to make decisions pertaining to matters of Dutch constitutional law. In response to these claims, the Court of Justice determined that: *"The Court is not obliged to assess the application of the Treaty in accordance with the principles of national law, which remains the domain of national courts. However, it is required to ensure compliance with subparagraph (a) of paragraph 1 of Article 177 of the Treaty, solely in terms of interpreting the scope of Article 12 of the Treaty within the context of Community law and its impact on individuals"*.[4]
In stating that it had only been asked to explain the scope of Article 12 by reference to its effect on individuals, the Court of Justice implied that it assumed it could answer this question exclusively based

FULL TEXTS BOOK

on Community law, without considering the concepts of national constitutional law on how international treaties are incorporated into national law. Furthermore, the Court of Justice determined that it was within the purview of the national court to ascertain when a preliminary reference was necessary to enable it to reach a decision. Subsequently, the Court of Justice considered the question of the direct effect of Article 12 and concluded that: *"In accordance with the spirit and wording of the Treaty, Article 12 must be interpreted as producing direct effect and creating rights for individuals, which national courts are obliged to protect"*.[5]

Notwithstanding the assertion by a Member State that the EEC Treaty is not distinct from conventional international treaties, the Court concluded that it is indeed a unique entity, diverging from other international treaties in its scope, which extends beyond the mere joint commitment of states to an intergovernmental level. In consequence of its purpose and institutional framework, it is empowered to confer directly upon individual's rights that are enforceable against Member States.[6]

2. The Van Gend en Loos case: The direct effect of the provisions set forth in the Treaty.

To substantiate its stance on the direct impact of the Treaty articles, the Court of Justice primarily advanced the following arguments:

The Court of Justice initiated its reasoning by referencing the objectives of the TEEC, rather than analyzing Article 12 in isolation. It was argued that the fundamental and general issue raised by the Dutch court was not limited to a specific article of the Treaty. It was thus determined that: *"The objective of the Treaty, namely the establishment of a common market, is of direct interest to the parties involved in the Community. As such, the Treaty is more than an agreement which simply creates mutual obligations between the contracting parties"*.[7] Furthermore, the Court of Justice observed that the Preamble of the TEEC refers not only to governments but also to peoples. The institutions of the EEC were endowed with sovereign rights, and the citizens of the Member States participate in their functioning through the European Parliament.[8] In this approach, the Court of Justice relies on the functioning of EEC.

Secondly, the Court provided further support for this determination in Article 177 TEEC, which states: *"Furthermore, the task given to the Court of Justice under Article 177, the object of which is to ensure a uniform interpretation of the Treaty by national courts, confirms that States have accepted that the law of the Community has an authority which may be exercised by their own nationals before these courts"*.[9] Consequently, Article 177 confers upon national courts the authority to refer a preliminary request to the Court of Justice solely in instances where it is determined that the decision on the case is indispensable for the Court to render an informed decision. A decision may be deemed "necessary" only if the legal position of individuals is affected by the provisions of the Treaty.

Considering the aforementioned arguments, the Court of Justice reached the following conclusion: The Community represents a novel order of international law, within which the Member States have relinquished certain sovereign rights, and to which they are subject not only as states, but also as to their citizens. Irrespective of the legislation enacted by the Member States, Community law not only imposes obligations on individuals but also aims to confer rights upon them that become part of their legal

FULL TEXTS BOOK

inheritance. These rights emerge not only from express provisions in the Treaty, but also from the clear obligations imposed on individuals, as well as on Member States and Community institutions.[10]

Thirdly, the Court of Justice considered Article 12 TEEC, which states that it is generally possible for Treaty provisions to recognize rights applicable to individuals. The Court of Justice determined that the wording of the provision in question contains a clear and unconditional prohibition and constitutes a negative obligation, independent of further legislative measures of national law. Consequently, it was deemed to be ideally suited to produce direct effects between Member States and their subjects. Furthermore, although the Member States are subject to the negative obligation set forth in this article, it does not preclude their citizens from benefiting from this obligation.[11]

3. Additional matters pertaining to the direct effect

3.1 Regulations

Regarding instruments of secondary legislation of the EU, the founding Treaties and the Treaty of Lisbon stipulate that only regulations are directly applicable, whereas directives and decisions are not. The second paragraph of Article 288 TFEU,[12] states the following: “A regulation shall have general application. It shall be binding in its entirety and directly applicable in all Member States”.[13] However, the fact that the Treaties have granted the regulation direct application does not necessarily imply that it also has direct effect.[14]

In the case of *Van Duyn v. Home Office*, the Court of Justice provided further clarification on this matter through the wording that "under Article 189 TEEC, the regulations are directly applicable and, therefore, may have direct effect by their very nature".[15] In her view, the term "direct implementation" can be understood to imply a "direct effect". However, in the same case, the Court of Justice stated that the fact that the regulations are "directly applicable" does not necessarily imply that they have a "direct effect". The question of whether the regulations will have a direct effect on the citizens of the Member States will be answered on a case-by-case basis.[16]

In the case of *Commission v. Italy*, the Italian Government was held accountable because the regulation was implemented, which called into question the legal character and direct application of that measure. In its ruling, the Court of Justice stated that: *"All of the methods of implementation were contrary to the Treaty, and as a consequence, would create obstacles to the direct effect of Community regulations and endanger their simultaneous and equal application throughout the Community." In the case of Muñoz, the Court of Justice ruled that: "Given their intrinsic nature and position within the hierarchy of Community law sources, regulations confer rights upon individuals, which national courts are duty-bound to safeguard."*[17]

In conclusion, with reference to the content of Article 288 TFEU, it can be stated that regulations are directly applicable in all Member States. This implies that they become part of national law without the necessity of a transposing act. Once they become part of the domestic law of a Member State, they will

[16] Ibid.
[17] Ibid.

FULL TEXTS BOOK

have direct effect if their provisions are sufficiently clear, precise, and appropriate to the situation of an individual litigant.[18]

3.2 Decisions

In the former articles 189 of the TEEC and 249 of the TEC, it was established that: "*A decision is binding in all its elements for the parties to whom it is addressed*". In Article 288 of the TFEU, the wording of the Treaty regarding decisions has been modified. The revised text states, "*The decision has binding force in its entirety*". The decision that determines the addressees is binding only for them.[19] With regard to the question of jurisprudence, the Court of Justice initially adopted a somewhat cautious approach regarding the definition of judgments as directly effective. This was even though the relevant Treaty article made no reference to their direct applicability.[20]

The Council or the Commission may take decisions, which may be addressed to individuals or Member States. Decisions addressed to individuals will, by their very nature, have a direct effect.[21] Nevertheless, even if the decision is addressed to a Member State, it can be used by individuals (vertical direct effect) if it meets the same conditions that are defined for the direct effect of primary Community law. Primarily, it must determine an obligation that is clear, precise and unconditional.[22]

However, the Court of Justice is hesitant to determine that a decision directed towards a Member State can result in enforceable obligations between private parties, a concept known as the direct horizontal effect. In the case of *Carp Snc di L. Moleri e vs. Corsi v Ecorad Srl*, the Court of Justice ruled that a decision addressed to Member States and containing appropriate procedures for certain construction materials does not impose obligations on private parties. This conclusion was reinforced by the wording of Article 288 of the TFEU, which stipulates that a decision that determines those to whom it is directed is binding only for them. Nevertheless, a decision may be addressed to a private party, in which case it is binding upon that party. In such cases, the decision may create a direct horizontal effect between the private parties, provided that the obligation established is clear, precise and unconditional.[23]

3.3 Directives

One of the most controversial aspects of the principle of direct effect is the fact that its application has been extended to directives. In accordance with Article 288 TFEU, paragraph 2, a directive has binding force with respect to the desired outcome for each Member State to which it is addressed. However, the authority to select the appropriate forms and methods is retained at the national level.[24] Upon initial examination, it becomes evident that the directives are not directly applicable, as they necessitate the implementation of measures at the level of the Member States. Furthermore, they do not have a direct effect. It thus appears that some of the criteria for direct effect, as defined in the Court of Justice's case law, are absent. Notwithstanding this apparent obstacle, the objective of legal integration, which reinforced the initial formulation of the Court of Justice regarding the direct effect of Treaty provisions,

[24] Article 288 TFEu, paragraph 2.

FULL TEXTS BOOK

may be equally applicable to directives in its view. In the case of *Grad v. Finanzamt Traustein*, the Court of Justice ruled that, in certain circumstances, directives could also have direct effect.[25]

In two related decisions, *Vand Duyn* and *Ratti*, the Court of Justice set forth the rationale for the direct effect of directives. In the *Van Duyn* case, the Court of Justice advanced two arguments to substantiate the recognition of the direct effect of directives. Firstly, the effect of a directive defining an obligation for Member States would be diminished if individuals were not granted the right to use it before a national court and if these obstacles were ultimately considered an element of Community law.[26] The Court of Justice has acknowledged the direct effect of directives designed to safeguard the rights of individuals. Secondly, Article 177 TEEC (now Article 267 TFEU) empowers national courts to refer to the Court of Justice matters pertaining to the legitimacy and interpretation of all acts of Community institutions, irrespective of classification. This indicates that such acts may be invoked by individuals before national courts.[27]

In the *Ratti* case, the Court of Justice established the principle of "prohibition," which held that Member States were prohibited from refusing to recognize the direct effect of a directive due to a failure to implement it properly. Furthermore, the Court of Justice has established that: *"the directive must have reached its deadline for implementation before it can have direct effect. In conclusion, as a directive imposes obligations solely on Member States, it is not feasible for an individual to safeguard the principle of "legitimate expectation" before the deadline for its implementation has elapsed"*.[28]

During the implementation period, Member States are at liberty to select the act they deem most appropriate, provided that the period is not exceeded. Once the designated period has elapsed, the obligation is absolute and non-compliance with the directive is no longer an option. In conclusion, the Court of Justice has, in its judicial practice, recognized the direct effect of a directive when its provisions are unconditional, sufficiently clear and precise, and when the Member State has not transposed the directive within the specified period or has not implemented it properly.

4. Conclusions

In the case of *Van Gen en Loos*, the Court of Justice established the principle of direct effect for certain provisions of the Treaty. Subsequently, the Court of Justice extended the application of these principles to EU secondary legislation.

In the *Van Gend en Loos* case, the Court provided an elaboration of the conditions for direct effect in relation to Treaty provisions. The *Van Gend en Loos* decision defined the criteria for a provision of primary EEC law to have direct effect. The Court determined that for a provision of the Treaty to have direct effect, it must meet the following criteria: it must be clear, negative, unconditional, and independent of any national enforcement measure.

The conditions for the application of the "direct effect" principle have also been developed in other cases before the Court of Justice. The cases in question pertain to the direct effect of EU secondary legislation. It is important to note that when the Court determines that a specific measure of secondary Community law has direct effect, it is legally equivalent to a provision of the Treaty.[29]

FULL TEXTS BOOK

The Court of Justice is responsible for ensuring that national courts safeguard the rights conferred upon individuals in Member States by Community law.

It is notable that none of the Treaties contains a stipulation regarding the direct effect of their respective provisions. It seems plausible to suggest that the drafters of the Treaties may have assumed that the question of direct effect would be decided by national courts in relation to rules of domestic law. In this regard, the jurisprudence of the Court represents a significant development in the field of EU law.[30]

ABSTRACT
The Court of Justice of the European Union (Court of Justice) is the guardian of respect for legality and the instrument of harmonization of the law within the European Union. It has taken a firm view to determine the status of *acquis* of the European Union and to give it priority when it is in conflict with the national legal systems of the Member States.
The doctrine of the supremacy of European Union law was elaborated by the Court of Justice in the early 1960s in the case *Costa vs Enel*. It constitutes one of the most significant constitutional doctrines of the European Union law, which did not have a legal basis in the founding Treaties of the first European Communities. However, it was developed by the Court of Justice on the basis of the concept that community law/EU *acquis* constituted a "new legal order". The Court of Justice has continuously insisted in its jurisprudence on the development of the principle of supremacy.
In order to analyze the subject matter of this article, both descriptive and case study analysis methods were used.
Keywords: supremacy, principle, jurisprudence, EU acquis, harmonization.

1.1. Introduction
In this article, the author examines the Court of Justice's judicial decision, which have established the principle of supremacy of European Union (EU) law over national laws of Member States. The analysis of case law focuses on the case of *Costa vs Enel*.[31] The consequences of applying the principle of supremacy were defined by the Court of Justice in another case, the *Simental II*.[32] The selected approach examines the interconnection between this pivotal EU legal principle and the legislative authority of national parliaments, addressing the question of whether the Court of Justice's ruling on the supremacy of EU law impinges upon legislative parliamentary sovereignty.

1.2. Costa vs. Enel: Facts and the Ruling of the Courts of Justice
In the *Van Gend en Loos*[33] case, the Court of Justice initially addressed the nature of community law. This ruling established the direct effect principle, according to the Court of Justice. This definition inevitably gives rise to the question of which law the national court should apply in the event of a conflict between a norm of national law and a norm with direct effect of Community law. The Dutch national court had not addressed this matter in its reference to the Court of Justice. Consequently, despite the evident interconnection between the two cases, the Court of Justice chose to refrain from addressing it in *Van Gend en Loos*. In the case of *Costa v. Enel*, the Court of Justice took this into account. The ENEL decision constitutes the foundation of the doctrine of the supremacy of Community law.

FULL TEXTS BOOK

To facilitate an understanding of the issues under discussion, it is essential to present the facts of this case, as in *Costa v. Enel* a law of the Italian Parliament was opposed on the grounds of incompatibility with the Treaty of European Economic Community (TEEC).

In light of the apparent conflict between the Parliamentary Act of 1962, which nationalized the electricity industry, and the TEEC, Flamino Costa elected to refrain from paying his electricity bills to the State Energy Corporation (ENEL). In order to ascertain the constitutionality of the Parliamentary Act of Nationalization, the national judge had referred the case to the Italian Constitutional Court. In the case of *Costa v. Enel*, the Italian Constitutional Court ruled that limitations in support of international organizations like the European Economic Community (EEC) were permitted by Article 11 of the Italian Constitution.

However, the European Treaties' standing and the standards that the Community institutions[34] had approved for the Italian internal legal system were unaffected by this clause. The investigation concluded that the dual system should be subject to the current international agreement provisions. The subsequent legislation, the Parliamentary Energy Nationalization Act of 1962, was unable to override the TEEC, which had been incorporated into domestic law in 1957.[35]

In a statement presented before the Court of Justice, the Italian Government advanced the position that the referral initiated by the Italian judge was devoid of legal validity. This assertion was accompanied by a reference to the reasoning employed by the Italian Constitutional Court in a similar matter. The national court was without the requisite authority to invalidate a parliamentary act on the grounds of conflict with EEC law, as per Italian legislation. This renders it impossible for this court to request that the EEC's legislation be interpreted.[36] The Italian Government advanced the further argument that the judge was obliged to decide the case solely in accordance with national law, and not in contravention of any provision of the Treaty.[37] In light of the Italian judge's request for the Court of Justice to determine the compatibility of Italian law with the TEEC, the Court of Justicelimited its consideration to matters pertaining to the Treaty's interpretation. In this manner, the Court of Justice did not address the initial objection raised by the Italian Government.

This ruling represents a significant expansion of the Court of Justice's constitutional conceptions regarding the nature of Community law. It acknowledges that the Member States had restricted their sovereign rights in the Community's formation and emphasizes the perpetual nature of the EEC, the independence of its powers and the delegation of powers from the Member States to the EEC:

"*The establishment of an unlimited-duration Community with its own institutions, distinct identity, legal capacity and international representation, coupled with the transfer of powers from Member States to the Community, has effectively curtailed the sovereign rights of the latter, albeit within defined limits. In this manner, they have established a legally binding entity, to which they and their citizens are subject.*"[38]

Despite the absence of any explicit mention of the principle of supremacy in the TEEC, the Court of Justice nevertheless proceeded to draw inferences from the text of the treaty, thereby implying the existence of this principle. The Court of Justice was resolute in demonstrating that the "words and spirit of the Treaty" unavoidably implied that:

FULL TEXTS BOOK

"It is not possible for Member States to introduce a further unilateral measure that is in conflict with a legal order which they have accepted on the basis of reciprocity.[39]

The Court of Justice determined that, based on the language of Article 189 of the TEEC, which stipulates that regulations are "binding" and "directly applicable" in all Member States, the supremacy of EEC law is inherently implied:
"The supremacy of Community law is also supported by Article 189, which stipulates that a regulation "shall be binding" and "directly applicable in all Member States". This provision, which is not subject to any reservation, would be devoid of any legal effect if a Member State were to unilaterally annul its effect by means of legislative measures which could prevail over EEC law."[40]

Ultimately, the Court of Justice reached to the conclusion that:

"From the aforementioned observations, it can be concluded that the right derived from the Treaty, as an independent source of law, due to its distinctive and original nature, cannot be contravened by national legal provisions, regardless of their wording, without being deprived of its character as a community right and without challenging the legal foundation of the Community itself.
The transfer of rights and obligations from the national legal system of Member States to the Community legal system is a permanent limitation of their sovereign rights, which cannot be overridden by subsequent acts. This unilateral action is incompatible with the concept of the Community."[41]
In a manner consistent with its approach in the *Van Gend en Loos* case, the Court of Justice did not consult the constitution of any specific Member State to determine whether or not such a transfer of powers was permitted by that state's constitution. In order to reach the conclusion that it was "impossible" for Member States to give precedence to domestic laws over Community law, the Court of Justice based its decision on an analysis of the "spirit and intentions" of the Treaty.

In comparing the Costa case to Van Gend en Loos, it becomes evident that the Court of Justice was confronted with a more complex and challenging task. The principle of supremacy cannot be applied to the conditions of direct effect since the latter could be evaluated in accordance with international law standards, which represents a crucial aspect of the Court of Justice's interpretive role. The principle that "among states contracting parties to a treaty, domestic law cannot prevail over that of the treaty" has been widely acknowledged as a fundamental tenet of international law since its inception.[42] Nevertheless, this principle was applied between the parties, which essentially meant that in the international sphere, Community law took precedence over national law. Meanwhile, the question of whether Community law should be given domestic primacy was being discussed in the context of the *Costa v Enel* case. This implies that national courts are obliged to apply Community norms in instances where there is a conflict between domestic law and Community law.[43]

FULL TEXTS BOOK

The Court of Justice has historically adopted a pragmatic approach to the concept of supremacy. As a consequence of the fact that it establishes all Community law norms as superior to all national norms, this viewpoint had the potential to have radical consequences. Nevertheless, its application will be constrained to instances where two norms that pertain to the same issue are manifestly in conflict with one another. Prior to establishing the status of this standard within the domestic legal framework, it is necessary to ascertain whether EEC acts have direct effect. Consequently, a clause cannot be assessed for adherence to national norms until it has been validated by a Member State court, otherwise, it may not be implemented.[44]

The Court of Justice's decision in the *Costa v. Enel* case is of considerable significance for two reasons. Primarily, it establishes the principle of supremacy of Community law over national laws of Member States. Consequently, it may be inferred that other treaty provisions may also have the same effect as Article 12 TEEC. Secondly, the Court of Justice's decision in the Costa case represents a pivotal moment in the history of European integration, establishing the notion of Community law's direct applicability and direct effect over national laws.

1.3 Conclusions

The fundamental principles of EU law are derived from the rulings of the Court of Justice regarding the nature and status of EU law, rather than from the text of the EU Treaties themselves. It is therefore essential to consider the Court's jurisprudence in the context of this article. The Court of Justice has considered the impact of these rulings on the legislative sovereignty of the national parliaments of the Member States. In the Costa case, the Court of Justice reaffirmed the primacy of EC law over national law. Furthermore, the Court of Justice extended this principle to encompass secondary EU legislation.

From the outset of the Costa case, the Court of Justice has established a consistent body of case law indicating that EU law is to be regarded as superior to national laws in each decision. The national institutions of the Member States are now subject to a number of obligations as a consequence of these decisions. National parliaments are prohibited from enacting legislation that is in contravention of EU law, as they are duty-bound to uphold the supremacy of EU law. In accordance with this principle, it is also incumbent upon them to amend any legislation that is in conflict with EU law.

The principles of a constitutional nature announced in the decisions of the Court of Justice have established the supremacy of EU law over national law by limiting the legislative functions of national parliaments. It is incumbent upon national governments to ensure that their legislation is in alignment with the minutest technical detail of the EU legislative framework.

ANALYSIS OF METH MODEL OF DRUG CRIME OF USER AND FAMILY ROLE WITH LAW ENFORCEMENT AGENCIES IMPACT IN NIGERIA

Akpienbi Isaac O.
Department of Mathematics and Statistics,
Federal University Wukari, Nigeria.
Ezra. E T.
Department of Mathematics and Statistics,
Federal University Wukari, Nigeria.

ABSTRACT
This paper presents a mathematical model that integrates family dynamics and law enforcement into the analysis of methamphetamine use and related drug crimes. The model explores the system's dynamic behavior, the existence of equilibrium states, and their global stability using advanced mathematical techniques. Specifically, the study examines equilibrium scenarios, distinguishing between drug crime-free and drug crime-persistent states, and calculates the reproduction number to assess potential spread under varying conditions. The results reveal that drug crime-persistent equilibria are asymptotically stable, indicating that the system tends toward these states over time. The study emphasizes the need for government intervention through policies and strategies aimed at controlling and eradicating drug crime in Nigeria, with a particular focus on law enforcement's role in implementing these measures. The findings highlight the importance of a coordinated, multi-faceted approach in combating methamphetamine use, focusing on key areas such as law enforcement, prevention, and recovery efforts to achieve a stable, drug-free state.
Keywords: drug abuse, drug crime, reproduction number, law enforcement agencies, stability

1.0 Introduction

Drug abuse and its associated criminal activities are significant global challenges, including in Nigeria (Farai Nyabadza, 2017). The relationship between criminal networks, political and civil institutions, and drug use has been studied, particularly in Cape Town (Khalil Goga, 2014). These issues have far-reaching negative effects on families, communities, and law enforcement, contributing to various social problems (Shakti M, Ramson, and Rajendra Chetty, 2016). The socio-economic impact of drug abuse extends beyond individual health, affecting broader societal structures (T.O. Orwa and F. Nyabadza, 2019). The study highlights the urgent role of families and friends in supporting drug users and traders (Surapol Naowarat and Nuengruedee Kumat, 2018), with the increasing drug supply linked to the rise in drug users (Nyabadza *et al.*, 2012). (Akpienbi & Iroka, 2024), research focuses on mathematical model of treatment control of substance abuse in Nigeria, highlighting the roles of inpatient and outpatient care. The study finds that the basic reproduction number can predict the stability of substance abuse dynamics, and that effective control methods, along with individual commitment, are crucial for reducing the progression of substance abuse in Nigeria. According to Akpienbi & Iroka (2024) developed a mathematical model to explore narcotic drug-related crimes in Nigeria, showing that consistent law enforcement and comprehensive rehabilitation are crucial, as the issue will decline if the reproduction number is below one but become endemic if it exceeds one, necessitating coordinated multi-sectoral efforts. The proposed study aims to analyze a model for the transmission of crime related to drug abuse, focusing on the roles of family and law enforcement.

2,0 Model formulation

this research work, incorporate family role, law enforcement agency as major control measure into the research work of Akpienbi *et al.* (2021), to eradicate substance abuse in Nigeria. The model was

Table 1Definition of variable/parameters in drug abuse crime model

Variable/Parameters	Description
S	susceptible individuals at risk of using drug
I	Mild or light drug user
H	heavy drug users
F_s	health care services or treatment center
T_{oi}	security forces unit or law enforcement agency
C	Law court trial for drug abuse crime
P	Correctional center for convicted suspect of drug abuse crime
R	recovered individuals
Π	Constant birth rate and immigration
β	crime suspect rate
μ	Natural Death rate
θ	per capita contact rate of a product of the effective number of contacts c between drug user and the susceptible population and the probability$\hat{\beta}$ that a contact results into initiation into drug use
r	the level of relapse to being a heavy drug user
γ_1	the recovery rate for light drug users
γ_2	the recovery rate for light drug users
γ_3	recovery rate for drug user in the correctional center
σ	uptake rate into treatment programs
α	Rate of charging suspect to law court
ν_1	Family roles in referring of drug abuse individual to treatment
ε	rate of suspect been discharge when not guilty of the crime
η	Recovered rate of outpatient
ν	η is rate of transfer or charging of suspect to law court
β_1	rate at which suspect been release after investigation
δ	transfer rate of suspect held in prison to court for hearing
θ_1	rate which suspect been guilty and sentence to prison as well to be held for further hearing of the court

3.0 Model Analysis

The drug crime analysis with control system establish the mathematical significance and existence of equilibrium points, and their stability. The basic reproduction number R_0 and effective reproduction number are computed using the next-generation matrix method. The value of the basic reproduction numberR_0 is used to determine the impact of family role and law enforcement agency and as well define the conditions for global and local stability of the equilibrium points. The focus of analysis of drug crime is to observed the control measures which aim to reduce the effect of crime related to drug abuse in Nigeria.

FULL TEXTS BOOK

3.0 Basic properties of the model

3.1 Invariant region

Drug abuse has a significant effect in Nigerian and there are need to model it process and proffer solution to it. Regard to this, we assumption state variables and parameters used in the model are positive for $\forall \geq 0$. Now need to analyze the drug abuse crime model so that it is defined in a suitable feasible region $\forall$ which has positive state variables and therefore result to Theorem 3.1; The existing forward solutions in R_+^8 of the drug abuse model system are feasible $\forall \geq 0$ whenever they enter the invariant region namely $\forall$.

$$\forall = \{(S, I, H, T_{oi}, F_s, C, P, R) \in \mathrm{R}_+^{\,8} : 0 \leq N \leq \frac{n}{\mu}\}$$

Where

Since substance abuse has an effect on the human population, there is a need to model its process. In regard to that, the following assumptions are made:

The state variables and parameters used in the model are non-negative for $\forall \geq 0$

- The drug abuse crime model is defined in a suitable feasible region that has positive state variables. The existing forward solutions in R_+^8 of the substance abuse model system are feasible $\forall \geq 0$whenever they enter the invariant region $\forall$.

where $S_0 \geq 0, I_0 \geq 0, H \geq 0, T_{oi0} \geq 0, F_{s0} \geq 0, C_0 \geq 0, P_0 \geq 0,$ and $R_0 \geq 0$

conclusively, the drug abuse crime model is well-defined, and the solutions remain within a non-negative and bounded region over time.

Proof: add up the model equation to obtain total population that satisfies differential equation that is

$$\frac{dN}{dt} \leq nn - \mu N$$

Then applying Lakshikantham *et al.* (1989) theorem by method of integrating factor

$$0 \leq N(t) \leq \frac{\Pi}{\mu} + N(0)e^{-\mu t}$$

.

In particular, if $0 \leq N \leq \frac{\Pi}{\theta}$, then for $t > 0$ if, then either the solution enters $\forall$ in finite time or $N(t)$ approaches to when taking limit as $t \to \infty$,hence the region $\forall$ attract all solutions in R_+^8 Indeed, the stated variable in set $\forall$ remain biological meaningful

3.2 Positivity of the solution

The model variables and parameters used in the drug abuse crime are non-negative $\forall \geq 0$. Assuming the initial values of the drug abuse crime model system (1) to be:

$S(0) > 0, I(0) > 0, H(0) > 0, T_{oi}(0) > 0, F_s(0) > 0, C(0) > 0, P(0) > 0$ and $R(0) > 0.$

Then the model's solution set

$(S(t), I(t), H(t), T_{oi}(t), F_s(t), C(t), P(t), R(t)) : (0, \infty) \to (0, \infty)$ remain positive for all $t > 0$

3.3 Analysis of the equilibrium points

This research section would be considering existence of stationary states, basic reproduction number $R_0$and sstability of the stationary

3.4 Drug Abuse Crime Free Equilibrium (DACFE)

At (**DACFE)**, we set all the model equation equal to zero. Solving the resultant to have equilibrium point E_0

$E_0 = S^*, I, H, T_{oi}, F_s, C, P, R$

FULL TEXTS BOOK

Therefore,

3.2.2 Drug Abuse Crime Persistent Equilibrium (DACPE)

denoted by $E_1 = S^*, I^*, H^*, T_{oi}^*, F_s^*, C^*, P^*, R^*$ **: here we solve the model equation simultaneously to have**

$$S^* = \frac{\Pi}{\theta I^* + \mu}$$

$$I^* = \frac{-\left((\gamma_1 + \alpha + \mu)\mu + \theta n\right) \pm \sqrt{\left((\gamma_1 + \alpha + \mu)\mu + \theta n\right)}}{(\gamma_1 + \alpha + \mu)\theta}$$

$$T_{oi}^* = \frac{v\sigma H^*}{(\gamma_1 + \mu)}$$

$$R^* = \frac{(\gamma_1 + \mu)\gamma_1 I^* + \gamma_2 v\sigma H^* + (\gamma_1 + \mu)\gamma_3 P^*}{(\gamma_1 + \mu)(r + \mu)}$$

$$H^* = \frac{\left(g_3 \propto + (\gamma_1 + \mu)\gamma_1 r\right) I^* + g_3 \varepsilon C^* + (\gamma_1 + \mu)\gamma_3 r P^* + g_3 \beta_1 F_s^*}{\left(g_3(\sigma + v\beta + \mu) - \gamma_2 rv\sigma\right)}$$

$$F_s^* = \frac{\left(g_3 \propto + (\gamma_1 + \mu)\gamma_1 r\right) v\beta I^* + g_3 \varepsilon v\beta C^* + (\gamma_1 + \mu)\gamma_3 rv\beta P^*}{\left((\beta_1 + \eta + \mu)g_4 - g_3\beta_1 v\beta\right)}$$

$$C^* = \frac{\left(g_3 \propto + (\gamma_1 + \mu)\gamma_1 r\right)\eta v\beta I^* + \left((\gamma_1 + \mu)\gamma_{3\eta} rv\beta + g_5\delta\right) P^*}{g_5(\varepsilon + \mu + \theta_1) - g_3\eta\varepsilon v\beta}$$

$$P^* = \frac{\left(g_3 \propto + (\gamma_1 + \mu)\gamma_1 r\right)\eta v\beta\theta_1 I^*}{g_6(\gamma_3 + \delta + \mu) - \left((\gamma_1 + \mu)\gamma_{3\eta} rv\beta\theta_1 + g_5\delta\theta_1\right)}$$

3.5 Basic reproduction number R_0 for drug abuse crime model

Using next generation matrix method by Van den Driessche and Watmoungh (2002)., we can generate an effective reproduction number that takes into account the effect of control measures in the model. The basic reproduction number, denoted as R_0represents the number of secondary drug abuse crime cases that are produced by one drug user over the entire period of their drug use in a population defined solely by susceptible individuals.

The criteria for this dimensionless parameter R_0 are as follows:

If $R_0 > 1$, then a single drug user in a population defined by only susceptible individuals may influence less than one individual to start using drugs. This implies that the drug abuse problem may be eradicated from the population, and the drug-free stationary point is asymptotically stable, meaning that the drug abuse cannot persist in the society.

When $R_0 < 1$n, it indicates that one drug user in a population defined by only susceptible individuals may influence more than one individual to start using drugs. This means that the drug abuse problem may continue to persist in the society. In this situation, the drug-free equilibrium point is unstable, and it is clear that the drug abuse problem can attack the society and remain for a long time.

If $R_0 = 1$, it suggests that one drug user in an entirely susceptible population may influence drug use to one new individual. Hence, the drug abuse problem will be alive in the country without a serious epidemic.

FULL TEXTS BOOK

The basic reproduction number R_0 is also known as the spectral radius, which is a critical epidemiological parameter in the drug abuse model.

$$R_0 = \frac{\Pi\theta\alpha}{\mu(\gamma_1+\alpha+\mu)(v_1\sigma+\mu+v\beta)}$$

When early identification and referrer family control and law enforcement methods are used, the number of secondary cases of drug abuse crime will decline. The reduction in the number of drug abuse crime will subsequently decrease the number of adequate contacts between the drug abuse crime population and the susceptible population.

The effective reproduction number represents the number of new drug abuse crime cases that are produced by one drug user during their entire infectious period, when the early identification and referrer family control and law enforcement agency are in place.

This effective reproduction number can be used to assess the impact of the control strategies on the dynamics of the drug abuse crime problem. If the effective reproduction number is less than 1, it suggests that the control measures are effective in limiting the spread of drug abuse in the population. Conversely, if the effective reproduction number is greater than 1, it indicates that the drug abuse crime problem may still persist despite the implementation of the control measures.

Analyzing the effective reproduction number, researchers and policymakers can evaluate the efficacy of the early identification and referrer family control and law enforcement methods in containing and potentially eradicating the drug abuse crime issue within the population.

$$R_a = \frac{\Pi\theta\alpha}{\mu(\gamma_1+\alpha+\mu)(\mu)}$$

When $v_1\sigma + v\beta \neq 0$ it reduces the value of the number of secondary cases produced as it can be seen in the expression R_0 it can be seen that the increase of the control efforts will reduce the value of the expression in R_0 which the number of secondary cases of drug users produced by a drug user in the entire period of drug abuse, but when $v_1\sigma + v\beta = 0$ the value of the number of secondary cases produced t can be seen in the expression R_a it can be seen that none control efforts was apply and there are increase the value of the expression in R_a which the number of secondary cases of drug users produced by a drug user in the entire period of drug abuse,. Therefore, R_0 become the basic reproduction number

3.6 Sensitivity analysis

We conduct sensitivity analysis of the given parameters on meth-related drug crime by evaluation of how each parameter affects the reproduction number R_0, which serves as an indicator of the potential spread of drug-related activities within Nigeria. The sensitivity of each parameter will be assessed using a normalized sensitivity index, which provides insight into which parameters have the greatest influence on R_0 as used in (Ogofotha *et al.* 2023; Ogwumu & Ataribu 2022 and Ogwumu *et al. 2023*)

$$\theta_{index} = \frac{\partial R_0}{\partial\theta}\cdot\frac{\theta}{R_0} = \frac{\Pi\alpha}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)}$$

$$\Pi_{index} = \frac{\partial R_0}{\partial\Pi}\cdot\frac{\Pi}{R_0} = \frac{\theta\alpha}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)}$$

$$\alpha_{index} = \frac{\partial R_0}{\partial\alpha}\cdot\frac{\alpha}{R_0} = -\frac{\Pi\alpha}{\mu(\alpha+\gamma_1+\mu)^2(v\beta+v_1\sigma+\mu)}$$

$$\beta_{index} = \frac{\partial R_0}{\partial\beta}\cdot\frac{\beta}{R_0} = -\frac{\Pi\theta\alpha v}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)^2}$$

FULL TEXTS BOOK

$$\sigma_{index} = \frac{\partial R_0}{\partial \sigma} \cdot \frac{\sigma}{R_0} = -\frac{\Pi \theta v_1 \alpha}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)^2}$$

$$v_{index} = \frac{\partial R_0}{\partial v} \cdot \frac{v}{R_0} = -\frac{\Pi \alpha \theta \beta}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)^2}$$

$$\mu_{index} = \frac{\partial R_0}{\partial \mu} \cdot \frac{\mu}{R_0} = -\frac{\Pi \alpha \theta}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)^2}$$

$$\gamma_{1index} = \frac{\partial R_0}{\partial \gamma_1} \cdot \frac{\gamma_1}{R_0} = -\frac{\Pi \alpha \theta}{\mu(\alpha+\gamma_1+\mu)^2(v\beta+v_1\sigma+\mu)}$$

$$v_{1index} = \frac{\partial R_0}{\partial v_1} \cdot \frac{v_1}{R_0} = \frac{\Pi \alpha \sigma \theta}{\mu(\alpha+\gamma_1+\mu)(v\beta+v_1\sigma+\mu)^2}$$

Sensitivity Impact of the drug abuse crime are rank and discus according to the most impactful to least impact. Law Enforcement Agencies Intervention Capture Rate parameters, indicate to be more sensitive significantly reduce the spread of meth-related crime. Effective law enforcement can directly reduce R_0 by capturing and deterring drug users and suppliers which is the strong impact due to high capture rates, indicating the critical role of law enforcement in controlling drug-related activities. The recruitment into drug user significantly increases R_0 parameter reflects the rate at which new users are introduced to meth, often influenced by factors like peer pressure, availability, and social environments and has a substantial contributor to the spread of drug use, emphasizing the need for preventive measures targeting at-risk populations. Crime Suspect Rate which represents the likelihood of users being suspected of or caught in drug-related activities, which can affect their future behavior and the public perception of drug use and influences the dynamics of the user population, affecting both deterrence and public health responses. Meth Drug Abuse Infection Rate Due to Interaction likewise represents the baseline transmission potential of drug abuse due to interactions between susceptible individuals and heavy users and this rate serves as a baseline multiplier for the spread of drug use, crucial for understanding how interactions contribute to the epidemic. Recovery Rate as a higher recovery rates decrease $R_0$by reducing the number of active users and reflects the success of treatment programs and natural recovery processes. Important for achieving a reduction in active users, highlighting the effectiveness of recovery programs. Effective Family Referrer Role intervention plays a significant role in preventing drug use and supporting recovery and strong family networks can deter initial drug use and aid recovery and has a moderate impact, emphasizing the importance of social and family support systems in addressing drug issues. Relative Infectivity of Heavy Drug User Rate are more likely to spread drug use compared to casual users and the parameter underscores the heightened risk associated with heavy users influencing new cases with less impactful than the top parameters but still significant, particularly in understanding the role of heavy users in the drug use chain. Uptake Rate into Treatment Program is the rate at which users access treatment which increased treatment uptake can lead to lower $R_0$by reducing the number of active users and lower impact due to the relatively low rate, but critical for long-term reduction in drug use prevalence. Natural Death Rate is least impactful parameter on R_0 while it does remove individuals from the population, it has minimal effect compared to other factors and very low impact, indicating that natural death is not a significant factor in controlling the drug epidemic

3.7 Global stability of the drug crime persistent equilibrium steady state

In this section, we prove the global asymptotic stability of E_1 by using Lyapunov's direct method. The ideal of Akpienbi *et al (2021)* were employed in constructing a common quadratic Lyapunov function of the model equations

Theorem If $R_0 > 1$, the equilibrium point E_1 of model Equations is globally asymptotically stable for $R_0 \le 1$ and unstable if $R_0 > 1$ in the interior of region Ω.

Proof. Let define $L:\{(S,I,H,T_{oi},F_s,C,P)\in\Omega : S,I,H,T_{oi},F_s,C,P>0\}\to R$

Then, we construct common quadratic Lyapunov function of the model equation and obtain

$$L(S,I,H,T_{oi},F_s,C,P)=\frac{1}{2}\left[\begin{array}{l}(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)\\+(P-P^*)\end{array}\right]^2 \quad (1.7)$$

L is D_1 in the interior of Ω, where E_1 denotes the global minimum of L on Ω hand $L(S^*,I^*,H^*,T_{oi}^*,F_s^*,C^*,P^*)=0$

Now, we differentiate L along the solution of the model system equations (0.1)-(0.8), we obtain

$$\frac{dL}{dt}=\left[(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)+(P-P^*)\right]\frac{d}{dt}$$
$$(S+I+H+T_{oi}+F_s+C+P) \quad (1.8)$$

Where

$$\frac{d}{dt}(S+I+H+T_{oi}+F_s+C+P)=n-\mu(S+I+H+T_{oi}+F_s+C+P)-\gamma_1 I-\gamma_2 T_{oi}-\gamma_3 P$$

Then, equations (0.1)-(0.8) becomes

$$\frac{dL}{dt}=\left[(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)+(P-P^*)\right]\times n$$
$$-\mu(S+I+H+T_{oi}+F_s+C+P)-\gamma_1 I-\gamma_2 T_{oi}-\gamma_3 P \quad (1.9)$$

At the equilibrium poin, E_1 π in equation (1.9) becomes

$$n=\mu(S^*+I^*+H^*+T_{oi}^*+F_s^*+C^*+P^*)+\gamma_1 I^*+\gamma_2 T_{oi}^*+\gamma_3 P^*$$

Therefore, equations (1.9) can be rewritten as

$$\frac{dL}{dt}=\left[(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)+(P-P^*)\right]$$
$$\times\left(\begin{array}{l}\mu(S^*+I^*+H^*+T_{oi}^*+F_s^*+C^*+P^*)-\mu(S+I+H+T_{oi}+F_s+C+P)+\gamma_1 I^*+\gamma_2 T_{oi}^*+\gamma_3 P^*\\+\gamma_1 I+\gamma_2 T_{oi}+\gamma_3 P\end{array}\right) \quad (2.0)$$

From equations (2.0) we have

$$\frac{dL}{dt}=\left[(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)+(P-P^*)\right]\times$$
$$\left(\begin{array}{l}\mu\left[(S-S^*)+(I-I^*)+(H-H^*)+(T_{oi}-T_{oi}^*)+(F_s-F_s^*)+(C-C^*)+(P-P^*)\right]-\\\gamma_1(I-I^*)-\gamma_2(T_{oi}-T_{oi}^*)-\gamma_3(P-P^*)\end{array}\right) \quad (2.1)$$

FULL TEXTS BOOK

Let

$$M_1=\left(S-S^*\right), M_2=\left(I-I^*\right), M_3=\left(H-H^*\right), M_4=\left(T_{oi}-T_{oi}^*\right), M_5=\left(F_s-F_s^*\right), M_6=\left(C-C^*\right),$$

$$M_7=\left(P-P^*\right), M_8=M_1+M_2+M_3+M_4+M_5+M_6+M_7$$

Thus, equation (2.1) becomes

$$\frac{dL}{dt}=M_8\left[-\mu M_8-\gamma_1 M_2-\gamma_2 M_4-\gamma_3 M_7\right]$$

It can also be rewritten as

$$\frac{dL}{dt}=-\left[\mu M_8^{\,2}+\gamma_1 M_2 M_8+\gamma_2 M_4 M_8+\gamma_3 M_7 M_8\right]$$

Therefore,

$$\frac{dL}{dt}=-\left[\mu M_8^{\,2}+\gamma_1 M_2 M_8+\gamma_2 M_4 M_8+\gamma_3 M_7 M_8\right]\le 0$$

Also, $\frac{dL}{dt}=0$ if $S=S^*, I=I^*, H=H^*, T_{oi}=T_{oi}^*, F_s=F_s^*, C=C^*$ and $P=P^*$ in equation (2.1).

So, the largest compact invariant set in $\left(S,I,H,T_{oi},F_s,C,P\right)\dot{o}\square : \frac{dL}{dt}=0$ is singleton E_1, where E_1 is the endemic equilibrium point. By Lassalle's invariance principle E_1 is globally asymptotically stable in the interior of $\forall$.

Conclusion

The study provides significant insights into the dynamics of methamphetamine use and associated drug-related crimes through a comprehensive mathematical model. The analysis of equilibrium states and the calculation of the reproduction number offer a deeper understanding of how these issues can persist or be eradicated within a population. The stability of both drug crime-free and drug crime-persistent equilibria underscores the potential for these states to be maintained under specific conditions.

The findings suggest that effective control and eradication of drug crimes require a multifaceted approach, including robust law enforcement, prevention strategies, and recovery support systems. The study advocates for targeted governmental policies and strategies, highlighting the critical role of law enforcement agencies in executing these measures. By prioritizing these key areas, there is a strong potential to significantly reduce the prevalence of methamphetamine use and move towards a stable, drug-free society. This research serves as a crucial foundation for policymakers and stakeholders in formulating effective interventions to combat methamphetamine use and its associated challenges

ABSTRACT
Architectural psychology used to be an emerging research and applied area in 1970s. But for unclear reasons, its popularity faded. Nowadays architects (especially interior architects) and psychologists rarely work together which is strange and tragic. Architectural psychology as a subfield of environmental psychology and as a bridge connecting psychology with design has yet a lot to contribute to the human understanding of built-in spaces. The references to this research field are rare, obsolete, and mostly unexpected. But we as a psychologist and an interior architect propose that architectural psychology can be the future's rising star as long as people prefer to live in psychologically relaxing spaces. Interior architectural designs allow residents and users of the buildings in general to perceive the environment in a certain way which has implications for human psyche. This paper poses an intellectual challenge to melt psychology and architectural design in the same theoretical pot.
Keywords: Architecture, psychology, and architectural psychology.

1 Brief History of Architectural Psychology

Janetius (2016) states that
"Architectural psychology is an important multidisciplinary field, bridging traditional psychology, engineering, architecture, domestic planning, and much more to assist people to design buildings and living spaces for better occupation. By understanding more about how people experience the built form, one can further take a more occupant-centred approach towards designing and engineering, which will lead to more truly innovative architectural designs" (p.67). According to Joye (2007), "One of the central issues of environmental psychology is how different types of settings can trigger different affective states in individuals (e.g., liking or preference reactions)" (p.306).
A precursor to architectural psychology is feng shui which is not scientifically proven (Bonaiuto et al., 2010). Bonaiuto et al. (2010) synthesizes feng shui principles and concludes with a taxonomy including colors: Green for hospitals, red for political centers, yellow for balconies, white/gray for commercial centers, black for any building.
According to Pol (2007), architectural psychology is the third stage in history of environmental psychology after the first environmental psychology and the American transition. It is an historical school which is no longer active, with its heydays from late 1950s to late 1980s. In those times, the terms environmental psychology and architectural psychology were mostly used synonymously, largely focusing on the psychological influences of the built-in spaces and ignoring other environmental issues (Petrović et al., 2015; Pol, 2007). One of the incipient topics were "spatial behaviour in psychiatric centres and hospitals" (Pol, 2007, p.3). Reuber (1996), in this context, investigates the evolution of asylum architecture in Ireland and delineates how the panopticon model evolved into the curative model. According to Philip (1996), when we reflect on psychology and architecture, we need to specify what kind of a psychology we are talking about: It can be behavioristic, cognitive, humanistic and so on. The first works on architectural psychology focused person-environment relationship and went to the

FULL TEXTS BOOK

extremes of architectural determinism sometimes and somehow (Philip, 1996). Later on behavioristic experiments were conducted excluding the by-then unpopular psychoanalytic approach (Philip, 1996). In those studies, environment was reconceptualized as a giant Skinner Box and manipulation was at the center stage of the research studies (Philip, 1996). In the next stage of architectural psychology, the key activity moved from prediction to understanding through the psychological turn towards humanism (Philip, 1996). From behavioristic perspective, this turn is not scientific at all, at is based on phenomenology and mostly qualitative. Moreover, humanist perspective considers person and the environment as a whole rather than separating them (Philip, 1996). A number of theoretical problems were identified at this point:

1. Overemphasizing the influence of physical environment at the expense of other influences such as personality and group influence,
2. Assuming the directness of the influences of the physical environments, ignoring ascribed meanings,
3. A passive modelling of individuals without goals, will or choice,
4. Assuming that the influence of the physical environment will not change and people will not do modifications to change the physical environment (Franck, 1984).

According to Philip (1996), the era of architectural psychology ended, because psychologists could not deliver what they hoped to deliver for architects. As a result, psychology became irrelevant for architects just as the time preceding the rise of architectural psychology. We think that this is partially correct. Although references to architectural psychology is rare after 1980s, architecture-relevant psychology research has moved towards specific topics such as spatial cognition (cf. Montello, 2004; Proulx et al., 2016; Soria, & Roth, 2018), residential identity (cf. Dandolova, 2017; Fleury-Bahi et al., 2008; Pahlavan et al., 2021), residential satisfaction (cf. Azizibabani et al., 2021; Fernández-Portero et al., 2017; Zohreh, & Rezaei, 2020) etc. Furthermore, a number of articles still revolve on the intersection of psychology and architecture (e.g. Barros et al., 2019; Berto, 2007; Chang et al., 2008; Coburn et al., 2020; Dreyer et al., 2018; Graham et al., 2015; Hadavi et al., 2015; Hartig et al., 1997; Herzog & Gale, 1996; Hill, & Daniel, 2007; Hur et al., 2010; Ikemi, 2005; Ivarsson, & Hagerhall, 2008; Kearnet, 2006; Larkin et al., 2021; Lindal & Hartig, 2013; Liu et al., 2020; Masoudinejad, & Hartig, 2020; Mouratidis, & Hassan, 2020; Nasar, 1994; 2016; Peschardt, & Stigsdotter, 2013; Staats et al.; Stoneham, & Smith, 2015; Subiza-Pérez et al., 2021; Twedt et al., 2016; Van den Berg et al., 2016; Weinberger et al., 2021; White, & Gatersleben, 2011; White et al., 2010).

Environmental psychology, the successor to architectural psychology covers topics such as "psychological effects of urban policies; place attachment and place identity; perceptions of city image and urban design; pro-environmental behavior, transportation choices, urban navigation and commuting issues; urban noise, recycling behavior, energy-related behaviors, green identities; and perceptions, attitudes and information on green issues such climate change, global warming, sustainability, conservation, biodiversity, and mitigation measures" (Gezgin, 2011, p.56).

The relationship between psychology and architecture has been elaborated in various settings including health care (Bonnes et al., 2009), justice and police architecture (Headley et al., 2021). Bonnes et al. (2009) concludes that humanization of the architectural design leads to better psychological outcomes, whereas in Headley et al. (2021), ethnic differences were observed in the way justice and police building designs perceived. Headley et al. (2021) compared the perceptions of hostile police stations characterized by "buildings kept behind large walls or barriers and lacking transparent windows" (p.3), with welcoming police stations which refer to "visible entryways, green and orderly surroundings, plentiful transparent windows"(p.3). While White respondents were affected by design variations, it was not the case for ethnic minorities (Headley et al., 2021).

FULL TEXTS BOOK

Historically speaking, that aesthetic experience in built environments is reduced to stimulus-response and to individual tastes and preferences had been criticized (Hubbard, 1996). This has been replaced by a more social approach (Hubbard, 1996). This brings social psychology and sociology to the fore. Architectural preferences are not immune to class positions in capitalist societies (Hubbard, 1996). However, these explanations do not exclude each other. On the other hand, gestalt psychology is one of the avenues for architectural psychology (Popow, 2000; Zhu et al., 2018). Moreover, Rodemann (2009) asks "Does architecture express personality? Does architectural pattern design have the ability to affect behaviour or physiological outcomes?" (p.102). These questions are obviously relevant for architectural psychology.

2 Guidelines in Architectural Psychology

People are inclined to prefer natural landscapes over built-in environments (Coburn et al., 2019; Joye, 2007). One of the examples mentioned by Joye (2007) is a train station project which resembles tree. He also reminds us that the interior of Gaudí's Sagrada Familia showcases branch and flower-like patterns (Joye, 2007). Ulrich (1984) compared the effects of facing a brick wall and a tree group in a hospital on various health variables, and found the restorative functions of tree-view rooms. Likewise, natural paintings are found to decrease stress (Wise and Rosenberg, 1986).

One point to consider in the intersection of psychology and architecture is the user groups. These can be "children, elderly, handicapped, infirm, different socioeconomic groups, groups with different ways of life" (Mahmoud, 2017, p.2). Another is place settings which covers "regions, cities and towns, urban areas, residential areas, complexes of buildings, buildings of various types, parts of the buildings, rooms, furniture, equipment and objects" (Mahmoud, 2017, p.2). The third point is behavioral phenomena concepts which are "anthropometrics, proxemics, personal space, territoriality, privacy, perception, cognition, meaning" etc.

It is not surprising to see that experts' and lay people's architectural preferences are discrepancy (Hubbard, 1996; Joye, 2007). However, considering the fact that often lay people will be occupants of the new projects, the latter should be given priority over the former. Furthermore, those who pay for the design are not necessarily the users. For instance, the company pays for the factory that the workers would occupy or the board of the school pays for the school that the students would occupy (Namazian & Mehdipour, 2013). This complicates the relationship between psychology and architecture even more. It requires participatory planning which is an emerging approach in urban planning (see Abdalla et al., 2016). In a study which compares architects' and accountants' views, Groat (1982) observes significant differences in design thinking. Thus, it is a matter of architectural Jacobenism to decide whether to follow the masses or elites. It may be the case that a particular building can be a feat of architectural success, but does not mean anything to lay people.

McAndrew (2020) proposes that places carry emotions with them. E.g. abandoned houses and places associated with death evoke creepiness in us. As a default value, people prefer places where they feel safe and they have a view of outside. This is the prospect-refuge theory where 'prospect' involves observation and 'refuge' refers to feeling safe without being watched (Dosen, & Ostwald, 2013). This is called as 'womb with a view' (Hester, 1979). This may have implications for phallic architecture (see Gezgin, 2014). Children, McAndrew (2020) adds, like to play in hidden places and boxes. This is also visible in cats, dogs and birds if not other species. Furthermore, people prefer the corners at restaurants to be backed by the walls (McAndrew, 2020). People, evolutionarily prefer to be in places where they can see but not seen, eat but not eaten, Greenbie (1982) concludes. Thus, buildings with neither prospect nor secure are felt to be creepy (McAndrew, 2020).

Another concept relevant for psychology and architecture is legibility. It refers to "the ease with which a place can be recognized, organized into a pattern and recalled—in other words, a place that we can wander around in without getting lost" (McAndrew, 2020, p.49). It is directly relevant for finding our

FULL TEXTS BOOK

way in a building (Weisman, 1981). A degree of illegibility brings mystery which may be positive (McAndrew, 2020), but a high degree of illegibility brings creepiness. These are good places for horror houses in thematic parks. In uncertain environments, people prefer not to be alone and isolated, as this increases threat perception (McAndrew, 2020). This is key to many horror movies.

In his discussion of the schools of future in the architectural sense, Walden (2015) criticizes the fact that five senses are usually considered in architectural psychology, but other senses such as "the sense of equilibrium (vestibular sense), of one's own movement (kinesthetic sense), and the various receptors for the sensation of our own bodily functions (somatovisceral senses)" are ignored (p.91).

One consideration in psychology and architecture is to ensure different forms of privacy and publicity through built-in structures (Namazian & Mehdipour, 2013). Some settings require privacy while others need publicity.

The open plan office concept is a matter of dispute (cf. Bernstein & Waber, 2019). In an early study, Sundstrom et al. (1980) find that architectural privacy is correlated with job satisfaction. People dislike noise and distraction.

3 Conclusion

In this article we aimed to delineate a brief history for architectural psychology and moved towards a set of guidelines. We propose that the days of architectural psychology is not over, but we need more systematic research to combine various studies in the intersection of architecture and psychology. Albeit that the term 'architectural psychology' is rarely used nowadays, its significance looms larger with a plethora of intersectional research. Thus, we need new architectural psychology books to systematize field and combine isolated research studies.

PUBLIC INVESTMENTS IN THE GREEN ECONOMY: BENEFITS AND CHALLENGES

Elvin Hajiyev
PhD candidate in Economics
Azerbaijan University
ORCID iD: 0009-0006-5926-6390

ABSTRACT
Public investments in the green economy play a pivotal role in shaping sustainable development by aligning economic growth with environmental stewardship and social equity. This essay examines their significance amidst global imperatives and ecological urgencies, emphasizing their role in job creation, economic resilience, and environmental mitigation. Drawing on examples from Germany, China, and Costa Rica, it highlights how strategic investments can yield substantial dividends, yet also explores challenges such as financial constraints, policy barriers, technological hurdles, market dynamics, and societal resistance. Innovative financing mechanisms, robust policy frameworks, technological advancements, infrastructure development, and public awareness campaigns are proposed as essential strategies to overcome these challenges. By navigating these complexities, stakeholders can harness the transformative potential of public investments in the green economy to foster sustainable growth and address pressing environmental challenges worldwide.
Keywords: Green economy; Public investments; Sustainable development; Environmental stewardship; Social equity; Job creation; Policy frameworks; Technological innovation

INTRODUCTION

In the contemporary economic landscape, public investments wield unparalleled influence, serving as linchpins for national development agendas. Embracing a multifaceted approach, these investments, underwritten by governmental coffers and driven by taxpayer support, traverse critical domains—from foundational infrastructure and educational advancements to healthcare innovations, research and development, and pivotal environmental stewardship initiatives. At the heart of their efficacy lies the strategic allocation of resources, poised not merely to spur economic dynamism and heighten productivity but also to significantly elevate societal well-being.

Central to this discourse are the Sustainable Development Goals (SDGs), a visionary mandate ushered in by the United Nations in 2015. These goals, an ambitious blueprint for global transformation by 2030, mandate the eradication of poverty, the safeguarding of planetary resources, and the equitable advancement of human prosperity. Within this framework, public investments emerge as indispensable catalysts, pivotal in engendering the infrastructural backbone and systemic resilience requisite for sustainable progress.

Foregrounding this paradigmatic shift is the ascendant concept of the green economy—a transformative ethos recalibrating economic growth trajectories towards environmental sustainability and social equity. Delving into how these investments not only galvanize economic vigor but also champion environmental integrity and societal inclusivity, it critically evaluates the impediments that temper their transformative potential.

In the pursuit of sustainable development, public investments in the green economy play a pivotal role, aligning economic prosperity with environmental stewardship and societal equity. Through strategic deployment of resources, these investments not only foster innovation and job creation in burgeoning sectors like renewable energy and sustainable agriculture but also mitigate climate change impacts and enhance community resilience. Yet, amid these promises lie significant challenges—financial constraints, policy ambiguities, technological barriers, and societal resistance—that demand innovative solutions and concerted efforts.

FULL TEXTS BOOK

Thus, against the backdrop of burgeoning global imperatives and emergent ecological urgencies, the discourse on public investments in the green economy assumes profound relevance—a testament to the imperatives of stewardship and resilience in shaping a sustainable future.

RESEARCH AND FINDINGS

Benefits of Public Investments in the Green Economy

The green economy is defined by the United Nations Environment Program (UNEP) as an economy that results in improved human well-being and social equity, while significantly reducing environmental risks and ecological scarcities (UNEP, 2011).

According to various authors and sources, the benefits of public investments in the green economy can be illustrated as follows:

1.Economic growth and the creation of jobs. Public investments in the green economy have the potential to stimulate job creation and foster economic expansion through the development of new markets and sectors. Emerging sectors such as sustainable agriculture, energy efficiency, and renewable energy show considerable growth prospects. For instance, the International Renewable Energy Agency (IRENA) reported that the global renewable energy sector employed approximately 11 million people in 2018 (IRENA, 2019, p. 8).

Investments in green technologies further promise to generate high-quality employment opportunities. The U.S. Department of Energy forecasts that the clean energy sector could potentially support up to 1.5 million jobs by 2030 (U.S. Department of Energy, 2020, p. 12).

2.Environmental Sustainability. Green investments offer substantial environmental advantages, notably through the mitigation of greenhouse gas emissions and conservation of natural resources. Renewable energy sources like wind, solar, and hydroelectric power generate minimal to zero emissions, thus contributing significantly to climate change mitigation. The Global Commission on the Economy and Climate highlights that transitioning to a low-carbon economy could yield economic benefits exceeding $26 trillion by 2030, compared to projections under conventional economic practices (Global Commission on the Economy and Climate, 2018, p. 5)

3.Social Equity and Inclusivity. The green economy may foster social equity by facilitating equal opportunities and mitigating disparities. Public investments in green infrastructure, such as public transportation and energy-efficient housing, have the potential to enhance access to vital services and improve the living standards of marginalized communities. Furthermore, initiatives focusing on the development of green skills and training programs can aid in transitioning workers from declining industries to burgeoning green sectors (ILO, 2011, p. 22).

Several illustrative cases underscore the potential for countries to achieve economic, environmental, and social advantages through investments in the green economy, thereby fostering sustainable development at a global level. The following examples highlight countries that have realized substantial benefits from such investments:

- Germany. Germany has been a leader in promoting renewable energy and green technologies through its Energiewende (energy transition) policy. This initiative has not only reduced greenhouse gas emissions but has also spurred innovation and created numerous jobs in the renewable energy sector. According to studies by the German Federal Ministry for Economic Affairs and Energy, investments in renewable energy have significantly contributed to economic growth and energy security (German Federal Ministry for Economic Affairs and Energy, 2020, p. 10).
- Denmark. Denmark's commitment to wind energy has made it a global leader in this sector. The country's investments in wind farms and related technologies have not only bolstered its energy independence but have also positioned it as an exporter of wind energy expertise. Reports from the Danish Energy Agency underscore the economic benefits and technological advancements resulting from these investments (Danish Energy Agency, 2021, p. 15).

FULL TEXTS BOOK

- China. China has invested heavily in renewable energy infrastructure, including solar and wind power. These investments have not only reduced China's reliance on fossil fuels but have also positioned it as a key player in the global renewable energy market. According to the National Energy Administration of China, investments in renewable energy have contributed to economic growth while addressing environmental challenges (National Energy Administration of China, 2020, p. 8).
- Costa Rica. Costa Rica has made significant strides in promoting environmental sustainability through its investments in renewable energy and biodiversity conservation. The country's efforts to achieve nearly 100% renewable electricity generation have not only reduced carbon emissions but have also boosted ecotourism and enhanced environmental stewardship. Reports from the Costa Rican Ministry of Environment and Energy highlight the socio-economic benefits and ecological gains from these initiatives (Costa Rican Ministry of Environment and Energy, 2019, p. 12).

Challenges of Public Investments in the Green Economy

Embarking on the transition to a green economy entails navigating a complex landscape of challenges that span financial constraints, policy and regulatory barriers, technological and infrastructure hurdles, market dynamics, and social-cultural resistance. The following sections delve into a detailed examination of the challenges associated with public investment in the green economy:

1.Financial Constraints. Public investments in the green economy face significant financial challenges due to the substantial upfront costs involved. Transitioning to a green economy necessitates considerable expenditures for developing new infrastructure, funding research and development initiatives, and providing subsidies for green technologies. According to the International Energy Agency (IEA), achieving the objectives outlined in the Paris Agreement requires an annual investment of $2.3 trillion in clean energy technologies by 2035 (IEA, 2019, p. 10).

2.Policy and Regulatory Barriers. Effective public investment in the green economy hinges on the establishment of supportive policy frameworks and regulatory environments. Inconsistent or inadequately designed policies can impede the growth of green sectors. For instance, the absence of standardized regulations for carbon pricing can distort markets and diminish the efficacy of investments in green technologies (World Bank, 2019, p. 15).

3.Technological and Infrastructure Challenges. The transition towards a green economy necessitates substantial advancements in technology and infrastructure. The development and deployment of new green technologies are resource-intensive and time-consuming endeavors. Additionally, there is often a need to retrofit or replace existing infrastructure, which poses significant costs and disruptions (IEA, 2017, p. 25).

4.Market Dynamics and Competitiveness. The green economy contends with entrenched industries that benefit from economies of scale and established market positions. Notably, fossil fuel industries historically received substantial subsidies, presenting challenges for renewable energy sources to compete on an equitable basis. According to research by the International Monetary Fund (IMF), global subsidies for fossil fuels amounted to $5.2 trillion in 2017, constituting 6.5% of global GDP (IMF, 2019, p. 3).

5.Social and Cultural Resistance. Transitioning to a green economy encounters resistance rooted in social and cultural factors. Changes in consumption patterns, adjustments in lifestyles, and shifts in employment sectors may provoke opposition from diverse stakeholders. Effective public awareness campaigns and educational initiatives are indispensable in garnering support for green initiatives and dispelling misconceptions about the viability and benefits of the green economy (OECD, 2018, p. 18).

The following case studies highlight exemplary initiatives in the realm of green investments, showcasing diverse national strategies aimed at advancing renewable energy adoption, enhancing environmental sustainability, and addressing associated challenges:

FULL TEXTS BOOK

- Germany's Energiewende. This initiative has yielded a substantial increase in the share of renewables in electricity generation, rising from 6.3% in 2000 to over 40% by 2019 (BMWi, 2020, p. 4). However, the transition has encountered challenges such as escalating electricity costs and concerns over grid stability (Agora Energiewende, 2020, p. 7).
- China's Green Investment Initiatives. China has emerged as a global frontrunner in green investments, particularly in renewable energy and electric vehicles. In 2018 alone, China accounted for nearly 45% of the world's total investment in renewable energy, amounting to $126.6 billion (REN21, 2019, p. 29). These initiatives have not only propelled significant economic growth but also contributed to mitigating air pollution. Nevertheless, China faces ongoing challenges including the imperative to harmonize economic development with environmental preservation and address regional disparities in green investment (World Resources Institute, 2019, p. 11).
- The European Green Deal. The European Green Deal represents an ambitious strategy aimed at positioning Europe as the world's first climate-neutral continent by 2050. Encompassing a broad spectrum of initiatives such as the Circular Economy Action Plan, Biodiversity Strategy, and Farm to Fork Strategy, this initiative aims to mobilize a minimum of €1 trillion in sustainable investments over the coming decade (European Commission, 2019, p. 3). While the plan holds promise for delivering substantial economic and environmental dividends, it confronts challenges related to securing adequate financing, coordinating policy measures across member states, and engaging diverse stakeholders in the transition (European Environment Agency, 2020, p. 14).

Strategies to Overcome Challenges

In the pursuit of advancing the green economy, several critical pillars emerge, encompassing innovative financing mechanisms, robust policy frameworks, technological innovation and research, infrastructure development, and public awareness and education. The following sections delve into a detailed examination of the strategies to overcome challenges:

✓ Innovative Financing Mechanisms. In response to financial constraints, innovative financing mechanisms such as green bonds, public-private partnerships, and climate funds can be strategically employed. Green bonds have emerged as a prominent instrument for mobilizing capital towards environmentally sustainable projects, with the global green bond market reaching $257.7 billion in 2019, and anticipated robust growth in subsequent years (Climate Bonds Initiative, 2019, p. 2).

✓ Robust Policy Frameworks. The development of robust policy frameworks that offer clear guidelines and incentives for green investments is imperative. Policies encompassing carbon pricing, renewable energy mandates, and tax incentives play a pivotal role in fostering an enabling environment for investments in sustainable initiatives. Moreover, fostering international cooperation and harmonizing standards are essential strategies to mitigate regulatory hurdles and market distortions (World Bank, 2019, p. 15).

✓ Technological Innovation and Research. Continuous investment in research and development is critical to drive technological innovation and achieve cost efficiencies within the green economy. Public funding directed towards research institutions, partnerships with private sector entities, and support for entrepreneurial ventures can expedite the advancement and deployment of green technologies (UNEP, 2018, p. 8).

✓ Infrastructure Development. The enhancement and expansion of green infrastructure are pivotal for facilitating the transition towards a sustainable economic model. Investments targeted at smart grids, public transportation networks, and energy-efficient building initiatives serve as foundational elements for fostering sustainable growth. Coordinated planning and collaboration among diverse stakeholders are essential to ensure that infrastructure development aligns harmoniously with the objectives of the green economy (World Bank, 2019, p. 23).

FULL TEXTS BOOK

✓ Public Awareness and Education. Elevating public awareness and advancing educational initiatives are essential strategies to mitigate social and cultural resistance to the green economy. Advocacy campaigns that underscore the multifaceted benefits—economic, environmental, and social—of green investments are instrumental in garnering public support and fostering behavioral change. Furthermore, initiatives aimed at vocational training and skill development are pivotal in preparing the workforce for emerging opportunities within green sectors (ILO, 2011, p. 31).

Each of abovementioned strategies plays a pivotal role in navigating the complexities of transitioning towards a sustainable economic paradigm, addressing financial, regulatory, technological, infrastructural, and societal challenges along the way.

CONCLUSION

In conclusion, the discourse on public investments in the green economy illuminates a transformative path towards sustainable development amidst global imperatives and ecological urgencies. The benefits of such investments are manifold, offering pathways to economic dynamism, environmental integrity, and social inclusivity. Through fostering job creation and economic growth in burgeoning sectors like renewable energy and sustainable agriculture, public investments not only bolster economic resilience but also mitigate environmental risks. The significant strides made by countries like Germany, China, and Costa Rica exemplify how strategic investments can yield substantial economic, environmental, and social dividends, positioning these nations as pioneers in the global green economy landscape.

However, the journey towards a green economy is fraught with challenges that demand nuanced strategies and steadfast commitment. Financial constraints loom large, requiring innovative financing mechanisms such as green bonds and public-private partnerships to mobilize substantial capital for sustainable projects. Policy and regulatory barriers necessitate the establishment of robust frameworks that incentivize green investments while harmonizing standards across jurisdictions to mitigate market distortions. Technological advancements and infrastructure developments are essential but fraught with complexities, requiring continuous research, strategic planning, and stakeholder collaboration to overcome.

Moreover, market dynamics that favor entrenched industries and social-cultural resistance to behavioral and lifestyle changes pose additional hurdles. Overcoming these challenges demands comprehensive strategies that integrate innovative financing, supportive policies, technological innovation, infrastructure development, and robust public awareness campaigns. By aligning these pillars, stakeholders can navigate the intricate terrain of the green economy transition, ensuring sustainable growth that balances economic prosperity with environmental stewardship and societal equity.

Looking ahead, the imperative remains clear: concerted global efforts are needed to scale up investments in the green economy, leveraging its transformative potential to address pressing ecological challenges while fostering inclusive and sustainable development worldwide. Through collaborative action, informed policy-making, and sustained public engagement, nations can chart a course towards a resilient future where prosperity thrives in harmony with planetary boundaries. As the world navigates towards achieving the Sustainable Development Goals by 2030, public investments in the green economy stand poised as catalysts for shaping a future that is prosperous, equitable, and environmentally sustainable.

In essence, the discourse on public investments in the green economy transcends conventional economic paradigms, underscoring a collective commitment to stewardship and resilience in pursuit of a sustainable future for generations to come.

RECENT REGIONAL MACROECONOMIC DEVELOPMENTS AND POSSIBLE FINANCIAL RISKS AT THE GLOBAL LEVEL

Prof. Dr. Ahmet Niyazi ÖZKER
Bandirma Onyedi Eylul University, Faculty of Economics and Administrative Sciences, Public Finance Department 10200-TÜRKİYE
ORCID ID: 0000-0001-5313-246X

ABSTRACT
This study aims to examine some phenomena that can be discussed at the global and regional levels, with a particular focus on the latter. The aim is to reveal the regional impact values and change processes related to the macro variables and to identify the stage at which the possible expectations can be brought to the agenda. From a global perspective, it is essential to comprehend the components of regional growth worldwide. Following the year 2022, it has become evident that regional disparities have become more pronounced with the increase in GDP, particularly when examining regional perspectives. The population fluctuations resulting from the Corona 19 pandemic and the differential effects of regional changes in government borrowing and the monitoring of price variations in commodities, in particular, have been observed. Furthermore, it is crucial to comprehend the fluctuations in energy prices, the utilisation of energy, and the alterations in the prices of raw materials and minerals employed in industry, particularly within the context of commodity prices and the agricultural sector. In addition to per capita incomes, the deviations in common and exchange values in developing and emerging economies, particularly national income per capita and income growth, are also worth consideration. Developing countries exhibit a markedly higher level of these variables than developed countries. This necessitates understanding the interrelations between government consumption, private sector consumption, investments (gross and net), and the margins of private sector investment. Furthermore, macroeconomic variations, particularly those occurring at the regional level, have impacted potential economic and fiscal projections, making it apparent that the macroeconomic framework can be essential for evaluating this structure.
Key Words: Developing Countries, Emerging Markets, Financial Risks, Macroeconomic Developments, Regional Macroeconomy.
JEL Codes: F43, F62, F63.

INTRODUCTION

These economic and fiscal policies have been insufficient to compensate for the losses after 2023 in developing economies, and they are affecting all regions. Again, it is remarkable that the expectations for the continuation of a structure in which the Gross Domestic GDP does not grow at the desired level in all regions at the global level are continued. This fact has been more remarkable, especially in some regions in 2023, and it is noteworthy that the negative impact of fiscal deficits will continue to overcome the concepts of economic curiosity. All regions will have to have a greater protective efficient production output, especially at the global price level. India has been in a position where financial difficulties caused a deficit of approximately 8% in production. The existence of economic growth, albeit small, during the pandemic period in countries such as Türkiye has created a positive impact on the global level as an essential value. Undoubtedly, employment level and economic growth trends are in the foreground as regional macroeconomic variables (International Labour Organization, 2023). These variables play a critical role in understanding the dynamics of regional economies and possible financial risks. Inflation trends, which are directly linked to economic growth trends, also have an essential place on a regional basis. Understanding the effects of these macro variables, especially in emerging economies and development plans, is critical regionally. Besides, analysing employment, production, and productivity

FULL TEXTS BOOK

levels, as well as actual added value creation, as macroeconomic variables, is essential to understanding their direct effects on economic growth (Wang et al, 2021). In this context, it means scoping the regional impacts of financial fragility levels and fiscal costs in financial resource sharing, especially energy costs, for regions expressing different growth values.

These analyses are also critical regarding the effective use of production factors and the determination of actual impact values in regions such as Pacific countries, Asian countries, and Central Asian countries. The efficiency of production processes in these regions and their contributions to economic growth require understanding regional macroeconomic variables due to careful examination of these variables and factors (Acemoglu & Restrepo, 2017). This fact enables us to better understand the differences between regions and the effects of these differences on financial fragility, especially for emerging market economics. Macroeconomic changes in recent years have led to various financial risks, especially in the United States (USA), within the framework of regional macroeconomic developments. The US economy has had a remarkable regional impact in recent years in terms of employment figures and consumer spending. In this context, the Federal Reserve Bank's monetary policy decisions significantly affect global financial markets.

On the other hand, factors such as increased inflation rates in regions such as the European Union (EU), supply chain crises, and energy crises stand out as the main financial effects of regional economic problems. These have important implications for the European Central Bank's monetary policy practices and regional economic stability When evaluated in terms of Asia Pacific countries, large economies such as China, Japan, and India caused regional financial crises with macroeconomic variability, especially during the pandemic process. Problems in China's real estate market and debt levels and Japan's long struggle with low inflation and low growth increase financial fragilities in these countries. With the increase in global financial risks, central banks were forced to increase interest rates, negatively affecting economic growth by increasing borrowing costs.

This process increased the risk of indebted countries and companies being unable to pay their debts, and fluctuations in global financial markets reduced investor confidence and created significant uncertainties (Awakening, 2023). Negative effects on capital outflows and debt sustainability have been observed, especially in emerging markets. Deviations in economic policies and increases in global interest rates, which affect debt sustainability and financial-economic stability, lead to financial risks regarding countries' inability to pay their debts. In addition, climate change and environmental risks increase the costs of the stance in macroeconomic variables, causing significant economic losses (Autor, 2013). Namely, the lack of coordination of regional risk management at national and international levels creates deviations from the effectiveness of countries' central banks' fiscal policies. This situation is reflected in the process as a justification for deviation effects in regional economic growth trends. It is observed that this approach especially points out the economic magic and disruptions resulting from the pandemic and a broader-got rapid growth structure in macroeconomic terms.

REGIONAL MACROECONOMIC DEVELOPMENT EVALUATIONS AT GLOBAL LEVEL AND PROJECTIONAL RISKS

Recent macroeconomic developments reveal that regional approaches, which demonstrate significant differences at the global level, have differentiated in some important determinations and targets. In particular, these determinations are divided between regions such as North America and Europe and other regions such as China and Asia, as well as Latin American countries and Africa, which means that some regional trends are also investigated. Again, by keeping the Middle East separately in this evaluation today, it is seen that interest rate increases are frequently on the agenda to fight inflation, especially with the North America II programmes, which include the United States, within the same regional framework on the subject, where economic vitality is supported, or certain deviations are the subject (Adrian et al, 2023).

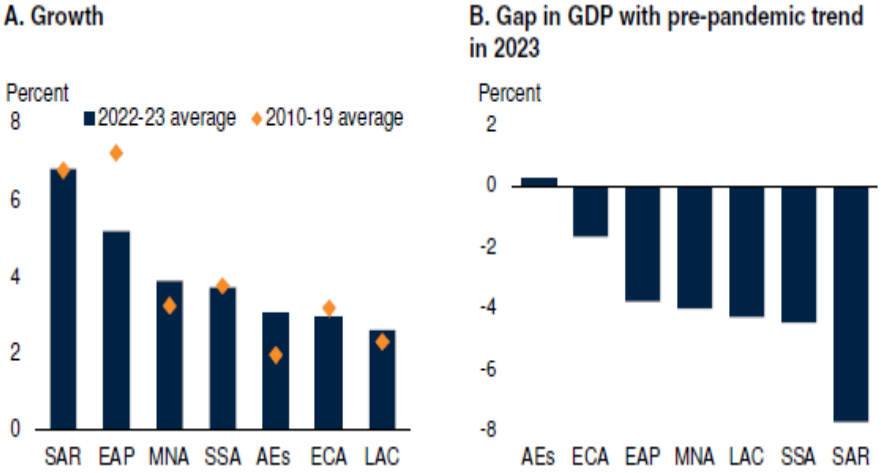
FULL TEXTS BOOK

Outlook of Regional Macroeconomic Developments and Macro Projections at The Global Level

It can be addressed the recent macroeconomic variations with a different regional classification for our study to the regional macroeconomic variations at the global level. Important Macro-economic variables at the global level, especially regarding the reconstruction of some regional contexts, especially an Economic growth cycle balance that can be handled on the basis of GDP has transformed into a structure that draws attention to some important issues. This structure also shows that in the growth of the GDP, especially after a pandemic process that can create an impact value in emerging Markets and Developing regions in 2022 and 2023 in the emerging Markets and Developing regions, it affects East Asia and countries every week and that it affects the countries in these regions every week (Financial Stability Board, 2022).

While these decreases also reveal the structure of countries that can be expressed in different values, on the other hand, it has turned into a structure that reveals regional differences in growth trends that can be expressed differently, especially in 2022 and 2023, as macroeconomic developments, it has turned into a period that reveals the structural differences between the target values in the emergence of the deficits of the GDP well as the growth on the basis of gross domestic product. This period after COVID-19 has also turned into a structural position in which a structure that can be expressed between the targeted values with the targeted macroeconomic projection structures and the current values in question can be expressed in different positions (Deghi et al, 2022). This concept of the difference between the targeted GDP and the actual realised structure can be described as a gap and open (Gap). This phenomenon has emerged with a structure that directly affects the emergence of capital increases in countries, especially in the South Asia and South Asia African region.

Besides, it is essential to say that inflation has started to increase in North America and especially in the United States of America, or it is crucial to say that the process of controlling the projected increase in inflation continues. When the event is evaluated based on North America, it is understood that, especially in Canada, energy export dependence comes to the fore on an economic scale and changes the macroeconomic balances with a significant level of impact as factors determining trade relations or macroeconomic situations, especially in the direction of fluctuations, and affects economic growth.



On the other hand, when these obligations are evaluated, especially within the European Union countries, it reveals that structural reforms aimed at ensuring financial and economic stability in the post-Brexit period are frequently on the agenda and monetary policies, especially in the European Central Bank, constitute an essential trend towards supporting economic growth with low interest rates (European Central Bank, 2022). In the case of the United Kingdom, which can be considered outside the European Union, especially the financial and macroeconomic developments in the United Kingdom also reveal that the United Kingdom has included some structural reform attempts that have reshaped the UK economy with trade agreements and new economic strategies. It is seen that inflation and supply chain problems are among the critical issues that reveal the necessity of balancing the macroeconomic variables in the United Kingdom with an import trend that can only be balanced with a more export-oriented potential (Office for National Statistics, 2023). This may occur, especially with a structure that directly affects the emergence of capital increases in the GDP gap. "- 8%" in 2023 with a negative value has turned into a macroeconomic development trend that values even more as "negatively" but positively creates the effect. Graph 1 below shows a gap between these values, primarily based on the GDP's alterations as economic growth levels and the difference between the actual GDP and projection values.

This regional classification at the global level can be expressed as follows:

AEs = Advanced Economies.
EAP = East Asia and Pacific,
ECA = Europe and Central Asia,
LAC = Latin America and the Caribbean,
MNA = Middle East and North Africa,

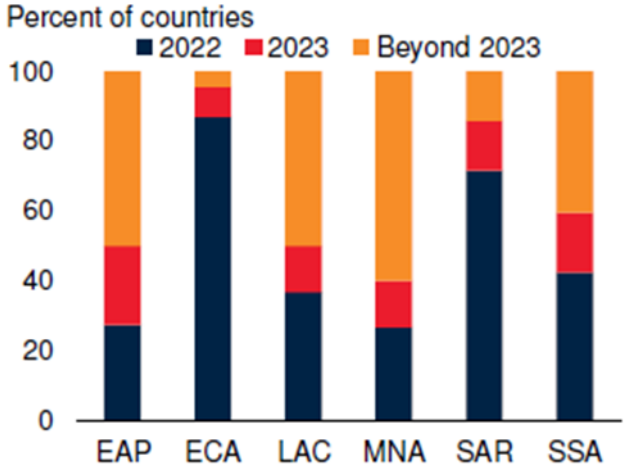
Graphic 1. Economic Growth and in Gap in GDP based Deficit of Regional locations at Global Level



Graph 1 shows that, despite economic growth, the growth in 2022 and 2023 is much more pronounced in emerging markets and developing economies. This growth rate indicates a post-pandemic period in Europe and Central Asia. It is important to note that if the SAR is present during the pre-pandemic period and there is no significant discrepancy between the regions, more than half of the Middle Eastern and North African economies will be eliminated by 2023. After 2019, this trend will continue, especially in East Asia, Latin America and the Pacific countries (DAP). It is crucial to highlight that this represents a structural position in which the gross net profit will consistently remain well below the gross net income per capita at the beginning of the year. In this context, cyclical recoveries, which can be expressed as Macroeconomic variables, increased throughout the period after 2021. Still, in the regions of emerging markets and developing economies (EMDE), they did not return to the average in 2022 and 2023 compared to the years before the pandemic (Ha et al, 2021). This projection regarding the macroeconomic variability of the regions mentioned above at the global level reveals that the growth in the Middle East and North Africa (MNA) will, on the contrary, be faster than the 2019 average in 2022 and 2023.

In this context, it is possible to talk about a policy in which increases in economic growth trends support and continue to significantly suppress growth, especially in regions representing markets and developing economies that continue to be supportive both politically and in a political sense (Valderrama et al, 2023). This policy also means a regional distribution regarding macroeconomic effects, where possible sanctions on these economies will have a different impact in developing countries between 2021 and 2023, especially in the post-pandemic period. This regional macroeconomic variability reveals a positive effect of 8%, which may contribute to the production gap, especially with the ongoing financial difficulties in India, especially when limited macroeconomic supports were on the agenda before the epidemic and the financial constraint obstacles were removed after the COVID-19 pandemic process after 2021 (European Systemic Risk Board, 2021).

This structure, which can be expressed mainly concerning the macroeconomic balance trend before the pandemic, has turned into a structural position that may be above 4%, especially in the SSA = Sub-Saharan Africa region, and which may be approximately 4% for the GDP deficit (Gap) is also monitored (African Development Bank, 2023). On the other hand, to understand the regional distribution and impact levels of macroeconomic variations globally, it is crucial to understand and analyse the regional distribution of GDP per capita, especially after the COVID-19 period. In the chart below, it is possible

FULL TEXTS BOOK

to monitor the process of regional variability per capita at the global level and the macroeconomic deviations in recent years:

Source: World Bank (2022). *Global Economic Prospects- January 2022*, Chapter 1, Washington, D.C.: World Bank, 2022, p. 18.

Graphic 2. Regional GDP per Capita and Alterations Process in The Recent Years

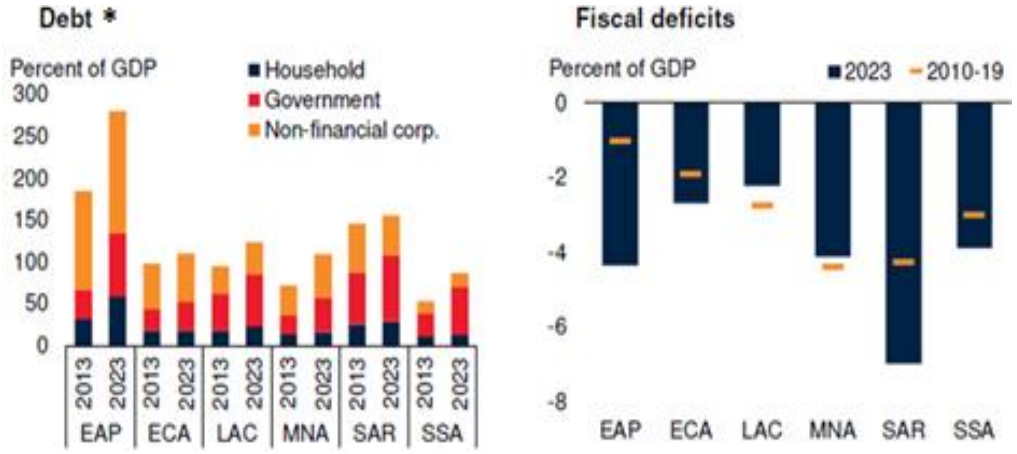
As seen in chart two above, a situation in which the rate of recovery is unequal at the global level between regions will further increase inequality and may lead to a growing deficit in terms of GDP on a per capita basis. Half or perhaps more of the countries dependent on the tourism economy, which may experience a striking deep contraction in 2020, especially in terms of tourism-dependent countries, will be below the GDP per capita levels before the 2019 Corona 19 process in 2023 and beyond. Even this situation, in the case of SSA = Sub-Saharan African countries, indicates a situation where two-fifths of these countries will still be below the pre-pandemic 19 process. Especially in Chart 2, the situation of EAP = East Asia and Pacific and ECA = Europe and Central Asia from 2022 to 2023 and after 2023 is quite striking.

In the expression of this structure, in terms of macroeconomic variability, where macroeconomic variability occurs as GDP deviation per capita in these two global regions, this situation increases even more, especially as GDP deviation, and this situation for 2022 turns into a structure where it shrinks even more, especially after 2023. reveals. However, the variability of this structure, especially in the ECA = Europe and Central Asia region, has turned into a situation where a very high per capita national income is expressed in 2022 but a shallow trend in 2023 and after that. On the other hand, the closeness of the variations that may occur in the global regions of LAC = Latin America and the Caribbean and MNA = Middle East and North Africa in the period 2023 and onwards, as the macroeconomic recovery in these countries, whose position in per capita national income values is relatively high in 2023 and after 2023, which is observed that it reveals a structure in which the recovery speed and effective macroeconomic together with fiscal policies speed is quite effective (World Bank, 2023).

Another regional issue that should be emphasised in this context is Asia and Asia's economic and financial support for the primary dynamics of the economic and financial support of China, India, and Japan (EAP, SAR) as the regions that form the primary dynamics. Especially in Asia (EAP), it is also observed that China's continuation of quite a severe economic growth trend and its economic relations with India and Japan in the same process within an economic trend constitute the grounds for those crucial changes based on structural reforms (Uchida, 2024). Factors such as unemployment and poverty in India have turned into a regional Asian look, and economic macroeconomic variables in the Asian region have affected the low growth and deflation and the struggling structure in Japan for a long time. Looking at Latin America, especially in South America, Brazil and Argentina draws attention to the position of Argentina, which has been in an important endeavour to combat high inflation and debt

FULL TEXTS BOOK

problems for a long time, frequently brings up the understanding of reform with a crucial financial structure in the agreements made with the structure of high inflation and debt problems. (Goodhart & Pradhan, 2020).



Regional Risk Dynamics and Possible Regional Risks Related to Global Macroeconomic Changes

Notably, the possible risks from regional macroeconomic variables at the global level pose some critical economic and financial risks due to the recent inflation and some other regional political and economic conflicts. What can be stated explicitly for these risks is that, as a result of the emergence of debt values and financial deficits of some countries regionally, it is also possible to say that the differences in the value chain outputs at the global level, which are very effective in the emergence of fiscal deficits, are caused by differences at the regional level and the worldwide level. In other words, when we consider the issue, it can be seen that such regional risks also affected the percentage of projection values and that the deviations in the output values before the pandemic formed a necessary infrastructure regarding financial policies in shaping the projection expectations.

Especially when we consider the issue in terms of neighbourhood risks as a proportional value on a GDP basis and regional borrowing trends, we see that borrowing trends are directly related to changes in trends in household borrowings, government borrowings and debt to the central government budget, and Comparing the variability values of non-financial regional companies at the global level in 2023 with the average values between 2010 and 2019 reveals meaningful change impact values. When we consider regional risks related to global macroeconomic fluctuations, we observe that the vacancy rate can be pretty high, especially in underdeveloped regions. This situation takes on different dimensions when evaluated from the perspective of developing countries or emerging markets. Examining the various impacts of this approach in Asian and Pacific countries reveals different borrowing trends with comparisons between 2013 and 2023. On the other hand, when looking at the trends in the MNA = Middle East and North African countries and SSA = Sub-Saharan Africa, it is understood that debt trends were relatively low between 2013 and 2023.

When economic trends in these regions are examined, borrowing rates are low. This situation may lead to macroeconomic deviations, especially despite increased borrowing trends in developed and developing countries. However, it is observed that these possible financial and economic risk factors are not very effective in the short term in terms of Gross Domestic Product (GDP) targets in developed economies. In particular, significant increases or decreases are observed in household and government borrowing trends, and this situation remains at lower levels at different values in Asia-Pacific, Middle East and North African countries. In this context, where the weight of government borrowing, which financial companies are insufficient, should be emphasized, this issue seems vital regarding possible financial risks (Warjiyo, 2024). Borrowing trends are low in the Latin America and Caribbean region, and possible financial risks are lower in these regions with tourism-oriented economic values. Chart 3 below shows that global borrowing trends are considered regionally based on households, governments, and non-financial companies. The variability level in the last ten years, between 2019 and 2023, can be monitored as a GDP ratio:

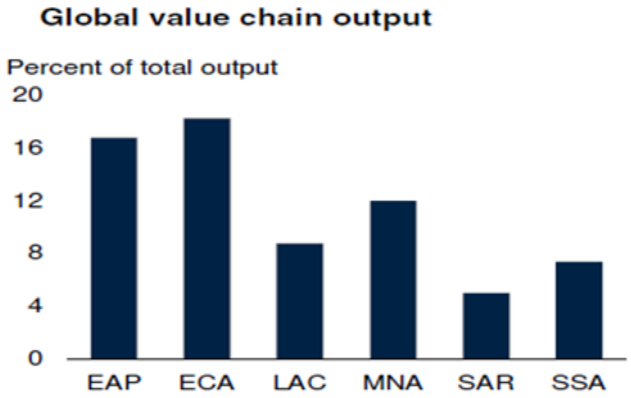


Graphic 3. Changes in Regional Debt Composition and Fiscal Deficits at the Global Level

As seen in Chart 3 above, the increases, especially as a proportion of the Gross Domestic Product, in which companies that are not financial transactions come to the fore, follow a trend at a higher rate, especially in East Asian and Pacific Countries. There is a significant increase in value as the 2013-2023 average is observed, and it is revealed that Europe and the European Centre countries have more negligible fiscal risks and are stable. This regularity also shows minimal government and household borrowings from non-fiscal companies. On the other hand, when looking at South Asia, these rates indicate that, due to the possibility of a financial crisis, non-financial corporate borrowings have increased with a more significant trend around South Asia. Subsequently, government borrowings have a higher position than other borrowings. In terms of financial risks, this situation reveals that in these regions, because of the increase in regional debt ratios at the global level as a percentage of GDP, financial risks may turn into a higher financial risk element than in East Asia and active countries, where debt trends are generally high (Open Government Licence, 2023).

However, there is also a controlled borrowing trend in Latin American and Caribbean countries, as well as in the Middle East and North African countries, MNA = Middle East and North Africa, where these borrowings are in a more controlled position. However, in any case, the higher ratio of government borrowings on a GDP basis, especially for Latin American and Caribbean countries, LAC = Latin America and the Caribbean, indicates a position where the level of financial fragility in these countries increases even more. Increasing financial fragility is a significant risk factor, especially for this region's emerging markets and developing economies. This risk factor is also directly reflected in the fiscal deficits as a proportion of the GDP, as seen in Graph 3 above. It reveals that there is time in the position. These risk positions are observed as a year in which fiscal deficits will increase even more as an essential financial fragility value, especially in East Asia, EAP = East Asia and Pacific, countries, and South Asia, especially after the Corona 19 pandemic. Possible regional governors' risks have turned into a situation where borrowing trends are more prominent, especially lending trends, to eliminate the lack of savings in underdeveloped countries and sufficient resources concerning economic growth (Loewald, 2024). These countries' underground resources and other natural resources are more mortgaged. This also means that it is marketed as a financial debt cycle in exchange for a fiscal cycle that may continue. Regionally, it is observed that the lowest values in terms of such financial risks and budgetary deficits are revealed by the average of the Latin American and Caribbean countries. as a ratio of GDP, which is why it is probably revealed the lower fiscal risk (Goldfajn, 2024).

FULL TEXTS BOOK

However, those who cannot evaluate the needs of more controlled industrial structures cannot create the necessary real contribution value in making the essential production only with the effect of borrowings. They form a specific insufficient added value due to non-effective resource use whose savings are inadequate, like SSA = Sub-Saharan African countries; concerning Sub-Saharan Africa, the regional rising fiscal risk has resulted in negative economic growth, probably due to financial and budgetary deviation risk components present. It reveals a shallow structure in the global output values of investments within its countries. It also shows a process of macroeconomic variability that has recently caused negative effects as a reflection of a possible financial-economic risk value in production processes based on the Sub-Saharan Africa region. In Chart 4 below, it is possible to monitor the global and regional distribution values as a percentage of the total output as a worldwide production value chain output:

Source: World Bank (2024). *Global Economic Prospects- January 2024*, A World Bank Group Flagship Report, Washington, D.C.: World Bank, 2024, p. 18.

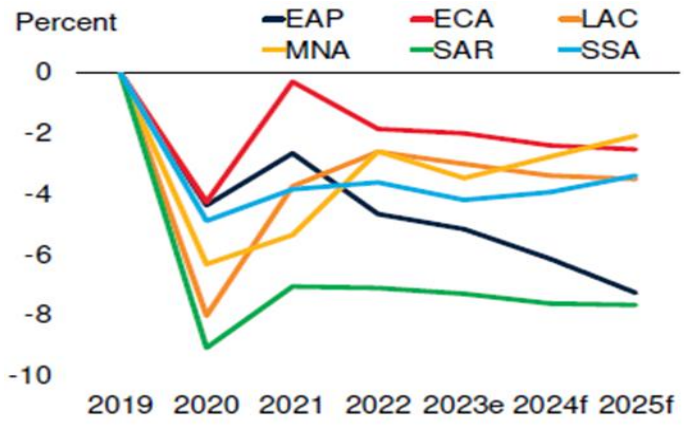
Graphic 4. Value Production Chain and Its Regional Distribution at the Global Level

As seen in Chart 4, it should be emphasized that this risk process noted in Chart 3 primarily affects the regional distribution of the value chain and production, especially as percentages of total output, from which the value chain at the global level arises. Therefore, it can be seen that it represents a process in which the regional global distribution in the total percentage value of the levels in global production processes is directly compatible with the graphs with a significant structure. This process also expresses a structure in which the risk positions are even higher, especially in countries with very high debt ratios, and the global value chain output chain also encounters a higher output value as a percentage value in the total output value, although there is a further increase. It states that increases in possible borrowings create an impact value globally with more productive investments.

Therefore, the high growth in all kinds of borrowing values, especially of households and non-financial investment-oriented companies, creates significant limits within the production process. Still, in terms of fiscal deficits, there will be a low budgetary deficit in 2023, which will also have a positive result with a controllable fiscal deficit. It also reveals that because of the structure in which the deficit persists, a vital production process and total output production values have reached the highest point at EAP = East Asia and Pacific and ECA = Europe and Central Asia. This structural regional macroeconomic position has created more economic growth and a stable fiscal position at the global level in the prominent region by a significant percentage in the lower fiscal-economic risk process (Parries et al, 2020).

When we consider the issue based on regional macroeconomic developments, primarily based on Africa and the Middle East, it also reveals that the economies of South Africa, especially in the Southern Africa region, are waiting as a projection of a significant stability potential with the intensity of political and economic reforms in South Africa. However, it is also seen that financial problems such as high

FULL TEXTS BOOK



insecurity and macro social inequality in the Southern Africa region are subject to significant deviations that may arise, especially with different effects. They are still ongoing, thus causing substantial deviations in macroeconomic growth balances.

On the other hand, it is observed that Nigeria is significantly affected by the changes, especially in oil exports, sometimes with negative and sometimes with positive values, and at the same time, it causes a macroeconomic balance fluctuation in which diversification is made. However, in addition to this, Nigeria has undergone significant economic restructuring, demonstrating that cyclical political and security fluctuations exert a considerable influence on macroeconomic balances within the broader African region. When we examine the situation in the Middle East, particularly in Saudi Arabia and the United Arab Emirates, we observe the emergence of components that can be expressed with different values.

DISCUSSION

From a regional and development-oriented perspective, the critical reason for discussing the case, especially regarding macroeconomic variables, is that the projected impact values after 2024 are more clearly revealed by the deviations in output values in the pre-pandemic regional process. In this context, when regional differences at the global level are considered, it is seen that the highest output values in terms of economic variability occur in East and South Asia regions.

It is observed that this significantly affects output, especially given the deficiencies that existed before the pandemic. It has been observed that the deviation values in these regions are related to the high production deficit, especially in South Asia, and that after the pandemic period, there was -8% contraction by 2020. However, when this region is compared to others, it appears that the production output deviation values in SSA = Sub-Saharan Africa and MNA = Middle East and North Africa have decreased to -0.5% as of 2021 as the deviation of output for regional. Graphic 5 below presents the deviation of output for the region from the pre-pandemic process and projection expecting to years:

Source: World Bank (2024). Global Economic Prospects- January 2022, Chapter 1, Washington, D.C.: World Bank, 2022, p. 17.

Graphic 5. Deviation of Output for Regional from Pre-pandemic Process and Projection Expecting to Years

Regarding macroeconomic variables, global production chains have significantly declined, especially after 2021, and a meaningful structure has emerged to express this issue. On the other hand, the positive growth values in Latin American and Caribbean countries are striking. Europe and Central Asia have the most positive development trends. Production output values show stability with the least financial risk and the lowest negative impact of economic changes. Another issue to be discussed is whether these values will remain the same after 2024 and 2025. Projected equal production output gaps for Europe and Central Asia (ECA) and the Middle East and North Africa (MNA) regions at the end of 2024 suggest that global macro variables will have the same impact on fiscal risks. The shifts in the macroeconomic

FULL TEXTS BOOK

landscape of Saudi Arabia have given rise to a novel and distinct global outlook that bears direct implications for the global economy and the country's export capabilities. The development of non-oil sectors has recently become a pivotal objective in the Middle East region, spearheaded by Saudi Arabia. An analysis of regional changes and approaches based on the United Arab Emirates (UAE) reveals that the positions in the tourism, finance and real estate sectors, especially in the tourism, finance and real estate sectors, have increased non-oil revenues. There are notable differences between regions and between regions and commodity prices, which are lower than expected. This is having a critical effect on the results. Furthermore, social unrest is caused by geopolitical tensions. Insecurities about price changes in food and food prices continue to affect regions. The UAE will find a place in the process, with an effect that can significantly impact economic activities, primarily focused on Dubai after 2020, and further accelerate economic growth as a positive macroeconomic evaluation (IMF, 2023).

CONCLUSION

The post-pandemic revival of growth rates below the pre-pandemic trend regarding the continuation of regional production in emerging and developing economies, the effects of financial tightening policies that bring financial conditions in the context of the pandemic to the agenda, as well as other natural disasters, has impacted economic growth and GDP. Moreover, risk factors significantly impact the cyclical recovery after 2021, particularly in emerging markets, where growth differences are pronounced. The current structure of monetary and financial tightening policies, primarily based on China, is rapidly reducing leverage in the real estate sector and causing significant differences in the pre-pandemic environment. It is clear that the regional distributions affected by macroeconomic variations at the global level, especially when the economic growth-based GDP is considered mutually, have seen a significant decrease in impact values, particularly following the 2022 pandemic period.

These are almost exact comparisons. The data clearly shows that compared to 2023 in a pre-pandemic period, there has been a significant increase in regional selling authority, particularly in South Asia and the SAP-Saharan Africa region. The increasing impact of this structure creates a remarkable agenda in these regions compared to the pre-pandemic period of 2023 on a GDP basis. It is also important to note that developed countries grew approximately 0.5 per cent in 2023 compared to the pre-pandemic period. Despite positive expectations for regional divisions representing developing economies, it is clear that there is a stable preference for small economic growth, which continues to increase despite negative growth values in other global locations. This structure clearly shows that the relationship brings different regional risks to the agenda, especially as a percentage of the countries in question. This is particularly relevant for companies that do not have a financial functional structure other than government borrowings. It is clear that the risk mechanism at this level is on the rise and that this level brings to the agenda a structure that reveals the most critical risk mechanism in the Middle East and Pacific countries. On the other hand, they are trying to balance macroeconomic variability in return for higher government borrowings in Southern North Africa, especially the Pacific regions. Government borrowings are lower in these regions than in less developed regions, especially during the financial-economic restructuring process. This phenomenon also signifies a regional interaction process, whereby it is evident that in Middle Eastern and North African countries, government borrowings continue to be more stable, and household borrowings continue to be more controlled. This structure of economic variables unquestionably reveals macro risks, and the increasing financial risks are a direct result of the fiscal deficit, which will continue to grow in 2023, especially in response to the values seen in the 2010 and 2019 periods. It is clear that the impact of increasing fiscal deficits, particularly in the SAR-South Asia and SSA = Sub-Saharan Africa regions, will continue to affect the future projectivity. The productive production structure related to the global value chain output has increased, especially in East Asia. It is understood that this will lead to lower but more stable economic growth in Europe and Central Asia.

FULL TEXTS BOOK

Still, this expected phenomenon will probably make them more fragile and also affect financial risk preferences due to probable macroeconomic alterations.

IDENTIFICATION AND RANKING OF THE FACTORS AFFECTING EMPLOYEE PERFORMANCE WITHIN AN ORGANIZATION

Saeed Ullah[1]
University of Engineering & Technology Peshawar, Pakistan
Dr. Rehman Akhtar[2]
University of Engineering & Technology Peshawar, Pakistan

ABSTRACT
The purpose of this study is to examine the factors that affect employee job performance in the textile sector of Punjab, Pakistan. The data were collected from three big cities of Punjab, namely Lahore, Sialkot, and Faisalabad through a 5-point Likert scale varying from strongly disagree to strongly agree. Nine factors (Salary, Job Security, Working Conditions, Training and Development, Opportunity for Promotion, Work-life Balance, Relationship with Co-workers, Leadership, and Fringe Benefits & Recognitions) were identified from previous research and studied statistically through analytic hierarchy process (AHP) and regression analysis. Cronbach's alpha value was found to check the reliability of the questionnaire. Classic assumption tests were also used such as the Normality test, Multicollinearity test, Heteroscedasticity test, and Autocorrelation test. This study showed that all the nine factors mentioned above have a strong positive relationship with the performance of employees working in the textile sector. Hence, company management can use this research to improve employee performance and company productivity.
Keywords; Employee Performance, Analytic Hierarchy Process, Textile Organizations

1. Introduction

An organization is a place where a group of people work together in a coordinated and structured way to achieve a common goal. The primary goal for every organization is to increase its efficiency and that is not possible without the performance of its employees [1]. Business organizations across the globe are facing fierce competition so they are well aware of their human resources as a competitive advantage. Organizations are busy in finding out the ways through which they get the highest level of employee performance to generate economic advantages for the organization [2]. In modern times, almost every organization knows the importance of employee performance for the organization's success. Enhancing employee performance or the approach through which employee performance can be increased becomes one of the crucial factors for the organization's growth. Managers work to accomplish the corporate goals and objectives by using the available resources efficiently and effectively [3]. Employee's job performance can be increased by focusing on the factors that affect their performance[2]. From previously conducted research the employee's performance has been observed to have a positive relation with Job Security, Fringe Benefits and Recognition, Opportunities for Promotion, Relationship with Co-workers[4], Training and Development[5] Salary[6] Working Conditions[7] Work-life Balance[8] and Leadership [9].

Therefore, for an organization to accomplish its goal the organization must focus on the factors that increase its employee's performance. Efficient and productive Employees result in the overall performance of the organization. (Markos and Sridevi, 2010). Organizations are now aware of the fact that without enhanced employee performance the organization's goal cannot be achieved. (Anitha, 2014) [2].

The current study attempts to understand the influence of various factors on employees' performance through the help of the Analytic hierarchy process (AHP) and regression analysis. AHP analysis was used to rank the factors and regression analysis was used to find out the partial and significant relationship between the independent variables and with dependent variable.

FULL TEXTS BOOK

1.2. Objectives

- To identify the factors affecting employee performance.
- To find out the influence of these factors on employee performance.
- To find out the partial and simultaneous effect of these factors on employee performance.

2. Literature Review

(ADI BANDONO et al., 2022) have considered salary, work facilities, and leadership factors for their research to find their influence on the employee's performance in government institutions, according to their study the dominant factor is salary followed by leadership style and work facilities. The work he carried out concluded that these three factors have partial and overall significant positive effects on the employees of government institutions [10].

(Gurpreet Randhawa et al., 2019) studied the effect of Job Security, Fringe Benefits and Recognition, Opportunities for Promotion, and Relationships with Co-workers including other factors to find its influence on the Agri warehouse employees. Their study concluded all the factors have a positive relation with the Agri warehouse employees, training opportunity counts as the most important one followed by the rest [4].

(Mohamed Hamed AL-Rawahi, 2022) concluded in his research that training and development can increase the performance of Oman Air's staff. By proper training and development plan, he concluded that the company can get competitive advantages, enhancing employee performance and reducing turnover [5].

(Dr. B Nagaraju and Pooja J, 2017) came out with the result of the positive influence of salary on the performance of public and private sector banks of Karnataka [6].

(Mohammad Shammout, 2021) took the variable work environment for his study to find out its effect on the employees of a real estate company Investo Global. He concluded that the work environment has a positive impact on the performance of the selected company. Pearson's correlation analysis was used for the analysis of the study [7].

(Gnei Rushna Preena, 2021) investigated the impact of work-life balance on the employee performance of a shipping company in Sri Lanka. According to her finding the work-life balance has a strong positive impact on the employee's performance of the shipping company in Sri Lanka. Regression analysis was carried out for the analysis of the data [8].

(Abbas Umar Ibrahim and Cross Ogohi Daniel, 2007) studied the impact of variable leadership on the employees' performance at the Coca-Cola Company in Abuja. According to their research, the performance of employees has a direct link with the leadership style the managers adopt. The leadership helps in improving the performance of the employees, goal attainment of the organization, and objectives fulfillment. They concluded that the achievement of organizational goals and objectives depends on the leadership style an organization adopts [9].

(Zaizura Che Zakaria et al., 2013) has studied the influence of promotion opportunities on the job satisfaction of higher public institutions employees in Malaysia. He took the lectures of four public universities and concluded that the promotion opportunity has a great effect on employee job satisfaction hence performance. He uses the Pearson product-moment correlation to find the relationship between the promotion opportunity and employees' job satisfaction. To retain the employee's best understanding and employee's satisfaction he recommended for the organization to consider promotion opportunities [11].

(Esuh Ossai-Igwe Lucky et al., 2013) considered the variable job security to find its effect on organizational performance in a Multiethnic Environment. The results showed that job security has a significant effect on the overall performance of a team as well as on the organizational performance. Moreover, according to them the more an employee experiences job security the more they are likely to perform their task effectively which is reflected in the overall performance of the organization. In

FULL TEXTS BOOK

addition, the study concluded that employees must consider job security before they decide on an organization to work with [12].

(Evangelos Triantaphyllou et al., 1995) used the analytic hierarchy process (AHP) for deciding engineering applications. The analytic hierarchy process (AHP) is a Multi-decision criteria method used for choosing the best alternative. The analytic hierarchy process is popular among researchers due to its easy use and precise mathematical properties [13].

(Zahra Idrees et al., 2015) Measured the effect of the variables salary, training, and motivation on the performance of the educational institutions. Regression analysis was used to find the relationship between these variables. They concluded that all three factors have strong positive effects on employee performance but the most dominant one was salary followed by training and motivation. The study intended to guide managers to give more focus to the factors that ultimately enhance employee performance and organizational productivity [14].

Ali et al. find out the impact of employees' training and development on organization performance. Their research area was the employees working in MOBILINK Islamabad and Rawalpindi region collectively. Regression analysis was used for the data analysis. The results concluded that the variable training and development has a positive and significant effect on employee productivity. Moreover, training and development positively and significantly affected organizational performance. Hence, training and development and employee productivity positively and significantly accounted for organizational performance [15].

(Syed Umar Farooq et al., 2015) studied the impact of employee participation, employee relations and job involvement on employee performance. He concluded that all the three variables mentioned above have a great influence on the employee's performance and can positively increase the overall productivity of the firm. He used descriptive statistics and the Pearson correlation for his study [16].

2.1. Conceptual framework

The factors that are considered for this study are; Salary, job security, working conditions, training and development, opportunity for promotion, work-life balance, Relationship with co-workers, leadership, fringe benefits and recognition are the independent variables and job performance is the dependent variable.

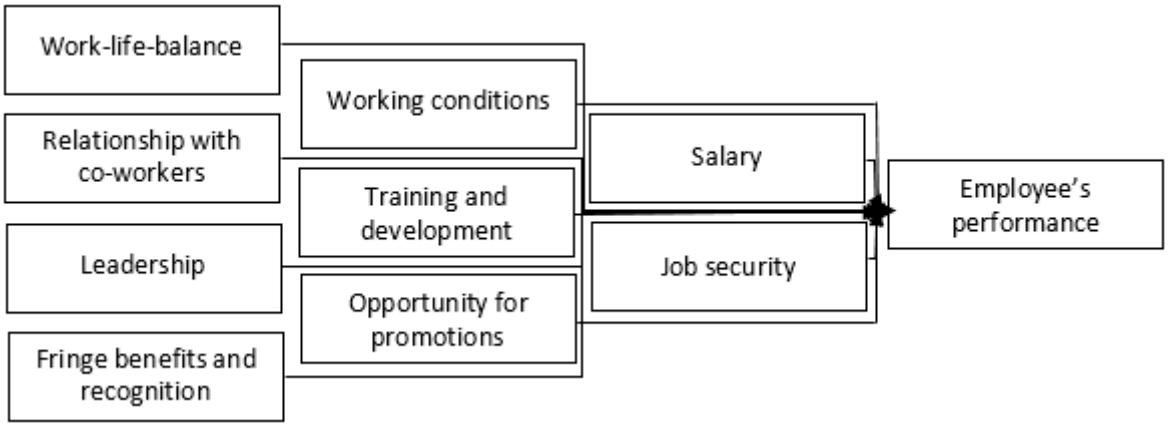

Figure. 1: Conceptual framework of the independent variables and dependent variable

3. Research Methodology

3.1. Research Design

This research was conducted to determine the effect of the nine independent variables on employee performance in the textile sector of Punjab, Pakistan.

FULL TEXTS BOOK

3.2. Data Collection Instruments and sampling techniques

A questionnaire structured with a 5-point Likert scale varying from strongly disagree to strongly agree was used to collect data from the employees working in textile industries f Punjab, Pakistan. The questionnaire was composed of two parts; the first part was comprised of the demographic information of the respondents and the second part with questions about these nine factors and employees' performance. For the data collection random sampling technique was used. A total of 87 responses were collected and 78 responses were considered for the study as the incomplete and irrelevant responses were dropped out.

3.3. Data Analysis

Cronbach's alpha value was found to check the reliability of the questionnaire. Classic assumption tests were also used such as the Normality test, Multicollinearity test, Heteroscedasticity test, and Autocorrelation test. Analytic Hierarchy Process (AHP) was used to rank the factors. Pearson correlation and regression analysis were used to determine the association between independent and dependent variable.

3.4. Results of the study

Cronbach's value of the proposed study

Variable	Cronbach's Alpha
1. Salary (X_1)	0.625
2. Job security (X_2)	0.607
3. Working Conditions (X_3)	0.645
4. Training and development (X_4)	0.723
5. Opportunity for promotion (X_5)	0.543
6. Work-Life Balance (X_6)	0.545
7. Relationship with Co-workers (X_7)	0.584
8. Leadership (X_8)	0.581
9. Fringe benefits and recognition (X_9)	0.649
Performance (Y)	0.693

The analytic hierarchy process (AHP) was used as a multi-criteria decision-making method. AHP is one of the most effective techniques for organizing and analyzing complex decisions. It was developed by Thomas L. Saaty in the 1970s.

The incompatibility rate ($\lambda_{Max}\, W$) is calculated based on the following steps:

Step 1. Estimating ($\lambda_{Max}\, W$)

$$\begin{bmatrix} 1.0000 & 0.9819 & 0.9888 & 0.9531 & 1.0135 & 1.0307 & 0.9893 & 1.0231 & 1.0114 \\ 1.0185 & 1.0000 & 1.0071 & 0.9707 & 1.0322 & 1.0497 & 1.0076 & 1.0420 & 1.0301 \\ 1.0113 & 0.9930 & 1.0000 & 0.9638 & 1.0249 & 1.0423 & 1.0005 & 1.0346 & 1.0228 \\ 1.0492 & 1.0302 & 1.0375 & 1.0000 & 1.0634 & 1.0814 & 1.0381 & 1.0735 & 1.0612 \\ 0.9867 & 0.9688 & 0.9757 & 0.9404 & 1.0000 & 1.0169 & 0.9762 & 1.0094 & 0.9979 \\ 0.9703 & 0.9527 & 0.9554 & 0.9247 & 0.9834 & 1.0000 & 0.9599 & 0.9927 & 0.9813 \\ 1.0108 & 0.9924 & 0.9995 & 0.9633 & 1.0244 & 1.0418 & 1.0000 & 1.0341 & 1.0223 \\ 0.9774 & 0.9597 & 0.9665 & 0.9316 & 0.9906 & 1.0074 & 0.9670 & 1.0000 & 0.9886 \\ 0.9887 & 0.9708 & 0.9777 & 0.9423 & 1.0021 & 1.0190 & 0.9782 & 1.0115 & 1.0000 \end{bmatrix} \times \begin{bmatrix} 0.1110 \\ 0.1130 \\ 0.1122 \\ 0.1164 \\ 0.1095 \\ 0.1077 \\ 0.1121 \\ 0.1084 \\ 0.1097 \end{bmatrix} = \begin{bmatrix} 0.9986 \\ 1.0170 \\ 1.0098 \\ 1.0477 \\ 0.9853 \\ 0.9689 \\ 1.0093 \\ 0.9760 \\ 0.9873 \end{bmatrix}$$

FULL TEXTS BOOK

Step 2. Calculating (λ_{Max} *W*)

$\lambda_{Max1} = \frac{0.9986}{0.1110} = 8.9964$

$\lambda_{Max2} = \frac{1.0170}{0.1130} = 9.0000$

$\lambda_{Max3} = \frac{1.0098}{0.1122} = 9.0000$

$\lambda_{Max4} = \frac{1.0477}{0.1164} = 9.0009$

$\lambda_{Max5} = \frac{0.9853}{0.1095} = 8.9982$

$\lambda_{Max6} = \frac{0.9689}{0.1077} = 9.1820$

$\lambda_{Max7} = \frac{1.0093}{0..1121} = 9.0036$

$\lambda_{Max8} = \frac{0.9760}{0.1084} = 9.0037$

$\lambda_{Max9} = \frac{0.9873}{0.1097} = 9.0000$

Step 3. Calculating λ_{Max} (Average) = $\frac{\lambda Max1 + \lambda Max2 + \cdots \lambda Max9}{9}$

$= \frac{8.9964+9.0000+9.0000+9.0009+8.9982+9.1820+9.0036+9.0037+9.0000}{9} = 9.0205$

Step 4. Calculating incompatibility index (CI) = CI= $\frac{\lambda Max - n}{n-1} = \frac{9.0205-9}{9-1} = 0.0026$

Step 5. Calculating incompatibility index (CR) = CR = $\frac{CI}{RI} = \frac{0.0026}{1.45} = 0.0018$

Table 1. Random Index (RI) (Saaty, 1980),

Number of elements (n)	1	2	3	4	5	6	7	8	9	10
RI	0.00	0.00	0.58	0.90	1.12	1.24	1.32	1.41	1.45	1.50

The Consistency Ratio (CR) value is less than 0.1, that's showing the consistency of the responses. Therefore, the overall priority ranking of the factors has been calculated.

Step 6. Overall priority ranking

Table 2. Factors ranking

Factor	S	J.S	W.C	T.A.D	O.F.P	W.L.B	R.W.C	L	F.B.A.R
Value	0.9986	1.0170	1.0098	1.0477	0.9853	0.9689	1.0093	0.9760	0.98731
Rank	5	2	3	1	7	9	4	8	6

S=Salary; J.S=Job security; W.C=Working condition; T.A.D=Training and development; O.F.P=Opportunity for promotion; W.L.B=Work life balance; R.W.C=Relationship with co-workers; L=Leadership; F.B.A.R=Fringe benefits and recognition.

According to the participants' responses, Training and Development is the most important factor having the highest value and ranked 1 followed by Job Security, Working Conditions, Relationship with Co-workers, Salary, Fringe Benefits and Recognition, Opportunities for Promotion, Leadership, and Work-life Balance.

**. Correlation is significant at the 0.01 level (2-tailed).

*. Correlation is significant at the 0.05 level (2-tailed).

PC= Pearson Correlation; N= Number; S 2-t= Sig. (2-tailed); S=Salary; J.S=Job security; W.C=Working condition; T.A.D=Training and development; O.F.P=Opportunity for promotion; W.L.B=Work life balance; R.W.C=Relationship with co-workers; L=Leadership; F.B.A.R=Fringe benefits and recognition.

Pearson correlation was used to check the relationship between the independent variables with the dependent variable. Pearson correlation for the employee's performance with Salary (r=.311), Job Security (r=.457), Working Condition (r=.498), Training and Development (r=.307), 0pportunity for Promotion (r=.400), Work-life-Balance (r=.539), Relationship with Co-workers (r=.645), Leadership (r=.515), and Fringe benefits and Recognitions (r=.303) show a positive relationship. The findings show that all the variables are statistically significant at a significant level of (p<.05).

Table 4. Regression Analysis ANOVA

ANOVA[a]						
Model		Sum of Squares	Df	Mean Square	F	Sig.
1	Regression	11.365	9	1.263	9.497	.000[b]
	Residual	9.041	68	.133		
	Total	20.406	77			

a. Dependent Variable: EP

b. Predictors: (Constant), S, JS, WC, TAD, OFP, WLB, RWC, L, FBAR

The ANOVA table shows a significant value of the F statistic that is less than 0.05, which indicates the statistical significance of the model. Based on the results of the F test as shown in the table, the F-count value is greater than F_{table} (9.497 > 2.017) with a significant level of (0.000<0.05). This means that simultaneously the factors Salary, Job security, Working conditions, Training and development, Opportunity for promotion, Work-life balance, Relationship with Co-workers, Leadership, and Fringe benefits & recognition have a significant effect on the performance of textile sector employee's. Therefore these nine factors have simultaneously significant influence on the employee's performance.

FULL TEXTS BOOK

Table 5. Regression Analysis Model Summary

Model Summary[b]										
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	Change Statistics					Durbin-Watson
					R Square Change	F Change	df1	df2	Sig. F Change	
1	.746[a]	.557	.498	.36464	.557	9.497	9	68	.000	2.047
a. Predictors: (Constant), S, JS, WC, TAD, OFP, WLB, RWC, L, FBAR										
b. Dependent Variable: EP										

Table 5 indicates the model is significant at .05. The model includes the correlation coefficient R and the coefficient of determination R square. The value of R is .746 which indicates that the correlation or relationship between these independent variables is strong because the value is above 0.5 with a value in the form of a positive influence value. Thus, it means the effect of the independent variables partially on the dependent variable which is employee's performance has significant.

The coefficient of determination i.e. R square value (0.557) shows 56% variation in employee performance is due to the proposed model. That means the factors Salary, Job security, Working conditions, Training and development, Opportunity for promotion, Work-life balance, Relationship with Co-workers, Leadership and Fringe benefits & recognition have a positive influence on Employee performance in the textile sector. Thus, it is proved from the proposed model that these nine independent variables contribute positively towards change in the dependent variable.

4. Conclusions and Discussions

This study considered nine independent factors that affect employee performance in the textile sector. Based on analytic hierarchy process (AHP) findings, "Training and development" was the most important factors for enhancing employee performance, followed by Job security, Working conditions, Relationships with Co-workers, Salary, Fringe benefits and recognition, Opportunity for promotion, Leadership, and Work-life balance.

The correlation and regression analysis indicated there is a significant relationship between the independent variables Salary, Job security, Working conditions, Training and development, Opportunity for promotion, Work-life balance, Relationship with co-workers, Leadership, and Fringe benefits & recognition with the dependent variable i.e. employees performance. The study also revealed that all the nine independent variables have partially and simultaneously significant influence on employee performance. The study concluded that employee performance can be increased by giving proper focus and attention to the employee's considerations.

4.1. Recommendations

It is clear from the results that the independent variables (Salary, Job security, Working conditions, Training and development, Opportunity for promotion, Work-life balance, Relationship with Co-workers, Leadership, and Fringe benefits & recognition) positively influence the employee's performance, So the management should implement these practices to achieve the desired goals. The organizations should provide proper training and development opportunities as well as the adequate availability of these independent variables to increase the employee's performance. Based on the proposed study it is recommended to give more concentration on (Salary, Job security, Working conditions, Training and development, Opportunity for promotion, Work-life balance, Relationships with Co-workers, Leadership, and Fringe benefits & recognition) to enhance employee's performance.

FULL TEXTS BOOK

4.2. Limitations and Future Research

The research study was only limited to the textile sector, while future research can be extended to consider different sectors of different locations to further strengthen the results. The sample size of the respondents can be increased to have a broader insight into the study. Other variables that are not included in this study can be added to get a clear understanding of their importance on employee performance.

ÖZET
İnsan, uygarlık tarihi sürecinde hastalıklardan kaçınmanın yollarını aramış ve sağlığın peşinden koşmuştur. Bireyler her çağda ve her uygarlıkta hastalıklardan korunmak, sağlık durumlarını iyileştirmek ve sağlıklarını etkileyen olumlu veya olumsuz faktörlerin farkında olmak için temel sağlık bilgisine gereksinim duymuşlardır. Tıp ve iletişim bilimlerinin günümüzde geldiği noktada sağlık, bir okuryazarlık türü olarak kabul görmektedir. Kavramsal açıdan 'sağlık okuryazarlığı' olarak adlandırılan bu okuryazarlık; bireylerin sağlıkla ilgili bilgilere ulaşması, bu bilgileri anlaması, uygulayabilmesi ve sağlıkla ilgili kararlarında kullanabilmesi için gerekli olan zihinsel ve sosyal beceriler olarak tanımlanmaktadır. Bu bağlamda sağlık okuryazarlığı, bireylere ve toplumlara büyük avantajlar sunmaktadır. Sağlık okuryazarı olan bireyler kendilerine, yakın çevrelerine ve topluma önemli katkılarda bulunarak sağlık ve yaşam kalitesinin yükselmesine yardımcı olmaktadırlar. Bu çalışmada son dönemlerin dikkat çekici kavramlarından biri olan sağlık okuryazarlığı konu edilmektedir. Çalışma, kavramsal bir bakış açısına sahiptir. Çalışma kapsamında sağlık okuryazarlığı; tanımı ve amacı, tarihsel gelişimi, tarafları, boyutları ve düzeyi temelinde ele alınmaktadır. Çalışmanın insan ve toplum yaşamı açısından önem arz eden kavramlardan biri olan sağlık okuryazarlığını konu alması nedeniyle önemli olduğu ve ardıl çalışmalar bağlamında alanyazına katkı sunacağı düşünülmektedir.
Anahtar kelimeler: Sağlık, Okuryazarlık, Sağlık Okuryazarlığı, Sağlık İletişimi, Sağlık Yönetimi.

ABSTRACT
Throughout the history of civilization, human beings have sought ways to avoid diseases and pursued health. In every age and civilization, individuals have needed basic health information in order to prevent diseases, improve their health status and be aware of the positive or negative factors affecting their health. At the point where medical and communication sciences have reached today, health is recognized as a type of literacy. This literacy, conceptually called 'health literacy', is defined as the mental and social skills necessary for individuals to access, understand, apply and use health-related information in their health decisions. In this context, health literacy offers great advantages to individuals and societies. Individuals who are health literate make significant contributions to themselves, their immediate environment and the society and help to improve health and quality of life. This study focuses on health literacy, which is one of the remarkable concepts of recent times. The study has a conceptual perspective. Within the scope of the study, health literacy is discussed on the basis of its definition and purpose, historical development, parties, dimensions and level. It is thought that the study is important because it deals with health literacy, which is one of the important concepts in terms of human and social life, and will contribute to the literature in the context of successive studies.
Keywords: Health, Literacy, Health Literacy, Health Communication, Health Management.

GİRİŞ

İnsanların ve toplumların en önemli gündem maddelerinden biri olan sağlık, tarihsel süreç içinde kavramsallaşmış ve gelişerek günümüzdeki görünümüne ulaşmıştır. Sağlık temel bir insani hak

FULL TEXTS BOOK

olmasının yanı sıra bir davranıştır. Sağlık, en yalın ifadeyle bireyin sağlığını korumak, geliştirmek, sürdürmek ve hastalıklardan korunmak için inandığı ve yaptığı davranışların tümüdür (WHO, 1998).
Bireyin sağlığa ilişkin inandığı ve gerçekleştirdiği tüm eylemlerini ifade eden sağlık davranışı; geçmiş deneyimlerden, etkileşimlerden ve toplumsal dinamiklerden etkilenerek şekillenmektedir. Tıbbi bakış açısıyla hastalıkların temelinde biyolojik ve fizyolojik faktörlerin yanı sıra davranışsal faktörler yatmaktadır. Bu bağlamda bireyin davranışları, sağlık durumunun olumlu veya olumsuz olabilmesi sonucunu doğurmaktadır. Buna göre olumlu sağlık davranışlarının oluşabilmesi için sağlık okuryazarlığına gereksinim bulunmaktadır.
Sağlık okuryazarlığı, günümüz dünyasında sağlık bilgisine sahip olma ve sağlığı koruma ile ilgili en önemli kavramlardan biridir. Sağlığın birey ve toplum için öneminden hareket eden çalışma kapsamında sağlık okuryazarlığı, kavramsal bir bakışla konu edilmektedir.

Sağlık Okuryazarlığı: Tanımı ve Kapsamı

Sağlık okuryazarlığı -health literacy- en yalın ifadeyle sağlık bilgilerini anlama, analiz etme, yorumlama ve uygulamadır. Sağlık okuryazarlığı, temel okuryazarlık seviyesi ile doğrudan ilişkilidir (Onotai, 2008; Sorensen vd., 2012). Basit bir örnekle bireyin okuma ve yazma güçlüğü yaşamasının, sağlık süreçlerini olumsuz etkileyeceği açıktır (Shahid vd., 2022). Bununla birlikte temel okuryazarlık becerilerinin gelişmiş olması, sağlık okuryazarlığını garanti etmemektedir.
Tüm okuryazarlık türleri gibi sağlık okuryazarlığı da temel okuryazarlık becerilerinin üzerine inşa edilmiştir ancak çağcıl dünyanın karmaşık ve kompleks sağlık sistemini anlayabilmek ve anlamlandırabilmek için temel okuryazarlık becerilerinden daha fazlasına ihtiyaç vardır (Liu vd., 2020). Bu bağlamda sağlık okuryazarlığı bireylerin sağlık hizmetlerini anlaması, sağlığın geliştirilmesi ve hastalıklardan korunma gibi konularda kararlar alması amacıyla sağlık bilgisine ulaşma, anlama, analiz etme ve uygulama yeterliliklerini içermektedir.

Sağlık Okuryazarlığının Tarihsel Gelişimi

Sağlık okuryazarlığı, amacı ve kapsamı itibarıyla önemli bir kavram olmakla birlikte görece yenidir. Alanyazın incelendiğinde sağlık okuryazarlığı ile ilgili çalışmaların, 1990'lar sonrasında yoğunlaştığı görülmektedir. Sağlık ve okuryazarlık kavramlarının önem kazanmaya başlaması, sağlık okuryazarlığının daha dikkat çekici olmasını sağlamıştır.
Sağlık okuryazarlığı kavramı, ilk kez Scott K. Simond tarafından 1974 yılında Sosyal Politika Olarak Sağlık Eğitimi (Health Education as Social Policy) isimli çalışmada gündeme getirilmiştir. Michael Grossman tarafından 1972 yılında yazılan Sağlık Sermayesi Kavramı ve Sağlık Talebi Üzerine (On the Concept of Health Capital and Demand for Health) isimli makale ise sağlık okuryazarlığı ve sağlık ekonomisi arasındaki ilişkiyi ilk kez ortaya koyması nedeniyle, daha öncel bir niteliktedir (Vernon vd., 2007, s. 4).
Sağlık okuryazarlığı kavramının yaygınlaşması, 1989 yılında Kanada'nın Ottawa kentinde düzenlenen Uluslararası Sağlığı Geliştirme Konferansı (International Conference on Health Promotion) ile olmuştur. Konferansta, sağlığı geliştirmede yalnızca sağlık sektörünün çabalarının yeterli olmadığı düşüncesinden hareketle sağlık bilgilerinin anlaşılabilir olması ve bireylerin bu bilgilere uygun davranışlar geliştirmesi gerekliliği konu edilmiştir. Bu kapsamda sağlığı geliştirmede sağlık ile ilgili bilgilerin anlaşılır bir dil kullanılarak uygun araçlarla iletilmesi aracılığıyla olumlu yönde davranış geliştirilebileceğine dikkat çekilmiştir (Kickbusch vd., 2013, s. 4).
Sağlık okuryazarlığı kavramı, zamanla önem kazanmış ve Dünya Sağlık Örgütü (World Health Organization) tarafından 1998 yılında yayımlanan Sağlığın Geliştirilmesi Sözlüğü'nde (Health Promotion Glossary) "bireylerin, iyi sağlığı teşvik edecek ve sürdürecek şekilde bilgiye erişme, bilgiyi anlama ve kullanma becerisi ve motivasyonunu belirleyen bilişsel ve sosyal beceriler" şeklinde tanımlanmıştır.

FULL TEXTS BOOK

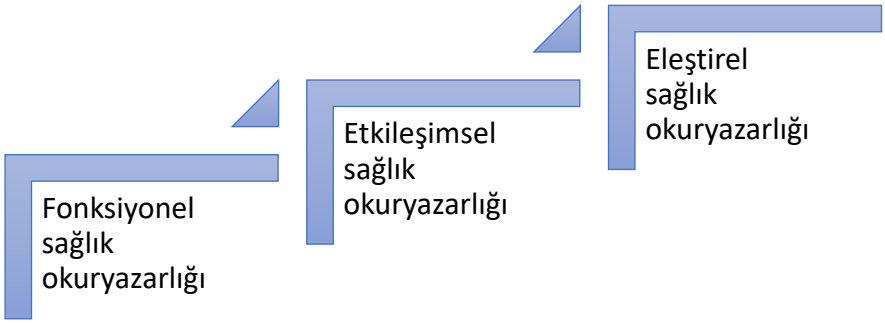
Sağlık okuryazarlığı ile ilgili alanyazında ulaşılabilen ilk çalışma, Hornik ve arkadaşları (1987) tarafından gerçekleştirilen çalışmadır. Sağlık okuryazarlığının sağlık davranışlarına etkisini araştıran çalışmada, 2000'li yıllardan itibaren sağlık okuryazarlığına olan ilginin ve konuya ilişkin çalışmaların arttığı gözlenmektedir.

Sağlık okuryazarlığı kavramı zamanla gelişmiş ve disiplinlerarası bir nitelik kazanmıştır. Küresel çapta etkili olan covid-19 pandemisi sürecinde sağlık okuryazarlığının önemi tüm dünyada kabul görmüş ve bu konudaki çalışmalarda artış yaşanmıştır. Sağlık okuryazarlığı kavramının gelişimindeki bir diğer kilometre taşı ise yeni iletişim teknolojilerinin gelişimine koşut olarak gündeme gelen e-sağlık okuryazarlığı (e-health literacy) kavramıdır (Gürel & Taşkıran, 2024). Sağlık konularının ve sağlığa ilişkin davranışların insan ve toplum yaşamındaki önemi düşünüldüğünde sağlık okuryazarlığı ile ilgili gelişmelerin devam edeceğini öngörmek mümkündür.

Sağlık Okuryazarlığının Tarafları

Sağlık süreci, genel bir bakışla sağlık hizmeti kullanıcıları ve sağlık profesyonelleri temelinde işleyen bir süreçtir. Sağlık hizmeti kullanıcıları, sağlık hizmetine gereksinim duyan bireyleri ve yakınlarını ifade etmektedir. Sağlık profesyonelleri ise sağlık çalışanları, sağlık uygulayıcıları ve sağlık hizmeti sağlayıcılarından oluşmaktadır. Sağlık profesyonelleri; bireylere, ailelere ve topluma sistematik bir şekilde önleyici, iyileştirici ve rehabilite edici sağlık hizmeti sağlamaktadır.

Sağlık okuryazarlığı, Şekil. 1'de sunulduğu üzere sağlık sürecinin iki temel öznesi olan sağlık hizmeti kullanıcılarını ve sağlık profesyonellerini konu etmektedir.



Şekil 1. Sağlık Okuryazarlığının Tarafları
Kaynak: Araştırmacılar tarafından geliştirilmiştir.

Sağlık okuryazarlığı, sağlık hizmeti kullanıcıları açısından da sağlık profesyonelleri açısından da önem arz eden bir okuryazarlık türüdür. Her iki taraf da sağlık süreçleri uyarınca doğru bilgiye ulaşmak, etkili iletişim kurmak, kendini ifade etmek, etkileşim içinde olmak, sorun çözmek, karar vermek, olası riskleri öngörmek ve elimine etmek gereksinimi ve arayışı içerisindedir. Bu nedenle de sağlık okuryazarlığı, sağlık sürecinin her iki taraf açısından da büyük anlam ifade etmektedir.

Sağlık Okuryazarlığı Boyutları

Sağlık okuryazarlığı, kavramsal düzlemde birbirinin üstüne kümelenen üç boyuttan oluşmaktadır. Don Nutbeam (2000) sağlık okuryazarlığını "sağlık", "toplum" ve "eğitim" olmak üzere üç değişken çerçevesinde ele alarak boyutlandırmaktadır. Bu bağlamda sağlık okuryazarlığını Şekil 2'de sunulduğu üzere "fonksiyonel sağlık okuryazarlığı", "etkileşimsel sağlık okuryazarlığı" ve "eleştirel sağlık okuryazarlığı" olmak üzere üç boyutta ele almak mümkündür.

FULL TEXTS BOOK

Şekil 2. Sağlık Okuryazarlığı Boyutları
Kaynak: Nutbeam'den (2000) yararlanılarak araştırmacılar tarafından geliştirilmiştir.

Sağlık okuryazarlığının boyutlarını oluşturan fonksiyonel sağlık okuryazarlığı, etkileşimsel sağlık okuryazarlığı ve eleştirel sağlık okuryazarlığı sonraki bölümlerde irdelenmiştir.

Fonksiyonel Sağlık Okuryazarlığı

Fonksiyonel sağlık okuryazarlığı -functional health literacy-, sağlık okuryazarlığının ilk boyutudur. Sağlık okuryazarlık boyutlarının hiyerarşik niteliği göz önüne alındığında fonksiyonel sağlık okuryazarlığı en temel boyuttur (Baker, 2006). Bu anlamıyla fonksiyonel sağlık okuryazarlığı, sağlık okuryazarlığının varlığı ve sağlık okuryazarlığının diğer boyutlarının oluşması için bir gerekliliktir.

Fonksiyonel sağlık okuryazarı olan bireyler, sağlık sistemi ve sağlık riskleri konusunda temel düzeyde bilinç ve farkındalığa sahiptir (Nutbeam, 2008). Sağlık ile ilgili temel bilgileri içeren bir süreç olan fonksiyonel sağlık okuryazarlığı, temel okuma ve yazma becerilerinden hareketle temel sağlık bilgilerini bilmeyi ve kullanmayı ifade etmektedir (Stormacq vd., 2020). Bu okuryazarlık; ilkyardım ve sağlıklı beslenme gibi temel sağlık bilgilerine sahip olma, ilaç prospektüsü okuyabilme, hekim randevularını oluşturabilme, sağlık ile ilgili riskleri bile gibi eylemleri içermektedir.

Fonksiyonel sağlık okuryazarlığı, bireylerin yaşam ve sağlık kalitelerini yükseltmeleri, toplumsal düzlemde fayda sağlamaları açısından bir ön şart olarak değerlendirilebilmektedir (Coughlin vd., 2020). Fonksiyonel sağlık okuryazarlığının düşük olması; bireyin yazılı sağlık bilgilerini anlamada ve kullanmada zorlanması anlamına gelmektedir. Aynı zamanda sağlık okuryazarlığının tüm tarafları açısından zorlayıcı bir görünüme neden olmaktadır. Bu bağlamda bireysel ve toplumsal düzeyde olumsuz sonuçların gündeme gelmesi sonucunu doğurmaktadır (Carthery-Goulart vd., 2009).

Fonksiyonel sağlık okuryazarlığının en dikkat çekici özelliği, bireyin pasif konumda olmasıdır. Fonksiyonel okuryazarlık kapsamında birey, sağlık bilgisine çeşitli şekillerde ulaşabilmektedir. Ancak birey, bu sürece doğrudan dahil değildir ve yalnızca alıcı konumundadır.

Etkileşimsel Sağlık Okuryazarlığı

Etkileşimsel sağlık okuryazarlığı -interactive health literacy-, sağlık okuryazarlığının ikinci düzeyini oluşturmaktadır. Fonksiyonel sağlık okuryazarlığının üzerine konumlanan etkileşimsel sağlık okuryazarlığı; gelişmiş okuryazarlık becerisinden hareketle sağlık ile ilgili bilişsel ve sosyal becerileri ifade etmektedir. Bu okuryazarlık türü bilgiye ulaşma ve kullanma, farklı iletişim kanallarından anlama, ulaşma ve söz konusu bilgileri yeni durumlara uygulama becerisini kapsamaktadır (Nutbeam, 2000, s. 263).

Etkileşimsel sağlık okuryazarlığı, karmaşık ve çok sayıda olan sağlık bilgisine ulaşma ve bu bilgilerin bireyler üzerindeki yönelimlerini değerlendirebilme anlamına gelmektedir (Rubin vd., 2011). Genel bir bakışla etkileşimsel sağlık okuryazarlığı, bireylerin günlük faaliyetlere katılımının artması için kişisel becerilerin kullanılması ve güçlendirilmesi anlamına gelmektedir (Nutbeam & Lloyd, 2020). Bu

FULL TEXTS BOOK

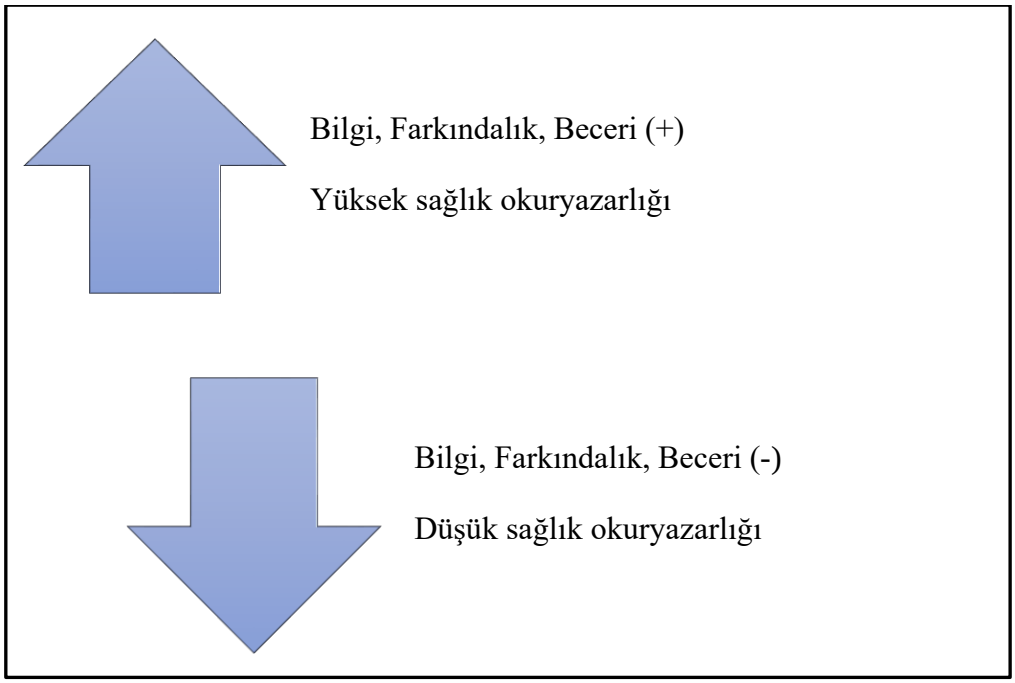
anlamıyla etkileşimsel sağlık okuryazarlığı; bireylerin sağlık iletişimi becerilerinin güçlenmesi, sağlık ile ilgili birçok bilgi içinden yararlı olanları seçebilmesi, hızla değişen sağlık sistemini kavraması ve bu sağlık sistemindeki bilgilerin uygulanmasını kapsamaktadır (Tones, 2002, s. 288).

Etkileşimsel sağlık okuryazarlığının bir diğer önemli özelliği, bireyin pasif konumdan çıkarak aktif konuma geçmesidir. Bu bağlamda birey; sağlık bilgilerine çeşitli şekilde ulaşabilmesinin yanı sıra onları anlayabilmekte ve uygulayabilmektedir. Örneğin birey, sağlıklı besinlerin bilgisine sahip olmanın dışında sağlıklı besinleri diyetine dahil edebilmektedir.

Eleştirel Sağlık Okuryazarlığı

Eleştirel sağlık okuryazarlığı -critical health literacy-, sağlık okuryazarlığının son boyutunu ifade etmektedir. Sağlık okuryazarlığının bu boyutunda birey, sağlık okuryazarlığının diğer iki boyutuna kıyasla ileri düzeyde sağlık bilgisine sahiptir ve hem bu bilgiyi doğru olarak yönetip kendi çıkarları için kullanabilmekte hem de sağlık sürecini sorgulayabilmektedir. Diğer bir deyişle eleştirel sağlık okuryazarı olan bir birey; gelişmiş sosyal ve bilişsel becerilerine ek olarak sağlık bilgisini eleştirel bir bakış açısıyla analiz edebilmekte; sağlık sürecinin işleyişini, eksikliklerini, yanlışlıklarını sorgulayabilmekte; medyada yer alan sağlık bilgilerini yorumlayabilmekte; sağlığın ekonomik ve politik boyutlarını anlayabilmektedir (Nutbeam, 2000, s. 263-264).

Eleştirel sağlık okuryazarlığının en ayırt edici özelliği, eleştirel düşünceyi ve analizi içermesidir. Eleştirel sağlık okuryazarlığı, fonksiyonel sağlık okuryazarlığının ve etkileşimsel sağlık okuryazarlığının aksine sağlık bilgisine eleştirel bakış anlamına gelmektedir (Chinn, 2011). Sağlık okuryazarlığının en son boyutu olan eleştirel sağlık okuryazarlığı, 'üçüncü nesil sağlık okuryazarlığı' olarak da tanımlanabilmektedir. Bu anlamıyla eleştirel okuryazarlığı, birey ya da grup temelinde politik veya sosyal hareketler aracılığıyla tepkisellik geliştirmeyi ve eylem oluşturmayı ifade etmektedir.



Eleştirel sağlık okuryazarlığı, sağlık bilgisini daha bilinçli bir şekilde algılama ve analiz etme becerisinden oluşmaktadır (Pleasant & Kuruvilla, 2008). Bireyin ve eleştirel düşünmenin aktif olduğu bu okuryazarlık türü, sağlık sisteminin işleyişindeki sorunları çözmeyi, sağlık sistemindeki eşitsizlikleri ve adaletsizlikleri azaltmayı hedeflemektedir. Dolayısıyla eleştirel sağlık okuryazarlığı, hem birey hem de toplum düzleminde önemli getiriler vaat eden bir okuryazarlık türüdür.

Sağlık Okuryazarlığı Düzeyleri

Sağlık okuryazarlığı, bireylerin kendi sağlık durumlarına ilişkin doğru kararları alabilmeleri ve sağlık profesyonelleri ile medya tarafından iletilen mesajları doğru olarak anlayabilmeleri için bir gerekliliktir (Urstad, 2022). Özellikle covid-19 pandemisi sürecinde, bireylerin ve toplumların sağlık okuryazarlık bilgilerinin ne denli önemli olduğu ortaya çıkmıştır. Sağlık okuryazarlığı ile sağlık bilgilerini anlama, uygulama ve sağlık süreçlerini yönetme arasında doğrusal bir ilişki bulunmaktadır.

Sağlık okuryazarlığı düzeylerini, Şekil 3'de sunulduğu üzere "düşük sağlık okuryazarlığı" ve "yüksek sağlık okuryazarlığı" olmak üzere iki kapsamda ele almak mümkündür.

FULL TEXTS BOOK

Şekil 3. Sağlık Okuryazarlığı Düzeyleri
Kaynak: Araştırmacılar tarafından geliştirilmiştir.

Düşük Sağlık Okuryazarlığı

Düşük sağlık okuryazarlığı; sağlık ile ilgili bilgi, tutum ve davranış eksikliği anlamına gelmektedir. Bireyin sağlık okuryazarlığı derecesinin düşük olması; sağlık bilgilerini anlama, değerlendirme ve uygulamada zorluk yaşamasına neden olmaktadır. Sağlık okuryazarlık düzeyi düşük olan birey; sağlığıyla ilgili kendisini aşan durumlarda kime, neye ve nasıl başvuracağını bilememektedir. Örneğin sağlık sorunu ile ilgili hangi uzmanlık alanına müracaat edeceğini, nasıl randevu alabileceğini bilememekte veya yanlış randevular alabilmektedir. Böylelikle sağlık sorunu ile ilgili zaman kaybı yaşayabilmekte, sağlık sorunun ilerlemesine neden olabilmekte ve yaşam kalitesini düşürebilmektedir.

Düşük sağlık yazarlığı, bireylerin sağlık sorunlarını anlamada ve değerlendirmede yetersizlik yaşamalarına neden olabilmektedir. Uluslararası ve ulusal alanyazın bulguları düşük sağlık okuryazarlık düzeyinin; hastalık belirtilerini anlamada gecikmeye, sağlık bilgisini anlama ve değerlendirmede yetersizliğe, sağlıkla ilgili tedavinin gecikmesine ve kronikleşmesine, sağlık profesyonellerinin önerilerine uymakta zorlanmaya, sağlık sorunu ile ilgili ilaç kullanımı, onam, randevu tarihi gibi bilgilerde yanlış anlamaların yaşanmasına ve sağlık risklerinin artmasına, öz bakımı sağlamamaya, koruyucu sağlık hizmetlerinden yararlanamamaya ya da yetersiz yararlanmaya neden olduğunu ortaya koymaktadır (Williams vd., 1995; Gazmararian, 2003; Durusu Tanrıöver vd., 2014; Yılmazel & Çetinkaya, 2016).

Düşük sağlık yazarlığı, bireyin yanı sıra topluma da etki etmektedir. Bu bağlamda düşük sağlık okuryazarlığı, bireylerin olumsuz sağlık davranışlarına yönelmelerine neden olmakta ve toplum genelinde sigara, alkol, obezite gibi davranışların yaygınlaşması sonucunu doğurmaktadır (Cho vd., 2008). Ayrıca düşük sağlık yazarlığı olan bireyler; kendilerinin ya da bakım verdikleri kişilerin hastaneye yatışların fazla ve uzun süreli olması, acil servislere gereksiz ve fazla başvurmaların yaşanması gibi nedenlerle sağlık giderlerinde artışa ve kamusal kaynakların israfına neden olabilmektedirler (Baker vd., 2004; De Walt vd., 2007).

FULL TEXTS BOOK

Yüksek Sağlık Okuryazarlığı

Yüksek sağlık okuryazarlığı; sağlık ile ilgili bilgi, tutum ve davranışın güçlü olduğu anlamına gelmektedir. Tıp biliminin ve sağlık bilgisinin geliştiği 21. yüzyılda bireylerin, gelişmiş sağlık bilgisine ve farkındalığına sahip olması, sağlık ile ilgili yetkinliklerini sağlık davranışlarına yansıtarak daha bilinçli kararlar verebilmeleri beklenmektedir. Bu beklenti; bireylerin sağlık bilgilerini anlama, analiz etme, uygulama, eleştirel bakış açısıyla yaklaşabilme becerilerini içeren yüksek sağlık okuryazarlığına sahip olmalarını gerektirmektedir.

Yüksek sağlık okuryazarlığına sahip bireyler, düşük sağlık okuryazarlığına sahip bireylere kıyasla sağlık ile ilgili konulara bireysel ve toplumsal düzlemde daha yetkin hareket edebilmektedirler. Bu bireylerin beslenmelerine dikkat etme, sağlıklarını koruma, sağlık ile ilgili konularda karar verebilme, sağlıklı davranışı ve yaşam tarzı seçebilme becerilerinin gelişmiş düzeyde olduğu bilinmektedir (Sorensen vd., 2012; Speirs vd., 2012).

Yüksek sağlık okuryazarlığı düzeyi, birey ve sağlık profesyonelleri arasındaki iletişim ve etkileşimi doğrudan etkilemektedir. Sağlık okuryazarlığı yüksek bir birey; sağlık sorunlarını sağlık profesyonellerine doğru aktarabilme ve sağlık profesyonellerinin bilgilendirmelerini doğru anlayabilme becerisine sahiptir. Dolayısıyla öz sağlık yönetimini doğru şekilde yapabilmekte ve olası sağlık sorunlarını daha etkili bir şekilde çözebilmektedir.

SONUÇ

Sağlık okuryazarlığı, çağcıl okuryazarlık türleri arasında en yaşamsallarından biridir. Sağlığın insan yaşamı için önemi ve tüm bireylerin sağlık hizmetlerine gereksinim duyduğu düşünüldüğünde, sağlık okuryazarlığının niteliği ve hayati konumu ortaya çıkmaktadır. Sağlık okuryazarlığı; bireyin sağlık ile ilgili bilgilere ulaşması, bu bilgileri anlaması, gündelik yaşamında kullanabilmesi, karar alabilmesi ve sağlık süreçlerine eleştirel yaklaşabilmesi için gerekli zihinsel ve sosyal becerilerdir.

Fonksiyonel sağlık okuryazarlığı, etkileşimsel sağlık okuryazarlığı ve eleştirel sağlık okuryazarlığı olmak üzere üç boyutta ele alınan sağlık okuryazarlığı, bireylerin sağlık süreçlerindeki aktif katılımını ve bilgiye dayalı karar alma süreçlerini güçlendirmektedir. Fonksiyonel sağlık okuryazarlığı, temel sağlık bilgilerini anlamayı ve kullanmayı içerirken, etkileşimsel sağlık okuryazarlığı bireylerin sağlık bilgilerini yeni durumlara uygulayabilme becerisini kapsamaktadır. Eleştirel sağlık okuryazarlığı ise bireylerin sağlık bilgilerini eleştirel bir bakış açısıyla analiz edebilme ve sağlık sisteminin işleyişini sorgulayabilme yeteneğini ifade etmektedir.

Sağlık okuryazarlığının bireylere ve toplumlara yönelik önemli avantajları vardır. Sağlık okuryazarlığı, birey ve toplum nezdinde sağlık ve yaşam kalitesinin artmasına katkı sunan temel faktörlerdendir. Bu bağlamda sağlık okuryazarlık düzeyinin düşük veya yüksek olması söz konusudur. Sağlık okuryazarlığının düşük olması; sağlık bilgilerini anlamakta, yorumlamakta, uygulamada ve analiz etmede zorluk anlamına gelmektedir. Sağlık okuryazarlığının düşük olması, sağlık hizmeti kullanıcıları ile sağlık profesyonelleri arasındaki iletişim ve ilişkiyi de olumsuz etkilemektedir.

Sağlık okuryazarlığı düzeyinin yüksek olması, bireylerin ve toplumların sağlık hizmetlerine erişimini ve bu hizmetlerden yararlanma düzeyini artırmaktadır. Yüksek sağlık okuryazarlığına sahip bireyler, sağlık bilgilerini daha etkin bir şekilde kullanarak sağlıklı yaşam tarzlarını benimseyebilmekte ve sağlık sorunlarını daha etkili bir şekilde yönetebilmektedir. Bu durum, sağlık sisteminin verimliliğini artırmakta ve sağlık hizmeti maliyetlerini düşürmektedir. Özellikle covid-19 pandemisi sürecinde, bireylerin ve toplumların sağlık okuryazarlık seviyelerinin ne kadar önemli olduğu bir kez daha ortaya çıkmıştır. Yüksek sağlık okuryazarlığı, bireyin yanı sıra toplumu da olumlu yönde etkilemektedir. Bu bağlamda yüksek sağlık okuryazarlığı; toplumun daha sağlıklı bireylerden oluşmasını, sağlık sorunlarının daha kolay çözülmesini, koruyucu önlemlerin alınmasını, sağlık iletişiminin daha etkili işlemesini, sağlık hizmetlerinin daha kaliteli olmasını, sağlık sektöründe memnuniyet oranının artmasını ve sağlık ile ilgili kaynakların daha verimli kullanılmasını sağlamaktadır.

FULL TEXTS BOOK

Sağlık okuryazarlığının artırılması, bireysel ve toplumsal sağlık düzeyini yükseltmek için kritik bir öneme sahiptir. Bu kapsamda eğitim programlarının ve sağlık iletişiminin, bireylerin sağlık okuryazarlığını geliştirmeye yönelik stratejilerle zenginleştirilmesi gerekmektedir. Böylelikle, bireylerin sağlık bilgilerine erişimi, bu bilgileri anlaması ve sağlıkla ilgili doğru kararlar alması teşvik edilebilecek ve genel sağlık düzeyinin yükseltilmesi sağlanabilecektir.

ÜNİVERSİTE ÖĞRENCİLERİNİN KARAR VERME STİLLERİNİN ÇEŞİTLİ DEĞİŞKENLER AÇISINDAN İNCELENMESİ
INVESTIGATION OF UNIVERSITY STUDENTS' DECISION-MAKING STYLES IN TERMS OF VARIOUS VARIABLES

Doç. Dr. Semra TETİK
Manisa Celal Bayar Üniversitesi
ORCID: 0000-0001-6266-8178

ÖZET
İnsanlar"günlük yaşam içerisinde birçok karar verme durumunda kalmaktadır. Karar, belirli bir hedef doğrultusunda mevcut olanaklara göre mümkün olabilen çeşitli muhtemel eylem şekillerinden en uygun olanı seçmektir. Karar verme, çeşitli seçenekler arasından seçim ve tercih yapmaya ilişkin bilişsel ve davranışsal çabalar olarak ifade edilebilir. Kişinin yaşamında mutlu olabilmesi için doğru zamanda, doğru yerde, doğru ve uygun kararlar verebilmesi gerekmektedir. Karar verme karmaşık ve aşamalı bir süreçtir. Kişilerin bu süreci algılama ve uygulama tarzları karar verme stili olarak adlandırılmaktadır. Diğer bir ifadeyle karar verme stili, herhangi bir konuda karar verme ile karşı karşıya kalan kişinin gösterdiği yaklaşım, tepki ve eylemlerdir."Üniversite öğrencilerinin üniversite yaşamında doğru ve etkili karar verebilmeleri açısından karar verme stillerinin önemli olduğu düşünülmektedir. Bu araştırmanın amacı, üniversite öğrencilerinin karar verme stillerinin çeşitli değişkenlere göre incelemektir. Araştırmada betimsel tarama yönteminden yararlanılmıştır."Araştırmaya 2023-2024 eğitim öğretim yılında Manisa Celal Bayar Üniversitesi, Salihli İktisadi ve İdari Bilimler Fakültesi ve Salihli Meslek Yüksekokulunda öğrenim gören 231 öğrenci gönüllülük esasına göre katılmıştır. Araştırma verileri, öğrencilere kişisel bilgi formu ve Melbourne Karar Verme Ölçeği uygulanarak toplanmıştır. Elde edilen bulgulara göre, öğrencilerin özsaygı düzeylerinin düşük düzeyde olduğu tespit edilmiştir. Kaçıngan karar verme stili en yüksek puan ortalamasına sahip iken, dikkatli karar verme stili en düşük puan ortalamasına sahiptir. Ayrıca demografik değişkenler (cinsiyet, yaş, sınıf, birim, gelir, yaşadığı yer) ile karar verme stilleri arasında anlamlı ilişkiler tespit edilmiştir.
Anahtar Kelimeler: Karar, Karar Verme, Karar Verme Stili, Üniversite Öğrencileri

ABSTRACT
People have to make many decisions in daily life. Decision is choosing the most appropriate course of action among various possible courses of action, which are possible according to the available possibilities, towards a particular goal."Decision making can be expressed as cognitive and behavioral efforts to choose and choose among various options. In order to be happy in one's life, one must be able to make the right and appropriate decisions at the right time, in the right place. Decision making is a complex and gradual process. The way people perceive and implement this process is called decision-making style. In other words, decision-making style is the approach, reaction and actions of a person who is faced with making a decision on any issue."It is thought that decision-making styles are important for university students to make correct and effective decisions in university life."The purpose of this research is to examine the decision-making styles of university students according to various variables. Descriptive scanning method was used in the research. 231 students studying at Manisa Celal Bayar University, Salihli Faculty of Economics and Administrative Sciences and Salihli Vocational School participated in the research on a voluntary basis in the 2023-2024 academic year. Research data were collected by applying the "Personal Information Form" and "Melbourne Decision Making Scale" to the students. According to the findings, it was determined that the students' self-esteem levels were low. While the avoidant decision-making style has the highest mean score, the careful decision-making style

FULL TEXTS BOOK

has the lowest mean score. Additionally, significant relationships were detected between demographic variables (gender, age, class, unit, income, place of residence) and decision-making styles.
Key Words: Decision, Decision Making, Decision Making Style, University Students

GİRİŞ

İnsanlar tüm yaşam süreçlerinde her zaman karar verme durumunda kalmaktadır. Karar kavramı, hedefe erişmek için var olan olanak ve duruma göre çeşitli seçenekler arasından en uygun olanı tercih etmek olarak tanımlanabilir (Ghareeb ve Kaya, 2022: 119). Karar verme, var olan alternatiflerden en uygun olanı seçme süreci olarak ifade edilebilir (Kırımoğlu, 2017: 2789). Bu bağlamda karar verme bir süreç, karar ise sonuçtur (Nas, 2010, 43). Heppner'e (1978) göre karar verme, alternatifleri değerlendirmeyi ve sonuçlarını takip etmeyi içerir (Akpınar vd., 2015: 93). Başka bir ifadeyle karar verme, birçok faktör dikkate alınarak çeşitli seçeneklerin seçiminde bu seçenekleri açıklamanın yanı sıra uygun olanı hedeflemek, isteyerek eyleme geçmek ve bu seçenekler arasından tercih yapma sürecidir (Harris, 1998; Tükel, 2021: 44). Karar verme süreci, beş aşama içermektir. İlk aşamada verilecek karara yönelik amaç belirlemek ya da sorun tanımlamak, ikinci aşamada belirlenen amaçlar ile tanımlanan sorunların irdelenmesi ve önceliklerin saptanması, üçüncü aşamada sorunu ortadan kaldıracak çözüm alternatiflerinin belirlenmesi, dördüncü aşamada üretilen çözüm alternatiflerinin irdelenmesi ve son aşamada ise seçim kriterlerinin belirlenmesi ve alternatifler arasından en uygun olanın seçilmesi yer almaktadır (Koçel, 2020:139). Karar verme sürecinde kişinin tercihinde, onun sahip olduğu kişisel özellikleri ve çevresel faktörler etkide bulunabilir (Akpınar vd., 2015: 94). Öğrencilerin üniversite ortamına adapte olabilmeleri için doğru ve etkili karar verme becerilerine sahip olmaları gerekmektedir (Mutlu ve Kaya, 2023: 59). Bu bağlamda karar verme stilleri önemli bir konu olarak karşımıza çıkmaktadır. Literatüre bakıldığında karar verme stili kavramımna ilişkin birçok farklı tanım olduğu görülmektedir. Phillips ve diğerleri (1985) karar verme stili kavramını "kişinin, karar verme sürecindeki bakış açısını, davranışlarını ve verdiği tepkileri" şeklinde tanımlamaktadır (Yılmaz, 2023b: 18). Diğer bir ifadeyle karar verme stili, "karar verme sürecinde kişinin problem durumuna ilişkin tutumu" olarak tanımlanabilir (Kuzgun, 2006: 148). Scott ve Bruce (1995) karar verme stilini, "bireyin bir karar verme durumu ile karşı karşıya kaldığında öğrenilmiş ve alışkanlık haline gelmiş tepki seti" olarak tanımlamışlardır (Yılmaz, 2023a: 54). Literatürde karar verme stillerine ilişkin birçok alanda çalışmaların yapıldığı ve her alana özgü yaklaşımların ileri sürüldüğü görülmektedir. Bu çalışmada Mann ve arkadaşlarının (1998) farklı toplumlardaki üniversite öğrencilerine yönelik gerçekleştirdikleri araştırmalarda belirlenen karar verme stilleri göz önüne alınmıştır. Söz konusu karar verme stilleri (Deniz, 2004: 23-25): Dikkatli karar verme stilinde; birey karar vermeden önce dikkatli bir şekilde bilgi toplar ve seçenekleri titizlikle inceledikten sonra tercih yapar. Kaçıngan karar verme"stilinde; birey karar vermekten kaçınır, karar vermeyi başkalarına bırakma eğilimi gösterir ve böylece sorumluluğu başkalarına bırakır. Erteleyici karar verme stilinde; birey kararları herhangi bir geçerli nedeni olmadan devamlı olarak erteler, geciktirir ve sürüncemede bırakır. Panik karar verme stilinde; birey bir karar verme ile karşı karşıya kaldığında, kendini zaman baskısında hissederek aceleci davranışlar gösterip çok hızlı biçimde sonuca ulaşmaya çalışır. Bu boyutların dışında ölçekte özsaygı düzeyi de ölçülmektedir. Özsaygı, karar verme sürecini etkileyen önemli bir faktördür. Yüksek özsaygıya sahip insanlar verdikleri kararlardan emin olurlar" (Avşaroğlu ve Üre, 2007: 91). Üniversite ortamına adapte olmada zorlanan öğrencilere destek olabilmek için öncelikle nasıl bir karar verme stiline sahip olduklarının bilinmesi gerekmektedir (Mutlu ve Kaya, 2023: 59). Dolayısıyla üniversite öğrencilerinin üniversite yaşamında doğru ve etkili karar verebilmeleri açısından karar verme stillerinin önemli olduğu düşünülmektedir. Bu noktadan hareketle"bu çalışmanın amacı, üniversite öğrencilerinin karar verme stillerini çeşitli değişkenlere göre incelemektir.

YÖNTEM

Araştırmanın Yöntemi ve Amacı

Araştırmada ilişkisel tarama ve fark analizi modeli kullanılmıştır. Araştırma verilerinin toplanmasında anket yöntemi uygulanmıştır. Bu araştırmanın amacı, üniversite öğrencilerinin karar verme stillerini belirlemek ve karar verme stillerini sosyo-demografik özelliklerine göre incelemektir. Bu amaç doğrultusunda aşağıdaki sorulara yanıt aranmıştır:

1. Üniversite öğrencileri karar verme stillerini hangi düzeyde kullanmaktadır?
2. Üniversite öğrencilerinin sosyo-demografik özelliklerine göre karar verme stillerinde anlamlı farklılık var mıdır?

Araştırmanın Evreni ve Örneklemi

Araştırmanın“evrenini 2023-2024 eğitim öğretim yılında öğrenim gören Manisa Celal Bayar Üniversitesi Salihli Meslek Yüksekokulu ve Salihli İktisadi ve İdari Bilimler Fakültesi öğrencileri oluşturmaktadır. Örneklemi ise tesadüfi örnekleme yöntemiyle anket uygulanan 231 öğrenci oluşturmaktadır.”

Veri Toplama Araçları

Kişisel Bilgi Formu: Araştırmacı tarafından oluşturulan form; cinsiyet, yaş, sınıf, birim, gelir ve yaşadığı yer ile ilgili sosyo-demografik özelliklerine ilişkin bilgileri içeren sorulardan oluşmaktadır.

Araştırmaya katılan öğrencilerin karar verme stillerini belirlemeye yönelik “Melbourne Karar Verme Ölçeği” kullanılmıştır. Orijinali Mann ve diğerleri (1998), tarafından geliştirilmiş olan Melbourne Karar Verme Ölçeğini, (Melbourne Decision Making Questionary) Deniz (2004), Türkçe’ye uyarlayarak geçerlik ve güvenirlik çalışmasını yapmıştır. Melbourne Karar Verme Ölçeği iki bölümeden oluşmaktadır (Mann vd., 1998; Deniz, 2004: 23-35):

I. Bölüm-Öz Saygı: Karar vermede öz saygıyı (kendine güven) belirlemeye yöneliktir. 6 madde ve tek boyut içermektedir. 3’lü likert tipi ölçekte 2, 4, 6. maddeler ters yönde puanlanmaktadır. Bu ölçekte “Doğru” yanıtı 2 puan, “Bazen” yanıtı 1 puan, “Doğru değil” yanıtı 0 puandır. Ölçekten alınabilecek maksimum puan 12’dir. Yüksek puanlar karar vermede öz saygının yüksek olduğunu göstermektedir

II. Bölüm-Ölçeğin ikinci bölümü ise karar verme stillerini ölçmeye yöneliktir.“Ölçek 22 madde ve 4 alt boyut içermektedir.”Bunlar; dikkatli karar verme, kaçıngan karar verme, erteleyici karar verme ve panik karar verme boyutlarıdır.

Üçlü likert tipi ölçekte “Doğru” 2 puan, “Bazen” 1 puan, “Doğru değil” 0 puandır. Dikkatli Karar Verme Stili 0-12, Kaçıngan Karar Verme Stili 0-12, Erteleyici Karar Verme Stili 0-10 ve Panik Karar Verme Stili 0-10 puan arasında değerlendirilir. Puanların yüksekliği ilgili karar verme stilinin kullanıldığı şeklinde yorumlanmaktadır.” Bu çalışmada ölçeğe ait Cronbach Alpha değeri .80’dir.

Verilerin Analizi

Araştırmada, karar verme stillerinin tanımlayıcı istatistik analizi yöntemi ile sosyo-demografik faktörler ve karar verme stillerine yönelik farklılık analizi kullanılmıştır. Verilerin analizinde $p<0.05$ anlamlılık düzeyi esas alınmıştır.

BULGULAR

Tablo 1. Katılımcıların Sosyo-Demografik Özelliklerinin Frekans Dağılımı

Değişkenler	Grup	f	%
Cinsiyet	Kız	138	59,7
	Erkek	93	40,3
Yaş	18-21 yaş	201	87
	22-23 yaş	24	10,4
	24 ve üzeri	6	2,6

FULL TEXTS BOOK

Sınıf Düzeyi	1. Sınıf	122	52,8
	2. Sınıf	68	29,4
	3. Sınıf	26	11,3
	4. Sınıf	15	6,5
Birim	Salihli MYO	144	62,3
	Salihli İİBF	87	37,7
Gelir	Düşük	66	28,6
	Orta	138	59,7
	İyi	21	9,1
	Çok iyi	6	2,6
Yaşadığı yer	Kırsal	27	11,7
	Şehir	108	46,8
	Büyükşehir	96	41,6

Tablo 1'de görüldüğü gibi, araştırmaya katılan öğrencilerin %59,7'si kız, %40,3'ü ise erkektir. Yaş dağılımına bakıldığında öğrencilerin %87'si 18-21, %10,4'ü 22-23 yaş aralığında, %2,6'sı ise 24 ve üzeri yaş grubunda yer almaktadır. Araştırmaya katılan öğrencilerin %52,8'i 1.sınıf, %29,4'ü 2.sınıf, %11,3'ü 3.sınıf, %6,5'i ise 4.sınıftadır. Araştırmaya katılan öğrencilerin %62,3'ü Slihli MYO'da, %37,7'si Salihli İİBF'de öğrenim görmektedir. Araştırmaya katılan öğrencilerin %28,6'sı düşük, %59,7'si orta, %9,1'i iyi ve %2,6'sı çok iyi gelir düzeyine sahiptir. Yaşadığı yer değişkenine göre bakıldığında öğrencilerin %46,8'i şehirde, %41,6'sı büyükşehirde ve %11,7'si kırsalda yaşamaktadır.

Tablo 2. Karar Verme Stillerinin Ortalama ve Standart Sapma Değerleri

Değişkenler	**N**	**Min.**	**Max.**	**Ortalama**	**Std. Sapma**
Özsaygı	231	0	12	2,74	,757
Dikkatli Karar Verme	231	0	12	2,69	,825
Kaçıngan Karar Verme	231	0	12	7,90	,982
Erteleyici Karar Verme	231	0	10	6,17	,897
Panik Karar Verme	231	0	10	5,26	,860

Tablo 2'de görüldüğü gibi, özsaygı $\bar{X}$ =2,74, karar verme stilleri alt boyutları olan dikkatli karar verme $\bar{X}$=2,69, kaçıngan karar verme $\bar{X}$ =7,90, erteleyici karar verme $\bar{X}$=6,27 ve panik karar verme $\bar{X}$ =5,26 puan ortalamasına sahiptir. Buna göre, kaçıngan karar verme stilli en yüksek puan ortalamasına sahiptir. Bunu da erteleyici karar verme stili izlemektedir. Diğer taraftan dikkatli karar verme stili en düşük puan ortalamasına sahiptir.

Tablo 3. Öğrencilerin Karar Verme Stillerinin Cinsiyete Göre Fark Testi (t-Testi)

Değişkenler	**Cinsiyet**	**N**	**$\bar{X}$**	**Ss**	**t**	**p**
Özsaygı	Kız	138	2,84	1,845	1,057	,298
	Erkek	93	2,59	1,565		
Dikkatli Karar Verme	Kız	138	2,97	2,370	1,932	,024
	Erkek	93	2,27	2,163		
Kaçıngan Karar Verme	Kız	138	8,03	2,766	1,845	,058
	Erkek	93	7,69	2,030		
Erteleyici Karar Verme	Kız	138	5,98	2,538	1,475	,049
	Erkek	93	6,45	2,064		
Panik Karar Verme	Kız	138	5,10	2,761	1,145	,003
	Erkek	93	5,50	2,121		

FULL TEXTS BOOK

Tablo 3'e bakıldığında, karar verme stilleri alt boyutlarından dikkatli karar verme stili (t=1,932;p<0.05), erteleyici karar verme stili (t=1,475;p<0.05) ve panik karar verme stili (t=1,145;p<0.05) puanlarının cinsiyete göre anlamlı farklılık gösterdiği tespit edilmiştir. Kız öğrencilerin dikkatli karar verme stiline ait puan, erkek öğrencilerin puanına göre anlamlı düzeyde daha yüksektir. Erkek öğrencilerin erteleyici karar verme stili ve panik karar verme stiline ait puanlar, kız öğrencilerin puanına göre anlamlı düzeyde daha yüksektir. Özsaygı (t=1,057;p>0.05), ve kaçıngan karar verme stili (t=1,845;p>0.05) puanlarının cinsiyete göre anlamlı farklılık göstermediği tespit edilmiştir

Tablo 4. Öğrencilerin Karar Verme Stillerinin Yaşa Göre Fark (Anova) Testi

Değişkenler	**Yaş**	**N**	**$\bar{X}$**	**Ss**	**F**	**p**
Özsaygı	18-21 yaş	201	2,80	1,734	4,740	,010
	22-23 yaş	24	1,88	1,569		
	24 ve üzeri	6	4,00	2,190		
Dikkatli Karar Verme	18-21 yaş	201	2,82	2,418	2,615	,075
	22-23 yaş	24	1,88	1,392		
	24 ve üzeri	6	1,50	,547		
Kaçıngan Karar Verme	18-21 yaş	201	7,84	2,927	2,767	,065
	22-23 yaş	24	8,88	1,569		
	24 ve üzeri	6	6,00	4,381		
Erteleyici Karar Verme	18-21 yaş	201	6,05	2,307	2,259	,107
	22-23 yaş	24	7,13	2,626		
	24 ve üzeri	6	6,50	2,834		
Panik Karar Verme	18-21 yaş	201	5,19	2,523	,530	,589
	22-23 yaş	24	5,75	2,053		
	24 ve üzeri	6	5,50	1,643		

Tablo 4 incelendiğinde özsaygı alt boyutuna ait puanın (F=4,740; p<0.05) yaş değişkenine göre anlamlı farklılık gösterdiği tespit edilmiştir. Özsaygı alt boyutu ile olan farklılığın nedenini tespit etmek için yapılan Tukey HSD testine göre 24 ve üstü yaş aralığında olanların puanı 22-23 yaş aralığında olanlara göre daha yüksektir ($\bar{x}$=4,00). Dikkatli (F=2,615; p>0.05, kaçıngan (F=2,767; p>0.05), erteleyici (F=2,259; p>0.05) ve panik karar (F=,530; p>0.05) verme stillerine ait puanların yaş değişkenine göre anlamlı farklılık göstermediği tespit edilmiştir.

Tablo 5. Öğrencilerin Karar Verme Stillerinin Sınıf Düzeyine Göre Fark (Anova) Testi

Değişkenler	**Sınıf Düzeyi**	**N**	**$\bar{X}$**	**Ss**	**F**	**p**
Özsaygı	1. Sınıf	122	2,87	1,757	1,623	,185
	2. Sınıf	68	2,50	1,670		
	3. Sınıf	26	2,73	1,929		
	4. Sınıf	15	2,80	1,897		
Dikkatli Karar Verme	1. Sınıf	122	2,81	2,392	1,694	,169
	2. Sınıf	68	2,68	2,301		
	3. Sınıf	26	2,08	1,937		
	4. Sınıf	15	2,80	2,541		
Kaçıngan Karar Verme	1. Sınıf	122	8,04	2,826	,139	,937
	2. Sınıf	68	7,87	2,911		
	3. Sınıf	26	8,00	2,993		
	4. Sınıf	15	6,67	2,015		

FULL TEXTS BOOK

Erteleyici Karar Verme	1. Sınıf	122	5,94	2,382	2,017	,031
	2. Sınıf	68	6,59	2,260		
	3. Sınıf	26	6,27	2,892		
	4. Sınıf	15	5,93	2,153		
Panik Karar Verme	1. Sınıf	122	5,11	2,531	2,047	,108
	2. Sınıf	68	5,47	2,605		
	3. Sınıf	26	5,46	2,928		
	4. Sınıf	15	5,20	2,007		

Tablo 5 incelendiğinde erteleyici karar verme stiline ait puanın (F=2,017; p<0.05) sınıf değişkenine göre anlamlı farklılık gösterdiği tespit edilmiştir. Erteleyici karar verme stili ile olan farklılığın nedenini tespit etmek için yapılan Tukey HSD testine göre 2. Sınıfta olanların puanı 4. sınıfta olanlara göre daha yüksektir ($\bar{x}$=4,00). Özsaygı (F=1,623; p>0.05), dikkatli (F=1,694; p>0.05), kaçıngan (F=,139; p>0.05) ve panik (F=2,047; p>0.05) karar verme stillerine ait puanların sınıf değişkenine göre anlamlı farklılık göstermediği tespit edilmiştir.

Tablo 6. Öğrencilerin Karar Verme Stillerinin Birime Göre Fark Testi (t-Testi)

Değişkenler	**Birim**	**N**	**$\bar{X}$**	**Ss**	**t**	**p**
Özsaygı	MYO	144	2,63	1,721	1,284	,200
	İİBF	87	2,93	1,809		
Dikkatli Karar Verme	MYO	144	2,63	2,323	,532	,596
	İİBF	87	2,79	2,338		
Kaçıngan Karar Verme	MYO	144	7,40	2,894	2,474	,001
	İİBF	87	8,72	2,679		
Erteleyici Karar Verme	MYO	144	6,21	2,344	,321	,748
	İİBF	87	6,10	2,496		
Panik Karar Verme	MYO	144	5,54	2,606	2,170	,031
	İİBF	87	4,79	2,426		

Tablo 6'ya bakıldığında, karar verme stilleri alt boyutlarından kaçıngan karar verme stili (t=2,474; p<0.05) ve panik karar verme stili (t=2,170; p<0.05) puanlarının birime göre anlamlı farklılık gösterdiği tespit edilmiştir. İİBF öğrencilerinin kaçıngan karar verme stiline ait puanı, MYO öğrencilerinin puanına göre anlamlı düzeyde daha yüksektir. Özsaygı (t=1,284; p>0.05), dikkatli karar verme stili (t=,532; p>0.05) ve erteleyici karar verme stili (t=,321; p>0.05) puanlarının birime göre anlamlı farklılık göstermediği tespit edilmiştir.

Tablo 7. Öğrencilerin Karar Verme Stillerinin Gelire Göre Fark (Anova) Testi

Değişkenler	**Gelir**	**N**	**$\bar{X}$**	**Ss**	**F**	**p**

	Orta	138	6,22	2,385		
	İyi	21	6,50	2,478		
	Çok iyi	6	6,36	2,738		
Panik Karar Verme	Düşük	66	5,09	1,719	,521	,668
	Orta	138	5,30	2,483		
	İyi	21	5,57	2,829		
	Çok iyi	6	5,50	2,834		

Tablo 7'ye bakıldığında, karar verme stilleri alt boyutlarından dikkatli karar verme stili (F=3,488; p<0.05) ve kaçıngan karar verme stili (F=4,445; p<0.05) puanlarının gelire göre anlamlı farklılık gösterdiği tespit edilmiştir. Tukey HSD testi sonuçlarına göre gelir düzeyi iyi ve çok iyi olan öğrencilerin dikkatli karar verme stillerine ait puanlar, gelir düzeyi düşük olan öğrencilerin puanlarına göre anlamlı düzeyde daha yüksektir. Gelir düzeyi düşük olan öğrencilerin kaçıngan karar verme stiline ait puanı, gelir düzeyi iyi ve çok iyi olan öğrencilere göre anlamlı düzeyde daha yüksektir. Özsaygı (F=2,009p>0.05), erteleyici karar verme stili (F=1,493; p>0.05) ve panik karar verme stili (F=,521;p>0.05) puanlarının gelire göre anlamlı farklılık göstermediği tespit edilmiştir.

Tablo 8. Öğrencilerin Karar Verme Stillerinin Yaşam Yerine Göre Fark (Anova) Testi

Değişkenler	**Yaşam Yeri**	**N**	**$\bar{X}$**	**Ss**	**F**	**p**
Özsaygı	Kırsal	27	2,44	1,601	6,280	,002
	Şehir	108	3,17	1,931		
	Büyükşehir	96	2,34	1,478		
Dikkatli Karar Verme	Kırsal	27	2,86	2,674	4,799	,009
	Şehir	108	3,67	2,235		
	Büyükşehir	96	2,22	2,229		
Kaçıngan Karar Verme	Kırsal	27	8,00	2,631	3,068	,048
	Şehir	108	7,42	2,301		
	Büyükşehir	96	8,41	2,328		
Erteleyici Karar Verme	Kırsal	27	6,22	2,439	,231	,794
	Şehir	108	6,06	2,699		
	Büyükşehir	96	6,28	2,014		
Panik Karar Verme	Kırsal	27	5,78	2,292	2,566	,079
	Şehir	108	4,86	2,627		
	Büyükşehir	96	5,56	2,512		

Tablo 8'e bakıldığında, özsaygı (F=6,280; p<0.05), karar verme stilleri alt boyutlarından dikkatli karar verme stili (F=4,799; p<0.05), kaçıngan karar verme stili (F=3,068; p<0.05) puanlarının yaşadığı yere göre anlamlı farklılık gösterdiği tespit edilmiştir. Tukey HSD testi sonuçlarına göre yaşam yeri şehir olan öğrencilerin özsagyı ve dikkatli karar verme stillerine ait puanları, yaşam yeri kırsal ve büyükşehir olan öğrencilerin puanlarına göre anlamlı düzeyde daha yüksektir. Yaşam yeri büyükşehir olan öğrencilerin kaçıngan karar verme stiline ait puanı, yaşam yeri kırsal ve şehir olan öğrencilere göre anlamlı düzeyde daha yüksektir. Erteleyici karar verme stili (F=,231; p>0.05) ve panik karar verme stili (F=2,566;p>0.05) puanlarının yaşam yerine göre anlamlı farklılık göstermediği tespit edilmiştir.

FULL TEXTS BOOK

SONUÇ

Bu bölümde, araştırmaya katılan öğrencilerin karar verme stilleri ve cinsiyet, yaş, sınıf, birim, gelir ve yaşadığı yer değişkenlerine göre elde edilen bulgular tartışılmış ve yorumlanmıştır. Bu bağlamda, elde edilen bulgular aşağıda özetlenmiştir.

Araştırmanın ölçeğe ilişkin tanımlayıcı istatistiki analiz sonuçlarına bakıldığında, araştırmaya katılan öğrencilerin karar vermede özsaygı düzeylerinin düşük olduğu, karar verme stilleri alt boyutları olan dikkatli karar verme ve kaçıngan karar verme stillerini düşük düzeyde kullandıkları, erteleyici karar verme ve panik karar verme stillerini orta düzeyde kullandıkları, kaçıngan karar verme stilini ise yüksek düzeyde kullandıkları görülmektedir. Buna göre, öğrencilerin en çok kullandıkları karar verme stili kaçıngan ve ertelemeci iken, en az kullandıkları karar verme stili ise dikkatli karar vermedir. Literatüre farklı sonuçların elde edildiği çalışmalar bulunmaktadır. Akpınar ve Akpınar'ın (2017) "Yüksekokullarda öğrenim gören öğrencilerin bazı değişkenler açısından problem çözme becerileri ve karar verme stillerinin incelenmesi" başlıklı yaptığı çalışmada, karar verme stillerinde dikkatli karar verme en yüksek puana sahip iken, kaçıngan karar verme en düşük puana sahiptir. Ayrıca karar vermede özsaygı düzeyi yüksek olarak tespit edilmiştir.

Araştırmaya katılan öğrencilerin karar verme stilleri, cinsiyet değişkenine göre incelendiğinde, dikkatli karar verme stili, erteleyici karar verme stili ve panik karar verme stili puanlarında anlamlı bir farklılık olduğu tespit edilmiştir. Farklılığın nedenine bakıldığında, kız öğrenciler dikkatli karar verme stilini erkeklere göre daha fazla kullanırken, erkek öğrencilerin erteleyici karar verme ve panik karar verme stillerini kızlara göre daha fazla kullandıkları görülmektedir. Buna göre, cinsiyetin karar verme stillerini etkilediği söylenebilir.

Araştırmaya katılan öğrencilerin karar verme stilleri, yaş değişkenine göre incelendiğinde, karar vermede özsaygı puanının yaşa göre anlamlı farklılık gösterdiği tespit edilmiştir. Farklılığın nedeni 24 ve üstü yaşında olan öğrencilerin özsaygısı diğerlerine göre daha yüksek olmasından kaynaklanmaktadır. Buna göre kişilerin yaşı arttıkça özsaygılarının arttığı söylenebilir. Karar verme stilleri (dikkatli, kaçngan, erteleyici, panik) ile yaş arasında anlamlı fark bulunamamıştır. Bu bağlamda yaşın karar verme stillerinde etkili olmadığı söylenebilir.

Araştırmaya katılan öğrencilerin karar verme stilleri, sınıf değişkenine göre incelendiğinde, karar vermede özsaygı puanının sınıfa göre anlamlı farklılık göstermediği tespit edilmiştir. Karar verme stilleri alt boyutlarından sadece erteleyici karar verme ile sınıf arasında anlamlı fark bulunurken (2. sınıf öğrencilerinin erteleyici karar verme puanı diğerlerine göre daha yüksektir.), diğer alt boyutlar ile anlamlı fark bulunamamıştır. Bu bağlamda genel olarak sınıf değişkeninin karar verme stillerinde etkili olmadığı söylenebilir.

Araştırmaya katılan öğrencilerin karar verme stilleri, birim değişkenine göre incelendiğinde, karar vermede özsaygı puanının birime göre anlamlı farklılık göstermediği tespit edilmiştir. Karar verme stilleri alt boyutlarından kaçıngan karar verme ve panik karar verme ile birim değişkeni arasında anlamlı fark bulunurken (İİBF öğrencilerinin kaçından karar verme puanı MYO öğrencilerinin puanında daha yüksektir.), diğer alt boyutlar ile birim değişkeni arasında ise anlamlı fark bulunamamıştır. Bu bağlamda genel olarak sınıf değişkeninin karar verme stillerinde etkili olmadığı söylenebilir.

Araştırmaya katılan öğrencilerin karar verme stilleri, gelir değişkenine göre incelendiğinde, karar vermede özsaygı puanının gelire göre anlamlı farklılık göstermediği tespit edilmiştir. Karar verme stilleri alt boyutlarından dikkatli karar verme (gelir düzeyi iyi ve çok iyi olan öğrencilerin dikkatli karar verme puanları, gelir düzeyi düşük olan öğrencilere göre daha yüksektir.) ve kaçıngan karar verme (gelir düzeyi düşük olan öğrencilerin kaçıngan karar verme puanı, gelir düzeyi iyi ve çok iyi olan öğrencilere göre daha yüksektir.) ile gelir değişkeni arasında anlamlı fark bulunurken, diğer alt boyutlar ile gelir değişkeni arasında ise anlamlı fark bulunamamıştır. Bu bağlamda genel olarak gelir değişkeninin karar verme stillerinde etkili olduğu söylenebilir.

FULL TEXTS BOOK

Araştırmaya katılan öğrencilerin karar verme stilleri, yaşadığı yer değişkenine göre incelendiğinde, karar vermede özsaygı puanının yaşadığı yere göre anlamlı farklılık gösterdiği tespit edilmiştir. Bunun nedeni yaşam yeri şehir olan öğrencilerin özsagyı puanları, yaşam yeri kırsal ve büyükşehir olan öğrencilerin puanlarına göre daha yüksek olmasından kaynaklanmaktadır. Karar verme stilleri alt boyutlarından dikkatli karar verme (yaşam yeri şehir olan öğrencilerin dikkatli karar verme puanları diğerlerine göre daha yüksektir.) ve kaçıngan karar verme (yaşam yeri büyükşehir olan öğrencilerin kaçıngan karar verme puanı diğerlerine göre daha yüksektir.) puanlarının yaşadığı yere“göre anlamlı farklılık gösterdiği tespit edilmiştir.

Sonuç olarak üniversitelerde öğrencilerinin karar verme stilleri önem ulaştıkları sonuçlar açısından büyük önem taşımaktadır. Dolayısıyla üniversitelerde öğrencilerin karar verme becerilerini geliştirecek sosyal ve kültürel faaliyetlere yer verilmesi, bu konulara ilişkin farkındalık yaratmaya yönelik hem öğrencilere hem de akademik ve idari personele gerekli eğitimlerin verilmesi yararlı olabilir.

ORCID: 0000-0001-6266-8178

ÖZET
İnsan sosyal bir varlık olduğu için başkalarıyla etkileşim ve iletişim kurarak varlığını sürdürmekte ve sosyalleşmektedir. Sağlıklı ilişkiler kurmanın ve sürdürmenin en etkili yolu empati kurmaktan geçmektedir. Empati, bireyin kendisini karşısındaki kişinin yerine koyarak, onun duygu ve düşüncelerini doğru olarak anlaması ve karşısındaki kişiye bunu hissettirmesidir. Motivasyon, bireyin hedef ve amaçları doğrultusunda kendi isteği ile ya da dışarıdan bir etki ile hareket emesidir. Empatik eğilimi yüksek olan kişilerin motivasyon düzeylerinin de yüksek olduğu düşünülmektedir. Bu noktadan hareketle bu araştırmanın amacı, üniversite öğrencilerinin empatik eğilimleri ve motivasyon düzeyleri arasındaki ilişkiyi incelemektir. Araştırmanın örneklemini Salihli Meslek Yüksekokulunda 2023-2024 eğitim öğretim yılında öğrenim gören 177 öğrenci oluşturmaktadır. Araştırma ilişkisel tarama modeline uygun yapılmıştır. Veri toplama aracı olarak "Kişisel Bilgi Formu", "Empatik Eğilim" ve "Motivasyon" ölçeği kullanılmıştır. Araştırma sonucunda, öğrencilerin algısına göre empatik eğilim ile Motivasyon arasında istatistiksel olarak anlamlı ilişkiler olduğu görülmüştür.
Anahtar Kelimeler: Empatik Eğilim, Motivasyon, Üniversite Öğrencileri

ABSTRACT
Since humans are social beings, they maintain their existence and socialize by interacting and communicating with others. The most effective way to establish and maintain healthy relationships is through empathy. Empathy is the ability of an individual to put himself in the other person's shoes, accurately understand his feelings and thoughts, and make the other person feel this. Motivation is the individual's ability to act voluntarily or under external influence in line with his goals and objectives. It is thought that people with high empathic tendencies also have high motivation levels. Starting from this point, the aim of this research is to examine the relationship between university students' empathic tendencies and motivation levels. The sample of the research consists of 177 students studying at Salihli Vocational High School in the 2023-2024 academic year. The research was conducted in accordance with the relational screening model. "Personal Information Form", "Empathetic Tendency" and "Motivation" scales were used as data collection tools. As a result of the research, it was seen that there were statistically significant relationships between empathic tendency and Motivation according to the students' perception.
Key Words: Empathic Tendency, Motivation, University Students

GİRİŞ
İlk olarak Lipps tarafından kullanılan empati kavramı Yunancada 'emp' teriminden türemiş olup, İngilizce 'empathy' sözcüğü ile kullanılmaktadır. Empati kavramı, Türk dilinde duygudaşlık anlamına gelmektedir (Sabirli, 2024: 10). Dökmen'e (2005) göre bu kavram, "aynı duyguların paylaşılması" anlamına gelmektedir. Empati kavramı; "kişinin kendisini karşısındakinin yerine koyması, karşıdaki kişinin duygularını ve düşüncelerini doğru anlaması, hissetmesi ve bunu da ona hissettirmesi" olarak tanımlanmaktadır (Işık, 2024: 586). Diğer bir ifadeyle empati, başkalarının yerine kendini koyarak ya da kendi bakış açısından olayları ve hayatı anlayabilme sanatı şeklinde ifade edilebilir (Gül vd.,

FULL TEXTS BOOK

2017:1862). Davis (1983) empatiyi, "bir kişinin gözlenebilir deneyimlerine diğer kişinin tepkileridir" şeklinde tanımlarken (Kaya ve Çolakoğlu, 2015: 22), Rogers (1983) "insanların şahsi iletişimde oldukları kişilerin ruh haline bürünmesi, durumları onların gözü ile görmesi, o kişilerin duygu ve davranışlarını doğru olarak kabul etmesi ve sonuç olarak bu tavırlarını onlara bildirmesi süreci" olarak tanımlamıştır (Sabirli, 2024: 12). Hogan (1969) ise empati kavramını, başka bir insanın içinde bulunduğu durumu zihinde ve hayali olarak algılama durumu ya da kişi aynı durumu hiç yaşamamış dahi olsa diğer insanların duygularını anlayabilme becerisi şeklinde ifade etmiştir (Aydın, 2023: 29). Bir başka tanıma göre ise empati, bir kişinin başka bir kişinin duygularını anlayarak o kişiyle ilişki oluşturmasıdır (Türk, 2023: 4). Empatik eğilim kavramı ise, kişinin rutin yaşamında kendisini karşısındaki kişinin yerine koyabilme ve yaşadığı olaylara ve içinde bulunduğu duruma onun gözünden bakabilme potansiyeli olarak tanımlanabilir (Aydın, 2023: 27). Diğer bir deyişle empatik eğilim, kişilerin duygusal halini ve duygusal derinliğini ortaya koyabilme becerisi olarak tanımlanabilir. Dolayısıyla empatik eğilim, empatinin duygular ile ilişkisini açıklar (Atasoy, 2024: 4). Empatik eğilim, empatik duyarlılık ile ortaya çıkmaktadır. Empatik eğilimi yüksek olan kişiler kolaylıkla empati kurabilirler. Empatik eğilimi yüksek olanların yaşama pozitif bakan, hoşgörülü, özgüvenli, psikolojisi sağlam, sevecen, yardımsever ve motivasyonu yüksek kişiler oldukları söylenebilir (Yüksel, 2004: 343). Empati becerisi, kişinin sosyal ilişkilerinin daha pozitif ve kaliteli olmasına katkıda bulunmaktadır. Bu durum kişilerin motivasyonunu da olumlu yönde etkilemektedir (Aydın Kartal ve Aker, 2020: 98).

Motivasyon, insan davranışlarına yön veren bir güçtür. Bu bağlamda motivasyon, kişinin içindeki gücü harekete geçirme, bir şeye istek duyma ve ona ulaşma isteğidir. Motivasyon gerek eğitim yaşamında öğrenciler, gerekse iş yaşamında çalışanların başarısı açısından önemli bir role sahiptir (Korkmazer, 2020: 502). Çünkü motivasyon, kişilerin ihtiyaç duyduğu neredeyse her şeyle yakından ilişkilidir. Bu açıdan motivasyon, kişilerin hedeflerini gerçekleştirmeye yönelik ortaya koyduğu çabalardır (Tataroğlu, 2017: 1). Akademik açıdan motivasyonu yüksek olan öğrenciler derslere istekli bir şekilde katılarak derslere yönelik başarıları ve performansları olumlu etkilenir (Korkmazer, 2020: 502). Motivasyon kavramını, Türk Dil Kurumu "hedefe doğru yönelmeye neden olan zihinsel bir durum" olarak tanımlanmaktadır (TDK, 2011). Tucker vd. (2002) motivasyonu, "öğrencinin eğitime olan yatırımı ve bağlılığını belirleyen zihinsel, duygusal ve davranışsal belirleyicileri" şeklinde tanımlamaktadır (Ergin ve Karataş, 2018: 868). Motivasyon kişide çalışma isteği uyandıran ve bu çalışmanın sürekliliğini sağlayan güçler topluluğudur (Güney, 2013: 353). Motivasyonun genel olarak iç ve dış motivasyon olmak üzere iki türü vardır. Eğitimde öğrencilerin başarı motivasyonunda da etkili olan içsel ve dışsal kaynaklar vardır (Ergin ve Karataş, 2018: 868). İç motivasyon, dışarıdan herhangi bir etki olmadan kişinin belirli davranışlara yönelmesi ve odaklanmasıdır. İçsel motivasyonda davranışlar kişinin içinden gelen güçle ilgi, merak, ihtiyaç vb. gibi duygularla kendiliğinden ortaya çıkmaktadır (Gömleksiz ve Serhatlıoğlu, 2013: 102). İç motivasyonda kişinin elde ettiği sonuç; bireysel mutluluk, sahip olduğu inanç ve beklentiler doğrultusunda ulaştığı tatmindir (Ağduman, 2014: 24). Dış motivasyon, davranışın belirli bir sonuca ulaşmak için sergilendiği motivasyon türüdür. Kişinin bir davranışı, davranıştan çok davranışın sonuçları için gerçekleştirmesidir (Deci vd., 1991: 328). Dış motivasyonda davranışlar çevrenin etkisindedir. Bu bağlamda çevre davranışı kontrol etmektedir (Tataroğlu, 2017: 28). Dış motivasyon ödül ve ceza temeline dayalıdır.

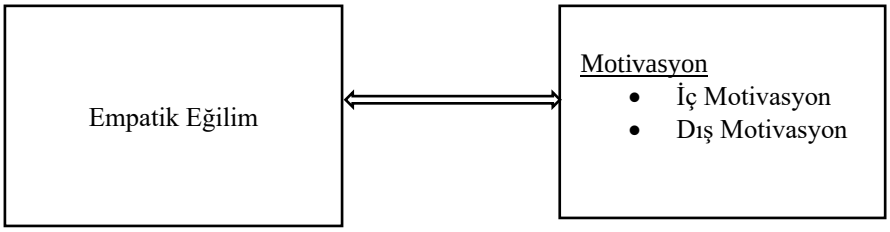
YÖNTEM

Araştırmanın Amacı

Bu araştırmada, üniversite öğrencilerinin algılarına göre empatik eğilim ile motivasyon arasındaki ilişkinin incelenmesi amaçlanmıştır. Çalışmada ilişkisel tarama modeli uygulanmıştır. Araştırma verilerini toplamada anket yöntemi kullanılmıştır.

FULL TEXTS BOOK

Evren ve Örneklem



Manisa Celal Bayar Üniversitesi Salihli Meslek Yüksekokulu öğrencileri araştırmanın evrenini oluşturmaktadır. Tesadüfi örnekleme yöntemiyle anket uygulanan 177 öğrenci ise araştırmanın örneklemi oluşturmaktadır. Veriler 2023-2024 eğitim öğretim yılı bahar döneminde toplanmıştır.

Veri Toplama Araçları

Araştırmaya katılan öğrencilerin empatik eğilimlerini belirlemeye yönelik "Empatik Eğilim Ölçeği", motivasyon düzeylerini belirlemek için "Üniversite Öğrencilerinde Motivasyon Ölçeği" kullanılmıştır. Araştırmada kullanılan "Empatik Eğilim Ölçeği" Dökmen (1988) tarafından geliştirilmiştir. Ölçek 20 maddeden ve tek boyuttan oluşmaktadır. 5'li Likert tipindeki (1=tamamen aykırı, 5=tamamen uygun) ölçekten alınan yüksek puan empatik eğilim düzeyinin yüksek olduğunu göstermektedir. Bu çalışmada ölçeğin Cronbach Alpha değeri .77 olarak tespit edilmiştir. Öğrencilerin motivasyon düzeylerini belirlemek için ise Yılmaz (2018) tarafından geliştirilen, 22 madde ve üç boyuttan (iç motivasyon, dış motivasyon, motivasyonsuzluk) oluşan "Üniversite Öğrencilerinde Motivasyon Ölçeği" kullanılmıştır. Bu çalışmada ölçek motivasyonsuzluk boyutu (5, 9, 17, 22, 23 nolu maddeler) hariç tutularak, iç motivasyon ve dış motivasyon olmak üzere iki boyut kapsamında değerlendirilmiştir. 5'li likert tipindeki ölçekten alınan yüksek puanlar motivasyon düzeyinin yüksek olduğunu göstermektedir.

Araştırma Modeli ve Hipotezleri

Bu araştırma ilişkisel tarama modelinde tasarlanmıştır. Bu doğrultuda üniversite öğrencilerinin algılarına göre empatik eğilim ile motivasyon ve alt boyutları (iç motivasyon, dış motivasyon) arasındaki ilişkiler incelenmiştir.

Şekil 1. Araştıma Modeli

Araştırmanın hipotezleri aşağıdaki gibi oluşturulmuştur.

H1: Katılımcıların empatik eğilimleri ve motivasyon düzeyleri arasında ilişki vardır.

H2: Katılımcıların empatik eğilimleri ve iç motivasyon düzeyleri arasında ilişki vardır.

H3: Katılımcıların empatik eğilimleri ve dış motivasyon düzeyleri arasında ilişki vardır.

Verilerin Analizi

Araştırmanın amacı doğrultusunda empatik eğilim ve motivasyon ve alt boyutları arasında anlamlı ilişki olup olmadığını saptamak için Pearson Korelasyon Analizi yapılmıştır. Ayrıca demografik değişkenlere ve ölçeklere ilişkin betimsel istatistikler belirlenmiştir.

BULGULAR

Tanımlayıcı İstatistiklere İlişkin Bulgular

Demografik değişkenlere dağılım ve empatik eğilim ile motivasyon ölçeklerine ilişkin tanımlayıcı istatistikler aşağıda tablolar halinde sunulmuştur.

Tablo 1. Katılımcıların Cinsiyetine Göre Dağılımı

Değiken	Grup	N	%
Cinsiyet	Kız	69	39
	Erkek	108	61
	Toplam	177	100

Tablo 1'de görüldüğü gibi, araştırmaya katılan öğrencilerin %39'u kız, %61'i erkektir.

FULL TEXTS BOOK

Tablo 2. Katılımcıların Yaşına Göre Dağılımı

Değiken	Grup	N	%
Yaş	18-21 yaş	81	45,8
	22-23 yaş	64	36,2
	24 ve üzeri	32	18,1
	Toplam	177	100

Tablo 2'de görüldüğü gibi, araştırmaya katılan öğrencilerin %45,8'i 18-25 yaş, %36'2'si 22-23 yaş ve %18,1'i ise 24 ve üzeri yaş aralığındadır.

Tablo 3. Katılımcıların Sınıf Düzeyine Göre Dağılımı

Değiken	Grup	N	%
Sınıf düzeyi	1.Sınıf	64	36,2
	2.Sınıf	113	63,8
	Toplam	177	100

Tablo 3'de görüldüğü gibi, araştırmaya katılan öğrencilerin %36,2'si 1. Sınıf, %63,8'i ise 2. Sınıf öğrencisidir.

Tablo 4. Katılımcıların Gelir Düzeyine Göre Dağılımı

Değiken	Grup	N	%
Gelir düzeyi	Çok düşük	14	7,9
	Düşük	44	24,9
	Orta	78	44,1
	Yüksek	27	15,3
	Çok yüksek	14	7,9
	Toplam	177	100

Tablo 4'de görüldüğü gibi, araştırmaya katılan öğrencilerin %44,1'i orta, %24,9'u düşük, %15,3'ü yüksek, %7,9'u çok düşük, %7,9'u ise çok yüksek gelir düzeyine sahiptir.

Tablo 5. Empatik Eğilim İle Motivasyon ve Alt Boyutlarına İlişkin Tanımlayıcı İstatistikler

Değişkenler	N	Ortalama	Std. Sapma
Empatik Eğilim	177	3,57	,600
İç Motivasyon	177	2,49	,409
Dış Motivasyon	177	2,68	,695
Genel Motivasyon	177	2,59	,479

Tablo 5'de görüldüğü gibi, empatik eğilim 3,57, motivasyon alt boyutları olan iç motivasyon 2,49, dış motivasyon 2,68 ve genel motivasyon 2,59 puan ortalamasına sahiptir.

Empatik Eğilim İle Motivasyon Arasındaki İlişkiye İlişkin Bulgular

Tablo 6. Empatik Eğilim İle Motivasyon Ölçekleri Arasındaki Korelasyon Değerleri

Değişkenler	1	2	3	4
1.Empatik Eğilim	1	,527**	,422**	,488**
2.İç Motivasyon	,527**	1	,482**	,600**
3. Dış Motivasyon	,422**	,482**	1	,760**
4. Genel Motivasyon	,488**	,600**	,760**	1

Tablo 6'daki empatik eğilim ile motivasyon ve alt boyutları arasındaki korelasyon değerleri incelendiğinde, empatik eğilim ile motivasyon boyutlarından iç motivasyon (r=,527; p=,000), dış motivasyon (r=,422; p=,000) ve genel motivasyon (r=,488; p=,000) arasında pozitif yönlü, orta düzeyde

FULL TEXTS BOOK

ve istatistiksel olarak anlamlı ilişkiler olduğu görülmektedir. Elde edilen bu sonuçlara göre H1, H2, H3 hipotezlerinin desteklendiği söylenebilir.

SONUÇ

Çalışmanın konusunu empatik eğilimler ve motivasyon kavramları oluşturmaktadır. Araştırmanın kapsamını Manisa Celal Bayar Üniversitesi Salihli Meslek Yüksekokulu öğrencileri oluşturmaktadır. 21. Yüzyılda bireylerin iş yaşamında başarılı olabilmeleri için dışa dönük, girişken, sosyal becerileri ve motivasyonu yüksek bireyler olmaları gerekmektedir. Dolayısıyla üniversite öğrencilerinin empatik becerilerinin geliştirilmesi ve motivasyonlarının artırılması konusunda onlara katkı sağlayacağı söylenebilir.

Yapılan araştırmada empatik eğilim ve motivasyon arasındaki ilişki üniversite öğrencileri özelinde incelenmiştir. Araştırma bulgularına göre; empatik eğilim ile motivasyon ve motivasyonun iç motivasyon ve dış motivasyon alt boyutları arasında pozitif yönlü orta düzeyde anlamlı ilişkiler tespit edilmiştir. Buna göre H1, H2 ve H3 hipotezleri doğrulanmıştır. Ölçeklere ilişkin betimsel istatistiklere göre empatik eğilim düzeyi yüksek (3,57), motivasyon düzeyi ise ortalamanın biraz altındadır (2,59). Ayrıca motivasyon alt boyularından dış motivasyon puan ortalaması iç motivasyon puan ortalamasından daha yüksektir.

Empatik eğilim ve motivasyon ilişkisi üzerine literatürde bir çalışmaya rastlanmadığından bu araştırmada elde edilen sonuçlar başka çalışmalarla karşılaştırılıp tartışılamamıştır. Bu bağlamda bu çalışmanın söz konusu iki kavramı birlikte ele alan çalışmalara ışık tutması açısından literatüre katkı sağlayacağı düşünülmektedir.

ÖZET

Amaç: Parmak kuklasıyla dikkati yönlendirmenin amacı 3-6 yaş aralığındaki çocukların ağrı düzeyi üzerindeki etkisini bulmaktı. Bu çalışmanın çocukların ağrılı işlemlere ilişkin olumsuz deneyimlerini azaltacağı ve çocuk servisinde çalışan hemşirelerin hasta bakım uygulamalarına yön vereceği düşünülmektedir.

Yöntem: Yapılan çalışmanın evrenini, Orta Karadeniz bölgesinde yer alan bir Eğitim Araştırma Hastanesine 01/12/2023-30/05/2024 tarihleri arasında yatışı yapılan 3-6 yaş grubu çocuklar oluşturmaktadır. G-power ile 64 kişilik (deney grubu=32, kontrol grubu=32 kişi) örneklem belirlenmiştir. Veriler, 'Veli Onay Formu' alınması ardından 'Çocuk ve Aileye Yönelik Tanıtım Bilgi Formu', 'flacc ağrı skalası' ile toplandı. Deney grubunda damar yolu açma işlemine başlamadan bir dakika önce parmak kuklası oynatıldı. Kontrol grubunda ise sadece damaryolu açıldı. Çocukların işlem esnasında hissettiği ağrı hemşire ve çocukların ifadeleri ile değerlendirildi. Verilerin değerlendirilmesinde Kolmogorov Smirnov testi, Ki-kare ve Fisher's Exact testi, t testi, Mann-Whitney U testi kullanıldı. Önem düzeyi $p<0,001$; $p<0,01$ ve $p<0,05$ olarak alındı.

Bulgular: sosyodemografik özelliklerinin dağılımı ve karşılaştırılmasında Kontrol grubunun %46,9'u ve deney grubunun %53,1'i kızlardan oluşmaktadır. Kontrol grubun bulunan çocukların yaş ortalaması 4,1±1,1 iken, deney grubunda bulunan çocukların yaş ortalaması 2,13±1,04'dır. Deney grubundaki çocukların damar yolu açma işlemi sırasında daha az ağrı yaşadığı ($p<0,001$), Kız çocuklarının ağrı puan ortalamasının erkek çocuklarınkinden daha yüksek olduğu belirlenmiştir. Kontrol grubundaki kız ve erkek çocukların ağrı puan ortalamalarının birbirine oldukça yakın olduğu görülmüştür.

Sonuç: Çalışmada işlem sırasındaki ağrı puanının deney grubunda kız ve erkek çocukları arasında istatistiksel olarak fark olduğu ortaya çıkmıştır. Kız çocuklarının ağrı puan ortalamasının erkek çocukların ağrı puan ortalamasından daha yüksek olduğu saptandı.

Anahtar Kelimeler: Damar Yolu Açma; Çocuk; Parmak Kukla; Ağrı; Dikkati Başka Yöne Çekme.

ABSTRACT

Purpose: The aim of directing attention with a finger puppet was to find out the effect of directing attention on the pain level of children aged 3-6. It is thought that this study will reduce children's negative experiences regarding painful procedures and will guide the patient care practices of nurses working in the pediatric ward.

Method: The population of the study consists of children aged 3-6 who were admitted to a Training and Research Hospital located in the Central Black Sea region between 01/12/2023-30/05/2024. A sample of 64 people (experimental group = 32, control group = 32 people) was determined with G-power. Data were collected with the 'Introduction Information Form for Children and Family' and the 'flacc pain scale' after obtaining the 'Parent Approval Form'. In the experimental group, a finger puppet was played one minute before starting the vascular access procedure. In the control group, only vascular access was

FULL TEXTS BOOK

established. The pain felt by the children during the procedure was evaluated by the statements of the nurse and the children. Kolmogorov Smirnov test, Chi-square and Fisher's Exact test, t test, Mann-Whitney U test were used to evaluate the data. Significance level $p<0.001$; It was taken as $p<0.01$ and $p<0.05$.

Results: In the distribution and comparison of sociodemographic characteristics, 46.9% of the control group and 53.1% of the experimental group are girls. While the average age of the children in the control group is 4.1±1.1, the average age of the children in the experimental group is 2.13±1.04. It was determined that the children in the experimental group experienced less pain during the vascular access procedure ($p<0.001$), and the average pain score of the girls was higher than that of the boys. It was observed that the pain score averages of girls and boys in the control group were quite close to each other.

Conclusion: The study revealed that there was a statistical difference in the pain score during the procedure between boys and girls in the experimental group. It was determined that the average pain score of girls was higher than the average pain score of boys.
Key Words: Vascular Access; Child; Finger Puppet; Pain; Diverting Attention.

Giriş

Kişisel yapı ile yakından ilişkili olan ağrı; fizyolojik, davranışsal, psikolojik, gelişimsel ve sosyokültürel faktörlerle ilişkili bir deneyimdir. İlk kez çocukluk döneminde deneyimlenir (1). Uluslararası Ağrı Araştırmaları Derneği'nin (International Association for the Study of Pain-IASP) tanımlamasında ağrı "Vücudun belirli yerinde kaynaklanan, doku hasarı sebebiyle veya olmayan, bireyin daha önce yaşadığı tecrübelerinden etkilenen ve istenilmeyen olayı uzaklaştırmaya yönelik iyi olmayan biyolojik durum veya deneyim"dir. Hastalık, her çocuğun yaşayabileceği en sık görülen stres kaynaklarından biridir. Yaşı ne olursa olsun hastanede kalmak çocuklar üzerinde olumsuz izlenim bırakabilecek önemli bir olaydır (2). Hastanede yatan çocuklarda damar yolu açma yaygın olarak uygulanan bir tıbbi işlemdir ve küçük bir müdahale gibi görünse de ciddi ağrı ve sıkıntıya neden olur (3). Çocuğun yaşadığı ağrı; davranışlarını, aileyle iletişimini, beslenme düzeyini etkilemenin yanı sıra büyümeyi de olumsuz etkileyerek beyin ve duyu gelişiminde değişikliklere neden olur (4,5). Ağrı çocukların yaşamını etkileyen en önemli durumlardan biridir (6). Çocukluk çağında oluşan ağrı reaksiyonu çocuğun gelecekteki ağrısını oluşturur ve ağrılı işlemler sırasında edinilen deneyimler onun ağrıya olan tepkisini şekillendirir (7,8). Bilimsel araştırmalar da, özellikle aşı, enjeksiyon ve damar yolu açma gibi uygulamaların çocuk için ağrı verici işlemler olduğu gösterilmiştir (9). Çocuklar bu işlemleri korku verici bir girişim olarak algılarlar (10). Çocukların, artan ağrı ve korkuya yanıt olarak daha sonraki tıbbi uygulamalardan kaçınmasına neden olur (11). Bu nedenle damar yolu açarken ve diğer tıbbi uygulamalarda girişimlerin etkili yönetilmesi gerekmektedir (12). Ağrı yönetimi için farmakolojik ve nonfarmakolojik yöntemler kullanılmaktadır. Ağrının algı ve duyu ile ilişkili bir boyutu olduğunu varsayan bilişsel/davranışsal görüşe göre çocuklar da dikkati dağıtmak ağrıyı az hissetmelerinde etkilidir (13). Hasta dikkatini başka yöne çevirerek kendini acıdan korur.Hastalarda dikkati başka yöne çekme yöntemi ağrının tamamen yok olmasını sağlamaz ama ağrı toleransını artırır (14,15). Bu da hastanın ağrı eşiğini yükseltir. Dikkati farklı yöne çekme ağrı kontrolü hissi sağlayarak hastanın keyif aldığı şeylere odaklanmasını sağlar (16,17). Dikkati dağıtmak için farklı yöntemler kullanılmaktadır. Flash kart kullanmak, çizgi film izlemek, kaleydoskop kullanmak, köpük üfleyerek balon oluşturmak, değişik konular hakkında konuşmak, müzik dinlemek, sanal gerçeklik gözlüğü kullanmak, balon şişirmek ve parmak kukla oynatmak gibi sayabiliriz (17,18).

Oyun; çocuğun kişiliğini rahatsız eden travmaya neden duygularını deneyim ve korkularını, oyun ve oyuncağa yansıtarak, stres ve ağrının az hissedilmesinde, problemle başa çıkma ve uyum sağlamasına

FULL TEXTS BOOK

yardımcı olan bir araçtır. Oyun esnasında çocuğun damar yolu açma işleminde kullanılan araçları eline alıp tanıması ile yaşadığı korkuyu ve ağrıyı azalttığı bildirilmiştir (18). Ayrıca bazı araştırmalar oyunun çocukların hastanedeki iyileşmesini hızlandırdığını da ortaya çıkarmıştır (19).

3- 6 yaş arası çocuklar aktif ve enerjiktir. Oyun döneminde olan çocuklar korkularını düzgün ifade edemezler ve her zaman ailelerinin ve oyuncaklarının yanında bulunmalarını isterler. 3-6 yaş grubu çocuk için oyun ve oyuncaklar oldukça önemlidir (20). 3-6 yaş arası çocukların dikkat ve gözlem becerileri henüz tam olarak gelişmemiştir. IV uygulamalarını ceza gibi değerlendirebilirler.Çocuklara yapılan işlemin nedeni anlatılmalı ve çocuğun yaşadığı stres ve korkusu samimi bir dokunuşla hafifletilmelidir. Bu nedenle hemşirelerin çocuklarla etkili iletişim kurmaları ve onların renkli dünyalarını gözlemlemeleri, çocukların ağrılarını ve işlemlere verdikleri duygusal tepkileri yaşa/zamana uygun farmakolojik olmayan yöntemlerle yönetmeleri gerekmektedir (21).

Parmak kuklasıyla dikkati yönlendirmenin amacı 3-6 yaş aralığındaki çocukların ağrı düzeyi üzerindeki etkisini bulmaktı. Bu çalışmanın çocukların ağrılı işlemlere ilişkin olumsuz deneyimlerini azaltacağı ve çocuk servisinde çalışan hemşirelerin hasta bakım uygulamalarına yön vereceği düşünülmektedir.

Gereç Ve Yönetim

1. Araştırmanın Amacı ve Tipi

Araştırma, pediatri 1-2-3 servislerinde parmak kukla oyunu ile dikkati başka yöne çekerek damar yolu açma işlemi sırasında 3-6 yaş grubu çocukların ağrı düzeyini belirlemek amacıyla yarı deneysel olarak yapıldı.

2. Araştırma Hipotezi

Damar yolu açma işlemi esnasında parmak kuklası oynatılarak dikkati farklı tarafa çekilen deney grubundaki çocukların hissettikleri ağrı puan ortalaması diğer grup olan kontrol grubunda bulunan çocuklara göre daha azdır.

3. Araştırmanın Bağımlı-Bağımsız Değişkenleri

3.1. Araştırmanın Bağımlı Değişkenleri;

Face, Legs, Activity, Cry, Consolability (FLACC) Ağrı Değerlendirme Skalası puan ortalaması

3.2. Araştırmanın Bağımsız Değişkenleri;

Araştırmaya katılan kişilerin sosyo demografik özellikleri

4. Araştırmanın Yapıldığı Yer ve Zaman

Araştırma, Orta Karadeniz bölgesinde yer alan bir Eğitim Araştırma Hastanesi çocuk servislerinde 01/12/2023-30/05/2024 tarihleri arasında yapılmıştır. Bu hastanede 3 çocuk servisi bulunmaktadır. Çocuk 1 servisinde 25, çocuk 2 servisinde 25, çocuk 3 servisinde 20 hasta yatağı bulunmaktadır. Damar yolu açma işlemi servilerin tedavi ve müdahale odalarında gerçekleştirilmiştir. Çocuk 1 servisinde 11 hemşire, 8 tane pediatri doktoru 2 tane endokrinoloji uzmanı, 1 tane gastroentroloji uzmanı, 1 tane enfeksiyon uzmanı, 1 tane alerji ve immünoloji uzmanı görev yapmaktadır. Çocuk 2 servisinde 11 tane hemşire, 8 tane pediatri uzmanı, 2 tane endokrinoloji uzmanı, 2 tane nefroloji uzmanı, 1tane hematoloji uzmanı görev yapmaktadır. Çocuk 3 servisinde 11 hemşire, 2 tane kardiyoloji uzmanı, 1 tane nöroloji uzmanı, 1 tane nefroloji uzmanı, 1 tane göğüs hastalıkları uzmanı çalışmaktadır.

5. Araştırmanın Evreni ve Örneklemi

Yapılan çalışmanın evrenini, Orta Karadeniz bölgesinde yer alan bir Eğitim Araştırma Hastanesine 01/12/2023-30/05/2024 tarihleri arasında yatışı yapılan çocuklar oluşturmaktadır (N=751). Çalışmanın yapılabilmesi için yapılmış bir yayın referans alınarak makalenin ana hipotezine göre; iki grup ortalamalarına göre etki büyüklüğü 0,63 olarak hesaplanmıştır. Hesaplanan etki büyüklüğünden hareket ile 64 kişilik (deney grubu=32, kontrol grubu=32 kişi) örneklemin yeterli olacağı belirlenmiştir. Örneklem genişliğinin tespit edilebilmesi için G-Power, v.3.1.0 programı ile analiz yapılmış, ve alfa hata 0.05,güç değeri 0,80 alınmış olup, yapılacak olan anket görüşmesi sonucunda değişkenler arasında farklılık olacağı düşünülerek minimum 64 kişilik örneklemin yeterli olacağı ön görülmüştür.

FULL TEXTS BOOK

6. Araştırmaya Alınma ve Dışlanma Ölçütleri

Araştırmaya alınma ölçütlri;, 3-6 yaş grubunda olma, araştırmaya katılmaya gönüllü olma, psikiyatrik tanısı olmama, iletişim engeli bulunmama ve bilinç bulanıklığı olmamasıdır.

Araştırmadan dışlanma ölçütleri; 3-6 yaş grubunda olmama, psikiyatrik tanısı olma, iletişim engeli bulunması,araştırmaya katılmayı kabul etmemeleri ve bilinç bulanıklığının bulunmasıdır. 3.9. İstatistiksel Analiz

IBM SPSS V23 ile verilerin analizi yapıldı. Kolmogorov Smirnov testi ile normal dağılıma uygunluğu incelendi. Ki-kare ve Fisher's Exact testleri gruplara göre kategorik değişkenlerin karşılaştırmasında kullanıldı. Her iki gruba göre normal dağılan verilerin karşılaştırılmasında Bağımsız örnekler t testi ve normal dağılmayan verilerin karşılaştırılmasında Mann-Whitney U testi kullanıldı. Analiz sonuçları nicel veriler için ortalama±s. sapma ve ortanca (minimum – maksimum) şeklinde kategorik veriler ise frekans (yüzde) olarak sunuldu. Önem düzeyi $p<0,001$; $p<0,01$ ve $p<0,05$ olarak alındı.

7. Araştırmanın Etik Yönü

Araştırmanın gerçekleştirilebilmesi için Ondokuz Mayıs Üniversitesi Sosyal ve Beşeri Bilimler Araştırmaları Etik Kurulu'ndan 24.11.2023 'de ''Etik Kurul Onayı'' alındı (Karar No: 2023/964).

Etik kurul onayı alındıktan sonra araştırmayı yapabilmek için Samsun Eğitim araştırma hastanesinden gerekli kurum izni alındı.

Araştırmaya katılım gönüllülük esasına istinaden yapılmaktadır. Araştırmaya katılan tüm katılımcılardan ''Veli Onay Formu''nu dikkati okumaları hakkında bilgi verildi. Çalışmada kullanılan ölçekler için ölçeği geliştiren kişilerden kullanım için izin alındı.

8. Araştırmanın Sınırlılıkları

Araştırmanın yapıldığı tarihlerde çalışmaya katılan ebeveynler ile sadece Samsun Eğitim ve Araştırma hastanesinde yürütülmüştür.

9. Veri Toplama Araçları

'Veli Onay Formu', 'Çocuk Ve Aileye Yönelik Tanıtım Bilgi Formu', 'Flacc Ağrı Skalası' ve parmak kukla kullanıldı.

Şekil.1.Parmak Kuklası

Bulgular

Bu kısımda damar yolu açma işlemi esnasında parmak kuklası gösterisi ile dikkati farklı yöne çekmenin 3-6 yaş aralığındaki çocukların hissettikleri ağrı düzeyine etkisini belirlemek amacıyla yarı deneysel olarak gerçekleştirilen araştırmadan elde edilen bulgular yer almaktadır.

Tablo 1'de, grupların sosyodemografik özelliklerinin dağılımı ve karşılaştırılması sunulmaktadır. Kontrol grubunun %46,9'u ve deney grubunun %53,1'i kızlardan oluşmaktadır. Kontrol grubun bulunan çocukların yaş ortalaması 4,1±1,1 iken, deney grubunda bulunan çocukların yaş ortalaması 2,13±1,04'dır. Her iki grupta da çocukların en yaygın olarak (%46,9) servise diğer kategorisinde yer alan hastalıklar nedeniyle başvurduğu görülmüştür. Kontrol grubundaki hastaların %43,8'i daha önce 6-10 kez kan aldırmışken, deney grubundaki hastaların %46,9'u daha önce 11 kez veya daha fazla damar yolu açtırmıştır. Hastaneye yatış nedenlerine göre deney ve kontrol grupları karşılaştırıldığında, gruplar arasında istatistiksel olarak anlamlı bir fark bulunmuştur ($p<0,05$). Ancak, cinsiyet, yaş ve damar yolu açtırma sayıları açısından gruplar karşılaştırıldığında, istatistiksel olarak anlamlı bir fark olmadığı tespit edilmiştir ($p>0,05$)

Tablo.2 Deney ve Kontrol Grubun Bulunan Çocukların Ailelerinin Tanıtıcı Özelliklerinin Dağılımı ve Karşılaştırılması (N=64) - Devam

Tanıtıcı özellikler	Deney (n=32)	Kontrol (n=32)	Toplam	Test İs.	p
Ailede bulunan çocuk sayısı (n,%)					
Bir	6(9,4)	14(21,9)	20(31,3)		
İki	17(26,6)	16(25,0)	33(51,6)	X^2=7,685	0,065
Üç ve üzeri	9(14,1)	2(3,1)	11(17,2)		
Aile tipi (n,%)					
Çekirdek	30(46,9)	31(48,4)	61(95,3)	X^2=0,350	0,554
Geniş	2(3,1)	1(1,6)	3(4,7)		
Gelir durumu (n,%)					
Gelir giderden az	9(47,4)	10(52,6)	19(29,7)	X^2=0,075	0,784
Gelir gidere eşit	23(51,1)	22(34,4)	45(70,3)		
İşlem sırasındaki ebeveyn (n,%)					
Anne	29(45,3)	28(43,8)	57(89,1)	X^2=0,160	0,689
Baba	3(4,7)	4(6,3)	7(10,9)		

X^2 : Ki kare test istatistiği, n:Örnek sayısı, %:Yüzde

Her iki gruptaki ailelerde çocuk sayısının genellikle 2 olduğu (kontrol grubu %25,0; deney grubu %26,6) ve ailelerin büyük çoğunluğunun çekirdek aile yapısında olduğu (kontrol grubu %98,4; deney grubu %96,9) tespit edilmiştir. Ailelerin gelir durumu incelendiğinde ise, her iki gruptaki ailelerin çoğunun gelirinin giderine denk olduğu (kontrol grubu %34,4; deney grubu %51,1) belirlenmiştir. İşlem sırasında çocukların yanında çoğunlukla annenin (%89,1) bulunduğu görülmüştür. Babaların yaş ortalamaları açısından deney ve kontrol grupları arasında istatistiksel olarak anlamlı bir fark bulunmuştur ($p<0,05$), deney grubundaki babaların yaş ortalaması kontrol grubundakilerden daha yüksektir. Ancak, ailelerin diğer tanıtıcı özellikleri açısından gruplar arasında istatistiksel olarak anlamlı bir fark bulunmamıştır ($p>0,05$).

Tablo. 3 Grupların Flacc Ağrı Skalası Toplam Puan Ortalamasının Cinsiyete Göre Karşılaştırılması (N=64)

Ölçüm zamanı	Deney Grubu			Kontrol Grubu

Ort: Ortalama, SS: Standart sapma, t: Bağımsız örnekler t testi, **p<0,01

Deney grubundaki kız ve erkek çocukların işlem sırasındaki ağrı puan ortalamaları arasında istatistiksel olarak anlamlı bir fark bulunmuştur ($p<0,001$). Kız çocuklarının ağrı puan ortalamasının erkek çocuklarınkinden daha yüksek olduğu belirlenmiştir. Kontrol grubundaki kız ve erkek çocukların ağrı puan ortalamaları arasındaki fark ise istatistiksel olarak anlamlı değildir ($p>0,05$). Kontrol grubundaki kız ve erkek çocukların ağrı puan ortalamalarının birbirine oldukça yakın olduğu görülmüştür.

Tartışma

İnvaziv prosedürler çocuklar için her zaman ağrı, korku ve kaygı kaynağı olmuştur. Yaşanılan korkular çocuğu ve aileyi kan alma, damar yolu açma, dikiş atma gibi ağrılı müdahalelere karşı isteksiz hale

FULL TEXTS BOOK

getirir ve çocuğun tıbbi tedavisini ve bakımını olumsuz yönde etkiler. Uzun süreli hastanede tedavi görmek zorunda kalan çocuklara tanı ve tedavi sırasında birçok ağrılı müdahale yapılmaktadır. Araştırmalar sonucunda, tıbbi müdahaleler esnasında çocukların anksiyete, korku ve ağrı yaşadığı tespit edilmiştir.

Bu bölümde, damar yolu açma müdahalesi esnasında parmak kukla gösterisi ile yapılan dikkati farklı tarafa çekmenin 3-6 yaş aralığındaki çocukların ağrı seviyesine etkisini tespit etmek amacıyla gerçekleştirilen çalışmadaki bulgular literatür bilgisi eşliğinde üç başlık halinde tartışılmıştır.

1. Çocukların Tanıtıcı Özelliklerinin Tartışılması

Araştırma grubunu 32 kontrol, 32 deney olmak üzere toplam 64 çocuk oluşturmuştur. 32 kız çocuk ve 32 erkek çocukta oluşan örneklem grubunun gruplar arasında fark bulunmaktadır ve deney grubunun da kontrol grubunun da yaş ortalaması 2.13 ±1.04'dür. Çocuk populasyonunda değişik yaş gruplarında ağrının azaltılmasına yönelik yapılmış pek çok çalışma bulunmaktadır (22,23).

Ağrılı uyarana karşı çocuğun verdiği tepkileri cinsiyet, bireysel farklılıklar genel sağlık durumu, hastalığının şiddeti, geçmiş deneyimler, baş etme yeteneği, uyanıklık durumu, ağrılı uyaranların çeşidi ve zamanı etkilemektedir (24). Bu sebeple araştırma kapsamında kontrol gruplarında ve deney gruplarında olan bütün çocuklar belirleyici özellikler açısından incelenmiş, cinsiyet, yaş ve damar yolu açtırma sayısı yönünden gruplar arasında istatistiksel yönünde anlamlı farklılık bulunmamıştır ($p>0,05$). Damar yolu açma işlemi sırasında ağrıyı etkileyebileceği düşünülen cinsiyet, yaş ve damar yolu açtırma sayısı gibi özelliklerin deney ve kontrol gruplarında eşit dağılması sağlanmış ve yapılan uygulamanın etkinliği değerlendirilirken bu özelliklerden etkilenme ihtimali ortadan kaldırılmıştır (Tablo 1).

2. Çocukların Ailelerinin Tanıtıcı Özelliklerinin Tartışılması

Çalışma sonuçlarına göre; anne yaşı, anne öğrenim durumu, anne iş durumu, baba öğrenim durumu, baba iş durumu, aile tipi, ailede çocuk sayısı, gelir durumu ve işlem sırasıdaki ebeveyn cinsiyeti arasında istatistiksel açıdan bir fark bulunmamaktadır , ($p \square 0.05$)(Tablo2).

Girişimsel işlemler gibi ağrılı işlemler sırasında ebeveyninin çocuğun yanında olmasının olumlu etkilerini inceleyen çalışmalar, ağrı skorlarını düşürmede, korkuyu azaltmada ve çocuğu sakinleştirmede olumlu etkisi olduğunu göstermiştir (25,26).

Çocuğa araştırma ve tedavi amacıyla invaziv girişimler öncesinde çocuğun ve ebeveynlerin bilgilendirilmesi ve işleme hazırlanması, çocuk ve ebeveynin kaygısını azaltmayı amaçlamaktadır. Sağlık profesyonellerinin sunduğu bilgilerde ebeveynlerin özellikleri önemlidir (27).

3. İşlem Sırası Flacc Ağrı Skalası Puan Ortalamalarının Tartışılması

Çalışma deney grubu ve kontrol grubu olmak üzere toplamda 64 (deney grubu: 32 kişi, kontrol grubu: 32 kişi) çocuk ile yapılmış, kukla oyunun damar yolu açma işlemi esnasında gelişen ağrıyı hafifletmedeki etkinliği araştırılmıştır. Literatürdeki diğer çalışmalara bakıldığında, ağrı yönetiminde dikkati farklı yöne çekme teknikleri birçok araştırmada kullanıldığı belirlenmiştir (28,30). Fakat 3-6 yaş grubunda damar yolu açma sırasında tedavi edici oyun yöntemlerinden olan kukla gösterisi yapılmış bu tür bir çalışmaya rastlanmamıştır. Çalışmamızın bu alanda yapılan tek araştırma özelliği taşıması nedeniyle literatüre önemli bir katkı sağlayacağı düşünülmektedir.

Çalışmamızda FLACC Ağrı Değerlendirme Ölçeği puan ortalamaları incelendiğinde (Tablo 3), gruplar arasında işlem sırasında fark olduğu tespit edilmiştir. Kukla gösterisi yapılan deney grubunda bulunan çocukların işlem esnasındaki ağrı puan ortalamalarının kontrol grubunda bulunan çocukların ağrı puan ortalamasından belirgin derecede düşük olduğu bulunmuştur.

Damar yolu açma işlemi esnasında parmak kukla gösterisi ile dikkati farklı yöne çekilen çocukların hissettikleri ağrı puanı ortalaması kontrol grubunda bulunan çocuklarla karşılaştırıldığında daha azdır hipotezi desteklenmiş, yapılan kukla oyununun ağrıyı büyük oranda azalttığı sonucuna varılmıştır.

FULL TEXTS BOOK

Venöz kan alma sırasında, Murat Ceylan'ın çalışmasında; terapötik oyun oynatma ve kuklaların ağrıyı hafifletmede etkili olduğu gösterilmiştir (31,32). Crevatin vd."nin (2016) kan alma odasında yaptıkları çalışmada; 200 çocuktan oluşan grubun yarısına oynatılan Angry Bird gösterisi, diğer yarısına ise eğitimli hemşire tarafından farklı figürlerden oluşan kukla gösterisi, balon şişirme- patlatma ve hikaye kitapları okuma gibi dikkati farklı tarafa çekme tekniği uygulanmıştır (30). Video oyunu ile oynayan çocukların hissettikleri ağrı seviyesinin diğer kontrol grubundaki çocuklara göre daha az hissetikleri tespit edilmiştir. Çalışmalarda ağrılı işlemler esnasında değişik yaş grubu çocuklara özgü uygulanan farklı dikkati başka yöne çekme tekniklerinin etkili olduğu görülmüştür (28, 33-36). Çalışma sonuçları, bu çalışma sonuçları ile benzerlik göstermektedir.

Çalışma sonucundan farklı olarak; Landolt ve ark. (2002) tarafından 4-12 yaş grubu yanık tedavisi gören çocuklara pansuman değişimi esnasında çizgi film izlemenin çocuklar tarafından algılanan ağrı seviyesinde istatistiksel olarak anlamlı bir fark oluşturmadığı tespit edilmiştir (37).

Sonuç Ve Öneriler

Bu çalışmada, damar yolu açma işlemi esnasında parmak kukla gösterisi ile dikkati farklı tarafa çekilen çocukların ağrı düzeyine etkisi araştırılmıştır.

Damar yolu açma işlemi sırasında yapılan kukla gösterisi, damar yolu açma işlemine bağlı gelişen ağrıyı azaltmada etkili olduğu sonucuna varılmıştır.

Çalışmaya katılan gruplardaki gruplar arasında yaş ortalaması yönünden belirgin fark olmadığı sonucuna varılmıştır.

Çalışmada işlem sırasındaki ağrı puanının deney grubunda kız ve erkek çocukları arasında istatistiksel olarak fark olduğu ortaya çıkmıştır. Kız çocuklarının ağrı puan ortalamasının erkek çocukların ağrı puan ortalamasından daha yüksek olduğu saptandı.

1. Öneriler

İnvaziv işlemler sırasında, işlem sırasında ve sonrasında ağrıyı azaltmak için oyun ve oyuncakların tedavi yöntemlerinden biri kullanılabilir. Sağlık profesyonelleri çocuklara gereksiz ağrılı işlemlerden mümkün olduğunca kaçınmalı ve ağrıyı azaltacak önlemler almalıdır. Hemşireler araştırmaya dayalı kanıtlarla yeni non farmakolojik yöntemlerden haberdar olmalıdır. Çocuk servislerinde çalışan hemşire ve diğer sağlık çalışanlarına ağrının azaltılmasının önemi ve uygulaması kolay olan parmak kuklanın etkinliği ve kullanımı anlatılmalıdır. Ayrıca bu yaş grubunda daha fazla randomize kontrollü araştırma yapılması önerilmektedir.

SÜRDÜRÜLEBİLİR AKILLI KENTLER İÇİN DEĞER ESASINA DAYALI İMAR UYGULAMA YÖNTEMİNİN GEREKLİLİĞİ

Öğr. Gör. Dr. Vuslat Salalı
Isparta Uygulamalı Bilimler Üniversitesi, TBMYO Mimarlık ve Şehir Planlama Bölümü
Dr. Öğr. Üyesi Şaban İnam
Konya Teknik Üniversitesi, Mühendislik ve Doğa Bilimleri Fakültesi

ÖZET

Arazi ve arsa düzenlemesi çalışmalarının değer esasına dayalı olarak yapılması, taşınmazların "ekonomik tabanlı sosyal hizmet olanaklarının sağlandığı, teknik altyapıya erişimin kolay olduğu ve yerleşim odaklı yönetilmesini" sağlayabilir. Bu bağlamda, değer esaslı (eşdeğerlilik ilkesi uyarınca) yapılacak imar uygulamaları, kentin etkin kaynaklarını yönlendiren, teşvik eden ve sürdürülebilirliği sağlayan teknik bir yaklaşım olarak görülebilir. Ülkemizde mevcut imar uygulama mevzuatımıza (3194 sayılı İmar Kanunu'nun 18. Maddesi ve uygulama yönetmeliği) uygun bir şekilde yapılan arazi ve arsa düzenlemesi çalışmalarına göre daha objektif ve adil bir yaklaşım sunan değer esasına dayalı uygulama modeli, "taşınmazların düzenleme öncesi ve sonrası değerlerinin çeşitli parametreler ve ölçütler kullanılarak belirlenmesi ve bu değer baz alınarak taşınmazın sahipleri adına 'yapılaşmaya hazır imar parseli' olarak tapu sicilinde tescili" esasına dayanır. Değer esasına dayalı olarak yapılan düzenleme çalışmaları, taşınmazları en uygun hale getirmek suretiyle en efektif şekilde kullanımlarını sağlamayı amaçlar. Taşınmazların doğru bir yaklaşımda değerlendirilerek düzenlenmesi, kent yapısının geliştirilmesini, sürdürülebilir odaklı kullanımını, adaletli ve güvenli bir yapının oluşturulmasının temeli olarak görülebilir. Bu kapsamda yerel yönetimler, kamu kurumları ve halkın katılımın sağlandığı 'taşınmaz değerleme' ve 'düzenleme' çalışmalarının yapılması gerekmektedir. Böylelikle, daha sürdürülebilir ve akıllı bir şehir için gerekli olan taşınmazların mevcut ve olası potansiyel değerlerinin belirlenmesi, toplumsal katmanlarda iş birliği (kurumsal eşgüdüm) içerisinde ve şeffaf bir ortamda belirlenebilir. Taşınmazların düzenleme sonunda artan değerlerinin adil dağıtımı sonrasında "artan değerin kamuya aktarılmak suretiyle kentlinin kent içi yaşam koşullarının iyileştirilmesi ve yerel yönetimin güçlendirilmesi" sağlanabilir. Bu nedenle, değer esaslı yapılacak arazi ve arsa düzenlemeleri, sürdürülebilir akıllı kentlerin planlanması ve yürütülmesi için en önemli araçtır. Yapılan çalışma ile bu gereklilik ortaya konulmuştur.

Anahtar Kelimeler: Arazi ve Arsa Düzenlemeleri, Değer Esaslı Dağıtım, Sürdürülebilir Kentsel Gelişme, İmar Uygulaması, Akıllı Kent, Sürdürülebilirlik.

GİRİŞ

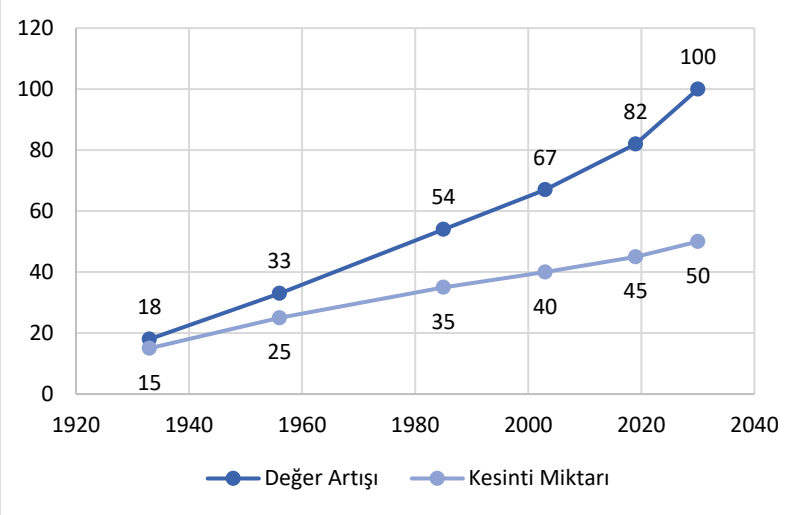
Birleşmiş Milletler (BM) tarafından ileriye yönelik yapılan tahminler sonucunda, dünya genelinde kentli nüfusunun 2050 yılına kadar 2,5 milyar kişi daha artabileceği öngörülmüştür. Söz konusu bu artışın tahminen %90'ının Afrika ve Asya'da gerçekleşeceği öngörülmektedir (World Bank, 2014). Dünya Kalkınma Raporu (2016) ise, yaşanan kentleşme hızı nedeniyle kaçınılmaz iklim değişikliği, artan toplumsal eşitsizlik gibi sorunların varlığına ve "kentlerimizi yeniden düzenlemenin" önemine değinmiştir. Dünya şehirlerinin hızla gelişmeleriyle birlikte, daha sürdürülebilir ve yaşanabilir bir ortam oluşturmak önemli bir hedef haline gelmiştir. Bu bağlamda, 'akıllı şehirler' konsepti ortaya çıkmış ve kent kullanımını daha verimli, çevre dostu ve insan odaklı olmasını sağlamayı hedeflemiştir.

Bugünün ve geleceğin ihtiyaçlarını düşünebilen, kente ait kaynakların ve altyapının yönetilebildiği, teknolojik gelişmeler ve sürdürülebilir çevre gelişimini sağlayan bir bütün olarak ele alınan kentler için kullanılan "akıllı kent" (zeki kent, dijital kent, sürdürülebilir kent, teknolojik kent) kavramı, planlama, uygulama, işletme döngüsünde yeni ve etkin bir yaklaşımdır (Varol, 2017). Akıllı şehirlerin yapısında,

FULL TEXTS BOOK

kalkınma amaçlı yapılan mekânsal planlamayı ve kullanımın etkili bir şekilde gerçekleştirilmesi gerekliliği bulunduğundan, arazi ve arsa düzenlemeleri büyük bir öneme sahiptir.
Arazi ve arsa düzenlemesi çalışmaları, gelişimin ve kalkınmanın sürdürülebilirliğin sağlanması amacı ile yapılan imar planlarının uygulanmasında önemli bir araçtır. Uygulama değer esasına dayalı olarak yapıldığı takdirde, arazi yönetimini düzenleyerek, arazinin verimli kullanımını sağlayarak, yerleşim yerlerinin düzenli ve estetik bir şekilde gelişimini teşvik etmenin yanında, arazi kullanımındaki eşitsizlikleri düzeltmek ve adaleti sağlamak bakımından da ayrıca önemlidir.

ARAZİ VE ARSA DÜZENLEMESİ (AAD) VE ELEŞTİRİLER



Ülkemizde Arazi ve Arsa Düzenlemesi (AAD) çalışmaları, 1848 yılında Mustafa Reşat Paşa döneminde ilk olarak sadece İstanbul ilinde uygulanmak üzere çıkarılan "Ebniye Nizamnamesi (Yapı Tüzüğü)" ile başlamıştır. 1864 yılında "Turuk ve Ebniye Nizamnamesi (Yapı ve Yollar Tüzüğü)" ile yürürlükteki mevzuat geliştirilmiştir. Günümüze kadar yaklaşık 160 yıldır uygulandığı düşünüldüğünde, AAD yönteminin 'kendine has özellikleri içerisinde barındıran köklü bir uygulama' olduğu söylenebilir. Yöntem en kısa şekilde "*tapuda kayıtlı olan taşınmazların, imar planı hükümlerince getirilen düzene uygun biçimde kullanılmalarını sağlamak*" amacıyla; yasal, ekonomik ve toplumsal özellikler dikkate alınarak 'taşınmazların biçimlendirilmesi ve kullanım özelliklerinin belirlenmesi' olarak tanımlanabilir (Salalı ve ark., 2022). Bu nedenle hem taşınmazın mülkiyet yapısında hem de kentsel alanda kullanımında bazı değişimler (taşınmazın cinsi, konumu, sınırları, şekli, payı ve ekonomik değeri) olması mümkündür.
Türkiye'de mevcutta uygulanan arazi ve arsa düzenlemesi yönteminde, alan esaslı dağıtımın benimsendiği, bu yöntemin gereği olarak "düzenlemeye alınan her parselden, düzenleme sahası için hesaplanmış 'düzenleme ortaklık payı (DOP) ve oranı (DOPO) nispetinde toprak kesintisi yapılması" modeli/ilkesi kullanılmaktadır. Bu uygulama, düzenleme ortaklık payı (DOP) kesintisi nedeniyle kamulaştırmaya benzetilen bazı çevreler tarafından kullanım adına yapılan bir düzenleme olarak görülse de aslında bir kamulaştırma işlemi değildir (Köktürk, 2007). İmar ile ilgili işlemler, kamu hukukundan doğan ve kamu gücü kullanılan planlama ve uygulama işlemleridir (Aksay, 1999). Bu nedenle, arazi ve arsa düzenlemesi işlemi, taşınmazlarda imar planına bağlı olarak kullanım haklarını kısıtlayan "kamu kullanımı" amacına sahiptir (Türk ve Türk, 2006). Türkiye'de AAD yönteminin uygulanmasına başlanmasıyla birlikte Tablo 1'de görüldüğü gibi kentsel gereksinimden kaynaklanan altyapı yönetimini sağlamak amacıyla DOP oranı sürekli artmıştır.

Tablo 1.Türkiye'de farklı DOP oranları (Köktürk ve Köktürk, 2019).

FULL TEXTS BOOK

Bu artışların hukuksal zeminde "imar planı ve uygulaması sebebiyle parselde oluşan değer artışına karşılık" olarak yapıldığı ifade edilse de her bir parselden aynı oranda miktarların bedelsiz olarak kesilmesiyle "her parselde aynı oranda bir değer artışının oluşmasının" beklenmesi yanlış olacaktır. Çünkü her bir taşınmazın aynı imar hakkına sahip olması ve uygulamanın ardından her taşınmazda aynı oranda değer artışının yaşanması mümkün olmayacaktır. Ülkemizde AAD uygulamaları sürecinde farklı DOP oranlarına göre oluşan değer artışı ilişkisi Şekil.1'de verilmiştir (Salalı ve ark., 2022).

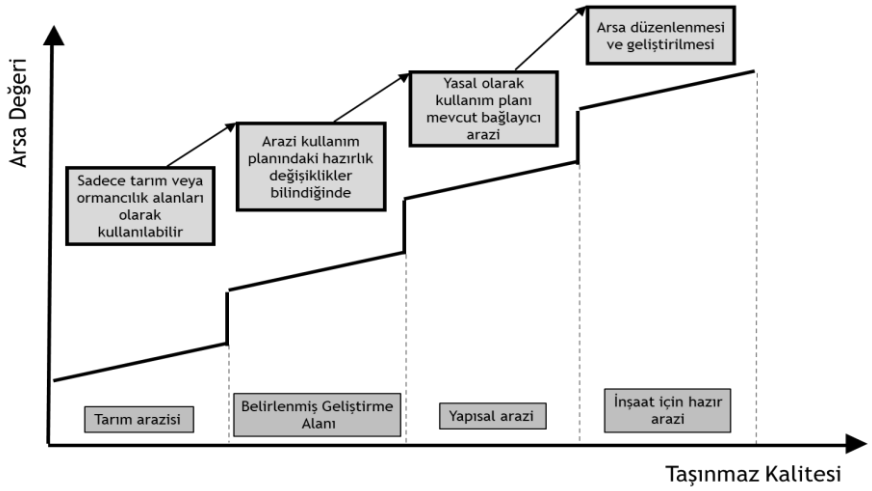
Şekil. 1. DOP oranlarına göre oluşan değer artışı miktarları (Salalı ve ark., 2022).

Mevcut imar mevzuatımıza göre uygulanan AAD yöntemine bakıldığında, uygulamayı yapan kamusal idare ve uygulamaya katılan taşınmaz sahipleri kesimlerinde olumlu ve olumsuz yönleriyle eleştiriler yaşanmaktadır. Yöntem, sorumlu idare açısından bütüncül ve hızlı olması, sorumlu idareye kamulaştırma yükünü azaltması, arsa spekülasyonlarının önlenmesi, düzenli bir kentsel gelişimin sağlanması, kaçak yapıların önlenerek vergi kaynağı yaratması ve istihdam sağlaması gibi avantajlı yönlere sahiptir. Taşınmaz sahipleri için de mülkiyet hakkının korunması, taşınmazın aktif kullanımının sağlanarak ekonomik kazanç sağlaması, taşınmazın sınır ve boyutlarının düzeltilmesi, sosyal ve teknik altyapının sağlanması ve maliyetin yerel yönetim tarafından karşılanması gibi avantajlardan söz edilebilir (Salalı, 2014; Salalı ve ark, 2022).

Taşınmazlarda plana göre meydana gelen değişikliklerden kaçınmanın mümkün olmadığı, ancak önemli olanın bu değişikliklerin her taşınmaza dengeli bir şekilde yansıtılması olduğu açıktır. Söz konusu denge sağlanamadığında ise sorun yaşanacaktır (Salalı, 2014). Düzenleme çalışmaları ile oluşan kentsel taşınmazların (arsa) tahsisi, katkı yüzdesine bağlı olarak göreceli büyüklüklerde olmak üzere sadece düzenlemeye katılan asıl taşınmaz sahipleriyle sınırlıdır. Uygulama neticesinde plan kararlarına göre büyük taşınmazların arsaya dönüşümünde sorun yaşamaz iken, küçük yüzölçümlü ve çok hisseli taşınmazların dönüşümü daha sorunlu olmaktadır (Manandhar, 2019). Ayrıca, düzenleme çalışmalarında her taşınmaz sahibinin onayı gerektiğinden, stresli ve zaman alıcı bir süreç olduğu da söylenebilir (Larsson, 1997). AAD yöntemi benzer nedenlerle, özellikle düzenleme çalışmalarının öncesi ve sonrasını kapsayan süreç içinde yaşanan sorunlar bakımından temelde teknik, planlama, hakçalık, ekonomik ve hukuki konularında eleştirilmektedir (Salalı, 2014).

AAD yöntemi ile ilgili öncelikli eleştirilerin, uygulama öncesi ve sonrası arasında yaşanan değer artışından kaynaklandığı görülmektedir. Mevcut yöntem sürdürülebilir gelişimin sağlanmasından ziyade, yapıya uygun arsa üretmek için uygulanmaktadır. Düzenleme çalışmalarının taşınmaz sahiplerini etkilediği halde katılımın sağlanmaması, değer artışının malikler arasında eşit dağıtılmaması, oluşan bu farkın kamuya aktarılamaması ve alternatif yaklaşımların uygulamaya konulamaması büyük

FULL TEXTS BOOK



bir sorun olarak yöntemi zorlamaktadır. Yapılan düzenleme çalışmalarına yapılan itirazların çoğu belediyeler tarafından reddedilmekte ve konu idari yargıya taşınmaktadır. Uygulamanın odağında yer alan DOP kavramının sadece 'alan esaslı' bir uygulamanın temeli olması, mevcut teknik sorunlara ilave pek çok hukuki soruna da yol açmaktadır. Bu nedenle, mülkiyetin kullanımına ilişkin toplumsal alışkanlıklarımızı da göz önünde tutarak, Türkiye'de AAD yönteminde değer esaslı uygulama (eş değerlilik) ilkesine geçilmesi önem arz etmektedir. Kaldı ki, bütün dünya ülkelerinde AAD yönteminin 'eşdeğerlilik ilkesi/modeli' esaslı uygulanması konusunda fikir birliği bulunmaktadır (Salalı ve ark., 2022).

DEĞER ESASINA DAYALI ARAZİ VE ARSA DÜZENLEMESİ

Günümüzde hızla büyüyen kentli nüfusu ve kentleşme hızı, şehir planlama ve arazi yönetimi konusunda daha sürdürülebilir ve etkili yaklaşımların benimsenmesi hususunu gündemde tutmaktadır. Bu noktada, kalkınma amacı ile hazırlanan imar planlarının mekâna aplikasyonu açısından arazi ve arsa düzenlemeleri önemli bir uygulama aracıdır. Türkiye'de arazi ve arsa düzenlemesi çalışmaları, 3194 sayılı İmar Kanunu'nun 18. maddesi ve buna iat uygulama yönetmeliği baz alınarak gerçekleştirilmektedir. Bu süreçte, değer esaslı (eşdeğerlik ilkesi) dağıtım kriterinin benimsenmesi büyük bir gereklilik olarak ortaya çıkmaktadır.

Değer esası ile yapılan uygulamalarda, taşınmaz sahibine "düzenlemeye başlanmadan önceki taşınmaz değerine yakın ya da aynı değerde" yeni bir taşınmaz (imar parseli) verilir. Değer ölçütü kullanılarak yapılan uygulama yöntemine "**değer esaslı yöntem**" ya da "**eşdeğerlik ilkesi**" denir. Eşdeğerlik ilkesi ile taşınmaz sahibi düzenleme sonucu ne kar ne de zarar etmelidir. Düzenlemeden öncesi ve sonrası bakımından söz konusu taşınmazın imar planına bağlı olarak yüzölçümü, geometrisi ve adresi değişebilir ama değeri aynı kalmalıdır. Bu nedenle, değer esaslı dağıtım kriterinin benimsenmesi, "taşınmazın adil bir şekilde dağıtılmasını, daha verimli kullanılmasını, daha esnek projeler hazırlanmasını, imar planlarına göre kamusal tesisler için gerekli alanın sağlanmasını ve ekonomik kalkınmayı" sağlamaya hizmet edecektir.

Yöntemin esasları, arazilerin mevcut ve sonrası için geçerli olan kullanım değeri, konum, altyapı erişimi ve diğer faktörler dikkate alarak belirlenir. Belirli bir bölgede alınan imar planı kararı ile başlayan taşınmazın ekonomik değer artışı, arsa düzenlemesi uygulamasının yapılması ile olgunlaşıp, iyice artış göstermektedir (Şekil 2). Bu nedenle, uygulama projeleri kentsel gelişim için oldukça önemlidir. Genellikle yenilikçi, ekonomik ve bölgesel arazi kullanımlarının gerçekleştirilmesini amaçlar. Bu içerikte proje geliştirmeleri, piyasaya uygun olması ve kullanımı sürdürülebilir varlıklara odaklanan bir gayrimenkul yaratmaktadır (Ortner ve ark., 2019).

Şekil. 2. Taşınmazın kalitesine bağlı olarak arsa değerinin değişimi (Ortner ve ark., 2019).

FULL TEXTS BOOK

Değer esaslı dağıtım, herkesin mülkiyetini koruyan ve toplumsal adaleti sağlayan bir yaklaşım sunar. Kaynakların etkin ve verimli bir şekilde kullanımını sağlar. Böylelikle enerji, su, altyapı ve diğer kaynaklarda, israfın önlenmesine ve sürdürülebilirlik ilkesinin sağlanmasına katkıda bulunur. Kaynakların doğru ve sürdürülebilir kullanılması ile yatırımların teşvikini sağlar. Artan iş imkânları ile istihdamın sağlanmasına, gelir birikimlerinin artmasına ve ekonomik açıdan kazanç elde edilmesine ve yerel yönetimlerin güçlenmesine neden olur.

Değer esaslı arazi ve arsa düzenlemeleri, akıllı kentlerin sürdürülebilirlik hedeflerinin başarısında da etkin bir rol oynar.

İlk olarak, bu yaklaşım, kaynakları etkin ve verimli şekilde korumayı sağlar. Sınırlı olan kaynaklar, daha yoğun ve kompakt yerleşimlerle daha verimli bir şekilde kullanılır. Bu yöntem altyapı, enerji ve su kaynaklarını daha iyi yönetmeye ve kullanmaya yardımcı olur.

İkinci olarak, değer esaslı arazi ve arsa düzenlemeleri, çevreyi korumayı ve sürdürülebilirlik ilkesini gözetmeyi hedefleyen bir yaklaşımdır. Bu düzenlemeler, doğal çevrenin ve yeşil alanların korunmasını ön planda tutar. Parklar, bahçeler, ağaçlandırmalar ve su sistemleri gibi yeşil alanlar düzenleme sürecine dahil edilir. Bu sayede biyoçeşitlilik korunur, hava ve su kalitesi iyileştirilir ve doğal kaynaklar sürdürülebilir bir şekilde kullanılır. Bu yöntem, çevre dostu bir planlama ve düzenleme yaklaşımı olarak öne çıkarır ve doğal çevrenin dengeli bir şekilde korunmasıyla uyumlu bir yapı oluşturur.

Üçüncü olarak, değer esaslı arazi ve arsa düzenlemeleri, toplumsal bütünleşmeyi ve sosyal dengenin sağlanmasını amaçlayan bir yaklaşımdır. Bu uygulamalar, farklı gelir ve yaşam biçimlerine yönelik konut seçeneklerini değerlendirir ve toplumsal katılımı teşvik eder. Aynı zamanda, erişilebilir ve yaşanabilir kültürel ve sosyal merkezlere kolay erişim sağlamayı hedefler. Bu şekilde, toplumun geniş kesimleri için uygun ve çeşitli konut seçenekleri sunar, sosyal ve kültürel etkileşimi arttırır ve toplumun bir arada yaşama ve katılımını destekler.

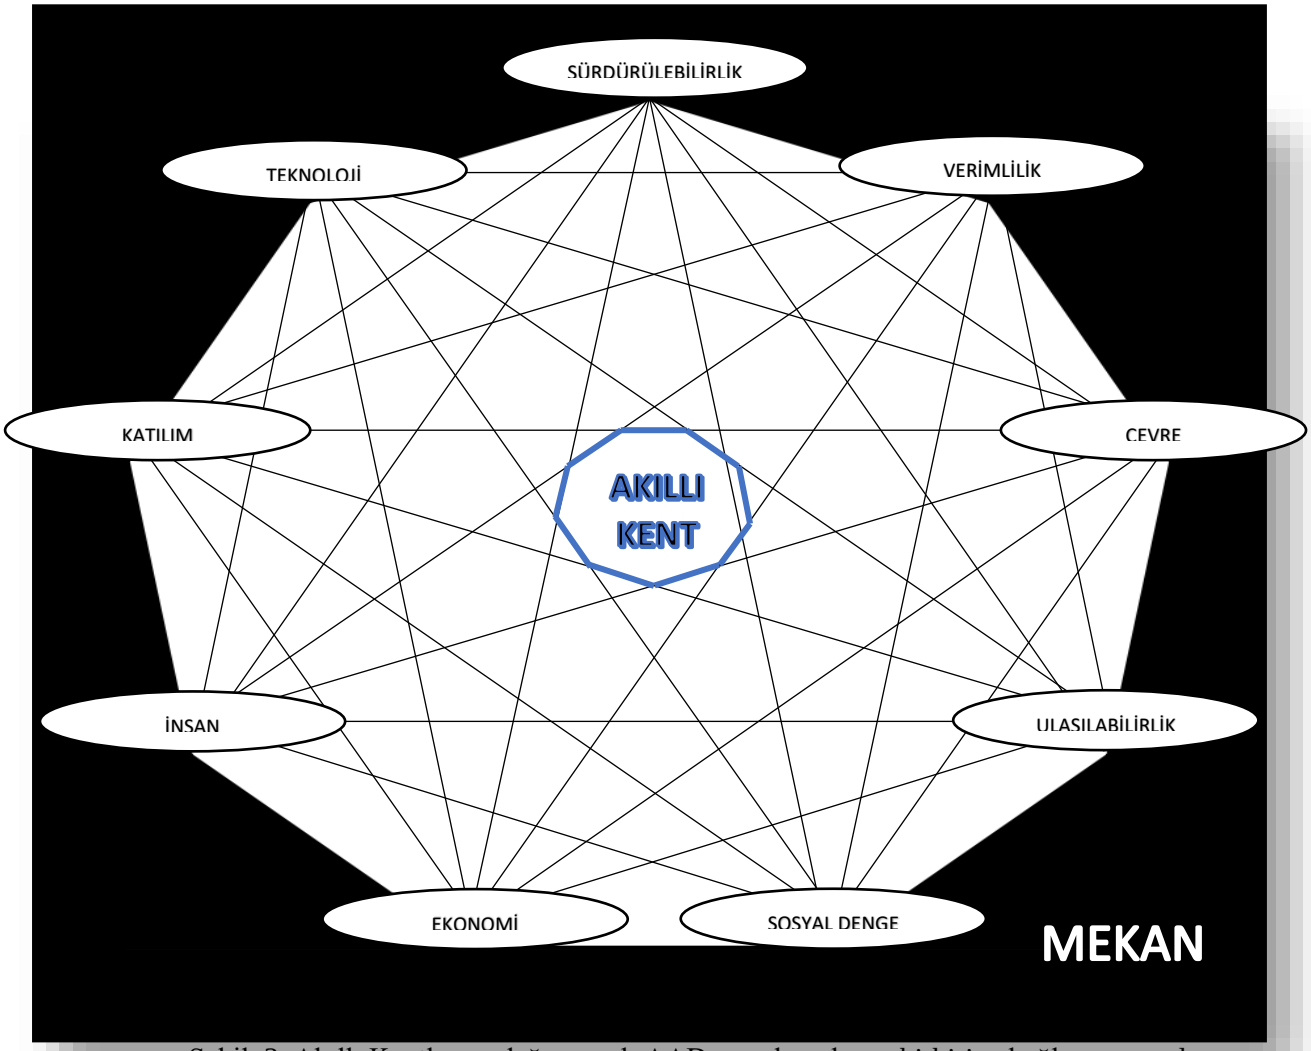
Son olarak, değer esaslı arazi ve arsa düzenlemeleri, ekonomik gelişmeyi teşvik etmek, sürdürülebilirlik alanlarında akıllı kentler oluşturmak ve yaşam kalitesini artırmak amacıyla verimli bir arazi kullanımı sağlamada önemli bir rol oynamaktadır.

Bu yaklaşım, iş fırsatlarından yararlanmayı ve yatırımları çekmeyi başararak kentlerde ekonomik gelişmeyi artırırken, istihdam maliyetlerini azaltır. Yöntem, adil bir dağıtım, toplumsal bütünleşme ve ekonomik gelişme gibi önemli amaçları gerçekleştirir. Değer esaslı düzenlemeler akıllı kentlerin sürdürülebilirlik hedeflerine ulaşmasında kritik bir rol oynar. Yöntem sayesinde akıllı kentler daha yaşanabilir, sürdürülebilir ve insan odaklı hale gelir; bu nedenle bu tür uygulamaların yaygınlaşması büyük önem taşır.

DEĞER ESASINA DAYALI İMAR UYGULAMALARI VE AKILLI KENTLER

Akıllı kentler için çeşitli tanımlar yapılmakla birlikte; kavram temel olarak, kentsel problemlerin çözümünde teknolojinin aktif olarak kullanılmasıyla ortaya çıkmıştır (Dameri, 2013). Albino ve diğerleri (2015) tarafından yapılan bir çalışmada, uluslararası yayınlarda yer alan farklı tanımlamalar bir araya getirilerek akıllı kentlere yönelik çeşitli ele alışlar belirlenmeye çalışılmıştır. Bu çalışmada, akıllı kent tanımlamalarında teknoloji, altyapı, bilgi yönetimi, bağlantılılık, sürdürülebilirlik, yaşam kalitesi, katılımcı yönetişim gibi kavramların öne çıktığı görülmektedir.

Sürdürülebilir kalkınma yaklaşımının uluslararası politikadaki toplantıları incelendiğinde (Rio Zirvesi ve Gündem 21, BM İnsan Yerleşimleri Konferansı-Habitat II, BM Milenyum Zirvesi, Rio+20 Zirvesi, Sürdürülebilir Kalkınma Hedefleri, Gündem 2030 ile Habitat III-Yeni Kentsel Gündem, vb.), dünya genelinde artan kentleşmenin özellikle kentsel alanlara daha fazla dikkat çektiği görülmektedir. Sürdürülebilir Kalkınma Hedeflerinde öngörülen 11. hedef, şehirlerin ve insan yerleşimlerinin "kapsayıcı, güvenli, dayanıklı ve sürdürülebilir hale getirilmesi" ilkesini içermektedir. Dünyadaki birçok şehirde hızlı kentleşmenin yönetilmesi, artan nüfusa destek sağlanması, yeterli konut ve altyapının temini, çevresel etkilerin ve afetlere karşı savunmasızlığın azaltılması gibi zorluklar olduğundan bahsedilmektedir. Bu nedenle, sürdürülebilir kalkınma için arazi kullanımı ve şehir planlamasıyla yerel stratejilerin geliştirilmesi gerektiği vurgulanmaktadır (BM, 2018).



Bu bağlamda, Caragliu ve arkadaşları (2011), akıllı kentleri "*sürdürülebilir ekonomik gelişme ve yaşam kalitesini besleyen beşerî ve sosyal sermaye ile katılımcı yönetişimin birleştiği kentler*" olarak vurgular. 2012 yılında Bakıcı ve arkadaşları tarafından yapılan çalışma, akıllı kenti "*sürdürülebilir, yeşil, rekabetçi, yenilikçi ve yaşam kalitesinin arttığı bir kent*" olarak tanımlar. Bu tanımlamalarda, insanları, bilgiyi ve kenti birbirine bağlamada yeni teknolojilerin kullanıldığı ileri teknolojili bir kentten

FULL TEXTS BOOK

bahsedilir. Cretu (2012) ise akıllı kentlere iki yönlü bir bakış açısı sunar. Bunlar, akıllı kentlerin yönetişim ve ekonomi ile ilgili her şeyi yeni bir anlayış ile gerçekleştirmesi ve akıllı kentlerin insan odaklı bir düzenleme ile akıllı teknolojilerin kullanılarak (akıllı cihazlar, sensörler, gerçek zamanlı veriler, bilgi ve iletişim teknolojileri) kent ile bütünleşmesinin sağlanması olarak tanımlanabilir.

Akıllı kentlerde, teknik ve sosyal donatı tesis ve alanların takip edilmesi, veri toplanması ve analiz edilmesiyle (Korah, 2021); hizmet faaliyetlerinin ve kalitesinin artırılması, kaynak yönetimi sağlanarak maliyetlerin azaltılması öncelikli hedeflerdendir (Varol, 2017). Kenti oluşturan temel faktörlere (insan, iş, ulaşım, iletişim, su ve enerji) ek olarak (Naphade vd., 2011), akıllı kentlerde özellikle işletme ve organizasyon, teknoloji, yönetişim, politika, insan ve toplum, ekonomi, altyapı ve doğal çevre gibi önemli faktörlerinde benimsenmesi gerektiği vurgulanmaktadır (Chourabi vd., 2012; Joshi vd., 2016). Bu nedenle, akıllı kent kavramı sadece teknolojik (bilgi, iletişim) olarak gelişmişlik değil, insanların ve toplumun ihtiyaçlarının karşılanmasını ve yaşam kalitesinin artırılmasını da amaçlamaktadır (Albino vd., 2015).

Akıllı şehirler ve kentsel sürdürülebilirlik kapsamında kent içi taşınmazların ve kaynakların tasarrufunun önemli olduğu, yapılan çalışmalar ile vurgulanmaktadır. Bu konuda değer esasına dayalı arazi ve arsa düzenlemeleri oldukça önemli bir rol oynamaktadır. Değer esaslı dağıtım, taşınmazların kullanımının ve dağıtımının, alanların ekonomik, sosyal ve çevresel değerlerine göre yapılması anlamına gelir. Bu yaklaşım, kaynakların etkin ve verimli kullanımını teşvik ederken, sürdürülebilirlik ve akıllı kentlerin hedeflerine ulaşmayı amaçlar (Kaya ve Susan, 2020; Korah, 2021). Akıllı kentler oluşturmak için değer esasına dayanan arazi ve arsa düzenlemeleri ile imar planlarının mekâna aplikasyonu, dokuz temel ilkeyi benimsemektedir. Söz konusu ilkeler ve birbirleri ile olan ilişki Şekil 3'te verilmiştir.

Şekil. 3. Akıllı Kentler ve değer esaslı AAD uygulamalarını birbirine bağlayan temel noktalar.

FULL TEXTS BOOK

Değer esaslı imar uygulamaları, akıllı kentlerde hem ekonomik hem de sosyal sürdürülebilirliği temel bir ilke olarak benimser. Bu kapsamda, arazi kullanımının çevresel etkilerini minimize etmek için çeşitli stratejiler geliştirilir. Yeşil alanların korunması, doğal kaynakların verimli kullanımı, enerji verimliliği, atık yönetimi ve ulaşım planlaması gibi sürdürülebilirlik odaklı uygulamaları içerir. Böylece, kentlerin çevresel ayak izi azaltılarak gelecek nesillere daha sağlıklı bir yaşam alanı bırakılmasını hedefler (Dameri, 2013; Kaya ve Susan, 2020).

Değer esaslı uygulama yaklaşımı, arazi kullanımının en verimli şekilde gerçekleştirilmesini hedefler. Bu yaklaşım, kaynakların etkin ve verimli kullanımını teşvik eder. Verimlilik (üretkenlik) ilkesi ile var olan kaynakların ve değerli ve stratejik alanların sağlanması, altyapı ve hizmetlerin daha efektif şekilde kullanılması, israfın önlenerek ekonomik kalkınmanın gerçekleştirilmesi hedeflenir (Joshi vd., 2016).

Akıllı kentlerde değer esaslı imar uygulamaları; yeşil altyapı, doğal ve tarihi çevrenin, kentsel dokunun ve kimliğinin korunmasını öncelikli hedefler arasına alır. Parklar, bahçeler, su sistemleri, orman alanları gibi doğal ve tarihi dokuya sahip alanlar, düzenleme sürecine entegre edilir ve bu alanların korunması ve artırılması için planlar yapılır. Bu doğal alanlar, biyoçeşitliliğin korunması, su kaynaklarının sürdürülebilir kullanımı ve ekolojik planlama ve denge açısından büyük önem taşır (Steiner, 2000; Özcan, 2007; Nayim, 2011).

Akıllı kentlerde yaşayanların ve ziyaretçilerinin yaşam kalitesini artırmak, temel hizmetlere erişimi kolaylaştırmak ve çevre dostu ulaşım seçeneklerine ulaşımı sağlamak amacıyla ulaşılabilirlik ilkesi, akıllı kentlerin tasarımında ve planlamasında önemli bir rol oynar (Cairney, & Speak, 2000). Değer esaslı arazi ve arsa düzenlemeleri, kentin farklı bölgelerindeki potansiyel değerleri analiz ederek, ulaşılabilirlik ilkesine uygun şekilde altyapı ve hizmetleri planlamayı kolaylaştırabilir. Toplu taşıma, bisiklet yolları, yaya dostu alanlar gibi çevre dostu ulaşım seçeneklerinin teşvik edilmesi önemlidir. Böylece, insanların ihtiyaçlarına daha iyi yanıt veren ve yaşam kalitesini artıran bir kent tasarımı sağlanabilir.

Akıllı kentlerde değer esaslı imar uygulamaları, sosyal dengenin sağlanmasını da hedefler. Farklı gelir ve yaşam biçimlerine yönelik konut seçenekleri sunularak, toplumun geniş kesimlerinin kente katılımı ve yaşam kalitesinin artırılması amaçlayan geniş kapsamlı bir hedeftir (Dameri, 2013). Ayrıca, eğitim, sağlık, kültürel ve spor alanları gibi sosyal altyapıların planlanması da sosyal dengenin korunmasına katkı sağlar.

Değer esasına dayalı olarak yapılan imar uygulamaları, kent içi arazilerde aşırı artan değerin önüne geçerek, kentlerin mevcut ve potansiyel değerlerini analiz eder, yatırım fırsatlarını ve potansiyel ekonomik büyüme alanlarını belirlemeye yardımcı olur. Bu sayede, kent yöneticileri ve yatırımcılar, ekonomik büyümeyi teşvik edecek alanlara odaklanabilir ve doğru yatırım kararlarını alabilir. Altyapı yatırımlarının etkin bir şekilde planlanmasını ve kaynakların en iyi şekilde kullanılmasını sağlar. Akıllı kentlerde altyapı yatırımları, teknoloji ve veri kullanımı ile optimize edilir; böylece maliyetler düşer ve hizmetlerin kalitesi artar. Kent içinde çeşitli sektörlerde istihdam yaratmayı teşvik eder. Planlama ve düzenleme süreçlerinde, işletmelerin ve girişimcilerin ihtiyaçları göz önünde bulundurulur; böylece ekonomik büyüme ve istihdam artışı desteklenir. Değer esası ile yapılan uygulamalar sonrası oluşan değer artışının kamuya aktarımı sağlanarak kentlerin cazip ve rekabetçi hale gelmesi sağlanır. Sürdürülebilir ve yaşanabilir kent yapıları, yatırımcıların ve şirketlerin ilgisini çeker, böylece kente yapılan yatırımlar artar (Görgülü ve Görgülü, 2016; Kocalar, 2018; Korah, 2021).

Arazi kullanımı ve yönetiminde rol alan politika yapıcıları, uygulayıcıları, karar vericileri, çevre korumacıları ve mülk sahipleri gibi farklı paydaşların farklı fikir ve çıkarları olduğu bir gerçektir. Bu nedenle, plansız bir kentleşmeden bahsetmek yanlış olmayacaktır (Gabriela vd, 2006). Mevcutta uygulanan mevzuatın özellikle katılım konusunda yetersiz olduğu da açıktır. Değer esaslı arazi ve arsa düzenlemeleri, uygulama süreci boyunca karar alma süreçlerine katılımı teşvik eden bir yaklaşım benimsenir. Kent sakinleri, yerel topluluklar, sivil toplum kuruluşları, yerel yönetimler, düzenleyiciler ve diğer paydaşlar, düzenleme sürecine aktif olarak dahil edilir. Şeffaf bir yaklaşım benimseyerek,

FULL TEXTS BOOK

kararların açıkça paylaşılması ve tüm tarafların görüşlerine saygı gösterilmesi önemlidir (Dameri, 2013; Bilsel ve Yomralıoğlu, 2016; Hajinedan ve Ramli, 2017; Guo vd., 2017).

Akıllı kentlerde değer esaslı imar uygulamaları, verilerin analiz edilmesi ve akıllı teknolojilerin kullanılmasıyla daha etkili, verimli ve adil kararlar almayı sağlar. Akıllı ulaşım sistemleri, enerji yönetimi, akıllı bina teknolojileri gibi akıllı çözümler, kentsel planlama ve düzenleme süreçlerini optimize eder ve sürdürülebilir bir şehir yönetimine olanak tanır. Değer esaslı arazi ve arsa düzenlemeleri, akıllı teknolojilerin kullanılmasıyla bütünleşerek şehirlerin kaynak verimliliğini, hizmet kalitesini, yaşam kalitesini ve sürdürülebilirlik performansını artırır. Akıllı teknolojiler; veri toplama ve analizi, iletişim, enerji verimliliği, ulaşılabilirlik ve diğer alanlarda şehirlerin daha akıllı ve sürdürülebilir olmasına katkı sağlar. Bu sayede şehirler daha iyi planlanır ve yönetilir, çevresel etkileri azaltılır ve insanların yaşam kalitesi artırılır. (Bilsel ve Yomralıoğlu, 2016; Varol, 2017; Trindade vd., 2017; Soydakök, 2022).

Son olarak, değer esaslı imar uygulamaları, kentlerin insanların ihtiyaçlarına uygun şekilde tasarlanması açısından göz ardı edilemeyecek kadar önemli bir yöntemdir. Erişilebilir ve yaşanabilir ortamların yaratılması, insanların günlük yaşamını kolaylaştırır ve kentsel yaşam kalitesini artırır. Yaya dostu alanlar, bisiklet yolları, toplu taşıma ağları gibi insan odaklı çözümler, kent sakinlerinin günlük hayatını daha keyifli ve kolay hale getirir. Teknoloji, çevre, sosyal ve ekonomik dengenin insan için kent yaşamını katılımcı, paylaşımcı ve kolay yaşanılabilir olmasını sağlar (Caragliu vd., 2011; Kaya ve Susan, 2020).

İlgili literatür kapsamında incelenen bu temel noktalar, değer esasına dayanan arazi ve arsa düzenlemeleri ile akıllı kentlerin oluşumu, işleyişi ve sürdürülebilirliğinin başarılı bir şekilde hayata geçirilmesini sağlayabilir.

DEĞER ESASINA DAYALI İMAR UYGULAMALARININ AKILLI KENTLER İÇİN OPTİMİZASYONU

Dünya şehirlerinin hızla gelişmeleriyle birlikte, daha sürdürülebilir ve yaşanabilir bir ortam oluşturmak önemli bir hedef haline gelmiştir. Bu bağlamda, akıllı şehirler konsepti ortaya çıkmış ve kent kullanımını daha verimli, çevre dostu ve insan odaklı olmasını sağlamayı hedeflemiştir. Akıllı şehirlerin yapısında, kalkınma amaçlı yapılan mekânsal planlamayı ve kullanımın etkili bir şekilde gerçekleştirilmesi gerekliliği bulunduğundan, arazi ve arsa düzenlemeleri büyük bir öneme sahiptir.

Değer esasının benimsendiği bir düzenleme çalışması ile özellikle yapılacak uygulama öncesi ve sonrası arazi ve arsaların mevcut durumu, kullanım, altyapı erişimi, kullanım özellikleri gibi faktörleri dikkate alarak bir alan değeri belirlenir. Bu analiz, arazi ve arsaların en uygun yönetim ve dağıtımını belirlemek için temel verileri sağlar. Böylelikle taşınmaza ait mevcut ve potansiyel değerleri analiz edilir. Bu yöntem, taşınmazların etkin bir şekilde değerlendirilmesini sağlayarak şehirlerdeki ulaşım ve altyapı maliyetlerini azaltabilir. Yöntem, düzenleme sınırının içinde bulunan taşınmaz özelliklerine göre esnek modeller geliştirebilme ve optimize etme özelliğine sahiptir. Arazi yönetimini en verimli hale getirmek için bina yoğunluğu, yeşil alan miktarı, ulaşım erişimi gibi temel sorunları ele alarak en ideal dağılımı belirler. Parklar, bahçeler, su sistemleri ve ağaçlandırmalar gibi yeşil alanların düzenlenmesine önem verilir. Bu durum biyoçeşitliliği artırır, hava ve su kalitesini iyileştirir ve şehirlerin çevre dostu bir yapıya kavuşmasına katkıda bulunur.

Eşdeğerlilik ilkesinde yapılacak arazi ve arsa düzenlemesi çalışmaları; teknolojik gelişmelerden yararlanarak, taşınmazların düzenleme öncesi ve sonrası değerlerinin tahminini ve dağılımını belirlemek için elde edilen verilerin analizini yaparak, daha iyi kararların alınmasını sağlayabilir. Alınacak kararlarda toplum ve kullanıcı fikir ve görüşleri dikkate alınır. Böylece adil bir dağıtım ile katılım ve şeffaflık sağlanır.

FULL TEXTS BOOK

SONUÇ

Akıllı ve sürdürülebilir kentlerin oluşumunda değer esasına dayalı arazi ve arsa düzenlemeleri önemli bir rol oynamaktadır. Bu düzenlemeler, şehirlerin sürdürülebilirlik hedeflerine ulaşmasına ve akıllı kent kavramının gerektirdiği teknolojik altyapıyı etkin bir şekilde kullanmasına yardımcı olur.

Değer esaslı arazi ve arsa düzenlemeleri, şehir planlamasında insan odaklı bir yaklaşımı temsil eder. Şehirlerin nüfusunun hızla arttığı ve kullanılabilir kaynakların kısıtlı olduğu günümüzde, arazi ve arsa kullanımının etkin ve verimli bir şekilde yönetilmesi gerekmektedir. Değer esaslı düzenlemeler, şehirlerdeki altyapı, konut, ticaret ve yeşil alanların dengeli bir şekilde dağıtılmasını sağlar. Böylece, şehirler daha yaşanabilir ve çevre dostu hale gelir. Bu düzenlemeler aynı zamanda kentsel yayılmayı kontrol altına alarak verimsiz ve plansız şehirleşmeyi engeller. Şehirlerdeki altyapı, ulaşım ve hizmetlerin etkin kullanılmasını teşvik eder. Bu da trafik sıkışıklığını azaltır, enerji tüketimini optimize eder ve çevre dostu ulaşım seçeneklerinin yaygınlaşmasına katkı sağlar.

Değer esasına dayalı arazi ve arsa düzenlemeleri aynı zamanda sosyal bütünleşmeyi teşvik eder. Farklı gelir gruplarına ve yaş gruplarına yönelik çeşitli konut seçenekleri sunarak sosyal dengenin sağlanmasını hedefler. Ayrıca, katılımcı yönetişimi destekler ve şehir sakinlerinin kent yönetimine etkin bir şekilde katılmasını sağlar. Ekonomik açıdan değerlendirildiğinde, değer esaslı düzenlemeler, şehirlerin ekonomik büyümesini ve yatırım çekiciliğini artırmada önemli bir rol oynar. Verimli arazi kullanımı ve altyapının etkin kullanımı, iş fırsatlarından yararlanma ve şehirlerin ekonomik potansiyelini artırma imkânı sunar.

Sonuç olarak, akıllı ve sürdürülebilir kentlerin oluşumunda değer esasına dayalı arazi ve arsa düzenlemeleri, şehirlerin sosyal, ekonomik ve çevresel açıdan daha sürdürülebilir ve planlı hale gelmesini sağlar. Bu düzenlemeler, şehir planlamasında akıllı teknolojilerin kullanımıyla birleşerek, insanların ihtiyaçlarını karşılayan, çevre dostu, teknolojik açıdan ileri düzeyde ve toplumsal bütünleşmeyi teşvik eden akıllı kentlerin inşasına katkı sağlar. Bu nedenle, mevcut mevzuatımız kapsamında yaşanan sıkıntıların giderilerek rekabetçi, güçlü ve dinamik yapıda akıllı kentlerin oluşumu için arazi ve arsa düzenlemeleri uygulamalarında "değer esası" yöntemi benimsenmelidir.

OKULLARDA HAYAT BOYU ÖĞRENME KÜLTÜRÜNE İLİŞKİN ÖĞRETMEN GÖRÜŞLERİ

Kıymet Yıldırım
Kırıkkale Üniversitesi, Sosyal Bilimler Enstitüsü, Eğitim Programları ve Öğretimi Ana Bilim Dalı, Eğitim Programları ve Öğretimi Tezli Yüksek Lisans Programı, Yüksek Lisans Öğrencisi
0009-0006-3261-8624

ÖZET
Bu araştırmanın sebebi, okullarda hayat boyu öğrenme disiplinine ilişkin öğretmen görüşlerini belirlemektir. Bilgi çağı ile birlikte, öğrenme yalnızca meslek edinme veya örgün eğitim kurumlarıyla sınırlı kalmayıp, "beşikten mezara" kadar süren bir eylem haline gelmiştir. Hayat boyu öğrenme (HBÖ) yaklaşımı, bireylerin sürekli öğrenme ve gelişim süreçlerini kapsayan önemli bir kavramdır.
Bu araştırma, Kırıkkale ilinde görev yapan ortaokul sosyal bilgiler öğretmenlerinin hayat boyu öğrenme konusundaki görüşlerini ortaya koymak amacıyla yapılmıştır. Araştırmada olgu bilim yöntemi kullanılarak, öğretmenlerin HBÖ hakkındaki düşünceleri derinlemesine incelenmiştir. Veriler, öğretmenlerle yapılan derinlemesine görüşmeler yoluyla toplanmış ve bu sayede öğretmenlerin perspektiflerinin kapsamlı bir şekilde anlaşılması sağlanmıştır.
Araştırma bulguları, öğretmenlerin hayat boyu öğrenme eğilimlerinin ve bu konudaki olumlu tutumlarının, eğitim sürecinde ve topluma katkı sağlama açısından önemli olduğunu göstermektedir. Öğretmenler, hayat boyu öğrenmenin bireysel gelişim ve toplumsal uyum açısından kritik bir rol oynadığını belirtmişlerdir. Öğrenmenin, örgün, yaygın ve enformel eğitim ortamları da dahil olmak üzere çeşitli biçimlerde ve ortamlarda gerçekleşen sürekli bir süreç olduğunu vurgulamışlardır.
Ayrıca, öğretmenler eğitim sistemlerinin toplumun değişen ihtiyaçlarına uyum sağlayabilmesi için hayat boyu öğrenmeyi teşvik etmesi gerektiğini belirtmişlerdir. Okullarda hayat boyu öğrenme kültürünün yaygınlaştırılmasının, öğrencilerin geleceğe hazırlıklı olmalarını ve değişimlere uyum sağlayabilme yeteneklerini artıracağını ifade etmişlerdir.
Elde edilen sonuçlar, eğitim sisteminde HBÖ kültürünün yaygınlaştırılmasına yönelik stratejilerin geliştirilmesinde yol gösterici olacaktır. Öğretmenlerin görüşlerini anlamak, politika yapıcılar ve eğitimcilerin, hayat boyu öğrenmeyi destekleyen daha etkili programlar ve girişimler tasarlamalarına yardımcı olacak ve bu da daha bilgili ve uyumlu bir toplumun oluşumuna katkıda bulunacaktır. Bu nedenle, araştırma sonuçları, eğitimde hayat boyu öğrenme kültürünün önemini vurgulamakta ve bu alandaki çalışmalara ışık tutmaktadır.
Anahtar Kelime: Hayat Boyu Öğrenme, Öğretmen Görüşleri, Eğitim Sistemi

GİRİŞ
Problem Durumu
Bilginin değişim süreciyle birlikte öğrenme yöntemleri de evrilmektedir. Artık öğrenme, yalnızca meslek edinme veya eğitim kurumlarında geçirilen süreyle sınırlı değildir. Bireylerin hayatında önemli bir yer tutan öğrenme süreci, "beşikten mezara" kadar süren ve hayatı boyunca devam eden bir eylem haline gelmiştir (Çolakoğlu 2002) akt. (Konokman & Yelken, 2014).
Bilgi çağının getirdiği bilgi yığınları ile başa çıkmak için bir dizi beceriye sahip olunması gerekmektedir. Bu beceriler arasında araştırma, sorgulama ve problem çözme yer almakta olup, günümüzde bu becerilerin işgücüne dönüştürülmesi beklenmektedir. Hayat boyu öğrenme (HBÖ) yaklaşımı, bilgi çağı becerilerinin geliştirilmesinde önemli bir kıymet olarak öne çıkmaktadır (Epçaçan, 2013). Öğrenen bir topluluğun üyeleri olarak hayat boyu öğrenme becerilerine sahip bireyler, öğrenmeyi öğrenme konusunda uyum sağlarlar ve duygularını ve kaynaklarını etkili şekilde kullanırlar (De la Harpe ve Radloff, 2000. akt Çalişkan Toyoğlu & Dogan, 2020).

FULL TEXTS BOOK

Türkiye'de hayat boyu öğrenme (HBÖ) yaklaşımının yaygınlaştırılması ve hayat boyu öğrenen bireyler yetiştirilmesi amacıyla, 2009 yılında "652 Sayılı Millî Eğitim Bakanlığı'nın (MEB) Teşkilat ve Görevleri Hakkında Kanun Hükmünde Kararname" ile HBÖ Genel Müdürlüğü kurulmuştur. Kuruluşundan bu yana Genel Müdürlük, "Okullar Hayat Olsun", "Öğrenme Şenlikleri", "Öğrenen Hastane Projesi", "Bağımlılıkla Mücadele Eğitimi" gibi yerel finansman destekli projeleri hayata geçirmiştir. Ayrıca, "Hayat Boyu Öğrenmenin Geliştirilmesi Projesi", "Türkiye'de Hayat Boyu Öğrenmenin Desteklenmesi Projesi 2" ve "Türkiye Yetişkin Öğrenme Projesi" gibi Avrupa Birliği finansmanlı pek çok projeye imza atmıştır (HBÖGM, 2014; Akt: (Doğan & Kavtelek, 2015).

Eğitim sisteminde yapılacak düzenlemelerle hayat boyu öğrenen kişilerden oluşan bir toplumu yapılandırmak mümkündür (Gencel, 2013). Eğitim, bireylerin yaşam boyu öğrenme becerilerini kazanmalarına yönelik olarak, ihtiyaçlara göre şekillendirilmelidir. Bu süreçte, eğitim sisteminin önemli unsurlarından olan öğretmenlerin, hayat boyu öğrenmeye ilişkin olumlu davranışları ile öğrencilerine ve topluluğa örnek olmaları beklenmektedir (Konokman & Yelken, 2014).

Bu nedenle ilk etapta öğretmenlerin hayat boyu öğrenme disiplininde ne düşündüklerinin araştırılıp daha sonra yapılması önerilen faaliyetlere yönelik sistemler geliştirmek faydalı olacaktır (Gedik & Sarpkaya Aktaş, 2016).

Problem Cümlesi

Okullarda hayat boyu öğrenme disiplinine ilişkin öğretmen görüşleri nelerdir?

Amaç ve alt amaçlar

Bu araştırmanın genel amacı okullarda hayat boyu öğrenme disiplinine ilişkin öğretmen görüşlerinin belirlenmesidir. Bu doğrultuda aşağıdaki sorulara yanıt aranmıştır;

1. Öğretmenlerin hayat boyu öğrenme disiplinine ilişkin görüşleri nelerdir?
2. Öğretmenlerin hayat boyu öğrenen bireylerin özellikleri hakkındaki görüşleri nelerdir?
3. Öğretmenlerin hayat boyu öğrenme ortamları hakkında neler düşündükleri hakkındaki görüşleri nelerdir?

2. YÖNTEM

2.1. Araştırma modeli

Araştırmada öğretmenlerin yaşam boyu öğrenme durumundaki düşüncelerini tespit etmek gayesinden dolayı nitel araştırmalar kapsamında olgubilim (fenomenoloji) yöntemi kullanılmıştır. Olgular yaşadığımız dünya da durumlar, deneyimler, algılar, yönelimler, disiplinler ve durumlar gibi çeşitli biçimlerde karşımıza çıkabilmektedir. Farkında olduğumuz ancak derinlemesine ve ayrıntılı bir anlayışa sahip olmadığımız durumlara odaklanan olgubilim yöntemi, birçok kişinin bir fenomen veya kavramla alakalı yaşanmış deneyimlerinin ortak anlamını tanımlamak amacıyla kullanılmaktadır (YILDIRIM vd., 2014).

Olgubilim çalışmalarında olgulara ilişkin yaşantıları ve anlamları ortaya çıkarmak için görüşmeler yapılır. Görüşmenin araştırmacıya sağladığı etkileşim ve esnek ortam olguya derinlemesine görüşme fırsatı vermektedir (Ömeroğlu vd., 2014).

2.2. Evren ve Örneklem / Çalışma Grubu

Araştırma kapsamında Kırıkkale ilinde ortaokullarda görev yapmakta olan 4 sosyal bilgiler öğretmeni ile görüşme yapılacaktır. Araştırmaya gönüllü öğretmenler katılım sağlayacaktır.

FULL TEXTS BOOK

2.3. Veri Toplama Araçları

Okullarda yaşam boyu öğrenme disiplinine ilişkin öğretmen görüşlerinin belirlenmesi amacıyla araştırmacı tarafından geliştirilen "Hayat Boyu Öğrenme Öğretmen Görüşme Formu (HBÖÖGF)" kullanılacaktır.

"Öğretmen Görüşme Formu",

GÖRÜŞME *SORULARI*

1. Hayat boyu öğrenme dendiğinde aklınıza neler geliyor?
2. Sizce hayat boyu öğrenen olarak nitelendirilen kişilerin özellikleri neler olabilir?
3. Hayat boyu öğrenme ortamları hakkında neler düşünüyorsunuz?

BULGULAR

Tablo 1

Katılımcılar	Kodlar
1. Hayat boyu öğrenme dendiğinde aklınıza neler geliyor?	
Katılımcı 1 Öğrenmenin zamandan ve bulunulan ortamdan bağımsız olarak gerçekleştirilmesi, öğrenmenin tüm türlerini (forma, informal, örgün, yaygın, sargın) içerisine alan **eğitsel etkinlik**. Öğrenme denildiğinde 4 duvar arasında meydana gelen öğrenmeler hep akla gelir ama evde, işte, sokakta hayatın her alanında her an devam eder.	Beşikten mezara, Eğitsel etkinlik
Katılımcı 2 Hayat boyu öğrenme bireyin yetenek ve yeterliliklerini **yaşam boyu geliştirme**sidir. Dolayısıyla akla gelen ilk şey, yine bireyin yaşadığımız bilgi ve teknoloji toplumuna **uyum sağlamak** amacıyla yaptığı çalışmalar olabilir.	Yaşam boyu geliştirme Uyum sağlamak
Katılımcı 3 Bireylerin yaşam boyu kaybedilmeyen **bilgi toplama süreci**, toplum içerisinde ki uyum, süreç kontrolü gibi becerilerin aşamalı olarak geliştirilmesine verilen isimdir	Bilgi toplama süreci
Katılımcı 4 Hayat boyu öğrenme, bir insanın yaşamı boyunca **yeni bilgi ve beceriler edinme**ye, geliştirmeye hazırlıklı olmasıdır. Eğitim sadece okulla sınırlı değildir. **Her yaşta öğrenme sürecine dahil olabilmek**tir. Bireyin istediği eğitimleri alabilmesidir.	Yeni bilgi ve beceriler edinme Her yaşta öğrenme sürecine dahil olabilmek

Katılımcılar	Kodlar

FULL TEXTS BOOK

2. Sizce **hayat boyu öğrenen** olarak nitelendirilen kişilerin özellikleri neler olabilir?	Hayat boyu öğrenen,
Katılımcı 1 Her an öğrenmeye açık ve hazır, belli kalıpları olmayan, her yeni bilgiyi içselleştiren, yaşa, bulunduğu ortama vs. takılmadan her an **öğrenmeye istekli**, **kendini sürekli yenileyen**, çevresine de öğrenmelerini, yeni bilgilerini aktaran, çok gezen, çok okuyan	Öğrenmeye istekli Kendini yenileme Öğrenme merak
Katılımcı 2 Hayat boyu öğrenen kişiler öğrenmeye istekli ve özellikle de **öğrenme merak** ve motivasyonu yüksek olan kişilerdir.	Açık öğrenme İstekli öğrenme
Katılımcı 3 Toplum içerisinde hayat boyu öğrenen kişilerin ortak özellikleri öğrenme motivasyonuna sahip, kendilerini her daim geliştirmeye **açık, istekli, öğrenme** süreçlerini planlayan ve meraklı kişiler olmasıdır.	
Katılımcı 4 Benim için hayat boyu öğrenmeye sahip kişiler de bulunan özellikler ilk olarak öğrenmeye isteklilik, meraklı olması, öz yönetimi güçlü, **eleştirel düşünebilen**, her koşula uyum sağlayabilen, geleceğe yönelik çalışmalar yapan, farklı bakış açılarını dinleyen, teknolojiyi takip eden ve **eğitimin her zaman her yerde** olabileceğinin farkında olan bireylerdir.	Eleştirel düşünebilen Her zaman her yerde eğitim

Tablo 2

Tablo 3

FULL TEXTS BOOK

3. Hayat boyu öğrenme ortamları hakkında neler düşünüyorsunuz?	Kodlar
Katılımcı 1 Belirli bir ortam ve yer olarak nitelendirilemez, bireyin olduğu her yerde, **her an gerçekleşebilen öğrenme**lerdir. Kendimizi belli kalıplar içerisinde sokmadan hayatın içerisinde her anı öğrenerek ve kendimizi geliştirerek değerlendirmeliyiz. **Öğrenmenin yaşı**, statüsü, maddiyatı yoktur, hiç tahmin bile etmeyeceğimiz anlarda, hiç beklemediğimiz kişilerden bile çok şeyler öğrenebilir, ufkumuzu geliştirebiliriz.	Öğrenme yaşı Her an gerçekleşebilen öğrenme Öğrenme durumu
Katılımcı 2 Hayat boyu öğrenme ortamı kişiye göre farklılık gösterebileceği gibi bu **öğrenme durumu** her ortamda gerçekleştirilebilir. Bence bireyin bulunduğu ortamın önemi olmadığı gibi öğrenmeye ne kadar istekli olduğu daha önemlidir.	Ortamın önemi Hayat boyu öğrenme Yaşam boyu öğrenme
Katılımcı 3 Öğrenme süreçlerinde **ortamın önemi,** öğrenme düzeyine etkisiyle bizlere ne kadar önemli olduğunu kanıtlamaktadır. Fakat **hayat boyu öğrenme**de kişiler bu motivasyona fazlasıyla sahip olduklarından dolayı öğrenme yüz-yüze olmasa dahi yüksek bir öğrenme düzeyi gerçekleşeceği kanaatindeyim. **Yaşam boyu öğrenme**de bu bağlamı yer mekândan bağımsız olarak sosyal ve duygusal kültür ortamı olarak değerlendirebiliriz.	
Katılımcı 4 Hayat boyu öğrenme ortamları belli bir alanda sınırlı değildir. Bireylerin her yaşta, her yerde ve çeşitli platformlarda öğrenmelerini destekler. Eğitim sadece dört duvarla çevrili ve bir tahtası olan yer değildir. Öğrenme ortamı hayat boyu öğrenme için çeşitlilik sağlar ve bu ortamlar bireylerin ihtiyaç ve tercihlerine yöneliktir. **Uzaktan eğitim**, seminerler, konferanslar hatta kitaplar bile hayat boyu öğrenme için bir ortam oluşturur. Yeter ki bireyin isteği ve kolay erişimi olsun.	Uzaktan eğitim

SONUÇ

Araştırma da öğretmen adaylarının yaşam boyu öğrenme eğilimlerine yönelik görüşlerini belirlemek amacıyla görüşmeler yapılmıştır. Öğretmen adaylarının hayat boyu öğrenme kavramına yükledikleri anlam, kişisel gelişim kavramına yükledikleri anlam, kişisel gelişimin önemi ve bu konudaki yeterliliklerine dair görüşlerine yer verilmiştir.

Görüşmelerin analizi sonucunda öğretmen adaylarının yaşam boyu öğrenme eğilimlerinin olumlu seviyede olduğu söylenilebilir.

Araştırmaya katılan öğretmen adaylarının yaşam boyu öğrenme eğilimlerinin iyi düzeyde olduğu saptanmıştır. Elde edilen bulgular öğretmen adaylarının öğrenme çabasına sahip meraklı bireyler oldukları düşünülmektedir.

ÖZET
Bu araştırma, geçmişten günümüze tasarım metodolojilerine ilişkin kapsamlı bir inceleme olup; analiz aşamasında toplanan verilerin görselleştirilmesi için ön tasarım aşaması olarak 'ara tasarım aşaması' önerisi sunmaktadır. Çalışmada geçmişten günümüze bilinen, özellikle ‘analiz-sentez-değerlendirme’, tasarım metodolojileri sunulmuştur. Böylece çalışma, küresel dijitalleşme araçlarına ve bilgisayar uygulamalarına paralel olarak tasarım metodolojilerine çağdaş bir katkı sunmaktadır. Günümüzde dijital araçlar ve bilgisayar uygulamaları kullanılarak analiz aşamasında toplanan veriler görsel olarak sade bir şekilde sunulabilmektedir. Metinsel verilerin görsel bir sunuma dönüştürülmesi, fikirlerin, kavramsal düşüncelerin ve ilk tasarım skeçlerin ifade edilmesi sırasında büyük bir anlam yaratır. Bu nedenle araştırmada analiz ve sentez arasındaki bu aşama araştırılmış ve günümüz teknolojisinin bilgisayar uygulamaları kullanılarak dijital ortamda oluşturulan tasarım öncesi aşama: bir ön tasarım araştırması olarak adlandırılmıştır. Araştırmanın amacına yönelik, ilk olarak geçmişten günümüze 'tasarım metodolojileri'nin gelişimine ilişkin akademik kaynaklardan kapsamlı bir literatür taraması gerçekleştirilmiştir. İkinci olarak, yazar tarafından geliştirilen ve dijital başlıklı bilgisayar uygulamaları kullanılarak temsil edilen iki vaka çalışması yapılmıştır; Proje-1: Modernist İkonlar: Mies Van Der Rohe, Le Corbusier, Sedat Hakkı Eldem ve Proje-2: Pablo Picasso'nun Evi. Özetle, bu çalışma temel olarak dijital araçlarla tasarım metodolojilerine yönelik önerilerde bulunmayı, konsept geliştirme becerilerini geliştirmeyi amaçlamaktadır.
Anahtar Kelimeler: Dijital Analiz, Tasarım Metodolojileri, Konsept Geliştirme, Mimari Proje, Mimari Mood-board

ABSTRACT
This research is a comprehensive investigation into design methodologies from the past to the present and contributes a new design methodlogy in the study titled as; ‘in-between design stage’ as the preliminary design study to visualize the data that is collected at the analysis stage. In the study, famous design methodologies from the past to the present have been presented such as; ‘analysis-synthesis-evolution’. Thus, the study introduces a contemporary contribution to design methodologies, in paralel to global digitalization tools and computer apps. Today, by using digital tools, and computer apps, the data that is collected at the analysis stage can be presented visualy simply. The transformation of textual data into a visual presentation creates a big sense during the expression of the ideas, conceptual thoughts, and design inspirations. Thus, in the research this stage between analysis and synthesis has been researched and titled as ‘in-between design stage: a preliminary design exploration’ which is created by today’s technology digitally by using computer apps. For the aim of the research, a comprehensive literature survey has been realized from academic sources on the development of ‘design methodologies’ from the past to the present. Secondly, two case studies have been developed by the author and represented by using computer apps digitaly titled; Project-1: Modernist Icons: Mies Van Der Rohe, Le Corbusier, Sedat Hakkı Eldem, and Project-2: House for Pablo Picasso. To sum up, this study mainly aims to make suggestions for the design methodologies with digital tools, to improve concept-development skills.
Keywords: Digital Analysis, Design Methodlogies, Concept Development, Architectural Project, Architectural Mood-board

FULL TEXTS BOOK

1.THE IMPORTANCE OF DATA VISUALIZATION IN ARCHITECTURAL DESIGN PROCESS

This paper mainly aims to explore the contemporary approaches and new trends for the visualization of the data of an architectural design project during the conceptual creation stage. Data visualization is an important process in architectural design phase, which is itself, is much related to visual perception in our cities and living environments, as buildings. Thus, the conceptual phase carries out an important step during the design stages, which is connected, to analysis where all data about the problem is collected.

In this scope, the traditional design phase that consists of 'analysis-synthesis-evaluation' is still an effective method in architectural design, but today by the help of digital technologies and computer based apps such as; architectural design map, etc… It is easier for an architect to express his/her ideas, and communicate with the client, and create visual data presentations at the analysis phase, at the beginning of the conceptual design, which makes a stronger preliminary design stage.

Thus, 'analysis' as the main data collection phase of an architectural design project that consists of data about; context, site, environment, function, programme, spatial requirements, client's character, lifestyle, etc. creates the preliminary design stage and concept creation period. So, analysis phase is the most important phase where all data has been collected through the problem from all sorts of sources such as; maps, cataloques, magazines, architectural journals, books, architectural web pages (arkitera, arch-daily, arkiv), to prepare visual presentations of the analysis.

In this paper, contemporary style of visual presentation techniques has been presented and current data visualization methods have been researched and digital tools/computer programs and apps have been explored such as; mood boards, tree graphics, architectural concept map tools.

1.1. Problem statement

This study seeks answers to research questions related with architectural design processes both at educational and professional enviorments, indicated above;

Question-1: How can an architect make a better communication with his/her instructor or client during the development of design concept and preliminary concept phases?

Question-2: Especially during the design of private projects, house projects, which digital techniques can be helpful to express client's character that will help to create best atmosphere for the spaces and design?

1.2. Aims and objectives

The aim of the study is to investigate and explore digital data visualization techniques that can be used during architectural design phases especially at analysis phase, where data is big, confused, non-visual and complex commonly.

1.3. Literature Review

The literature study consists of basicly two parts; at first part a comprehensive presentation have been realized on chronological development of design methodologies from the past to the present by books, journals of Nigel Cross, Bruce Archer, French&Bonatz&Pahl's on design methodologies. Second part consists of a comprehensive literature on the contemporary digital data visualization methodologies from academic sources such as; Bige Tunçer's studies on Architectural Information Map, Christina Portugal's study on 'Design and the Creation of an Interactive Academic Space'.

1.4. Methology

Methodology of the paper consists of two parts mainly, the theorethical part that consisting a comprehensive literature on design methodolohies from past to present. Second part is the application part, that two projects have been presented in the paper, which are prepared digitaly with computer apps

FULL TEXTS BOOK

visually by the author ; the 'modernist icons' project-1, and 'the house of Pablo Picasso' project-2 as the outputs of the paper content&topic.(Fig.1)

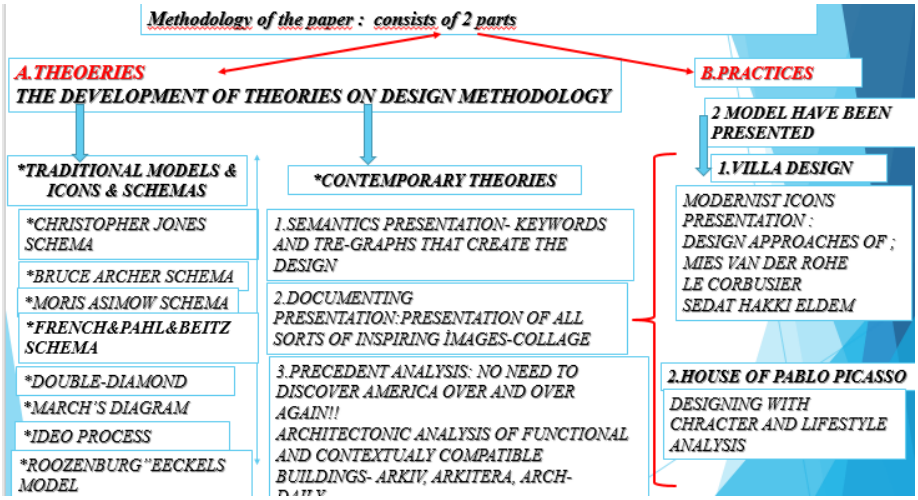

Figure 1. Methodology of the paper

2.DESIGN METHODOLOGIES FROM THE PAST TO THE PRESENT: TRADITIONAL MODULES

This part introduces design methodologies from the past to the present within a choronological order and represents the development of design methodologies from simple linear form to complex forms such as; diamond form, circle form, and cubic forms.

The design methology studies began in the 1950's by the increased complexity in industrial products. And the linear schemes of the first models evolved to more systematic representations of the design process. (Linden & Lagerda&Aguiar,2021)

2.1.Two Basic Types of Design Methodologies: Descriptive and Presciptive

Descriptive models

From the past to the present, many design metholodies have been described and schematized by academics, and however some of these methodologies concentrate on describing the activity stages, some of them commonly focused to determine more clear and prescriptive stages. Descriptive models focuses on more solution-based design thinking and define a problem at the very early beginning of the design process. (Cross, 2000)

Prescriptive models

As indicated by Cross (2000); prescriptive models are based on 'analysis-synthesis-evaluation' stages, a more analytical way and presents solution concepts. It is aimed to understand the design problem very clearly. These stages were defined by Jones (1984) in an early example of a systematic design methodology as follows:

-analysis: listing of all design requirements and the reduction of these to a complete set of logically related performance specifications.

-synthesis: finding possible solutions for each individual performance specification and building up complete designs from these with least possible compromise.

-evaluation: evaluating the accuracy with which alternative designs fulfill performance requirements for operation, manufacture and sales before the final design is selected. (Cross, 2000)

2.2.Development of design methodologies

There quite a lot of researchers, designers, and philosphers have been worked on the schemes of design methodologies from the past to the present and there are master names that also give his/her name to the scheme of the methodology diagrams such as; Jones' schema, Cross' schema, Archer' schema, French'&Bontz' scheme, etc. (Linden & Lagerda&Aguiar,2021)

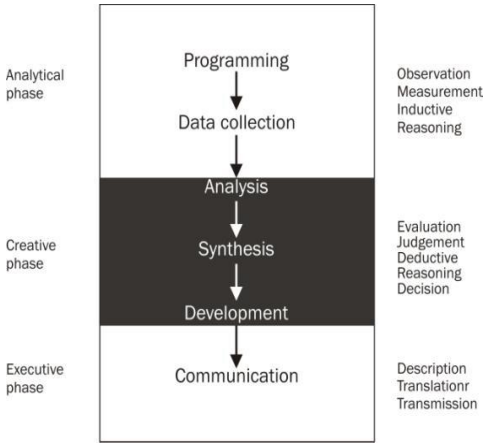
FULL TEXTS BOOK

In the paper firstly the choronological development of the design methodologies, which approxiamately maps the dates between 1950's and 2000's have been introduced by table-1 given below.

Table 1. Development of design methodologies

Name of the idea	**The idea**	**The schema/The aim**	**Years**
Rene Descartes	Systematic approach	Divide each difficulty into as many parts as possible	1637
Christopher Alexander	The cartesian principle	Breaking down the problem in min. units	1950
Kuhn&Karl Popper	The structure of scientific revolutions. The knowledge is progressive and cumulative	Linearity	1962
Paul Feyerbend	The variety of strategies for dealing with product development complexity	Humanistic view	1970
Herman Kahn and Alvin Toffer	Scenarious model	İnvestigates;'How people interact with products ?'	1980
Christopher Jones	Design activity: the division of the process in well-defined steps. (ıts rooted to the Cartersian method)	-understand the problem -define the problem -gather information -analyse information -develop concepts -evaluate alternatives and elect solutions, -test and implement	1960
Bruce Archer	Combination of 'intuition with cognition'. A more creative process tends to transform it in a more scientific practice.	-analysing phase -subjective phase -deductive (reasoning)phase	1963
Morris Asimow	Life cycle of the product: -Preliminary design phase -Life-cycle phases	Primary needs: Phase1:feasibility study Phase2:preliminary design Phase3:Detailed design Phase4:Planning for manufacturing Phase5:Planning for distribution Phase6:Planning for consumption Phase7: Planning removal	
French's&Pahl's &Beitz' model	The activities related to: -production, -distribution, -consumption and, -disposal	Basic steps: -clarification of the task -conceptual design -embodiment design -detail design	

FULL TEXTS BOOK



Kahn's & Popper's &Feyerband's	A new paradigm in the design methodology	-ideas and in a reaction to critics -new tools: mind maps, scenario techniques, usability testing, cooperative design.	1970s'
Jone's idea against to Kahn's& Popper's & Feyerband's	End of functionalism, the design process has changed, studies on new specific tools became more common	-mind maps -scenario -techniques -usability testing -cooperative/participatory design	
Design Council in UK	Double diamond: -divergence versus -convergence	-discover -define -develop -deliver	1980s'
March'scomplex diagram	-induction -deduction -production	Abductive thinking (reasoning): -production (synthesis) -induction and deduction are related to research (analysis)	
IDEO'sdesign process	A system of steps rather than a predefined series of orderly steps	-inspiration -ideation -implementation	
Victor Papanek	Sustainability	-sustainable product design process	1970
Nigel Cross	Prescriptive module	-analysis -synthesis -evaluation	2000

2.3.Iconic Design Methodologies

This part introduces well known and accepted design methodologies.

2.3.1.Archer's Model of the Design Process: Analytical Phase + Creative Phase + Executive Phase (prescriptive model)

Bruce Archer presented a design process in 1963 with a sequence of articles published in design magazine which combines intuition and cognition during the design process. He aimed to formalize the creative part of the design in a more scientific basis. The design process model proposed by Archer predicts the need for different approaches in different moments: systematic observation and inductive reasoning in the analytical phase, and subjective-deductive reasoning in the creative phase. (Linden & Lagerda&Aguiar,2021) (Fig.2)

FULL TEXTS BOOK

Figure 2. Archer's model of the design proces

Archer summarized this process as dividing into three broad phases: analytical, creative and executive. He suggested that: ''one of the special features of the process of designing is that the analytical phase with which it requires objective observation and inductive reasoning, while the creative phase the heart, requires involvement, subjective, judgement and deductive reasoning' (Cross,2000, (quoted from Archer))

2.3.2. Asimow's Method (prescriptive model)

Moris Asimow proposed a representation that considered the life cycle of the product. The method starts with analysis of requirements, followed by a feasibility study, prior to joining the preliminary design and detailed design phase. Next three activities related to the production, distribution, consumption and disposal. This method is considered as a predecessor of all the product development methods organized in separated phases. (Linden & Lagerda & Aguiar, 2021) (Fig.3)

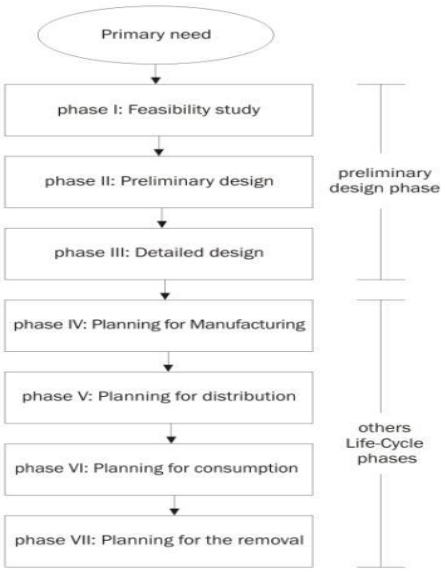


Figure 3. Asimow's model

2.3.3.French's & Pahl's & Beitz's Model- (descriptive model)

French's, Pahl and Beitz's methods were developed concurrently in business and academic environments to reduce the uncertainity in the development of new products before the competition. They aim to draw the general picture of the design stages by creating the final detail of the numerous tasks and activites. (Cross,2000)

It is based on the following design stages:

*clarification of the task: collect information about the requirements to be embodied in the solution and also about the constraints.

*conceptual design: establish function structures; search for suitable solution principles; combine into concept variants.

*embodiment design: starting from the concept, the designer determines the layout and forms, devleops a tehnical product or system in accordance with technical and economic considerations.

*detail design: arrangement, form, dimensions, and surface properties of all the individual parts finally laid down, material specified, technical and economic feasibility re-checked; all drawings and other production documents produced. (Cross, 2000) (Fig.4)

FULL TEXTS BOOK

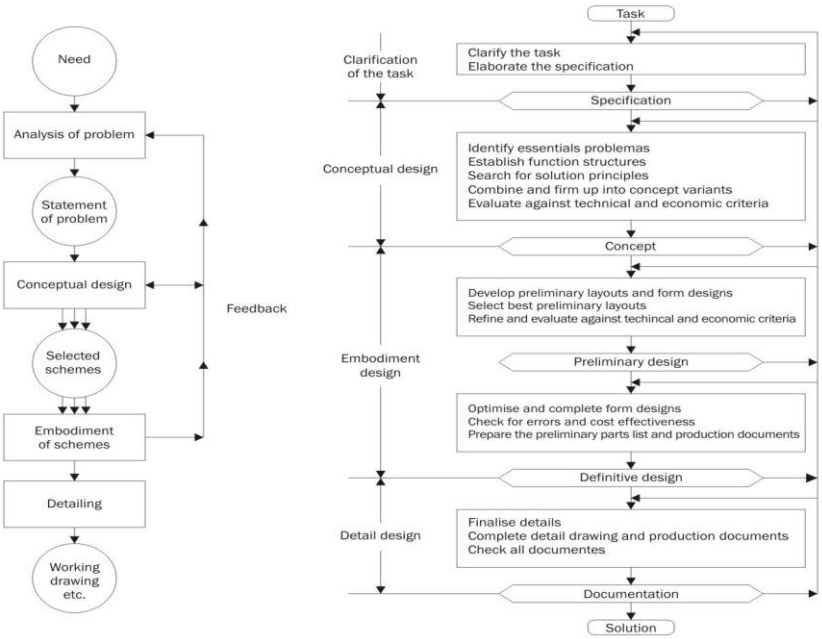

Figure 4. French's & Pahl's & Beitz's Model

2.3.4. The Design Council from UK: DOUBLE DIAMOND discover+define+develop+distribute

The form originated it's name from a double diamond. In this diagram, the process of divergence and convergence are associated with key moments in the design process. Discover and develop phases correspond to divergent process, while defines and distribute phases are convergent. To complement and extend this representations, the elements arranged inside the diagram indicate explanatory and focus activities on the left diamond, and cycles of prototyping testing and refinement in the right diamond.

Linearity was a common characteristics of the first representations. Even though many authored included the possibility of returns and feedbacks, this was seen as a problem or an opportunity to correct errors. Another way of understanding the process embraces the nature of uncertainity as part of the design activity. The path was no longer linear, simply because successive iterations are needed to frame the problem and the solution. (Cross, 2000) (Fig.5)

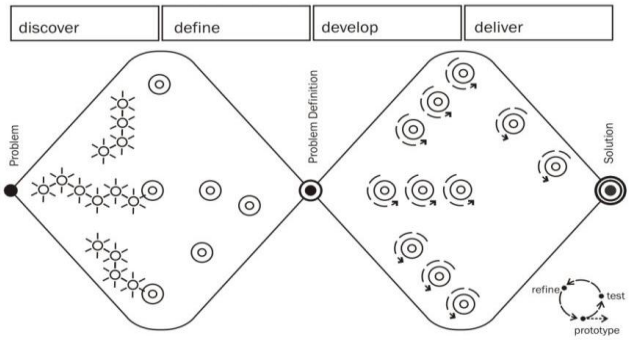

Figure 5. Double diamond diagram

2.3.5. March's diagram to the design methodologies- PDI: production-deduction-induction (prescriptive model)

A more radical model of the design process, which recognizes the solution-focused nature of design thinking has been suggested by March (1984). He argues that two conventionally understood forms of reasoning: inductive and deductive, only apply logically to evaluate analytical types of activity in

FULL TEXTS BOOK

design. Deductive proves that something must be, induction shows that something actually is operative, abduction suggest that something may be. The act of synthesis, that is central to design, which designs are generated and produced. March prefers to call it productive reasoning. Thus, his model for a rational design process is PDI model: production-deduction-induction. (Cross, 2000) (Fig.6)

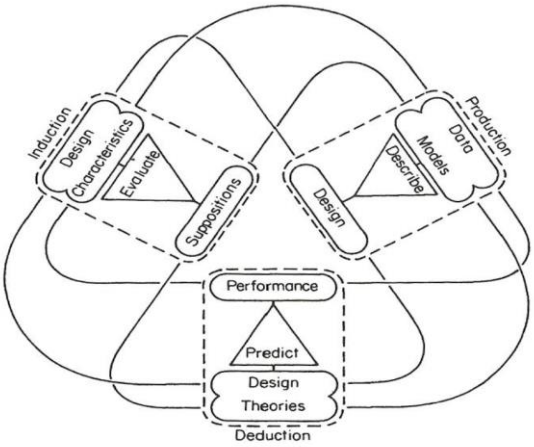

Figure 6. FrenchMarch's diagram

2.3.6. IDEO'S Design Process

Non-linearity can be found in IDEO's design process, defined by Brown as 'a system of steps rather than a predefined series of orderly steps'. Figure 6 demonstrates a modus operandi that is beyond the classic models. The process, or the design space, involves three areas: inspiration, ideation, and implementation.

-Inspiration: corresponds to the circumtances that motivate the search for a solution

-Ideation involves the generation, development and testing of ideas that could lead to a solution.

-İmplemantation deals with the product launch. Throughout a project, the three spaces can be explored, in particular the first two, in order to refine ideas and take new paths. It is important to notice that the design in IDEO is done in close collaboration professionals with diverse backgrounds. (Linden & Lagerda & Aguiar, 2021)

This ensures that many activities can be done simultanouesly, saving time in comparison with linear processes. The process, or the design space involves three areas: inspiration, ideation and implementation. (Linden & Lagerda&Aguiar,2021) (Fig.7)

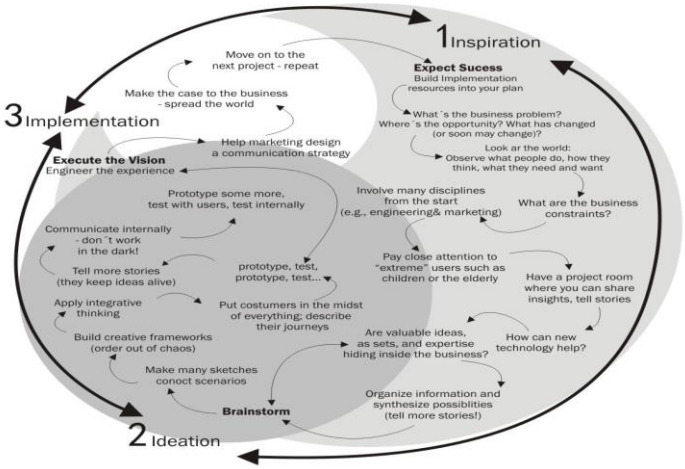

Figure 7. Ideo's process

FULL TEXTS BOOK

2.3.7. Roozenburg and Eeckels' Method

Since 1960s, the role of designers in new products development process has changed to encompass other activities, not only restricted to the project itself. An example of possibilities for design scope can be found in Roozenburg and Eeckels, who defines design as a process of goal-directed reasoning that flows from the product function to it's form. Traditionally the core of design activities is related with the left side of the figure, the product designing process, not with the right side, the product planning process. But as the authors indicate, 'the more to right we start… the more open-ended the product development process will be'. (Linden & Lagerda & Aguiar, 2021) (Fig.8)

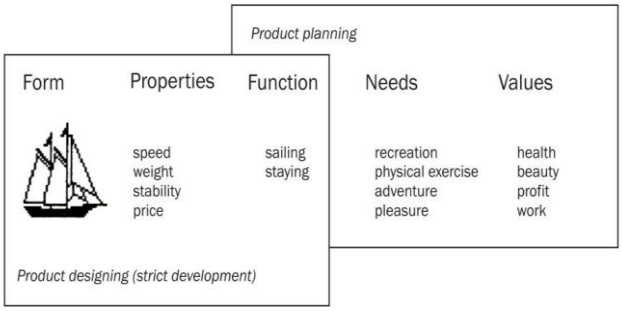

Figure 8. Roozenburg and Eeckels' method

3. DATA VISUALIZATION METHOD IN ARCHITECTURAL DESIGN- CONTEMPORARY METHODS

This part introduces the contemporary presentation techniques that are created digitally and the development of design methodologies from traditional to digital ways. (Fig 9)

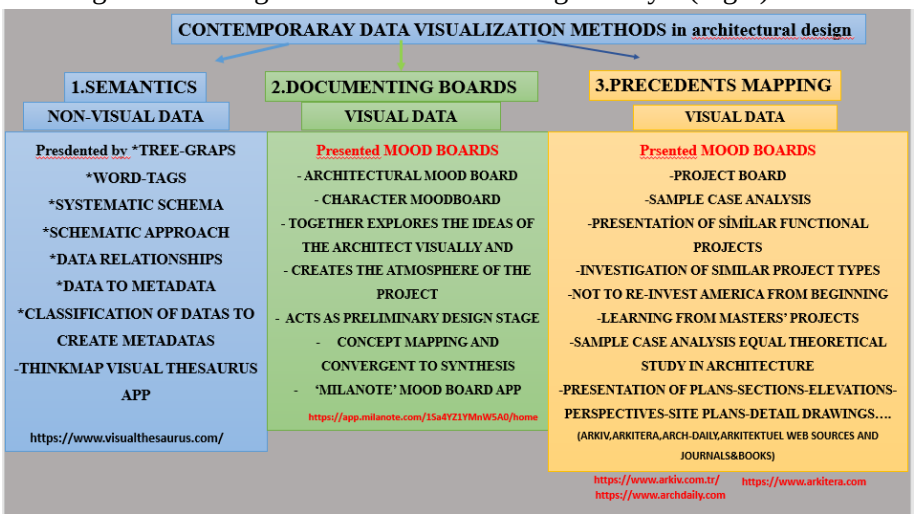

Figure 9. Contemporary data visualization methods

The paradigm of design as a rational problem solving activity that follows this view proposes that design is a process of defining a series of stable problems and respectively searching for design solutions in a solution space. (Dorst, 1997) Schön (1983) criticizes the approach to design as primarily a problem solving activity, and argues that considering the design process as ruled by explicit and rational problem solving knowledge is not accurate. All of these approaches to design and design research fully acknowledge the need for information gathering throughout the design process, and especially in the conceptual design phase. In the conceptual design phase, there is no ready information about the problem or the solution, and the operations in between are also not known yet. (Tunçer, 2009)

Designers collect, browse, use and reuse, learn from and get inspired by collections of (visual) information especially in the conceptual phase of design. They browse through magazines, scan through or read books, surf the web and are in general mindful about interpreting what they see within the context

FULL TEXTS BOOK

of the project they are working on, just waiting to be inspired. (Tunçer, 2009). Here the **mood board** concept is a key to problem. (Fig.10)

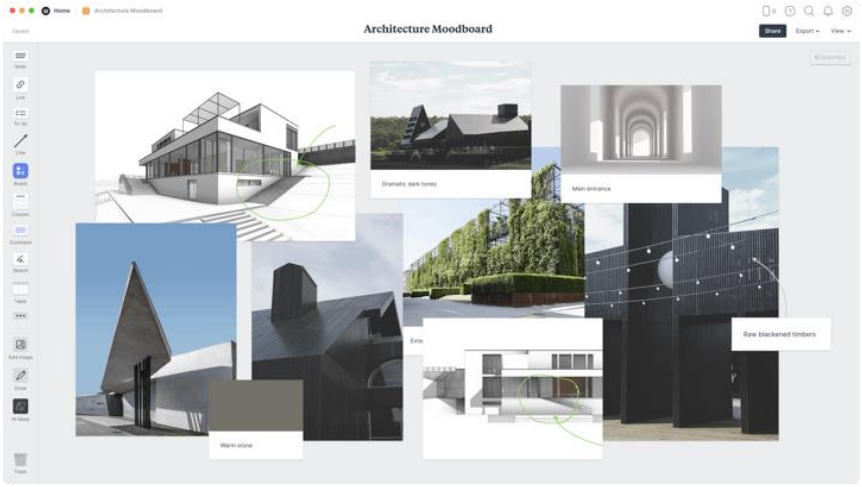

Figure 10. Architectural mood board template (source:URL-5)

An architectural mood board is a visual tool to gather and curate inspirational images, color palettes, and design elements that capture architectural projects' desired style and ambience. Drag photos of architectural elements, building plans, materials and texture samples, and arrange them on the free-form canvas'.With milanote you can easily add videos, animated GIF's, colour swatches, PDF's, design files, fonts and more when you create a mood board. A moodboard may seem like a sample tool, but it is an excellent solution to boost and express the development of ideas and concepts. A moodboard may seem like a sample tool, but it is an excellent solution to boost and express the development of ideas and concepts. A moodboard feeds the creative atmosphere and gives meaning to interior design project. (Fig.11)

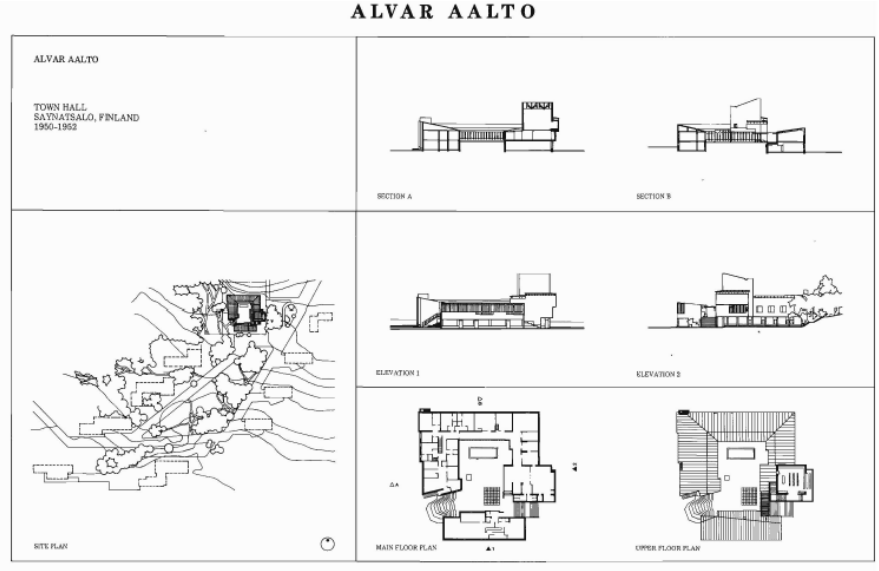
Figure 11. Interior space mood board template (source:URL-5)

Accordingly to Tunçer (2009); *''the aim of this research is to enable the design and creation of digital environments where a design community can collectively organize and correspond on collections of visual information in a meaningful way. Visual, flexible and extensible environments needed in order to support designers in the conceptual phase of design. Such environments are useful both in educational and practical contexts''* (Tunçer, 2009).

As indicated by Tunçer; *''Designers collect design documents in order to gain knowledge and inspiration in the conceptual phase of design. The design concepts that tag and classify the information entities are Metadata''*(Tunçer,2009). Such keywords, denoting concepts are collected in a complex

FULL TEXTS BOOK

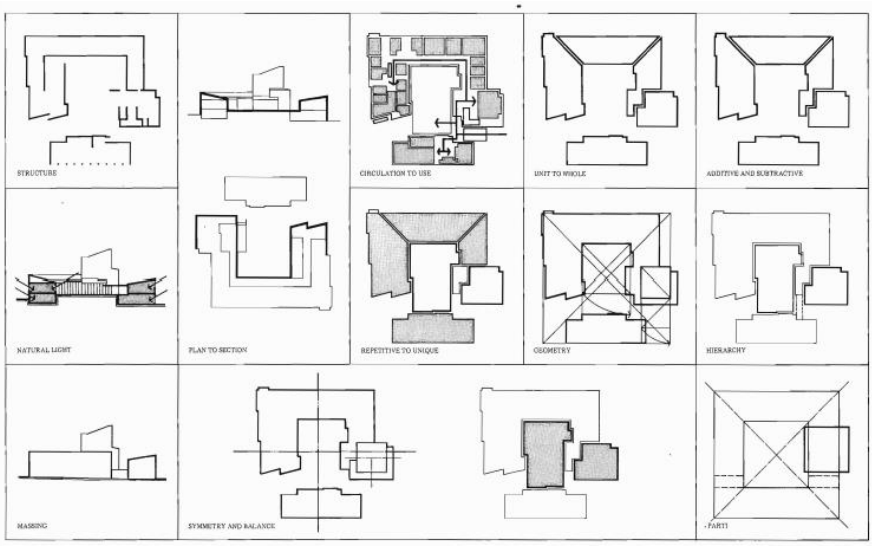
information structure and further related through semantic relationships. Some examples of such relationships allow for subjective information as well (tree graphs). It is important that metadata and semantic relationships allow for subjective information as well. Being able to freely define associative relations between concepts allows users to record personal associations in their knowledge structures, enabling the recording of internalized procedural knowledge and possibly even tacit knowledge.(Tunçer, 2009)



3.1. Precedents and Design Process

Precedents are 'specific designs or buildings, which are examplary in some sense, so that what architects and students glean from these examples can support their own designs. These precedents are very often past solutions to specific design problems' (Akin, 2002). Precedents contain design knowledge that can be accessed and reused in the context of the design problem at hand. The knowledge that precedents provide to designers is both physical and conceptual.

Students usually have analysis tasks in design studios in order to understand and extract precedent knowledge from documents: plans, sections, elevations, pictures, etc. of precedent buildings. Precedent-based design is the selection of relevant ideas from prior designs in current design situations. Precedent-based learning is the common method used in the architectural education system. In order not to reinvent the wheel over and over again, we learn from our elders and adopt their successful solutions to situations similar.(Goldschmidt, 1995)



Design studio instruction aims at helping students learn to understand design principles, formulate, isolate, and define design problems, and to use this knowledge in their design. Precedents have been the subject of numerous design research related investigations (Quoted from Tunçer; 'Tzonis, and White,1994; Oxman and Oxman, 1994; Kolodner,1993;Maher,1995; Heylighen,2000; Schmitt,1994; Fang,1993')

Precedents analyses may include, Project drawings, plans, sections, elevations, site plans at first part. And secondy may indicate design properties suchas ; structure,natural light, massing, plan to section, symmetry-asymmetry, circulation to whole,hierarchy, parti, geomerty, uit to whole,etc.(Fig.12 a-b)

3.2. Classification and Document Collection for Analysis Stage:

As discussed before, the process of correspondence in initiated when a user creates a document in the system and makes a number of claims about this document. Metadata is generally described as 'data about data'. The document structure of a complex information structure consists of a collection of multi-media design documents that are used in the conceptual design phase. Documents in this collection initially do not have semantic relationships with each other.

As indicated by Tunçer (2009); *''Complex information structures are comprised of a collection of abstractions, an organization of these abstractions, metadata describing the abstractions, and a specification of the relationships between these abstractions''*(Tunçer,2009). An architectural abstraction has been defined as an abstraction of the content of a design object, such as; function, acousitcs, structure, process, form generation, space, and organizational relationships. An abstraction itself can be understood in a syntactic manner as a composition of components, their metadata, and relationships between these components. (Mitchell,1994) (Fig.13-14).

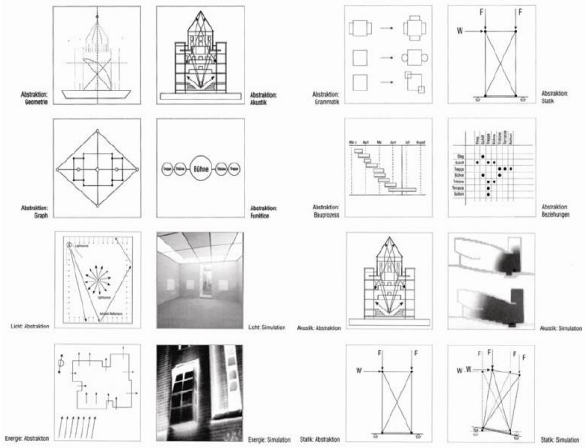

Figure 13. A demostration of a collection of abstractions. These abstractions define various aspects of the buildings they depict. Diagram by Schmitt (1993)(source: Tunçer,2009)

3.4.The Semantic Presentation

A semantic is made up of concepts and their relationships organized as a flexible and extensible semantic network. Concept mapping is an excellent medium for creating semantic structures within a complex information structure.(Fig.15)

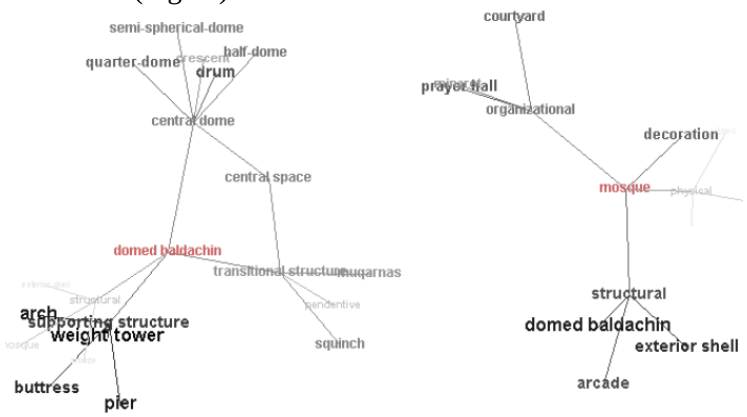

Figure 15. An examplary semantic structure developed within the context of a design information environment with the purpose of organizing a collection of documents of three Ottomon mosques from the classical period. The interactive visualization has been developed using the Thinkmap application.(source: Tunçer,2009)

4.DATA VISUALIZATION AT THE ARCHITECTURAL DESIGN PROCESS

In the research, it's observed that 'data visualization process' can make a bridge between analysis and synthesis steps of a design as 'preliminary design phase'. In fact which is more important than the final design being the root design of the project. In the process, between analysis and synthesis, the data visualization method ensured that the analyzes became more convergent to the synthesis and turned into the preliminary design phase and was included in the concept development process in architectural design. (Fig 16)

FULL TEXTS BOOK

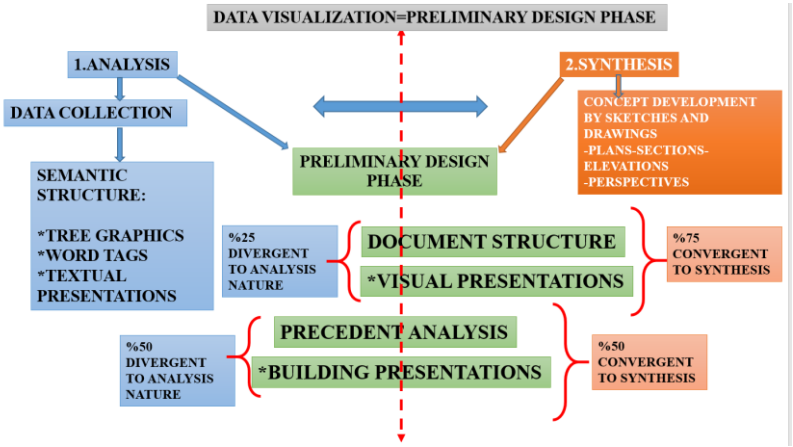

Figure 16. Data visualization process

The scheme given below that has been formulated by the author expresses the visualization of data collected at analyses stage, and which creates the preliminary design stage of an architectural project. By transforming semantic presentation in other words keywords of the design into a visual presentation, makes a strong exploration of the idea of the design process at the beginning stage. Thus, this stage gains strong importance for an architectural design to be successful and rooted.(Fig.17)

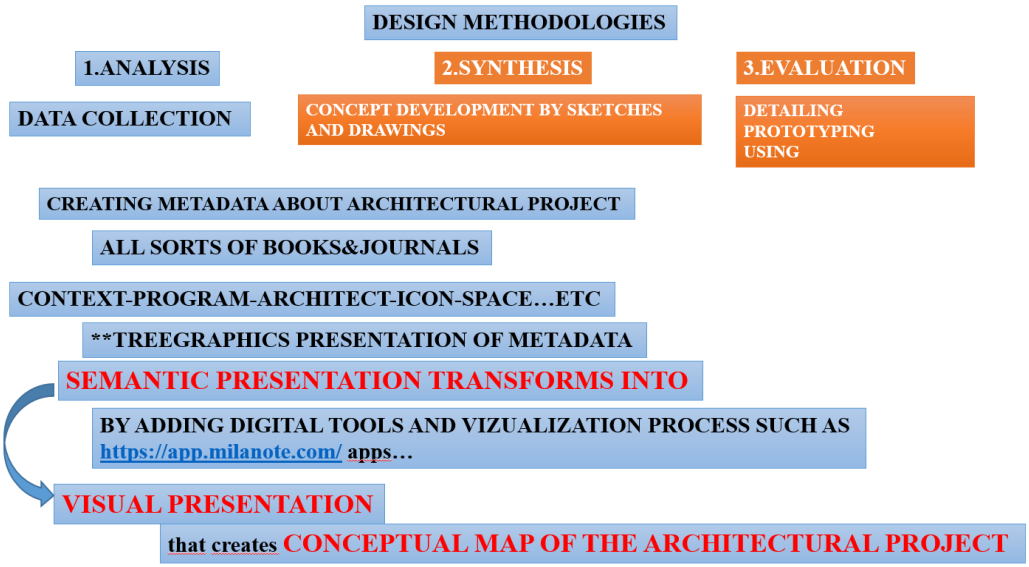

Figure 17. Methodology developed by the author to demonstrate the transformation of semantic presentation of 'Modernist Icons' Project to visual presentation

4.1. Project -1: Concept of Modernist Icons

(Digitializing architectural preliminary design phase: visualization of the analysis of the context & programme & topic)

This is a sample mood board that is created for the architectural design of a modern villa. Mood boards are one of the best ways to visualize design ideas before starting to design. Mood board is the creation of concept process, in other words creation of the visual data of the concept phase. By making a mood board schematic process and keywords of ideas transform into visual data which enlarges the creativity phase of the concept development process of an architectural design project.

Project 1: Analysis of Modernist Icons: Mies Van Der Rohe-Le Corbusier-Sedat Hakkı Eldem

A.Semantic Presentation of Analysis Phase of the Archıtectural Design Project (Fig.18)

FULL TEXTS BOOK

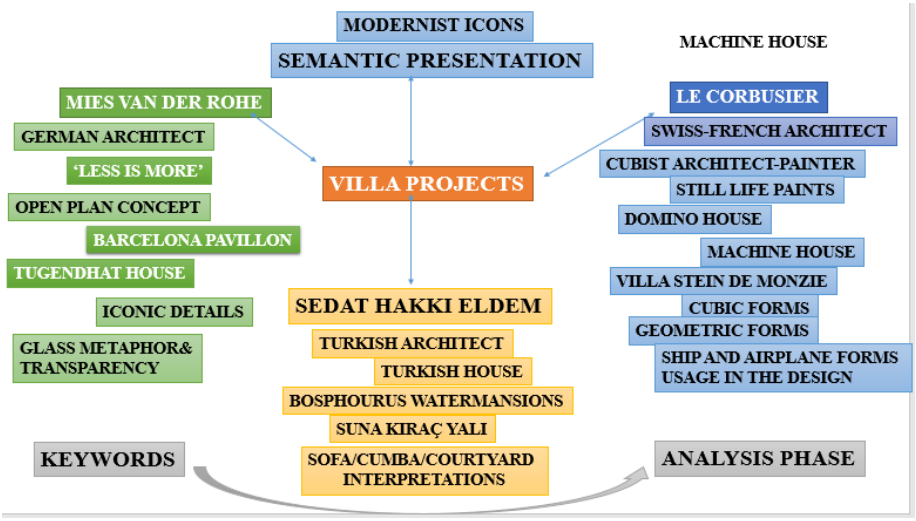

Figure 18. Semantic presentation of 'Modernist Icons' Project

B.Visualization of the Data Coming From Semantic Presentation-Digitalizing the Data (Fig.19)

Figure 19. Visualization of 'Modernist Icons' project –Mood Board

In architectural design, the main design methodologies as indicated at the previous chapter such as the best famous one comes from Cross (2000); 'analysis-synthesis-evaluation' stages there are both textual schematic represenations especially at the analysis phase and visual representations at the synthesis and evaluation phases. In the paper, it is mainly aimed to visualize all data processes from beginning to end, from analyses to synthesis and evaluation. Thus, architects especially talk visually such as; drawings, plans, sections, sketches, etc. And preliminary design phase is one of the most important part of an architectural design. Preliminary stage or phase of architectural design consists of basicly analysis… analysis of the site, of the programme, of the topic, of the context, of the client… thus, the analysis stage is very important due to its' rooted style and, which the basicly collect all correct data at the beginning of the design stage is very important.

Design stage begins with the synthesis of the analysis which is a connected proecedure, that synthesis are **concept-maps** of what designer interpret through the analysis. And begins to draw, make sketches and communicate in visual and graphic ways of design with plans, sections, elevations and perspectives. Then, after creating different concepts through analysis in the synthesis phase, a selection of the best concept occurs and evaluation phase begins at this step. This evaluation phase is also requires strong

FULL TEXTS BOOK

visual representations with all detailed drawings, plans, sections, elevations, perspectives, material applications, etc. Thus, the three main stages of the architectural design process : 'analysis-synthesis-evaluation', analysis phase is more related to schemas, texts, documentations, and synthesis & evalution phases are more related to drawings, exploration of visual ideas on sketches, perspectives and etc.

At this point; 'VISUALIZING OF DATA' which is the main problem of the this study, appears as a creative process by the new digital technologies, artificial intelligence, and computer applications today, by the help of the digitalization in design. Today, we, architects, and interior designers and product designers can easily visualize our data at the preliminary design phase, at the analysis phase, before starting the conceptual design by drawings, that enlarges the representation of data visually.

By using digitalization, computer programs, mobile apps, designers can express themselves within a much more expressive ways to their clients. Or it is also same for the educational stage, students can express their ideas, their analyses, their first concepts on the given architectural design project in a more strong, aesthetic and creative ways. In addition, by visualizing the data they collect also will enlarge their ideas and develop their conceptual creations. This 'architectural mood board' looks like digitializing the ideas within a kolage format.

4.2.Project -2: House of Pablo Picasso

(Digitializing Scenario and Client's Character of the Project by Using Data Visualization Method)

This even a much more difficult task for both architectural students and architects working with clients professionally in their design offices. For example, there is a 'villa project and a client', which the design must suit with the client and this one the main task of the architect, to make client happy. These private projects commonly more difficult to deal with in order to being more private, more customer demands are at the forefront, such as, the mood of the client, is an important element affecting the design. These private projects such as house, villa.. instead of educational building, or commercial building, or a theather, hospital, otel, etc. which functional and formal approaches of the project is much more important.

Thus, to deal with these private projects, data visualization is very important on both to express preliminary design ideas visually and communicate with the client whom she/he don't understand much verbal and textual presentations, but much more happy with the visual digital presentations. Thus, the character of the client creates the atmosphere of the house. It is very important. If you don't design a house in relation with the client's character, the project will fail because she/he can not live in the house you design.

This digitializing data, data visualization process, is the best way to explore phenemonological design stage, to explore aesthetic and artistic part of a design and m more importantly to explore the best atmosphere to the client through his /her characteristics.

To analyze client's character is such an abstract process and the best way to communicate with the character in architectural design process is to make visualize as much as possible to deal in a better way. Thus, in your architectural mood board, there will colors, textiles, 3d modules, things she/he likes, things that expresses hobies of the client, a bicycle, or a car, etc. or a shoe, furniture, etc.

By visualization the data reflects clients' chracter, hobbies, lifestyle, his/her likes and unlikes, will be very effective and expressive with digital tools such as; Architecture Moodboard-Template & Example-Milanote. For example to design a house for; Agatha Cristie, Sean Connery, Pablo Picasso, Gene Kelly the singer of the 'singing in the rain', Marilyn Monroe, etc. to design a house for a icon, using data visualization by digital tools, is very beneficial both for educational and professional environments.

In addition to MODERNIST ICONS presentation both from semantic and visualized materials, the second precedent in the paper is concentrates on an icon person, icon artist, architect, scientist, president, singer, novelist, painter, etc… Thus, in the paper, the analysis of the character which is very hard to express in the architectural process, today can be visualized and digitalized by the usage of articifial intelligence and computer apps. The analysis of a character during the architectural design process is

FULL TEXTS BOOK

one of the most important part to create atmosphere of the building within a phenomological approach which connects the client with his/her personal space. Otherwise client may not like his/her house or space, and do not want to live there normally.

A. Project 2: Analysis of an Iconic Person: Pablo Picasso

This part consists of exploration of an architectural design project titled as;'Pablo Picasso House' at the analysis phase of the project within three steps;

Data collection and presentation the collected data within a semantic manner.

Tree graphs and wordtags. In the project the data collection is concentrated on the main character of the design as the house owner; Pablo Picasso. (Fig.20)

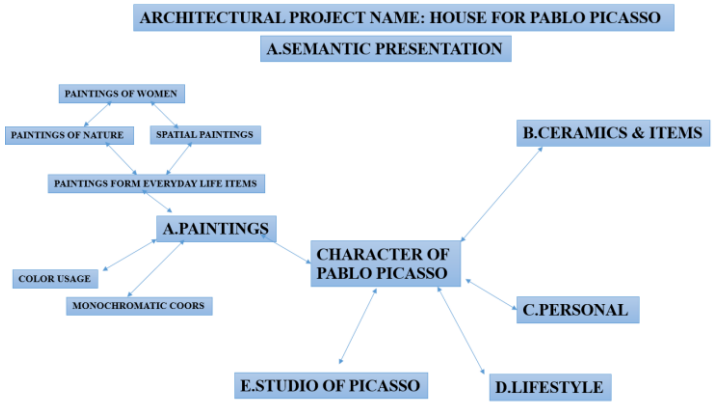

Figure 20. Semantic Presentation of the House of Pablo Picasso

Visualization of the data, and presenting Pablo Picasso's character and lifestyle with a architectural mood board as an icon.(Fig.21)

Figure 21. Visualization of Character and Lifestyle of House of Pablo Picasso

Precedents' analysis, is the research of previous architectural buildings of an artist houses.

In this project Joan Miro Foundation has been presented as precedent analyses with the building's drawings, plans-sections-elevations-perspectives' and pictures. Joan Miro foundation has been selected as precedent case, due to being an iconic artist building, and due to it's location which is in Barcelona, Spain. The location compramises an important part of the architectural design stage, a meditterranean building, with its' local color, materials, daylight usage, exterior envelope design.(Fig.22)

FULL TEXTS BOOK

Figure 22. Precedent analysis of the house of Pablo Picasso

4.3. Chapter Evaluation

In this chapter, two projects have been presented, Project-1: 'Modernist Icons''Mies Van Der Rohe-Le Corbusier-Sedat Hakkı Eldem', and Project-2: House for Pablo Picasso. These two projects have been demonstrated that the stage between analysis and synthesis, has an important value by its preliminary design stage role and the strongest this stage, will be resulted as the best design proposal at the end both at synthesis and evoluation process. This in-between stage, between analysis-synthesis, consists of three steps as indicated by the scheme given above; i) semantic presentation of an iconic person: Pablo Picasso, ii) Vizualization of the character and lifestyle of the user of the project, iii) Precedent analysis of the project, which in this case is Joan Miro's foundation in Barcelona, Spain due to its contextual and conceptual architectural features; a Mediterranean style architecture and an artist house.

Therefore, in the study these two projects have been demonstrated that the data gained from analyses stage, when transformed into a visual presentation by computer apps digitaly become much more effective in architectural field, and create a much better communication with the client or instructor in the studio. (Fig.23-24)

Figure 24. Three steps of preliminary design process for modern villa project

5. CONCLUSIONS

The communication of an architect with his/her client compromises a prior importance for the success of an architectural design project from a conceptual and aesthetical point of views. Thus in the paper it is investigated that how a better communication skills can be developed today for an architectural concept and design, that an architect can express him/her self in a better way , and expression of the design ideas , which is the most important part, as the root of the project. Thus, the visualization of the data and preliminary ideas come forward, which can be achieved easily today by the developed technology and digitalization techniques such as; architectural mood boards.

In addition, precendent analysis, as the second important data collection method on a specific topic in architectural design process, to not to discover America from the beginning, has been gained big importance today, by the developing digital archives of building projects and web pages such as; Arkitera, Arkiv, Arch-daily, etc.

To sum up, today developing digital techniques and computer tools have been enabling architects to make better communication skills in their both educational and professional lives to express their ideas, designs and projects by data visualization.

(Important note: this mood board method, digitalization of data and data visualization process has been experimented by author within a design course at Split University, Civil Engineering, Architecture and Geotechnik Faculty, 2.nd year architectural design course students between the dates 13-17 may 2024 within the Erasmus+academic personel mobility/Teaching) (and found very effective by the author)

ÇİN'İN ENERJİ GÜVENLİĞİ STRATEJİSİNDE AKTÖR OLARAK DEVLETİN ROLÜ: ABD VE HİNDİSTAN BAĞLAMINDA KARŞILAŞTIRMA

Sina KISACIK[1]
Murat YORULMAZ[2]

Giriş

''Enerji arz güvenliği'' kavramı, günümüzün enerji konularına ilişkin tartışmalarında her zaman güncelliğini korumaktadır. Kavram, mikro ve makroekonomik gelişmelerle yakından ilgili olmakla birlikte enerji fiyat artış oranları ve bir devletin ekonomik sisteminin küresel rekabetçi konumu gibi hususlar da kavramın küresel açıdan önemini sürdürmesine etkendir. ''Güvenlik'' kavramsal açıdan siyasi, askeri, sosyal, ekonomik ve çevresel alanlara atıfta bulunarak çeşitli çağrışımlar yaparken; ''enerji güvenliği'' tüm bu gruplamaları içine alan kapsamlı bir tanıma sahiptir. Enerji ücretleri, dünya genelinde devletler adına ekonomik güvenlik açısından ''enerji arz güvenliği'' zorbalığını sürdüren kaçınılmaz bir tehdit olmaya devam etmektedir. Zira ''enerji güvenliği'' ya da ''enerji arz güvenliği'' konusundaki mevcut ekonomik tehdit algılamaları, tek bir kaynak üzerinden enerji bağımlılığı ya da tek bir tedarikçi üzerinden enerji ithalatı bağımlılığı ile giderek artmaktadır. Dünyanın bazı bölgelerinde son derece yoğun bir şekilde bulunan kömür, petrol ve doğal gaz gibi öngörülebilir fosil yakıt kaynaklarının tükenmesi; son yirmi yıl içinde meydana gelen sosyal ve ekonomik gelişme nedeniyle hızla artan küresel enerji talebi ve enerji kaynakları üzerindeki mücadele, enerji ücretlerinin artmasına neden olan en önemli etkenlerdir. Enerji arz güvenliğine ilişkin deneysel araştırmalar, makul enerji ücretlerinin yerel ekonomik sistem için uygun büyümesine ulaşmanın ön koşulu olduğunu ortaya koymaktadır. Artan petrol ücretleri, dünya çapında petrol kullanımı ve kısa vadede doğal gaz gibi petrol ikamelerinin faturaları üzerinde beklenmeyen olumsuz bir sonuç doğurmaktadır. Diğer bir ifade ile petrol krizlerinin ardından artan enerji ücretleri, uzun vadede enerji kullanımında bir azalmaya neden olmakla birlikte enflasyon, dış ticarette eşitsizlik, ödemelerde istikrarsızlık, yüksek işsizlik, şirketler için iş kaybı ve müşterilerin güvensizliği gibi olumsuz sonuçları beraberinde getirmektedir (Erdal, 2015: 153-154). Bu bağlamda enerji ücretlerinin, tüm enerji talebinin ve arzının tetikleyici özelliği olduğunu söylemek mümkündür.

Dünya ekonomisi içerisindeki etkin varlığı her geçen gün artan Çin'in doğru orantılı olarak enerji talebi de artmaktadır. Bununla birlikte Çin'in enerji güvenliği, ulusal güvenlik ve ekonomik güvenlik açısından oldukça önem arz etmektedir. 19. yüzyılın sonlarından itibaren Çin'in siyasi ve ekonomik olarak çökmüş olması, emperyalist güçler açısından kendisinin jeopolitik bir istila ve hâkimiyet alanına dönüşmesine sebep olmuştur. 1 Ekim 1949'da Çin Halk Cumhuriyeti'nin kurulması ile 1839 Afyon Savaşları ile başlayan ''aşağılanma yüzyılı'' sona ermiş ve Mao Zedong liderliğindeki yönetim, Sovyetler Birliği (SSCB) modelini örnek alarak devlet merkezli sanayi gelişimini temel alan ekonomik kalkınma modeli uygulamaya koymuşlardır. Bu doğrultuda 1953-1957 yılları arasında uygulamaya konan Birinci Beş Yıllık Plan belirli ölçütte başarılı olmuştur. Ancak 1958-1961 döneminde sürdürülen ''Büyük İleri Atılım'' kampanyası, Çin'in modern tarihindeki en yıkıcı kıtlığa neden olan ekonomik bir felaketle sonuçlanmıştır (Boyle, 2022). Buna ek olarak SSCB yardımlarının da eş zamanlı azalması, ''Üçüncü Beş Yıllık Plan''ın ilerlemesini olumsuz etkilemiş ve Çin'in sosyoekonomik gelişimi daha da kötüleşmiştir. ''Büyük İleri Atılım''ın ekonomik açıdan olumsuz sonuçlarını ise ''Büyük Kültür Devrimi''nin siyasi ve sosyal açıdan olumsuz sonuçları ve yarattığı derin sistemsel kriz takip etmiştir. Mao Zedong'un 1976'da ölümü sonrası ikinci nesil lider olarak yönetime gelen Deng Xiaoping ve

FULL TEXTS BOOK

yönetimi, sürekli devrim yaklaşımından uzaklaşarak Çin karakteristiği temelli sosyalizme geçiş sağlamıştır. Sürekli reform ve dışa açılma yaklaşımları ile Çin, yaklaşık kırk yıl içerisinde ekonomik göstergelerini yükselterek standart bir seviye yakalayarak dünya ekonomisinde adından söz ettirmeye başlamış, uluslararası politikada etkin bir güç olarak görünüm sağlamış ve sürdürülebilir bir dış politika ve ekonomik yapı elde etmiştir. Ancak, Çin'in söz konusu çok yönlü büyüme seyri dışında sürdürülebilir çevre, kaynak ve enerji temalarında sorunları da dikkat çekmiştir. Bu noktada gelişim seyrine paralel olarak Çin'in artan enerji tüketimi enerji güvenliği çerçevesinde önem arz etmektedir. Çalışmanın amacı bağlamında Çin'in enerji arz güvenliği dolayısıyla enerji güvenliği hususu, Çin hükümeti için günümüze değin ulusal güvenlik adına öncelikli konular arasında yer almaktadır.

Çin'in çok yönlü kalkınma modeli bağlamında enerji güvenliği, Çin adına her geçen gün önemi giderek artan bir sorun olarak ortaya çıkmaktadır. Çin'in kuruluşundan bugüne enerji kaynakları, ulusal güvenlik meselesi ve kronik bir kırılganlık kaynağı olarak algılanmaktadır. Çin, 1950'li yıllardan itibaren kendi kendine yeterlilik politikası uygulayarak önemli ölçüde ihracat kaynağı elde etmiş ve bu durum zaman içerisinde Çin'in modernleşme sürecine katkı sunmuştur. Ancak modernleşmeye paralel olarak teknoloji ve sanayideki gelişmeler, 1990'lardan itibaren Çin'i başta enerji olmak üzere birçok alanda ithalata bağımlı hale getirmeye başlamıştır. Nitekim Çin 2002 yılında kömür ithalatçısı, 2007 yılında ise doğal gaz ithalatçısı konumuna gelmiştir. Bu değişim kendisini özellikle petrol üretimi ve tüketiminde göstermiştir. 1980'lerde Çin'in petrol üretimi, tüketiminden %35 daha fazla iken 2003'ten bugüne tüketilen petrolün yarısından fazlası ithal edilmektedir (IEA, 2021; Statista, 2024). 2000-2010 döneminde Çin sanayi sektörü ülkedeki toplam enerji tüketiminin %70'ini oluşturmuştur. Çin'in artan petrol tüketim hızının sanayi ve endüstrideki hızlı gelişim ile doğrusal bir ilişkisi bulunmamaktadır çünkü petrol tüketimi diğer sektörlerde daha hızlı bir seyir izlemektedir (Pan vd., 2020). Hatta sanayi sektörünün toplam petrol tüketimindeki payı 1990 yılında %59 iken 2014 yılında %41'e düşmüş, Çin sanayi sektörü 1980-2012 döneminde %2.09 oranında artan ulaştırma sektöründeki petrol talebini yönlendirerek toplam petrol tüketimine katkıda bulunmuş ve petrolün toplam sanayi enerji yakıt karışımındaki payı 1990'ların başında %15-16 civarında iken ulaştırma sektörü yakıt karışımındaki payı 2000'lerin ortasında %90'a yükselmiştir (Leung, 2010: 937).

Çin'de 2000'li yıllardaki sosyoekonomik değişiklikler de petrol tüketimini arttıran etkenler arasında yer almaktadır. Çin'in kentsel nüfusu, 2000 yılında %35,4 iken 2016 yılında %57,35'e yükselmiş ve aynı zamanda kentli nüfusta kişi başına düşen gelir yıllık %10 artış göstererek hızla yükselmiştir (NBSC, 2017). Çin'in önlenemeyen dinamik tüketim kültürü, ekolojik açıdan yıkıcı ve temelde yenilenemeyen enerji kaynaklarına bağımlı bir yaşam tarzını zorunlu kılmaktadır. Çin'in kent ve kırsal nüfus yapısındaki yoğun fosil yakıt tüketimi ve karbon yoğun davranışlar ülkede temel tüketim anlayışı haline gelmiştir. Çin 1950'lilerden günümüze ''kendine güven, dışa açılma ve bilimsel gelişme'' üçgeninde kendi kendine yeten bir enerji üretim potansiyeli yakalamış olsa da 1990'lı yıllardan itibaren çoğu sektördeki hızlı gelişim ile küresel açıdan en önemli enerji ithalatçısı konumuna gelmiş ve bu durum, Pekin'in ulusal güvenlik bağlamında öncelikli meselesi olmuştur. Pekin, ulusal ölçekte devlet ile özel sektör arasında dengeyi koruyacak, uluslararası pazarda da tedarik zinciri bağlamında enerji ithalatını ekonomik açıdan sürdürülebilir kılacak devlet merkezli pazarlama stratejisi uygulamaktadır. Diğer bir ifade ile enerji güvenliği, Çin'in ulusal güvenliği açısından öncelikli konumdadır.

Enerji güvenliği enerjinin her zaman istenilen türde, talep edilen miktarda ve uygun fiyatta bulunabilirliği olarak tanımlanmaktadır. Enerji güvenliğinin ülkeler açısından önemi ülkelerin ekonomileri açısından enerjiye uygun fiyatlı ve güvenilir ulaşım sağlanmasından, enerji arzındaki olası kesintilerin ve enerji fiyatlarındaki dalgalanmaların ulusal güvenlik, kamu sağlığı ile ekolojik sistem üzerinde dolaylı etkiler yaratmasından kaynaklanmaktadır. Bu sebeple enerji güvenliği her ülke için öncelikli konuma sahiptir. Uluslararası sistemde büyük güçler arasında yer alan Çin açısından ise enerji güvenliği gelişen ekonomik gücü ve üretimi bağlamında daha da önemlidir. Bu noktada Çin, enerji güvenliği stratejisini ekonomik büyüme, enerji güvenliği ve çevrenin korunması denkleminde inşa

FULL TEXTS BOOK

etmektedir. Söz konusu denklemin birinci ayağında uygun fiyatlı enerjiye ulaşım yer almakta ve bu durum iktidarın meşruiyeti ile ekonomik büyümenin ana bileşenini oluşturmaktadır. İkinci ayakta enerji kaynaklarının çeşitliliği ve kapasitesi yer almaktadır. Çevrenin korunması bu aşamada enerji verimliliğinin artmasına ve enerji kullanım türüne olumlu katkı sağlamaktadır. Üçüncü ayakta ise çevrenin korunmasının çoğu gelişmekte olan ülkelerde ekonomik büyüme ile ters bir orantıya sahiptir ve bir çatışma söz konusudur. Çin'in enerji güvenliği stratejisinin inşa sürecinde başta hükümet olmak üzere yerel yönetimler, ilgili bakanlıklar, STK'lar ve sektör temsilcileri gibi çeşitli yapılar yer almaktadır. Ancak temel aktör hükümet olup kendisi enerji endüstrisi ile diğer endüstriler arasında denge kurma sorumluluğuna sahiptir. Bu bağlamda hükümetin yani Çin Komünist Partisi'nin (ÇKP), devletin içeride ve dışarıda enerji güvenliği stratejisinin belirlenmesinde ve devlet ile iç-dış piyasa arasındaki sınırların çizilmesinde önemli pay sahibi olduğunu söylemek mümkündür. Dünyanın en büyük enerji tüketicisine konumuna sahip olarak Çin'in enerji kaynaklarına artan talebi ve yaratılan çevre kirliliği ile uluslararası enerji gündeminin ana başlığında yer alması, devlete ait enerji şirketlerinin uluslararası enerji piyasasında önemli rekabetçi aktörler olmalarına ve enerji güvenliği stratejisinin belirlenmesinde hükümetin aktif rolüne sebep olmaktadır. Bilindiği üzere enerji güvenliği günümüzde küresel rekabet alanlarının başında gelmektedir. Devletler çok yönlü ulusal çıkarları bağlamında yoğun rekabet içerisindedirler. Çin'in enerji güvenliği inşasına ilişkin hükümet temelinde devletin aktif rol aldığı bir yapıya sahip olması kuşkusuz kendisine özgü bir durum değildir. ABD, Rusya, Hindistan vb. ülkelerde de hükümetlerin devlet ile iç-dış enerji piyasası arasında aktif ve dengeleyici rol aldığı ve müdahil olduğu gözlemlenmektedir. Fakat hükümetlerin yani devletin rolü açısından ülkeler arasında rol ve uygulamalar açısından farklılıklar gözlemlenmektedir. Bu bağlamda çalışmanın amacı, Çin'in enerji güvenliği stratejisinde hükümet temelinde devletin rolünün hangi araçlarla ne şekilde ortaya çıktığını ve uygulamaların ABD ve Hindistan temelinde nasıl farklılık teşkil ettiğini karşılaştırmalı olarak analiz etmektir. Bu amaç doğrultusunda çalışmanın birinci bölümünde enerji güvenliğine kavramsal açıdan yer verilirken, ikinci bölümde Çin, ABD ve Hindistan'ın enerji güvenliği stratejileri değerlendirilecektir. Çalışmanın son bölümünde ise söz konusu üç devletin enerji güvenliği stratejileri devletin aktör rolü bağlamında karşılaştırmalı olarak analiz edilecektir.

1. Kavramsal Açıdan ''Enerji Güvenliği''

Enerji güvenliği kavramının iktisadi yönü; yarışmacı, açık ve de güven içeren bir enerji pazarını hedeflemektedir. Siyasi yöne bakıldığında ise enerji rezervlerini ellerinde tutan ülkelerin bahse konu rezervleri güvenli yollardan satmalarını, bunları alan ülkelerin ise bu kaynaklara güvenilir bir biçimde erişmesini kapsamaktadır. Enerjiyi piyasaya sunan, bu enerjiyi talep eden ve aradaki geçiş ülkelerinin farklılığı, ulus-devletlerin bahse konu kavramı farklı şekilde tanımlamalarına ve buna dönük değişik enerji siyasaları tatbik etmelerine sebebiyet vermektedir. Ülkeler yönünden enerji farklılaştırmasını ve devamlılığını çoğaltmak uluslararası düzlemde güçlü olmanın bir işareti şeklinde kıymetlendirilebilmektedir. Çevresel yönden ele alındığında ise ekolojiye verilen zararın asgariye düşürülmesi, karbondioksit/sera gazı salımı gerçekleştiren enerji rezervlerinin kullanımının düşürülmesine ilaveten enerji tasarrufu gerçekleştirilmesine dönük faktörleri içermektedir. Enerji güvenliği aynı zamanda zaman unsuru göz önünde bulundurularak uzun ve kısa dönemli enerji güvenliği biçiminde ayrıma tabi tutulabilmektedir. Uzun dönemli enerji güvenliği ölçeğinde iktisadi gelişmelere ek olarak sürdürülebilir ekolojik gereksinimler bağlamında enerji rezervlerinden istifade edilmesine yönelik gerçekleştirilen yaptırımlar öneme sahiptir. Kısa vadeli enerji güvenliği konusunda ise arz-talep dengesi ölçeğindeki ansızın dönüşümlere karşılık olarak sistemsel tepki yeteneğine ağırlık verilmektedir. Kısa dönemli güvenlik meydan okumaları; teknik meseleler, olumsuz hava şartları veyahut politik kesintileri barındıran kesilme tehlikelerini içermekteyken uzun dönemli güvenlik tehlikeleri ise enerji stoklamalarının yükselen ihtiyaca cevap vermek amaçlı tam zamanında devreye

FULL TEXTS BOOK

alınamaması tehlikelerine yoğunlaşmaktadır. Enerji güvenliği, gelecek yıllarda enerji krizleri tecrübe edilmesi ve dış tedarikçilere bağımlılıkta artış yaşanmasıyla doğrudan alakalıdır (Polat, 2022: 304).

Petrol, gaz ve kömür yenilenmeyen enerji rezervleri olarak ara malı, hammadde, güç ve de enerji kaynağı olarak küresel ekonomik sistemin can damarları şeklinde nitelendirilebilmektedir. OPEC ve onun fiyat artırımı neticesinde vuku bulan küresel petrol kriziyle mücadele etmenin yanı sıra enerji güvenliğini gerçekleştirmeye dönük olarak Ekonomik Kalkınma ve İşbirliği Örgütü (OECD) içerisinde teşkil edilen Uluslararası Enerji Ajansı (UEA) benzeri yapılanmalar çok yönlü enerji siyasalarını takip etmekte ve enerji güvenliğinin teminine yardımcı olmaktadırlar. UEA tarafından enerji güvenliği "uygun bir fiyata her türlü petrol ve enerji kaynaklarının kesintisiz kullanılabilir olması" şeklinde tanımlanmaktadır. Ulus-devletler karşılıklı bağımlılığı barındıran devletlerden meydana gelen karmaşık bir uluslararası sistemde bir taraftan politik, iktisadi, güvenlik ve de ekolojik amaçlarına erişebilmek maksadıyla faaliyetler gerçekleştirirken öte taraftan da amaçlarına ulaşabilmek maksadıyla gereksinim duydukları enerji rezervlerinin kontrolünü sağlayabilmek arayışındadırlar. Enerji siyasalarının teşkilinde küresel pazarlara bağımlılık ve enerji siyasası dengelerini idare etmek çok gelişmiş bir yaklaşımı zorunlu kılmaktadır. Enerji güvenliği, enerji rezervini satan devletler bakımından talep güvenliği anlamındayken, enerji ithal eden devletler bakımından arz güvenliği biçiminde görülmektedir. Arz güvenliği, birçok devlet bağlamında öncelikli olarak gelişmiş sanayi iktisadi sistemleri ve lider askeri kuvvetler bakımından kritik önemde bir milli çıkar konusu olarak değerlendirilmektedir (Polat, 2022: 305).

Ulus-devletlerin enerji ihtiyaçlarına barış ve de savaş dönemlerinde kesinti olmadan cevap verilebilmesi, taktiksel düzlemde sürdürülebilir gelişme ve de rekabetin, toplumsal barış ve huzurun ana faktörlerindendir. Enerji güvenliği, iktisadi faaliyetler bakımından elzem olmasına ilaveten birçok devletin öncelikli gündem maddeleri arasındadır. Enerji güvenliğindeki ana konu "makul maliyetlerde yeterli kaynağın uygunluğu ve güvenliğidir." Enerjiye karşı olan gereksinimin önemli bir kısmının son senelerde vuku bulan iktisadi farklılaşmalardan dolayı OECD üyesi olmayan ülkelerden meydana geleceği öngörülmektedir. İktisadi gelişmeye destek sağlamak amacıyla tüm ulusların enerji rezervlerine kesinti yaşamadan ulaşmasına yönelik kuvvetli bir niyeti söz konusudur. Enerjideki karşılıklı bağımlılık küresel iktisadi sistemin bir gerçeği konumundadır. Enerji güvenliği aynı zamanda kendi kendine yeterlilik anlamına gelmemektedir. Uluslararası ticarete tabi olan her meta için devletler, enerji güvenliklerini yalnızca açık küresel piyasalar yoluyla temin edebilmektedir. Enerji güvenliği tanımı şu unsurları içermelidir: *"Nüfusun temel ihtiyaçlarını karşılamaya yetecek enerjiyi sağlamak ve gelişme hedeflerine mutlak katkıda bulunacak şekilde, ulusal ve bölgesel şartlara bağlı olarak, ithalat azaltmayı ve enerji kaynaklarının çeşitlendirilmesi gibi arz güvenliği kaygıları"* (Kısacık, 2020: 231-235).

Enerji güvenliği kavramının ortaya koyulmasında teorik seviyedeki iktisadi bakış açısı şu unsurları içermektedir: • Bulunabilirlik- availability", • "Ekonomik tercih edilebilirlik-affordibility", • "Erişilebilirlik-accesibility", • "Kabul edilebilirlik- acceptibility" ve • "Sürdürülebilirlik-sustainability". Enerjinin değişik elde etme kaynaklarından (hidrokarbon, hidroelektrik, nükleer, termik, yenilenebilir, vb.) temini göz önünde bulundurulduğunda, enerji güvenliğinin ana faktörlerini ivedi olarak • Enerjinin mevcudiyeti, • Erişilebilir olması, • Yakıt olarak kabul edilebilir (güvenli ve çevre ile uyumlu) olması ve • Maliyetlerinin düşük olması, şeklinde ifade edilebilir. "İkinci ölçüt ise, enerji güvenliğinin • Arama, sondaj, AR-GE çalışmaları, • Üretim, iletim, çevrim, ulaşım (boru hatları, deniz ve kara ulaşım araçları) • Dağıtım, pazarlama, tüketim ağı faaliyetlerinin, her türlü ve askerî ve terör saldırılarına karşı, sürekli olarak korunması şeklinde belirtilebilir. • Bu durumda, enerji kesintisini kısıtlayacak yeterli, alternatif kaynak ve de depolama sistemleri geliştirmeyi gerektirmektedir. Enerji güvenliği kavramsallaştırmasının enerji temelli içeriği ele alındığında enerji rezervlerinin varlığı, erişilebilirliği ve benimsenebilirliği söz konusudur. Öte taraftan enerji güvenliği kavramının güvenlik odaklı tanımlanmasında ise enerjinin bulunması, geliştirilmesi, üretimi, iletimi, çevrimi, dağıtımı, piyasaya sunumu ve tüketim zincirindeki tesislerin her çeşit riske karşın fiziksel olarak muhafazasını

FULL TEXTS BOOK

içermektedir. Enerji güvenliği kavramı enerji odaklı biçimde farklı şekillerde ifade edilebilmektedir: ***Enerji güvenliği**; enerjinin sürekli bir biçimde güvenli, temiz ve değişik kaynaklar yoluyla uygun ücretlerle temini ve bundan yüksek verimlilikte istifade edilmesi, ***Enerji güvenliği**; yeterli seviyelerdeki enerji rezervlerine kabul edilebilir fiyatlama ve istikrarlı bir rezerv kanalıyla, de facto risk altında olmayan transfer araçları kanalıyla ve adaletli bir dağılım çerçevesinde erişilebilmesi, ***Enerji güvenliği;** dünyadaki enerji kaynaklarının rasyonel ve tasarruf odaklı kullanımı, ***Enerji güvenliği**; ekonomik sistemin ihtiyacı durumundaki enerji hizmetlerinin daimi mevcudiyetidir. Enerji güvenliği ve iklim değişikliği, metal bir paranın iki tarafına benzemektedir. 2000'li yılların başından beri enerji güvenliği kavramsallaştırmasının içerisine iklim krizi mevzusu da dâhil edilmiştir. Enerji arz rezervlerinde farklılık olması, enerji siyasalarının merkezindedir. Enerji rezervlerine sahip olan ve bunları üreten ülkeler sosyo-ekonomik kalkınmalarını gerçekleştirebilmek amacıyla talep eden ülkelerin farklılığına ağırlık verirken (pazar çeşitlemesi), enerji ithalatı gerçekleştiren ülkeler ise tedarikçi çeşitlendirmeye ağırlık vermektedirler. Bu metotla enerji güvenliklerini temin eden ikinci gruptaki devletlerin ilgili stratejileri sayesinde herhangi bir ekonomik ve politik kriz halinde son kullanıcılar enerjisizliği yaşamamakta ve sadece bir kullanıcı ülkeye bağımlı olmayan üretici devletler ise enerji rezervlerinin ihracından gelir sağlamaya devam edebilmektedirler (Kısacık, 2020: 238-240).

2. Çin, ABD ve Hindistan Enerji Güvenliği Stratejileri

2.1. Çin Halk Cumhuriyeti'nin Enerji Güvenliği Stratejisi

Çin'de enerji güvenliği ulusal önceliklerin başında gelmektedir. Örneğin 2019 yılında Çin'in toplam ana enerji tüketiminde %58'lik pay ile kömür ilk sırada gelmiştir (Tür, 2021: 197). Petrol ürünleri ve diğer sıvılar %20'lik bir paya sahip olup hidro enerji ve doğal gazın her birinin %8'lik payı olmuştur. Nükleer enerjinin %2'lik bir payı bulunup yenilenebilir enerjideki pay ise %5 olmuştur. Bu enerji karışımı, Çin'in kaynak tabanını yansıtmaktadır (Ulatowski, 2023: 209). Çin, kömür rezervleri açısından zengin olmasına karşın petrol ve doğal gaz rezervleri açısından yetersiz durumdadır. Ülkenin enerji politikalarının üç ana hedefi vardır. Bunlardan ilki, tedarik güvenliğini sağlamaktır. İkincisi ise istikrarı ve hızlı ekonomik büyümeyi desteklemek maksadıyla ucuz enerji kaynaklarını güvence altına almaktır. Üçüncü olarak çevresel olarak tarafsız olan enerji politikaları ortaya koymaktır. Bu üç hedef arasında gerilimler söz konusudur. Doğal gaz yerel olarak üretilen kömürden daha çevre dostu bir yakıt olarak görülse de daha pahalıdır ve onun tedarik güvenliği bağlamında endişeler bulunmaktadır. Çin'in enerji sektörü durumu için önemli bir rehber ise ''On Üçüncü Beş Yıllık Kalkınma Planı'' olup ülkenin enerji sektörü için üç seviyede hayati olarak görülmektedir. Birincisi, Çin ekonomisinin tüketici odaklı bir sisteme dönüşümü meselesi söz konusudur. İkinci olarak Çin ekonomisi yeniden bir dengelenme içerisindedir ki hafif petrol ürünleri olan jet yakıtı, gazolin ve petrokimyasallara yönelik talep artıştadır öte yandan dizele yönelik eğilimler ya da yaklaşımlar olumsuzdur. Üçüncüsü ise Pekin açısından çevre koruması yüksek bir önceliktedir. On Üçüncü Beş Yıllık Kalkınma Planı'ndaki yirmi beş sayısal hedefin onu çevreyle ilgilidir. Hükümet, 2010-2015 döneminde ekonominin enerji yoğunluğunu %15 düşürmeyi hedeflemiştir ve bu hedef %18,2 olarak gerçekleştirilebilmiştir. Plan aynı zamanda ülkenin taşımacılık sektöründe petrol temelli yakıtlardan alternatif enerji kaynaklarına geçiş arzusunu da yansıtmaktadır. Araştırmacılar, On Dördüncü Beş Yıllık Planı'nın temiz enerjiye öncelik vereceğini beklemektedirler. Yenilenebilir enerji kaynakları, Çin'in enerji ve ekonomik dönüşümünde ön plana doğru gelmektedirler (Ulatowski, 2023: 209-210).

Çin'in enerji diplomasisinde iki yaklaşım bulunmaktadır. Bunlardan ilki gerçekçi yaklaşım olup buna göre Çin'in enerji diplomasisi, kaynak zengini İran ve Rusya gibi ülkeleri ABD'ye karşı dengelemeyi amaçlamakta ve Çin'in artan küresel varlığıyla bağlantılıdır. İkincisi ise liberal bütünleşmeci yaklaşımdır ki bu bakış açısı Çin'in piyasa güçleri bağlamında artan rolünü tanımlamaktadır. 1970'li ve 1980'li yıllarda Çin önemli miktarlarda petrol ihraç edebiliyorken artan tüketim ve yavaşlayan üretimden ötürü 1993 yılı itibariyle Çin bir petrol ithalatçısı haline dönüşmüştür. Endüstrinin

FULL TEXTS BOOK

verimliliğini artırmak, onu küresel ölçekte rekabetçi bir hale getirmek ve hükümet fonksiyonlarını ana endüstrilerden ayırmak için Çin hükümeti 1982'nin başında başlayan altı turluk sanayi reformları gerçekleştirmiştir. Üç adet ulusal petrol şirketi kurulmuştur: China National Petroleum Corporation (CNPC), China Petroleum and Chemical Corporation (Sinopec), and China National Offshore Oil Corporation (CNOOC). Bunlar dikey bütünleşik firmalar olarak iç piyasa üzerinde hakimdirler. Çin'in enerji diplomasisinin tarihçesi 1992 yılına kadar gitmektedir ki bu tarihte CNPC, Peru'da yaşlanan Talala Petrol Sahası'nı geliştirme haklarını satın almıştır. 1990'lı yılların ortalarında CNPC aynı zamanda Sudan ve Kazakistan'a da yatırımlar yapacaktır ancak 1990'lı yılların başında Çin üst yönetimi, deniz aşırı yatırımlar yapmayı makul bir strateji olarak görmemiş ve bunun yerine iç yatırımlara devam etme kararı almışlardır. Bu durum, Çin'in petrol ithalatlarına bağımlılığı artınca değişmiştir. Bunun sonrasında Pekin, CNPC, Sinopec ve CNOOC firmalarına küresel oyuncular haline dönüştürme yönünde kararlılık göstermiş ve ülkenin enerji diplomasisinin yönünü Orta Doğu, Afrika, Latin Amerika, Rusya ve Orta Asya'ya çevirmiştir. Afrika'daki birçok Çin yatırımı Angola, Sudan, Demokratik Kongo Cumhuriyeti ve Gabon'da gerçekleşmiştir ki buralar petrol firmalarının ana hedefi olmuştur. Çin, insan haklarını ihlal eden demokratik olmayan hükümetlerle iş birliği geliştirdiği için sıklıkla eleştirilmiş ve Çinli firmalar kurumsal eksiklikleri olan ülkelerde yüksek riskli yatırımları tercih eder görülmüşlerdir. Bu durum, uluslararası yatırımcıların siyasi riski düşüren ve istikrarlı bir iş çevresini destekleyen ülkeler arayışında olması gerekliliğini içeren konvansiyonel yatırım çerçevesine aykırılık teşkil etmektedir. 2008 sonbaharındaki küresel finansal kriz emtia fiyatlarının düşmesi ile sonuçlanmış ve birçok petrol üreticisi ülke kendilerini mali zorluk içerisinde bulmuşlardır. Çin, bu fırsatı petrol tedarikleriyle güvence altına alınan borç teklifleriyle değerlendirmiştir. Örneğin, 2009 ve 2010 yıllarında dokuz ülkeye teklif edilen petrol karşılığı borçlar sisteminin toplam tutarı yaklaşık 77 milyar dolar değerindedir. Ödünç alan tüm ülkeler, Orta Doğu'nun dışında olup o sözleşmelerin Çin'in kaynak çeşitlendirmesine yardımcı olmasını sağlamıştır (Gholz vd., 2017: 42-50; Ulatowski, 2023: 212-213).

Çin aynı zamanda doğal gaz tedarikini çeşitlendirme konusunda da başarı sağlamıştır. Buradaki ilk kilometre taşı, 2006 yılında LNG ithalatlarına başlanması olmuştur. Bunu 2010 yılında Orta Asya'dan ve 2019 yılında Rusya'dan doğal gaz ithalatları izlemiştir (. 2017 yılından bu yana Çin, Japonya'nın ardından ikinci en büyük LNG ithalatçısı olmuştur. Çin, doğal gaz tedarikçilerini çeşitlendirmiştir. Söz konusu ithalatların %38'i boru hattıyla doğal gaz, %62'si ise LNG yoluyla olmuştur. Bu hususta Avustralya (%29), Türkmenistan (%25) ve Katar (%9) ana kaynak ülkeler arasında yer almaktadır (Grigas, 2017: 236-241, 257-263). Çin'deki ulusal petrol şirketlerinin başarılı büyümelerine rağmen strateji küresel desteği barındırmamaktadır. Buna karşı dört argüman bulunmaktadır. Bunlardan ilki, ulusal petrol şirketleri küresel piyasada kendi yabancı ortakları tarafından üretilen petrolü ağırlıklı olarak satmakta ve bunu Çin'e göndermemektedirler. İkincisi ise ulusal petrol şirketleri, ortakları tarafından üretilen petrolü sattıklarında piyasa fiyatlarını talep etmeleri ve küresel bir kesinti durumunda üretilen petrolün Çin için var olup olmayacağı konusunda bir garantinin olmamasıdır. Üçüncüsü ise ulusal petrol şirketlerinin küresel ölçekte büyümeleri adına yabancı varlıklar için aşırı ödeme yapmalarıdır. Dördüncüsü ise ulusal petrol şirketleri, ABD ve Batı Avrupa ülkeleri ile anlaşmazlık yaşayan ülkelerde yatırımlar yapmışlardır ki bu, Çin açısından dönem dönem bir dış politika sorumluluğu ya da meselesi haline dönüşebilmektedir. Çin, 2017 yılından günümüze en fazla ham petrol ithalatçısı konumundadır. En büyük tedarikçileri, sırasıyla %16 ve %15'lik oranlara sahip Suudi Arabistan ve Rusya'dır (Ulatowski, 2023: 213-214).

Çin, son on yılda Orta Doğu ve Kuzey Afrika bölgesinde daha etkili bir aktör haline gelmektedir. Çin'in Orta Doğu'daki siyasi ve güvenlik açısından meydan okumalara yönelik yaklaşımı geleneksel olarak temkinli olmuştur. Bölgeye yeni gelen bir oyuncu olarak ekonomik varlığını ve ilişkilerini kısa sürede geliştirmeyi başarırken Arap devletleri ile çok boyutlu ilişkilerini geliştirememiştir. Pekin'in MENA ülkeleriyle ilişkileri esasında bölgede keşfedilen enerji kaynaklarına yönelik Çin'in küresel talebinin yanı sıra 2013 yılında geniş ölçekli olarak ilan edilen ''Tek Kuşak-Tek Yol Girişimi''ni temel

FULL TEXTS BOOK

almaktadır. 2017 yılından bu yana Çin dünyanın en büyük ham petrol ithalatçısıdır ki petrol dış alımlarının yarısı Orta Doğu kaynaklıdır. Buna ilaveten Asya-Avrupa-Afrika arasında stratejik açıdan lojistik bir kesişim noktası olarak Orta Doğu, Çin'in hırslı Tek Kuşak-Tek Yol Girişimi çerçevesinde çok önemlidir. Bu durum Çin'i ticaret ve ekonomik ağ bağlantıları bakımından anahtar oyuncu haline dönüştürecektir. Asya-Pasifik bölgesi dışında Orta Doğu, barındırdığı zengin hidrokarbon kaynaklar ve jeostratejik konumundan ötürü Pekin bakımından en önemli bölge olarak düşünülebilir (Savicheva vd., 2022: 182).

2022 yılı itibariyle Çin'in nüfusu 1.4 milyara ulaşmıştır ve hızlı büyüyen ekonomisi bu ülkeyi dünya genelinde lider enerji tüketicisi olarak konumlandırmıştır. BP'ye göre 2021 yılında Çin, küresel enerji tüketiminin %26,5'inden sorumlu olmuştur (Sun vd. 2023: 1). Çin'deki hidrokarbon üretimi ve tüketimi arasındaki farktan ötürü, bu ülke yabancı ülkelerdeki enerji kaynaklarını araştırmalıdır. Çin, kendi ekonomisinin sürdürülebilir büyümesini gerçekleştirmek için enerjiye ihtiyaç duymaktadır. Çin, yabancı ülkelerden kendi taleplerindeki kesintileri ithal etmelidir. Pekin'in kendi ekonomisi tarafından ihtiyaç duyulan enerji akışını güvence altına alma konusunda ciddi endişeleri bulunmaktadır. Çünkü güvenilir enerji kaynaklarına erişim, Çin'in dünyanın en büyük ekonomisi olma yönelik hareketinin sürdürülebilirliğine katkı sağlamaktadır. Nihayetinde Çin, petrol ve LNG ithalatında farklı meydan okumalarla karşılaşmaktadır çünkü bu emtialar Malakka Boğazı boyunca geçmek zorundadır. Malakka Boğazı hidrokarbon taşımacılığı ve büyük ölçekli kargo için kritik bir su yolu görevi görmektedir. Bundan dolayı Malakka Boğazı doğal bir stratejik geçiş noktasıdır. Düşman bir ülke olarak ABD, herhangi bir çatışma durumunda Malakka Boğazını kolaylıkla kapatabilir ve böylece Çin'in kritik enerji kaynaklarına erişimini kesebilir. Çin, kaliteli kalkınma programının bir parçası olarak düşük karbonlu gelişme stratejisi ile 2060 yılı itibariyle sıfır karbon hedefine ulaşma taahhüdünde bulunmuştur (Luo, 2022). Bunu başarabilmek için Pekin, fosil yakıt kullanımını azaltan ve tedarik tarafında yenilenebilir kaynakları geliştirmeyi içeren bir kapsamlı politika ortaya koymuştur. Ülke aynı zamanda petrol, biomass ve kömür gibi çevreyi daha çok kirleten enerji kaynakları seçeneklerinin yerine doğal gaz kullanımını artırmayı öncelemiştir. Doğal gazın daha fazla kullanımına ağırlık verilmesi Pekin'deki şehir havası kirliliğini azaltmaya yardımcı olmuştur ki bu dünyanın gelişen diğer şehirleri için bir örnek teşkil etmektedir (Moghani & Maleki, 2024: 2282-2284).

Fosil yakıtları kontrol etme ağırlıklı olarak fosil olmayan yakıtların geliştirilmesine bağlı olacaktır ki Çin dünyada yenilenebilir enerji geliştirme ve nükleer enerjide lider durumdadır (Hilton, 2024; Nuclear Engineering International, 2024; Clifford, 2023). Gelecekte fosil yakıt kullanımının düşebileceği beklenmektedir. Çin'de enerji güvenliği ve güç üretiminde kömür kullanımı kritik önemdedir ve kömür kullanımı daha öncesinde talep kaynaklı olmuştur. Ancak hava kirliliği gibi çevresel konularla ilgili artan endişeler, Çinli karar alıcıların dikkatlerini tedarik tarafını kontrol etmeye yöneltmeye yol açmıştır. Çin kömür kullanımını azaltmaya ve temiz kömür kullanmaya yönelik politikalar uygulamaktadır. Burada amaç, On Dördüncü Beş Yıllık Kalkınma Planı ile kömür kullanımını azaltmayı ve On Beşinci Beş Yıllık Kalkınma Planı ile bunu daha da düşürmeye amaçlamaktadır. Buna ilaveten sürdürülebilir kalkınma planları, Çin'in enerji diplomasisinde önemli rol oynamaktadır. Pekin, dünyanın en büyük solar panel ve rüzgâr türbinleri üreticisi olup bunları diğer ülkelere ihraç etmektedir. (Izumi & Suzuki, 2024; Hawkins, 2023). Aynı zamanda Çin, Uluslararası Yenilenebilir Enerji Ajansı'nın yenilikçilik birimine katılmış ve ülkesinde yenilenebilir enerji araştırma ve geliştirmeyi desteklemek için bir teknoloji merkezi kurmuştur. Çin'in enerji diplomasisi girişimleri bir yandan sürdürülebilir kalkınma hedeflerini gerçekleştirmeyi amaçlarken diğer yandan da enerji güvenliğini sağlamak niyetindedir. Yenilenebilir enerjiyi destekleyerek enerji verimliliğini geliştirerek ve altyapı projelerine yatırımlarda bulunarak Çin kendisi ve ortak ülkeleri için daha sürdürülebilir bir gelecek oluşturulmasına yardımcı olmaktadır (Moghani & Maleki, 2024: 2282-2284).

FULL TEXTS BOOK

2.2. ABD'nin Enerji Güvenliği Stratejisi

ABD, 2010'ların başına kadar net bir enerji ithalatçısı konumunu korumuştur. Ancak sonrası süreçte ülke içerisindeki değişik bölgelerde kaya gazı ve petrolünün keşfi, Washington'ın enerji güvenliği siyasalarında devrimsel dönüşümlere yol açmıştır. Bu rezervlerden yararlanılmasıyla birlikte ABD, enerji ithalatçısı konumundan enerji ihracatçısı konumuna yükselmiştir. Yabancı enerji sağlayıcılarından kaynaklı yüksek bağımlılıktan kendisini kurtarmayı başaran Washington dünya enerji piyasasında kaya gazı ve petrolünün devriminin yardımıyla öncü bir enerji ihracatçısı olmayı başarmıştır. Bahse konu devrimin sağladığı 'know-how' kanalıyla Washington, dünyanın sayısız bölgesine sıvılaştırılmış doğal gaz (LNG) ihraç edebilmektedir. Buna ilaveten mevcut kaya gazı devrimi sayesinde ABD, dünyanın öncü doğal gaz kaynak sahibi ve üreticilerinden birisi olarak bu sektörde dünya listesinde ilk on ülke içerisindedir (Iran Oil Gas Network, 2024). 2022 Rusya-Ukrayna savaşı sebebi ile Rus doğal gaz alımını kademeli olarak düşürmeyi amaçlayan Avrupa açısından da öngörülen seçenekler arasında ABD'den LNG ithalatı yer almıştır (Yorulmaz vd., 2024: 79-80). Beyaz Saray tarafından 26 Ocak 2024 tarihinde yapılan açıklamaya göre, ABD hâlihazırda dünyada enerji ihracatında birinci sırada yer almakta ve bu on yılın sonu itibariyle ABD'nin LNG ihracatlarının ikiye katlanması beklenmektedir (Corbeau, 2024;Rodriguez, 2023). Yine bu açıklamaya göre, Washington müttefiklerini destekleme konusunda taahhüdüne sıkı sıkıya bağlıdır ve ABD'nin yakın zamanda müttefiklerine sıvılaştırılmış doğal gaz teminine devam edebilecektir. 2023 yılında ABD, LNG ihracatlarının yaklaşık olarak yarısını Avrupa'ya gerçekleştirmiş ve AB ile birlikte tüketimi ekonomikleştirmek ve depolama kapasitelerini yönetmeye çalışmıştır. Ayrıca 2022 yılında ABD ve AB, Birlik piyasasına ek LNG miktarları sağlanması taahhüdünde bulunmuşlardır. ABD'nin geçtiğimiz son iki yılın her birinde AB piyasasına yönelik yıllık teslimat hedeflerini aşmıştır. ABD'ye göre var olan LNG üretim ve ihracat altyapısıyla müttefiklerine yönelik teslimatları sürdürmeye devam edecektir (The White House, 2024). Sıvılaştırılmış Petrol Gazı (LPG) ve LNG üretimleri/satışları 2024 yılında yüksek miktarlara ulaşmıştır. Artan üretimler aynı zamanda LNG ve LPG ihracatlarına da bir temel sağlamıştır. ABD'nin LNG ihracatları, 1 Ocak 2024-29 Nisan 2024 arasında S&P Global Commodities at Sea taşımacılık verisine göre 2024 yılında toplamda 20.2 milyon tona ulaşmıştır. Bu miktar, ABD ihracat verilerinin başladığı yıl olan 2017 yılından bu yana Ocak-Nisan dönemi için kaydedilen tüm zamanların en yüksek LNG ihracatları olmuştur. Buna kıyasla 2023 yılında ABD LPG ihracatları, 19 milyon ton iken 2022 yılında aynı dönem içinde 16.6 milyon ton olarak kayıt edilmiştir. ABD LPG üretiminin çoğunluğu, istikrarlı Asya talebinden ötürü Doğu'ya yönelmektedir ki bu pazara ek varillerin girişini olanaklı kılmaktadır. Fakat, istikrarlı üretim ve yeterli tedarik Avrupa talebine cevap verebilmek için yeterli olandan daha fazla üretim yapılabileceği anlamına gelmektedir (Kiddie vd., 2024). İleri bakacak olursak Asya ve özellikle Çin'in kömürden çıkması ve yerel gaz üretiminin düşmesi sonucu küresel LNG talebi artabilecektir. Bir LNG oyuncusu olan Shell, 2040 itibariyle küresel talep büyümesinin %50'yi aşacağını öngörmektedir. 2023 yılında ABD Enerji Bakanlığı verilerine göre, 2023 yılında ülke ortalama olarak günde 11,9 milyar m^3 LNG ihraç etmiştir. Uygun ve maliyeti karşılanabilir doğal gaz tedarikiyle ABD, LNG projeleri geliştirmekte ve ihracat kapasitesinin artırılması hedeflenmektedir. Mevcut şartlarda ABD'de geliştirilen altı adet LNG projesi yer almaktadır. Bu projeler, toplam kapasiteyi %80'lik bir artışla 2024 yılındaki günde 14 milyar m^3 küpten 2028'de günlük 25 milyar m^3'ün üzerine taşıyabilecektir. ABD LNG satışları, üretim kapasitesi ile sınırlandırılmaktadır. Nihayetinde büyüme, devreye alınacak ek tesislere bağımlıdır. 2024 yılı sonu itibariyle iki adet LNG projesinin tamamlanması beklenmektedir. Bunlar Louisiana'daki Phase 1 of Venture Global's Plaquemines Projesi ve Teksas'taki Cheniere Energy's (LNG) Corpus Christi Liquefaction Stage 3 projesidir. Söz konusu projeler, mevcut kapasiteye günde 3,1 milyar m^3 katkı sağlayacaktır. Bu aynı zamanda mevcut seviyelerin %22'sine tekabül etmektedir. Bu projeler devreye alındıkça 2025 yılında ABD'nin LNG satışlarının %18 artması beklenmektedir (Segal, 2024).

FULL TEXTS BOOK

ABD'nin 20. yüzyılın son on yıllık döneminden bugüne kadar görevde bulunan farklı başkanların yönetimlerince kararlılıkla uygulanmaya çalışılan stratejilerinden birisini öncelikli olarak Avrasya enerji jeopolitiği ve güvenliği stratejileri çerçevesinde Rusya-İran tarafından geliştirilen Kuzey-Güney Enerji Koridoru'nun karşısına Doğu-Batı Enerji Koridoru'nu çıkartmıştır. Washington kendisinin enerji güvenliğini doğrudan ilgilendirmese de Avrupalı ortaklarının ivedi şekilde enerji güvenliğini gerçekleştirmek ve de Sovyetler'in parçalanmasının ardından bağımsızlıklarına kavuşan Orta Asya Türk devletleri ve Azerbaycan'ın güçlendirilmesine yönelik politikalar bütün yumuşak güç stratejilerinden istifade edilerek egemenliğini devam ettirmek için uygulanmıştır. Bahse konu düzlemde, ABD, 1990'lardan günümüze öncelikli olarak Bakü'nün zengin hidrokarbon rezervlerini Rusya'yı devre dışı bırakarak Türkiye ve Gürcistan vasıtasıyla Batı pazarlarına iletmeyi planlayan Bakü-Tiflis-Ceyhan Ham Petrol Boru Hattını, Bakü-Tiflis-Erzurum (Güney Kafkasya) Doğal gaz Boru Hattını ve Güney Gaz Koridorunu (Anadolu Geçişli Doğal gaz Boru Hattı ve Adriyatik Geçişli Doğal gaz Boru Hattı) faaliyete geçirmek için diplomatik çabalarını arttırmış ve bunlarda başarı elde etmiştir (Caşın, 2022: 11-15; Telli, 2022: 319-333).

ABD, Nabucco Doğal gaz Boru Hattı ve Hazar Geçişli Doğal gaz Boru Hattı projelerini devreye almada başarısız olmuştur. Bahse konu kapsamda 2000'li yıllarda Moskova-Kiev kaynaklı enerji anlaşmazlıkları kapsamında Avrupalı ortaklarının enerji güvenliğinin tesisine ağırlık veren ABD, yukarıdaki başarılı girişimlerine ilaveten Rusya'nın Avrupa ve dünya enerji pazarlarındaki mukayeseli avantajını sürdürmek maksatlı ortaya koyduğu Türk Akım ve Kuzey Akım doğal gaz boru hatlarının faal olmasını engelleme çabalarını arttırmıştır (Blank, 2021). Fakat ABD'nin yaptırım tehdidine karşın Rusya ve Türkiye, Türk Akımı'nı başarılı bir biçimde işletebilmektedirler. Buna karşın, Moskova'nın bütün yapım aşamalarını ve Berlin haricinde tüm onay safhalarını tamamlamasına karşın Kuzey Akım 2 Doğal Gaz Boru Hattı Projesi (Lefebvre, 2022; The White House, 2022), Washington'ın engelleme girişimleri ve yaptırım uyarısı sonucunda Berlin tarafından askıya alınmıştır (Appunn & Wettengel, 2022). Şubat 2022'den bugüne süren Rusya-Ukrayna savaşında Kuzey Akım 2 Projesi merkezli engelleme, sabotaj ve saldırı girişimleri kapsamında Moskova ve Washington arasında bir bilek güreşi yaşanmaktadır (Örmeci vd., 2023: 454-455).

2.3. Hindistan'ın Enerji Güvenliği Stratejileri

Güney Asya ülkeleri arasında en çok petrol üreten ülke, kanıtlanmış en çok petrol rezervini barındırmasından ötürü Hindistan'dır. Dünyanın üçüncü en büyük petrol tüketicisi olarak Hindistan'ın petrol üretimi 1990-2015 arasında düzenli olarak artmışken, 2015 sonrasında düşmüştür (Abdi, 2020). 2019 itibariyle Hindistan'da faaliyet gösteren on iki petrol firması yaklaşık 360 milyon varil petrol üretmişlerdir. Petrolde olduğu gibi Güney Asya ülkelerinin doğal gaz rezervleri talebini de karşılamak için yeterli değildir. 2019 verisine göre Güney Asya'da en fazla doğal gaz rezervine sahip ülke yaklaşık 1,3 trilyon m^3 ile Hindistan'dır. Bu miktar, 1990 yılındaki 673 milyar m^3'lük toplam gaz rezervinden yaklaşık %97 daha fazladır. Hindistan'daki doğal gaz rezervlerinin çoğunluğu, ülkenin kuzey kıyı bölgesindeki alanlardadır. Bu kaynaklar, toplam rezervlerin %41'ni oluşturmaktadır. Ülkenin batı kıyıları toplam rezervlerin %23,4'üne ev sahipliği yapmaktadır (Yüksel & Özdemir-Daşcıoğlu, 2021: 262-264).

Uluslararası Enerji Ajansı tarafından hazırlanan Hindistan Enerji Görünümü 2021 Raporu'na göre Hindistan'ın enerji taleplerinin %80'inden fazlası kömür, petrol ve katı biyokütle yakıtlar tarafından karşılanmaktadır. Kömür, elektrik üretiminin ve endüstrinin genişlemesini desteklemiştir ve enerji karışımındaki temel yakıttır. Petrol kullanımı ve alımları araç sayısının ve karayolu taşımacılığı kullanımının hızlı artışından ötürü yükselmiştir. Doğal gaz ve modern yenilenebilir enerji kaynakları gelişmeye başlamış ve 2020 yılındaki COVID-19 salgınından asgari düzeyde etkilenmiştir. SolarPV'nin özellikle artışı çok önemli olmuştur ve kaynak kapasitesi yüksektir. Hindistan kişi başı CO_2 salınımlarında düşük bir seviyede olsa da dünyanın en büyük üçüncü CO_2 salımcısı konumundadır.

FULL TEXTS BOOK

Hindistan'ın elektrik sektörünün karbon yoğunluğu özellikle uluslararası ortalamanın üzerindedir. Hindistan, güvenilir ve sürdürülebilir bir enerji geleceği yaratmayı hedefleyen yürürlükte olan geniş kapsamlı stratejilere sahiptir. 2010-2020 arasında Hindistan, yenilenebilir enerji oranını %16'dan %22'ye çıkartmıştır. Gelecek yıllarda Hindistan'ın yenilenebilir enerji oranının %50'ye çıkartılması hedefi, ülkenin enerji dönüşümünün hızlandırılmasını gerektirmektedir. Hindistan, elektrik üretiminin %77'sini fosil yakıtlardan (%72,5'si kömür, %4,2'si doğal gaz ve %0,3'ü petrol) karşılamaktadır (Buchholz, 2022). Sadece elektrik elde etmede değil aynı zamanda yenilenebilir ve nükleer güç 2020 yılında ülkenin enerji karışımında %4'lük bir paya sahip olmuştur. Biyoyakıtlar, Hindistan'ın enerji karışımının %20'sini teşkil etmektedir. Bunların %13'ü geleneksel biyoyakıtlardır. Bunlar odun yakılması ve tarımsal kaynaklı ürünlerdir (International Energy Agency, 2021).

2022 yılında Hindistan dünyanın en büyük üçüncü sera gazı salıcısı olmuştur. 2070 yılında sıfır karbonlu bir sisteme ulaşmayı hedeflemektedir. Bu bağlamda iklim hedeflerini başarabilmesi için hızlı bir enerji dönüşümüne/geçişine ihtiyacı vardır. Fakat 2022 senesinde Yeni Delhi, yazın aşırı sıcak hava dalgaları ve ülkenin kuzeyinde beklenenden daha soğuk kışların yaşanması üzerine kesintilerin önüne geçmek için kömür merkezli santrallerden ve güneşten üretimi artırma zorunda kalmıştır. Hindistan'ın 2022 yılında enerji büyümesindeki artışta %22'lik oranla kömür ilk sırada yer almıştır. Kömür hâlihazırda ülkenin enerji ihtiyacının yaklaşık %70'ini karşılamakta ve 2023 itibariyle ek bir %8'lik kömür yakımı olabileceği öngörülmekteydi. 2023 yılının başında hükümet enerji üreten firmalardan 2030 yılına değin kömür merkezli üretim tesislerinde üretimleri durdurmamalarını talep etmiştir. Yenilenebilir enerji gücü de hala yükselmektedir. Hindistan, kurulu elektrik gücü, rüzgar ve de güneş enerjisinde dünyada dördüncü sıradadır. 2028 yılı itibariyle yeşil enerjiye 250 gigavatlık bir kapasite daha ekleyerek emisyon salınımlarını 2005'teki seviyesinin %45 altına düşürme konusunda umutludur. Yine bu bağlamda 2030 yılı itibariyle toplam enerji karışımının yarısını yenilenebilir enerjilerden oluşturmayı hedeflemektedir. Ülkenin enerji bakanı Alok Kumar, Hindistan'ın hızlıca temiz güç santralleri inşa etmesi gerektiğini vurgulamıştır. Bunlar ülkenin iklim hedeflerine ulaşmasına da yardımcı olacaktır. Kumar, Hindistan'ın enerji üretimindeki karışımda temiz enerji kaynaklarının oranını 2047 itibariyle günümüzdeki mevcut miktarın iki katı olacak %90'a çıkarmanın gerekliliğine vurgu yapmıştır (Frost, 2023). 2023 yılında Hindistan'ın Rusya'dan petrol ithalatları 2022'nin başında çok küçük bir oranda o yıl boyunca önemli oranda artmıştır. Örneğin Hint devlet bankası Bank of Baroda'ya göre 2021 yılında sadece %2'lik bir artışla bu ülkenin yıllık ham petrol alımlarının yaklaşık %20'ye ulaşmaktadır (Kısacık, 2024: 166).

Hindistan'ın deniz kaynaklı petrol alımları Çin'inkini geçmiştir. Hindistan, 2022 Rusya-Ukrayna Savaşı'ndan sonra Urallar ham petrolünü azalma da olsa almaya başlamıştır. Yeni Delhi'nin petrol rafinerileri aynı zamanda Rusya'nın ESPO Karışımı'nı (Doğu Sibirya-Pasifik Okyanusu Petrol Boru Hattı) almaya gittikçe artan bir ilgi göstermişlerdir. Bu durumdan ABD rahatsız olmasına rağmen Washington, Yeni Delhi'nin Moskova'dan petrol tedarik edebileceğini kabul etmektedir. Bahse konu bağlamda Rus petrolü kaynaklı rafine edilmiş yakıtların ABD ve AB'ye ticaretinin yapıldığına yönelik aynı zamanda endişeler de olmuştur. Hint hükümeti, Rusya'dan mevcut petrol alımlarını ekonomik ve uygun gördüğü her yerden petrol sağlamak zorunda olması gerekçesiyle açıklamıştır. Hindistan'ın toplam doğal gaz tedariklerinin neredeyse %50'si dış kaynaklardan sağlanmaktadır. Bunun çok küçük bir bölümü Rus kaynaklı olup birçoğunun menşei Körfez devletleridir (Menon, 2023).

Nisan 2023 itibariyle doğal gaz ithalatları % 6,5 artmışken, gazın yurt içi kullanımı % 1'lik artış yaşamıştır. Hindistan aynı zamanda bir önceki yılın aynı dönemindeki 1,3 milyar dolar kıyasla toplam 1.4 milyar dolarlık doğal gaz alımı yapmıştır. Ham petrol ithalatları ise Nisan 2023'te 2022'deki 16,8 milyar dolarlık miktardan 10,8 milyar dolara düşmüştür. Kapasite bağlamında Hindistan'ın ham petrol dış alımları Nisan 2023'te %8 düşmüştür. Petrol ürünleri çıktısı aynı zamanda %1 düşmüşken bunun kullanımı % 0,2 azalmıştır (The Economic Times, 2023; Kısacık, 2024: 167-168). Rusya Federasyonu Başbakan Yardımcısı Aleksandr Novak tarafından 10 Temmuz 2024 tarihinde Moskova'da Rusya Devlet Başkanı Vladimir Putin ile Hindistan Başbakanı Narendra Modi arasında yapılan görüşme

FULL TEXTS BOOK

sonrasında yaptığı açıklamada Rusya'nın Hindistan'a yılda 3 milyon ton LNG sağladığını ve iki ülkenin doğal gaz mevzusundaki ortaklığını daha da güçlendirme niyetinin bulunduğunu ifade etmiştir. Buna ilaveten Hintli firmaların Rus firmalarıyla ortak enerji projeleri gerçekleştirdiğini ve bunun ağırlıklı olarak Kuzey Kutbu ve Sahalin bölgelerinde vuku bulduğunu vurgulamıştır. Novak ayrıca şu hususlara da dikkat çekmiştir: *''Uzun vadeli iş birliğine gelince hem Rusya hem de Hindistan bu tür ilişkilere ilgi duyuyor. Zaten ortak bir petrol rafinerisi projemiz var. Tedarik konusunda da uzun vadeli iş birliğiyle ilgileniyoruz ve bu tür anlaşmalar şu anda kesinlikle değerlendiriliyor.''* Rusya ile Hindistan arasındaki toplam ticaret tutarı başta özellikle enerji kaynaklarının yükselen oranıyla 2023 yılında 2022'ye kıyasla % 60 artışla 65 milyar dolara ulaşmıştır (HaberTurk, 2024).

3. Aktör Olarak Devletin Rolü: Çin, ABD ve Hindistan Üzerine Karşılaştırma

Çin'in artan enerji tüketimi ve dolayısıyla yabancı enerji kaynaklarına olan bağımlılığı kendisinin küresel enerji piyasasında önemli bir aktör olmasını da sağlamaktadır. Çin dünyanın en büyük petrol ithalatçısı olarak 2023 yılında günlük 11.3 milyon varil ithal ederek 2022 yılına göre %10 artış göstermiştir (EİA, 2024). Çin'deki rafineriler, ülkenin ulaşım yakıtı ihtiyacını desteklemek ve büyüyen petrokimya endüstrisi için hammadde üretmek amacıyla ülkenin artan rafinaj kapasitesini karşılamak için 2023 yılında rekor hacimlerde ham petrol ithal etmiştir (Kool, 2024). Rusya, Suudi Arabistan ve Irak 2023 yılında Çin'in başlıca ham petrol ithalat kaynakları olmuştur. 2022 ile karşılaştırıldığında, Çin'in 2023 ham petrol ithalatı en çok Rusya, İran, Brezilya ve ABD'den artmakla birlikte Çin'in 2023 yılında ham petrol ithalatındaki en büyük hacimsel artış Rusya'dan gerçekleşmiştir (EİA, 2024). Çin, 2019'dan 2021'e kadar ham petrol ithalatının %15'ini Rusya'dan gerçekleştirerek Suudi Arabistan'dan sonra ikinci sırada yer almıştır (Statista, 2024). 2023 yılında Rusya, Çin'in ham petrol ithalatının %19'unu (2,1 milyon varil/gün) karşılayarak Çin'in en büyük ham petrol ithalat kaynağı haline gelmiştir (EİA, 2024). Bu artış, 2022'de Ukrayna'yı tamamen işgal etmesinin ardından Rusya'dan alınan ham petrole uygulanan yaptırımlar ve fiyat sınırlamalarıyla ilgili indirimlerin bir sonucudur. Çin aynı zamanda doğal gaz tüketiminde dünyada üçüncü sırada, ithalatında da ise ilk sırada yer almaktadır (Zang, Nie ve Downs, 2023). Üretim notasında ise her geçen yıl artış gözlemlenmektedir. Fosil yakıtlardan kömür ithalatı açsından ise sahip olduğu yüksek rezervler sayesinde petrol ve doğal gaza kıyasla yüksek bağımlılıktan söz etmek mümkün değildir. Çin, artan enerji talebi karşısında ortaya çıkan bağımlılığını enerji güvenliği stratejisine ilişkin 2050 vizyonu ve devlet merkezli pazarlama modeli ile üretimini arttırarak ve iç-dış pazarda denge sağlayıcı rol üstlenerek düşürmektedir.

Çin ve Hindistan başta olmak üzere gelişmekte olan ekonomilerin, dünya enerji talebindeki artışın en büyük pay sahibi oldukları ve küresel enerji sektöründe önemli birer aktör haline geldikleri görülmektedir. Endüstri, sanayi ve kentleşme üçgeninde Çin'in artan enerji talebinin durması neredeyse mümkün değildir. Bu durum karşısında Çin'in enerji güvenliğine ilişkin uluslararası kurallara riayet edip etmeyeceği ve enerji güvenliği stratejisinde nasıl bir değişikliğe gideceği temel sorular arasında yer almaktadır. Bu noktada temel tartışma konusu, Çin'in enerji güvenliği stratejisinin uluslararası enerji piyasasını istikrarsızlaştırıp istikrarsızlaştırmayacağı veya başta ABD olmak üzere diğer ülke ve bölgelerin enerji güvenliğine tehdit oluşturup oluşturmayacağıdır. Çin, ulusal ölçekte devlet ile özel sektör arasında dengeyi koruyacak, uluslararası pazarda da tedarik zinciri bağlamında enerji ithalatını ekonomik açıdan sürdürülebilir kılacak devlet merkezli pazarlama stratejisi uygulamaktadır. Pekin özellikle bu stratejisini yoğun şekilde petrol sektöründe uygulamaktadır. Bu yaklaşımın temelinde Çin hükümetinin petrol ve diğer sektörleri istikrar temelli kontrol altında tutma isteği yatmaktadır.

Çin'in devlet merkezli pazarlama stratejisinin ayırt ediciliğine ilişkin soruyu yanıtlamak için iki nokta dikkat çekmektedir. İlki, dünyadaki her ülke için geçerli standart uluslararası kuralların olmaması ve Çin'in stratejisinin temel dayanaklarının net şekilde saptanmasıdır. Öte yandan her ülke enerji güvenliği stratejisini kendi ulusal çıkarları, talepleri ve mevcut enerji kaynakları potansiyeline göre oluşturmakta ve bu durum da küresel ölçekte ortak değerlendirme ilkelerinin oluşturulamamasına yol açmaktadır.

FULL TEXTS BOOK

Çalışmada Çin, ABD ve Hindistan karşılaştırılmasına yer verilmesinin nedeni, ABD'nin serbest piyasa ekonomisinin küresel başat örneği olması iken Çin ve Hindistan'ın benzer nüfusa, enerji talebine ve her iki ülkenin de yükselen ekonomiye sahip durumda olmalarıdır. Dikkat çeken ikinci nokta ise Çin'in devlet merkezli pazarlama stratejisinin devinim halinde olmasıdır. Enerji güvenliğine ilişkin istikrar sahibi gelişmiş ülkelerin aksine Çin'in her yıl artarak devam eden enerji talebine ilişkin enerji güvenliği stratejisi de zaman için değişiklik arz etmektedir. Bu bağlamda Pekin de enerji güvenliği hususunda reformist yaklaşım sergilemektedir. Bu noktada akla gelen temel soru, Çin'in devlet merkezli pazarlama stratejisinin ve enerji güvenliği algısının ABD'den ve Hindistan'dan hangi açılardan farklılık taşıdığıdır. Devletlerin enerji güvenliği stratejileri birbirlerinden farklılık arz etmektedir. Son yıllarda dünya genelinde enerji kullanımında verimliliğin arttırılması ve çevrenin korunmasına ağırlık verilse de Çin'in enerji güvenliği algısında yeterli petrol arzının sağlanması sürekli olarak ön planda tutulmaktadır. Bunun yanında Pekin'in enerjiye yönelik güvensizlik algısı, hala öncelikli olarak petrol arzının kesintiye uğramasından ve petrol fiyatlarındaki artışlardan kaynaklanmaktadır. Bu tür algılamalara dayanarak Çin'in daha fazla petrol imtiyazını kontrolü altına almak için her türlü çabayı gösterdiği anlaşılmaktadır. Bu durum Çin'in enerji güvenliğinin arz tarafına verdiği önemin ABD ya da Hindistan'dan farklı olup olmadığı sorunu gündeme getirmektedir. Küresel açıdan 1970 yılında petrol üretiminin zirve yapmasına rağmen ABD'nin o yıllardan 2000'lerin başına değin tüketiminin sürekli artması ve bu sebeple ABD'nin ithalatının da artarak enerji güvenli açısından bağımlı hale gelmesi, Çin açısından benzer bir örnek oluşturmaktadır. Çin de 1970'lerden 2000'lerin başına hatta günümüze değin artan enerji talebi karşısında enerji güvenliği adına bağımlılık ile karşı karşıya kalmaktadır. Bu durum karşısında devletlerin enerji güvenliğini kendi perspektiflerinden nasıl tanımladıkları ve algıladıkları önem taşımaktadır. ABD açısından bakıldığında, ilk olarak petrol arz güvenliği anahtar role sahip iken ikinci olarak enerji güvenliği, ABD'nin ulusal güvenliğini ve süper güç statüsünü korumanın önemli bir yapıtaşı ve son olarak da ABD'nin enerji güvenliği çabası demokrasiyi teşvik etmenin ve korumanın aracı olarak görülmektedir (Yergin, 2024; McCown, 2024; Shepard & Pratson, 2022: 462-464). Diğer bir ifade ile ABD'nin enerji güvenliğinin petrol sorunu temelinde ulusal güvenliğin bir bileşeni olduğu algısı üzerinde vücut bulmaktadır. 1973 petrol krizinin ABD'deki enerji güvenliği algıları üzerinde derin bir etkisi olmuş ve dolayısıyla enerji güvenliğine ilişkin algı, enerji piyasalarındaki arz kesintilerini karşılayabilme yeteneği üzerine odaklanmıştır. Söz konusu arz kesintileri jeopolitik, askeri veya sivil gelişmelerden kaynaklanabilir ve kısa vadede telafisi mümkün olmayabilir. Enerji bağımlılığı, devlet yönetim mekanizması dışında bireyler açısından da bir tehdit olarak algılanmaktadır. Enerji arzının kesintiye uğramasını önlemek ve doğabilecek sorunlara çözüm üretmek adına genel olarak en makul yol, enerji bağımsızlığı adına diğer ülkelerden petrol ve diğer enerji türlerinin ithalatını azaltmak ve alternatif enerji kaynaklarına ulaşarak iç üretimi çeşitlendirmek ve arttırmaktır. ABD, Nixon dönemi ile olası OPEC ambargosuna karşılık bu süreci başlatarak enerji güvenliği stratejisinde ulusal bağımsızlık hedefini belirlemiş ve bu hedef doğrultusunda enerji güvenliğini, istikrarsız veya dostane olmayan ülke ve bölgelerden petrol ithal etmemek olarak ifade etmiştir (Grossman, 2023; Barbaccia, 2012).

Dünyanın üçüncü büyük enerji tüketicisi olan Hindistan artan enerji talebi, ithalatı, üretimi arttırma ve alternatif enerji kaynaklarına yönelim gibi enerji adına birçok konuda Çin ile benzerlik göstermektedir. Hindistan da Çin gibi yeterli kaynaklara sahip olmaması sebebi ile enerji güvenliği adına dışa bağımlılık ile yüz yüzedir. Uluslararası Enerji Ajansı'nın (IEA) (2021) verilerine göre Hindistan'ın enerji tüketiminde petrol ve türev ürünleri %32.4, kömür %16.9, doğal gaz %6, elektrik %16.4 ve biyoyakıtlar ve katı yakıtlar %28.1 pay sahibi iken tedarik açısından kömür %44.6, petrol %23.7, doğal gaz %5.8 ve biyoyakıtlar ve katı yakıtlar %21.6 pay sahibi olmuştur. Ekonomik ve endüstriyel gelişimi ile enerji tüketimi 2000 yılına göre iki kat artan Hindistan'ın enerji tüketiminin %80'ini sırasıyla kömür, petrol ve biyoyakıtlar oluşturmaktadır. 2023 mali yıl verilerine göre Hindistan'ın enerji tüketimi toplamda %10.4 artış gösterirken özellikle fosil yakıt artışı %8'e ulaşmıştır (Livemint, 2023; The Economic Times, 2024). Petrol ithalatına bağımlılığı giderek artan Hindistan'ın 2021 petrol ithalatı 9070412 TJ'ye

FULL TEXTS BOOK

ulaşırken aynı zamanda kömür ithalatı da 2023 mali yılına göre 2024 mali yılında %8 artış göstermiştir (IEA, 2021; The Economic Times, 2024). Hindistan dünyada üçüncü büyük petrol ithalatçısı ve ikinci büyük kömür ithalatçısı konumundadır (Nair, 2024; Tradeimex, 2024). Hindistan petrol ithalatını ağırlıklı olarak Rusya, Irak, Suudi Arabistan ve Birleşik Arap Emirleri ve yeni rota olarak Nijerya'dan gerçekleştirmektedir. Hindistan'ın enerji güvenliği stratejisi enerji kaynaklarının çeşitlendirilmesi, arama ve üretim faaliyetlerinin arttırılması, alternatif enerji kaynakları ile gaz bazlı ekonomi ve yeşil hidrojen ile elektrikli araçlar yoluyla enerji dönüşümünün sağlanması temeline dayanmaktadır (Government of India Press Information Bureau, 2023). Bu bağlamda Hindistan'ın enerji güvenliği stratejisinin Çin'in enerji güvenliği stratejisi ile benzerlik gösterdiğini söylemek mümkündür. Gıda güvenliğinden sonra Hindistan adına ikinci önemli sorun enerji güvenliğidir. Petrol ve Doğal Gaz Bakanı Dharmendra Pradhan, Hindistan'ı enerji kaynakları bakımından kendi kendine yeterli hale getirme hedefini vurgulayarak Hindistan'ın entegre enerji politikasına göre vatandaşların ve tüm sektörlerin ulaşabilir, ucuz ve güvenli doğal gaza sahip olmalarının temel hedefleri olduğunu belirtmektedir (The Economic Times India, 2024). Diğer bir ifade ile, Hindistan da Çin gibi enerjide dışa bağımlılığı azaltmak ve ulusal anlamda alternatif enerji kaynakları ile kendi kendine yeterliliği amaçlamaktadır. Bu amaç doğrultusunda Yeni Delhi yönetimi, enerji güvenliği adına politikaların uygulanmasında ve devlet-özel sektör arasında dengenin oluşturulması ve ekonomik açıdan fiyat istikrarı adına aktif rol üstlenmektedir.

Yukarıdaki belirtilenler çerçevesinde Çin, Hindistan ve ABD'nin enerji güvenliği stratejilerinin ve algılarının benzer tarafları şunlardır: (a) Genel olarak, enerji güvenliği algıları zaman içinde ulusal çıkarlar temelinde değişkenlik gösterebilmektedir; (b) Üç ülke açısından da petrol güvenliği, enerji güvenliğinin özü olmaya devam etmektedir; (c) Enerji arz güvenliği, ulusal güvenlik ve ekonomik kalkınma açısından üç ülke için de enerji güvenliği stratejisinin odağını oluşturmaktadır; (d) Enerji fiyatlarındaki istikrarsızlıkların ve düzensiz değişikliklerin olumsuz sonuçları noktasında üç ülke de çözüm arayışı içindedir. Enerji güvenli algılamalarındaki farklılıklara gelindiğinde, Hindistan'ın enerji güvenliği algılamasında nüfusunun çoğunun enerji (elektrik) yoksulluğundan kurtarılması hedeflenmektedir. Nüfusunun neredeyse yarısının elektriğe erişiminin olmaması nedeni ile hayvansal atıkların yemek pişirme ve ısınmada kullanılması, toplum sağlığı ve çevre kirliliği sorunlarını etkilemektedir. ABD'nin enerji güvenliği algısının temeli ise ulusal güvenlik ve süper güç konumunun sürdürülmesi noktasında petrol arzındaki kesintilerin olmaması üzerine dayanmaktadır. 11 Eylül saldırıları sonrası Washington ve ABD kamuoyunda petrol arzındaki kesintilere ilişkin hassasiyetin artması ve Ortadoğu'dan petrol ithalatına bağımlılığın sorgulanmaya başlanarak alternatif arama çabaları, ABD'nin enerji güvenliği algılamalarına önemli bir örnek teşkil etmektedir. Bu durum, ABD'de de bağımlılık yerine bağımsızlık düşüncesini daha da fazla tetiklemektedir. Çin'in enerji güvenliği algısı ise enerji talebinin artmasının sonuçlarından ziyade talebin karşılanması adına iç ve dış piyasada alternatifler üzerinde durulmakta ve Pekin, ekonomik büyüme, sürdürülebilir çevre ve enerji tasarrufu arasında denge kurmanın öneminin altını çizmektedir. Bu noktada devlet merkezli pazarlama modeli ile stratejiye ilişkin aktif rol üstlenilmektedir. Ancak, merkez yönetimin kararları ile yerel uygulamalar arasında ayrılıklar dikkat çekmektedir. Ne var ki Çin açısından devletin tüm uygulamalardaki baskın gücü, enerji güvenliği stratejisi bağlamında enerji verimliliği konusunda da kendini gösterse de toplumsal algıda istenilen oluşum sağlanamadığı için hedefe ulaşmamaktadır. Diğer bir ifade ile Pekin yönetimi ekonomik ve enerji güvenliğinde aktif role ve güce sahip olmasına rağmen enerji güvenliği stratejisinin hedeflenen çıktılarına henüz ulaşmış değildir. Enerji güvenliği ve çevre kirliliği denkleminin doğrusal bir yapıya kavuşamaması, bu durumu açıklar niteliktedir. ABD ise Çin ve Hindistan'a göre toplumsal yapıdaki bilinç ve kazanımlar açısından oldukça ileri aşamadadır. Washington'ın uygulamaları, yerel yönetim açısından olumlu bir karşılık bulmaktadır. 1973 krizi sonrası ABD sadece merkezi yönetim açısından değil yerel yönetim ve toplumsal bilinç açısından önemli kazanımlar elde etmiştir. Bu noktada ABD'de de devletin aktör olarak rol oynadığı ancak Çin

FULL TEXTS BOOK

ve Hindistan kadar etken role sahip olmadığı ve uluslararası petrol şirketlerinin aktif rolünün ve rekabetinin öne çıktığı görülmektedir. ABD özelikle aktif rolünü, ülke dışındaki tedarik yapılarında hegemonik gücü ekseninde ortaya koymaktadır. Devletin aktör rolü bağlamında Hindistan açısından durum, devletin artan enerji talebini karşılamak ve ekonomik büyümeyi desteklemek misyonu üzerinedir. Yeni Delhi, gıda güvenliği üzerine birincil olarak yoğunlaşırken enerji güvenliği ve sürdürülebilir çevre algısından henüz hedeflenen sonuçlara ulaşmış değildir.

Sonuç

Birçok farklı tanıma sahip olan ‘‘enerji güvenliği’’ kavramı, genel olarak uygun fiyatlarda yeterli arz sorununa vurgu yapmaktadır. Daniel Yergin (1988: 112), bulunabilirlik ve satın alınabilirliğin yanı sıra enerji elde etme yolunun ‘‘ulusal değerleri ve hedefleri tehlikeye atmaması’’ gerektiğini vurgulamaktadır. Devletler adına önemli bir kavram olarak günümüzde yer eden enerji güvenliği, devletlerin tedarik süreci ile sınırlı kalmayıp aynı zamanda ulusal güvenlik ve ekonomileri, ulusal çıkarları ve gelecek projeksiyonları ile de yakından ilgilidir. Diğer bir ifade ile enerji güvenliği siyasi, ekonomik, askeri ve diğer birçok unsuru içinde barından çok boyutlu bir kavramdır.

Enerji güvenliği kaynak sahibi ülkelerden nihai kullanıcı olan tüketicilere petrol, doğal gaz ve kömürün çeşitli taşımacılık yollarıyla ucuz, güvenilir ve kesintisiz bir biçimde taşınması olarak da tanımlanabilmektedir. Söz konusu çerçevede ele alındığında hidrokarbon sahibi ülkeler müşteri ya da alıcı çeşitliliği olarak nitelenebilecek istikrarlı pazarların varlığını öncelerken enerji talep eden ülkeler ise tek bir tedarikçiye bağlı kalmadan farklılaştırılmış tedarikçilerden enerji sağlamayı tedarik güvenliği çerçevesinde öncelemektedirler. Bir başka ifade ile tedarikçiler yüksek, orta ve düşük akış seyri içinde geçiş ülkeleri ve nihai kullanıcı ülkeler arasında karmaşık ilişkiler kurulabilmektedir. Zaman zaman siyasi ve ticari anlaşmazlıklardan ötürü enerji akışı durabilmekte bu da alıcı-satıcı ülkelerde ciddi krizlerin yaşanmasına sebep olabilmektedir. Yükse, orta ve düşük akış seyrinde vuku bulan jeopolitik gerginlikler, terör faaliyetleri, savaşlar ve çatışmalar enerji akışında sıkıntılar yaratabilmekte, ilgili ülkelerin sosyo-ekonomik sistemlerini sürdürmede elzem bir rol üstlenmekte ve ülkelerin kalkınmasında ana besleyici güçlerden birisi olan enerji sistemlerinin çökmesine ya da zarar görmesine sebep olmaktadır. Bu durum, alan yazında ‘‘kritik enerji alt yapı güvenliği’’ olarak ifade edilmektedir. 1990’lı ve 2000’li yıllarda yaşanan ve etkileri dünyanın her yerinde güçlü bir biçimde hissedilen iklim değişikliği/krizi özellikle fosil yakıtların yoğun kullanımından kaynaklanmaktadır. Çevresel felaketler, artan seller ve sıcaklıklar dünyanın ekolojik dengesini bozmakta ve bunun önüne geçebilmek için petrol-doğal gaz-kömür üçlüsünün kullanımının aşama aşama ortadan kaldırılarak rüzgâr, güneş, biyoyakıt ve nükleer gibi daha temiz ve çevresel enerji teknolojileriyle ikame etme çalışmaları 21. yüzyıl enerji güvenliği politikaları bağlamında ulus-devletlerce ve uluslararası örgütlerce yoğun bir biçimde gerçekleştirilmektedir. Önümüzdeki yıllarda bu konulardaki çabaların daha da yoğunlaşacağı öngörülmektedir.

Bu çalışmamız bağlamında ele alınan Çin, ABD ve Hindistan özelinde konuyu analiz edecek olursak Çin, 1990’lı yıllarına başına kadar önemli ve kendi kendine yeterli bir enerji üreticisiyken mevcut siyasal sistemini koruyarak serbest piyasa ekonomisine geçme kararıyla birlikte liberal ekonomi yönünde reformları neticesinde ciddi büyüme oranları kaydederek sosyo-ekonomik yönden büyük bir gelişme kaydetmiştir. Bu sürecin bir neticesi olarak kendi enerji kaynaklarının kendi sosyal ve ekonomik yapılarını desteklemede yetersiz kalması üzerine Çin 1990’lı yılların ortasından itibaren net bir hidrokarbon ithalatçısı konumuna yükselmiştir. Bundan sonraki süreçte ülke içerisindeki enerji karışımını istikrarlı bir hale getirip güvence altına almak maksadıyla dışarı açılma stratejisi çerçevesinde proaktif bir dış (enerji) ilişkiler geliştirmeyi öncelemiştir. Buna yönelik olarak aralarında Rusya, Afrika, Latin Amerika ve Orta Asya ülkeleri ile petrol, doğal gaz ve kömür alışverişi temelli yoğun ilişkiler geliştirmeye başlamış ve bunları da günümüzde çeşitlendirerek sürdürmektedir. Çin, bu coğrafyalarla yakın münasebetler geliştirirken enerji tedarik güvenliğini ilk plana almış ve bu ülkelerin siyasi

FULL TEXTS BOOK

rejimlerinin içerikleri ile ilgilenmeyerek sadece kendisine yönelik enerji akışının sorunsuz olmasına önem atfederek sıfır kilometre iş birlikleri kurmaya ulusal enerji şampiyonları olan Sinopec, CNOOC, CNPC aracılığıyla devam etmektedir. 2060'lı yıllar itibariyle karbonsuz bir ekosistem kurmayı hedefleyen Pekin, yenilenebilir enerji ve nükleer enerjiye de önemli yatırımlar yapmakta ve her geçen gün dünyada öncü ülkeler arasındaki yerini hızla yükseltmektedir.

ABD'ye geldiğimizde ise, 2010'lu yıllara kadar net bir hidrokarbon ithalatçısı olan bu ülke söz konusu zaman zarfında keşfettiği kaya gazı ve petrolü sayesinde dışa bağımlılıktan büyük ölçüde kurtulmuş ve böylece dünyanın en önde gelen enerji ihracatçılarından birisi haline dönüşmüştür. Birçok ülkeye büyük miktarlarda LNG satışı yapabilen ABD, bu yönüyle de dünya enerji piyasasının lider ve karar verici oyuncularından birisi durumdadır. 2022 Rusya-Ukrayna Savaşı/Özel Askeri Operasyonu bağlamında Avrupa'nın yaşadığı ve de yaşayabileceği enerji tedarik kesintilerine karşı ön planda yer alan seçeneklerden birisi de ABD'den LNG ithalatı olmuştur. 1990'lı yıllardan günümüze dünyanın en büyük enerji kaynağı sahibi/üreticisi ülkeleri arasında yer alan Rusya ile enerji nakil projeleri bağlamında geniş ölçekli bir rekabete giren ABD, Doğu-Batı Enerji Koridoru'nu Rusya-İran eksenli Kuzey-Güney Enerji Koridoru'na karşı ortaya atmış ve bunun gerçekleştirilmesine dönük olarak elindeki tüm yumuşak güç araçlarını kullanmayı sürdürmektedir. Güney Gaz Koridoru ve Bakü-Tiflis-Ceyhan Ham Petrol Boru Hattı gibi başarı hanesine yazılabilecek girişimler bulunsa da Hazar Geçişli Doğal gaz Boru Hattı, Nabucco gibi başarısızlık örnekleri bulunmaktadır. Öte yandan 2010'lu ve 2020'li yıllarda Rusya tarafından Ukrayna'yı Avrupa'ya enerji gönderiminde devreden çıkartmayı önceleyen Türk Akımı ve Kuzey Akım 2 Doğal gaz Boru Hatları gibi projeleri engellemede kısmen başarı sağlamış durumdadır. Öncelikli olarak enerji dış politikasında Rusya'yı engelleyici ve oyun dışı bırakıcı uygulamalara ağırlık veren ABD'nin bu alanda Rusya ile olan geniş kapsamlı rekabetinin önümüzdeki yıllarda da artarak devam edeceği söylenebilir.

Hindistan ise ekonomik açıdan sürekli gelişen ve yüksek nüfusa sahip bir ülke olarak enerji gereksiniminin her geçen gün yükseldiği görülmektedir. Enerji karışımında ağırlıklı olarak petrol-doğal gaz-kömür üçlüsü olan Hindistan, artan talebi doğrultusunda giderek önemli bir ithalatçı konuma yaklaşmaktadır. Buna ek olarak enerji karışımında yenilenebilir enerjinin payını artırmak da Yeni Delhi'nin mevcut ve geleceğe dönük politikalarında dikkat çekici bir yer işgal etmektedir. Petrol ve doğal gaz bağlamında bulunduğu bölge itibariyle lider durumda olmasına karşın halkının enerji gereksinimlerine anında cevap verebilmek maksadıyla önde gelen enerji üreticileriyle yakın ortaklıklar geliştirmeye çalışmaktadır. Bunlardan en önemlilerinden birisini Rusya ile gerçekleştirilen enerji ağırlıklı ekonomik ilişkiler oluşturmaktadır. 2050'li yıllarda enerji karışımında yenilenebilir enerjinin payını arttırarak daha sonrasında karbonsuz bir ekosistem kurmayı hedefleyen Yeni Delhi'nin mevcut şartlarda ve gelecek yıllarda bu yöndeki girişimlerini arttırabileceği öngörülmektedir.

Çalışmanın temel konusu bağlamında üç devletin karşılaştırılması adına şunları söylemek yerinde olacaktır. Enerji güvenliği stratejileri ve algıları açısından üç ülke de petrolü merkezi konuma alarak istikrarlı petrol arzının önemini ve yerli enerji üretiminin arttırılmasını vurgulamaktadır. Ayrıca üç ülke de petrol sonrası doğal gaza dikkat çekmektedir. Aldıkları önlemler ve politikalar hem arz hem de talep tarafını kapsaması bakımından önem taşımaktadır. Arz yönlü tedbirler arasında enerji kaynaklarının çeşitlendirilmesi öne çıkan stratejidir; talep yönlü tedbirler arasında ise çevrenin korunması ve enerji dönüşümüne önem verildiği anlaşılmaktadır. Belirgin farklılık ise petrol ve doğal gaz sektörlerindeki başlıca piyasa aktörlerinin ve piyasa yapısının türünde yatmaktadır. Çin ve Hindistan açısından bakıldığında devletin aktör rolünün varlığı, devlet merkezli pazarlama modelinin enerji güvenliği stratejisinin temel argümanı olduğu ve ulusal petrol şirketlerinin bazı ayrıcalıklara sahip olduğu görülmektedir. ABD'de ise devletin aktör rolü Çin ve Hindistan'daki kadar etkin olmamakla birlikte uluslararası petrol şirketlerinin sektörde hâkim etkisi söz konusudur. Devletin aktör rolü ve devlet-iş dünyası ilişkisi söz konusu olduğunda, ABD hükümeti petrol ve doğal gaz sektörüne Çin ve Hindistan hükümetleri kadar derinlemesine müdahale etmemektedir. Çin ve Hindistan, ticari olmayan amaçlara

FULL TEXTS BOOK

hizmet etmek için genellikle kamu iktisadi teşekküllerinden yararlanmakta, kaynakları farklı sektörler arasında paylaştırmakta ve hatta petrol endüstrisinin yönetimine doğrudan dâhil olmaktadır. Bu durum, Washington'ın petrol endüstrisini düzenlemek için daha az kaldıraca sahip olduğu anlamına gelmemektedir. Washington, diğer bölge ve ülkelerdeki petrol çıkarlarını korumak için hegemonik gücünü sıklıkla kötüye kullanmaktadır. Dahası, üç büyük güç arasında farklı şekillerde de olsa hükümet desteği yaygındır. ABD'nin Çin ve Hindistan'dan bu noktada farkı, ülke içinden ziyade tedarik noktasında ülke dışındaki yapılara yönelik aktif rolüdür. Genel olarak bakıldığında, söz konusu üç ülkedeki enerji şirketleri özel ya da devlet olması fark etmeksizin hükümetlerinin talimatlarını ivedilikle uygulamak ve ulusal çıkarları dikkate almaktadırlar. Ne var ki söz konusu şirketlerin ticari çıkarlarını ön planda tutma ve hatta bazen kendi hükümetlerinin iradesine karşı hareket etme gibi eğilimleri olduğu da gözlemlenmektedir. Bu bağlamda uluslararası ve ulusal petrol şirketleri arasında ticari hedefler açısından önemli ölçüde benzerlikler yer alırken kamu çıkarlarına hizmet etme güdüleri açısından az da olsa farklılıklar bulunduğu söylenebilir. ABD'nin uluslararası petrol şirketlerine yaptırım noktasında elinde yeterli araç yok iken Pekin ve Yeni Delhi yönetimleri özellikle ulusal petrol şirketlerini kontrol, yönlendirme ve disipline noktasında açık ve örtülü birçok araca sahiptirler. Sonuç olarak, devletler her geçen gün artan enerji talepleri doğrultusunda enerji güvenliği stratejilerini yenilemekte ve alternatif enerji kaynaklarına yönelim sağlamaktadırlar. Ancak, petrol ve ikinci olarak doğal gaz neredeyse tüm devletlerin enerji güvenliğinin merkezi konumunda olup arzın kesintiye uğramaması adına ulusal ve uluslararası ölçekte devletlerin aktör olarak rol aldığı ve arz-talep ve ekonomik/ulusal çıkarlar adına müdahil olmayı sürdürdüğü görülmektedir. Her geçen gün artan enerji talebi ile Çin'in de enerji güvenliği stratejisinde devletin aktör olarak etkin rol aldığı ve ulusal ve uluslararası şirketler arasında iç ve dış enerji piyasasına yönelik denge koruyucu, yönlendirici ve disipline role sahip olduğunu söylemek mümkündür. Ayrıca, Pekin yönetiminin enerji güvenliğine yönelik gelecek projeksiyonunda da bu rolünü sürdürmesi beklenmektedir.

CELLULAR STRESS CAN LEAD TO ABNORMAL CELL MORPHOLOGY AND GENOMIC INSTABILITY ALTERING THE EXPRESSION OF *CCNE1, PARP1, IGF1R, EEF1A1, AURKB, EIF4E* AND *CDK4* GENES

Dr. Murat Kaya
Istanbul University, Istanbul Faculty of Medicine, Department of Internal Medicine, Division of Medical Genetics, Istanbul, Turkey
Doç. Dr. Ilknur Suer
Istanbul University, Istanbul Faculty of Medicine, Department of Medical Genetics, Istanbul, Turkey

ABSTRACT
Cellular stress is a condition that causes morphological and physiological deteriorations in cells due to various factors. In this study, the effect of mechanical stress on the expression of 10 stress-related genes as well as its influence on cell morphology and genomic instability was investigated. The morphological examination of Du145 cells was examined using a light microscope at 10x magnification. Micronucleus (MN) assay was performed to make a comparison in terms of DNA damage. Genes reported to be related to stress in the literature were investigated and the expression analysis of ten genes was investigated through qRT-PCR. It was observed that the morphology of Du145 cells exposed to mechanical stress changed dramatically over time when compared to the control group. It was determined that the number of micronuclei increased by 80% in DU145 cells exposed to mechanical stress. Up-regulation of *CCNE1, PARP1, IGF1R, EEF1A1, AURKB* and *EIF4E* genes and down-regulation of *CDK4* gene expression were detected ($p<0.05$) stress group cell. However, no significant change was detected in *CDK6, CCND2* and *CCND1* gene expressions ($p>0.05$). Various cellular stressors can cause false positive or negative outcomes in *in vitro* studies. We expect that our research will be valuable in bringing attention to this critical issue that may occur during cell culture investigations.
Keywords: Cellular stress, micronucleus, stress-related gene expression

INTRODUCTION
Cellular stress is a condition that causes morphological and physiological deterioration in cells due to various factors and has been reported in the literature as one of the causes of various diseases, including cancer. (Mensch & Zierz, 2020). The amount of micronuclei is an important indicator in determining stress-induced cell damage. Micronucleus (MN) is one of the signs that represent DNA damage caused by numerous cellular factors during cell division (Bhatia & Kumar, 2013). Stress-induced chromosomal instability in the cell may cause a rise in MN formation (Torres-Bugarín et al., 2015). Furthermore, the literature reports that the expression of several cell cycle genes and expression of regulatory genes changes in stressed cells (Frenk & Houseley, 2018). In the experimental phase of our project, where Du145 prostate cancer cells were seeded in different culture plates, morphological differences were detected between the cells in 6-well plate (control group) and petri dish (stress group). Therefore,in our present study, we aimed to perform comparative MN analysis and stress-related gene expression analysis of cells in these two different culture conditions.

MATERIALS AND METHODS
Culture of DU145 and morfological examination
Du145 cells were cultured at 37 °C and 5% CO_2 in RPMI1640 cell culture medium containing 10% FBS and 1% antibiotics. The cell cultivation was performed on petri dishes and 6-well plates. Morphological examinations of the cells at 24h, 72h and 120h were carried out using a light microscope at 10x magnification.
Cytokinesis block micronucleus (CBMN) assay

FULL TEXTS BOOK

For DNA damage determination, CBMN assay was applied according to the protocol. 1000 cells/per culture were counted for cytotoxicity evaluation (Farabaugh et al., 2023).

Selection of the genes and determination of protein-protein interactions

In our work, the literature on cellular stress was reviewed using the keywords 'cell, stress, gene' in Pubmed, and 10 genes were chosen. The gene expression of the selected genes were investigated utilizing the qRT-PCR method and the STRING tool was used to show the interactions between the genes evaluated by expression analysis.

cDNA synthesis and expression analysis

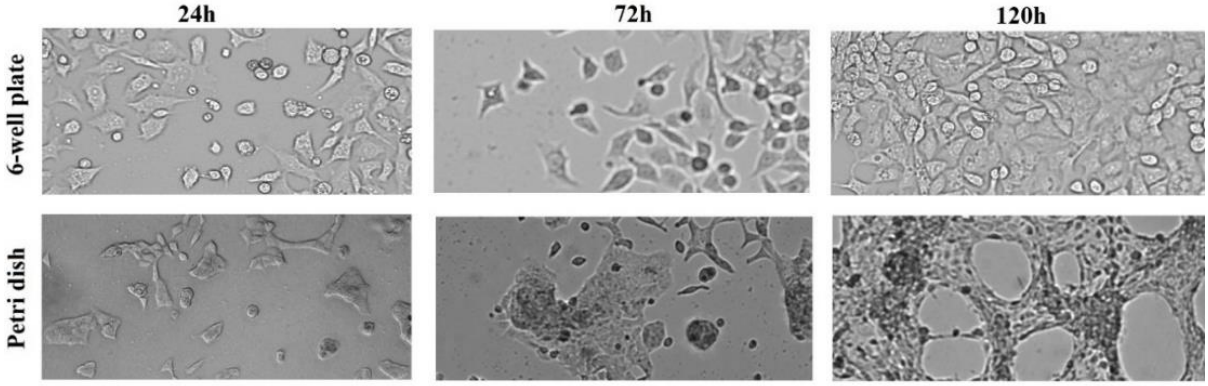
cDNA was produced using Revertaid First Strand cDNA Synthesis Kit (Thermo Fisher Sci.) using a total of 1000ng RNA from each of the RNA samples isolated from the cells using Trizol reagent (Thermo Fisher Sci.). For relative quantification of stress related genes, qRT-PCR was performed on the LightCycler 480 device using SYBR Green Master mix (Roche).

Statistical analysis

Statistical analysis was performed with Student's t-test and $2^{-\Delta\Delta CT}$ methods. A p-value less than 0.05 was considered to be statistically significant. Figures were created using the GraphPad Prism 9.5.1 software.

RESULTS

It was observed that DU145 cells cultured by seeding into a 6-well plate (control group) had the expected morphology and there were no adhesion problems. It was determined that Du145 cells were more adaptive in adherence to the surface of the 6-well plate. On the other hand, both adhesion problems and deterioration in cell shape were detected in the cells seeded in the petri dish (stress group) over time. It has been determined that this deterioration gradually increases over time (Figure 1).



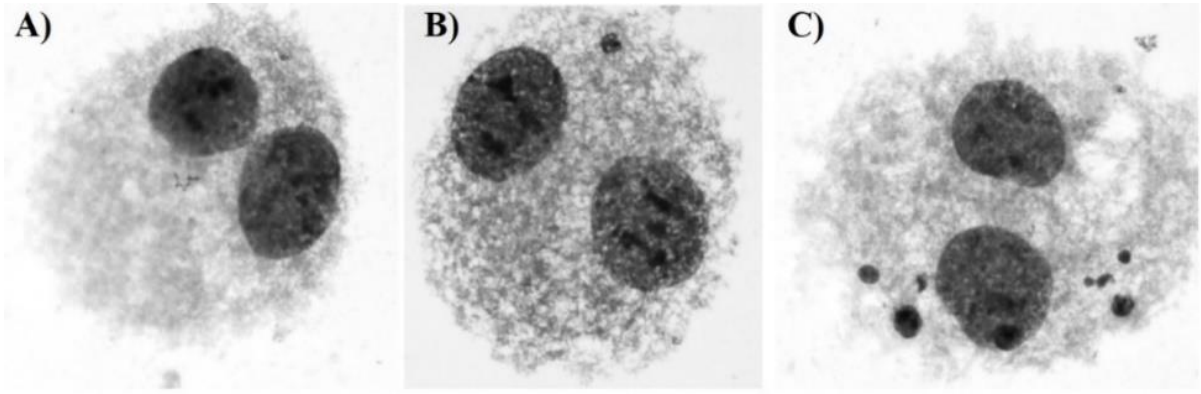


Figure 1. Morphological images of cells at 24h, 72h and 120h (x10 magnification)

A significant increase in the number of micronucleus was detected in the cells seeded in the petri dish compared to the cells in the 6-well (80%) ((Figure 2).

FULL TEXTS BOOK

Figure 2. Results of the cytokinesis block micronucleus (CBMN) assay A) binucleated cell B) binucleated cell with mono micronuclei C) binucleated cell with four micronuclei

Up-regulation of CCNE1 (p=0,028), PARP1 (p=0,002), IGF1R (p=0,033), EEF1A1 (p=0,021), AURKB (p=0,002) and EIF4E (p=0,0004) genes and down-regulation of CDK4 (p=0,012) gene expression were detected in cells in the petri dish (stress group) compared to cells in the 6-well plate (control group). However, no significant change was detected in CDK6, CCND2 and CCND1 gene expressions (p=0,078); (p=0,608); (p=0,131), respectively) (Figure 3).

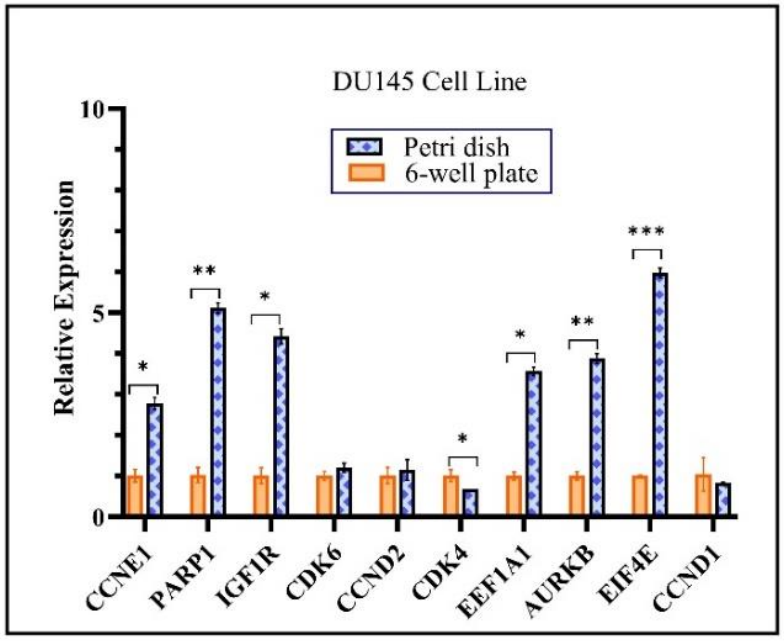

Figure 3. The expression level of the stress related genes (***p<0.05, ****p<0.01, and *****p<0.001).

These genes, whose expression levels were assessed in this study and which play significant roles in the cell cycle and checkpoints, were shown to interact closely with each other.

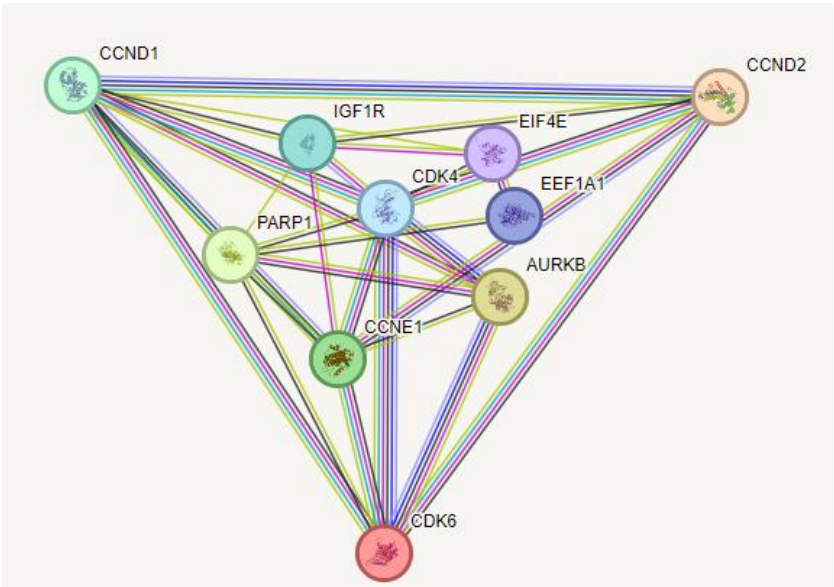

Figure 4. The interactions between genes assessed by expression analysis (created using the https://string-db.org/ tool).

Although it was determined that the change in the culture area of the cells caused stress on the cells, an improvement in the adhesion of the cells was observed when the cells seeded in the Petri dish were

FULL TEXTS BOOK

placed back into the 6-well plate before the 5th day. It was observed that after 5 days, the cells were unable to tolerate the stress and would not attach even when a 6-well plate was seeded.

DISCUSSION

Cellular stress is known to alter a wide range of cellular functions via a large number of genes. In line with the literature, it was found that the expression of six of selected genes increased in the stress group, while one was downregulated. MN formation as a result of chromosomal damage may impact cellular adhesion and proliferation. As a result, the expression patterns of numerous genes vary, particularly those involved in the cell cycle and checkpoints (Franzke et al., 2015). In the current investigation, the micronucleus rate in the stress group increased dramatically compared to the control group, showing that genomic instability was altered in the stress group. Heat, adhesion, chemical agents, and other stressors on the cell could affect the direction of the study's findings (Franzke et al., 2020). As a result, it is critical to closely track any cellular stress conditions that could occur during *in vitro* studies. In our work, stress-related morphological changes, MN formation, and expression differences in some important genes were detected in cells that had difficulty adhering. Through the data we have obtained, we aim to enable cell culture researchers to look at it from this perspective.

ÖZET

Amaç: Yapay zeka, hızla gelişen ve gün geçtikçe önemi artan bir teknolojik ilerlemedir. Özellikle sağlık sektöründe, sağlık hizmetlerinin kalitesini artırma potansiyeli nedeniyle giderek daha fazla önem kazanmaktadır. Yapay zekanın yutma bozuklukları alanında yer edinmesi dil ve konuşma terapistler açısından önem arz etmektedir. Yapay zeka yutma bozukluklarının tanılanmasında, müdahale yöntemleri geliştirilmesinde ve sonuçların iyileştirmesinde dil ve konuşma terapistlerine yardımcı olabilir. Bu çalışmada, dil ve konuşma terapisi alanında gerçekleştirilen yutma bozuklukları ve yapay zekayla ilgili çalışmalar incelenerek dil ve konuşma terapistleri açısından mevcut durumun ortaya konulması ve gelecekteki çalışmalara ışık tutması planlanmıştır.

Yöntem: Çalışmada, doküman incelemesi tekniği kullanılarak nitel araştırma yöntemlerinden yararlanılmıştır. Veri toplama sürecinde PubMed veri tabanı esas alınarak "yutma bozuklukları ve yapay zeka'' anahtar kelimeleri ile yutma terapisinde yapay zeka alanı ile ilgili Türkçe ve İngilizce çalışmalar taranmıştır.

Bulgular: İncelemenin sonucunda 2012- 2024 yıllara arasında yapılan 28 çalışmaya ulaşılmıştır. 2020 sonrası yıllarda yapılan çalışmalara bakıldığında en fazla çalışmanın 2022 yılında yapıldığı (n=9) görülmektedir. 2021 yılında 3, 2023 yılında 6 çalışma yapılmıştır. 2024 yılının ilk yarısında 8 çalışmanın yayınlandığı görülmektedir. Çalışmaların yapıldığı ülkelere bakıldığında 8 çalışmayla Amerika Birleşik Devletleri birinci sırada yer almaktadır. 6 çalışmayla Japonya ikinci sırayı takip etmektedir. Çalışmaların 20'si tıp alanında yapılmış ve yayınlanmıştır, 4'ü mühendislik alanı kapsamında hazırlanmıştır ve 2'si diş hekimliği alanında 1'i nörobilim alanında ve 1'i fizyoterapi ve rehabilitasyon alanında hazırlanmıştır.

Sonuç: Elde edilen bilgiler ışığında, yutma bozukluklarının tanısı ve değerlendirilmesinde yapay zekanın kullanımıyla ilgili çalışmaların gün geçtikçe daha çok önem kazandığı görülmektedir. Dil ve konuşma terapisi alanında yutma ve yapay zekayı bizzat konu alan herhangi bir çalışmaya rastlanılmamıştır. Bu çalışma ile dil ve konuşma terapistlerinin primer alanlarından olan yutma bozukluklarında yapay zekayla ilgili daha fazla araştırmaya ihtiyaç olduğunu göstermektedir. Bu bağlamda dil ve konuşma terapistleri teşvik edilmeli ve bu konuya değinen çalışmalara destek verilmelidir.

Anahtar Kelimeler: Dil ve Konuşma Terapisi, Yapay Zeka, Dijitalleşme, Yutma, Teknoloji

ABSTRACT

Objective: Artificial intelligence is a rapidly developing and increasingly important technological advancement. Especially in the health sector, it is gaining more and more importance due to its potential to improve the quality of health services. The use of artificial intelligence in swallowing disorders is important for speech and language therapists. Artificial intelligence can help speech and language therapists diagnose swallowing disorders, develop intervention methods, and improve outcomes. In this

FULL TEXTS BOOK

study, it is planned to reveal the current situation in terms of speech-language therapists and shed light on future studies by examining the studies on swallowing disorders and artificial intelligence in the field of speech-language pathology.

Method: In the study, qualitative research methods were utilized by using document review techniques. In the data collection process, the PubMed database was used as the basis, and Turkish and English studies related to the field of artificial intelligence in swallowing therapy were searched with the keywords "swallowing disorders and artificial intelligence.".

Findings: As a result of the review, 28 studies conducted between 2012 and 2024 were found. Looking at the studies conducted in the years after 2020, it is seen that the most studies were conducted in 2022 (n = 9). Three studies were conducted in 2021 and six in 2023. It is evident that eight studies were published in the first half of 2024. Looking at the countries where the studies were conducted, the United States ranks first with 8 studies. With six studies, Japan follows in second place. 20 of the studies were conducted and published in the field of medicine; 4 were prepared within the scope of engineering; 2 in the field of dentistry; 1 in the field of neuroscience; and 1 in the field of physiotherapy and rehabilitation.

Conclusion: In the light of the information obtained, it is seen that studies on the use of artificial intelligence in the diagnosis and evaluation of swallowing disorders are gaining more importance day by day. In the field of speech-language therapy, there is no study on swallowing or artificial intelligence. This study shows that there is a need for more research on artificial intelligence in swallowing disorders, which is one of the primary fields of speech and language therapists. In this context, speech and language therapists should be encouraged, and studies addressing this issue should be supported.

GİRİŞ

Teknoloji, yutma bozukluklarının teşhis ve değerlendirilmesinde önemli bir rol oynamaktadır. Teknolojik yenilikler, yutma bozukluklarının tedavisinde de etkili çözümler sunmaktadır. Yapay zeka, büyük veri analizi, makine öğrenimi ve derin öğrenme gibi teknolojiler aracılığıyla sağlık sektöründe devrim yaratma potansiyeline sahiptir. Yapay zeka, günümüz teknolojik ilerlemelerinin ön safhalarında yer almakta ve pek çok sektörde devrim yaratma potansiyeli taşımaktadır. Sağlık sektörü, bu teknolojik gelişmelerden büyük ölçüde faydalanan alanlardan biridir ve yapay zekanın sağlık hizmetlerinin kalitesini artırma potansiyeli nedeniyle önem kazanmaktadır (Topol, 2019).

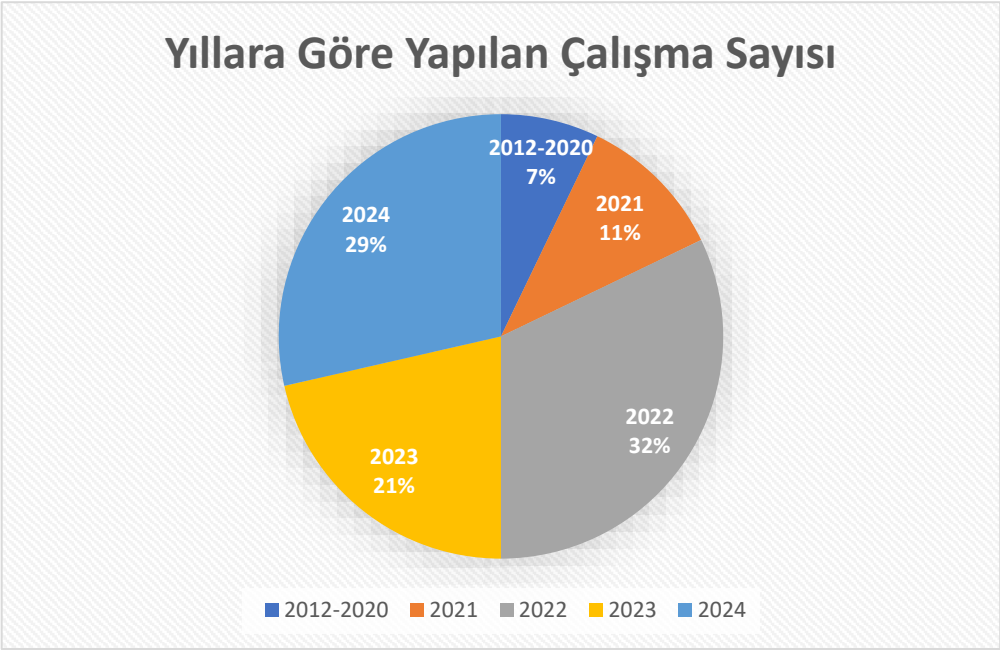
Yapay zekanın dil ve konuşma terapisi alanındaki potansiyeli, son yıllarda büyük bir ilgi görmüştür. Dil ve konuşma terapisi alanında, özellikle yutma bozukluklarının tanılanması, müdahale yöntemleri geliştirilmesi ve müdahale sonuçlarının iyileştirilmesinde yapay zekanın kullanımı büyük bir öneme sahiptir. Yapay zekanın, yutma bozukluklarının tanısında büyük veri analizi kullanarak daha doğru ve hızlı sonuçlar sağlaması mümkün görünmektedir (Park C.,2024)

Yutma, ağızda başlayan ve mideye kadar devam eden kompleks bir süreçtir. Bu süreç, dört ana aşamadan oluşur: oral hazırlık, oral itme, faringeal, ve özofageal aşamalar (Kahrilas, 1992). Her aşama, belirli kas gruplarının ve sinirlerin koordineli çalışmasını gerektirir. Bu aşamalardan herhangi birinde meydana gelen bozukluklar, yutma bozukluklarına yol açabilir.Disfaji, yutma sürecinin herhangi bir aşamasında meydana gelen aksaklıklar sonucu ortaya çıkan yutma güçlüğü olarak tanımlanır (Ekberg, 1986). Yutma bozuklukları, nörolojik hastalıklar, kas hastalıkları, yapısal anomaliler ve yaşlanma gibi çeşitli nedenlerden kaynaklanabilir (Logemann, 1998). Disfaji, hem çocuklarda hem de yetişkinlerde görülebilir ve hayat kalitesini ciddi şekilde etkileyebilir.

Yutma bozukluklarının değerlendirildiği videofloroskopik yutma çalışmaları (VFSS) ve fiberoptik endoskopik yutma değerlendirmesi (FEES) gibi tekniklerde, yapay zekanın kullanımı sayesinde daha hassas ve doğru teşhisler konulabilir (Martin-Harris et al., 2008). VFSS, yutma bozukluklarının teşhisinde en yaygın kullanılan görüntüleme tekniklerinden biridir. Bu teknik, yutma sürecinin detaylı

FULL TEXTS BOOK

bir şekilde incelenmesine olanak tanır ve yutma bozukluklarının yerini ve nedenini belirlemekte kullanılır (Logemann, 1998). FEES, yutma bozukluklarının değerlendirilmesinde kullanılan bir diğer önemli görüntüleme tekniğidir. Bu teknik, yutma sürecinin doğrudan gözlemlenmesine olanak tanır ve yutma bozukluklarının nedenlerini belirlemekte kullanılır (Martin-Harris et al., 2008). Yapay zeka, VFSS ve FEES görüntülerinin analizinde kullanılarak, yutma bozukluklarının daha hızlı ve doğru teşhis edilmesine yardımcı olabilir (Bishop, 2018)



Yapay zekâ, yutma bozukluklarının tedavisinde kullanılan müdahale yöntemlerinin geliştirilmesinde de önemli bir potansiyele sahiptir. Yapay zeka, yutma bozukluklarının tedavisinde bireyselleştirilmiş tedavi planları oluşturulmasında önemli bir rol oynayabilir. Bu sayede, tedavi süreçlerinin etkinliği artırılabilir ve hastaların iyileşme süreci hızlandırılabilir (Topol, 2019). Yapay zeka, yutma bozukluklarının tedavisinde kullanılan müdahale yöntemlerinin etkinliğini artırmak ve tedavi süreçlerini optimize etmek için kullanılabilir. Yapay zeka, yutma kaslarının güçlendirilmesi ve koordinasyonunun artırılması için kullanılan; biyo-geribildirim ve nöromüsküler elektrik stimülasyonu (NMES) gibi müdahale yöntemlerinde ile kullanılabilmektedir (Crary et al., 2004; Chen et al., 2018).Ayrıca yapay zeka yutma müdahale süreçlerinin sürekli olarak izlenmesi ve analiz edilmesi için kullanılabilir (Esteva et al., 2017). Bu sayede, tedavi süreçlerinde meydana gelebilecek sorunlar hızlı bir şekilde tespit edilerek çözülebilir ve tedavi süreçlerinin etkinliği artırılabilir (Chen et al., 2018).

Yapay zekanın dil ve konuşma terapistleri için önemi; yutma bozukluklarının tanılanması, müdahale yöntemleri geliştirilmesi ve tedavi sonuçlarının iyileştirilmesi konularında kendini göstermektedir. Yutma bozukluklarının tanılanmasında yapay zekanın kullanımı, doğru teşhis ve etkili tedavi yöntemlerinin geliştirilmesi açısından büyük önem taşımaktadır. Yapay zekanın, yutma bozukluklarının tanılanmasında kullanılan çeşitli araç ve teknikleri geliştirerek, teşhis süreçlerini daha hızlı ve doğru hale getirebilir (Park C.,2024) dil ve konuşma terapistlerinin eğitiminde ve araştırmalarında da önemli bir rol oynayabilir. Dil ve konuşma terapistlerinin mesleki bilgi ve becerilerini geliştirmek için kullanılabilir (Topol, 2019). Ayrıca, yapay zeka, yutma bozuklukları ve diğer dil ve konuşma bozuklukları konusundaki araştırmalarda kullanılabilir ve bu alanlardaki bilgi birikiminin artırılmasına katkıda bulunabilir (Chen et al., 2018). Bu nedenle; bu çalışmada yapay zekanın yutma bozuklukları alanındaki uygulamalarını ve dil ve konuşma terapistleri üzerindeki etkilerini detaylı bir şekilde incelemek amaçlanmıştır.

ARAŞTIRMA VE BULGULAR

Çalışmada, doküman incelemesi tekniği kullanılarak nitel araştırma yöntemlerinden yararlanılmıştır. Veri toplama sürecinde PubMed veri tabanı esas alınarak “yutma bozuklukları ve yapay zeka’’ anahtar kelimeleri ile yutma terapisinde yapay zeka alanı ile ilgili Türkçe ve İngilizce çalışmalar taranmıştır. İncelemenin sonucunda 2012- 2024 yıllara arasında yapılan 28 çalışmaya ulaşılmıştır. 2020 sonrası yıllarda yapılan çalışmalara bakıldığında en fazla çalışmanın 2022 yılında yapıldığı (n=9) görülmektedir. 2021 yılında 3, 2023 yılında 6 çalışma yapılmıştır. 2024 yılının ilk yarısında 8 çalışmanın yayınlandığı görülmektedir (Şekil 1)

Şekil 2: Bilim alanlarına göre yutma bozukluklarında yapay zeka ile ilgili yapılan çalışmaların dağılımı

SONUÇ

Bu çalışmada, yapay zekanın yutma bozuklukları alanında dil ve konuşma terapistlerine nasıl yardımcı olabileceği detaylı bir şekilde incelenmiştir. Yapay zekanın sağlık sektöründeki önemi giderek artmakta olup, yutma bozukluklarının tanı ve tedavisinde bu teknolojinin potansiyel avantajları belirgin hale gelmiştir. Yapılan literatür taraması, yapay zekanın yutma bozukluklarının tanı, değerlendirme ve tedavisinde giderek daha önemli bir rol oynadığını göstermektedir. Yapay zeka, dil ve konuşma terapistlerinin işlerini daha etkin bir şekilde yapmalarına yardımcı olma potansiyeline sahiptir. Ancak, dil ve konuşma terapisi alanında, özellikle yutma bozuklukları ve yapay zeka üzerine odaklanmış spesifik çalışmaların sınırlı olduğu görülmüştür. Bu durum, dil ve konuşma terapistlerinin bu konuda daha fazla araştırma yapmaları ve yapay zekanın yutma bozuklukları üzerindeki potansiyelini keşfetmeleri gerektiğini ortaya koymaktadır. Dil ve konuşma terapistlerinin yapay zeka teknolojilerini daha etkili bir şekilde kullanabilmeleri için bu alandaki eğitim ve bilgilendirme faaliyetlerinin artırılması gerekmektedir. Terapistlerin yapay zeka konusunda bilgi ve becerilerinin artırılması, yutma bozukluklarının teşhis ve tedavisinde daha etkili sonuçlar elde edilmesine katkıda bulunabilir. Yapay zekanın dil ve konuşma terapisi alanında daha yaygın bir şekilde kullanılması için teknolojik gelişmelerin desteklenmesi gerekmektedir. Özellikle yapay zeka tabanlı teşhis ve tedavi sistemlerinin geliştirilmesi ve bu sistemlerin dil ve konuşma terapistleri tarafından etkin bir şekilde kullanılabilmesi için gerekli altyapının oluşturulması önemlidir.

FULL TEXTS BOOK

Gelecekte, dil ve konuşma terapisi alanında yapay zekanın etkinliğini ve güvenilirliğini değerlendiren daha fazla araştırma yapılmalıdır. Bu araştırmalar, yapay zekanın klinik uygulamalardaki rolünü daha iyi anlamamıza ve bu teknolojilerin potansiyel faydalarını en üst düzeye çıkarmamıza yardımcı olabilir. Özellikle yutma bozukluklarının teşhis ve tedavisinde yapay zekanın kullanımı konusundaki araştırmaların artırılması önemlidir. Bu araştırmalar, Yapay zekanın dil ve konuşma terapistlerine nasıl daha iyi hizmet sunabileceğini ve tedavi süreçlerini nasıl iyileştirebileceğini ortaya koyabilir. Son olarak, yapay zekanın başarılı bir şekilde uygulanabilmesi için multidisipliner bir yaklaşımın benimsenmesi gerekmektedir. Tıp, mühendislik, bilişim ve dil ve konuşma terapisi gibi farklı disiplinlerin işbirliği, yapay zeka tabanlı sistemlerin daha kullanıcı dostu, güvenilir ve etkili olmasını sağlayabilir. Bu işbirliği, yapay zekanın klinik uygulamalardaki başarısını artırabilir ve dil ve konuşma terapistlerinin işlerini daha etkin bir şekilde yapmalarına yardımcı olabilir. Bu bağlamda, yapay zekanın dil ve konuşma terapisi alanında daha yaygın bir şekilde kullanılması ve bu alandaki araştırmaların artırılması, yutma bozukluklarının teşhis ve tedavisinde daha etkili sonuçlar elde edilmesine katkıda bulunacaktır. Yapay zekanın sunduğu imkanlar, dil ve konuşma terapistlerinin iş süreçlerini destekleyebilir ve hastaların yaşam kalitesini arttırabilir.

ABSTRACT
Each year, millions of tons of concrete become waste due to the end of their service life, urban renewal projects, earthquakes, and laboratory tests. Recycling and utilization of waste concrete significantly contribute to environmental sustainability and economical development. This study aims to compare the effects of waste concrete powder obtained from old and new concrete on the workability and strength of mortars. For this purpose, waste concrete powder obtained from a building that collapsed in the February 6th Kahramanmaraş Earthquakes, approximately 30 years old (old waste concrete powder), and waste concrete powder obtained from 3-month-old laboratory waste (new waste concrete powder) were used as cement replacement materials in mixtures. Samples with 10%, 20%, and 30% by weight of new and old waste concrete powder were subjected to flow table tests, compressive strength tests, and flexural strength tests. The compressive and flexural strength tests were conducted on the 2nd, 7th, and 28th days. The effects of waste concrete powder on early and final strength were observed. The flow table test results show that both waste concrete powders exhibited similar behavior. The flow diameters of the samples containing equal amounts of waste concrete powder were the same. The flow diameter of the sample with the highest replacement rate of 30% waste concrete powder decreased by 15% compared to the reference sample. The flexural and compressive strength test results indicated that when OWCP was replaced at a rate of 10%, it reduced compressive strength by approximately 8% at all ages. When OWCP was replaced at a rate of 30%, it reduced compressive strength by approximately 30%. It was observed that mixtures containing 10% NWCP increased compressive strength by approximately 4% at all ages compared to the reference sample. When NWCP was used at a rate of 30%, it reduced compressive strength by approximately 25%.
Keywords: Waste Concrete Powder, Cement, Sustainability, Supplementary Cementitious Material, Waste Management

INTRODUCTION
Millions of tons of concrete become waste every year (Kim and Choi, 2012; Ye and Yuan, 2014; Yuan and Shen, 2011). This waste is sometimes generated due to buildings reaching the end of their service life and urban renewal projects (Zhang et al., 2022), and sometimes due to demolitions caused by major earthquakes (Wu et al., 2014). In addition, there are laboratory wastes obtained to inspect structures and whose tests have concluded. These wastes bring storage problems (Ajayi et al., 2016), environmental pollution (Wu et al., 2014), and consumption of natural resources (Yuan and Shen, 2011). Almost all of the waste concrete is used only as filling material (Kim, 2017). Although this method offers a solution for waste disposal, it is not a priority in terms of effective waste utilization. The replacement of cement with waste concrete powder (WCP) contributes to sustainability and economy as well as waste disposal by reducing the consumption of cement, which is responsible for about 7% of global carbon dioxide emissions (Du Plessis, 2002; Meyer, 2009; Turner & Collins, 2013). Therefore, studies have focused on the recycling and utilization of waste concrete (Yuan and Shen, 2011; Zhang et al., 2022; Xiao et al., 2016).

FULL TEXTS BOOK

There are obstacles to the widespread use of WCP, such as low activity and high water demand (Bu et al., 2023). Therefore, various activation processes are applied to WCP before it is included in concrete and mortar mixtures. Among the activation methods are alkaline activation (Liu et al., 2016), mechanical activation (Yang et al., 2022), and thermal activation at different temperatures (Sui et al., 2020; Zhang et al., 2022). Studies on the use of waste concrete powder as a cement replacement material have examined how it affects the rheology, setting time, strength, and microstructure of mortars (Kim and Choi, 2012; Kim, 2017; Zhang et al., 2022; Lin et al., 2023). Although the chemical composition of WCPs obtained from different sources varies, as a result of chemical analysis, it was concluded that WCP contains $Ca(OH)_2$ (Kim and Choi, 2012), unhydrated cement particles, tobermorite and SiO_2 (Yang et al., 2022). Therefore, it is considered that WCP could be a potential cement substitute material (Yang et al., 2022).

This study aimed to compare the effects of WCPs obtained from old and new waste concrete masses on mortars. The old waste concrete powder was obtained from the waste of buildings that collapsed as a result of earthquakes of magnitude 7.7 and 7.6 that occurred in Turkey on February 6, 2023. New waste concrete powder was obtained from laboratories for building inspection and R&D purposes. With this study, it is thought that waste concrete will be disposed of and storage problems will be solved and sustainable and economical mortar mixtures will be obtained by reducing the use of cement.

2. MATERIAL AND METHOD

2.1. Materials

In this study, CEM I 42.5 R type Portland cement produced by Konya Cement was used. The mixing water component in the study is of drinking water quality. Tap water from the Selçuklu district of Konya province was used. Standard sand was preferred as the aggregate. Two different raw material sources were used to prepare WCP: one from a concrete mass estimated to be approximately 30 years old that collapsed in the earthquake, and the other from a new concrete mass produced in the laboratory 3 months ago.

Although thermal activation has high activation potential, the simple and low-cost mechanical activation method was adopted in this study due to its high energy consumption. The optimal grinding time for WCP, in terms of activation and energy consumption, was determined to be 60 minutes (Zhang et al., 2022). WCPs ground in a ball mill for 60 minutes were sieved through a 0.75 µm sieve, and approximately 50% passed through the sieve. Mortar mixtures containing 10%, 20%, and 30% of new and old WCP by cement weight were prepared.

Table 1. Mixture proportions

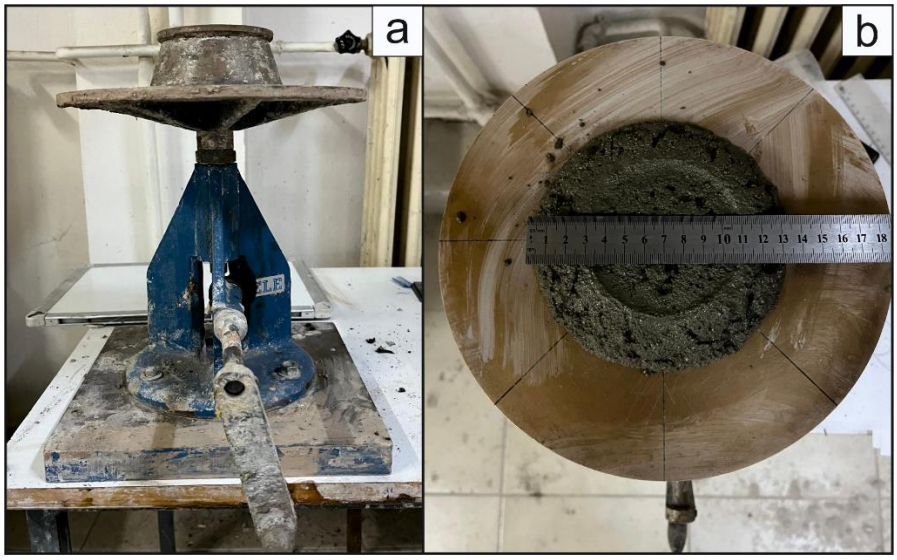
Mixture	Cement (kg/m^3)	Sand (kg/m^3)	Water (kg/m^3)	NWCP (kg/m^3)	OWCP (kg/m^3)
Reference	586	1758	293	0	0
NWCP1	527.4	1758	293	58.6	0
NWCP2	468.8	1758	293	117.2	0
NWCP3	410.2	1758	293	175.8	0
OWCP1	527.4	1758	293	0	58.6
OWCP2	468.8	1758	293	0	117.2
OWCP3	410.2	1758	293	0	175.8

FULL TEXTS BOOK

First, the cement and waste concrete powder, which comprise the binder system, were weighed and then mixed for 1 minute using a cement mixer. After dry mixing the binders for 1 minute, the mixing water was added and mixed for 60 seconds. Subsequently, sand was gradually added to the mixture over 30 seconds. Then, the mixer was stopped, and the sides and bottom of the container were scraped with a spatula. The mixture was then mixed for another 60 seconds at high speed.

2.3. Flow Table Test

The mortar mixtures were placed into the cone shown in Figure 1, made of brass, with a base diameter of 100 mm, an upper diameter of 70 mm and a height of 60 mm, and then the cone was pulled upwards. The table was then dropped 15 times using the arm under the table. The spreading diameter of the material spread on the table in two perpendicular directions was measured and the arithmetic average was taken. The spreading diameters of the mixtures were determined.



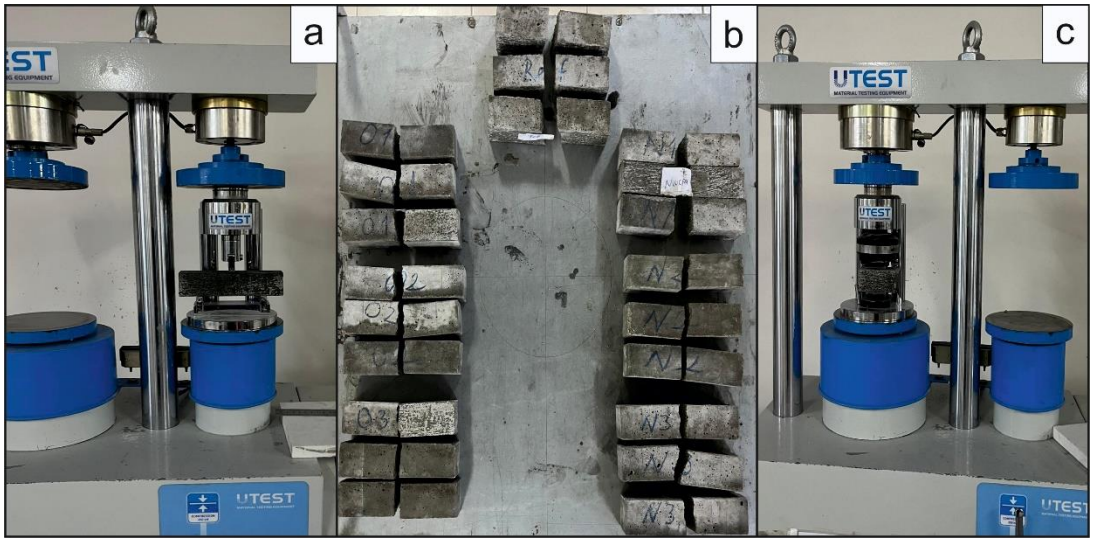


Figure 1. Flow table test (a) before the mould is removed (b) the spread of the material after dropping the table for 15 times.

2.4. Flexural and Compressive Strength Test

To determine the mechanical properties of hardened mortars, the mortar mixtures were placed in molds of 40x40x160 mm and kept at room temperature for 24 hours. The samples were first subjected to 3-point bending and then compressive strength tests on days 3, 7 and 28 (Figure 2).

3. Results and Discussion

3.1. Flow table test results

The flow diameters of the mortars are presented in Figure 3.

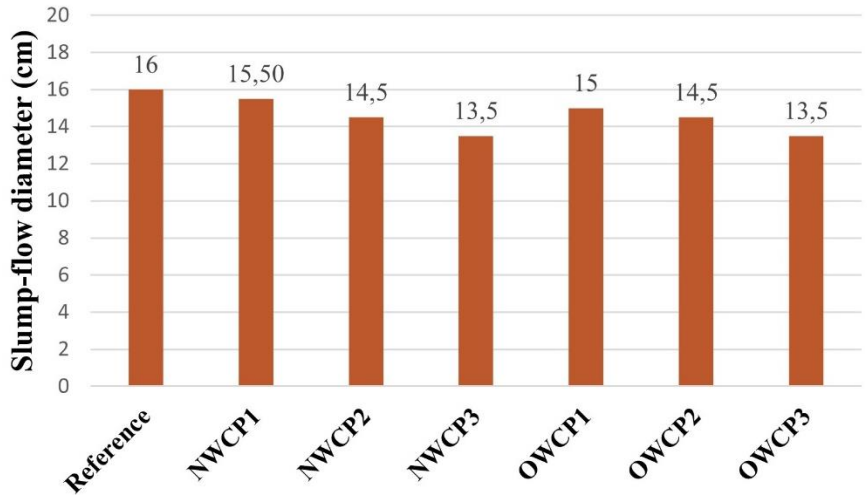

Figure 3. Flow diameters of mortars

Both waste concrete powders caused a decrease in the spreading diameter of the mortars. The spreading diameter decreased as the amount of waste concrete powder used increased. Mortars containing the maximum amount of waste concrete powder (30%) showed a 15% reduction in spread diameter compared to the reference sample. These results are consistent with the literature. The decrease in the spreading diameter was attributed by previous studies to the surface shape of WCP, high water absorption capacity, high specific surface area, and the filling effect of WCP, which increases the friction between cement particles (Ji et al., 2022; Bu et al., 2023; Lin et al., 2023).

3.2. Flexural and Compressive Strength

The 3, 7 and 28-day flexural strength results of the mortar samples are presented in Figure 4.

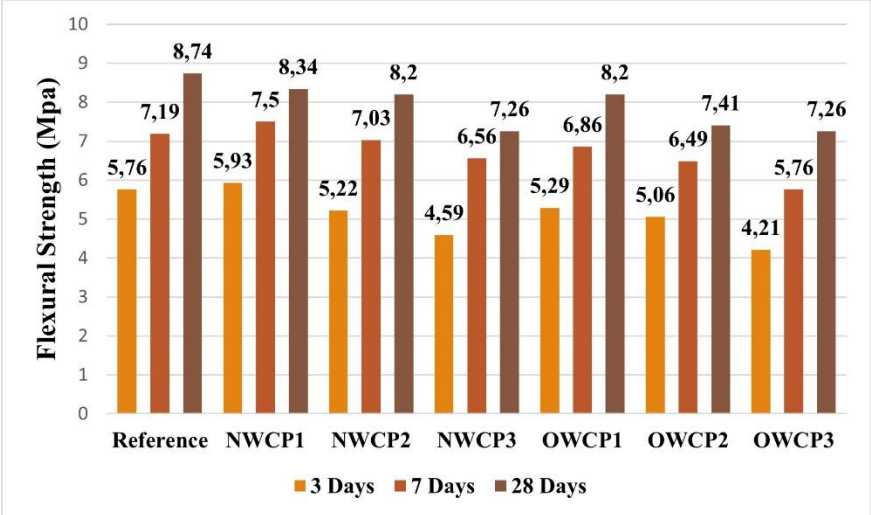

Figure 4. Flexural strength of mortars

Both types of WCP caused a decrease in flexural strength. As the amount of WCP increased, the decrease in strength also increased. No dramatic reduction in strength was observed in mortar mixtures containing 10% WCP.

The 3, 7 and 28-day compressive strength results of the mortar samples are presented in Figure 5.

FULL TEXTS BOOK

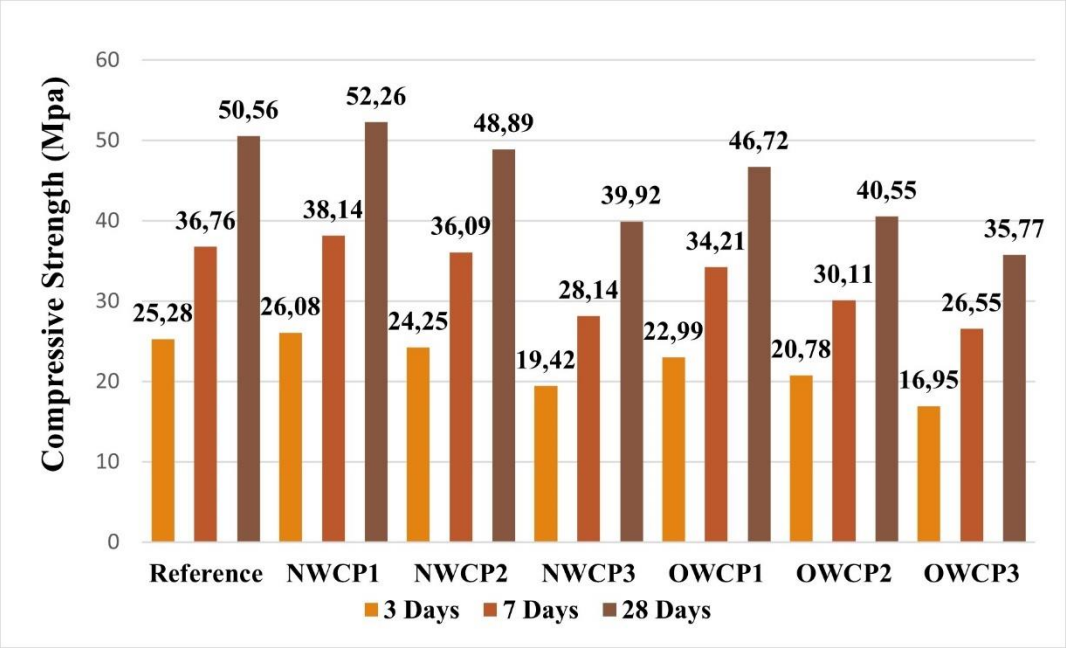

Figure 5. Compressive strength of mortars

The use of new waste concrete powder at the minimum dose (10%) increased the compressive strength of the mortars by approximately 3.5% at all ages. When new waste concrete powder was used as a 20% replacement, it achieved approximately 97% of the compressive strength of the reference sample at all ages, thus meeting the requirements. At higher replacement dosages, however, a decrease in compressive strength was observed.

WCP contains $Ca(OH)_2$, unhydrated cement particles, tobermorite, and other components. Therefore, waste concrete powder is thought to have the ability to show pozzolanic activity and continue hydration (Yang et al., 2022). In addition, waste concrete powder has a filling effect, filling the pores (Duan et al., 2020; Zhang et al., 2022) and creating a more compact structure. It strengthens the aggregate-cement interface by adhering to the surface of aggregates (Lin et al., 2023).

When old waste concrete powder was used at 10%, it provided approximately 92% of the compressive strength of the reference sample. However, when used in higher doses, it caused a dramatic decrease in compressive strength. The reason for this may be that old waste concrete powder contains fewer unhydrated particles compared to new waste concrete powder, and concrete produced in accordance with old regulations may contain less cement due to the mixing ratios.

The reason for the decrease in compressive strength of both waste concrete powders, when used at high replacement rates, could be their content of non-reactive particles, the reduction in clinker content, and the high water absorption of WCPs, which may retain water necessary for cement hydration (Bu et al., 2023).

4. CONCLUSION

Recycling waste concrete, which is the focus of many studies, and using it as a cement replacement material has great potential application value. In this study, unlike the literature, old and new waste concrete powder were compared. The results of the study are as follows:

1) The effect of old and new waste concrete powders on the workability of mortars is the same. Both resulted in a decrease in the spread diameter of the mortars, as expected.

2) Both waste concrete powders caused a decrease in flexural strength.

3) When new waste concrete powder was used at a 10% replacement rate, it increased compressive strength at all ages compared to the reference sample. At a 20% replacement rate, it reached approximately 97% of the compressive strength of the reference sample.

FULL TEXTS BOOK

4) When old waste concrete powder was used at a 10% replacement rate, it achieved approximately 92% of the compressive strength of the reference sample.
5) New waste concrete powder provided better results than old waste concrete powder due to its content of unhydrated particles.
6) There is no obstacle to the substitution of up to 20% of new waste concrete powder. The utilization of laboratory waste as a cement substitute is an economic and environmentally friendly approach with high potential.

BİPOLAR BOZUKLUK TANISI BULUNAN VE BULUNMAYAN KİŞİLERDE DUYGUSAL YEME, ALGILANAN STRES VE ALGILANAN SOSYAL DESTEK ARASINDAKİ İLİŞKİNİN İNCELENMESİ

Ozan Acar,
İstanbul Arel Üniversitesi, Lisansüstü Eğitim Enstitüsü
ORCID Numarası : 0009-0006-4946-4430

ÖZET
Bipolar bozukluğa sahip popülasyonda obezite, depresyon, dürtüsellik gibi duygusal yeme ile ilişkili olduğu tespit edilen birçok özellikle sıkça karşılaşılmaktadır. Literatürde bipolar bozukluğa sahip kişilerin stresli yaşam olaylarına daha duyarlı olduğu yönünde bazı bulgular bulunmakta, kimi araştırmalar algılanan stres ile duygusal yeme arasında pozitif yönlü bir ilişki olduğunu ortaya koymaktadır. Bu araştırmanın amacı bipolar bozukluğa sahip olan ve olmayan kişilerde duygusal yeme, algılanan stres ve algılanan sosyal destek arasındaki ilişkinin incelenmesidir. Araştırmanın örneklemleri 105 bipolar bozukluğa sahip katılımcı (53 erkek, 52 kadın) ile bipolar bozukluğa sahip olmayan, daha önce psikiyatrik tedavi almamış 105 katılımcıdan (51 erkek, 54 kadın) oluşmaktadır. Verileri toplamak için Algılanan Stres Ölçeği, Çok Boyutlu Algılanan Sosyal Destek Ölçeği, Hollanda Yeme Davranışı Anketi'nin Duygusal Yeme Alt Ölçeği ve bilgi formları kullanılmaktadır. Veriler "Bağımsız örneklemler t testi", "Pearson Korelasyonu", "Mann-Whitney U Testi", "Spearman Korelasyonu" kullanılarak analiz edilmektedir. Bipolar bozukluğa sahip kişiler ile sahip olmayan kişiler arasında duygusal yeme açısından anlamlı bir fark yoktur. Bulgular bipolar bozukluğa sahip erkek katılımcıların bipolar bozukluğa sahip olmayan erkek katılımcılardan anlamlı bir şekilde daha çok duygusal yemeye başvurduğunu göstermektedir. Bipolar bozukluğa sahip katılımcılar daha az sosyal desteğe sahiptir ve 20-40 yaş grubuna ait katılımcılar için algılanan sosyal destek ile duygusal yeme arasında anlamlı ve negatif yönlü bir korelasyon bulunmaktadır. Bipolar bozukluğa sahip olmayan katılımcılar için duygusal yeme düzeyi cinsiyete göre farklılaşmaktadır, kadınlar duygusal yeme örüntüsüne daha çok sahiptir. Bipolar bozukluğa sahip erkeklerin duygusal yeme düzeyi bipolar bozukluğa sahip olmayan erkeklerinkinden daha yüksektir. Bu farkın kaynağı bipolar bozukluğa sıkça eşlik eden kimi özellikler ve/veya hastalıkla ilişkili sürecin kişiler üzerindeki etkisi ile ilgili olabilir.
Anahtar kelimeler: Bipolar bozukluk, duygusal yeme, algılanan stres, algılanan sosyal destek

GİRİŞ
Bipolar bozukluk ciddi ve kronik bir psikiyatrik hastalıktır. Yaşam boyu yaygınlık oranı bipolar I bozukluğu için %0,6, bipolar II bozukluğu için %0,4'tür (Merikangas ve ark., 2011). Bipolar I bozukluğuna sahip kişilerin büyük çoğunluğu tekrarlayan mani ve depresyon epizodları yaşamaktadır (World Health Organization, 2006:5).

Bipolar bozukluğa sahip kişilerde tıkınırcasına yeme (McElroy ve ark., 2016; Craba ve ark., 2021), dürtüsellik (Santana ve ark., 2022; Muhtadie ve ark., 2014; Swann ve ark., 2001), depresiflik (American Psychiatric Association, 2013:130-137), obezite (McElroy ve Keck Jr, 2012) stresli yaşam olaylarına duyarlılık (Lex ve ark., 2017), kaçıngan başa çıkma stili (Goossens ve ark., 2008) gibi özellik ve belirtilere sıkça rastlanmaktadır.

Duygusal yeme; fizyolojik açlık ipuçlarından ziyade duygusal tetikleyicilere tepki olarak yiyecek tüketme davranışıdır (Ford ve ark., 2017; van Strien ve ark., 2007; Sharma ve Padwal, 2010). Ayrıca olumsuz duyguları yönetmek için kullanılan bir başa çıkma mekanizması olarak da görülebilmektedir (Ozier ve ark., 2008; Bennett ve ark., 2013). Duygusal yeme sırasında kişiler kendilerini üzüntü, kaygı ve stres gibi olumsuz duygulardan uzaklaştırmak veya bu duygulardan kaynaklanan rahatsızlıklarını geçici olarak yatıştırmak için yiyecekleri kullanmaktadır (Macht ve Simons, 2011).

FULL TEXTS BOOK

Tıkınırcasına yeme (Ricca ve ark., 2009; Eldredge ve Agras, 1996), dürtüsellik (Yang ve ark., 2023), depresiflik (Ouwens ve ark., 2009; Lazarevich ve ark., 2016; Cordero, 2021; van Strien ve ark., 2016), algılanan stres (Carpio-Arias ve ark., 2022; Van Strien ve ark., 2012), obezite (Dakanalis ve ark., 2023) ve kaçıngan başa çıkma stilinin (Deroost ve Cserjési, 2018) duygusal yeme ile ilişkili olduğu saptanmaktadır.

Sosyal destek, sosyal ilişkilerin işlevselliği ve kalitesi ile ilişkilidir (Schwarzer ve ark., 2004). Sosyal desteğin bipolar bozuklukta hastalık seyri üzerinde önemli etkileri bulunduğu ortaya konmaktadır (Johnson ve ark., 1999; Davis ve Kallivayalil, 2023; Kazan Kızılkurt ve ark., 2019; Cohen ve ark., 2004). Buna karşın araştırmalar bipolar bozukluk tanısına sahip kişilerin sağlıklı kişilere kıyasla aldıkları sosyal desteği daha fazla yetersiz olarak algıladıklarını göstermektedir (Studart-Bottó ve ark., 2023). Olumsuz yeme tutum ve davranışların ortaya çıkmasının sosyal destekle negatif ilişkisi bulunduğu (Pace ve ark., 2018) ve strese bağlı yemenin algılanan sosyal destekle negatif yönlü bir ilişkisinin olabileceği (Darling ve ark., 2017) yönünde bulgular mevcuttur.

Bipolar bozukluk tanısı bulunanların stresli yaşam olaylarına sağlıklı kişilerden duyarlı olduğu (Lex ve ark., 2017), şizofreni ve şizoaffektif bozukluk tanısı bulunanlara kıyasla daha çok stresli yaşam olayı yaşadıklarını bildirdikleri (Parmigiani ve ark., 2021) ve stresin epizodların yinelenmesi ile ilişkili olduğu (Cohen ve ark., 2004) gibi bulgular literatürde yer almaktadır.

Bulgular stresin duygusal yemeyle ilişkili olduğu yönündedir (Nguyen Rodrigueza ve ark., 2008; Carpio-Arias ve ark., 2022). Duygusal yeme örüntüsü sergileyenler stres altında aşırı yeme davranışı göstermektedir (Wallis ve Hetherington, 2004). Örneğin Kuijer ve Boyce (2012) Richter Ölçeği'ne göre 7,1 şiddetinde olan bir depremin öncesinde ve sonrasında bir grup orta yaşlı ve yaşlı kadını duygusal yeme konusunda değerlendirmektedir. Depremin öncesinde yüksek duygusal yeme puanı alan kadınlar, depremin ardından aşırı yeme davranışlarının arttığını bildirmektedir. Düşük duygusal yeme puanı alanlar ise böyle bir artış bildirmemektedir.

Boulanger ve arkadaşları (2018) bipolar bozukluk popülasyonunda tıkınırcasına yeme davranışının ilişkili olduğu faktörlerden birinin duygusal yeme olduğunu ortaya koymaktadır. Martin ve arkadaşları (2016) ise ergenler ve genç yetişkinlerle yaptıkları araştırmada bipolar bozukluğa sahip kişilerin kontrol grubuna göre anlamlı miktarda daha fazla duygusal yemeye başvurduğunu raporlamaktadır.

YÖNTEM

Örneklem

Bipolar bozukluğa sahip örneklemin seçilmesinde kriter örnekleme yöntemi kullanılmaktadır. Toplum Ruh Sağlığı Merkezlerinden hizmet almakta olan 105 bipolar bozukluğa sahip katılımcı (53 erkek, 52 kadın) araştırmaya dahil edilmektedir.

Bipolar bozukluk tanısına sahip olmayan örneklemin seçilmesinde ise uygun örnekleme kullanılmaktadır. Bipolar bozukluğa sahip olmayan ve daha önce psikiyatrik tedavi almamış 105 katılımcıya (51 erkek, 54 kadın) internet aracılığıyla ulaşılmakta ve veriler internet üzerinden toplanmaktadır.

İşlem

Bipolar bozukluğa sahip kişilerden veriler, Sultangazi ve Fatih Toplum Ruh Sağlığı Merkezlerinde bilgilendirilmiş onam formunun alınmasının ardından Duygudurum Bozuklukları Ölçeği, Algılanan Stres Ölçeği (ASÖ), Çok Boyutlu Algılanan Sosyal Destek Ölçeği (ÇBASDÖ), Hollanda Yeme Davranışı Anketi'nin Duygusal Yeme Alt Ölçeği (DYAÖ) ve kişilerden birtakım bilgilerin alınmasını sağlayan bir bilgi formu aracılığıyla toplanmaktadır. Veri toplama aşaması 02.10.23 ile 15.03.24 tarihleri arasında sürmektedir.

Bipolar bozukluğa sahip olmayan kişilere ilişkin veriler ölçeklerin (Duygudurum Bozuklukları Ölçeği, ASÖ, ÇBASDÖ, DYAÖ) ve kişilerden birtakım bilgilerin alınmasını sağlayan bir bilgi formunun

FULL TEXTS BOOK

Google Forms'a aktarılmasıyla oluşturulmuş bir bataryanın yardımıyla internet üzerinden toplanmaktadır. Veri toplama 11.12.23 ile 13.03.24 tarihleri arasında sürmektedir.

Veri Toplama Araçları

Duygudurum Bozuklukları Ölçeği (DBÖ)

Bipolar bozukluk taraması için kullanılan Duygudurum Bozuklukları Ölçeği Hirschfeld ve arkadaşları (2000) tarafından geliştirilmektedir. Konuk ve arkadaşları (2007) tarafından Türkçe uyarlamasının bipolar bozukluk taramasındaki geçerlik çalışması yapılmaktadır. Konuk ve arkadaşları (2007) söz konusu tarama aracının kişide ilgili belirtilerin bulunup bulunmadığının sorgulandığı 1. sorusunun alt maddeleri için optimum kesim noktasının 7 olduğunu tespit etmekte, bu değer için duyarlılığın %64 özgüllüğün ise %77 olduğunu bulgulamaktadır. Araştırmada belirtilerin kesme noktası 7 kabul edilmektedir. Tarama aracı 3 sorudan 38 oluşmakta, 1. sorunun 13 alt maddesi bulunmaktadır. İlk sorudan 7 ve üzeri alt maddeye "Evet" yanıtını vermesi halinde eğer 2. soruya "Evet" ve 3. Soruya "Orta derecede"/"Ciddi" yanıtlarını vermişse bu durum kişinin bipolar bozukluğa sahip olduğuna işaret etmektedir.

Bilgi formu

Araştırmada katılımcılar hakkında bilgi toplamak için bilgi formları kullanılmaktadır. Bipolar bozukluk tanısı olan ve olmayan kişilere uygulanan formlarda bazı sorular farklılık göstermektedir. Bilgi formlarındaki ortak maddeleri yaş, cinsiyet, boy, kilo, sigara bırakma durumu söz konusuysa ne kadar süredir sigara kullanmadığı oluşturmaktadır. Bipolar bozukluk tanısı bulunan katılımcılara ortak maddelere ek hastalıklarına (bipolar bozukluk) ilişkin sorular yöneltilmektedir. Bipolar bozukluğa sahip olmayan katılımcılara, ortak maddelere ek olarak, eğitim durumu, hiç psikiyatrik ilaç tedavisi görüp görmedikleri, hiç psikolojik destek alıp almadıkları konularında soruları yanıtlamaları istenmektedir. Bipolar bozukluğa sahip katılımcılara yönelik formda 9 madde, bipolar bozukluğa sahip olmayan katılımcılara yönelik formda 8 madde bulunmaktadır.

Algılanan Stres Ölçeği (ASÖ)

ASÖ Cohen ve arkadaşları (1983) tarafından geliştirilmekte; ölçeğin Türkçe geçerlik ve güvenirlik çalışmasını Eskin ve arkadaşları (2013) yapmaktadır. Eskin ve arkadaşları (2013) yapı geçerliliğini test etmek için yaptıkları faktör analizi sonucunda orijinal ölçeğe benzer bir şekilde ölçeğin 10 maddelik ve 14 maddelik formlarında 2 faktör bulunduğu ortaya konmaktadır. Yetersiz öz-yeterlik alt ölçeği kişinin kendine yetme, kendi başının çaresine bakabilme algısının yetersiz olup olmadığını ölçme yönünde maddeler içermektedir. Stres/rahatsızlık algısı alt ölçeği yaşanan olaylar konusunda kontrol kaybı karşısında kişinin yaşadığı olumsuz hislere odaklanan maddeler 39 içermektedir. Eskin ve arkadaşları (2013) tarafından yapılmış çalışmada ölçeğin 10 maddelik formunun Cronbach's Alpha katsayısı .82 bulunmaktadır. 10 maddelik formunun alt ölçeklerinin Cronbach Alpha katsayıları yetersiz öz-yeterlik alt ölçeği için .69, stres/rahatsızlık algısı için .80'dir. Ölçekten ve alt ölçeklerden alınan daha yüksek puanlar kişinin daha yüksek algılanan strese sahip olduğuna işaret etmektedir.
Ölçeğin bu araştırmadaki Cronbach Alpha katsayısı bipolar bozukluk örneklemi için ,826, bipolar bozukluğa sahip olmayan örneklem için ,743 bulunmaktadır.

Çok Boyutlu Algılanan Sosyal Destek Ölçeği (ÇBASDÖ)

ÇBASDÖ Zimet ve arkadaşları (1988) tarafından geliştirilmekte; Türkçe geçerlik ve güvenirlik çalışmasını Eker ve arkadaşları (2001) yapmaktadır. ÇBASDÖ'nün "Aile", "Arkadaş" ve "Özel Bir İnsan" olmak üzere 3 alt ölçeği bulunmaktadır. Eker ve arkadaşlarının (2001) çalışmasında ölçeğin Cronbach's alpha katsayısı psikiyatrik örneklem için .86 normal örneklem için .83 olarak bulunmaktadır. Alt ölçeklerin Cronbach alpha katsayıları psikiyatrik örneklem için aile, arkadaş, özel

FULL TEXTS BOOK

bir insan alt ölçekleri bakımından sırasıyla .83, .84 ve .88; normal örneklem için aile, arkadaş, özel bir insan alt ölçekleri bakımından sırasıyla .80, .85 ve .92'dir (Eker ve arkadaşları, 2001). Ölçekten alınan daha yüksek puanlar daha yüksek düzeyde algılanan sosyal desteğe işaret etmektedir.
Bu araştırmada ölçeğin Cronbach Alpha katsayısı bipolar bozukluğa sahip örneklem için ,832, bipolar bozukluğa sahip olmayan örneklem için ,896 olarak bulunmuştur.

Hollanda Yeme Davranışı Anketi Duygusal Yeme Alt Ölçeği (DYAÖ)
Hollanda Yeme Davranışı Anketi van Strien ve arkadaşları (1986) tarafından geliştirilmekte; Bozan (2009) ölçeğin Türkçe geçerlik ve güvenirlik çalışmasını yapmaktadır. Araştırmamızda bu ölçeğin alt boyutu olan Duygusal Yeme Alt Ölçeği kullanılmaktadır. Bozan'ın (2009) çalışmasında söz konusu alt ölçeğin Cronbach's alpha katsayısı .97 olarak bulunmaktadır. Ölçekteki daha yüksek puanlar daha şiddetli bir duygusal yemeye işaret etmektedir.
Ölçeğin bu araştırmadaki Cronbach Alpha katsayısı bipolar bozukluğa sahip örneklem için ,909, bipolar bozukluğa sahip olmayan örneklem için ,968 olarak bulunmuştur.

Veri Analizi
Verilerin analizinde SPSS 29.0.2.0 paket programından yararlanılmakta ve "Bağımsız örneklemler t testi", "Pearson Korelasyonu", "Mann-Whitney U Testi", "Spearman Korelasyonu" kullanılmaktadır.

BULGULAR
Araştırmaya katılmaya gönüllü olmuş 105 bipolar bozukluğa sahip katılımcının 52'si (%49,5) kadın, 53'ü (%50,5) erkek; 105 bipolar bozukluğa sahip olmayan katılımcının 54'ü (%51,4) kadın, 51'i (%48,6) erkektir. Bipolar bozukluğa sahip katılımcıların yaş ortalaması 39,91 (std. sapma 10,62) iken bipolar bozukluğa sahip olmayan katılımcıların yaş ortalaması 43,62'dir (std. sapma 12,64). Vücut kitle indeksine (VKİ) ilişkin bipolar bozukluğa sahip katılımcıların sıra ortalamaları (129,40) bipolar bozukluğa sahip olmayan katılımcılarınkinden (81,60) anlamlı bir şekilde daha yüksektir (U= 3002,50, z=-5,701, p<,001).
Algılanan sosyal destek açısından, bipolar bozukluğa sahip olan katılımcıların ortalaması (52,809) ile bipolar bozukluğa sahip olmayan katılımcıların ortalaması (62,105) arasında anlamlı bir fark vardır (t(208)=4,349, p<,001). Hesaplanan etki değeri (d=,60) farkın orta büyüklükte olduğunu göstermektedir. Bipolar bozukluğa sahip kadın katılımcıların ortalaması (53,269) ile bipolar bozukluğa sahip olmayan kadın katılımcıların ortalaması (65,074) arasında anlamlı bir fark vardır (t(104)=4,168, p<,001). Hesaplanan etki değeri (d=,81) farkın büyük olduğunu göstermektedir. Bipolar bozukluğa sahip olmayan kadın katılımcıların arkadaş alt boyutuna ilişkin sıra ortalamaları (66,41) bipolar bozukluğa sahip kadın katılımcıların sıra ortalamalarından (40,10) anlamlı bir şekilde farklılaşmaktadır (U= 707,00, z= -4,431, p<,001).
Bipolar bozukluğa sahip erkek katılımcıların ortalaması (52,358) ile bipolar bozukluğa sahip olmayan erkek katılımcıların ortalaması (58,960) arasında anlamlı bir fark vardır (t(102)=2,078, p=,040). Hesaplanan etki değeri (d=,40) farkın orta büyüklükte olduğunu göstermektedir. Bipolar bozukluğa sahip olmayan erkek katılımcıların arkadaş alt boyutuna ilişkin sıra ortalamaları (59,94) bipolar bozukluğa sahip erkek katılımcıların sıra ortalamalarından (45,34) anlamlı bir şekilde farklılaşmaktadır (U= 972,00, z= -2,473, p=,013).
Bipolar bozukluğa sahip 20-40 yaş arası katılımcıların ortalaması (53,641) ile bipolar bozukluğa sahip olmayan 20-40 yaş arası katılımcıların ortalaması (63,750) arasında anlamlı bir fark vardır ($t_{(95)}$=3,374, p<,001). Hesaplanan etki değeri (d=,69) farkın orta büyüklükte olduğunu göstermektedir. Bipolar bozukluğa sahip olmayan 20-40 yaş katılımcıların arkadaş alt boyutuna ilişkin sıra ortalamaları (58,18) bipolar bozukluğa sahip 20-40 yaş katılımcıların sıra ortalamalarından (41,38) anlamlı bir şekilde farklılaşmaktadır (U= 762,00, z= -2,935, p=,003). Bipolar bozukluğa sahip 41-65 yaş arası katılımcıların

FULL TEXTS BOOK

ortalaması (51,961) ile bipolar bozukluğa sahip olmayan 41-65 yaş arası katılımcıların ortalaması (60,918) arasında anlamlı bir fark vardır ($t_{(111)}$= 2,931, p=,004). Hesaplanan etki değeri (d=,55) farkın orta büyüklükte olduğunu göstermektedir. Bipolar bozukluğa sahip olmayan 41-65 yaş katılımcıların arkadaş alt boyutuna ilişkin sıra ortalamaları (68,36) bipolar bozukluğa sahip 41-65 yaş katılımcıların sıra ortalamalarından (43,67) anlamlı bir şekilde farklılaşmaktadır (U= 893,00, z= -4,015, p<,001).

Algılanan stres açısından, bipolar bozukluğa sahip katılımcıların ortalaması (18,048) ile bipolar bozukluğa sahip olmayan katılımcıların ortalaması (17,438) arasında anlamlı bir fark yoktur (t(208)=-,633, p=,527).

ÇBASDÖ ile ASÖ arasında anlamlı bir ilişki yoktur ve alt boyutlarının ilişkileri incelendiğinde de anlamlı bir korelasyona rastlanmamaktadır. Ancak bipolar bozukluğa sahip 20-40 yaş grubuna ait katılımcılar için ÇBASDÖ'nün Aile alt boyutu ile ASÖ'nün Stres/Rahatsızlık Algısı alt boyutu arasında negatif yönlü ve anlamlı bir korelasyon bulunmaktadır (rho=-,34, p=,012).

DYAÖ puanları açısından, bipolar bozukluğa sahip katılımcıların sıra ortalamaları (110,86) ile bipolar bozukluğa sahip olmayan katılımcıların sıra ortalamaları (100,14) arasında anlamlı bir fark yoktur (U=4950,00, z=-1,280, p=,201). Bipolar bozukluğa sahip katılımcılar için cinsiyete göre DYAÖ puanları farklılaşmamaktadır (U= 1339,00 , z= -,250 , p=,802). Bipolar bozukluğa sahip olmayan katılımcılar için cinsiyete göre DYAÖ puanları arasında anlamlı bir fark vardır (U= 919,50, z= -2,943 , p=,003). Bu farklılık kadınların sıra ortalamalarının (61,47), erkeklerin sıra ortalamalarından (44,03) yüksek olmasından kaynaklanmaktadır. Bipolar bozukluğa sahip erkek katılımcıların puanları ile bipolar bozukluğa sahip olmayan erkek katılımcıların puanları arasında anlamlı bir fark vardır (U=970,00, z=-2,487, p=,013). Bu farklılık bipolar bozukluğa sahip erkek katılımcıların sıra ortalamalarının (59,70) bipolar bozukluğa sahip olmayan erkek katılımcıların sıra ortalamalarından (45,02) yüksek olmasından kaynaklanmaktadır. Bipolar bozukluğa sahip katılımcıların yaş gruplarına göre DYAÖ puanları arasında anlamlı bir fark vardır (U= 977,00, z= -2,573 , p=,010). Bu farklılık 20-40 yaş grubundaki katılımcıların sıra ortalamalarının (60,57), 41-65 yaş grubundaki katılımcıların sıra ortalamalarından (45,29) yüksek olmasından kaynaklanmaktadır.

Bipolar bozukluğa sahip katılımcıların yaşları ve DYAÖ puanları arasında negatif yönlü ve anlamlı bir korelasyon gözlenmektedir (Spearman's *rho* = -.24, p= .012). Bipolar bozukluğa sahip katılımcıların VKİ değerleri ve DYAÖ puanları arasında pozitif yönlü ve anlamlı bir korelasyon gözlenmektedir (r =,25, p=,010).

Bipolar bozukluğa sahip katılımcılar için algılanan stres puanları ve DYAÖ puanları arasında anlamlı bir ilişki yoktur (r=,16, p=,104). Bipolar bozukluğa sahip olmayan katılımcılar için algılanan stres puanları ve DYAÖ puanları arasında anlamlı bir ilişki vardır (r=,30, p=,002). Bipolar bozukluğa sahip olmayan katılımcılar için ASÖ'nün Stres/Rahatsızlık Algısı alt boyutu ile DYAÖ puanları arasında pozitif yönlü anlamlı bir korelasyonun bulunduğu (rho=,38, p<,001); ASÖ'nün Yetersiz Özyeterlik Algısı alt boyutu ile DYAÖ puanları arasında ise anlamlı bir ilişkinin bulunmadığı (rho=,02, p=,846) gözlenmektedir. Bipolar bozukluğa sahip olmayan 41-65 yaş grubuna (n=61) ait katılımcılar için ASÖ'nün Stres/Rahatsızlık Algısı alt boyutu puanları ile DYAÖ puanları arasında pozitif yönlü ve anlamlı bir korelasyonun bulunmaktadır (rho=,48, p<,001).

Bipolar bozukluğa sahip olmayan katılımcılar için algılanan sosyal destek puanları ile DYAÖ puanları arasında ilişki bulunmamaktadır (r=,02, p=,840). Bipolar bozukluğa sahip katılımcılar için algılanan sosyal destek puanları ile DYAÖ puanları arasında anlamlı bir ilişki bulunmamaktadır (r=-,15, p=,133). Ancak bipolar bozukluğa sahip 20-40 yaş katılımcılar için algılanan sosyal destek puanları ile DYAÖ puanları arasında negatif yönlü anlamlı bir ilişki tespit edilmektedir (rho=-,27, p=,048).

TARTIŞMA

Bipolar bozukluğa sahip katılımcılar hem kendi cinsiyetlerindeki hem akranları bipolar bozukluğa sahip olmayan katılımcılardan daha düşük düzeyde algılanan sosyal desteğe sahiptir ve farkın kaynağı büyük

FULL TEXTS BOOK

ölçüde Arkadaş alt boyutudur. Bu sonuçlara göre katılımcıların algıladığı sosyal desteğin üzerinde bipolar bozukluğa sahip olmanın bir etkisinin bulunduğu söylenebilir. Bipolar bozukluğa sahip katılımcılar bu hastalığa sahip olmayan katılımcılara göre daha az sosyal destek almaktadır veya en azından algıladıkları sosyal destek daha azdır. Bu bulgular sağlıklı kontrollere göre bipolar bozukluğa sahip kişilerin algıladığı sosyal desteğin daha düşük seviyede olduğunu raporlayan çalışmalarla uyumludur (Studart-Bottó ve ark., 2023).

DYAÖ puanları bipolar bozukluğa sahip olmayan katılımcılar için cinsiyete göre farklılaşmaktadır. Kadınların erkeklerden daha çok duygusal yeme örüntüsüne sahip olduğu bulgusu literatürü desteklemektedir (Hadar-Shoval ve ark., 2022; De Lauzon-Guillain ve ark., 2009). Araştırmamızdaki bipolar bozukluğa sahip erkekler ve kadınlar arasında duygusal yeme açısından anlamlı bir fark bulunmamaktadır ve bipolar bozukluğa sahip erkekler, bipolar bozukluğa sahip olmayan erkeklerden daha yüksek düzeyde duygusal yemeye sahiptir. Bu durumda bipolar bozukluğa sahip erkeklerin bipolar bozukluk veya bipolar bozukluğa sıklıkla eşlik eden obezite, dürtüsellik, depresyon ya da başka bir özellik nedeniyle duygusal yeme düzeylerinin yüksek olduğu söylenebilir.

Bipolar bozukluğa sahip katılımcılar için yaşa göre DYAÖ puanları farklılaşmakta, 20-40 yaş grubu 41-65 yaş grubundan anlamlı bir şekilde daha çok duygusal yeme örüntüsü sergilemektedir. Ayrıca bipolar bozukluğa sahip katılımcılar için yaş ile duygusal yeme arasında negatif yönlü anlamlı bir ilişki bulunmaktadır. Bu durumda duygusal yemenin bipolar bozukluğa sahip genç katılımcılarda daha çok gözlendiği ve yaşla birlikte azalma eğiliminde olduğu söylenebilir. Duygusal yemenin yaşla birlikte azaldığına ilişkin bulgu literatürdeki benzer sonuçları desteklemektedir (Samuel ve Cohen, 2018; Güner ve Aydın, 2022).

Literatürle uyumlu bir şekilde bipolar bozukluğa sahip olan katılımcıların VKİ ile DYAÖ puanları arasında pozitif yönlü anlamlı bir ilişki bulunmaktadır (Dakanalis ve ark., 2023). Bipolar bozukluğa sahip olmayan katılımcılar için böyle bir ilişki tespit edilememiştir.

ASÖ'nün Stres/Rahatsızlık Algısı alt boyutu yaşanan olaylar konusunda kontrol kaybı karşısında kişinin yaşadığı olumsuz hislere odaklanmaktadır. Araştırmamızda bipolar bozukluğa sahip 20-40 yaş grubuna ait katılımcılar için ÇBASDÖ'nün Aile alt boyutu ile ASÖ'nün Stres/Rahatsızlık Algısı alt boyutu arasında negatif yönlü ve anlamlı bir korelasyon tespit edilmektedir. Buna göre kişilerin ailelerine ilişkin algıladıkları sosyal destek arttıkça Stres/Rahatsızlık Algısı puanları azalmakta, Aile alt boyutuna ilişkin algılanan sosyal destek azaldıkça Stres/Rahatsızlık Algısı puanları artmaktadır. 20-40 yaş aralığı bipolar bozukluğun genellikle ortaya çıktığı dönemdir (Hays ve ark., 1998), bu yaş döneminde kişilerin pek çok stresli olay yaşadığı ve ailenin sosyal desteğinin bu dönemde birey için kritik olduğu söylenebilir.

Araştırmamızda bipolar bozukluğa sahip olmayan katılımcılar için algılanan stres puanları ve DYAÖ puanları arasında anlamlı ve pozitif bir korelasyon gözlenmektedir Literatürde duygusal yemenin stresle ilişkili olduğuna yönelik bulgular bulunmaktadır (Nguyen-Rodrigueza ve ark., 2008; Carpio-Arias ve ark., 2022).

Bipolar bozukluğa sahip 20-40 yaş katılımcılar için algılanan sosyal destek puanları ile DYAÖ puanları arasında negatif yönlü anlamlı bir ilişki tespit edilmektedir. Bu bulgudan hareketle belki sosyal desteğin; algılanan stresi zayıflatmak, başa çıkma konusunda tutum ve beceriler edinmeyi sağlamak ve diğerlerinin teşviği sayesinde yararlı etkinliklerde bulunmak gibi kazanımlarla duygusal yeme durumu üzerinde etkili oluyor olabileceği söylenebilir. Araştırmamızın bu bulgusu Kirsch ve arkadaşlarının (2016) geç ergenlikte ailesel sosyal destek düzeyinin düşüklüğünün yeme bozukluğu ile ilişkili olduğu yönündeki bulgusu ile uyumludur.

SONUÇ

Bipolar bozukluğa sahip erkekler bipolar bozukluğa sahip olmayan erkeklerden daha çok duygusal yemeye başvurmaktadır. Bipolar bozukluğa sahip kişiler bipolar bozukluğa sahip olmayanlardan daha

FULL TEXTS BOOK

düşük algılanan sosyal desteğe sahiptir. 20-40 yaş grubu bipolar bozukluğa sahip kişiler için algılanan sosyal desteğin duygusal yeme ile anlamlı ve negatif yönlü bir ilişkisi vardır.

ÖZET

Batı dünyasının uluslararası ilişkilerde sergilediği tutarsızlıklar ve çifte standartlar, Ukrayna-Rusya Savaşı ile İsrail-Filistin çatışması arasındaki farklar üzerinden açıkça görülebilir. Bu iki olay, Batı'nın insan hakları, uluslararası hukuk ve adalet konularındaki söylemleri ile pratikteki davranışları arasındaki derin uçurumu gözler önüne sermektedir. Rusya'nın 2022 yılında Ukrayna'ya karşı başlattığı askeri müdahale, uluslararası arenada büyük bir şok etkisi yarattı ve Batı dünyasının hızla harekete geçmesine neden oldu. Bu dönemde, Batı'nın tepkisi çok yönlü ve kararlı bir şekilde şekillendi, çeşitli diplomatik, ekonomik ve askeri adımlar atıldı. Batı medyası, Ukrayna-Rusya Savaşı'nı geniş çapta ve detaylı bir şekilde haberleştirdi. Ukrayna'nın direnişi, Rusya'nın saldırıları ve sivillerin yaşadığı acılar, dünya genelinde büyük yankı uyandırdı. Batı'da, kamuoyu Ukrayna'nın yanında yer aldı ve birçok ülkede Ukrayna'ya destek gösterileri düzenlendi. Bu kamuoyu desteği, Batılı hükümetlerin Ukrayna'ya yönelik yardımlarını artırmalarında önemli bir rol oynadı. Öte yandan, İsrail'in Filistin halkına yönelik politikaları konusunda Batı'nın tutumu daha karmaşık ve çelişkili bir tablo çizmektedir. İsrail'in yerleşim politikaları, Filistin topraklarının genişletilmesi ve Gazze'deki askeri operasyonlar, insan hakları ihlalleri ve uluslararası hukuk açısından ciddi sorunlar teşkil etmektedir. Ancak, Batılı ülkeler genellikle İsrail'in güvenlik endişelerini gerekçe göstererek güçlü bir siyasi ve askeri destek sağlamaktadır. Batı medyası, İsrail-Filistin çatışmasını ele alırken genellikle dengeli ve tarafsız bir tutum sergileyemez. İsrail yanlısı bir yaklaşım benimseyen medya organları, Filistinlilerin yaşadığı insan hakları ihlallerini ve yapılan soykırımı yeterince gündeme getirmez. Bu durum, Batı'nın insan hakları ve adalet ilkelerine olan bağlılığını sorgulattırmaktadır. Bu çalışma Batı dünyasının uluslararası politikalarda sergilediği çifte standartları ve stratejik çıkar odaklı yaklaşımları, İsrail-Filistin çatışması ve Ukrayna-Rusya savaşı bağlamında detaylı bir şekilde incelemeyi, insan hakları, uluslararası hukuk ve adalet ilkeleri açısından Batı'nın tutumlarındaki tutarsızlıkları ortaya koyarak, bu durumun Batı'nın güvenilirliği ve meşruiyeti üzerindeki etkilerini değerlendirmeyi amaçlamaktadır. Çalışma, Batı'nın insan hakları ve adalet ilkelerini evrensel olarak savunurken, uygulamada nasıl seçici davrandığını ve bu seçiciliğin altında yatan stratejik çıkarları vurgulamayı hedeflemektedir.

Anahtar Kelimeler: İnsan Hakları, Ukrayna, İsrail, Soykırım, Filistin.

ABSTRACT

The inconsistencies and double standards of the Western world in international relations can be clearly seen in the differences between the Ukraine-Russia War and the Israeli-Palestinian conflict. These two events illustrate the profound gap between the West's rhetoric on human rights, international law and justice and its behavior in practice. Russia's military intervention against Ukraine in 2022 shocked the international arena and caused the Western world to take swift action. During this period, the West's response was multifaceted and decisive, with various diplomatic, economic and military steps taken. Western media covered the Ukraine-Russia war extensively and in detail. Ukraine's resistance, Russia's

FULL TEXTS BOOK

aggression and civilian suffering were widely reported around the world. In the West, public opinion sided with Ukraine and demonstrations in support of Ukraine were organized in many countries. This public support played an important role in Western governments increasing their aid to Ukraine. On the other hand, the Western position on Israel's policies towards the Palestinian people is more complex and contradictory. Israel's settlement policies, the expansion of Palestinian territories and military operations in Gaza pose serious problems in terms of human rights violations and international law. However, Western countries provide strong political and military support, often citing Israel's security concerns. Western media coverage of the Israeli-Palestinian conflict is often not balanced and impartial. Media outlets that adopt a pro-Israel approach do not adequately cover the human rights violations and genocide of Palestinians. This situation calls into question the West's commitment to the principles of human rights and justice. This study aims to examine in detail the double standards and strategic interest-oriented approaches of the Western world in international politics in the context of the Israeli-Palestinian conflict and the Ukraine-Russia war, to reveal the inconsistencies in Western positions in terms of human rights, international law and principles of justice, and to evaluate the effects of this situation on the credibility and legitimacy of the West. The study aims to highlight how the West, while universally upholding the principles of human rights and justice, has been selective in practice and the strategic interests underlying this selectivity.
Keywords: Human Rights, Ukraine, Israel, Genocide, Palestine.

GİRİŞ

Küresel siyasette sürekli dile getirilen konular arasında Batı dünyasının uluslararası ilişkilerdeki tutarsızlıkları ve çifte standartları önemli bir yer tutmaktadır. Batılı ülkeler insan hakları, uluslararası hukuk ve adalet konularında güçlü söylemler dile getirmekte ve bu değerlerin koruyucusu rolünü üstlenmektedir. Bununla birlikte, bu değerlerin söylemi ve pratikteki uygulamaları büyük tutarsızlıklar ve çifte standartlar ortaya koymaktadır. Bu makale, Ukrayna-Rusya Savaşı ve İsrail-Filistin çatışması örnekleri üzerinden Batı dünyasının uluslararası ilişkilerdeki tutarsızlıklarını ve çifte standartlarını net bir şekilde ortaya koymayı amaçlamaktadır.

Ukrayna-Rusya Savaşı ve İsrail-Filistin çatışması, Batı'nın uluslararası ilişkilerdeki politika ve davranışlarının uyumluluk derecesini incelemek için uygun örneklerdir. Ukrayna-Rusya Savaşı ile ilgili olarak Batı, Ukrayna'nın toprak bütünlüğünü ve egemenliğini savunmuş, Rusya'ya ağır yaptırımlar uygulamış ve uluslararası hukuk ihlallerini kınamıştır. Buna karşılık, İsrail-Filistin çatışması söz konusu olduğunda, Batı'nın İsrail'in işgal ve yerleşim politikalarına tepkisi daha yumuşak ve çelişkili bir yol olmuştur. Bu husus, Batı'nın uluslararası hukuk ve insan hakları söylemi ile fiili eylemleri arasındaki önemli farklılığa işaret etmektedir.

Bu araştırmanın temel amacı, Batı'nın insan hakları, uluslararası hukuk ve adalet söylemi ile pratikteki davranışları arasındaki büyük uyumsuzluğu ortaya koymaktır. Bu amaçla, Ukrayna-Rusya Savaşı ve İsrail-Filistin çatışması farklılıkları açısından karşılaştırılacak ve Batı'nın bu olaylar karşısındaki tutumları yan yana getirilecektir. Araştırma literatür taraması, doküman analizi ve karşılaştırmalı analiz yaklaşımını benimseyecektir.

Çalışmada, Batı'nın uluslararası ilişkilerdeki tutarsızlıklarının ve çifte standartlarının küresel barış ve istikrar üzerinde zararlı etkileri olduğu iddia edilmektedir. Böylece makale, politika yapıcılara, akademisyenlere ve uluslararası ilişkiler alanında çalışan diğer paydaşlara değerli ve güvenilir bir kaynak sağlayacaktır.

KAVRAMSAL ÇERÇEVE

Batı'nın Uluslararası İlişkilerdeki Tutarsızlıkları

Bu konu on yıllardır Batı'nın uluslararası ilişkilerinde hararetli tartışmalara konu olmuştur. Batılı ülkelerin uluslararası sahnede uyguladıkları politikalar, ulusal çıkarlarına ve stratejik hedeflerine

FULL TEXTS BOOK

bağlıdır. Bu da Batı'nın insan hakları, uluslararası hukuk ve adalete ilişkin temel beyanlarının fiili eylemleriyle çelişmesine yol açmaktadır.

Realist ve Liberal Teorilerin Perspektifleri

Realizm, devletlerin uluslararası ilişkilerdeki temel kaygısının ulusal çıkarlarını maksimize etmek olduğunu vurgulayan bir teoridir. Batı, çıkarlarına fayda sağladığı sürece uluslararası norm ve değerlerin korunmasından yanadır, dolayısıyla bu teori bu fikri desteklemektedir (Morgenthau, 2005). Realist teorisyenler, Batı'nın tutarsızlıklarının devletlerin rasyonel ve çıkar odaklı davranışlarının bir sonucu olduğunu savunmaktadır. Öte yandan, liberal teoriler uluslararası işbirliğinin ve normların önemine odaklanmaktadır. Bu amaçla liberal teorisyenler, Batı'nın uluslararası norm uygulamasındaki pozisyonundaki tutarsızlıklara işaret etmekte ve bunu çifte standarda bağlamaktadır. Örneğin Keohane (1984) ve Nye (2020) gibi liberal teorisyenler, Batı'nın insan hakları ve uluslararası hukuk konusundaki söylemlerinin uygulamada stratejik ve ekonomik çıkarların peşinde koşulması nedeniyle zayıfladığını savunmaktadır.

Geçtiğimiz yıllarda, Batı'nın uluslararası ilişkilerdeki sorunları her zamankinden daha kapsamlı bir şekilde incelenmiştir. Bu çalışmalar, Batılı ülkelerin politikalarının dünyanın farklı bölgelerinde ve vakalarında nasıl değiştiğini ve bu değişikliklerin arkasındaki nedenleri incelemektedir. Örneğin Barkin ve Sjoberg (2019), Batı'nın uluslararası müdahalelerdeki tutarsızlıklarını insani müdahalelerin maliyet ve faydaları üzerinden incelemiştir. Bu çalışma, Batı'nın stratejik çıkarlarının olduğu bölgelerde insan hakları ihlallerine, stratejik çıkarlarının düşük olduğu zamanlara kıyasla daha şiddetle karşı çıktığını ortaya koymaktadır. Benzer şekilde, Weiss (2018) Batı'nın uluslararası hukuk söylemi ve uygulamasındaki sorunları araştırmıştır. Weiss, Batı'nın çıkarlarına uygun olduğu sürece uluslararası hukuku desteklediğini, ancak uygun olmadığında göz ardı ettiğini belirtmektedir. Ukrayna-Rusya Savaşı ve İsrail-Filistin çatışması gibi vakalar bunu açıkça göstermektedir.

Batı'nın uluslararası ilişkilerle ilgili felsefesi çoğunlukla bölgesel ve stratejik çıkarlarla ilgilidir. Örneğin, Batı'nın Ortadoğu'daki politikaları enerji kaynakları ve jeopolitik dengeler gibi stratejik faktörlerden türetilmiştir. Dolayısıyla, Batı'nın İsrail-Filistin çatışmasına yönelik tutumu, uluslararası hukuk ve insan hakları retoriği yerine ağırlıklı olarak stratejik hesaplar tarafından belirlenmektedir (Chomsky, 2015). Öte yandan, Doğu Avrupa'daki politikalar Batı'nın Rusya ile olan stratejik rekabeti tarafından belirlenmektedir. Ukrayna-Rusya Savaşı'nda Batı'nın Ukrayna'ya verdiği güçlü destek, Rusya'nın bölgedeki etkisini sınırlamaya yönelik stratejik bir hamle olarak anlaşılabilir (Mearsheimer, 2014). Batı, çifte standartlarında bir tarafı diğerine tercih ederek küresel barış ve istikrarı olumsuz yönde etkilemektedir. Batı'nın tutarsızlıkları, uluslararası toplumda küresel güvensizlik ve hoşnutsuzluğun ana nedenidir ve aynı zamanda Batı'nın insan hakları ve adalet konusundaki güvenilirliğini zayıflatmaktadır. Ayrıca, ahlaki ikiyüzlülük diğer devletlerin uluslararası normlara bağlı kalma konusundaki isteksizliğinin nedeni olabilir (Krasner, 1999).

İnsan Hakları ve Uluslararası Hukuka İlişkin Batılı Söylemler

Batı, İkinci Dünya Savaşı'nın sonundan bu yana insan hakları ve uluslararası hukuk konusunda çok güçlü söylemler üretmektedir. Diğer Batılı devletler de bu değerlerin küresel olarak korunması ve desteklenmesi konusunda Avrupa Birliği ile güçlerini birleştirmiştir. Bunu yaparak kendilerini insan hakları ve uluslararası hukukun savunulmasında ön plana çıkarmışlardır. Bu bölüm, insan hakları ve uluslararası hukuka ilişkin Batılı söylemlerin tarihsel gelişimine ve mevcut durumuna odaklanmaktadır. İkinci Dünya Savaşı sonrası dönemde Batı dünyası insan hakları ve uluslararası hukuk alanında önemli adımlar atmıştır. Bunların başında 1948 yılında kabul edilen BM Evrensel İnsan Hakları Beyannamesi gelmektedir. Batılı ülkeler bu bildirgenin varlığının ve hatta oluşturulmasının en önemli destekçileri olmuştur (Moyn, 2014). Ayrıca, Nürnberg ve Tokyo mahkemeleri, savaş suçları ve insanlığa karşı işlenen suçlarla ilgili uluslararası hukukun uygulanmasına yönelik ilk ciddi adımlardır.

Soğuk Savaş dönemi, Batı'nın insan hakları ve uluslararası hukuka ilişkin söylemlerinin ideolojik rekabetin bir parçası olarak şekillendiği bir dönemdir. Batılı devletler, özellikle de Amerika Birleşik

FULL TEXTS BOOK

Devletleri, Sovyetler Birliği'ne karşı insan hakları konularının savunuculuğunu yapmıştır (Hoffmann, 2011). Bu dönemde Batı'nın insan hakları söylemleri siyasi ve ideolojik çıkarlarla yakından ilişkiliydi ve kimi zaman bu çıkarları meşrulaştırmak için kullanılıyordu.

Soğuk Savaş'ın sona ermesiyle birlikte Batı'nın insan hakları ve uluslararası hukuka ilişkin söylemleri daha fazla ön plana çıkmıştır. 1990'larda Bosna, Ruanda ve Kosova'da yaşanan krizler Batı'nın insani müdahaleler ve uluslararası hukuk söylemleri konusundaki pozisyonunu test etmiştir. Bu müdahalelerle Batı, insan hakları ve uluslararası hukuka bağlılığını göstermiş gibi görünebilirdi, ancak aynı zamanda çatışan çıkarların kanıtı da çok önemliydi (Forsythe, 2012). Batı'nın insani yardım müdahaleleri, insan hakları ve uluslararası hukuka bağlılığının bir göstergesiydi; ancak çıkar çatışmalarının ana neden olduğu da açıktı (Forsythe, 2012).

Günümüzde, Batılı insan hakları ve uluslararası hukuk söylemleri küresel düzeyde hala önemli roller oynamaktadır. Bununla birlikte, uygulamada bu söylemler yaygın bir eleştiri konusudur. Şöyle ki, Batı'nın insan hakları ve uluslararası hukuka olan yükümlülüğünün, Batı'nın stratejik çıkarlarıyla çeliştiği durumlarda zayıfladığına dikkat çekilmektedir. Örneğin, Batı'nın Ukrayna'nın toprak bütünlüğü arayışını desteklemesi ve Rusya'ya yaptırım uygulaması, Batı'nın insan hakları ve uluslararası hukukun sadık bir destekçisi olmasıyla açıklanabilir (Menon & Rumer, 2015). Bununla birlikte, bu pozisyon aynı zamanda Batı'nın hayati stratejik çıkarlarının olduğu bir bölgede alınan bir pozisyon olarak görülmektedir. Sonuç olarak, Batı'nın bu konudaki söylemlerinin stratejik çıkarlarıyla ne derece uyumlu olduğu şüphelidir (Mearsheimer, 2014).

İsrail-Filistin çatışması açısından bakıldığında İsrail tarafından işgal edilen topraklardaki yerleşim politikaları ve insan hakları ihlalleri uluslararası hukuk üzerinde ciddi şüpheler yaratmaktadır (Chomsky, 2015). Bununla birlikte, Batılı devletlerin İsrail'e tepkisi Ukrayna-Rusya Savaşı'na kıyasla daha az şiddetli olmuştur. Bu da Batı'nın insan hakları ve uluslararası hukuka ilişkin söylemlerinin, stratejik çıkarlarla karşı karşıya kaldıklarında daha zayıf ve farklı hale geldiğini göstermektedir (Finkelstein, 2012).

Ukrayna-Rusya Savaşı Konusunda Batı'nın Tutumu

24 Şubat 2022 tarihinde Rusya Devlet Başkanı Vladimir Putin Ukrayna'da "özel askeri operasyon" ilan etti ve Ukrayna'ya karşı geniş çaplı bir askeri operasyon başlattı. Dünyada yeni bir şeylerin olduğu gerçeği, Batılı ülkelerle birlikte hızlı ve güçlü bir şekilde tepki veren uluslararası toplum için sürpriz oldu. Avrupa Birliği (AB), Amerika Birleşik Devletleri (ABD) ve NATO, Ukrayna'nın egemenliğini ve toprak bütünlüğünü savunmak için bir dizi diplomatik ve ekonomik önlem aldı.

Batı'nın Ukrayna meselesine tepkisi, Rusya'ya karşı kapsamlı ekonomik yaptırımların uygulanması, Ukrayna'ya askeri ve insani yardım sağlanması ve Rusya'nın diplomatik olarak izole edilmesi şeklinde olmuştur. ABD Başkanı Joe Biden Rusya'nın saldırganlığını şiddetle kınamış ve Ukrayna'ya olan desteğini de güçlü bir şekilde ifade etmiştir (Beyaz Saray, 2022).

Rusya'ya yönelik ekonomik yaptırımlar Batı'nın en güçlü tepkilerinden biri oldu. AB ve ABD, Rusya'nın finans, enerji ve savunma sektörlerine kapsamlı yaptırımlar uygulamıştır. Rus bankalarının uluslararası ödeme sistemlerine erişimi engellendi, Rus oligarkların mal varlıkları donduruldu ve Rusya'ya yüksek teknoloji ürünlerinin ihracatı yasaklandı (Avrupa Komisyonu, 2022). Bu yaptırımlar Rus ekonomisini ciddi şekilde etkilemeyi ve Rusya'nın uluslararası ticari ilişkilerini sınırlamayı amaçlıyordu.

Diplomatik cephede ise Rusya uluslararası örgütlerden ve forumlardan atıldı. Batılı ülkeler Birleşmiş Milletler Güvenlik Konseyi'nde Rusya'nın saldırgan eylemlerini kınayan kararlar aldılar ve Rusya'yı uluslararası alanda izole etmeye çalıştılar (UN, 2022).

Batı'nın Ukrayna'ya desteği farklı askeri ve insani yardımlar aracılığıyla da kendini göstermiştir. ABD ve AB'nin silah sistemleri moderndi ve ayrıca Ukrayna'ya mühimmat ve askeri teçhizat sağlandı. Bu yardımlar sayesinde Ukrayna savunma kapasitesini arttırmış ve Rus saldırılarına karşı koyabilmiştir (NATO, 2022). Bunun yanı sıra, Batılı ülkeler savaşta zarar gören sivillere destek olmak amacıyla Ukrayna'ya insani yardım göndermiştir.

FULL TEXTS BOOK

Batı'nın Ukrayna ve Rusya'daki savaşa verdiği tepkiler medyada geniş yer buldu ve kamuoyunda büyük yankı uyandırdı. Batı medyası savaşın başlamasından bu yana Ukrayna'da yaşananları yakından takip etmiş ve kamuoyunun bu konudaki görüşlerini dünyaya taşımıştır. Medyanın işbirliği, Batılı hükümetlerin Ukrayna'ya desteğinin güçlenmesinde ve kamuoyu desteğinin sağlanmasında önemli bir etken olmuştur (BBC, 2022).

Son zamanlarda araştırmacılar Batı'nın Ukrayna'ya verdiği desteğin stratejik ve jeopolitik hesaplarla ne kadar uyumlu olduğunu bulmaya çalışmışlardır. Örneğin Menon ve Rumer'in (2015) makalesi, Batı'nın Ukrayna'ya verdiği desteğin temelde Rusya'nın bölgedeki etkisini sınırlandırmaya yönelik olduğunu ve bu desteğin altında bazı stratejik çıkarların da yattığını vurgulaması açısından oldukça önemlidir.

Batı'nın Ukrayna-Rusya savaşına verdiği tepki, Batı'nın uluslararası hukuka ve egemenlik ilkesine olan bağlılığının bir yansımasıydı. Aynı zamanda Batı'nın stratejik çıkarlarının da bir tezahürüydü. Ukrayna'nın ayrılmasını sağlamak, Rusya'nın Avrupa'ya hakim olmamasını sağlamak ve NATO'nun doğu kanadını güçlendirmek gibi stratejik nedenler, Batı'nın Ukrayna'yı desteklemesinin ana faktörleridir.

İsrail-Filistin çatışması, Batı'nın uluslararası ilişkilerdeki tutum ve politikalarını anlamak için kritik bir vakadır. Bu çatışma yıllar boyunca tüm dünyayı endişelendiren en önemli uluslararası meselelerden biri olmuştur. Başta ABD olmak üzere Batılı ülkeler, bu çatışmanın en önemli aktörleri olarak hareket etmiş ve İsrail'e verdikleri destek nedeniyle en çok tartışılan ülkeler olmuşlardır (Gordon, 2020).

İsrail'in 7 Ekim 2023'te Gazze Şeridi'ne karşı başlattığı savaş tüm dünyada büyük tepkilere neden oldu. İsrail, Hamas'ın roket saldırılarına karşı kendini savunmaya çalıştığını itiraf etmiştir. Bu operasyonlar çok sayıda sivilin hayatını kaybetmesine ve büyük bir insani krize yol açmıştır (Al Jazeera, 2023). Farklı Batılı ülkeler bu olaylara farklı tepkiler göstermiştir.

7 Ekim 2023 saldırılarının ardından ABD, İsrail'in eylemlerini desteklemiş ve İsrail'in kendini koruma hakkı olduğunu yinelemiştir. Başkan Joe Biden, ABD'nin İsrail'in yanında duracağını ve ülkeye askeri ve diplomatik yardım sağlayacağını kesin bir dille ifade etmiştir. ABD, BM Güvenlik Konseyi'nde İsrail'i eleştiren kararları veto etmiş ve ülkeyi desteklemeye devam etmiştir (Beyaz Saray, 2023). Avrupa Birliği, 7 Ekim 2023'ten sonraki olaylara ilişkin tutumunda daha tarafsız olmak için çaba sarf etmiştir. AB, İsrail'in meşru müdafaa hakkını tanımış ancak aynı zamanda aşırı güç kullanımını ve sivillerin öldürülmesini de kınamıştır. AB, İsrail ve Filistinli grupları çatışmaları durdurmaya ve çatışmaya barışçıl bir çözüm bulmaya çağırdı. Ancak bu eleştiriler somut yaptırım ve baskılarla desteklenmediği için etkisiz kalmıştır (Avrupa Komisyonu, 2023).

Batı'nın İsrail-Filistin çatışmasına yönelik tutumu, Ukrayna-Rusya Savaşı'ndaki davranışlarıyla karşılaştırıldığında, Batı'nın çifte standardını oldukça açık bir şekilde ortaya koymaktadır. İsrail, 7 Ekim 2023'ten bu yana Gazze'de uluslararası hukuka uymaksızın askeri operasyonlar yürütmektedir (HRW, 2023). Ancak Batılı devletlerin İsrail'e yönelik tepkileri Ukrayna-Rusya Savaşı'nda olduğu kadar katı ve sürekli olmamıştır. Bu durum, Batılı insan hakları ve uluslararası hukuk söylemlerinin stratejik çıkarlarla çatıştığında zayıfladığını göstermektedir (Finkelstein, 2022).

Batı'nın İsrail-Filistin anlaşmazlığına ilişkin tutumu, son gelişmeler nedeniyle yeniden tartışma gündemine gelmiştir. İnsan hakları örgütleri ve bazı araştırmacılar, Batı'nın İsrail'i desteklemesini uluslararası hukuk ve insan hakları standartlarına aykırı olduğu gerekçesiyle kınamıştır (B'Tselem, 2023). Bu eleştirilerin temel noktası, Batı'nın stratejik ve siyasi çıkarlarının insan hakları ve adalet söylemlerinin önüne geçmesidir.

Batı, İsrail'in Gazze'deki operasyonlarını uluslararası hukukun ihlali olarak algılasa da İsrail'e yönelik yaptırım ve baskılar çoğunlukla sınırlı kalmaktadır. Bu durum, Batı'nın stratejik ve siyasi çıkarlarının insan hakları ve uluslararası hukuk söylemini gölgede bıraktığını göstermektedir (Qumsiyeh, 2020).

Batı'nın İsrail-Filistin mücadelesine bakışı, insan hakları ve uluslararası hukuk söyleminin temel ilkesiyle çelişir görünmektedir. Batı'nın İsrail'e verdiği sarsılmaz destek, hem bölgesel hem de küresel politikaların belirlenmesinde önemli bir etken teşkil etmektedir. Öte yandan, bu tür bir destek Batı'nın

FULL TEXTS BOOK

insan hakları ve adalet söylemleri açısından tehlikeli ve uluslararası toplumda var olan güvensizliğin başlıca nedenidir (Abunimah, 2022).

İnsan hakları örgütleri ABD'nin İsrail'e verdiği desteği çifte standart ve tutarsızlıklarla dolu olarak nitelendirmiştir. İnsan Hakları İzleme Örgütü (2023), ABD'nin İsrail'in uluslararası hukuk ihlallerine seyirci kalamayacağını ve bunun da uluslararası hukukun korunmasını etkilediğini gündeme getirmiştir. Bu eleştiriler, ABD'nin stratejik çıkarlarının insan hakları ve uluslararası hukuk söylemini gölgede bıraktığını açıkça ortaya koymaktadır.

SONUÇ VE TARTIŞMA

7 Ekim 2023 tarihinde İsrail'in Gazze Şeridi'ne yönelik başlattığı geniş çaplı askeri operasyonlar, Batılı ülkelerin uluslararası ilişkilerdeki tutumlarının yeniden gözden geçirilmesine neden olmuştur. İsrail'in askeri operasyonları sırasında Gazze'de çok sayıda sivilin hayatını kaybetmesi ve büyük bir insani krizin yaşanması Batılı devletlerin tepkisini çekmiştir. Yine de bu tepkiler çoğunlukla retorikle sınırlı kaldı ve gerçek bir ceza hala uygulanmadı.

Batı'nın insan hakları ve uluslararası hukuka ilişkin söylemi Gazze'deki gelişmeler söz konusu olduğunda tekdüze ve çifte standartlı olmuştur. Batılı devletler İsrail'in meşru müdafaa hakkını vurgulamakta ve orantısız güç kullanımını ve sivil kayıpları eleştirmekten kaçınmaktadır. Bu durum, Batı'nın stratejik çıkarlarının insan hakları ve uluslararası hukuk söyleminin üzerinde olduğunu yansıtmaktadır.

Batı'nın Gazze'deki duruma yaklaşımı, insan hakları ve uluslararası hukuk söyleminin çizgileriyle örtüşmemektedir. Batılı devletler İsrail'in haklarından ve meşru müdafaasından bahsetmiş olsalar da, aslında sivil kayıpları kınamamış ya da çok fazla güç kullanmamış ve herhangi bir pratik önlem almamışlardır. Batı'nın bu tutumu bölgenin uluslararası gücüne zarar vermektedir. Batı, önümüzdeki günlerde insan hakları ve uluslararası hukuka ilişkin açıklamalarında daha yeknesak bir duruş sergilemelidir. İsrail'in Gazze'deki tutumuna karşı daha dengeli ve adil bir tutum takınılması, Batı'nın uluslararası hukuka ve insan haklarının korunmasına verdiği desteğin bir kanıtı olacaktır.

Batılı devletler uluslararası hukukun korunması ve uygulanması yönünde daha fazla adım atmalıdır. Bu tür eylemlerin uluslararası hukuk ışığında analiz edilmesi ve gerekirse yaptırım uygulanması esastır. Bu, uluslararası hukuk normlarının evrenselliğinin güçlü bir göstergesi olacaktır. Batılı devletler ve Müslüman ülkeler İsrail ve Filistin arasında barış sürecinin yeniden başlatılmasında öncü olmalıdır. İki devletli bir çözümün hayata geçirilmesi için her iki tarafın da iletişim kurmasına acil ihtiyaç vardır. Gazze'deki insani krizi çözmek ve zarar gören altyapıyı yeniden inşa etmek için Batılı devletler insani yardım ve yeniden inşa projelerine daha fazla destek vermelidir. Bu yardım sadece mevcut ihtiyaçların karşılanmasına yardımcı olmakla kalmayacak, aynı zamanda Gazze'nin uzun vadeli kalkınmasında da kritik bir rol oynayacaktır.

Batı'nın Ukrayna ve Gazze vakalarına verdiği tepkiler, uluslararası toplumda çifte standart iddialarına yol açmıştır. İnsan hakları örgütleri ve bazı devletler, Batı'nın Ukrayna'ya verdiği katı desteğin ve Rusya'ya karşı uyguladığı sert yaptırımların Gazze'deki durumla karşılaştırıldığında açık bir çifte standart olduğunu gözlemlemiştir. Ukrayna-Rusya Savaşı ve Gazze'deki durum, Batı'nın uluslararası ilişkilerde gözlemlenen ikiyüzlülüğü ve karakteriyle birebir örtüşmektedir. Ukrayna-Rusya Savaşı, 24 Şubat 2022 tarihinde başlamış ve Batı'nın Rusya'ya karşı çok ciddi ekonomik yaptırımlar uygulamasına ve Ukrayna'ya oldukça kapsamlı askeri ve insani yardım sağlamasına yol açmıştır. Bununla birlikte, Batı'nın 7 Ekim 2023'ten sonra Gazze'deki olaylara verdiği tepki aynı kararlılık ve sertlikte olmamıştır. Batılı devletler, İsrail'in Gazze'ye yönelik geniş çaplı askeri operasyonlarına ve bu operasyonlardaki yüksek sayıdaki sivil kayıplara yönelik eleştirilerinde yeterince güçlü olmamıştır. Amerika Birleşik Devletleri ve Avrupa Birliği İsrail'in meşru müdafaa hakkını vurgulamış, ancak aşırı güç kullanımını ve sivil kayıpları güçlü bir şekilde kınamamıştır. Ayrıca belirli yaptırımlar uygulamaktan da kaçınmışlardır

ABSTRACT

In recent years, studies on snacks with high nutritional value have gained popularity. Medium moisture products and especially dried tomatoes are among the products that attract the attention of consumers. Fig (*Ficus carica L*), one of the aromatic plants, has attracted the attention in the field of health due to its biological activities. Bay fruit and leaves also have been known and used since ancient times until today. It is widely used in our country and also has an important place in our foreign trade. Bay leaf (Laurus nobilis L) is used in the food industry to make spices or sweeteners. Dried leaves are used especially in food canning, in the proper storage of olives, and in the packaging of various fruits such as dates, plums, grapes and so on to have fresher and more delicious tastes.

In this research, it was aimed to make a functional snack food with these extracts. Ultrasonic extraction was used. The effects of addition of bay and fig leaves extract (800 ppm), rich in phenolic and flavonoid contents, to sun-dried tomato samples, which were made medium humidity with the desired properties (SO<100 ppm; 2.34% salt) by using the immersion method, on the quality parameters were investigated during production and 4-month storage.

At the end of the production, no statistically significant change was observed in the water activity, moisture, pH, titrimetric acid, salt and water-soluble dry matter contents and it was determined that the raw material properties were preserved after the application. Phenolic and flavonoid contents were protected better compared to control group during storage. Redness, which is important for tomatoes in the final product was found to be higher in the group with bay leaf extract added during storage. When the textural properties were examined, it was determined that the chewiness and durability did not change after 4 months of storage. In the sensory analysis results, it was determined that the groups enriched with bay and fig extracts were more liked compared to the control sample group. As a result, functional product enriched with valuable components for health was produced.

Key words: Functional snacks, intermadiate moisture tomato, bay, fig leaves, quality, fenolics.

INTRODUCTION

The increasing consumer demand for healthy, convenient, and natural foods has led to the development of food products with higher levels of bioactive compounds. Therefore, food technology experts are focusing on developing food products with higher phenolic content and maintaining these compounds at maximum levels during processing (Purkayastha et al., 2013). From this perspective, the use of spices and aromatic plants as preservatives in foods has become widespread due to their natural antioxidant properties and antimicrobial characteristics. The antioxidant and antimicrobial properties of spices and plants are attributed to the phytochemicals they contain, such as vitamins, flavonoids, terpenoids, and

FULL TEXTS BOOK

carotenoids (Gök, 2006). Phenolic-based compounds found in plants can be extracted through various methods and used as natural antioxidants (Bozkurt, 2006b). The extraction process is applied to ensure the highest yield of substances with the best quality in terms of the concentration of target compounds and the antioxidant strength of the extracts. Typically, plant material is cleaned, dried, and ground into a fine powder, followed by solid-liquid extraction. Different solvents are used for the extraction process either separately or in combination (Biswas et al., 2012). For instance, the use of various aromatic plant extracts such as bay leaf, basil, thyme, clove, ginger, and mint is increasing day by day.

The largest group in the chemical structure of the leaves and fruits of bay laurel (*Laurus nobilis L.*) consists of terpenes. Terpenes are known as a broad and diverse class of hydrocarbons. The derivatives formed by the oxidation of terpenes are substances with aromatic, flavorful, and therapeutic properties. Additionally, they have gained significant attention in recent years due to their content of alcohols, aldehydes, esters, phenols, and compounds containing nitrogen and sulfur (Avcı, 2019). A study investigating the antioxidant activities of Turkish bay laurel populations found that bay leaves have high phenolic capacities, making them a good source of antioxidants. Consequently, they can be used as natural antioxidants in cosmetics, pharmaceuticals, food, and chemical industries, replacing synthetic antioxidants (Avcı, 2019). Furthermore, they are used to prevent infestation in foods such as lentils, chickpeas, and dried beans. Dried leaves are especially utilized in the preservation of animal food cans, the proper storage of olives, and the packaging of dried fruits such as dates, plums, and grapes to keep them fresher and more flavorful (Özer et al., 2019).

Similarly, the fig (Ficus carica L), an aromatic plant, has attracted attention in the health field due to its biological activities (Yüksel et al., 2020). Not only the fruit but also the leaves and latex (white sap) of the fig are used for food and medicinal purposes. In developing countries, they are particularly used alongside medicines to treat traditional diseases. Additionally, fig leaves have been included in the therapeutic guides of herbal medicines in Spanish and British pharmacology (Yüksel et al., 2020).

Among dried products, 'semi-dried' or 'intermediate moisture' products, which have less difference in texture and taste compared to fresh products, have become increasingly important in consumer preferences recently. Semi-dried fruits are defined by the Food and Agriculture Organization (FAO) as having more than 25% moisture content and can be consumed without rehydration. Recently, the most focused-on intermediate moisture vegetable is the tomato. It is also the most commercially sold product today (Seçkin and Taşeri, 2015).

Sun-dried tomato exports have held the top position among Turkey's dried vegetable export items for many years, both in terms of quantity and sales value. Among the vegetables grown in Turkey, tomatoes had the highest production in 2020, with a yield of 13.2 million tons. As a crucial food for human consumption, tomatoes accounted for 42% of vegetable production in 2020, making them the leading crop in vegetable farming (TEPGE, 2021). However, tomatoes spoil very quickly when fresh, leading to significant waste and loss during peak harvest periods. Preventing these losses and waste is crucial, especially when there are subsequent imbalances in supply and demand outside the harvest season. The growing market opportunities have necessitated making tomatoes more accessible, leading to the development of technologies for preserving and selling the product, particularly in dried form (Purkayastha et al., 2013).

Taking all of this into consideration, the aim is to produce a new functional snack product by enriching intermediate-moisture tomatoes with extracts from fig and bay leaves, which are rich in phenolics and flavonoids. For this purpose, valuable components were first extracted from fig and bay leaves. The intermediate-moisture tomatoes were then treated with these extracts using the dipping method, packaged, and stored for 4 months. During the storage period, physicochemical (color, pH, acidity, water-soluble dry matter, moisture, water activity, salt, total flavonoid and phenolic content), sensory,

FULL TEXTS BOOK

and textural analyses were conducted to examine the effects of the extracts on the intermediate-moisture tomatoes.

MATERIALS AND METHODS

Raw Material

Natural dried tomatoes with a salt content of 2.34% and a sulfur content below 100 ppm were obtained from Silare Phoenix Domestic and Foreign Trade Company, which operates in Torbalı-İzmir, TURKEY. The tomatoes were brought to the Fruit and Vegetable Processing Pilot Plant at the Department of Food Engineering at Ege University, and stored at 4°C under refrigeration conditions until processing.

All reagents used were analytical grade and Folin-Ciocalteu reagent, silver nitrate, sodium carbonate (Na_2CO_3), sodium hydroxide (NaOH), methanol, potassium acetate, aluminum chloride, sodium nitrat were supplied from Sigma-Aldrich (St. Louis, MO, USA).

Methods

Extraction Process

Fresh fig and bay laurel leaves were collected and shade-dried at 23±2°C for 7 days (Yüksel et al., 2020). Dried fig and bay laurel leaves were ground using a grinder (Sinbo-SCM 2934, Turkey). Subsequently, 1 gram of the dried and ground leaves was added to 50 ml of distilled water for the extraction process. The extraction process was carried out using an Ultrasonic water bath (Everest, Turkey) at 30°C for 30 minutes. After extraction, centrifugation was performed at 4°C for 15 minutes at 4500 rpm using a branded centrifuge to separate the extract. The desired extract was obtained through filtration. Two different extracts were prepared with fig and bay laurel leaves: 400 ppm and 800 ppm concentrations. Preliminary trials were conducted at three different durations (30, 60, 120 minutes) to optimize the extraction process.

Treatment with Extracts

To enrich medium-moisture tomatoes with phenolic and flavonoid compounds, the medium-moisture tomato samples were divided into three groups: Control Group (C) without any extract treatment. Fig Leaf Extract Group (FE) and Bay Leaf Extract Group (BE). The addition of extracts involved soaking the medium-moisture tomatoes in cooling water containing 800 ppm of fig and bay leaf extracts for 30 minutes. Tap water was used as the cooling water, and the temperature of the solution during soaking was maintained at 20±2°C. After 30 minutes in the cooling water, excess moisture was removed from the samples, which were then placed in crates and incubated in a climate chamber for 72 hours. Subsequently, the samples were stored under refrigeration conditions at 4°C for 4 months.

Methods of Analysis

Each production batch was conducted with 2 replicates, and the analyses were performed in 3 parallels.

Physical and Chemical Analyses

Color

To determine the color of dried tomatoes, a Konica Minolta Chroma Meter (CR-400, Japan) color measurement device was used. According to Vujovic (2015), CIE L*, a*, and b* values were measured using 15 tomatoes from each batch. These values are important quality parameters for tomato products. The L* value in the CIE L*a*b* color coordinate system represents brightness, ranging from 0 to 100. The a* and b* values indicate color characteristics: a* represents redness when positive and greenness when negative, while b* represents yellowness when positive and blueness when negative (Anonim, 1996; 1996b).

pH

A 10 g sample of dried tomatoes was mixed with 90 ml of distilled water using an IKA Ultra Turrax (T25, Germany) until being homogeneous. The pH value was then measured by immersing a calibrated pH meter (Thermo Scientific Orion 3 Star, UK) into the prepared homogeneous mixture (AOAC, 1990).

FULL TEXTS BOOK

Titration for Titratable Acidity

A 10 g sample of dried tomatoes was mixed with 90 ml of distilled water using an IKA Ultra Turrax (T25, Germany) until being homogeneous. The prepared homogeneous mixture was then filtered, and 10 ml of the filtrate was titrated with 0.1 N NaOH solution using phenolphthalein indicator until a persistent pink color was obtained. The amount of 0.1 N NaOH solution used in titration represented the total acidity value in 100 g of dried tomatoes was calculated (AOAC, 1990).

Soluble Solids Content (°Brix)

The soluble solids content was measured as °Brix using a digital refractometer (Models HI 96801, 0-85 °Brix, Hanna) (Cemeroğlu 2007).

Moisture Content

Moisture content was determined using an infrared moisture analyzer (MOC63u, Shimadzu Inc., Japan). 5-gram sample was heated at 105°C, and the moisture content was calculated as a percentage AOAC (1990).

Water Activity

Water activity values were determined using a water activity measurement device (Testo AG 400, Germany) with a sensitivity of ±0.001.

Salt Content

To detect chloride ions, dried samples were taken and ground in a blender. A 10 g sample was taken and diluted to 250 ml with distilled water, mixed in the blender, and filtered through coarse filter paper. A 5 ml aliquot of the filtrate was taken and titrated with 0.1 N silver nitrate solution using a 5% potassium chromate indicator. Titration was stopped when the color changed from yellow to reddish-orange. Calculations were done according to Equation 1 (Cemeroğlu, 2007):

$$\% \text{ Salt (g)} = (0.00585 \times V) \times m / SF \times 100 \quad \text{Eq. 1.}$$

Where: V = Volume of $AgNO_3$ solution used (in mL),m = Mass of the sample taken (in g), SF = Dilution factor

Total Flavonoid Content

Total flavonoid content was determined using the aluminum chloride method. One milliliter of methanol extract was added to a test tube, followed by 1.5 ml of pure methanol, 0.1 ml of 10% aluminum chloride, 0.1 ml of potassium acetate solution, and 2.8 ml of distilled water. The mixture was thoroughly mixed and the absorbance was measured at 415 nm using a spectrophotometer (UV-1700, Shimadzu, Kyoto, Japan). The total flavonoid content was calculated equivalent to quercetin based on a standard curve drawn using a 500 ppm 100 ml stock solution of quercetin (Ebrahimzadeh et al., 2008).

Total Phenolic Content

Total phenolic content was determined using the Folin-Ciocalteu method. Methanolic extract (0.5 mL) was taken into a test tube, followed by the addition of 5 ml of 10% (w/v) Folin–Ciocalteu reagent. After 5 minutes, 4 mL of saturated sodium carbonate was added to the mixture. The solution was allowed to stand in the dark for 15 minutes. A calibration curve for gallic acid was prepared using stock solutions in the range of 50-250 ppm, and the total phenolic content was calculated as gallic acid equivalents (Vasco et al., 2008).

Sensory Analysis

Sensory analysis was evaluated by 6 panelists at specified intervals. Samples were randomly coded with three-digit numbers and presented to panelists on white plates at room temperature. Evaluation criteria included color, texture, aroma, taste, and overall liking (1: poor, 9: excellent) to assess sensory qualities (Altuğ and Elmacı, 2005).

Texture Analysis

Texture analysis was conducted to determine factors such as hardness, elasticity, stickiness, gumminess, chewiness, and resilience in the product. Samples were analyzed tı mneasure hardness using a texture

FULL TEXTS BOOK

analysis device (TA.XT Plus, UK) equipped with a 2 mm diameter cylindrical probe, operating at a speed of 5 mm/s with a penetration distance of 7 mm (Mosayabi et al., 2018).

Statistical Analysis

Medium moisture tomatoes (including the control group and all other groups) were stored for 4 months, and physicochemical analyses were conducted at 0, 2, and 4 months. Analysis results were subjected to analysis of variance (ANOVA) with a 95% confidence interval using the SPSS statistical softwarepackage (SPSS, 2011, Version 20.0 for Windows; SPSS Inc., Chicago, Ill). Duncan's multiple range test was applied.

RESULTS AND DISCUSSION

After production and during storage, two different color measurements were provided for the samples: inner and outer parts. The color values of the samples' inner parts measured during storage are presented in Table 1. Medium moisture tomatoes stored at 4°C showed higher brightness values initially in the L* values of the FE (31.95) and BE (35.71) groups compared to the control group (37.27). No statistically significant changes were observed in color values during the storage period ($p>0.05$).

The color values of the samples' outer parts are presented in also in the Table 1. In the 1st month, when looking at the L* values of the outer parts, it was determined that the control group again had the highest brightness value. During the storage process, the brightness value of the samples' outer parts decreased ($p\leq0.05$). The greatest decrease was observed in the BE group. This is thought to be due to the terpenes present in the bay plant, which can affect brightness through oxidation. Baysal et al. (2009) found in their study that samples coatedwith a film containing ascorbic acid could reduce brightness due to the oxidation of ascorbic acid.

The initial a* values after the medium moisture and aromatic plant extracts were added were highest in the control group for both inner and outer parts. The lower redness value (a* value) in the groups with fig and bay leaves compared to the control group is thought to be due to the color of the extracted plants themselves. No significant change was observed in the a* values of the samples during the storage period ($p>0.05$). b* values representing the yellow color, an increase was observed in the FE group during storage, but no statistically significant difference was found in the BE group in the 2nd month ($p>0.05$), while a statistically significant decrease was detected at the end of the 4th month ($p\leq0.05$). Similar changes were found in literature for example, Giovanelli et al. (2002), dried tomato purees with air up to the same moisture content (medium moisture 23% and dry 9%). Both samples were stored for 5 months at 4, 20, and 37°C. Initially, medium-moisture and dry samples showed similar antioxidant activity, while lycopene remained the same in both, and ascorbic acid decreased in both. During storage, differences emerged between medium-moisture and dry products. Medium-moisture products were found to be more sensitive to decreases in lycopene, rutin, and antioxidants, as well as non-enzymatic browning compared to dry products. Changes in color indices were more pronounced at higher temperatures, with the greatest degradation of lycopene and antioxidant activity observed in products stored at 4°C, resulting in color changes. Toor and Savage (2019), studied three different tomato varieties in a commercial greenhouse in New Zealand, drying tomatoes half-dried at 42°C in a hydroponic environment. Semi-dried tomatoes were found to have low HMF values and were darker and had higher a*/b* values compared to fresh tomatoes. In a study examining the effect of cinnamon and clove essential oils on sun-dried apricots, conducted by Levent (2021), all samples showed a decrease in L*, a*, and b* values during storage.

The samples from the control group exhibited a pH value of 4.47 in the 0th month analysis, statistically different from the FE and BE groups ($p\leq0.05$). There was no significant difference observed in the pH changes of the samples over the months ($p> 0.05$). Similarly, Baysal et al. (2009) found no significant difference in pH values between tomato samples treated to high humidity and coated with edible corn

FULL TEXTS BOOK

zein. Ergün et al. (2020), observed no statistically significant changes in pH values when examining tomatoes dried with different salts.

Post-production acidity values were found to be 0.014, 0.221, and 0.007 for the C, FE, and BE groups, respectively. While acidity increased in the control samples during storage, a decrease was observed in the FE group, an increase at the 2nd month followed by a decrease at the 4th month in the BE group. These changes in values are expected to result from the release of free acids due to the breakdown of some compounds during storage. Additionally, previous studies support these findings. For instance, in a study by Levent (2011), the antimicrobial effects of cinnamon and clove essential oils, known as natural preservatives, were investigated on semi-dried apricots with an average moisture content of 21%, which were rehydrated to achieve medium moisture levels. A consistent decrease in moisture and pH values and a regular increase in titration acidity were observed during storage. Veillet et al. (2009), produced a tomato product from smoked and semi-dried tomatoes with a moisture content of 20%. While pH values were similar between fresh and new products, titratable acidity was higher in the new products compared to fresh ones, particularly in terms of citric acid.

The water-soluble dry matter contents of the samples were found to be 51.00±0.00 for the control, 51.50±0.54 for FE, and 47.50±2.588 for BE, showing a statistically significant difference between the BE group and the other groups ($p \leq 0.05$). Significant increases wereobserved at the end of the 4th month ($p \leq 0.05$). It is believed that this difference is due to the extract contents, and the consistent level of this value throughout storage is considered a positive outcome for product quality.

The moisture values for the control, FE, and BE groups were measured as 39.46±1.62, 37.81±3.04, and 38.761±1.40%, respectively at post-production. No statistically significant change was observed in moisture values during storage, despite increases at the 4th month ($p > 0.05$). The stability of moisture levels indicates a delay in microbial spoilage and protection against potential mold formation. Similarly, Vujovic (2015) examined the changes in quality characteristics during storage with different sodium chloride and potassium chloride ratios. They found that the moisture content of dried tomatoes subjected to different salt treatments and stored for 10 months determined statistically significant differences in the first 4 months, but significant increases were observed from the 6th month onwards.

The water activity values of the samples were 0.82±0.03 for C, 0.82±0.00 for FE, and 0.80±0.01 for BE at the 0th month. Initial water activity values did not change due to the addition of aromatic extracts, and statistically insignificant increases were observed during storage ($p > 0.05$), with water activity values ranging between 0.80 and 0.84. Şahin et al. (2010) compared different methods for tomato drying and found that pre-treated dried samples had lower water activity values compared to untreated samples.

Salt (NaCl) is used to slow down spoilage and extend the shelf life of tomatoes before drying. It was determined that the salt content of the control sample was lower compared to samples with added fig and laurel extracts. Generally, an increase in salt content of the samples was observed during storage.

When examining the changes in phenolic compound contents of the samples over months, it was observed that phenolic levels decreased in the control group samples, while samples with added fig and laurel leaf extracts maintained their phenolic capacities during storage. Kurozawa et al. (2014) suggested in their study that the degradation of phenolic compounds could be linked to polyphenol oxidase enzymes, which may have an association with thermal stability. Additionally, they mentioned that a decrease in water activity would lead to a reduction in molecular diffusion, thereby preventing chemical reactions such as oxidation. Oxidation reactions contribute to the degradation of phenols (Terefe et al., 2009). The changes in phenolic compounds during storage are believed to be related to water activity.

The changes in flavonoid contents of the samples after converting them to intermediate moisture and adding aromatic extracts were changed as expected. Initially, the groups with added bay and fig leaf extracts showed higher flavonoid contents compared to the control group. Over the storage period, the phenolic contents of the control group samples gradually decreased. However, the samples with added fig and bay leaf extracts showed a rapid increase in flavonoid levels at the 2nd month and were found

FULL TEXTS BOOK

to be maintained at the 4th month of storage. Thermal processes induce changes in flavonoid structures, especially in the tendency of glycoside forms to convert to aglycone forms, affecting the activity and bioavailability of flavonoids (Roy et al., 2007). These values have either increased or been maintained throughout storage due to extracts enriched with these components. Supporting the decrease observed in not enriched samples, Toor and Savage (2019) dried tomatoes in a hydroponic environment at 42°C in a commercial greenhouse in New Zealand. Total phenolic contents were lower than in fresh tomatoes, and reductions in total flavonoid and lycopene levels were observed in semi-dried tomatoes compared to fresh ones. The ascorbic acid value also decreased after drying, and the total antioxidant value was lower than in fresh tomatoes. Veillet et al. (2009) found that the total phenolic content in semi-dried products with a final moisture content of 20% at 40°C was lower than in fresh products.

Hardness values are an important criterion for tomatoes. Hardness is defined as the maximum force applied to compress the sample and can also be described as the resistance of the food to any external force. No significant difference was observed in the hardness values of the obtained samples ($p>0.05$). This is thought to be due to the consistent moisture content. Since the moisture content did not change, the textural properties were not compromised. Gök (2006), reported that the hardness values of sucuk (a type of sausage) increased during storage due to moisture loss. After 30 days of storage, the hardness values of the samples increased to 7.959-8.499 kg, and the increase in hardness continued on the 60th and 90th days of storage, reaching 12.825-13.080 kg by the end of storage. Similarly, Pürçüklü (2021) found in a study where different concentrations of laurel leaf extract were added to fermented sucuk that the type of sample did not have a significant effect on hardness values during storage. They suggested that the increase in hardness values during storage was due to moisture loss and drying of the samples. In this study, the absence of moisture loss in tomato products during storage has also improved their textural properties.

Sensory analysis showed that, fig leaf extract attracted the attention of panelists. During storage the scores were decreased specially dor the color and taste but generally they prefer the FE group.

Conclusion

In this study, medium moisture tomato snacks enriched with bay leaf and fig leaf extracts were produced, and their quality attributes were compared with the control group after 0, 2, and 4 months of storage. When comparing the color values of the samples, the group enriched with bay leaf extract exhibited enhanced redness. The L* value, indicating brightness, decreased on the outer surfaces of the samples throughout the storage period, with the greatest decrease observed in the group enriched with bay leaf extract, likely due to the presence of terpenes in bay leaves. According to the findings, there were no significant changes in pH and titratable acidity levels in the groups enriched with fig and bay leaf extracts compared to the control group. It was observed that fig and bay leaf extracts preserved pH and titratable acidity levels. The application effects on hardness, elasticity, stickiness, chewiness, gumminess, and resilience were found to be statistically insignificant even after 4 months. Analysis of soluble solid content (°Brix), changes in water activity and moisture content showed no statistically significant changes in the enriched groups compared to the control group during storage. Results indicated that the salt content of the control group changed less compared to the other groups after 4 months of storage, with the lowest salt content found in the control group. However, these changes were statistically insignificant. Moreover, the changes in salt content were determined not to be perceptible from a consumer perspective. Samples from the control group showed a decrease in phenolic and flavonoid capacities during storage. However, groups enriched with fig and bay leaf extracts preserved their phenolic and flavonoid contents, likely due to the bioactive compounds present in fig and bay leaves. In conclusion, the development of products enriched with bioactive compounds such as phenolics and flavonoids using different aromatic plant extracts is considered effective in maintaining quality during storage.

ÖZET
Doğal reçine, genellikle iğne yapraklı ağaçlardan elde edilen, tarihi ve ekonomik değeri oldukça yüksek olan katma değerli bir orman ürünüdür. Türkiye'de 1950'li yıllardan bu yana doğal reçine üretimi için çeşitli girişimlerde bulunulduğu fakat ekonomik sebepler ve piyasa koşullarına uyum sağlanamaması nedeniyle zaman içinde üretimin azaldığı bilinmektedir. Bugün stratejik bir ürün olarak görülen doğal reçinenin endüstriyel ölçeklerde üretilmesi yeniden teşvik edilmektedir. Diğer taraftan, üretilen doğal reçinenin doğrudan kullanım alanları kısıtlıdır ve günümüz pazar koşullarında rekabet edebilmesi için doğal reçinenin fraksiyonlarına ayrılarak işlenmesi gerekmektedir. Bu nedenle hem kullanım yelpazesini genişletmek hem de ürünü standardize edebilmek için doğal reçinenin türevlendirilmesi önerilmektedir. Bu çalışmanın amacı, Kazdağları'nda bulunan kızılçam ormanlarından elde edilen doğal reçinenin endüstriyel olarak reçine türevlerine dönüştürülebilme potansiyelinin incelenmesidir. Bu kapsamda, bölgede bulunan pilot bir tesiste bütüncül fizibilite analizi yapılarak yaklaşımsal değerlendirmeler yapılmıştır. Ülkemizin reçine üretimine elverişli orman kaynaklarına sahip olduğu ve reçine türevlerinin üretilebilmesi için önünde teknik, örgütsel ve yasal fizibilite bakımından bir engel olmadığı görülmüştür. Diğer taraftan, doğal reçine türevleri alanında girişimci şahıs ve şirket sayısının az olması ve mevcut tesislerde ürün çeşitliliğin arttırılamaması sektörün başlıca sorunları olarak öne çıkmaktadır. Gelecekte bu alanda yapılacak çalışmalar ile Türkiye'de doğal reçine sektörünün gelişmesine yönelik önemli adımlar atılacağı düşünülmektedir.
Anahtar Kelimeler: doğal reçine, odun dışı orman ürünleri, kazdağları, teknik fizibilite, örgütsel fizibilite

ABSTRACT
Natural resin is a value-added forest product obtained from coniferous trees and it has a high historical and economic importance. It is known that various trials have been made to produce natural resin in Türkiye since the 1950s, but production amount has decreased over time due to economic reasons and inability to adapt to global market conditions. Today, natural resin is recognized as a strategic product and its production on industrial scales is being encouraged again. On the other hand, the direct use of natural resin is limited, and it must be fractionated to be competitive in today's market conditions. Therefore, derivatization of the natural resin is recommended both to widen the range of uses and to standardize the product. The aim of this study is to investigate the potential of natural resin obtained from Kazdağları forests to be converted into industrial resin derivatives. In this context, a comprehensive feasibility analysis was carried out based on approachable evaluation at a pilot plant in this region. It has been observed that Turkey has suitable forest resources for natural resin production and there is no

FULL TEXTS BOOK

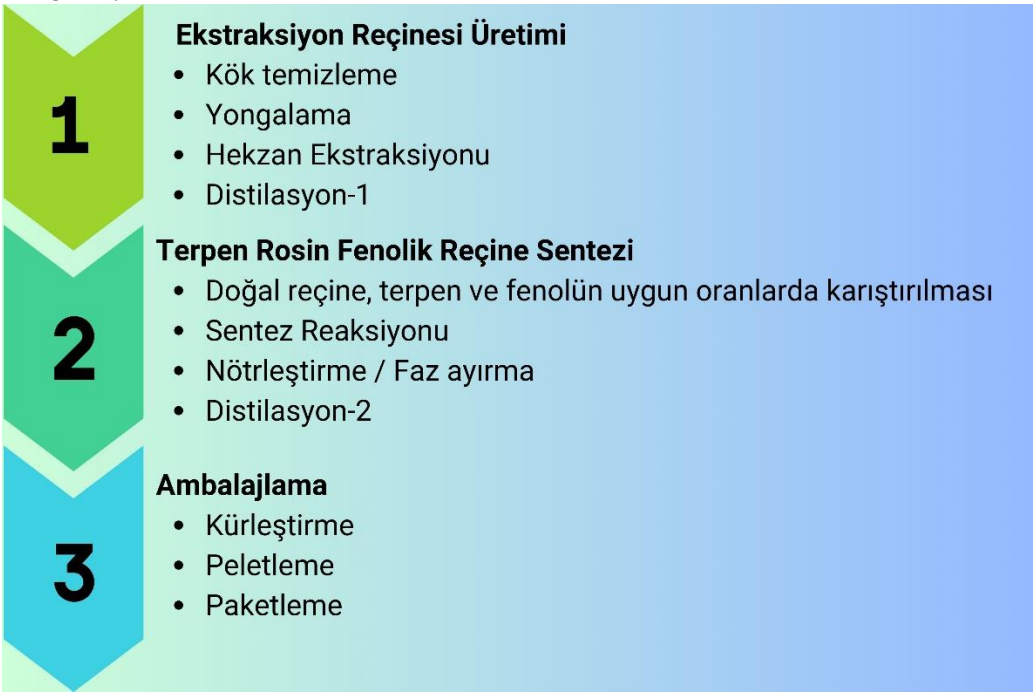
obstacle in terms of technical, organizational and legal feasibility to produce resin derivatives. On the other hand, the main problems of the sector are the low number of entrepreneurs in the field of natural resin derivatives and the inability to increase product variety in existing facilities. It is thought that future studies in this field will play an important role in the development of the natural resin sector in Türkiye.
Keywords: natural resin, non-wood forest products, Kazdağları, technical feasibility, organizational feasibility

GİRİŞ

Doğal reçine, genellikle iğne yapraklı ağaçlardan elde edilen, tarihi ve ekonomik değeri oldukça yüksek olan katma değerli bir orman ürünüdür (Deniz, 2002; Pekgözlü & Ceylan, 2018). Doğal reçinenin geçmişinin Hz. Nuh dönemine kadar dayandığı ve geminin suya değen kısımlarında çürümeyi ve su almayı önlemek amacıyla kullanıldığı rivayet edilmektedir (Güner, 2015). Günümüzde ise kâğıt endüstrisi, mürekkep, gıda, sağlık, otomotiv gibi birçok alanda doğal reçine kullanılmaktadır (Zinkel, 1975).

2017 yılında yayınlanan Reçine Eylem Planı'na göre Türkiye'de doğal reçinenin tarihi gelişimi dört döneme ayrılmıştır. Birinci dönemde, 1850-1874 yılları arasında plansız bir reçine üretimi yapılmıştır. 1874-1959 yılları arasında doğal reçine üretimi konusunda bir yönetmelik uygulamaya alınmıştır ancak bu dönemde üretim şeklinde henüz bir standardizasyon yapılamamıştır. İlerleyen yıllarda Orman Genel Müdürlüğü (OGM) tarafından "Reçine Talimatı" yayınlanmış ve böylece 1959 yılında planlı bir üretime geçilmiştir. İçinde bulunduğumuz dördüncü dönemde, doğal reçine "odun dışı orman ürünleri" kapsamında değerlendirilmekte ve OGM'nin ilgili yönetmelikleri doğrultusunda üretim süreçleri yürütülmektedir. Bununla birlikte, reçine üretimine elverişli ağaç türlerine sahip Kazdağları ormanları çevresinde, doğal reçine üretimi hususunda geçmiş yıllarda çeşitli özel girişimlerde bulunulduğu fakat zaman içinde fabrikaların kapandığı ve bu alandaki ihtiyacın ithalat yoluyla karşılandığı bilinmektedir (Angın, 2020). Kapanmanın sebepleri ürün geliştirme faaliyetlerinin olmaması, mevsime bağlı hammadde temin zorluğu ve bu nedenle sürekli üretim yapılamaması ve ithal ürünlerle fiyat rekabeti yapılamaması olarak sıralanabilir. Yıllar içinde ülkemizin kalkınma stratejileri değişmiş ve milli kaynakların etkin kullanılması hedefiyle çeşitli kararlar alınmıştır. Bugün stratejik bir ürün olarak kabul edilen doğal reçinenin endüstriyel olarak üretilmesi devlet tarafından yeniden desteklenmektedir (Reçine Eylem Planı, 2017). Diğer taraftan, üretilen doğal reçinenin doğrudan kullanım alanları kısıtlıdır ve günümüz pazar koşullarında rekabet edebilmesi için doğal reçinenin fraksiyonlarına ayrılarak işlenmesi gerekmektedir (Güle, 2019; Pathak & Dorle, 1990; Popova et al., 2021). Bu nedenle hem kullanım yelpazesini genişletmek hem de ürünü standardize edebilmek için doğal reçinenin türevlendirilmesi önerilmektedir (Angın, 2024). Türevlendirmenin ilk basamağı doğal reçineyi terebentin (uçucu faz) ve kolofana (sabit faz) ayırmaktır. Akabinde, nihai kullanım alanına göre seçilen modifikasyon kimyasalları ile her iki faz da türevlendirilmekte ve ekonomik değeri yüksek reçine türevi ürünler elde edilmektedir (Zinkel, 2018).

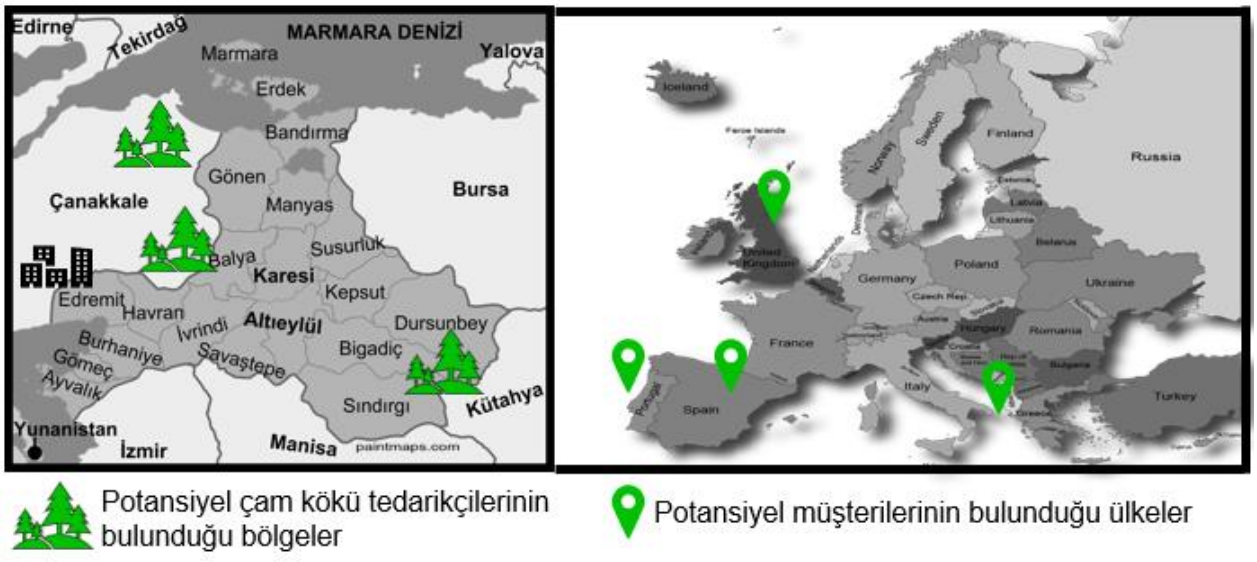
Bu çalışmanın amacı, Kazdağları'nda bulunan ve fenolik reçine türevi ürettiği varsayılan pilot bir tesiste yaklaşımsal fizibilite analizleri yaparak, doğal reçine türevlerinin üretiminin teknik, örgütsel ve yasal açıdan uygulanabilirliğini bütüncül olarak değerlendirmektir. Ülkemizde doğal reçine türevlerinin üretilmediği göz önünde bulundurulduğunda, bu konuda yapılan araştırmaların literatüre katkı sağlayacağı ve yerli üretimde farkındalık yaratacağı düşünülmektedir.



MATERYAL VE YÖNTEM

Fizibilite analizleri olası yatırım kararının isabetli olup olmadığı, kısa, orta ve uzun vadede sürdürülebilirliği açısından kritik önem arz etmektedir. Bu çalışmada, Kazdağları bölgesinde üretim yapan bir tesiste yaklaşımsal olarak teknik, örgütsel ve yasal fizibilite analizi yapabilmek için aşağıdaki sınırlar belirlenmiş ve varsayımlarda bulunulmuştur:

FULL TEXTS BOOK



- Doğal reçine, çam köklerinin uygun çözücü ekstraksiyonuyla üretilmektedir.
- Yılda yaklaşık 3000 ton reçineli çam kökü işlenmektedir.
- Tesiste nihai ürün olarak yalnızca Terpen Rosin Fenolik Reçine üretilmektedir.
- Üretilen terebentinin tamamı fenolik türevlendirme prosesinde kullanılmaktadır.
- Tesis üç vardiya çalışmaktadır.
- Çam kökleri yalnızca OGM'nin belirlediği alanlardan ve izin verilen miktarlarda çıkarılmaktadır.

Terpen Rosin Fenolik Reçine üretiminin genel proses akışı Şekil 1'de gösterilmiştir. Buna göre gereken ekipmanlar seçilmiştir ve yukarıda verilen üretim kapasitesi ve sektör araştırması baz alınarak ekipman sayısı ve iş gücü yaklaşımsal olarak belirlenmiştir.

Şekil 1. Terpen Rosin Fenolik Reçine üretimi proses akış şeması

Tesisin Kazdağları civarında reçineli çam kökü tedarik edebileceği potansiyel bölgeler ve olası müşterilerin konumları Şekil 2'de işaretlenmiştir.

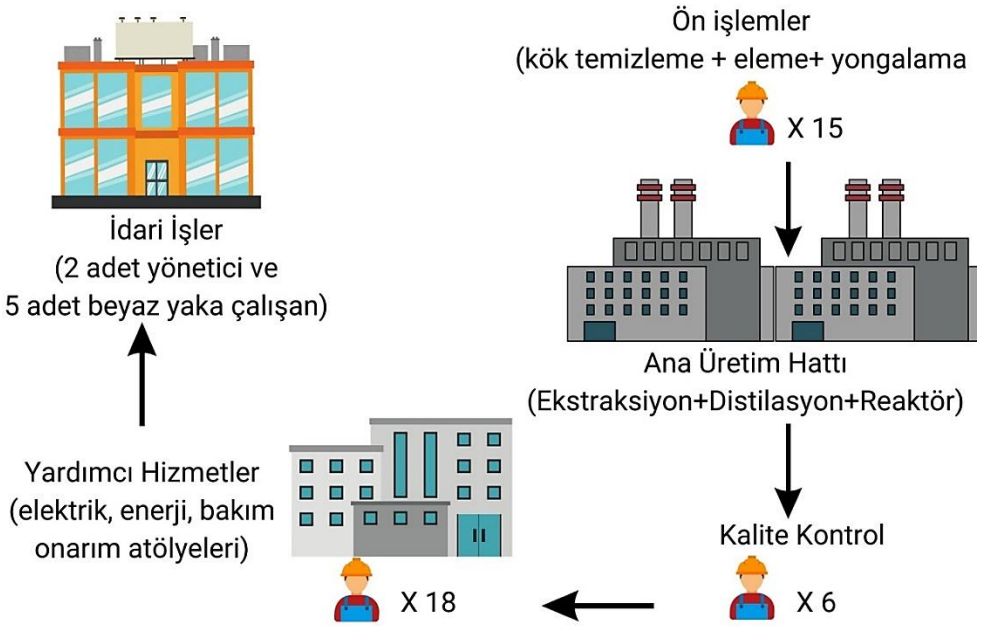
FULL TEXTS BOOK

Şekil 2. Potansiyel tedarikçi ve müşterilerin konumları

Yukarıda verilen bilgiler ışığında teknik, örgütsel analizleri yaklaşımsal olarak gerçekleştirilmiştir. Yasal fizibilite analizi için yürürlükte olan mevcut mevzuatlar ve yasalar taranmış, sanayi paydaşının bilgi birikimi ve uzman görüşleri de değerlendirmeye alınmıştır.

BULGULAR ve TARTIŞMA

Doğal reçine kullanarak Terpen- Rosin Fenolik Reçine üreten bir tesisin teknik değerlendirmesi yapıldığında, üretim hattı ve ekipman yerleşimi için yaklaşık 3020 m² kapalı alan öngörülmektedir. Tesiste ihtiyaç duyulacak ekipmanların listesi ve sayısı Şekil 3'te verilmiştir.



Şekil 3. Terpen Rosin Fenolik Reçine üretiminde kullanılacak ekipman listesi

Teknik fizibilite kapsamında bir değerlendirme yapıldığında, yıllık 500-1000 ton reçine türevi üretilebilmesi için küçük ölçekte bir tesisin yeterli olacağı öngörülmektedir. Bununla birlikte, ihtiyaç duyulan ekipmanlar incelendiğinde özellikle distilasyon ve reaktör ünitelerinde etkin sıcaklık ve basınç kontrolünün gerekeceği tahmin edilmektedir. Bu proseslere yapılacak yatırımların önceliklendirilmesi ve bakım onarım maliyetlerinin de göz önünde bulundurulması tavsiye edilmektedir.

Tesisin üç vardiya üretim yapabilmesi için örgütsel fizibilite kapsamında üretim tesisinde çalışacak personelin yetkinliği ve sayısı belirlenmiştir (Şekil 4). Buna göre toplamda 46 çalışana ihtiyaç duyulmaktadır. Örgütsel fizibilite açısından değerlendirildiğinde reçine sektörünün kırsal kalkınmaya destek sağladığı, orman köylülerine iş fırsatı yarattığından söz edilebilir. Fakat topraktan kök çıkarım işi emek yoğun bir iş olduğu için her zaman istenen sayıda işçi bulanamadığı bilinmektedir. Bununla birlikte, orman köylülerinin reçine ve reçineli dip kütüklerin tespiti ve topraktan doğru bir şekilde çıkarılması konusunda düzenli olarak eğitilmesi gerekmektedir. Bu konuda da gerek reçine üreticilerinin sosyal sorumluluk projelerine gerekse OGM'nin farkındalık eğitimlerine ihtiyaç duyulmaktadır.

FULL TEXTS BOOK

Şekil 4. Personel yetkinliği ve yeterliği

Doğal reçine türevinin üretimi yasal fizibilite kapsamında değerlendirildiğinde üretimin önünde yasal bir engel olmadığı görülmektedir. Ancak, atıl çam köklerini topraktan çıkarma işlemi 6831 sayılı Orman Kanunu'nun ilgili maddeleri ve 310 Sayılı Oduna Dayalı Orman Ürünlerinin Üretim İşlerine Ait Tebliğ uyarınca Orman Genel Müdürlüğü'nün iznine tabidir. Dolayısıyla yasal yıllık üretim kapasitesi verilen izinlerin miktarı kadardır. OGM'nin her yıl bu kapasiteyi artırmak ve reçine üretimini teşvik etmek için çeşitli faaliyetler yürüttüğü bilinmektedir. Bir diğer konu ise ülkemizde ithal reçinelerden gümrük tarife vergisinin alınmamasıdır. Bu durum ithal ürünleri ekonomik anlamda daha cazip hale getirmekte ve yerli üreticinin fiyatlarla rekabetini zorlaştırmaktadır.

SONUÇ ve ÖNERİLER

Bu çalışmada Türkiye'de şimdiye kadar hiç üretilmemiş ve tamamen dışa bağımlı olunan, ülkemiz için yeni ve yerli katma değerli bir reçine türevi olan Terpen Rosin Fenolik Reçine'nin tarafımızca özgün tasarlanan bir yöntem ile Kazdağları civarında yer alan pilot bir tesiste endüstriyel ölçekte üretilebilme potansiyeli teknik, örgütsel ve yasal fizibilite analizleri ile incelenmiştir. İncelemeler neticesinde üretimin önünde teknik veya yasal boyutta bir engel olmadığı ve küçük ölçekli bir işletmede üretimlerin yapılabileceği tespit edilmiştir. Doğal reçine ve türevlerinin üretilmesi katma değerli ve yatırıma değer bir iş kolu olarak değerlendirilmektedir. Bununla birlikte doğal reçine sektörünün bilinirliğinin artmasına, üreticilerin teşvik edilmesine, nitelikli personel sayısının artması için sektörel eğitimlerin düzenlenmesine ve orman köylülerinin doğal reçine konusundaki farkındalığının arttırılmasına ihtiyaç duyulmaktadır. Gelecekte bu alanda yapılacak çalışmalar ile Türkiye'de doğal reçine sektörünün gelişmesine yönelik önemli adımlar atılacağı düşünülmektedir.

TEŞEKKÜR

Bu çalışma Naile Angın'ın, 120O609 numaralı TÜBİTAK projesi ile desteklenen, "Doğal Terpen-Rosin Fenolik Reçinenin Çevreci Bir Yaklaşımla Sentezi ve Yapay Sinir Ağları ile Modellenmesi" başlıklı doktora tezinden türetilmiştir. Destekleri için TÜBİTAK'a teşekkür ederiz. Teknik bilgi ve tecrübe paylaşımı için İVA Reçine Biyokütle A.Ş. yöneticilerine ve Yüksek Kimya Mühendisi Mehmet Emin GÜLE'ye teşekkürlerimizi sunarız.

VISUALIZING TIME: A CINEMATIC EXPLORATION OF TIME-IMAGE IN *"COCOON"*

Fatma Serdaroğlu
Lec. Dr., Anadolu University, School of Foreign Languages
Orcid: 0000-0003-4112-2680

ABSTRACT
This study explores Nuri Bilge Ceylan's film "Cocoon" (Koza, 1995) within the framework of Gilles Deleuze's concept of the "time-image." Deleuze's theory posits a shift in cinema after World War II towards a more profound exploration of time and existence, termed the "time-image." "Cocoon" exemplifies this cinematic evolution through its narrative style and thematic exploration, inviting viewers into a contemplative engagement with the complexities of temporality and human experience. By analyzing specific elements of the film through Deleuzian lenses, this study aims to explain how "Cocoon" employs the time-image to reshape cinematic perception and enrich philosophical reflections on time and existence. This research contributes to the understanding of both Ceylan's cinematic aesthetics and Deleuze's philosophical framework, emphasizing the transformative potential of the time-image in contemporary cinema.
Keywords: Gilles Deleuze, Time-image, Nuri Bilge Ceylan, "Cocoon" (1995), aesthetics

INTRODUCTION

Gilles Deleuze, in all his works, aimed to capture the connection between philosophy and life. He believed that philosophy, seen as the sensation and realization of life, is fundamentally a practical part of human existence. In his view, philosophy should be brought closer to life and people. By providing different perspectives and mediating various sensations, philosophy, according to Deleuze, is an activity of creating concepts. "The philosopher is the concept's friend; he is potentiality of the concept" (Deleuze and Guattari, 1994, p. 5). These concepts, once discovered, enrich our ways of living in this world. In developing his philosophy of 'immanence,' Gilles Deleuze created his own concepts, while also evaluating the philosophies and concepts of many other thinkers.

Emphasizing life's constant change, Deleuze believed art had a special role in this regard. While philosophy creates concepts, art creates sensations by materializing virtual differences through creative acts, extracting pure sensory existence through its imagery. The aim of art within the possibilities of its materials is to extract from a mass of sensations, a pure sensory existence (Deleuze and Guattari, 1994, p. 163-179). Each artwork conveys the sensations discovered by the artist to its audience. Art is sensory becoming, liberating us from ourselves to engage with matter, while philosophy is conceptual becoming, reshaping our understanding of thought itself (Colebrook, 2001, p. 70). Art is associated with humanity's struggle with chaos and the search for meaning. This engagement with chaos is shared by philosophy and science, all advancing through crises to challenge fixed opinions and explore new conceptual realms (Deleuze and Guattari, 1994, p. 201-208).

In Deleuze's philosophy, the art of cinema holds an important and privileged place. In his books, "Cinema 1: Movement-Image" (1986) and "Cinema 2: Time-Image" (1989), Deleuze examines the evolution of cinema from a philosophical perspective through two primary concepts: "the movement-image", characteristic of early cinema, and "the time-image", representative of modern cinema. Deleuze asserts that cinema evolved post-World War II and entered a modern era. While the movement-image conveys time indirectly, the time-image directly offers a sense of duration, free from movement. There are different cinematic techniques of these two distinctive periods of cinema. The movement-image in cinema explores how films depict movement and action (Deleuze, 1986). Influenced by Bergson's

FULL TEXTS BOOK

concept of ‘durée,’ ‘the time-image in cinema merges past, present, and future, evoking the sensations of concepts and mental states’ (Deleuze, 1989).

Nuri Bilge Ceylan's debut short film "Cocoon" (Koza, 1995) exemplifies Gilles Deleuze's "time-image" by rejecting traditional narratives for a contemplative exploration of time and existence through long takes, minimalist dialogue, and sensory imagery. This approach emphasizes temporal experience and the subjective nature of existence, fostering philosophical reflections on time's fluidity and multiplicity. Ceylan's aesthetic choices enrich our understanding of time, memory, and identity in contemporary cinema.

METHODOLOGY

Deleuze identifies two distinct periods in cinema, shaped as the world transitioned into the modern era after World War II, fundamentally altering perceptions and sensations of existence. Time in cinema is indirectly presented through the movement-image (Deleuze, 1986), whereas the time-image (Deleuze, 1989), devoid of movement, directly conveys a sense of duration.

Deleuze's (1986) concept of the movement-image in cinema examines how films portray physical, psychological, and emotional movement through perception-images, action-images, and affection-images, offering unique perspectives on reality and time in cinematic storytelling. These images constitute a mobile section of a changing whole, representing a bloc of space-time and providing perspectives on real time, with time-images potentially encompassing various indirect forms resulting from comparisons or combinations of these varieties. (Deleuze, 1986, p. 68). Deleuze believes that until Italian Neorealism, cinema primarily provided the movement-image, where time was reflected as dependent on movement. In the cinema of the movement-image we have frames which organize sets of images” (Colebrook, 2001, p. 45).

He suggests that the changing world postwar period and our way of perceiving it are reflected in modern cinema through the time-image, which conveys time directly, independent of movement and space. In neo-realism, time is liberated from movement, creating a dreamlike quality where actions float rather than drive towards a clear conclusion, engaging the senses optically and auditorily (Deleuze, 1989, p. 4).

In the cinema of the movement-image the flow of time is sensed as that which lies above and beyond any of the divergent movements. In the time-image we sense duration directly, not derived from movement. Unlike the dialectic, its becoming is positive: for we confront becoming itself, not as an indirect whole of all the composed mobile sections (Colebrook, 2001, p. 50).

Modern cinema shows significant similarities with Deleuze's concept of time. Deleuze and Guattari's ontology urges a reorientation towards time as a unified duration, fostering creative solutions to contemporary challenges by emphasizing imagination alongside reason in the postmodern era (Lorraine, 2011, p. 113). When developing his concept of time, Deleuze was greatly influenced by Bergson’s (2000, pp. 226-227) concept of ‘durée’, (duration). In this context, time is not formed by the sequential occurrence of equal intervals of past, present, and future. The past never disappears. Our duration, which defines our existence, integrates past and present, reflecting modern pace of life and the complexities of mental states.

This study examines how Nuri Bilge Ceylan's short film "Cocoon" creatively employs the time-image to evoke a sensory experience of time, thereby enriching our comprehension of Deleuze's philosophical concepts in modern cinema.

"COCOON": VISUALIZING THE TIME-IMAGE

Nuri Bilge Ceylan's short film "Cocoon" employs Deleuze's concept of the "time-image" and reshapes cinematic perception, enriching philosophical reflections on time and existence. It demonstrates the transformative potential of the time-image, highlighting how Ceylan's aesthetic choices cultivate a space

FULL TEXTS BOOK

to reflect on the intricate relationship between time and memory, thereby enriching our understanding of Deleuze's philosophical framework and its application in modern filmmaking. Ceylan's films address the unbearable nature of relationships, the helplessness of connecting with ourselves, others, and the surrounding world, and the painful process of being human (Harvey-Davitt, 2016, pp. 250-252). His films show situations that we have normalized or become accustomed to. In a way, this represents a challenge or confrontation with oneself, one's life, its darker aspects, and one's values; it is an attempt to understand oneself and an ongoing struggle with that understanding.

"Cocoon" uses the time-image to evoke deep emotions and concepts, intertwining themes of lost past, alienation, elusive time, memories' burden, and the existential weight of human existence. The plot centers around a couple isolated from the outer world and from each other, giving a sense of loss and unmet expectations. It depicts an elderly couple in a remote rural setting, revealing their existential reflections and unspoken tensions. There is almost no events or story in the film. With just the images, the meaning is formed in "Cocoon". The short, wordless black-and-white "Cocoon" creates an enigmatic mood through its non-linear narrative, leaving the relationships between an old man, an old woman, and a young boy unspecified, inviting the viewer to construct their own storyline (Diken, Gilloch & Hammond, 2022, 17)

Ceylan's characters often reflect the disillusionment of unmet potential and grapple with existential questions about life, past influences, and the reconciliation of ideals with reality (Andrew, 2010, p. 3). In "Cocoon", the abstract portrayal of the elderly couple's emotional distance prompts us to reconsider their sense of closeness. It gives the moods of the people in it and depicts core of their existence. Ceylan's films feature estranged characters who ironically seek loneliness as a remedy for their inability to form meaningful relationships (Diken, Gilloch & Hammond, 2022, p. 2).

"Cocoon" explores themes of isolation and introspection, life and death through a minimalist style and non-narrative approach. "Cocoon" visualizes the intertwined processes of individual memory and mourning, reflecting on death as both a past event and an inevitable future, encapsulating the sadness of the life cycle's transformation into a "death cycle" (Diken, Gilloch & Hammond, 2022, pp. 24, 25, 33). Without a dialogue, the film gives the feeling temporality and weight of time giving an image of time that merges lived and unlived moments merging the past and future in the present time. How does the film achieve this?

Temporal Experience and Fragmented Narrative

"Cocoon" exemplifies Deleuze's idea of the "time-image" in cinema, reflecting a departure from traditional narrative structures and a deeper exploration of time and existence. The film's narrative eschews conventional linear storytelling, opting instead for a fragmented and contemplative approach that foregrounds the temporal experience. So, it does not tell a story but a state of mind. "Ceylan's cinematic language is fundamentally based on visual aesthetics" (Aliyev, 2019, p. 15). This is accomplished through the multifaceted representation of time in the film. With the time-image, cinema has moved beyond narrative. The time-image utilizes the power of art to generate new sensations and create 'difference.' This stems from the concept of time as 'duration.' Unlike a linear series of past, present, and future, duration is a continuous flow that produces new differences with each moment, embodying a sense of 'togetherness'.

Whereas movement-images were indirectly tied to time through montage, pure optical and sound images directly connect to a time-image that subordinates movement, making time the perspective of movement and creating a new cinema of time (Deleuze, 1989, p. 22). This represents a narrative style that contrasts with the editing approach used in movement-image cinema. The rejection of a cohesive whole created through editing becomes possible in this manner. There are no longer sensory-motor images with extensions, but complex circular links between pure optical and sound images and those from time and thought (Deleuze, 1989, p. 47). In the time-image cinema, there is a destruction of established realities. As the world we believed in collapse, the classical narrative structure in cinema has been shattered. With

FULL TEXTS BOOK

the time-image, cinema transcends action-image constraints by unifying time, image, and thought into a single subjectivity, offering characters detached sensory experiences and a fluid panorama of memories, reflecting a deep temporal freedom like expressionism's unconscious imagery (Deleuze, 1989, p. 55).

The shift in cinematic understanding has disrupted the linearity of time. In the modern era, where mental states are shaped by possibilities and uncertainties, people no longer perceive time linearly. Consequently, films do not progress continuously forward; instead, they exhibit jumps backward and forward in time due to the disruption of causal relationships between events. Like "stream of consciousness" technique in contemporary novels, time is constructed through associations. Time itself seems to have expanded, giving the impression of floating within it. The time-image captures a transient panorama where time appears to float freely among images of the past (Deleuze, 1989, p. 55). To convey this sensation, the time-image employs long shots and depth of field reveal the multi-layered nature of reality.

Post-war cinema, through prolonged stillness and the time-image, shifts focus from character-driven narratives to the heightened presence of time, revealing characters' idle defeat and questioning the possibilities of action and representation (Katsanis, 2015, p. 170). "Cocoon" creatively uses the time-image to evoke a specific emotion and concept. The film successfully conveys the conceptual sense of lost past, elusive time, the burden and ruthlessness of memories, as they merge in the consciousness of two elderly people, making us feel the weight of life, human existence, unfulfilled expectations, and lost hopes in this world. Deleuze argues that cinema liberates image sequencing from everyday perceptual structures, presenting images in their purely optical form, thus challenging conventional narrative and perceptual frameworks (Colebrook, 2001, pp. 31-32). In "Cocoon," Ceylan breaks the linear narrative of time by employing a sense of temporality.

Koza ends with a montage of shots previously seen in the film: the woman sitting on the boat; the man warming his hands; the woman beside the barred window; and the rain plashing on the window. The action fades to black without any apparent dénouement, thereby reminding us that life has no beginning, middle, or end. What we are left with is a kaleidoscope of melancholy memories. Only when we make the effort to escape from our physical or mental cocoons can we understand Mother Anatolia, symbolized in Ceylan's film by the sight of a single bird feather falling slowly to the ground and blown away by a gust of wind (Raw, 2107, p. 142).

Contemporary narrative cinema, rejecting the notion of a definitive story, avoids creating complete or coherent worlds. Unlike traditional cinema, which develops plots through cause-and-effect relationships, contemporary narratives forgo the logical progression of beginning, middle, and end. Modern film aesthetics favor scenarios where unexpected situations arise, and events do not necessarily lead to a conclusion. "Cocoon" is open to different commentary with its fragmented structure and different meanings at a time. For example, numerous interpretations can be made about the couple's relationship or the image of a young boy. The couple might be estranged or reluctantly reunited. The boy could represent their lost child or a child they never had. While various interpretations are possible, the film's atmosphere and the characters' moods can be sensed: they are trapped in a specific moment that continually blends with the present. And the images contribute to the uncanny feeling in the film.

Slow Aesthetics and the Time-image

Nuri Bilge Ceylan's cinema is named as "slow cinema" by some scholars like Çağlayan (2018) and Rattee (2017). The absence of quick scene transitions allows the audience to fully absorb the character's emotional state, connect with the scene's mood, and gauge the character's feelings. Slow films challenge viewers not only due to their somber subjects but also because they restrict movement, dialogue, and spectacle, creating a sense of stillness and emptiness (Jaffe, 2014, pp. 36-37). Ceylan's films generally explore themes of alienation, homelessness, communication breakdown, and rural life. Ceylan's intentional slowness helps form what Deleuze refers to as the 'time-image' (Suner, 2010; Çağlayan,

FULL TEXTS BOOK

2018; Diken, Gilloch & Hammond, 2022). Specific elements such as the deliberate pacing, no dialogue, and the focus on ordinary yet profound moments invite viewers into a meditative engagement with the complexities of temporality and human experience.

“Ceylan’s films are characterized by long takes, featuring static compositions or slow zooms, creating self-contained universes.” (Raw, 2107, p. 138). Through its use of long takes and deep imagery, "Cocoon" disrupts the conventional cause-and-effect progression, emphasizing the pure passage of time and the subjective nature of existence, giving the feeling of Heidegger’s “profound boredom” concept. "Profound boredom" in art cinema through slow aesthetics and empty images to prompt deeper reflection on perception and time, contrasting with mainstream cinema's focus on engagement and emotional investment (Quaranta, 2020, pp. 2-17). This cinematic technique fosters philosophical reflections on the fluidity and multiplicity of time, aligning with Deleuze's notion of the "time-image". Ceylan’s long takes help us grasp their enigmatic qualities and raises questions about accessing others' thoughts and feelings (Rattee, 2017, p. 217). Ceylan’s long takes help us grasp their enigmatic qualities and raises questions about accessing others' thoughts and feelings (Rattee, 2017, p. 217). By transforming boredom into a contemplative state, Ceylan’s films utilize it as an aesthetic virtue, reconfiguring it from a negative emotion to one that fosters creative inspiration and artistic insight (Çağlayan, 2018, pp. 162-163).

“The modern reality is that we no longer fully believe in this world or the events in our lives, including love and death; it feels as though the world itself is a bad film projected at us” (Deleuze, 1989, 171). People in an isolated and alienated world seek to reclaim their reality and reconnect with their lives. As Tarkovsky (1987, pp. 82-82) says as they buy their tickets, the cinemagoer seeks to fill the spiritual void caused by modern life's constant activity, reduced human contact, and materialist education. In cinema, our experiences become creative by merging with our own sense of time, generating new sensations and differences through our connection with the film's duration. This is a way of coping with the existence in modern life. And Ceylan’s focus on images prompts us to question whether our pursuit of material wealth disconnects us from nature (Raw, 2107, p. 139). "Cocoon" portrays a world of isolation, clearly illustrating that everyone exists in their own secluded space, much like a cocoon.

Modern cinema structures its narrative and formal features to reveal and embody the reality it depicts. Like other arts, modern cinema does not present a cohesive, completed aesthetic. "Modern life is marked by paradoxes such as fragmented images, discontinuity, the collapse of order, and inconsistency; therefore, film form must embody and reflect these elements within its structure" (Savaş, 2003, p. 204). Modern cinemas problematize the reality it depicts. "If reality is continually evolving and lacks an absolute essence to guide and determine it, then determined values cannot exist" (Savaş, 2003, p. 196). Modern cinema is a cinema of possibilities, suggesting what a person could be rather than defining them. It highlights the grim aspects of reality, presenting films as open works that viewers reconstruct in their minds. These all contribute to the formation of the time-image.

With its static cameras, long takes, and close-ups, "Cocoon" invites us to ponder the images and feel the inner time of the characters. By this way, it makes us skeptical of both hidden intentions and the visible reality. The lack of cohesive narrative reflects a focus on abstract issues. Slowness and boredom become aesthetic features that evoke the film's concepts, shaping the time-image.

Time and Fragmented Space

With the time-image, space and events transform into a dreamlike reality occurring within our minds. Individuals seek to reclaim their sense of reality and reconnect with their self and life in a desolate and alienated world. In time-image cinema, what we see is the representation of the past and future within the present, emphasizing a specific emotional state as if it were frozen in time. Neo-realism's focus on optical and sound situations diverges from traditional sensory-motor settings, establishing a context in 'any-space-whatever', whether connected or emptied, highlighting a shift towards a more abstract cinematic experience (Deleuze, 1989, p. 5).

FULL TEXTS BOOK

In "Cocoon", the old couple is portrayed as living in a state of solitude, surrounded by an environment that underscores their sense of disconnection from the world. Through long takes and minimal dialogue, the film explores their inner lives and the silent, yet profound, impact of their surroundings on their emotional state. “The time-image gives us time itself, no longer spatialized or derived from movement” (Colebrook, 2001, p. 47). The emphasis is on exploring mental states and layers of real rather than action. Deleuze uses Antonioni’s Eclipse as an example to highlight how limit situations absorb characters and actions into empty, abandoned spaces, emphasizing that space becomes any-space and movement loses its meaning (Deleuze, 1989, p. 5).

In Ceylan’s films, there is minimal causality due to their lack of a narrative focus. In "Cocoon", the independent and timeless spaces convey a dreamlike sensation, with the elderly couple mourning lost time, unfulfilled expectations, and the passage of life. Time merges within these dreamlike spatial fragments, creating a mental image that disrupts chronological time. The non-linear narratives in Ceylan’s films result in an almost non-existent chain of causality. "Cocoon" conveys intertwined memories, longing for the past, and breaks free from the constraints of space.

CONCLUSION

Gilles Deleuze saw philosophy as a dynamic process that shapes and is shaped by the world, fostering creative evolution and deeper exploration (Lorraine, 2011, p. 165). He applied this view to art and cinema, considering art a transformative act that reveals new sensations and confronts chaos. For Deleuze, cinema should focus on creating images and emotions rather than merely telling stories, avoiding clichés and exploring new possibilities through its connection with time to offer unique experiences. Deleuze distinguishes between the movement-image and the time-image to describe how cinema represents movement and time. He asserts that the aftermath of World War II brought about profound shifts in how we perceive and depict reality, which is reflected in the evolution of cinematic art. Deleuze argues that while earlier cinema focused on depicting physical movement through the movement-image, modern cinema, characterized by the time-image, explores a deeper sense of temporal experience. The time-image captures the internal passage of time and existential depth, offering a reflection of modern existence.

Nuri Bilge Ceylan’s "Cocoon" exemplifies Gilles Deleuze’s concept of the time-image by eschewing traditional narrative structures in favor of a contemplative and fragmented approach to cinema. The film’s use of long takes, minimalist dialogue, and timeless spaces underscores its focus on the subjective experience of time and memory, aligning with Deleuze’s theory that cinema can directly evoke a sense of duration beyond mere movement. Through its non-linear narrative and abstract portrayal of existence, "Cocoon" invites viewers to engage with the complexities of temporality and human existence in a manner that challenges conventional cinematic storytelling. The film is notable for its contemplative mood and its focus on the emotional landscape of its characters, reflecting Ceylan’s characteristic style of exploring the human condition. "Cocoon" stands as a significant example of how modern cinema can harness the time-image to offer profound insights into human experience and perception.

THE IMPACT OF SOCIAL MEDIA MARKETING ON THE BUSINESSES IN ELBASAN DISTRICT

PhD. MIMOZA KOTOLLAKU
University of Elbasan "Aleksandër Xhuvani" Elbasan, ALBANIA
MSc Ylgersa Cara
Assistant Lecturer, Marketing and Engineering Department
Faculty of Economics, Aleksander Xhuvani University, Elbasan
MSc Erjeta Deda

ABSTRACT
Social media has become an important aspect of businesses in Elbasan district, offering businesses the opportunity to reach new audiences, engage with customers, and promote their products and services. This paper aims to describe social media platforms, social media marketing and social media management as well and to investigate the impact of social media marketing on businesses in the Elbasan district.
The methodology of the work is based on the collection of quantitative data using online questionnaires. Questionnaires were sent to 200 businesses in the Elbasan district, from which we received 85 positive responses. Data were analyzed using Microsoft Excel software.
The findings of the study show that social media marketing is highly valued by businesses in the Elbasan district, where most participants report that it is very important and positively affects the performance of businesses. Businesses in the Elbasan district are actively using social media for marketing purposes, with Instagram being the most used platform by businesses. The study found that the main reason why businesses use media marketing is to promote their products or services. According to the study, most businesses in Elbasan district neglect the presence of a qualified person who manages their social media.
Keywords: Marketing, Social Media, Social Media Management, Business, Elbasan district.

1. Introduction

The use of social platforms has become an integral part of our daily life since the technological developments that have occurred over the years. Social media has evolved the way we connect and communicate with others. Not only that, they are also used as a tool to engage with businesses, organizations and communities online. Social media has been used by many companies to create marketing opportunities and develop the way they operate and connect with customers. By using social media, businesses find it easier to target the right audience and attract new customers. Social media marketing helps businesses increase traffic on social media platforms and also sales. Social media allows for real-time interaction with customers, enabling businesses to get instant feedback on products or services. It has also opened up new avenues for businesses to sell their products or services online without the need for consumers or customers to come to the business. Social media provides valuable data analytics tools that allow businesses to accurately track the performance of their campaigns.
The purpose of this study is to describe social media platforms, social media marketing and social media management as well and to investigate the impact of social media marketing on businesses in the district of Elbasan.
The methodology used in this paper combines primary and secondary data. Primary data was collected from questionnaire and secondary data was found from books, online articles and online blogs that are focused on social media marketing.
Questionnaires were sent online by communicating with businesses with different online communication platforms to 200 businesses in the district of Elbasan, from which we received 85 positive responses. Data were analyzed using Microsoft Excel software.

The study found that the main reason why businesses use media marketing is to promote their products or services. According to the study, most businesses in Elbasan district neglect the presence of a qualified person who manages their social media.

2. Review of Literature

Many people think of marketing as just selling and advertising. Every day we come across TV commercials, catalogs, articles from retailers and various online campaigns. However, selling and advertising are important elements of marketing. Today, marketing should not be understood in the old sense of making sales in a new sense of understanding and meeting the needs of customers. As the authors say, “The purpose of selling is to satisfy a customer’s need; the goal of marketing is to understand its need” (Kotler, Philip T., Armstrong, Gary, 2017).

Broadly defined, marketing is a social and managerial process by which individuals and organizations get what they need and want through the creation and exchange of value with others. In a narrower business context, marketing involves building profitable and meaningful exchange relationships with customers. Therefore, we define marketing as the process by which companies engage customers, build strong customer relationships, and create customer value to get value from customers in return (Kotler, Philip T., Armstrong, Gary, 2017).

The evolution of marketing is a complex process that has occurred over the past few decades. This evolution is closely related to technological developments, changes in consumer behavior and increased competition in the market.

The evolution of the marketing concept over time can be divided into 6 main phases: the production-oriented period, the sales-oriented period, the marketing-oriented period, the market-oriented period, the relationship marketing-oriented period, and the marketing period online or digital marketing.

Social media is the term often used to refer to new forms of media that involve interactive participation (Manning, 2014).

Social media is defined as "a set of Internet-based applications that are based on the ideological and technological foundations of Web 2.0 and that allow the creation and sharing of user-generated content" (Kaplan, Andreas M., Haenlein, Michael, 2010).

Social media, is part of our daily lives, has evolved the way we connect and communicate with others. With just a few taps on the screen, we can instantly contact friends, family and even strangers across the globe. Social media have become essential tools for sharing ideas and staying informed.

In addition to these, social media are also widely used in business. Social media has been used by many companies to create marketing opportunities and developing the way they operate and connect with customers (Abdullah, Nurul Ain., Jabor, Khata., Ismail, Mohamad Alif., Isa, Ahmad Shobah Mohd, 2019).

By creating engaging content businesses can increase their brand awareness and attract new customers. In addition to brand visibility, social media also offers businesses the opportunity to engage directly with their customers. Through various platforms businesses can answer customer questions, address concerns and gather feedback in real time. This level of interaction not only helps build trust and loyalty, but also provides valuable insights that can be used to improve products or services. Also, businesses have the opportunity to collect various information about the needs and demands of consumers who will enter their work when they launch a new product or service on the market (Polańska, 2014).

Additionally, social media has transformed the way businesses market their products or services. Traditional advertising methods such as print ads or TV commercials are often expensive and have

FULL TEXTS BOOK

limited reach. However, social media advertising allows businesses to target specific demographics, ensuring that their message reaches the right audience. With advanced targeting options and analytics tools, businesses can track the effectiveness of their campaigns and make data-driven decisions to optimize their marketing strategies.

Another important impact of social media on businesses is the rise of influencer marketing. Influencers, who have amassed large followings on social media platforms, have become powerful brand advocates. By partnering with influencers, businesses can tap into their loyal fan base and use their influence to promote their products or services. This form of marketing has proven to be very effective, as consumers tend to trust recommendations from people they admire and follow.

Recently, social media has also opened up new avenues for businesses to sell their products or services online without the need for consumers or customers to come to the business.

Social media platform, or social media channels, are platforms or websites that enable users to interact, share content and communicate with other users online (Pasaribu, 2023).

Some examples of social media platforms include Facebook, Twitter, Instagram, LinkedIn, WhatsApp, Snapchat, TikTok, and YouTube. Each of these platforms offers unique features and functionality that allow users to share different forms of content, such as text, images, videos, and live streams (Shields, 2017).

Social media marketing is a mechanism that empowers people through online social networks to advertise their websites, goods or services and engage and tap into a much wider audience that would not be possible through traditional advertising channels (Ravi, Dr., Sujaya, Mr., Scholar, Kumar., Sabri, Mustafa, 2021).

Social media marketing is presented as a set of tools that taken together can amplify, promote and help others share your message (Evans, 2012).

Social media marketing has become an indispensable tool for businesses looking to expand their reach and engage with customers in today's digital age. With the rise of social media platforms, companies have found new ways to connect with their target audience.

An important advantage of social media marketing is its cost-effectiveness compared to traditional advertising methods.

Additionally, social media allows for real-time interaction with customers, enabling businesses to receive immediate feedback on products or services (Fan, 2023).

Social media provides valuable data analytics tools that allow businesses to accurately track the performance of their campaigns.

With the use of social media, businesses find it easier to target the right audience. They can identify and reach the most appropriate target groups for the products or services they offer. This helps in increasing the efficiency of marketing campaigns and improving return on investment (Nadaraja, Rubathee., Yazdanifard, Rashad, 2013).

Social media marketing helps businesses increase traffic on social media platforms and also sales.

Social media platform management is an important area of digital marketing that involves planning, creating, publishing and monitoring content on social networking platforms, in order to achieve business objectives (Alharrasi, 2023).

Successful social media management requires an integrated and strategic approach, combining content creation, audience engagement and performance measurement to achieve business objectives.

A social media manager Is a professional responsible for planning, implementing and monitoring an organization’s strategy on social media platforms, such as Facebook, Instagram, Twitter, LinkedIn, etc. It plays an important role in building and maintaining the presence of the organization in these digital channels, contributing to the achievement of business objectives (Talentport, 2024).

Social media marketing has a significant impact on consumers’ purchase decision-making process. Advertising, recommendations, and carefully planned marketing activities on social media can stimulate

FULL TEXTS BOOK

consumers' needs and wants, stimulate their interest in specific products or brands, and thus promote purchasing behavior (Mu, 2023).

Some social media marketing strategies that businesses use to influence consumers in purchasing decisions are: digital word of mouth, influencer marketing, targeted advertising, content marketing, search engine optimization (SEO), feedback and reviews, fear of missing out (FOMO) (Zhang, 2023).

3. Methodology

The purpose of this study is to describe social media platforms, social media marketing and social media management as well and investigate the impact of social media marketing on businesses in Elbasan district. In this paper, initial importance will be given to social media and their impact on businesses in the district of Elbasan.

The methodology used in this paper combines primary and secondary data. The primary data were obtained through questionnaires distributed to several businesses or companies in the district of Elbasan, operating in different sectors of the economy.

The primary sources of secondary data collection of information used throughout this paper are taken from books, online articles and online blogs that are focused on social media marketing in order to provide up-to-date and accurate information.

In the questionnaire, 15 questions were formulated where in questions 1 to 3 it is intended to collect data that reflect information about the name of the business, the type of activity that the business performs and the number of employees that the business has.

In other designed questions, information about social media marketing is obtained.

The questionnaire is structured and contains closed questions, dichotomous questions, multichotomous questions and open questions. The questions are formulated in such a way that they are as understandable as possible to the respondent in order to guarantee the validity of the questionnaire.

The questionnaire was designed using Google Forms.

Through a research on the Internet, and simultaneously in the field, we managed to identify a population of 200 businesses. The questionnaire was sent to 200 businesses, of which 85 responded positively to its completion. The respondents were representatives of large, medium, small and family businesses. In order to be as successful as possible, the distribution of the questionnaires was done in such a way that the selected sample of this study was as general as possible.

We carried out the survey or the distribution of online questionnaires through Google Forms in the businesses operating in the district of Elbasan. Businesses are contacted through social networks, e-mails and other communication platforms.

4. Data analysis

The computer program Microsoft Excel was used for data recording and analysis.

Based on the analysis of the data obtained from the questionnaire, the activity of the surveyed businesses was in most cases service-oriented. The surveyed businesses were mainly bars, restaurants, resorts, travel agencies, photo studios, beauty centers, pastry shops, guesthouses, pharmacies, atelier, event agencies, clothing shops, accessories bags and shoes, agricultural products shops, electrical household products shops, bookstores, carpets shops, import and export, pizzeria, foreign language course center, jewelry shops, hydrosanitary, products for babies and children, cosmetic products shops, dental service and furniture.

54% or 46 businesses have 1-3 employees, 14% or 12 businesses have 4-7 employees, 14% or 12 businesses have 8-11 employees, 4% or 3 businesses have 12-15 employees and 14% or 12 businesses have over 15 employees in their businesses.

5. Conclusions

From the information analyzed from the primary data obtained from the questionnaires sent to the businesses in the district of Elbasan, we reach the following conclusions.

- All businesses surveyed or 85 businesses use social media for their social media marketing strategy.
- Regarding the moment of using social media in business, most of the surveyed businesses, 64 businesses or 75% of businesses have used social media since the moment of opening the business
- The social media platform that the surveyed businesses use most often is Instagram 91% or 77 businesses
- The main reason why businesses use social media as a marketing tool is because it helps to present products or services for 28 businesses or 33% of businesses
- The main reason why businesses use social media and not another marketing strategy for 60 businesses or 71% of businesses use it because it is easier to reach the audience
- Regarding the specific budget for social media, 47 businesses or 55% of businesses have a specific budget for social media
- The amount of budget that businesses spend on social media marketing per month is up to 10,000 ALL for 25 businesses or 53% of businesses
- For 54 businesses or 64% of businesses social media marketing has a very good impact on their business
- Most businesses surveyed, 47 businesses or 55% of businesses do not have a qualified person managing their social media or a social media manager
- Most of the businesses, 46 businesses or 54% of the surveyed businesses do not make online deliveries (this result because most of the surveyed businesses are mainly service oriented)

6. Recommendations

- Choose the right social media
- Create a strategy for your social media
- Hiring a qualified person in social media management (Social Media Manager)

FULL TEXTS BOOK

- Consistency in social media
- Increasing the social media marketing budget
- Use of influencer marketing
- Organizing games on social media

ÖZET

Hortikültürel terapi (bahçecilik terapisi) danışanların terapötik olarak beklentilerini karşılamak amacıyla doğaya karşı hissedilen doğuştan yakınlık ile bahçecilik faaliyetlerini kullanan ve bir profesyonel yönetici ile uygulamaya alınan bir terapi yöntemidir (Toyoda, 2012). Her yaştaki kişilere uygulanabilen bu bahçecilik programlarının amacı kişisel, fiziksel, ruhsal, entelektüel olarak farklılıklar göstermektedir ve uygulamalar amacına uygun olarak değişebilmektedir (Pouya, 2023). Psikososyal müdahale olarak yeni bir yöntem olarak araştırmalarda yer almakta olsa da, tarihsel sürece bakıldığında insanın varlığı ile beraber doğanın iyileştirici gücüne inanma hep vardır (Adevi ve Lieberg, 2012). M.Ö. 3000 yılında var olan Çin halkının bitkilerden bir reçete yazdığı ve adından şifalı otlar olarak bahsettiği kaynaklarda yer almaktadır. Sonraki süreçlerde tarihin verimli toprakları olarak da geçen Mezopotamya'da, Pers bahçelerinde ve eski Roma İmparatorluğu'nda bitki kullanımı olduğu bilinmektedir (Scott, 2017). Hortikültürel terapi tarihte sadece bitkilerin kullanımı ile değil, doğanın görüntüsü ve doğa içinde yapılan fiziksel hareketlerin ruhsal yapıya ve algılanan sağlık düzeyine etki ettiği görülmüştür ve Mısır kraliyet ailesinde uygulanmış, ilk örneklerini göstermiştir. Bu uygulamalar ile tarihin ilk hekimlerine botanikçiler demişlerdir (Yar, 2019; Olszowy, 1978; Lewis, 1976). Günümüz kullanımına gelindiğinde ise Pensilvanya' da bulunan Dr. Benjamin Rush, ruh sağlığı bozukluklarına karşı bir tedavi sürecini Hortikültürel Terapi kavramını kullanarak açıklayan ve kanıtlayan ilk kişi olarak kabul görmüştür (AHTA, 2022).

Değişen dünya ile beraber günümüzde kapalı ortam kullanımının artmış olması (US EPA, 2014), zihinsel ve bilişsel süreçlerde sorunların artmasına neden olan birçok faktör barındırmaktadır (Chaudhury ve Banerjee, 2020; Oh ve ark., 2020; Wright ve ark., 2013). Ayrıca bu durumun dünyada anksiyete ve depresyon oranlarındaki artmayla ilişkili olduğu ortaya konmuştur (Earl, 2022; WHO, 2018). Doğa temelli terapilerin bu sorunların tedavi sürecinde etkili olduğu kanıtlanmıştır (Oh ve ark., 2020). Ayrıca Hortikültürel Terapi uygulaması bireylerde doğa ile iletişimde olma yoluyla kontrol duygusunda ve benlik kavramında gelişme sağlamaktadır (Kabakçı, 2023). Bu uygulama bireylerde algılanan streste azalma, dürtü kontrolünü sağlama, zihinsel işlevsellikte artma, duygusal işlevselliği sağlama ve dilin bilişsel işlevlerini deneyimleme konusunda etkilidir (Toyoda, 2012). Bahçecilik terapisi programı, psikolojik rehabilitasyon, güven ve başarma duygusunu desteklemekte açısından olumlu sonuçlar ortaya çıkarmaktadır (Lee ve ark., 2007). Süreç odaklı olan bu yaklaşımda ortaya çıkan son üründen çok, terapötik süreç önemli olarak Kabul edilmektedir. Terapötik süreç ise danışanın fiziksel ve ruhsal özelliklerine göre terapist tarafından düzenlenmektedir. Bir hortikültürel therapist ile çalışılan bu süreçte terapist danışanın özellikleri doğrultusunda planlama yapmaktadır (Haller ve ark., 2019). Hortikültürel terapi uygulamalarının bu özellikleri psikiyatri hemşireliği uygulamalarında kullanımını elverişli hale getirmektedir. Bu terapi yöntemi psikiyatri hemşireleri tarafından doğa dışında hastanelerde, psikiyatri kliniklerinde, hapishanelerde ve rehabilitasyon birimlerinde de kullanabilmektedir (Lasaater, 2022). Uygulama sürecinde bu tedaviyi uygulayan bahçecilik terapistleri

FULL TEXTS BOOK

bir ruh sağlığı uzmanı değil ise rehabilitasyon süreçlerinde eksiklikler olacağından birimlerde bulunan psikiyatri hemşirelerinin de görevlendirilmesi önerilmektedir (Kim ve ark., 2022).
Anahtar Kelimeler: Hortikültür, Terapi, Psikiyatri Hemşireliği, Ruh Sağlığı

ABSTRACT

Horticultural therapy (horticultural therapy) is a therapy method that uses horticultural activities with an innate affinity for nature to meet the therapeutic expectations of clients and is implemented with a professional manager (Toyoda, 2012). The purpose of these horticulture programs, which can be applied to people of all ages, varies personally, physically, spiritually, intellectually, and applications can vary according to the purpose (Pouya, 2023). Although it is included in research as a new method as a psychosocial intervention, when we look at the historical process, there is always a belief in the healing power of nature with the existence of human beings (Adevi & Lieberg, 2012). It is stated in the sources that the Chinese people who existed in 3000 BC wrote a prescription from plants and referred to it as medicinal herbs. In the following processes, it is known that plants were used in Mesopotamia, which is also known as the fertile lands of history, in Persian gardens and in the ancient Roman Empire (Scott, 2017). Horticultural therapy has been observed in history not only with the use of plants, but also with the appearance of nature and physical movements in nature affecting the mental structure and perceived health level, and it was applied in the Egyptian royal family and showed its first examples. With these practices, the first physicians in history were called botanists (Yar, 2019; Olszowy, 1978; Lewis, 1976). When it comes to today's use, Dr. Benjamin Rush in Pennsylvania was recognized as the first person to explain and prove a treatment process against mental health disorders using the concept of Horticultural Therapy (AHTA, 2022).

Today, with the changing world, the increased use of indoor environments (US EPA, 2014) has many factors that cause increased problems in mental and cognitive processes (Chaudhury & Banerjee, 2020; Oh et al., 2020; Wright et al., 2013). It has also been shown that this is associated with an increase in anxiety and depression rates around the world (Earl, 2022; WHO, 2018). Nature-based therapies have proven to be effective in the treatment of these problems (Oh et al., 2020). In addition, Horticultural Therapy practice improves individuals' sense of control and self-concept through being in contact with nature (Kabakçı, 2023). This practice is effective in reducing perceived stress in individuals, providing impulse control, increasing mental functionality, providing emotional functionality and experiencing the cognitive functions of language (Toyoda, 2012). The horticultural therapy program produces positive results in terms of psychological rehabilitation, supporting confidence and sense of accomplishment (Lee et al., 2007). In this process-oriented approach, the therapeutic process is considered more important than the final product. The therapeutic process is organized by the therapist according to the physical and psychological characteristics of the client. In this process with a horticultural therapist, the therapist makes planning in line with the characteristics of the client (Haller et al., 2019). These features of horticultural therapy practices make it suitable for use in psychiatric nursing practices. This therapy method can also be used by psychiatric nurses in hospitals, psychiatric clinics, prisons and rehabilitation units (Lasaater, 2022). If the horticultural therapists who apply this treatment in the application process are not a mental health specialist, it is recommended that psychiatric nurses in the units should also be assigned, as there will be deficiencies in the rehabilitation processes (Kim et al., 2022).
Keywords: Horticulture, Therapy, Psychiatric Nursing, Mental Health

Giriş

Bahçecilik terapisi, bahçe etkinliklerinin sağlık amacıyla kullanıldığı bir terapi türüdür. Bu terapi yöntemi bahçe ve kültür kelimelerinden türemiştir. Bahçecilik terapisi danışanları bitki ve bahçe merkezli etkinliklere katarak genel sağlıklarını iyileştirmeye amaçlamaktadır. Hortikültürel terapi

FULL TEXTS BOOK

uygulayıcıları bu terapi sürecinde bireylerin stres ve kaygı düzeylerini değerlendirir, azaltmak ve genel refahını artırmak için bu uygulamaları amaçlı şekilde kullanır (Navya ve Rani, 2021; Yar, 2019; Meore ve ark., 2021). Bahçecilik terapisinin tarihi süreci incelendiğinde eski Çin, Yunan ve Roma uygarlıklarının tarihte bahçeleri tedavi amaçlı kullanımının yaygın olduğu görülmektedir. Ayrıca eski Mısır'da sarayda görevli sağlık görevlilerinin ruhsal hastalığı olan kraliyet ailesi mensuplarının bahçe yürüyüşleri yapmasını tavsiye ettiği bilinmektedir. Modern çağa gelindiğinde 1800'lü yıllarda Amerika Birleşik Devletleri'nde bahçecilik terapisi zihinsel engelli bireylerle uygulanmaya başlanmış ve bu yöntemin kullanım alanı giderek artmıştır (Scott, 2017; AHTA, 2012; Olszowy, 1978; Yar, 2019). Dr. Benjamin Rush bu terapötik yöntemin etkinliğini ilk belgeleyen ve literatüre bu kavramı kazandıran kişi olarak bilinmektedir (AHTA, 2022).

Psikiyatri hemşireliği uygulamaları açısından hortikültürel terapi uygulamalarının etki alanları oldukça değerlidir. Hortikültürel terapi fiziksel zihinsel, sosyal ve entelektüel gelişimi desteklemektedir. Bu terapi yöntemi stres azaltma, özgüvenin artması, bilişsel işlevlerin korunması gibi birçok psikiyatrik fayda sağlamaktadır (Pouya, 2023). Araştırmacılar doğa ile temasın stresi, depresyonu ve olumsuz duyguları azalttığını göstermektedir. Bu terapi yönteminin hastaların öz güvenini artırdığı, sosyal becerilerini geliştirdiği belirlenmiştir. Bahçecilik terapisi tıbbi psikiyatrik rehabilitasyon ve hapishane ortamları gibi çeşitli ortamlarda uygulanabilmektedir (Haller ve ark., 2019). Ruhsal sorunları olan bireylere fiziksel ve psikososyal bakım rolü olan psikiyatri hemşireleri, hastaların bireysel olarak topluma uyum sağlamalarına yardımcı olmaktadır. Bu yönleri ile bahçecilik terapisi psikiyatri hemşireleri tarafından etkili bir şekilde uygulanarak, hastaların iyileşme süreçlerini olumlu katkı sağlama, tekrarlı yatışların önüne geçme, psikiyatrik iyi oluşu sürdürmede etki gösterebilir (Oh ve ark., 2020; Lee ve ark., 2007; Kim ve ark., 2022).

1. Hortikültürel Terapi Nedir?

Hortikültürel Terapi kelime anlamı olarak hortikültür yani bahçecilik işleri veya bahçecilik kültürü anlamlarını belirtmektedir. Latin dilinde 'hortus' 'cultus' yani bahçe ve kültür kelimelerinin birleşiminden oluşmaktadır. Bu terapi yöntemi bahçecilik ve rehabilitasyon alanlarını birleştiren nispeten modern bir alandır. Katılımcılar bu terapi yönteminde hortikültürel terapistin uygulamayı kolay hale getirmesi sayesinde bitki ve bahçe temelli faaliyetlere aktif veya pasif katılım yolu ile genel sağlık örüntülerinde iyileşmeyi amaçlar. Bitkiler ve bahçecilik uygulamaları terapide kullanılır ve insanların kendilerini daha iyi hissetmelerine yardım sağlar (Navya ve Rani, 2021; Yar, 2019; Meore ve ark., 2021). Bu terapi yöntemi amaca uygun olarak bitkileri ve bahçeleri kullanarak kişilerin sağlık verilerini olumlu etkilemeyi amaçlan bir örüntüyü tanımlar. Fakat bahçe terapisi, bitki dikme gibi elle yapılan etkinlikleri veya kuş sesini dinlerken pencereden bir bahçeyi izlemeyi de içerebilir (Scott, 2017). Doğal olan çevre ve bulunan unsurlar, dikkati anda tutmada oldukça verimli işlev görebilir, stres ve anksiyeteyi azaltabilir. Bu sayede bütünsel sağlık ile iyileşmeyi destekleyebilir. Yapılan araştırmalarda hastanede yatan hastaların odalarının bulunduğu camlardan baktıklarında büyük bir ağacın gölgesini görenler, bir dalı görenler ile mukayese edildiğinde büyük bir ağaç ve gölgesini görenlerin ameliyat sonrası fizyolojik ve psikolojik iyileşme açısından fayda sağladığını göstermiştir (Ulrich, 1984). Hortikültürel terapi yaklaşımının odak noktası daha çok duyusal deneyimlerde ve tüm duyuların kullanmasında olmaktadır (Scott, 2017).

2. Hortikültürel Terapinin Tarihi Süreci

İnsan dünyaya geldiği ilk andan itibaren doğanın sağlığı iyileştirici gücüne inanmış ve doğayı şifa bulmak, tekrardan yapılanmak yani yenilenmek amaçlı kullanmıştır (Adevi ve Lieberg, 2012). Bahçelerin ve içinde büyütülen bitki türlerinin insanın fizyolojik ve psikolojik sorunlarının tedavisinde kullandıkları en eski yıllardan bugüne bilinmektedir. Bu bahçelerin tedavi amacı ile kullanıma sunulması eski Asya, Roma ve Yunan tarihinde görülmektedir. Çin toplumuna ait olan bilinen şifalı

FULL TEXTS BOOK

otlar listesinin Pen Ts'ao tarafından M.Ö.3000 yılında ipek bir doku üzerine yazıldığı bilinmektedir (Gerlach-Spriggs ve ark., 1998). Sonraki süreçte M.Ö. 2000 civarında Mezopotamya'nın verimli tarım alanlarına ve M.Ö. 500 civarında Pers bahçelerine dayanır. Orta Çağ boyunca manastır bahçeleri, tıbbi bitkilerin yetiştirilmesi ve dinlenme için yer sağlamak amacıyla kullanılmıştır (Scott, 2017). Dicle ve Fırat nehirlerinin arasında bulunan verimli arazilerin, Mezopotamya bölgesinde bulunan 29 bahçeye ilham kaynağı olduğu bilinmektedir. M.Ö. 500 yıllarında ise Perslerin bahçelerinde; koku, görme, müzik ve suyu bir arada toplayarak var olan bütün duyulara hitap etmesi, bahçe tasarımlarını ortaya çıkarmıştır (AHTA, 2012).Bahçeciliğin bir tedavi bağlamında kaydedilen ilk kullanımı, eski Mısır'da, saray hekimlerinin zihinsel olarak rahatsız olan kraliyet ailesi için saray bahçelerinde yürüyüşler önerdiği zamanlarda meydana gelmiştir (Lewis, 1976; Yar, 2019). Bitki türlerinin şifa verici bilgisinin öğrenilmesi tıbbi olarak bilgeliğin başlangıcını var etmektedir. Bu nedenle tarihte ilk hekimler botanikçilerdir (Olszowy, 1978; Yar, 2019). 1800'lerde, Amerika Birleşik Devletleri'nde zihinsel engelli bireylere, dezavantajlı gençlere ve zihinsel engelli çocuklara terapi olarak bahçecilik yapılmıştır (Toyoda, 2012). Bir başka tarafta ise engelli bireylerin tedavi edici rehabilitasyonu, çiftliklerin en önemli parçalarından olan tarıma dayanmaktadır. Bu rehabilite edici tedavi yöntemi ilk başta bireylerin üretim amaçlı çalışması ile başlamıştır. Çiftliklerde konaklama imkânı bulamayan bireyler, çiftliklerin bağlı olduğu arazilerde çalışmaya başlamış ve bu sayede konaklama imkanı bulmuşlardır. Sonrasında çalışan kişilerde gözlenen farklılıklar hortikültürel terapinin ilerleyen yıllarda meslek haline dönüşmesine yardımcı olmuştur (Shoemaker, 2014). Pensilvanya' da bulunan Tıp Enstitüsünde "Amerikan Psikiyatrisinin Babası" olarak da söylenen Dr. Benjamin Rush, ruh sağlığı sorunlarına karşı Hortikültürel Terapi kavramını kullanan ve etkinliğini belgeleyen ilk psikiyatrist olarak kabul görmektedir (AHTA, 2022). Sonraki süreçte İkinci Dünya Savaşı sonrası ABD'de savaştan dönen gazilerin tedavilerine hastanede devam edilirken, hortikültürel terapi programlarının rehabilitasyon süreci içinde uygulandığı bilinmektedir (AHTA, 2022). 1955 yılına gelindiğinde yapılan hortikültürel terapi çalışması sonucu araştırmacılar şizofreni de dahil olarak bu terapi yönteminin ruhsal ve zihinsel süreçlerde olan sorunları büyük ölçüde iyileştirdiğini gözlemlemiştir (Kinross-Wright, 1955, Kabakçı, 2022). Sonraki süreçte 1973 yılında "Hortikültür Yoluyla Terapi ve Rehabilitasyon Konseyi" kurulmuş fakat sonradan adını "Amerikan Hortikültürel Terapi Derneği" olarak değiştirmiştir. Bu dernek kar amacı gütmeden halen varlığını devam ettirmektedir (Yar, 2019).

3. Hortikültürel Terapinin Psikolojik Etkileri

Hortikültürel terapinin uygulanan tüm modellerinde belirlenen gruplar üzerinde entelektüel, ruhsal, sosyal ve fiziksel gelişim düzeylerinin hepsinde olumlu gelişim düzeyine ulaşılabilmektedir (Pouya, 2023). Yetkin olarak uygulandığında benlik kavramının gelişmesinde, algılanan kontrol duygularında gelişim sağlamaktadır. Bu sayede bireylerin diğer terapötik girişimler için esneklik kazanması sağlanarak, uygulanan diğer tedavi süreçleri daha verimli işleyecebilmektedir (Pouya, 2023). Hortikültürel terapinin beklenen psikolojik etkileri içinde stresin azalması, güvenin yeniden kazanılması, yararlı benlik duygusunun geri kazanılması, zihinsel işlevlerin korunması veya geri kazanılması yer almaktadır. Bu kapsamda sıralanan zihinsel işlevler, oryantasyon işlevlerini (zamana, yere, kişiye vb. yönelim), enerji ve dürtü işlevlerini, dikkat işlevlerini (dikkati sürdürme, bölme ve kaydırma), bellek işlevlerini, duygusal işlevleri, algısal işlevleri, düşünce işlevlerini, üst düzey bilişsel işlevleri, dilin zihinsel işlevlerini, karmaşık hareketleri sıralamanın zihinsel işlevini ve benlik ve zaman işlevlerini deneyimlemeyi içermektedir (Toyoda, 2012). Bu deneyimleme farklı olan gruplarda bitkiler ile çalışma, öz saygı, farkına varma ve görev alma duygusunun yükselmesi gibi ruhsal ve zihinsel faydalar sağlamaktadır (Pouya, 2023). Bahçe bitkilerine yapılan bakım, bireylerin özgüvenlerini ve özgürlükçü duygularını artırmaktadır. Bahçe bitkilerinin görüntüleri, kokuları katılımcı kişiye huzur hissi vermektedir ve bireyin yaptıklarından haz almasını sağlamaktadır. Bu kazanımlara ek olarak hortikültürel terapi bireylere sosyalleşme fırsatı sunmaktadır (Uslu ve Shakouri, 2012). Fakat tüm

FULL TEXTS BOOK

hortikültürel terapi uygulamaları bitkilerden, gözlemden, renkten kaynaklanan hoş bir duygu ve sosyalleşme ortamı sunsa da amaçlarına göre uygulandığında sosyal, zihinsel ve fiziksel olarak kazanım sağlamaktadır (Yar, 2019).

4. Hortikültürel Terapi Kullanım Alanları

Hortükültürel terapinin ve bireyin ruhsal refah seviyesini artıran yeşil ortamların ortak noktası, bunların evrensel olarak bitki ortamlarında olmasıdır (Pouya, 2023). Bahçecilik terapisi, süreç odaklı olan, sürecin terapötik işleyişine odaklanan ve bir tedavi planı bağlamında ortaya çıkan aktif bir süreçtir. Bahçecilik terapisinde katılımcılar, bahçecilikle ilgili faaliyetlerde bulunurlar. Katılımcıların bakım gerektiren tanımlanmış bir sakatlığı, hastalığı veya yaşam durumu varsa, hortikültürel terapist aktiviteyi kolaylaştırır (Haller ve ark., 2019). Katılımcı ya da danışan, müdahalenin merkezinde yer alır (Lasaater, 2022). Hortikültürel terapi uygulaması ve mesleği dünya çapında gelişmeye devam ettikçe, bahçecilik terapisinin kullanımı çeşitli ortamlarda kullanılmaktadır. Bunlar arasında tıbbi, psikiyatrik, rehabilite edici ve konut ortamlarının yanı sıra yüksek stresli ortamlar olan bakım evleri ve hapishaneler bulunmaktadır. Bahçecilik terapisi, kırsal ve kentsel alanlar gibi coğrafi alanlarda, yüksek ve orta gelirli ülkelerde de uygulanmaktadır (Lasaater, 2022). 1214 katılımcıyı içeren 21 araştırmanın incelendiği bir sistematik incelemede hortükültürel terapi uygulamaları geniş etki yelpazesine sahip bir uygulama olarak tanımlanmış, bakım kurumları, hastaneler, evler gibi farklı alanlarda uygulanmasının teşvik edilmesi üzerinde durulmuştur (Wang ve ark., 2023).

5. Hortikültürel Terapinin Psikiyatri Hemşireliği Uygulamalarında Kullanımı

Araştırmalar, iç mekanlarda çok fazla zaman geçirmenin çeşitli fiziksel ve zihinsel problemlerle (örneğin uyku yoksunluğu) ilişkili olduğunu göstermektedir (Chaudhury ve Banerjee, 2020; Oh ve ark., 2020; Wright ve ark., 2013). Bununla birlikte, dünya çapında ruh sağlığı sorunlarındaki artışı kabul etmek de önemlidir. Bunlardan en yaygın ikisi depresyon ve anksiyetedir (Earl, 2022; WHO, 2018). Ruhsal hastalıklar, hastalığın doğası gereği çeşitli işlevsel bozukluklara neden olmaktadır. Ruhsal hastalığı olan bireylerin baş etme becerileri normal insanlara göre daha zayıf olmakla birlikte, bunun yarattığı stres nedeniyle bireylerde birçok psikososyal sorun ortaya çıkmaktadır (Park ve Park, 2017). Bu nedenle ruhsal hastalığı olan bireylerde hastaneye yatmayı gerektiren akut belirtilerin hafiflemesi ile hastaneden taburcu edilmesinden sonra dahi, hastalığın yol açtığı psikolojik ve kişilerarası sorunlar onların yaşamda zorluk yaşamasına, uzun bir süre boyunca tekrarlı hastane yatışlarının olmasına sebep olmaktadır (Kim ve ark., 2022).

Son zamanlarda ruh sağlığı hizmetleri, ruhsal hastalığı olan bireylerin hizmetlere proaktif katılımının güçlendirilmesini vurgulayan bir iyileşme modeline doğru genişlemektedir (Kwak ve ark., 2018). Ruh Sağlığı Refah Yasası'nın 2017'deki revizyonuyla ilgili önemli bir politika değişikliği, ruhsal hastalığı olan bireylerin etkili tedavisi ve rehabilitasyonu için taburcu olduktan sonra bile toplum temelli ruh sağlığı hizmet kuruluşlarıyla sürekli bir bağlantı sisteminin sürdürülmesi ve böylece psikososyal sorunlarla baş edebilmenin güçlendirilmesini içermektedir (Kim ve ark., 2020). Yani ruhsal hastalığı olan bireylerin taburcu olduktan sonra kendine yardım becerilerini kullanabilmeleri için klinik aşamadan itibaren zihinsel rehabilitasyon programlarından aktif olarak yararlanmaları oldukça önemlidir (Kim ve ark., 2022). Mental rehabilitasyon programının amacı, kronik ruhsal hastalık nedeniyle işlevleri azalan hastaların taburcu olduktan sonra normal bir yaşam sürmelerine yardımcı olmak, hastaların olumlu benlik saygısı ve başarı duygusu yoluyla sosyal beceri ve bağımsızlık geliştirmelerini sağlamaktır (Kang, 2015). Çeşitli zihinsel rehabilitasyon programları arasında hortikültürel terapi programının, ruh sağlığı sorunu olan kişiler için ilgiyi teşvik eden, bir şeyler üretebileceklerine dair güveni artıran, karmaşık olmayan etkinliklerden oluşan yapısıyla etkili bir yöntem olduğu söylenebilir (Lee ve ark., 2007). Hortikültürel terapinin anksiyete ve depresyon üzerinde olumlu etkilerinin olduğu saptanmıştır. Araştırmalar, doğa ile temas kurmanın stresi azaltmada, depresyon ve olumsuz duyguları azaltmada,

FULL TEXTS BOOK

olumlu duyguları artırmada etkili olduğunu ve bunun sonucunda ruh sağlığını iyileştirdiğini göstermiştir (Oh ve ark., 2020). Uzun vadede, doğada geçirilen zamanın dolaylı etkileri ev, iş ve genel olarak yaşamdan memnuniyet düzeylerinin artmasını sağlamaktadır (Oh ve ark., 2020). Şizofreni hastalarına yönelik uygulanan hortikültürel terapi programının etkililiğine ilişkin bir meta-analiz çalışması, şizofreni hastalarının ruhsal semptomları, rehabilitasyonu, yaşam kalitesi ve sosyal işlevleri üzerinde olumlu etkisinin olduğunu bildirmektedir (Lu ve ark., 2021). Bunun nedeni, hortikültürel terapide bitkiler aracılığıyla terapistle etkileşime girerek, akranlar arasındaki grup aktivitelerine katılarak, aktif ve bağımsız aktiviteleri mümkün kılarak, zihinsel hastalığı olan kişilerin gerilemesini önleyebilmesi ve sosyal becerileri geliştirebilmesidir (Lee, Kim, 2017). Bitki bakımı ve bitki yetiştirme deneyimi, ruh sağlığı hastalığı olan kişilerin zihinsel iyileşmesine yardımcı olmakta, onlara sadece bakılmaktan ziyade bir şeyle ilgilenebilecekleri ve sağlıklı bir yaşam sürdürmenin anlamı konusunda bir özgüven duygusu vermektedir (Matsuo, 2008). Bununla birlikte, Kore'de bu terapötik etkilerin avantajları kanıtlanmış ve uygulamada kullanılması teşvik edilmiş olmasına rağmen, çoğu psikiyatri kliniğinde bir iç çatı bahçesi, bir dış sebze bahçesi veya bir tedavi bahçesinin bulunmadığı, buna ayrılmış insan gücünün olmadığı, klinik ortamlarda kullanılmasının ve tutarlı bir şekilde uygulanmasının zor olduğu, dışarıdan bir hortikültürel terapistin işe alınmasının mali bir yük getirdiği bildirilmiştir. Uygulamada olan bu engeller birçok ülkede bulunan ruh sağlığı hastaneleri ya da psikiyatri klinikleri için geçerlidir. Bu nedenle bu uygulamanın yaygın şekilde kullanılması ve etki mekanizmasından faydalanılabilmesi için psikiyatri hemşirelerinin bu konuda eğitim almaları ve uygulamaları önerilmektedir (Kim ve ark., 2022).

Ağır ruhsal bozukluğu olan birey örnekleminde (n=24) hortikültürel terapi uygulamasının etkinliğinin incelendiği bir araştırmada 10 seans günde bir kez ve bir saat uygulanan program aşağıda verilmiştir:

1. Seans: Oryantasyon (Bahçeye Uyum, Aktiviteler vb)
2. Seans: Organik Tarıma Giriş (Uygulamalar)
3. Seans: Yetiştirme ve Büyüme
4. Seans: Büyük Başarıya Doğru Küçük Adımlar
5. Seans: Büyük Gün
6. Seans: Rahatlama İçin Otlar
7. Seans: Bir Korkuluk Kadar Dayanıklı Olun
8. Seans: Otların Tadına Bak
9. Senas: Hayata Geçirmek
10. Seans: Destekle Büyüt

Uygulanan bu program sonrasında anksiyete, depresyon, stres, iş performansı, yaşam kalitesi üzerinde olumlu sonuçlar elde edilmiştir. Bu çalışmada her oturumda bir tema bulunmaktadır ve canlı bitkilerle çalışılmıştır (Kam ve Siu, 2010).

6. Sonuç

Sonuç olarak hortikültürel terapi, insanın temelinde bulunan doğa ile etkileşimde kalma gereksiniminden yola çıkarak fiziksel ve psikososyal açıdan olumlu sonuçlar veren bir yöntemdir. Bu terapi yöntemi bahçe, çiftlik gibi açık alanlarda olduğu kadar hastane, cezaevi, bakım evi gibi kapalı alanlarda da etkin şekilde kullanılabilmektedir. Kliniklerde ve eşdeğer ortamlarda uygulanan hortikültürel terapi programları hasta veya danışanların ihtiyaçlarını belirleyen ve bu süreçte amaçlı bir müdahale programı tasarlayabilen psikiyatri hemşirelerinin uygulaması için uygundur.

ÖZET
1790-1820 arası İngiltere'nin siyaseten en radikal yıllarıydı. Bu radikal yıllarda yaşananlardan çıkarılan dersler İngiliz demokrasisi ve parlamenter yapısının gelişiminde önemli rol oynadı. Radikal dönemde liberallerin ve işçilerin talepleri, demokrasi mücadelesi ve kazanımlarının dayanak noktası oldu; talepler, farklı yöntemlerle ısrarla dile getirilerek uzun bir mücadelenin sonunda hakedildi. Cato Sokağı Komplosu olarak anılan olay bu radikal dönemin en ilginç olaylarındandı. Dönemin koşulları Kral III. George'un 29 Ocak 1820'deki ölümü ile doğan hükümet bunalımıyla daha zorlu bir hal aldı. Napolyon Savaşları'nın yarattığı ekonomik sorunlar, Spa Fields ve Peterloo gibi olaylar nedeniyle öfkeli olan cumhuriyetçi bir grup radikal, hükümet krizini de fırsat bilerek bir komplo planladılar. Bu komplo, tüm kabine üyelerini ve başbakanı öldürmeyi içeren bir darbe planıydı. Ancak aralarındaki casus George Edwards nedeniyle komplo açığa çıktı. Olayla bağlantılı olan ve suçlu bulunan 11 kişiden 5'i idam edildi, 5'i Avustralya'ya sürgüne gönderildi, 1'i ise hapis cezası aldı. Cato Sokağı Komplosu'na karışan isimlerin tamamı Spencean Hayırseverleri olarak bilinen ve Thomas Spence'in fikirlerini takip eden grubun üyeleriydi. Thomas Spence, genel oy hakkını destekleyen, özel mülkiyete son verilerek ulusun topraklarının halk arasında paylaştırılmasını savunan fikirleri ile bilinir. Spencean Hayırseverleri grubu yaklaşık 27 kişi olmakla birlikte, Cato Sokağı Komplocuları 13 kişiydi ve Onüçler Komitesi olarak bilinmekteydiler. Komplocular, Lordlar Kamarası üyelerinin ve Kabinenin, ülkedeki tüm acıların mimarı olduğuna inanarak hareket etmişlerdi. Kabine üyelerinin Grasvenor Meydanı'ndaki Lord Harowby'nin evinde birlikte akşam yemeği yiyeceklerini aktaran New Times gazetesindeki haber ile yemeğin yeneceği 23 Şubat 1820 akşamı elbombası ve diğer ateşli silahlarla tüm kabine üyelerini öldürmek üzere harekete geçtiler ve Grasvenor meydanına çıkan Cato Sokağı çıkmazındaki bir ahıra saklandılar. Harekete geçmek üzereyken tedbir almış olan Coldstream Muhafız Müfrezesi'nin baskını ile yakalandılar. Mahkeme sürecinde grubun lideri Arthur Thistlewood'un savunması ile idam edilenler arasında olan William Davidson'ın savunması dönemin radikal fikirlerini vurgulaması açısından dikkat çekici savunmalar olarak öne çıkmaktadır.
Bu çalışmanın amacı İngiltere'deki toplumsal yapı değişimi ile bunun siyasete olan etkisini açıklamak ve Cato Sokağı Komplosu'nun mikro olarak bu süreçteki yerini detaylandırmaktır. Bu detaylandırma çabası, Cato Sokağı Komplosu gibi radikal girişimlerin İngiltere'de başarıya ulaşmama nedenlerini açıklayabilmek için bir başlangıç noktası oluşturacaktır. Bu çerçevede İngiltere'de radikal dönemin çatışmalı ortamından uzlaşmaya geçişin temel dinamikleri nelerdir? Sorusunun yanıtlanması mümkündür. Bu sorunun yanıtı ile İngiliz Demokrasisi'nin özgün yanları tespit edilebilir. Bu amaçlar çerçevesinde çalışma iki bölüm olarak planlandı: Giriş bölümünde Sanayi Devrimi, İngiltere'nin ekonomik değişimi ve toplumsal yapıdaki değişim açıklanmaktadır. Birinci bölümde 1799'da işçi örgütlenmeleri dahil her türlü muhalif örgütlenmeyi yasaklayan İsyancı Dernekler Yasası sonrasında gelişen ve hak talep eden eylemler ile tarihsel arka plan özetlenmektedir. İkinci Bölümde ise Cato Sokağı Komplosu'nun gelişim süreci ve etkileri ele alınmaktadır.
Anahtar Sözcükler: İngiltere'de Demokrasi, Cato Sokağı Komplosu, Arthur Thistlewood, İngiltere'de Gösteriler

FULL TEXTS BOOK

ABSTRACT

Between 1790 and 1820, England experienced its most politically radical years. The lessons drawn from this period significantly influenced the development of English democracy and the parliamentary system. During these radical years, the demands of liberals and workers laid the foundation for the struggle for democracy and its eventual achievements. These demands were persistently expressed through various methods and were ultimately realized after prolonged efforts. One of the most intriguing events of this era is the Cato Street Conspiracy. The period's challenges were exacerbated by the government crisis following King George III's death on January 29, 1820. A group of angry republican radicals, motivated by the economic problems stemming from the Napoleonic Wars and events such as Spa Fields and Peterloo, exploited this crisis to plan a conspiracy. This conspiracy aimed to overthrow the government by assassinating all cabinet members and the prime minister. However, the plot was foiled by a spy among them, George Edwards. Of the 11 conspirators found guilty, 5 were executed, 5 were exiled to Australia, and 1 was imprisoned. All those involved in the Cato Street Conspiracy were members of the Spencean Philanthropists, a group that adhered to the ideas of Thomas Spence. Spence advocated for universal suffrage and the redistribution of the nation's land among the people, proposing the abolition of private property. The Spencean Philanthropists consisted of approximately 27 individuals, while the Cato Street Conspirators, known as the Committee of Thirteen, numbered 13. The conspirators believed that the House of Lords and the Cabinet were responsible for the country's suffering. They planned to kill all cabinet members with grenades and firearms on the evening of February 23, 1820, based on a New Times newspaper report that the cabinet members would dine together at Lord Harrowby's residence in Grosvenor Square. They hid in a barn in the cul-de-sac of Cato Street leading to Grosvenor Square, but were captured during a raid by the Coldstream Guards Detachment, who had taken precautions. The defenses of the group's leader, Arthur Thistlewood, and William Davidson, who was among those executed, highlighted the radical ideas of the time during their trial.

This study aims to explain the changes in England's social structure and their impact on politics, detailing the role of the Cato Street Conspiracy in this process on a micro level. This detailed examination serves as a starting point to explain why radical initiatives like the Cato Street Conspiracy did not succeed in England. Within this framework, the study seeks to answer the question: What are the fundamental dynamics of the transition from a conflicting environment to a consensus during England's radical period? Addressing this question can reveal the unique aspects of English democracy. The study is planned in two sections: The introduction discusses the Industrial Revolution, England's economic transformation, and changes in social structure. The first section summarizes the historical background and rights-based actions that emerged after the Seditious Societies Act of 1799, which banned all forms of dissenting organization, including worker organizations. The second section addresses the development process and effects of the Cato Street Conspiracy.

Keywords: Democracy in England, Cato Street Conspiracy, Arthur Thistlewood, Demonstrations in England most politically radical years.

GİRİŞ

Cato Sokağı Komplosu'na olan ilgi 2020'de komplonun 200.yıl dönümü nedeniyle artmış[1] ve çeşitli tartışmaları da beraberinde getirmiştir. Cato Sokağı Komplosu, İngiltere Tarihi açısından uzun bir süre

[1] Westminster Community Reminiscence and Archive Group (WCRAG) isimli bir Sivil Toplum Kuruluşu tarafından Heritage Fund'dan alınan 72.400 £'luk hibenin yardımı ile Westminster tarihini ortaya çıkarmak ve her yaştan insanı Westminster tarihine dahil etmek amacıyla Cato Sokağı Komplosu hakkında bir yerel tarih projesi başlatılmış ve Cato Sokağı Komplosu'na özel bir internet sayfası oluşturulmuştur. https://www.catostreetconspiracy.org.uk/

FULL TEXTS BOOK

görmezden gelinmiş ve ümitsiz, aptalca ve nihayetinde önemsiz bir olay olarak aktarılmıştır (McElligot, 2021, s. 481). Oysa İngiltere Tarihi'nde Cato Sokağı Komplosu kadar şiddet içeren olaylar, 1605 Barut Komplosu ya da IRA'nın 1984'te Brighton'daki Grand Hotel'de Tory kabinesine suikast planı gibi, sonuçlarından bağımsız ilgi görmüşlerdir. E. Palmer Thompson, bu ilgisizliğin oldukça tuhaf olduğu ve dönemin kaynaklarının yeterince değerlendirilmemesinden kaynaklandığı görüşündedir (Thompson, 2006, s. 588-590). 2000'lerin başından itibaren Cato Sokağı'nın ele alınış biçimi farklılaşmaya başlamış, Birleşik Krallık Ulusal Arşiv'indeki belgeler ve mahkeme kayıtları ile olayın detayları yüksek bir akademik ilgi ile incelenmiştir. Bu incelemeler Cato Sokağı Komplosu'nun basit bir hükümet darbesi girişimi yerine Fransız Devrimi'nden etkilenen Cumhuriyetçi fikirleri olan, İrlanda radikalizminden etkilenen; askeri birlikleri işin içine katarak ne kadar zor görünürse görünsün bir askeri darbe olasılığını yaratan, ciddi etkileri olan bir olay olduğunu ortaya koymuştur.

Komplonun ortaya çıktığı dönemde Lord Liverpool başbakanlığındaki hükümet, İngiltere tarihinin en hatırda kalan hükümetlerinden biridir. Bunun en önemli nedeni Napolyon Savaşları'nı yöneten ve başarıyla sonuçlandıran kabine olmasıdır. Castlereagh, Canning ve Lord Sidmouth gibi aristokrat kökenleri zayıf bakanlar[2] (McCord & Purdue, 2007, s. 11) İngiliz hükümetlerinde farklı profilli bakanlar dönemini başlattı. Bu hükümet dönemi ayrıca hükümet sisteminin güçlendiği, monarşi karşısında hükümet yetkilerinin genişlediği ve bu bağlamda parlamenter yapının güçlendiği bir dönemdir. Bu güçlenmede Naiplik döneminin etkisi vardır. Liverpool hükümeti aynı zamanda Torylerin birkaç parçaya bölündüğü bir dönemdir. Bizzat Liverpool, liberal muhafazakardır, ekonomik yapıdaki değişimin bir yansıması olarak Whigler parlamentoda daha etkin olmaya başlamışlardır. Ancak bu durum Muhafazakar Whiglerin kopmasından sonra yavaş yavaş gerçekleşebilmiştir (McCord & Purdue, 2007, s. 10). Özellikle Lordlar Kamarası'ndaki bu değişim 1830'da IV. George'un Reform Yasalarını Lordlar Kamarası'ndan geçirebilmek için yaptığı yeni Lord atamaları ile hızlanmış Muhafazakar ve Liberal partilerin oluşumu adı konabilir hale gelmiştir.

Sanayi devrimi, İngiltere'de üretim ilişkilerini 1750 sonrasında hızla değiştirmiştir. 1750 sonrasında uzun bir süreç boyunca hazırlanan sanayi devrimi İngiltere'yi bir ekonomik büyüme sürecine sokmuştur. Teknolojik ilerlemelerin başat katkısı ile sanayi devrimi başta dokuma sektörü olmak üzere üretim ve istihdam artışını gerçekleştirmiş, deniz gücü üstünlüğü ile uluslararası ticaretin büyük kısmı İngiliz tüccarlar eliyle gerçekleşmeye başlamıştır. Bu şartlar altında öncelikle toplumsal bir değişim başlamış ve eskiden tarım işçisi olarak çalışan insanlar sanayi işçisine doğru dönüşmüştür. Toplumsal sınıfların ayrıcalıkları açısından belirgin değişim, kent nüfuslarının artışı ile yeni ve eskisinden daha farklı bir yaşam tarzını, toplum düzenini beraberinde getirmiştir. Sanayi devriminin daha iyi beslenme ve tıbbi yardım sağlayan koşullarının etkisi ile de hızlı artan nüfus, İngiltere'de üretimin yoğunlaştığı sanayi kentlerinde işçi olarak çalışmaya başlamıştır. Manchester, Liverpool, Birmingham gibi sanayi kentleri giderek güçlenerek parlamentoda daha fazla temsil hakkını arayan ve sürecin değişimine toplumsal gösteriler ile etki eden merkezler olmuşlardır (Allen, 2006). Cato Sokağı Komploculları'nın Londra'da başlattıkları bir devrimin bu kentler tarafından takip edileceğine dair inançları buradan kaynaklanmaktadır. Ancak daha iyi yaşam beklentisi ile kentlere gelen insanların 19.yüzyıl başındaki ekonomik sıkıntılarla yüzleşmesi sırasında beklenti ve talepleri değişmiştir. Bu değişimde dönemin aydınlanmacı düşüncelerinin etkisi ile başta daha iyi yaşam ve çalışma koşullarına yönelik talepleri; ardından da karar verici bir etkiye sahip olmak adına siyasal talepleri gelmiştir. Bu bildiriye konu olan olayların ve süreçlerin tamamı bu değişim döneminin başlangıcını aktarmakta, bildiri; çatışmadan uzlaşmaya geçişin dinamiklerini aramaktadır.

[2] Castlereagh, İrlandalı bir aileden gelen ikinci kuşak bir soyluydu, Canning, kariyerini kendi yeteneklerine ve başarılı bir bankacı olan amcasının zamanında yardımına borçluydu. Lord Sidmouth, bir doktorun oğluydu ve siyasete W. Pitt'in bir arkadaşı olarak girmişti; asaleti sadece 1805'ten kalmaydı.

FULL TEXTS BOOK

1. 18.YÜZYIL SONUNDAN 1820'YE TARİHSEL ARKAPLAN

İngiliz tarihçi Eric Hobsbawm, 1789-1848 yılları arasını Devrim Çağı olarak tanımlar ve bu dönemde İngiltere'nin rejim değişikliği ile sonuçlanan bir devrimden kurtulmasının şans eseri olduğu görüşündedir. Hobsbawm'a göre devrim ruhuyla hareket eden bir burjuvazinin olmaması anarşiye sürüklenmeyi önlemiştir (Hobsbawm, 2003). İngiltere'de Devrim Çağı, araştırmacılar tarafından üç döneme ayrılarak incelenmektedir. Birinci dönem 1789-1815 Fransa ile mücadele dönemidir. İkinci Dönem 1815 barışı sonrası ekonomik sıkıntıların derinleştiği, sanayi devrimi etkilerinin ortaya çıktığı ve 1830'a kadar süren dönemdir. Bu dönem İngiliz siyasal yapısının en hızlı değiştiği dönem olarak kabul edilebilir. Üçüncü dönem ise 1832 Reform Yasasının kabulü ile 1848 arasında geçen dönemdir (Lee, 1994, s. 15).

Birinci dönemde başta kıta ablukasının getirdiği ekonomik sorunlarla gittikçe zorlaşan bir dönem yaşanmış, artan nüfusu besleme sorunu; tarımsal üretimde 1790 sonrası görülen bitki hastalığı kaynaklı düşüş ile en önemli sorunlardan biri haline gelmiştir. Bu dönemde yiyecek sıkıntısı *"radikal dava için önemli bir üye kazanım aracı"* haline gelmiştir (Lee, 1994, s. 17-18).

Fransa ile savaş devam ederken İskoçya ve İrlanda'nın karışması; donanmada 1797 Nore ve Spithead isyanları sürekli varolan bir ayaklanma söylentisini de beraberinde getirmiştir. Buna rağmen Lee, İngiltere'de genel bir ayaklanma olasılığını *"oldukça düşük"* olarak değerlendirmekte ve bunun nedenlerini şu şekilde analiz etmektedir: En önemli unsur Fransız Devrimi'nin İngiltere'de sınırlı bir etki yaratmasıdır. Fransızların aksine İngiliz siyasal sisteminin soyut haklar yerine Burke etkisi ile somut haklara yönelmesi, ekonomik durum iyileştikçe devrim ve ayaklanma riskini azaltmıştır. İngiltere'de Locke'un etkisi Rousseau'dan fazladır. Locke'un akılcılığının Rousseau'nun eyleminden fazla olması uzlaşmayı desteklemiştir. Ayrıca İngiltere'de 17.yüzyıl devrimlerinden itibaren bir radikalizm geleneği vardır ve en geniş kitlelere hitap eden gruplar genellikle en az açıkça devrimci olanlardır. İngiltere'de Protestanlığın çeşitli biçimlerinin varlığı, her ne kadar Anglikan kilisesine ayrıcalıklar tanınsa da, devam edebilmiş ve Protestanlığın dünyevi hayatla olan bağı radikalizmi kısıtlayıcı bir etki yaratmıştır. Metodizm özellikle siyasi uyumu vurguladığından İngiltere'de radikalizmi azaltan önemli bir unsur olmuştur (Lee, 1994, s. 17-18).

Hükümet ayrıca yasal düzenlemelerin sağladığı kısıtlamalar ile siyasal kurumları stabil tutabilmiştir. 1794-1800 arası arka arkaya hükümet kontrolünü arttıran düzenlemeler yapılmıştır. Bu düzenlemelerden en başta geleni Cato Sokağı Komploculari'nın idam cezası almalarında ve idam şekillerinde etkisi bulunan 1795 tarihli Vatana İhanet Yasası'dır. Diğer önemli düzenlemeler 1799'da başta işçi örgütlenmeleri olmak üzere toplumsal örgütlenmeleri yasaklayan Corresponding Societies[3] ve İsyancı Dernekler Yasası (Seditious Societies Act)[4]'dır (Lee, 1994, s. 19). Bu yasaklara rağmen parlamenter reform belli isimlerin liderliğinde savunulmuştur. William Cobbet, John Cartwright, Henry Hunt gibi isimler gerçek bir öncülük yapmıştır (Morris, 1948).

Çeşitli talepler kent merkezlerinde yüksek sesle dile getirilmeden önce maden, tarım ve dokuma üretimlerinin yoğun olduğu kırsal bölgelerde eylemler başlamıştır. Makine Kırıcılığın 1811 civarında başladığı (Hobsbawm, The Machine Breakers, 1952); Yorkshire'ın West Riding bölgesinde, Lancashire'da ve Midlands'da oldukça etkili olduğu söylenebilir, 1815'te Battaniyeciler Eylemi, 1816

[3] Bu terim Türkçeye Mektuplaşma ya da Yazışma Dernekleri olarak çevrilebilir. 18.yy. sonunda fikir ve bilgi paylaşımı amacıyla kurulan aynı zamanda birer yardımlaşma derneği olarakta çalışan sivil topluluklardır. İngiltere'de işçi örgütlenmelerinin gelişerek sendikalaşması konusunda önemli rol oynamışlardır. Bunlar arasında en dikkat çekeni ve Spencean Hayırseverler Derneği ile irtibatta olanı London Corresponding Society'dir. Bu çerçevede İngiltere'de Sendikal yasakların 1799'da başladığı kabul edilir.

[4] İlk etapta radikal olan mektuplaşma derneklerini diğerlerinden ayırmak için kullanılmıştır. Ancak sonrasında hükümet hemen hepsinden aynı derecede çekinmiştir. Bu tür yasaklayıcı yasaları birleştiren bir Birleştirme Yasası (Combination Act'te)1800'de çıkartılır.

FULL TEXTS BOOK

Spa Field Gösterileri, 1817 Derbyshire Ayaklanması (Pentridge Ayaklanması), 1819 Peterloo[5] ve 1820 Cato Sokağı Komplosu dönemin en radikal itirazlarıdır (Lee, 1994, s. 21-23). Bu itirazların motivasyon kaynağı henüz sınıf bilincinin tam olarak gelişmediği bu dönemde ücretlerdeki düşüşler ve istihdama yönelik tehditlerdir. Yok sayıldıklarının farkında olan insanlar değişim talep etmekten başka çıkar yol görmemişlerdir. Bu değişim döneminde geldikleri toplumsal kökenin bir yansıması olarak Cato Sokağı Komplocuları, aristokrasiye ve monarşiye karşı bir nefret geliştirmişlerdir. Yukarıda sayılan olaylarda hükümetin takındığı tavizsiz otoritenin kaynağı olarak Lord Liverpool'u ve İç İşleri Bakanı Lord Sidmouth'u görmüşlerdir. Cato Sokağı Komplocuları'nın Lideri Arthur Thistlewood ile Lord Sidmouth arasında ayrı bir nefret olduğunu da belirtmek gerekir. Thistlewood, Sidmouth'u bir tiyatro oyununda sahneye çıkarak düelloya davet etmiştir, sürekli kendisine tehdit içerikli mektuplar yazmıştır. 1816'da Habeas Corpus'un[6] kaldırılması ve 1818 Ocak ayına kadar uzatılması nedeniyle Thistlewood, Sidmouth'a ettiği tehditlerden tutuklanarak yargılanmadan 1817'de hapiste tutulmuştur (McCord & Purdue, 2007, s. 23).

Derbyshire ve Peterloo olayları hoşnutsuzluğu geniş kitlelere ileten ateşleyiciler olmuştur. Spencean Hayırseverlerinin bu süreçte oldukça fazla sempati ve aktif taraftar edindiği söylenebilir. Komplocular, İngiltere'deki bütün kötülüklerin kaynağı olarak Kralı, Naibi, Başbakan Liverpool'u ve Lord Sidmouth'u görmüşlerdir. Kral, III. George'un akıl sağlığı ile oğlu, naip IV. George'un bohem hayatı zaten sorunlarla boğuşan pek çok sıradan insan açısında önemsenmediği duygusunu hissettirmiştir (McCord & Purdue, 2007, s. 16-26).

1815 sonrası ikinci dönemin önemli bir faktörü de savaşın bitimi ile İngiliz Donanması'nın küçülmesi ve terhis olan askerlerin durumudur. Askerlerin içinde bulunduğu ekonomik durum ve daha önce donanmada gerçekleşen isyan örnekleri Thistlewood'a devrimci bir girişim esnasında ordudan destek bulabileceklerini düşündürmüştür.

1815 sonrasında savaş ekonomisinin sona ermesi ile maliyet ve giderlerde azalma beklentisine rağmen değişen koşullar ve savaş sırasında oluşan borçlanma, kamu maliyesinin sürekli açık verdiği bir döneme girdiğinin işaretlerini vermiştir. Bu durum halkta, savaş zamanı konmuş olan dolaylı vergilerin kaldırılması beklentisi ile çelişmiş; yiyecek kıtlığı, yüksek vergi ve düşük ücret ile yüksek fiyatlar arasında ekonomik huzursuzluklar artmıştır. 1815'te çiftçi ve toprak sahiplerini korumak üzere tahıl yasalarının çıkartılması, tahıl ithalatının yerli üreticiyi korumak üzere sınırlandırılması ekmek fiyatlarının artmasına neden olmuştur (McCord & Purdue, 2007, s. 33). Hükümet gerçek bir mali reforma ancak 1820 sonrasında başlayabilmiştir.

1820'de III. George'un ölümü Kraliçe Viktoria'yı tahta çıkaracak olaylar ve varisler sürecini başlatmıştı. IV. George döneminde Kral ve Lord Liverpool arasındaki denge 1827'de Liverpool'un ölümü ile bozuldu, Liverpool sonrası Canning'in başbakanlığı kısa ve kabine birlikteliği sağlayamayan bir başbakanlık oldu. Hükümet kurmada yaşanan sorunlar ve güç dengelerinin değişimi 1830-32 arasında yasama reformlarının en önemli nedeni haline geldi.

1832'deki reform yasası ile İngiltere'de oy verme için gerekli olan şartlar hafifletildi. Hala belli bir oranın üstünde vergi veriyor olma şartı mevcuttu ancak toprak sahibi olma şartı kaldırılmıştı. Bu durum oy hakkı genişlemesinin ilk büyük adımı oldu ve Whigler arasında oy kullanamayan hemen hemen

[5] Olaya Waterloo'ya atıf ile Peterloo denmektedir. 1819'da Manchester'ın hemen dışındaki Saint Peter çayırında düzenlenen barışçıl gösteri İngiliz Süvarilerin sert müdahalesi ile bir katliama dönüşmüştür. Süvarilerin komutanı olarak Waterloo kahramanı Lord Wellington'un varlığı Peterloo adının verilmesinde başlıca etkendir.

[6] İngiltere'de 17.yüzyıl devrimlerinin sonucu olarak ortaya çıkmış insan haklarının ve demokratik gelişimin önemli bir parçası olarak nitelendirilen yasadır. 1679 yılında çıkan yasa, tutuklamaların mahkeme kararına bağlanmasını ve suçun kanıtlar ile mahkemede ispatlanma zorunluluğunu sağlamıştır. Yasa, İngiltere'de 1794'te 1814, 1816 ve 1863'te belirli süreler ile askıya alınmıştır. Bazı savaş durumlarında da uygulanmamıştır.

FULL TEXTS BOOK

kalmadı. Az sayıda işçi de oy kullanma hakkına kavuşmuş oldu. İşçilerin çoğunun oy kullanmasını sağlayan değişiklik ise 1867'de gerçekleşti.

2. CATO SOKAĞI KOMPLOSUNUN GELİŞİMİ

2.1. Thomas Spence ve Spencean Hayırseverleri Derneği

Spencean Hayırseverleri Derneği, Naiplik döneminde tarım işçilerinin ve kentlerdeki çalışanların içinde bulunduğu umutsuz koşullarda gelişme fırsat bulmuş ve geniş bir sempatizan kitlesine ulaşmıştı. Buna rağmen işçi sendikalarından ya da diğer radikal gruplardan daha az incelenmiştir. Oysa Lord Sidmouth'un casus ağını yönetem John Stafford, Spence'in ölümü sonrası cemiyete özel bir ilgi göstermiş, önce John Castle isimli casusu arkasından Cato Sokağı Komplosu'nda önemli bir rol oynayan George Edwards'ı gruba yerleştirmişti. (Beeson, 2012, s. 6) Muhtemelen Cato Sokağı Komplosu olmasa cemiyetin daha fazla göz ardı edilmesi söz konusu olurdu.

Thomas Spence'in ilk fikirlerini 1773'te Newcastle olaylarına tanık olduktan sonra geliştirdiği düşünülmektedir. Newcastle'da çiftçilerin çitleme hareketine karşı direnişi sonrası toprağın hallkın ortak malı olduğuna dair ilk fikirilerini dile getirmişti. Spence, toprağın zenginliğin tek kalıcı biçimi olduğuna inanıyordu, bu nedenle toprak sahiplerinin mücevherleri ve taşınır malları onlarda kalabilirdi ama toprak olmadan servetlerinin devam etmesini mümkün görmüyordu. Ayrıca kadınlara oy hakkı dahil genel oy hakkına ve gizli oylamaya inanıyordu. Çalışamayacak durumda olanlar için gelir garantisi sağlanmasını ve dokuma fabrikalarında çalıştırılmakta dahil olmak üzere çocukların istismar ve yoksulluktan korunması gerektiğini savunuyordu. Merkezi hükümete güvenmiyor ve daimi bir orduya karşı çıkıyordu. Herkesin toplum içindeki yerini gerçekten anladığında bu fikirlerden ayrı düşünemeyeceği görüşündeydi. (Beeson, 2012, s. 19)

Spence, 1792'de Londra'ya gitti, burada London Corresponding Society (LCS) ile ilişki kurdu ve bu ilişki sonrasında hükümet tarafından takip edilmeye başlandı. LCS ile ilişki kurması cemiyetinin geleceğinde ve Cato Sokağı Komplosu'nda etkili olmuştur. Londra'da kendisi etrafında bir hayran kitlesi oluşarak cemiyetin kurulması gerçekleşmiştir. Cemiyet'in 1803'te kurulduğu kabul edilmektedir (Beeson, 2012, s. 21). Butcher, Cemiyetin toplantılarını her hafta White Lions barında yaptığını ve en az 30 kişinin sürekli toplantılara katıldığını söylemektedir (Butcher, 2007, s. 10).

Özetle; Thomas Spence (1750-1814), arazinin ortak mülkiyete devredilmesini savunmuş ve Paine'in insan hakları kavramını politik bağlamın aksine geniş bir ekonomik anlayışa dayandırarak savunmuştur. Spence'e göre insanın iyi yaşama hakkı geniş bir ekonomik özgürlükten ve her bireyin mülkiyetinden tam olarak faydalanmasından geçer (McElligot, 2021, s. 488-489). Toprak mülkiyetinin hala başlıca zenginlik kaynağı olduğu bu dönemde fikirleri geçimlik toprağı çoğunlukla olmayan ve karın tokluğuna çalışan geniş bir kitlede yer bulmuştur. Spence'in fikirleri özünde oldukça barışcıldır. Spence'in ölümünden sonra yerine Thomas Evans geçmiştir. Grubun Evans, döneminden itibaren daha radikal bir hale geldiği görülmektedir. Ancak Evans'ın 1816 sonunda Cemiyetten ayrılması ile Thistlewood'un liderliğe gelmesi sonrasında en radikal cemiyetlerden biri haline gelir. Tarihçiler Spenceanların kralın kendisine kızgın olmadıkları konusunda hemfikirdir. Cemiyet içinde 13'ler Komitesi olarakta bilinen Cato Sokağı Komplocuları da Hannover Hanedanı'nın çok uzun süredir iktidarda olduğuna inansalarda, esas olarak Parlamento üyeleri ve kralın kabinesi tarafından gerçekleştirildiğini düşündükleri yetki suiistimallerine kızgındırlar (Beeson, 2012, s. 13).

Cato Sokağı Komplocuları'nın tamamı Thomas Spence'in fikirlerini savunan Spencean Hayırseverleri Derneği'ne farklı zamanlarda giren geçmişleri birbirinden farklı radikallerdir. Grubun en radikalleri Arthur Thistlewood, James Watson, Thomas Preston'dır. Bu isimlerin ortak noktası geçmişlerinde hepsi farklı gruplarda silah zoruyla köklü anayasal değişiklikler yapma arzusunu geliştirmişlerdir. Barışcıl bir gösteri olan Peterloo'nun kanlı bir şekilde bitmesinin arsından Aralık 1819'da Thistlewood ilk olarak 200 kişi ile parlamentoyu basma planını gruba kabul ettirmeyi denemiş ancak 40 kişi ile kabinenin düzenli toplu yemeklerinden birinde kabineyi öldürmenin daha gerçekçi bulunması ile plan değişmiştir.

FULL TEXTS BOOK

Grup, 1 Şubat 1820'de gerçekleşeceği bilinen kabine yemeğini hedef almıştır (McElligot, 2021, s. 483). Koplocuların hedefi, tüm kabineyi öldürerek ortadan kaldırmak ve geçici bir hükümetin kurulmasını sağlayarak bu süre içinde eşitliği sağlayan reformları hayata geçirmektir. Bu plana Batı Yakası İşi (West End Job) adını vermişlerdir (Beeson, 2012, s. 1).

2.2. Komplonun Planlanması ve Polis Baskını

Komplocular, ilk olarak 1 Şubat'taki baskın hedefine yönelik; 25 Ocak'ta Gray's Inn Yolu 4 Fox Court'ta Komplocu John Brunt'un kaldığı evde ilk planlama toplantısını yaptılar. Toplantıya katılanlar şunlardı: John Brunt, iç işleri casusu George Edwards, Abel Hall, John Palin, Bay Potter, Arthur Thistlewood ve Richard Tidd. Toplantıda, yemeğin yapılacağı Grosvenor Meydanı'ndaki Harrowby Konutu'nun sürekli gözlenerek raporlanmasına, askerlere ve halka hitaben bildiriler hazırlanarak posta yoluyla Manchester, Glasgow, Newcastle, Lynne gibi kentlere gönderilmesine karar verildi (McElligot, 2021, s. 484). Bildirileri basma görevini, Cumhuriyetçi geçmişi olan ve London Corresponding Society üyesi Thomas Davidson gönülsüz bir şekilde kabul etti.

27 Ocak'ta aynı yerde yapılan ikinci toplantıda üretilen el bombalarının "teneke kabuk" örnekleri gösterildi ve halka hitaben yazılacak ilk bildirinin taslağı hazırlandı[7]:

"İngilizler,

Adalet zafer kazandı - ve Zalimleriniz yok edildi - vatansever çabalarınızı şanlı bir kader bekliyor - yüzyıldan fazla bir süredir sizi köleleştiren ve aşağılayan Oligarşinin yerine geçici bir Hükümet atandı - Geçici Hükümet, her bireyin Mülkiyetinden ve Korunmasından tam olarak yararlanmasını sağlayacaktır.

Ve, sizin durumunuzun ve ülkemizin iyileştirilmesinin bir garantisi olarak, hak gaspçıları tarafından bu tarihten itibaren kabul edilen her eyleme bu şekilde uyulmasına son verilmesine karar verilmiştir. Ancak Halkın duygularına ve nesillerinin çıkarlarına uygun olarak Hükümeti benimsemesi için fırsat sağlamak üzere bu tarihten itibaren bir ay içinde 21 yaşını doldurmuş tüm erkeklere oy kullanma hakkını veren bir Temsil Sözleşmesinin oluşturulmasına yönelik tedbirlerin kabul edilmesi arzu edilmektedir. Ülkelerinin Rütbelerine katılan ordular, liyakatlerine göre ilave maaş avansı alacaklardır; ailelerinin yanına dönmek isteyenler silahlarını teslim etmeye çağrılmaktadır ve bunun karşılığında kendilerine en cömert şekilde derhal ödeme yapılacaktır." (McElligot, 2021, s. 485-486)

Hazırlanan bu taslak bildiri metni White Cross hapishanesinde tutuklu bulunan ancak ziyaretçi kabul edebilen eski Corresponding Society üyesi James Watson'a düzeltmesi için ulaştırıldı. Watson'un düzeltilmiş taslağı 28 Ocak'ta Thistlewood ve Davidson'a ulaştı. Watson'un taslağı ilkinden çok farklıydı. İngilizler şeklinde olan halk hitabını İngilizler ile Birleşik Britanyalılar ve İrlandalılar olarak iki gruba ayırmıştı. Bu ayrım o dönemde İngiltere'nin durumunun Birlik yasasına rağmen birlik olamadığını göstermektedir. İki hitap birbiri ile çelişmektedir. Askerlere yönelik vaadlerin olduğu bölüm de kaldırılmış ve Watson tarafından orduya hitaben ayrı bir bildiri yazılmıştır. Ayrıca ilk taslakta olan oy kullanma ve yeni hükümetin oluşma şeklinden ise hiç bahsedilmemektedir.

"İngilizler!

Adalet sonunda galip geldi. Zalimleriniz yok edildi.

Vatansever enerjilerinizi şanlı bir kader bekliyor. Sizi bir yüzyıldan fazla bir süredir en kısmi ve baskıcı tedbirlerle köleleştiren ve aşağılayan aşağılık ve kötü Oligarşinin kötülüklerinden ve yanlışlarından sizi korumak için geçici bir Hükümet atandı. Geçici Hükümetin Kararlarına itaat, her bireyin Kişilerinin ve Mülklerinin korunmasını sağlayacaktır.

Birleşik Britanyalılar ve İrlandalılar!

[7] Bu bildiri metni ve diğerleri, McElligot'un Home Office belgeleri ve mahkeme kayıtlarına dayalı olarak aktardığı İngilizce metinlerden tarafımca çevrildi. Bu çeviriler, bildirilerin Türkçe metinlerinin ilk yayınlanmasıdır.

FULL TEXTS BOOK

Sivil ve Dini Özgürlük!

Kararname:

Bundan böyle İlçe Taciri Gasp Eylemlerinin etkisi sona erecektir. İnsanlar, kendi duygularına en uygun ve Gelecek nesillerin çıkarlarına en uygun olan Hükümet Sistemini oluşturmaya çağrılmaktadır." (McElligot, 2021, s. 486)

Watson'un askerlere yönelik yazdığı bildiri metni ise şöyledir:

Cesur Askerler, Zalimler artık yok!

İnsanlarla ortak bir amaç edinin. Babalarınız, annelerinizi ve arkadaşlarınızı düşünün! Uzun zamandır katlandıkları acıların hakkını verin! Kendinize adil olun!

Cesur ol ve özgür ol!!!

İnsanlara katılın; Dünyadaki en özgür ulus olmak için, o zaman en müreffeh ve mutlu ulus olacaksınız. Geçici Hükümet'in talimatlarını bekleyin, hizmetleriniz için sizi ödüllendirecek önlemleri projelendirmekle meşgul. Durumunuz mutlu edilecektir. Geçici hükümlere uyun.

Sen cesursun, Ülkenin yanlışlarına karşı adil ol. Kader, talep eder; Adalet, İnsan Haklarının korunmasını gerektirir. Büyük bir ödül Hakkındır." (McElligot, 2021, s. 488)

Basılmak üzere hazırlanan bu bildiriler Davidson tarafından basılamamıştır. İzlendiğini bilen Davidson, bildirileri basmak konusunda oyalanmıştır. Ancak bildiriler basılmamasına rağmen Davidson olaydaki rolü nedeniyle idam cezası alacaktır. 29 Ocak'ta bildirlerin hala basılamaması üzerine Thistlewood, basabilecek başka bir isim ya da yer arayışına girmiştir.

1 Şubat planı için hazırlıklar sıkışırken beklenmedik bir olay planı bozdu. Kral III. George 29 Ocak'ta öldü. Thistlewood kabine yemeğinin herşeye rağmen yapılmasını umdu ve Kralın cenazesine katılmak için Londra'dan ayrılan askeri birliklerin işleri kolaylaştıracağını düşünüyordu. Sonuçta 1 Şubat planının yapılması imkansız hale geldi. Thistlewood, olası bir hükümet krizi ile işlerinin kolaylaşacağını, vazgeçmemeleri gerektiğini düşünüyor ve grubu ikna etmeye açlışıyordu. Thistlewood, yapılacak ilk işin bildirilerin basılması ve kent merkezlerine postalanması olduğuna inanıyordu ancak tüm uğraşlarına rağmen 18 Şubat'ta hala bildirler basılmamış ve herhangi bir kabine yemeği duyurusu yapılmamıştı. Beklemenin gerginliği ve gizli davranma zorunluluğunun sinirlerini oldukça gerdiği düşünülebilir.

Grubun içindeki casus George Edwards, grubun her an harekete geçebileceğini iç işlerine rapor ediyordu. 20 Şubat'taki grubun toplantısına ilişkin raporunda; Brunt'un 23 Şubat Çarşamba gününe kadar bir kabine yemeği ilan edilmezse, grubun ellerindeki silahlarla karışıklık çıkararak taraftar toplayıp bir Londra ayaklanması çıkarma planının oybirliği ile kabul ettiğini belirtiyordu. Bunun üzerine İç İşleri, 22 Şubat'ta New Times gazetesinde yayınlanan sahte kabine yemeği haberini organize etti. Haberi, bizaat Edwards'ın Thistlewood'a gösterdiği ve teşvik ettiği anlaşılmaktadır (McElligot, 2021, s. 491). Sonuçta 1 Şubat için yapılan hazırlıklar 23 Şubat'ta Cato Sokağı çıkmazından Harrowby kontuna yapılacak yeni bir plana entegre edildi. Grup daha fazla ateşli silah toplamak üzere harekete geçti. Basılamayan bildirilerin yerine el yazısı ile halka ve askerlere yönelik iki kısa bildiri çoğaltıldı, Halka olan bildiri şöyle diyordu: *"Tiranlarınız yok edildi - özgürlük dostları ileri gelmeye çağrıldı - Geçici Hükümet şimdi toplandı. [İmza] James Ings, Sekreter, 23 Şubat"* (McElligot, 2021, s. 492) Askere hitaben yazılan bildiri biraz daha uzundu ve ekonomik vaadlerden ayrılmıyor, askerleri "özgürlük dostlarına" katılmaya çağırıyordu (McElligot, 2021, s. 493).

Bildiriler ancak kabine üyelerinin öldürülmesinin başarılması üzerine etkili olabilirdi ve askerlerin müdahale etmeyeceğini varsaymak o noktada dahi oldukça gerçek dışıydı. Bu şekilde yemeğin saatini beklemek üzere Cato Sokağı'ndaki ahırın çatı katında toplanan yaklaşık 20 komplocunun heyecanlı bekleyişi başladı. Bekleyiş sona ermeden Yüzbaşı Fitzclarence liderliğinde Coldstream Muhafızları çatı katına baskını saat 19:30'da gerçekleştirdi (Pollard, 2020). Baskın sırasında Thistlewood, bir polis memurunun ölümüne sebebiyet verdi. O kargaşada Thistlewood çatı katından kaçabildi. Edwards'ın ihbarı ile saklandığı yerde 24 Şubat günü yakalandı. Thistlewood, Edwards'ın hükümete çalışan bir

FULL TEXTS BOOK

casus olduğunu ancak bu noktada öğrendi (Beeson, 2012, s. 51). Baskınla, Spencean Hayırseverleri Cemiyeti'nin en radikal üyeleri tutuklanmış ve hükümet darbesi girişimi başarısızlıkla sonuçlanmış oldu.

2.3. Yargılamalar

Yargılamalar 15 Nisan 1820'de başladı. Her bir komplocunun yargılanması istinad edilen suçlara göre bireysel olarak isim isim yapıldı. Görülen ilk duruşma Thistlewood'un davası oldu ve iki gün sürdü (Beeson, 2012, s. 53). Komplo Yargılamaları Old Bailey olarak bilinen Merkezi Ceza Mahkemesi kayıtlarında detaylı olarak bulunmaktadır. Duruşma kayıtları, sanıklara yöneltilen suçlamaların yanı sıra suikast girişimini çevreleyen günlerde komplocuların faaliyetlerine ilişkin görgü tanıklarının raporlarını da içermektedir (Beeson, 2012, s. 8).

Savunma Avukatı John Adolphus, vatana ihanet suçlamasına itiraz ederek, bulunan silahların ancak *"bir yol soygunu için yeterli olduğunu"* iddia etmiştir. Adolphus, 1814'te Thistlewood'un tutuklanıp yargılanması esnasında, John Castle isimli casusun tanıklığını çürüten ve Thistlewood'u kurtaran savunmayı deneyerek Casus George Edwards'ın işin beyni olduğunu; onun manipülasyonları olmadan müvekkillerinin işleri bu raddeye getirmeyeceğini iddia etmiştir (McElligot, 2021, s. 494). Savcılık, Edwards'ı tanık kürsüsüne çıkarmadan 4 tutuklu komplocu; Robert Adams, Thomas Dwyer, Thomas Hiden ve John Monument ile anlaşarak suçlamalarının düşürülmesi karşılığında tanıklık etmelerini sağlamıştır (McElligot, 2021, s. 495).

Savunmanın itirazları yetmedi ve 5 komplocu idam cezası aldı: Arthur Thistlewood, James Ings, William Davidson, John Brunt ve Richard Tidd. Eski asma ve dörde bölme cezasının bir kalıntısı ile idam edileceklerdi. Asıldıktan sonra başları kesilerek teşhir edildi. İnfaz 1 Mayıs 1820'de Newgate Hapishanesi'nin dışındaki iskelede binlerce kişilik bir kalabalığın önünde gerçekleşti. Thistlewood'dan sonra grubun ikinci adamı James Ings'in son sözleri *"Ölüm ya da özgürlük! Kral George beni hatırlasın, Tanrı onu korusun!"* oldu. Thistlewood son sözleri ise *"Umarım dünya, çabalarımda samimi olduğuma ve özgürlüğün dostu olarak öldüğüme ikna olacak."* oldu (Bates, 2020). Beş komplocu, Richard Bradburn, Charles Cooper, John Harrison, John Shaw Strange ve James Wilson ise Avustralya'da ömür boyu sürgün cezasına çarptırıldı ki birçokları bunu idamdan daha kötü bir kader olarak görüyordu. İnfazları izlemeye zorlandıktan sonra aynı gün Guildford gemisiyle yola çıktılar (Beeson, 2012, s. 69). Onların Avustralya'daki yaşamları kolay olmadı, tehlikeli radikaller olarak orada da sıkı şekilde takip edilirler. McQueen, 1819-20 arasında Cato Sokağı Komplocusu olarak Avustralya sürgün kayıtlarına geçmiş 25 kişinin varlığından bahseder. McQueen, Avustralya'nın bir siyasal sürgün yeri olarak kullanılması ve önemli pek çok radikalin ömür boyu Avustralya'da yaşamak zorunda kalmasının Avustralya demokrasisini olumlu anlamda etkilendiği görüşündedir (McQueen, 1968, s. 3-4). McQueen'in 1794-1842 Arasında Avustralya'ya gönderilen siyasi mahkumlara ilişkin ortaya koyduğu veriler ışığında tarafımca oluşturulan aşağıdaki tablo oldukça ilgi çekicidir.

Tablo 1: 1794-1842 Arası Avustralya'ya Sürülen Siyasi Mahkumlar

1794-1842 Arası Avustralya'ya Gönderilen Siyasi Mahkumlar		
Yıl	Siyasi Grubu	Sayıları
1794	İskoç Şehitleri (Scottish Martyrs)	5
1812	Luddist	50
1817	Derbyshire İsyancıları (Derbyshire Rioters)	11
1819-1820	Cato Sokağı Komploculari (Cato Street Conspirators)	25

FULL TEXTS BOOK

1830-1831	Tarım İşçileri (Agricultural Labourers)	464
1834	Tolpuddle Şehitleri [8](Tolpuddle Martyrs)	6
1839-1842	Sendikacı ve Chartist (Unionist and Chartists)	72

Tablodan da anlaşılacağı üzere Avustralya sürgünü Cato Sokağı Komplosu'ndan sonra da radikalleri İngiltere'den uzaklaştırmak için kullanılan bir ceza oldu. Özellikle 1830-1831 Kaptan Swing (Hobsbawm, Captain Swing, 2001) olaylarında çok sayıda tarım işçisinin bu cezaya maruz kaldığı anlaşılmaktadır. Kaptan Swing olaylarının kırsalda başta toprak sahiplerinin üzerinde ve mülklerinde olmak üzere geniş bir anarşi ortamı yarattığı ve bir anlamda 1832 reformlarının çıkışını desteklediği söylenebilir. İşçi ve sendika hareketlerinin 1824'de yasallaşması ile bu sürede giderek artan sayıda sendikacının da sürgün cezasına maruz kalması olasıdır. McQueen, 1839 sonrası için yüksek bir rakam tespit etmiştir.

İdamlar binlerce kişi tarafından izlendi. Özellikle Ings'e karşı büyük bir sempati ve sevgi vardı. İdamlardan sonra başlarının kesilmesi ve 1 saat boyunca teşhir edilmesi pek hoş karşılanmadı. Başları kesen celladın kim olduğuna dair spekülasyonlar yapıldı. Çoğunluk bir doktor olabileceğini düşünüyordu, Londra'da bir cellat avı başladı. Mahkumların başlarını kesen cellat olduğu suçlaması ile Doktor Thomas Wakley'in evi yakıldı. Gerçek cellat ise Web'deki karakolda otopsi odasının baş görevlisi Tom Parker'dı. Parker'ın kimliği ancak yıllar sonra ortaya çıktı (Butcher, 2007, s. 12-14). Aynı tepki toplumdan dışlanan George Edwards'a da gösterildi. Londra'da saklanmak ve kaçmak zorunda kaldı. Mahkeme de tanıklık yapmamış olsa bile pek çok kişi Edwards'ı suçladı. Edwards, güvenliği gerekçesi ile hükümet tarafından ülke dışına çıkarıldı ve 1843'te Güney Afrika'da öldü (Bates, 2020).

Suçlamaların düşürülmesi karşılığında tanıklık yapan Robert Adams, Thomas Dwyer, Thomas Hiden ve John Monument'ın da Londra'da kalabilmesi mümkün değildi. İngiltere sınırları içinde radikalizmin en az görüldüğü yer olan Güney Galler'e gönderildiler. Cato Sokağı Komplosu'na adı karışan başka isimlerde Güney Galler'e gitti ve bazıları emniyet müdürlüğü makamı da dahil olmak üzere çeşitli hükümet kademelerinde görev alan eski radikaller oldular (McQueen, 1968, s. 20). İdamlar sonrası görüldüğü üzere hayatta kalan üyeler sisteme entegre oldular ve Spencean Hayırseverleri Cemiyeti toplumda sahip olduğu sempatiye rağmen bir süre sonra unutuldu.

SONUÇ

Cato Sokağı Komplosu planı, İngiltere'de 18.yüzyıl sonunda başlayan huzursuzluk isyanlarının şiddet içeren önemli bir parçasıdır. Peterloo gibi olaylarda yaşanan şiddet gösterinin ya da planın kendisinden değil, hükümetin müdahale şeklinden kaynaklanmıştır. 1810'lardan itibaren İngiltere'de huzursuzluk kaynaklı, çeşitli haklar talep eden eylemlerin varlığı İngiltere'nin Kıta Avrupası'ndan biraz daha erken

[8] Dorset kentindeki Tolpuddle köyündeki 6 tarım işçisi 1834'te Tarım İşçileri Dostluk Derneği (Friendly Society of Agricultural Labourers) kurarak gizli bir yemin etmekten suçlu bulundular. Yasadışı Yeminler Yasası (Unlawful Oaths Act) çıkmıştı ve Avusturalya'ya sürgün cezasına çartptırıldılar. Yoğun protestolar ve Lord John Russell'ın desteği ile 1836'da affedildiler ve 1837-39 arasında İngiltere'ye döndüler. Şehitlerin liderleri George Loveless, kararı duyduğunda bu dizeleri yazmıştı:

Tanrı rehberimizdir! Tarladan, dalgadan,
Sabandan, örsten ve tezgahtan;
Geliyoruz, ülkemizin haklarını kurtarmaya,
Ve zalim bir hizbin felaketini dile getiriyoruz:
Özgürlük şiarını yükseltiyoruz;
Yapacağız, yapacağız, özgür olacağız!

FULL TEXTS BOOK

bir dönemde 19.yüzyıl devrimleri sürecini yaşamaya başladığını düşündürmektedir. İngiltere, bu süreçte çeşitli yasal düzenlemelerle hakların tanınması sürecine erkenden başlayarak ve devrimci bir burjuvazisinin olmamasının avantajını kullanarak; isyan ve eylemlerin devrimci bir duruma dönüşmelerinin önüne geçebilmiştir.

Cato Sokağı Komplosu'nun siyasi niteliği ve hükümet casuslarının komploda oynadıkları rol, hükümetin yetki alanı tartışmalarını arttırmıştır. Tory ve Whigler arasında değişmekte olan güç dengelerinin ilk işaretleri 1832 Reformu sürecinde 1830'da başlayan parlamento tartışmaları sırasında ortaya çıkmıştır.

Cato Sokağı Komplosu İngiltere'de halka ve orduya açıkça bir ayaklanma çağrısını da içermesi nedeniyle İngiliz Demokrasisi'nin gelişim sürecinin sorunsuz ilerlemediğini ve devrimci durumların hükümet tarafından bıçak sırtı bir süreçte durdurulabildiğinin kanıtıdır. Komplocular, aktif ve geniş bir sempatizan desteğine rağmen başarısız olmuşlardır. Bu başarısızlığın temelinde aristokrasi burjuvazi uzlaşması; Tory ve Whiglerin sınırlı monarşi konusunda anlaşmaları bulunmaktadır.

Komplocuların kurmayı istedikleri düzenin nitelikleri Cumhuriyetçi fikirlerin İngiltere'de görüldüğü ve etkilerinin bilenenden fazla olduğunu göstermektedir.

Komplonun başarısız olmasındaki en önemli rol huzursuzluğunu çeşitli gösteriler ile dile getiren halkın, Komplocuların arzu ettiğinin aksine doğrudan bir rejim değişikliği istemiyor olmasıdır. İngiliz halkında monarşinin her zaman önemli bir desteği bulunmaktadır. Halkın temel isteği daha fazla dikkate alınma, daha iyi yaşam ve çalışma koşullarıdır. Kısacası halk ve siyasal aktörler sınırlı monarşi ve parlamento yetkilerinin iki meclis arasında düzenlenerek arttırılması konusunda uzlaşmışlardır.

Bildirinin araştırma sorusu olan; İngiltere'nin radikal döneminde çatışma ortamından uzlaşıya geçişin temel dinamikleri nelerdir? sorusunun cevabı siyasal aktörler arasında yukarıda bahsi geçen uzlaşının varlığı ve 17.yüzyıl İngiliz Devrimlerinden itibaren tarihsel süreç içinde parlamentonun güçlenmesidir. 19.yüzyılın sonunda parlamenter gücün Lordlar Kamarası'ndan Avam Kamarası'na doğru kayışı ise ayrı bir siyasi mücadeleyi gündeme getirecektir.

İngiltere gibi bugün "demokrasinin beşiği" olarak kabul edilen bir ülkede demokrasinin gelişim süreci içinde bu tür darbe girişimlerinin görülmesi; siyasal güç mücadelesinde bu tür çatışmaların olası olduğunun bir göstergesidir. Türkiye Cumhuriyeti'de demokrasi sürecinde bu darbe girişimleri ile karşılaşmıştır. İngiliz demokrasisinin geçtiği yol ve gelişim çizgisinin dayandığı tarihsel sürecin uzunluğu dikkate alındığında Türkiye Cumhuriyeti'nin Meşrutiyet dönemine kadar götürebildiğimiz parlamento gelişimi ve demokrasi süreci henüz gençtir. Demokratik gelişimin belli dinamik ve kurumlara sahip bir süreç olduğu düşünüldüğünde, demokrasinin yaşadığı sorun ve engelleme girişimleri siyasal-sivil kurumsallaşma ve demokratik bilincin gelişimi ile süreç içinde aşılamayacak sorunlar değildir.

ÖZET
Göç, insanlığın ilk varoluşundan günümüze kadar süren ve günümüzde de halen devam etmekte olan önemli bir olgudur. Göçmenler, yalnızca coğrafi bir yer değiştirme yapmamakta, aynı zamanda yaşamları boyunca edindikleri çeşitli sosyo-kültürel, ekonomik, politik ve hukuki değerleri de beraberlerinde taşımakta ve yeni ortamlarında kendilerinden oldukça farklı toplumsal yapılarla karşılaşmaktadırlar. Bu durum göç alan ülkelerin göç ile ilgili önemli politikalar üzerinde yoğunlaşmasını zorunlu kılmaktadır. Bu ülkeler arasında yer alan Türkiye, geçmişten günümüze göç alan ve göç veren bir ülke olarak, göç ve entegrasyon politikalarına büyük oranda ağırlık vermektedir. Özellikle son yıllarda artan göçmen çeşitliliği, yasalların ve politikaların yeniden düzenlenmesini zorunlu kılmıştır. Türkiye'de yaşayan çeşitli göçmen grupları hukuki statülerine göre ayırt edilerek; uluslararası koruma altında olanlar, geçici koruma sağlananlar, ikamet iznine sahip olanlar, düzensiz göçmenler ve vatansızlar gibi farklı gruplar bulunmaktadır. Göç yönetimi, politik, yasal, ekonomik ve toplumsal alanlarda önemli yönetim becerilerini gerektiren, çok boyutlu ve çok aktörlü bir süreç olarak tanımlanmaktadır. Bu nedenle günümüzde yapılan entegrasyon politikaları toplumsal yaşamın sadece bir alanında değil iç içe geçmiş birden fazla alanında çok boyutlu olarak yapılmaktadır. Türkiye'de ise son yıllarda artan göç olayları neticesinde göçmen bireylerin ekonomik, sosyal, siyasal ve kültürel yaşama etkin katılımını ve hâkim toplumla karşılıklı ilişkilerini mümkün kılmayı amaçlayan, sosyal, kültürel ve ekonomik alanlarda önemli entegrasyon çalışmaları yapılmaya çalışılmaktadır. Bu entegrasyon çalışmalarının en önemlilerinden biri de sağlık politikaları alanında yapılan çalışmalardır. Bu çalışmanın amacı Türkiye'de göçmenlere yönelik sağlık alanında yapılan entegrasyon politikalarının uygulamadaki zorluklarını ve toplumdaki etkinliğini ortaya koymaya çalışmaktır. Çalışmada tarihsel ve betimsel metodoloji kullanılmıştır.
Anahtar Kelimeler: Sağlık Politikaları, Göç, Aidiyet, Entegrasyon.

ABSTRACT
Migration is an important phenomenon that has continued from the first existence of humanity to the present day and still continues today. Immigrants not only make a geographical displacement, but also carry with them various socio-cultural, economic, political and legal values that they have acquired throughout their lives, and they encounter social structures that are quite different from their own in their new environments. This situation necessitates the receiving countries to focus on important policies regarding migration. Turkey, which is among these countries, gives great importance to immigration and integration policies as a country that has received and sent immigrants from past to present. The increasing diversity of immigrants, especially in recent years, has necessitated the reorganization of laws and policies. Various immigrant groups living in Turkey are distinguished according to their legal status; There are different groups such as those under international protection, those under temporary protection, those with residence permits, irregular immigrants and stateless people. Migration

FULL TEXTS BOOK

management is defined as a multidimensional and multi-actor process that requires significant management skills in political, legal, economic and social fields. For this reason, today's integration policies are made multi-dimensionally, not only in one area of social life, but in more than one intertwined area. In Turkey, as a result of the increasing migration events in recent years, important integration studies are being carried out in social, cultural and economic fields, aiming to enable the active participation of immigrant individuals in economic, social, political and cultural life and their mutual relations with the dominant society. One of the most important of these integration studies is the studies carried out in the field of health policies. The aim of this study is to try to reveal the difficulties in implementation of integration policies in the field of health for immigrants in Turkey and their effectiveness in society. Historical and descriptive methodology was used in the study.
Keywords: Health Policies, Immigration, Belonging, Integration.

GİRİŞ

Göç kavramı küreselleşme ile beraber büyük bir ivme kazanmış olsa da göç olgusu insanların ilk anından bu güne kadar sürekli gerçekleştirdiği bir eylemdir. Göç birden çok faktöre bağlı olarak ortaya çıkar. Göç eyleminin çıkış nedeni her ne olursa olsun gerçekleştiği taktirde küresel boyutta önemli sonuçlar doğuran bir hareketliliktir. Geçmişten günümüze kadar olan süreçte insanlar, birçok doğal afet yaşamış, salgın hastalıklarla mücadele etmiş, kıtlık ve açlık gibi zorlu süreçlerden geçmiştir. Bu doğal süreçlerin dışında ülkelerarası çatışmalar, iç savaşlar, bunlardan doğan insan hakları ihlalleri gibi nedenlerle gönüllü veya gönülsüz, tamamen veya geçici bir süre bulundukları mekândan başka bir yere göç etmek zorunda kalmışlardır.(Çağlar, 2018:30). Göç eden kişi, göç ettiği yere sadece beden olarak gitmekten ziyade ayrıldığı mekânın kendisine kattığı sosyal, ekonomik ve kimliksel özellikleri de yanında götürmektedir. Bu nedenle göç, hem göç eden tarafı hem de göçe maruz kalan tarafı etkileyen çift yönlü bir olgudur.

Türkiye'de göçmenlerin entegrasyonu ve aidiyet duygusunun güçlendirilmesi, çeşitli politika ve uygulamalarla desteklenmektedir. Entegrasyon politikaları, göçmenlerin yeni toplumlarına uyum sağlamaları ve toplumsal hayata katılımlarını artırmayı hedefler. Bu politikaların başarılı olabilmesi için göçmenlerin temel ihtiyaçlarının karşılanması, özellikle de bireyin yaşamı için en temel olan sağlık hizmetlerine erişimlerinin sağlanması ve toplumsal destek mekanizmalarının oluşturulması büyük önem taşır (Kirişci, 2003). Göçmenlerin sağlık hizmetlerine erişiminde karşılaşılan engellerin aşılması, entegrasyon sürecinin başarılı olabilmesi için hayati önem taşır. Sağlık hizmetlerine erişim, göçmenlerin yeni toplumlarına daha hızlı uyum sağlamalarını ve aidiyet duygularının güçlenmesini sağlar. Türkiye'de sığınmacılara yönelik olarak geliştirilen sağlık politikaları, geçici koruma statüsü altındaki bireylerin sağlık hizmetlerinden faydalanabilmelerini sağlamayı amaçlamaktadır. Geçici koruma kimlik belgeleri ile sağlık kuruluşlarına başvurabilen göçmenler, acil durumlar haricinde sağlık hizmetlerine doğrudan erişim imkanına sahiptir (Gültaç ve Ark. 2018:193-204). Sağlık faktörü her ne kadar birinci öncelik olsa da iki tarafın da tam olarak bütünleşebilmesi açısından göçmenlerin entegrasyonu ve aidiyet duygusunun güçlendirilmesi, sadece sağlık hizmetlerine erişimle sınırlı kalmamalıdır. Eğitim, istihdam, sosyal hizmetler ve kültürel uyum gibi diğer alanlarda da göçmenlere yönelik politikaların geliştirilmesi gerekmektedir. Entegrasyon süreçlerinde karşılıklı anlayış ve işbirliği, hem göçmenlerin hem de ev sahibi toplumların daha uyumlu ve barışçıl bir şekilde bir arada yaşamasını sağlayacaktır (Akgündüz, 2017,s,1-24).

Türkiye'de göçmenlerin aidiyet ve entegrasyon süreçlerini inceleyen bu çalışma, sağlık politikalarının bu süreçteki rolünü ve önemini vurgulamayı amaçlamaktadır. Göçmenlerin sağlık hizmetlerine erişimlerinin iyileştirilmesi ve entegrasyon süreçlerinin desteklenmesi, toplumsal uyum ve barışın sağlanması açısından büyük bir öneme sahiptir. Bu bağlamda, yapılan çalışmada Türkiye'deki göçmenlere yönelik sağlık hizmetlerinin yasal düzenlemeler açısından yeterliliği ve bu yasal düzenlemelerin uygulamadaki verimliliği değerlendirilecektir. Türkiye'nin deneyimleri ve

FULL TEXTS BOOK

uygulamaları, uluslararası göç yönetimi ve entegrasyon politikaları için önemli bir model teşkil etmektedir.

KAVRAMSAL ÇERÇEVE

Göç Kavramı

Göç kavramı insanlık tarihi ile ortaya çıkmış ve hala varlığını sürdürmeye devam eden önemli bir olgudur. Geçmişten günümüze yaşanan her türlü Göç'ün temelinde bireyin şuan bulunduğu konumdaki sahip olduğu yaşam standartlarından daha iyi bir yaşam standartlarına geçmek istemesi yer alır.(Yaman ve Kaya, 2023:71). Türk Dil Kurumu Sözlüğünde göç kavramı, "ekonomik, toplumsal ve siyasi sebeplerle bireylerin veya toplulukların bir ülkenin başka bir bölgesine veya başka bir ülkeye yerleşmek amacıyla yaptığı yer değiştirme hareketi; taşınma, hicret, muhaceret" şeklinde tanımlanmaktadır. (TDK, 2005). Son yıllarda artan küreselleşme hareketi doğrultusunda göç faaliyetlerinde büyük çaplı artış yaşanmaktadır. Göç, nedenine bakılmaksızın geçmişten günümüze sürekli olarak yapılan bir eylemdir. İlk zamanlarda göç olayları genellikle coğrafi şartlar, açlık, savaş, kıtlık ve iklim koşulları gibi nedenlerden kaynaklanırken, günümüzde bu nedenler önemli ölçüde değişim göstermiştir. Tarih boyunca insanlar, hayatta kalabilmek, daha verimli topraklara ulaşmak veya doğal afetlerden kaçmak için göç etmişlerdir.(Akıncı, Nergiz ve Gedik,2015:60-61). Eski dönemlerde göç, büyük ölçüde zorunlu sebeplerden kaynaklanırken, modern dünyada göçün sebepleri çok daha çeşitlenmiş ve karmaşık bir hal almıştır. Göç kavramı birden fazla disiplin alanını ilgilendirmiş ve bu disiplinler tarafından farklı tanımlanmıştır. Lee, göç üzerine yazmış olduğu makalede göçü zorunlu ya da gönüllü olmasının dışında tamamen yaşanan yerin kalıcı veya geçici olarak değiştirmesi şeklinde ifade etmiştir.(Özcan, 2016 :186). Göç kavramı her ülkeye ya da mekâna göre değişen bir olgu olmaktan ziyade insanın bulunduğu her bölgede ve ortak nedenler eşliğinde gerçekleşmektedir. Ortaya çıkış nedenleri bakımından göç olgusu, genellenebilir bir olgudur.(Koçak ve Terzi, 2012:165).

Göç, insanların bir yerden başka bir yere, uluslararası bir sınırı geçmek suretiyle veya bir devletin içinde yer değiştirerek gerçekleştirdiği nüfus hareketleridir. Bu hareketler, süresi, yapısı ve nedenleri ne olursa olsun, insanların yaşam alanlarını değiştirme sürecini ifade eder. Son yıllarda göç türleri, hedef ülkeye ulaşma yöntemi, geri dönme olasılığı ve göç sırasında kullanılan transit ülkeler açısından farklı kategorilere ayrılmaktadır. Bu bağlamda, göç türleri transit göç, mekik göç ve sığınmacı göç olarak sınıflandırılmaktadır.(Aktel ve Kaygısız, 2018:581). Bunun dışında genel anlamda göçler, nereye, nasıl ve ne amaçla yapıldığına göre, ülke içine veya dışına yapıldığında dış ve iç göç; Göç edilme kararının alınış şekline göre gönüllü veya zorunlu göç; göç edenlerin amaçları ve özelliklerine göre iş göçü ve beyin göçü olarak kategorize edilmektedir.(Başel, 2003:17). Göç, geçmişten günümüze bakıldığında sürekli artış gösteren bir kavramdır. Bunun temelinde ise her toplumu önemli ölçüde etkilemiş olan küreselleşme faktörü yer alır. Günümüzde yaşanan küreselleşme ile birlikte ulusal ve uluslararası alanlarda yoğun bir göç yoğunluğu yaşanmaktadır. Bu nedenle göç kavramı evrensel bir sorun haline gelmiştir.(Türkel, 2018,s.30).

Günümüzde yaygınlaşan göçler neticesinde göç edenleri tanımlamak için göç eden kişinin durumuna göre farklı kavramlar ortaya çıkmıştır. Bunlardan ilki göçmen kavramıdır. Göçmen kavramı Birleşmiş Milletlere göre "sebebi olsun veya olmasın, gönüllü veya gönülsüz, düzenli veya düzensiz, göç yolları ile fark etmeksizin bir yıldan fazla yabancı bir ülkede ikamet eden birey" şeklinde tanımlanmıştır.(Fansa, 2021:296). Bir diğer önemli kavram ise mülteci kavramıdır. Mülteci kavramı 1951 Cenevre Sözleşmesinin 1.maddesine göre, meydana gelen olaylar sonucunda ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi düşünceleri yüzünden zulme uğrayacağından korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkelerin korumasından yararlanamayan ya da söz konusu korku nedeniyle yararlanmak istenmeyen yahut tabiiyeti yoksa bu tür olaylar sonucu önceden yaşadığı ikamet ülkesinin dışında bulunan, oraya dönemeyen veya söz konusu korku nedeniyle dönmek istemeyen şahıs olarak tanımlanmıştır.(Nurdoğan, Dur ve Öztürk, 2016:219). Göç olgusu ile hayatımıza

FULL TEXTS BOOK

giren bir diğer kavram ise sığınmacı kavramıdır. Sığınmacı kavramı mülteci kavramı ile sıkça karıştırılmaktadır. Her iki kavramında göç eden kişiyi nitelerken benzer noktaları bulunsa da anlam ve kişiye getirileri bakımından farklıdırlar. Sığınmacı kavramı "Avrupa ülkelerinde meydana gelen olaylar nedeniyle; ırkı, dini, tabiiyeti, belli bir toplumsal gruba mensubiyeti veya siyasi düşüncelerinden dolayı zulme uğrayacağından haklı sebeplerle korktuğu için vatandaşı olduğu ülkenin dışında bulunan ve bu ülkenin korumasından yararlanamayan ya da söz konusu korku nedeniyle yararlanmak istemeyen yabancıya veya bu tür olaylar sonucu önceden yaşadığı ikamet ülkesinin dışında bulunan, oraya dönemeyen veya söz konusu korku nedeniyle dönmek istemeyen vatansız kişiye statü belirleme işlemleri sonrasında verilen statüyü ifade eder."(T.C.İ.B Göç İdaresi Başkanlığı,2024).

Göç Yönetimi

Göç yönetimi, devlet sınırları içinde yabancıların girişi ve mevcudiyetini, mültecilere ve korunma ihtiyacı bulunan diğer kişilere sağlanan korumayı düzenli ve insani bir şekilde yönetmek üzere oluşturulan ulusal sistem içindeki çeşitli devlet kurumlarından oluşan yönetim sürecini tanımlayan bir terimdir. Göç yönetimi, göçe ilişkin kilit konuları ele alacak politikaların, yasal ve idari düzenlemelerin geliştirilmesine yönelik planlı bir yaklaşımı ifade eder. Bu süreç, hem ulusal güvenliği sağlamak hem de insan haklarını korumak amacıyla çeşitli devlet kurumları ve organları tarafından yürütülen kapsamlı bir çerçeve oluşturur.(Uluslararası Göç Örgütü(IOM), 2004:36). Göç yönetimi, göçmenlerin ülkeye girişinden önce başlayan ve çeşitli uygulamalar ve hukuki düzenlemelerle devam eden kapsamlı bir süreçtir. Bu süreç, göçmenlerin ülkeye kabulünden önce alınacak önlemler ve yapılacak kontrollerle başlar. Bu önlemler arasında sınır kontrolleri, vize düzenlemeleri, sağlık kontrolleri ve güvenlik taramaları yer almaktadır.(Aktel ve Kaygısız, 2018:384).

Göç gerçekleştikten sonra alınan önlemler ise, yasa dışı göçü önlemek, ulusal güvenliği sağlamak ve halk sağlığını korumak amacıyla uygulanır. Ancak göç yönetimi sadece ülkeye girişte yapılan kontrollerle sınırlı kalmaz. Göçmenlerin ülkeye geldikten sonraki süreçte de devam eder ve bu süreçte yeni gelen toplulukların temel ihtiyaçlarının karşılanması, sosyal hizmetlerin sunulması ve entegrasyonlarının sağlanması gibi önemli adımlar atılır. Göçmenlerin barınma, sağlık hizmetleri, eğitim, istihdam ve sosyal güvenlik gibi temel ihtiyaçlarının karşılanması, göç sonrası dönemde büyük önem taşır (UNHCR, 2021).

Entegrasyon

Entegrasyon kavramının dilimizdeki karşılığı 'bütünleşme' ve 'uyum' karşımıza çıkarken sosyoloji bilimi tarafından toplumsal kurumların, grupların ve toplumsal yapının diğer unsurları arasındaki uyumu şeklinde tanımlanmaktadır.(Aslan, 2019:77). Toplumun ve bireylerin birlikte bir bütün olarak yaşayabilmeleri açısından entegrasyon kavramı oldukça önemlidir. Farklı ülkelerde ve bağlamlarda çeşitli şekillerde kullanılan ve anlaşılan "entegrasyon" terimi, göçmenlerin hem birey olarak hem de grup olarak toplumun bir parçası kabul edildiği süreci ifade eder. Bu süreç, genellikle göçmenler ile ev sahibi toplumlar arasında iki yönlü bir etkileşimi kapsar. Ev sahibi toplumların göçmenleri kabul etmesi için gerekli somut koşullar, ülkeden ülkeye farklılık gösterir ve bu süreçte yerel politikalar, kültürel normlar ve sosyal yapılar belirleyici olabilir.(Uluslararası Göç Örgütü(IOM), 2004:30).

Entegrasyon, daimi yerleşim anlamına gelmek zorunda değildir. Bunun yerine, göçmenlerin ve ev sahibi toplumların haklarına ve yükümlülüklerine erişimlerini, çeşitli hizmetlerden ve işgücü piyasasından yararlanabilmelerini ve ortak değerler etrafında birleşmelerini ifade eder. Bu süreçte göçmenler, ev sahibi toplumun sosyal, kültürel ve ekonomik hayatına katılarak toplumsal bağlarını güçlendirirler. Aynı zamanda, ev sahibi toplum da göçmenlerin katkılarını ve varlıklarını kabul ederek toplumsal uyumu sağlar (Penninx ve Garces-Mascarenas, 2016).

FULL TEXTS BOOK

Sağlık Politikaları

Sağlık politikası, sağlık alanındaki birden fazla faktörün nasıl işleyeceğine karar veren ve süreci kontrol eden politikadır. Sağlık politikaları, mevcut sağlık hizmetlerinin kime yönelik yapılacağı ya da kimin bu hizmetten yararlanabileceği, hangi sağlık teknolojilerinin üretilmesi gerektiği, sağlık hizmetleri organizasyonlarının nasıl yapılacağı ve tüm bu sürecin mali kontrolünün nasıl sağlanacağı konusunda yol gösterici bir faktördür.(Toygar, 2022:12). Bu tanıma göre sağlık politikaları, toplumun sağlık düzeyini korumak ve iyileştirmek amacıyla oluşturulan, sağlık hizmetlerinin planlanması, uygulanması, finansmanı ve değerlendirilmesini içeren stratejik kararlar ve eylem planlarıdır. Bu politikalar, hükümetler, uluslararası kuruluşlar ve sağlık kurumları tarafından geliştirilir ve toplumun sağlık ihtiyaçlarına yanıt vermeyi hedefler. Sağlık politikalarının temel amacı, herkesin eşit ve adil bir şekilde sağlık hizmetlerine erişimini sağlamaktır (WHO, 2000).

Türkiye'de sağlık politikaları, Sağlık Bakanlığı tarafından belirlenmekte ve uygulanmaktadır. Türkiye'de uygulanan sağlık politikalarının temel amacı, herkesin nitelikli sağlık hizmetlerine erişimini sağlamak ve sağlık hizmetlerinin kalitesini artırmaktır. Özellikle son yıllarda, sağlıkta dönüşüm programları kapsamında önemli reformlar gerçekleştirilmiştir. Türkiye Halk Sağlığı Kurumu, sağlık politikalarının uygulanmasında önemli bir rol oynamaktadır (Sağlık Bakanlığı, 2013).

METODOLOJİ

Araştırmanın Yöntemi

Bu çalışma tarihsel ve betimsel metodoloji kullanılarak oluşturulmuştur. Tarihsel metodoloji geçmişte yaşanmış olaylar, olgular, nesneler ve kişilerin araştırılması ya da belirli bir problemin geçmiş ve bazen de günümüzle olan ilişkisi yönünden incelenmesi amacıyla kullanılan yöntem, olarak adlandırılır. Bu yöntem, geçmişin eleştirel bir şekilde tanımlanması ve analiz edilmesini içerir. Tarihsel yöntem, araştırmanın sistematik bir biçimde yapılmasını, verilerin analiz ve sentezinin gerçekleştirilmesini ve bu verilerden elde edilen bulguların değerlendirilmesini kapsar. Türkiye'de göçmenlerin aidiyet ve entegrasyonu: sağlık politikaları bağlamında bir değerlendirme adlı çalışma tarihsel yöntem ışığında ülkemizde yakın geçmişte gerçekleşen göç olaylarının nedenleri, süreçleri ve sonuçları incelenmiş bu alanda yazılan çalışmalardan veriler elde edilerek analiz yapılmıştır. Bu bağlamda Türkiye'ye yapılan göçler geçmiş belgelerde yazan somut verilerle ortaya konmuştur.

Bu çalışmada mevcut veya geçmişten gelen sorunların, belirli standartlar doğrultusunda değerlendirilerek, olaylar arasındaki ilişkilerin ortaya çıkarılması amaçlanmıştır. Bu nedenle bu çalışma yapılırken bir diğer bilimsel metodoloji olan betimsel yöntem kullanılmıştır. Bu yöntem, incelenen konunun ayrıntılı bir şekilde tanımlanmasını ve açıklanmasını hedeflemektedir. Bu doğrultuda yapılan bu çalışmada göçmenlerin aidiyet ve uyum süreçleri bunun akabinde yapılan entegrasyon politikalarının göç sürecine olan olumlu etkisi ayrıntılı bir şekilde aktarılmaya çalışılmıştır. Göçmenlere Uygulanan entegrasyon politikalarından yalnızca sağlık politikaları seçilmiş olup bu doğrultuda Sağlık Bakanlığının göçmenlere yönelik yapmış olduğu faaliyetlerin yazılı olduğu tüm kaynaklar incelenerek bu alandaki faaliyetlerin etkinliği ortaya konmuştur. Ayrıca göçmenlerin ilk göç ettiği tarihten bu yana göçmenlere yönelik yapılan politikaların ve stratejilerin günümüzde ne kadar etkili olduğu resmi kaynaklar taranarak ve uygulama aşamasındaki verimliliği belirli standartlar çerçevesinde değerlendirilerek bir çıkarım yapılmıştır.

Araştırma Sorunun Analizi

Türkiye'de göçmenlerin aidiyet ve entegrasyonu: sağlık politikaları bağlamında bir değerlendirme adlı çalışma doğrultusunda elde edilen verilerle 'göçlerin oluşturduğu olumsuz sonuçların en aza indirilmesinde en etkili yol olan uyum politikalarının verimlilik düzeyleri ortaya konmaya çalışılmıştır. Bu doğrultuda ilk olarak Türkiye'deki göçmenlere yönelik olan sağlık politikalarının yasal

FULL TEXTS BOOK

düzenlemelerine, bu yasal düzenlemelerin uygulanışındaki başarısına ve ortaya çıkan netice itibariyle de göçmenlerin hakim toplumla olan uyum seviyesine bakılmıştır.

Bu çalışmada ilk üzerinde durulan bağlam, iki unsur arasındaki uyumu engelleyen veya aksatan sorunların açığa çıkarılmasıdır. Bu bağlamda incelenecek ilk faktör, göçmenlere yönelik sağlık alanında yapılan uyum politikalarının yasal dayanaklarda ne oranda ele alındığı ve yasal olarak bu alanda ne kadar çalışma yapıldığıdır. Bu amaçla taranan kaynaklarda elde edilen verilere göre yasal anlamda göçmenlere yönelik birçok sağlık hizmeti düzenlemelerinin yapıldığı ve hala günümüzde yapılmaya devam edildiği saptanmıştır. Bu elde edilen veriye ise kaynaklık eden yasal düzenlemelerin bazıları şunlardır(Gültaç ve Balçık, 2018:195):

*AFAD Yönetmeliği (19.02.2011)
*Yabancılar ve Uluslararası Koruma Kanunu (04.04.2013)
*Geçici Koruma Yönetmeliği (22.10.2014)
*Geçici Koruma Altına Alınanlara Verilecek Sağlık Hizmetlerine Dair Esaslar (25.03.2015)
*AFAD ve Sağlık Bakanlığı Protokolü 2015 (01.07.2015)
*AFAD- Suriyeli Misafirlerin Sağlık ve Diğer Hizmetleri Hakkında Genelge (12.10.2015)
*Göçmen Sağlığı Merkezleri/Birimlerine Dair Yönerge (03.09.2015)
*Geçici Koruma Altına Alınanlara Verilecek Sağlık Hizmetine Dair Esaslarda Değişiklik Yapılmasına İlişkin Esaslar (04.11.2015)
*AFAD ve Sağlık Bakanlığı Protokolü 2016 (01.01.2016).

Bu veriler incelendiğinde yasal düzenlemelerin belirli yıllarda üst üste güncellendiği buradan yola çıkılarak ise bu konudaki çalışmalara önem verildiği ortaya konmuştur. Bunların dışında bu yasal düzenlemelerin içeriği incelendiğinde göçmenlerin niteliklerine göre ayrım yapılmadığı bu çalışmalardan hem sığınmacıların hem de mültecilerin yararlanabildiği saptanmıştır. Bu veriler ışığında göçmenlere yönelik Türkiye'de yapılan sağlık hizmetleri uyum politikalarında yasal anlamda bir eksiklik olmadığı bulgusu elde edilmiştir.

Entegrasyonu önemli ölçüde etkileyen politikalar arasında yer alan sağlık hizmetlerinin değerlendirilmesinden yola çıkılarak yapılan bu çalışmada elde edilen bir diğer önemli veri ise politikaların uygulama süreci ile ilgili elde edilen bilgilerdir. Türkiye'de göçmenlere yönelik sağlık politikalarının uygulanabilirliği incelediğinde, araştırılan kaynaklardan elde edilen verilere göre göçmenlerin dil farklılığı nedeniyle kendilerini ifade etmede zorlandıkları bu nedenle sağlık hizmetlerinden tam anlamıyla verim alamadıkları saptanmıştır. Elde edilen bir diğer veri ise göçmenlerin çok fazla yığılma yaptığı bölgelerde hem göçmenlerin hem de ülke vatandaşlarının randevu bulmada zorlandıkları bu açıdan sağlık hizmetlerinin talepleri karşılamada sayıca yetersiz olduğu bilgisidir. (Turhan, Turan ve Karakullukçu, 2021:288-289). Bu çalışma doğrultusunda elde edilen çıkarım, bu tür olumsuz aksaklıkların hem göçmenlerin hem de ülke vatandaşlarının en temel ihtiyacı olan sağlık hizmetlerinden yararlanabilmesini önemli ölçüde düşürdüğü bunun neticesinde ise her iki taraf arasındaki entegrasyon sürecinin zorlaştığı ve geciktiğidir. Bu doğrultuda Türkiye'de sağlık hizmetlerini daha verimli kılmak için bu alanlardaki eksiklerin giderilmesine yönelik çalışmalar devam etmektedir.

Araştırma Modeli

Bu çalışmada, geçmişte ya da hali hazırda var olan basılı ya da internet ortamındaki belgelerin araştırma konusu için incelenip analiz edildiği tarama modeli kullanılmıştır. Bu doğrultuda çalışma da kullanılmak üzere geçmişten günümüze Yükseköğretim Kurulu Başkanlığı (YÖK) Ulusal Tez Merkezi veri tabanında kayıtlı göçmenlerin aidiyeti, entegrasyon ve Türkiye'de yapılan sağlık politikaları kapsamında yazılan Yüksek Lisans ve Doktora tezleri ayrıca Dergipark gibi akademik yayınların yapıldığı diğer çevrimiçi kaynaklar taranmıştır

FULL TEXTS BOOK

SONUÇ

Bu çalışma, Türkiye'de göçmenlerin aidiyet ve entegrasyon süreçlerini sağlık politikaları bağlamında değerlendirerek, bu politikaların etkinliğini ve uygulanabilirliğini ele almayı amaçlamıştır. Göç, insanlık tarihi boyunca var olan ve günümüzde küreselleşmenin etkisiyle daha da artan bir olgu olarak, hem göç eden bireyleri hem de ev sahibi toplumları derinden etkileyen çift yönlü bir süreçtir. Göç süreci tamamlandıktan sonra artık farklı kültürleri birbirlerine uyumlayabilmek için entegrasyon sürecine geçilmektedir. Entegrasyon süreci birden fazla boyuta sahiptir. Bu nedenle politika yapıcılarının birden fazla alanda çalışma göstererek, sağlık hizmetlerine erişim, eğitim, istihdam, sosyal hizmetler ve kültürel uyum gibi alanlarda da politika yapmaları ve uygulamaları gerektirmektedir. Bu çalışmada entegrasyon alanında yapılan en önemli uygulamalardan biri olan sağlık hizmetleri üzerinde durulmuştur. Çalışmada elde edilen bulgular, Türkiye'de göçmenlere yönelik sağlık hizmetlerinin yasal düzenlemeler açısından yeterli olduğunu, ancak uygulama sürecinde bazı aksaklıkların bulunduğunu göstermektedir.

Göçmenlerin dil bariyeri nedeniyle sağlık hizmetlerinden tam anlamıyla faydalanamaması ve yoğun göç alan bölgelerde sağlık hizmetlerine erişimde yaşanan sıkıntılar, entegrasyon sürecini olumsuz etkilemektedir. Bu tür aksaklıkların giderilmesi, hem göçmenlerin hem de yerel halkın sağlık hizmetlerinden eşit şekilde yararlanabilmesi açısından büyük önem taşımaktadır. Bu alanda yapılabilecek faydalı çalışmalara, tercüman yardımı, göçmenlere basit sağlık terimleri ile alakalı eğitim verilmesi ve illerdeki yığılmaların önüne geçilmesi gibi alternatif politikalar da önerilmektedir. Entegrasyon süreçlerinde karşılıklı anlayış ve işbirliği, hem göçmenlerin hem de ev sahibi toplumların uyumlu ve barışçıl bir şekilde bir arada yaşamasını sağlayacaktır.

Sonuç olarak, Türkiye'de göçmenlerin entegrasyonu ve aidiyet süreçlerinde bireyin en temel ihtiyaçlarından biri olan sağlık politikalarının önemi büyüktür. Bu doğrultuda, Türkiye'nin göçmenlere yönelik sağlık ve entegrasyon politikalarının sürekli gözden geçirilmesi ve iyileştirilmesi, toplumsal uyum ve barışın sağlanması açısından kritik bir öneme sahiptir. Türkiye'nin bu alandaki deneyimleri ve uygulamaları, uluslararası göç yönetimi ve entegrasyon politikaları için önemli bir model teşkil etmektedir.

VASİLİ VASİLYEVİÇ RADLOV'UN ALTAY'A SEYAHATİNİN 163. YILI MÜNASEBETİYLE

Dr. Nevin Evrim Küçük
ORCİD ID: 0000-0001-8906-1317

ÖZET
Bu çalışma, ünlü Alman Türkolog Friedrich Wilhelm Radloff'un (Rus Türkolojisinde genel olarak bilinen adıyla Vasili Vasilyeviç Radlov'un) 1861 yılında Altay'a yapmış olduğu seyahatinin 163. yılı münasebetiyle kaleme alınmıştır. Çalışma öncelikle Radlov'un kısa bilimsel biyografisi ile başlayıp, daha sonra Altay seyahati ile ilgili bilgiler ihtiva etmektedir. Son olarak, Radlov ve onun çalışmaları ile ilgili bilgileri bulabileceğimiz kısa bir kaynakça sunulmuştur.
Anahtar Kelimeler: Vasili Vasilyeviç Radlov, Rus Türkolojisi, 1861, Altay.

ABSTRACT
This study was written on the occasion of the 161st anniversary of the famous German Turcologist Friedrich Wilhelm Radloff (Vasili Vasilyevich Radlov, commonly known in Russian Turcology) to Altai in 1861. The study first starts with Radlov's short scientific biography and then includes information about his Altai travel. Finally, a short bibliography is presented where we can find information about Radlov and his work.
Key words: Vasili Vasilyeviç Radlov, Russian Turkology, 1861, Altay.

GİRİŞ

Türkoloji çalışmaları 19. Yüzyılın ortalarından itibaren hızlı bir şekilde artmaya başlamış ve bu alanda araştırmalar yoğunlaşmıştır. 1889'da Köl Tigin ve Bilge Kağan bengü taşlarının bulunması, 1893'te Göktürk yazısının çözümlenmesi, 1897'de Tonyukuk Anıtı'nın keşfi, yine aynı yıl Kutadgu Bilig'in Mısır nüshasının bulunması, 1898 – 1914 arasında Doğu Türkistan'a yapılan ilmi seferler sonucunda Eski Uygur Türkçesiyle yazılmış birçok eser, belge ve şiirin ortaya çıkarılması, 1906'da Atabetü'l Hakayık'ın bulunması, 1915'te Divanü Lügati't Türk'ün keşfi gerçekleşmiştir.[9] Bu birbiri ardına gelen keşif ve çalışmalar Türkoloji alanında yaşanan hızlı gelişmenin birer göstergesi olarak kabul edilebilir. Yapılan keşif ve çalışmaların perspektifinden bakıldığında bu çalışmaları gerçekleştiren ünlü Türkologların isimleri de hemen akla gelmektedir. Bu bilim adamları içerisinde Türkoloji çalışmalarında bir döneme ismini vermiş olan Vasili Vasilyeviç Radlov[10] ayrı bir öneme haizdir.

Türkoloji literatüründe V. V. Radlov'un ilmi hayatı ve onun çalışmaları üzerine yapılmış oldukça fazla eser ve makale bulunmaktadır. Biz burada sadece onun Altay'a yapmış olduğu seyahatini ve bu yol üzerinde uğramış olduğu merkezleri ele alacağız. Radlov, seyahati esnasında Altay halklarının hayatları, giyim kuşamları, günlük hayatları, örf ve adetleri gibi konularla ilgili aldığı notlarını "Sibirya'dan" adlı eserinde detaylı bir şekilde aktardığından tarafımızca burada bu detaylara girilmeyecektir.[11]

Vasili Vasilyeviç Radlov'un Hayatı (17 Ocak 1837 – 12 Mayıs 1918)

Vasili Vasilyeviç Radlov'un çalışmaları ile ilgili Türkoloji literatüründe yapılan araştırma ve bilimsel çalışma sayısı oldukça fazladır. Sadece Türkoloji çalışmaları değil, hayatında önemli yer arz eden

[9] Ahmet Bican Ercilasun, "Wilhelm Radloff ve Türk Bengü Taşları", **Avrasya Etüdleri**, S. 13, İlkbahar 1998, s. 92.
[10] Almanca adı Friedrich Wilhelm Radloff olsa da genel olarak Rus Doğu Bilimi ve Rus Türkolojisi'nde bilinen adıyla Vasili Vasilyeviç Radlov olarak daha çok anıldığından metin içerisinde bu adı kullanmayı tercih ettik.
[11] Radlov'un Altay halkları ile ilgili aktarmış olduğu detaylı bilgiler için bakınız: W. Radloff, **Sibirya'dan I**, Ahmet Temir (çev.), İstanbul 1956.

FULL TEXTS BOOK

Rusya'daki (Kazan'daki, St. Petersburg'taki ve Sibirya'daki) faaliyetleri de ayrı ayrı çalışma konusu yapılmıştır.[12] Bu çalışmalar içerisinde Türkçe yazılmış olanlar arasında karşımıza çıkan önemli nokta, Radlov'un eserlerinin veya çalışmalarının yanında biyografisinin de ele alınmasıdır. Dolayısıyla bazen hemen hemen aynı bilgileri veren yazılarla karşılaşmak pek tabii şaşırtıcı olmamaktadır. Ancak Yusupov'a göre, V.V. Radlov'un çalışmalarının araştırılması üzerine adanmış çok sayıda bilimsel makale ile hayatı ve faaliyetlerinin farklı dönemlerini, çok yönlü eserlerinin farklı açılardan sunumlarını içeren birçok biyografi denemesi bulunmasına rağmen usta Türkolog'un hayatı bu zamana kadar tam anlamıyla bilinmemektedir.[13]

V. V. Radlov'un hayatı bizce Berlin, Halle ve Jena dönemi ve Petersburg, Sibirya, Kazan dönemi olarak ikiye ayrılabilir.[14] Rusya'ya geldikten sonra burada yapmış olduğu çalışmalar incelendiğinde Radlov'un hayatında Rusya'nın ve Rusya'daki araştırmaların ne kadar büyük önem taşıdığı net bir şekilde görülebilir.

V. V. Radlov, 17 Ocak 1837 yılında Almanya'nın Berlin şehrinde dünyaya gelmiştir. Genel olarak Rus adıyla bilinse de Almanca adı Friedrich Wilhelm Radloff'tur. Babası Berlin polis komiseri Wilhelm W. Radloff'tur.[15]

İlk, orta ve lise eğitimini Berlin'de tamamlayan Radlov, daha sonra burada 1854 tarihinde üniversiteye başlamıştır. İlk olarak teolojiye merak sarmış, ancak çok geçmeden tarihi-karşılaştırmalı dilbilim ile ilgilenmiştir.[16] Radlov, dönemin en tanınmış dil bilginlerinin öğrencisi olmuştur: Franz Popp, August Pott, Steinthal, Doğu bilimci W. Schott, coğrafya uzmanı Carl Ritter.[17] Özellikle W. Schott'un etkisinde kalarak doğu dilleri sahasına ilgi duymuş; İbranî, Arap, Fars, Türk, Mançu ve Çin dilleri gibi derslere devam etmiştir.[18] Bu esnada bir yandan da Rusça öğrenmeye başladığı bilinmektedir.

Eğitim süresinin büyük bir kısmını Berlin'de tamamlayan Radlov, iki dönem Hell'de bulunmuştur. Jena Üniversitesi'nde 1858'de "*Über den Einfluss der Religion auf die Nationalitäten und Sprachen*

---

[12] Bu noktada ilk dikkati çeken çalışma Ahmet Temir'in "**Türkoloji Tarihinde Wilhelm Radloff Devri Hayatı – İlmi Kişiliği – Eserleri"** adlı eserde müellif tarafından Radlov'un hayatı bölümlere ayrılarak verilmesidir. Bunun dışında Radlov'un bu bölgelerdeki çalışmalarından yola çıkılarak yazılan makalelerden bazıları şunlardır: Abdülkadir İnan, "Radloff'un Proben'leri Üzerine Bazı Düzeltmeler", **Dil ve Tarih-Coğrafya Fakültesi Dergisi**, S. 3, Ankara 1944; Ahmet Temir, "Radloff'un Proben <Deneme>leri", **Arayış**, S. 17, Ankara 1958; Osman Fikri Sertkaya, "Eski Türkçe (Göktürkçe ve Uygurca) Araştırıcısı Olarak Wilhelm Radloff", **Türk Dili**, S. 444, 1988; Hasan Eren, Wilhelm Radloff ve Türk Diyalektleri Sözlüğü", **Türk Dili**, S. 444, 1988; Zeynep Korkmaz, "Friedrich Wilhelm Radloff'un Orta Türkçe Üzerindeki Çalışmaları", **Türk Dili**, S. 444, 1988; Nuri Yüce, "Friedrich Wilhelm Radloff'un Derlemeleri", **Türk Dili**, S. 444, 1988; Naciye Yıldız, "Wilhelm Radloff; Hayatı, Eserleri, Manas Destanı", **Türk Kültürü**, S. 384, Ankara 1995; Mehmet Ölmez, "Radloff Sözlüğünün Yeni Bir Yayımı Nasıl Olmalıdır?", **VII. Uluslararası Türk Dilbilimi Kurultayı**, (yayımlayanlar: K. İmer, N. E. Uzun), Ankara 7-9 Ağustos 1996; Mustafa Toker, "W. Radloff'un "*Opıt Slovarya Tyurkskih Nareçiy*" Adlı Eserinde Geçen Tatar Türkçesine Ait Kelimeler Üzerinde Genel Bir Değerlendirme", **Selçuk Üniversitesi Türkiyat Araştırmaları Dergisi,** S. 14, 2003; G. Selcan Sağlık**, "**Wılhelm Radloff'un Hayatı ve Sibirya Türk Halklarının Kültür Dokusu Üzerine Görüşleri", **Hacettepe Üniversitesi Türkiyat Araştırmaları Dergisi**, S.9, 2008.

FULL TEXTS BOOK

Hochasiens" adlı teziyle Felsefe doktoru ünvanını almıştır.[19] Bir süre sonra halk mektebi öğretmenlerinden birinin kızı olan Pauline Auguste Fromm'la nişanlanmıştır.

Dönem itibariyle Türkoloji çalışmaları Rusya'da Moskova, Petersburg ve Kazan'da yoğun bir şekilde gerçekleşmektedir. Radlov tezini savunmuş olduğu yılın yaz ayında hocasından almış olduğu tavsiye mektubuyla beraber Türkoloji çalışmalarının yoğun bir şekilde yapıldığı St. Petersburg'a gelmiştir. Burada Şarkiyat Fakültesi'ne girmek ve yapılan çalışmalara katılmak istemiştir. Bu dönemde F. B. Schmidt'in başkanı olduğu Rus Coğrafya Cemiyeti'nin bilimsel bir gezisine katılabilmek ve Amur bölgesine gidip Tunguz halklarını araştırabilmek için uğraşmıştır.[20] Ancak heyet planlanan tarihte hareket etmemiştir. Geçimini sağlamak için Almanca, Latince ve İtalyanca özel dersleri vermiştir. Bu esnada Rusçası da gelişen Radlov, üniversitede yapılan lise öğretmenliği sınavlarına katılarak öğretmen olma hakkı kazanmıştır. P. Meyendorff ve F. A. Schiefner gibi hamileri ona Altay bölgesindeki Barnaul şehrinde öğretmen olmasını tavsiye etmişlerdir.[21] Bu tavsiyeden sonra Radlov, Barnaul'a gitme hazırlıkları yapmıştır. Kendisi Barnaul'a gittikten kısa bir süre sonra 1858'de nişanlandığı Pauline Auguste Fromm eşi olarak Barnaul'a yanına gelmiştir.

Radlov'un Barnaul'a gelişi onun ilmi hayatında adeta bir dönüm noktasıdır. 1859 – 1871 yılları arasında Sibirya'da kalmıştır. Kononov onun hayatındaki bu dönemi (Altay Dönemini) Altay'ın Türk dillerinin incelenmesi ve daha sonra folklor, etnografya ve arkeoloji ile ilgili materyallerin toplanması ve birincil işlenmesi Altay ve Batı Sibirya Türk halkları ile ilgili çalışmalar gerçekleştirmesinden ötürü kendi kendine eğitim süreci olarak adlandırmaktadır.[22] Radlov, 1860 yılından itibaren gezilerine ve çalışmalarına başlamıştır.

1871 yılında Radlov Kazan'a taşınmak üzere Barnaul'dan ayrılmıştır.[23] Türkoloji çalışmaları açısından onun hayatındaki Kazan dönemi Sibirya'da geçirmiş olduğu dönem kadar verimli geçmemiştir diyebiliriz. Kazan'a geldikten sonra Nikolay İvanoviç İlminsky ve Pytor Dmitrieviç Şestakov ile görüşmüştür. Bu görüşme neticesinde Radlov'a Müslüman Tatarlar için okullar ile çalışmalarda lider olması teklif edilmiştir.[24] Radlov bu teklifi kabul etmiş ve hayatının Kazan dönemi başlamıştır.

10 Mart 1871 tarihinde P. D. Şestakov Milli Eğitim Bakanı Dmitry Andreeviç'e bir dilekçe göndererek "Kazan eğitim bölgesi idaresi altında Tatar, Başkurt ve Kırgız okullarında müfettişlik pozisyonunun kurulması ve Radlov'un bu pozisyona atanması hakkında" Radlov'un belirtilen pozisyona görevlendirilmesini yapmıştır.[25] Bu dilekçe içerisinde Radlov'un görevi de açık bir şekilde belirtilmiştir.

6 Kasım 1872'de Radlov, Şestakov'a, kendisini öğretim yöntemleri, programları ve öğretim yardımcıları hakkında bilgi sahibi olması için yurtdışına gönderme talebiyle dönmüştür.[26] Radlov'un bu talebi olumlu sonuçlanmış ve Millî Eğitim Bakanlığı'nın 24 Şubat 1873 tarih ve 2 numaralı emriyle altı aylığına gönderilmiştir.[27]

Öğretim yöntemleriyle ilgili çalışmalarıyla görevlendirmeden sonra Kazan'a görevine dönen Radlov, 1872 – 1881 tarihleri arasında mevcut müfettişlik görevi paralelinde raporlar hazırlamış ve bunları ilgili makamlara iletmiştir.[28]

FULL TEXTS BOOK

Görüldüğü üzere Sibirya'da Türkoloji alanıyla ilgili yoğun bir şekilde araştırmalar yapan Radlov, Kazan'da idari ve pedagojik faaliyetlerde bulunmuştur.

1884 yılında Kutadgu Bilig'in Viyana nüshasının tıpkı basımı için Avusturya'ya giden Radlov, bu seyahati sırasında Petersburg İlimler Akademisi'nin teklifini kabul etmiş ve asli üye olarak bu akademiye geçmiştir.[29] Burada kaldığı süreçte toplamış olduğu materyallerin düzenlenmesine ve yayımlanması faaliyetlerine yoğunlaşmıştır. Bunun dışında 1886'da Kırım 1887'de Batı Karaylar'a gitmiş, 1888'de Macar İlimler Akademisi'nin Muhabir üyeliğine seçilmiş, 1891'de Orhon bölgesine gönderilen heyete başkanlık yapmıştır.

1899'da Roma'da toplanan XII. Şarkiyatçılar Kongresi'nde Radlov'un teklifi üzerine St. Petersburg'da, Orta Asya ve Uzakdoğu'nun arkeolojik ve linguistik yönden araştırılması için milletlerarası bir cemiyetin kurulmasına karar verilmiştir.[30] 1902 yılında tekrar toplanan kongrede konu tekrar görüşülerek cemiyetin tüzüğü kabul edilmiş ve başkanlığına Radlov getirilmiştir. 1907 yılında Batı Avrupa Etnografya müzelerini dolaşmıştır. Radlov ne yazık ki 12 Mayıs 1918 tarihinde yakalanmış olduğu grip nedeniyle vefat etmiştir.

V. V. Radlov ünlü bir Türkolog olmasının yanı sıra etnolog, arkeolog, oryantalist ve aynı zamanda seyyah[31] olarak nitelendirilmektedir. V. V. Radlov, çoğunluğu Almanca olmak üzere 150'den fazla eser yayınlamıştır.

V. V. Radlov'un Altay'a Seyahati

V. V. Radlov'un ilmi hayatındaki dönüm noktalarından biri Barnaul'a gelişidir. Genç yaşlarında Barnual'a gelmiş olması onun kendi içinde planları olmadığı anlamına gelmemektedir. Bu durumu daha sonra ortaya koymuş olduğu eserlerinde net bir şekilde görebilmekteyiz. Barnaul'a 1859 tarihinde geldikten sonra Radlov, kışın öğretmenlik yapmış, yazın ise ilmi çalışmalar yapmak üzere saha araştırmalarına çıkmıştır.

1861'de V. V. Radlov, folklor materyallerini toplamak ve yerli nüfusun yaşamı ve dili hakkında bilgi almak için Altay Dağ Bölgesi'nin doğu kısmına neredeyse üç aylık bir gezi yapmıştır.[32] Bu gezi esnasında yer yer atlarla karadan yer yer kayık veya teknelerle nehir yoluyla yolculuk yapmıştır. 10 Mayıs 1861 tarihinde Radlov eşiyle birlikte bu seyahati için Barnaul'dan ayrılmıştır.

11 Mayıs 1861'de Şmakova, Berkova, Mamanova ile Suyenga posta istasyonlarından geçtikten sonra Yegorievsk köyüne varmıştır. Burası bütün Altay'ın en eski altın ocağıdır. Bu noktada Radlov bu maden ocağı ve civarı hakkında edindiği bilgiyi kısaca bizlere aktarmıştır.[33] Buradan daha sonra Lisvinki altın istasyonuna geçmiştir.

12 Mayıs'ta Podnivaya, Kasma, Brıykanova ve Timakova köylerinden geçen Radlov Brıykanova'da Starşina (köy muhtarı) ile görüşüp bölge hakkında bilgiler almıştır.[34] 13 Mayıs'ta ilk Teleüt köyüne geldikten sonra 14'ünde Solkoy, 16'sında Ulus – Şandı ve 17'sinde Ulu – Ayıl Teleüt köylerinde kaldıktan sonra Sokolova, Tereşkina ve Nedoresova köylerinden geçerek 18 Mayıs tarihinde Kuznetsk'e varmıştır.

FULL TEXTS BOOK

Hatıralarında 20 Mayıs tarihli yazısında Radlov bizlere Kuznetsk hakkında bilgiler vermektedir.[35] 21 Mayıs tarihinde Radlov Şor Tatarları ile ilgili bilgi toplamak üzere kaldığı yerden seyahatine devam etmiştir. Önce Attamanovo köyüne, ardından tekneyle Bezrukova (Protok) köyüne ulaşmıştır. 22 Mayıs'ta çoğu Ruslaşmış olan Tatarlardan oluşan Balbı köyüne ulaşmıştır. Halkın çoğunun Ruslaşmasından ötürü burada kalmayan Radlov yoluna devam ederek Pras – Pältärindä adlı Tatar köyüne varmıştır.[36] Burada 2 gün kalmıştır.

24 Mayıs akşamı Krasnoyarsk'a gelen Radlov buradan 26 Mayıs tarihinde ayrılmış ve Sıbırgı boyundaki Ulus'a kadar gitmiştir. Burada bir gün kaldıktan sonra Çıbaş ve Ulus – Kaynçak'tan geçerek Rusların "Sosnavaya gora" dedikleri Ulus – Tos'a varmıştır. 29 Mayıs'ın sabahında buradan ayrılan Radlov uzun ve yorucu bir yolculuktan sonra Ulus – Çeley köyüne varmıştır.

3 Haziran günü Ulus – Çeley'den ayrıldıktan sonra yine Mras nehri yolunu takip ederek yolculuğuna devam etmiştir. 6 Haziran'a kadar Ulus – Karga, Ak – Kaya, Ulus – Kızıl – Kaya, Ulus – Tayaş'ı geçerek Spasski altın ocağına varmıştır. 9 Haziran'da buradan ayrılmıştır. Bu noktadan ayrıldıktan sonra 10 Haziran'da daha önce altın ocağı olan ancak daha sonra sadece istasyon olarak kullanılan Biysk altın ocağına gelmiştir. Daha sonra yoluna devam eden Radlov Ulbas'ta Lebed Tatarlarına rastlamıştır. 14 Haziran sabahı güneş doğarken Radlov ve beraberindekiler Ulbas'tan ayrılmıştır. 19 Haziran günü Karaorman Tatarlarının kulübelerine rastlamıştır. 20 Haziran tarihinde ünlü bir şarkıcıyı görmek için Radlov Teletsk gölüne giden en kısa yol üzerinde bulunan Käbisän misyonerliğine gitmeyip Talaslı kulübelerine yönelmiştir. Daha sonra 22 Haziran'da belirlemiş olduğu rotasını yeniden takip etmeye başlayarak Käbisän misyonerliğine gitmiştir. Burada çok kalmayarak yoluna devam eden Radlov, Oroşok – Zaysan'ı geçerek Teletsk gölüne gitmiştir. Bu civarda yapmış olduğu seyahatinin neticesinde Tolış mansabına vararak ilk Dvoyedan yurtlarını 25 Haziran'da görmüştür.

26 Haziran tarihinde Radlov ve ekibi yola erkenden çıkmıştır. 26 Haziran 1861 tarihi Radlov'un seyahatinde bir dönüm noktasıdır. Çünkü Abakan Nehri'ne giden yol, Çolışman Vadisinden geçmektedir. Çolışman Nehri'nin sağ kolu üzerinden Radlov'un seyahati başlamıştır. Seyahatini karanlık bastığı için Başkaus mansabı yakınlarında durdurmak zorunda kaldığını belirten[37] Radlov, güncesine bu tarihten sonraki tarih olarak 17 Temmuz 1861'i düşmüştür. 17 Temmuz günü Çolışman'dan Çülçö membaına doğru hareket etmiş ve öğleden sonra buraya vararak çadırını burada kurmuştur.[38] Radlov güncesinde 17 Temmuz'dan 24 Temmuz tarihine kadar herhangi bir bilgi aktarmamıştır. Bu noktadan bakınca Radlov'un bir müddet burada kaldığı yorumunu yapabiliriz.

24 Temmuz tarihinde Çin sınırına doğru ilerlerken Çolışman nehri o kadar yükselmiştir ki mecburen yoluna sağ sahil boyunca devam etmek zorunda kalmıştır. 25 Temmuz'da Radlov, mevsimin ilerlemesinden ötürü Teletsk gölünün batısından geçen kara yoluyla hareketine devam etmiştir.[39]

26 Temmuz'da Açıman'dan ayrılan Radlov batı yönünde yükselen dağ zirvelerine doğru yönelmiştir. Buradan Biji nehir sistemine varmıştır. Akşamleyin Biji nehrinin güneyindeki doruklar çizgisine varmış ve burada gecelemiştir.[40] 27 Temmuz günü erkenden yola çıkan Radlov ve beraberindekiler şiddetli bir yağmura tutulmuşlardır. Hava şartlarının kötü olmasından dolayı ekip oldukça yavaş hareket etmek zorunda kalmıştır.[41]

28 Temmuz'da Biji'nin küçük bir kolu boyunca dağın doruklar çizgisinden tekrar yukarıya doğru yürüyen ekip sık orman, bataklık ve taşlı – çamurlu yoldan ilerlemiştir. Zorlu yolculuğun sonunda Radlov ve ekibi Biji vadisini görmüştür. Bu vadideki ilk yurt'a varışları öğleden sonra 4 gibi olmuş ve

burada yemek yedikten sonra yollarına devam etmişlerdir. Gece geç vakitlerde Biji nehrini geçerek büyük bir Tatar köyüne varmışlardır.[42]

29 Temmuz'da Ügön yolunu takip eden Radlov ve beraberindekiler akşam vakti Kara – Köpçü sahilindeki Kömnöş boyundaki Zaysan – Tatar'ın yurduna varmıştır.[43]

Radlov ve ekibi, 30 Temmuz'da Kara – Köpçü boyunca ilerlemiştir. Paspagıl boyunda vaftiz edilmiş Tatarların köyünden geçen Radlov buradan Katun'nun ilk kolu olan İşi'ye doğru dönmüştür. Gece geç saatlerde son Tatar köyü olan Taştu'ya varan Radlov Biysk yoluna varabilmek için at üzerinde seyahatine devam etmiştir.[44]

1 Ağustos tarihinde Barnaul'a geri dönen Radlov zorlu saha çalışmasını başarıyla tamamlamıştır. Radlov'un yapmış olduğu bu seyahat Altay halklarının hakkında merak uyandırmış ve yeni çalışmaların yapılmasını sağlamıştır.

SONUÇ

V. V. Barthold'un değerlendirmesiyle "dünya çapında birinci sınıf bir bilgin", Akademi üyesi S. F. Oldenburg'un ifadesiyle "Türkolojinin kurucusu" olarak adlandırılan Radlov'un bu sözlerle tarif edilmesi pek tabii olarak tesadüf değildir. Ömrünün 60 yıllık bir zaman dilimini Türkoloji çalışmalarına adayan Radlov, Türk halklarının, örf, adet, yazı, folklor gibi birçok unsurunu kaydederek arkasından gelen Türkologlar için eşsiz çalışmalar bırakmıştır. Bugün Radlov'un çalışmalarındaki eksik veya yanlışlar hala Türkologların çalışma konularının temelini oluşturmaktadır.

1861 yılında Radlov'un Altay bölgesine yapmış olduğu seyahatinin 163. yılı olması münasebetiyle kaleme almış olduğumuz bu yazımız Radlov'un seyahatinin güzergahını ve bu güzergahta görmüş olduğu yerleşim yerlerinin tespiti üzerinedir. Pek tabii olarak seyahati esnasında karşılaşmış olduğu hava ve yol durumlarının muhalefetinden de bahsedilmiştir. Yolculuğu boyunca Altay'ın zorlu coğrafyası ve iklimi karşısında çeşitli zorluklarla karşılaşmış olsa da bu seyahatinden vazgeçmeden devam eden bu büyük Türkolog bizlere Altay hakkında paha biçilemez bir kıymetli günce bırakmıştır.

EVLİLİK VE KADIN: *BLUEBEARD* VE *THE YELLOW WALLPAPER* ADLI ESERLERDE KUŞATILMIŞ KADINLIK

Doç. Dr. Veysel LİDAR
Eskişehir Osmangazi Üniversitesi, İnsan ve Toplum Bilimleri Fakültesi, Karşılaştırmalı Edebiyat Bölümü

ÖZET
Kadınların aile içinde maruz kaldığı kötü davranışlar, şiddet ve kısıtlamaları konu alan pek çok edebi ve görsel metin bulunmaktadır. Söz konusu eserlerde kadın, kocası tarafından sınırlandırılan ve daima ev içi alana, bir diğer tabirle özel alana hapsedilen bir kimlikle karşımıza çıkmaktadır. Kadından istenilen ev içindeki işleyişi düzenlemesi ve uysal bir eş olmasıdır.
Çalışmada ele alınacak eserlerde de karşımıza kadından böylesine istekleri olan kocalar çıkmaktadır. Charles Perrault'nun yapma masalı olan Mavi Sakal'da, korkutucu görünümüne rağmen zenginliği sayesinde evlenen bir adam ve onun eşi arasındaki mücadele anlatılmakta, kadının kocasının isteklerine riayet etmesi beklenen bir nesne gibi sunulmasına karşı çıkılmaktadır. Masalda kocanın kadından beklediği tek şey, emirlerinin dışına çıkmaması ve meraklı olmamasıdır.
The Yellow Wallpaper adlı eserse, Charlotte Perkins Gilman tarafından yazılmış bir kısa öyküdür. Bu öyküde geçirdiği ruhsal buhranlar nedeniyle mutsuz olan bir kadınla, kendisini bilime adamış ve rasyonel kocasının ilişkisi aktarılmıştır. Yine bu eserde de kadından beklenilen kocasının istek ve yönlendirmelerine kesin bir kabulle uymasıdır.
Çalışma kapsamında feminist yaklaşım üzerinden bu iki eser irdelenecek ve kadınların evlilik içi psikolojik şiddete maruz kalışları ve bununla mücadele stratejileri değerlendirilecektir. Yayımlanma tarihleri itibariyle birbirleri arasında büyük bir fark bulunmayan bu iki eserde, kadının rolünün nasıl değiştiği de yine çalışmada açıklanmaya gayret edilecektir.
Anahtar Kelimeler: *Mavi Sakal*, *The Yellow Wallpaper*, Charles Perrault, Charlotte Perkins Gilman, Feminist eleştiri

ABSTRACT
There are many literary and visual texts that address the mistreatment, violence, and restrictions faced by women within the family. In these works, women often appear as identities confined to the domestic sphere, or in other words, the private realm, restricted and controlled by their husbands. They are expected to regulate the household chores and to be obedient wives.
The works to be discussed in this study also feature husbands who have such expectations from their wives. In Charles Perrault's fairy tale 'Bluebeard,' despite his frightening appearance, a man who marries due to his wealth is depicted in a struggle with his wife, who is presented as resisting being treated as an object expected to comply with her husband's wishes. The only thing expected of the wife in the tale is not to disobey his orders and not to be curious.
'The Yellow Wallpaper,' written by Charlotte Perkins Gilman, is a short story depicting the relationship between a woman unhappy due to her mental breakdowns and her husband dedicated to science and rationality. In this work too, the woman is expected to unquestioningly adhere to her husband's desires and directions.
Within the scope of this study, these two works will be analyzed through a feminist approach, evaluating the psychological violence experienced by women within marriage and their strategies of resistance. Despite being published around the same time, the study will also attempt to explain how the role of women changes in these works
Keywords: *The Bluebeard*, *The Yellow Wallpaper*, Charles Perrault, Charlotte Perkins Gilman, Feminist Theory.

FULL TEXTS BOOK

GİRİŞ

Bu çalışmada Fransız yazar Charles Perrault'nun 1697 yılında yayımlanan *Bluebeard* ve Amerikalı yazar Charlotte Perkins Gilman'ın 1887 yılında yazdığı *The Yellow Wallpaper* adlı eserleri feminist yaklaşım ışığında karşılaştırmalı olarak ele alınacaktır. İki eserde de evlilik içinde kadının yaşadığı problem ve kısıtlamalar irdelenecek ve eserler arasındaki zaman farkının kadının toplumdaki yerine yönelik ne gibi değerlendirmelere yol açabileceği üzerinde durulacaktır.

Çalışma kapsamında belirlenen eserler, edebi metinlerde kadın ve kadının temsili noktasında farklı bir bakış açısı sunan feminist eleştiri kuramından hareketle değerlendirilecektir. Bu nedenle feminist eleştiri yaklaşımına yönelik bilgilerin verilmesi çalışmanın tutarlılığı açısından yerinde olacaktır.

En genel ifadeyle feminist eleştiri, cinsiyet temelli yaklaşımlarla ilintilidir. Örneğin bazı feminist eleştirmenler, medya ve yazılı basında kadının nasıl karakterize edildiğiyle ilgili araştırmalarda bulunur, edebi metinlerde kadının rolünü sorgular, kadın bedeninin istismar edilmesine ve erkeğin kadına bakışına odaklanır, kadına yönelik olduğu düşünülen edebi ve görsel metinlerde kadının nasıl işlendiğini inceler. Bir başka ifadeyle feminist eleştiri; kadının edebi metinlerde ve daha geniş bir bağlamda günlük yaşamdaki rolünü, kadının bir cinsellik nesnesi olarak istismarını, erkeğin iş yerinde, cinsel ilişkide ve yaşamın diğer alanlarındaki egemenliğini ve kadının kendi varlığının bilincine varmasını çalışma alanının eksenine yerleştirmiştir. Feminist eleştirmenler pek çok toplumun ataerkil bir yapıda olduğunu ve dünyayı algılamada ve bilimde erkek egemen görüşün, üstün kabul edildiğini iddia etmektedirler (Berger, 1995, s.29-30).

Feminist edebiyat eleştirisi, kadının ve erkeğin rol modeller edinmesi ve sosyalleşmesinde önemli bir yeri olan edebiyatta, kadının nasıl ele alındığını sorgular (Barry, 2002, s.122). Feminist araştırmacılar, geleneksel yaklaşım her ne kadar edebiyat eleştirisinin cinsiyet temelli olmadığını iddia etse de, edebiyat eleştirisinin evrensellik gayesi taşıyorsa feminist bilince sahip olması gerektiğini savunmuşlardır. Erkek egemen yapıdaki edebiyat ve edebiyat eleştirisinin mevcudiyetini savunan feminist teorisyenler, edebiyat eleştirisinin feminist bilinci de kapsayacak şekilde yeniden yapılandırılması gerekliliğini dile getirmişlerdir. Onlara göre 1960 ve 1970'lerde yükselen özgürlük hareketlerinin çıkış noktası, erkek egemen söylemdir. Bu dönemin Amerikan toplumunda muteber olan çoğunluğun beyaz, orta sınıfa mensup erkekler olduğu feminist araştırmacılar tarafından ortaya koyulmuştur (Guerin vd., 1979:245-246).

Feminist eleştiri, cinsiyet eşitliğini savunan ve toplumda cinsiyet temelli egemenliği ortadan kaldırmak için ataerkil kültüre karşı çıkan bir yaklaşımdır. Feminist eleştiri her türlü ataerkil düzeni, edebiyat ve edebiyat eleştirisinden uzak tutma amacı taşımaktadır (Selden vd., 1997, s.121).

Feminist eleştiriyi sadece 20. yüzyıla özgü bir yaklaşım olarak görmek doğru değildir. Feminist söylemin geçmişi Antik Yunan'a, Sappho'nun şiirlerine ve Aristophanes'in *Lysistrata* adlı eserlerine dek götürülebilir. Antik dönemden, orta çağa ve sonrasında günümüze değin izleri sürülebilecek feminist yaklaşımın çeşitli temel taşları mevcuttur. Bu temel taşlardan ilki olan Mary Wollstonecraft, Fransız Devrimi'nden sonra devrimin ve Aydınlanma düşüncesinin ideallerinin kadınları da kapsayacak şekilde kurgulanması gerekliliği yönündeki tartışmaları ateşlemiş, kadınların da eğitim alabilmesi zorunluluğunu savunmuştur. 19. yüzyılda ise, Virginia Woolf, Bronte Kardeşler, Eliot Stein, Katherine Mansfield gibi feminist yazarlar göze çarpmaktadır. Feminist söyleme sahip kadın yazarlar, sadece eğitim ve finansal bağımsızlık hakları için mücadele etmezler, bunun yanında kendilerinin edebi üretimlerini, üretim çabalarını küçümseyen, kendilerinden sessizlik ve itaat bekleyen erkek egemen ideolojiyle de savaşmışlardır. Onlara göre erkek egemen edebiyatta; melek, ilahe, fahişe, itaatkâr kadın ve anne olarak işlenen kadın, cinsiyet temelli ideolojinin yansımasıdır. 20. yüzyılla birlikte kadınların politik haklarını kazanma yönündeki mücadeleleriyle, feminist eleştiri sistemli bir yapıyı ortaya çıkarmıştır. Bu dönemden itibaren feminist eleştiri; kadın emeklerini de kapsayan yeni bir edebiyat tarihinin oluşturulması, kadın edebiyat geleneğinin takip edilmesi, cinsellik ve cinsel farklılık temelli teorilerin oluşturulması, erkek egemen edebiyatta kadının temsili, edebi üretim ve eleştiride cinsiyet

FULL TEXTS BOOK

rolleri, edebi türlerle cinsiyet ilişkisi gibi konularla ilgilenmiştir. Yine eril değerlerle ve içerikle yüklü bir dille edebiyat yapmanın problemleri de feminist eleştirinin araştırma alanlarından biri olmuştur (Habib, 2005, s.667-668).

Feminist yaklaşıma göre dil, kaynağını Aristoteles'te bulan bir eril düşünme biçimiyle örgütlenmiştir. Aristoteles'in öğretilerine göre mantık, kimlik ve diğer kategorilendirmelerde, sınırlar kesin olarak çizilmiştir. Aristoteles'e göre bir insan ya erkek ya da kadındır, ya siyah ya da beyazdır, ya efendi ya da köledir ve bu gibi ayrımların hepsi, oldukça sınırlayıcıdır. Feminist teorisyenlere göre bu kategoriler doğal olmadığı için, kültürel ve ideoloji kaynaklıdır. Tam da bu noktada feminist söylemin, yapıbozumculuktan, Hegel, Schopenhauer ve Bergson'dan, Fransız sembolizminden yararlanmakla birlikte, eleştirdiği bir yapıya benzememek adına sınırlı, sabit kurallarla, değerler dizgesiyle kuşatılmadığını söylemek mümkündür (a.g.e., 668-669).

Günümüz feminist edebiyat eleştirisi 1960'ların 'kadın hareketi'nin bir ürünüdür. Feminist hareket, edebi metinlerde yansıtılan kadın imajının önemini kavramış, edebi metinlerdeki kadın imajıyla mücadeleyi önemli olarak addetmiş ve eril edebiyatın otoritesini ve geçerliliğini sorgulamıştır. Feminist eleştiride temel odak; cinsiyet eşitsizliğinden kaynaklanan ve kültürel temeli olan 'kadın' ve 'erkek'e yönelik sabit fikirlerin oluşturduğu ataerkil mekanizmaların ortaya çıkarılmasıdır. Erkek yazarlar tarafından yazılan, kadına yönelik tipik ya da etkili imajlara yer veren eserler, bu kapsamda incelenmiştir. 1980'lerle birlikte feminist yaklaşımının bakış açısı değişmiştir. İlk olarak feminist yaklaşım eklektik bir yapıya bürünmüş ve Marksizm, yapısalcılık ve dilbilim gibi alanların bulgu ve yaklaşımlarından yararlanmıştır. Bu dönemde feminist yaklaşım eril dünyanın uygulamalarına saldırmak yerine, kadının dünyasının ve görünüşünün doğasına, kaybolan ya da baskılanan kadın deneyimini yeniden oluşturmaya odaklanmıştır. Feminist yaklaşımdaki bir diğer odak değişimi ise; ihmal edilmiş/görmezden gelinmiş kadın yazarlara hak ettikleri değerin verildiği yeni bir edebiyat tarihinin yazılması ve bir kadın edebiyatı kanonu oluşturulmasıdır (Barry, 2002, s.121-122).

Feminist edebiyat eleştirisinin başlangıcı olarak gösterilebilen 1960'larda, feminist edebiyat eleştirisinin tam anlamıyla oluştuğu, bir kimlik ve içerik kazandığını iddia etmek güçtür. Feminist edebiyat eleştirisi o dönemde, yüzyıllara dayanan kadın yazınına, kadın yazını hakkında oluşturulan kadın yazınına, kadınların zihinleri, bedenleri, sanatları ve fikirleri ile ilgili olarak kadın ve erkek yazınına karşı farkındalık yaratma amacı taşımıştır. Feminist eleştiri yöntemi genel olarak feminist yazının kaynağını açıklamak, kadın yazın geleneğini oluşturmak ve erken dönem 'feministleri'nin, erkeği ve erkek dehasını, sorgulamadan kabul etmelerine karşı çıkma amacını taşımaktadır (Plain ve Sellers, 2007, s.2).

Feminist yaklaşım tarihsel açıdan ele alındığında üç dalga halinde gelişim göstermiştir. Bu dalgalardan ilki olan birinci dalga feminizmi Virginia Woolf ve Simone de Beauvoir'le temsil edilmiştir. Bu dönem feministlerin, kadın-erkek eşitliği, oy kullanma hakkı ve kadının; babanın ve kocanın malı kabul edilemeyeceği fikrini savunmuştur. Woolf, *Kendine Ait Bir Oda* adlı eserinde, erkek egemen toplum yapısında, 'kadın'ın, erkek egemen söylem tarafından tanımlandığını iddia etmiştir. Woolf'a göre siyasal, ekonomik, sosyal ve edebi konuları kontrol eden de erkektir. Kadına düşense, mevcut durumu kabul etmeyip, kendi kimliğini oluşturmak ve tanımlamaktır. Beauvoir'sa *İkinci Cinsiyet* adlı eserinde kadının olmanın ne demek olduğunun erkek tarafından belirlendiğini yazmıştır. Kadın, bu noktada erkeğin karşısındaki değersiz 'öteki'dir. Feminist eleştirinin ikinci dalgası, 1960'ların özgürlük söyleminin yansımasıdır. Feminist yaklaşım bu dönemde kadınların sosyal alandaki temsiliyet krizine dikkat çekmiş, kadınların farkındalık kazanması ve cinsellik gibi konular üzerinde durmuştur. Kadın, sıkıştığı erkek boyunduruğundan çıkmalı ve kendine ait bir yazın anlayışı oluşturmalıdır. Bu dönemin önde gelen temsilcisi Elaine Showalter'dir. O, kadın yazınını üç evrede anlatır. Bu evreler; 1840-1880 arasındaki dişil evre, 1880-1929 arasındaki feminist evre ve 1970 sonrasındaki kadın evresidir. Dişil evre yazarları eserlerinin basılması için erkek isimlerini takma ad olarak kullanmışlardır. Feminist evrede, erkek egemen edebiyatta kadının nasıl ele alındığını araştırılmıştır. Kadın evresinde ise, kadınların kendilerine dayatılan ikincil pozisyonu kabullenmeyişi vardır. Genel akış içinde üçüncü dalga

FULL TEXTS BOOK

feminist yaklaşımsa; bütün ötekileştirilen sınıf ya da ırkları kapsayan bir anlayışa sahiptir. Söz gelimi, siyah feminizm, Amazon feminizmi ve ekofeminizm gibi alt alanlar, bu dönemde gündeme gelmiştir (Turgut, 2019, s.41-51).

Temel hatları ve tarihsel gelişimiyle aktarılmaya çalışılan feminist yaklaşım ve feminist edebiyat eleştirisi, kadının yaşamdaki, edebi ve görsel metinlerdeki rolüne odaklanmakta, erkek egemen yapıdaki çevre ve edebiyat dünyasında kadına yönelik bir farkındalık yaratma amacındadır.

ARAŞTIRMA VE BULGULAR

Çalışmada kullanılacak olan ilk eser olan Perrault'nun eseri kısaca, mavi bir sakalı varlıklı bir adamla evlenen genç kadının evlilik sürecinin anlatılmasıdır. Varlıklı bir adam olan Mavi Sakal, iş için evden ayrılırken eşine evin tüm odalarının anahtarını bırakır ve her odayı gezebileceğini, arkadaşlarını çağırabileceğini ama bir odaya kesinlikle girmemesi gerektiğini söyler. Genç kadın kendisine yasaklanan odanın kapısını açar ve bu anlamda eşinin uyarılarını dikkate almaz. Eserde kocasının uyarılarına kulak asmayan bir kadının eşi tarafından cezalandırılması ve öldürülmeye çalışılması işlenmiştir.

Charles Perrault'nun orijinal dilindeki adıyla "La Barbe bleue" adlı eseri 1697 yılında yayımlanmış ve eser yayınlandıktan çok kısa bir süre sonra seri katil koca tipini içeren edebi eserlerin öykündüğü kanonik metin haline gelmiştir. Bir yapma masal olan Perrault'nun eseri daha sonra, söz gelimi 18. yüzyılda sözlü geleneğe geçmiştir. Grimm Kardeşlerin 1812-1815 yılları arasında derledikleri masallarda 'Blaubart' masalının yer alması bu geçişin ispatı niteliğindedir (Ruddick, 2004: 346-347). Perrault'nun eseri, kolektif hayalgücüne etki eden ve yazıldığı tarihten sonra pek çok kez yinelenen ve yeniden yazılan bir metindir (Le Juez, 2016:4). Perrault'nun eserini, 15. Yüzyılda yaşayan soylu Gilles de Rais'ten etkilenerek oluşturduğu da düşünülmektedir (Vincendeau, 2010:50). Ruddick'e göre varlıklı adamın mavi bir sakala sahip olması, erkeğin doğal olmayan maskülenliğine/erilliğine bir göndermedir. Erkeğin mavi sakalı aslında açık bir tehlike uyarısı olmakla birlikte, kadının Mavi Sakal'ın zenginliğinden etkilenmiş ve sakalın 'aslında o kadar da mavi olmadığını' düşünmesine neden olmuştur (a.g.e.,:348). Perrault'nun eserinde geçen bu ifade, aslında yine eserdeki kadının zenginlik karşısındaki tamahkârlığının göstergesidir. Mavi Sakal'ın şatosunda mobilya ve sofra takımlarının koleksiyonunun da olması, eserde kendisiyle evlenen kadın için bir cazibe unsurudur. Başlangıçta Mavi Sakal'la evlenmek istemeyen kadın, Mavi Sakal'ın evindeki bir haftalık şölen neticesinde onun sakallarının o kadar da mavi olmadığını düşünebilecektir (Randall, 2004:91).

Randall'a göre Perrault'nun eserindeki erkek karakterin mavi sakalı, düşmanlarını püskürtüp tehdit eden ve farklılığını gösteren bir unsurdur. Mavi Sakal'ın evindeki koleksiyon odalarında pek çok zenginlik unsuru meta bulunmakta ve saklı odada, daha önce evlilik yaptığı kadınların cesetleri yer almaktadır ve odadaki ölü gelinlerin varlığı Mavi Sakal'ın kadınlar üzerindeki gücünü göstermektedir. Kendisi fiziksel güzellikten yoksun olduğu için, Mavi Sakal kendisinden kaçan kadınlara karşı intikamını arzu nesnelerini ve güzel vücutları toplayıp biriktirerek alır. Ayrıca Mavi Sakal'ın eşine verdiği emirler mantık dışı, keyfi ve tuzaklıdır, mutlakçı bir dilin ve davranışın tezahürüdür. Mavi Sakal'ın eşine koyduğu yasakları ifade etme biçimi, açık bir şekilde Tanrı'nın Havva'ya yasakladığı ağacın meyvesini yememesi gerektiği yolundaki uyarısına benzemektedir (Randall, 2004:94).

Perrault'nun eserinde aslında Mavi Sakal'ın karısı kurallara uymaması için eşi tarafından ayartılmış, bir anlamda ikna edilmiştir. Eserde görüldüğü şekliyle Bluebeard kadına sadece anahtarı vermekle kalmaz aynı zamanda anahtarın açtığı odanın yerini bütün açıklığıyla tarif eder. Aynı zamanda kadın, eşiyle ilgili hiçbir bilgiye sahip değildir. Kadın, eşinin seçimlerini ve düşüncelerini bilmediği için evlilik içinde hem daha değersiz hem de tehlikeye çok daha açık durumdadır. Bu durum aslında halen güncel olan ev içi istismara da açık bir göndermedir. Esere başka bir açıdan yaklaşıldığında; Mavi Sakal'ın eşinin kendisinden önce Mavi Sakal'la evlenenlerin akıbetini gördüğü açıktır. Bu noktada Mavi Sakal'ın ilk eşinin bu odada ne gibi bir manzarayla karşı karşıya kalmış olabileceği açık şekilde eril tahakküme bir

FULL TEXTS BOOK

göndermedir. Erkeğin girmemesi, merak etmemesi üzerine yaptığı vurgu ve sınırlama aslında kendi otoritesinin sınandığı bir güç gösterisidir (Le Juez, 2016:6-7).

Çalışma kapsamında ele alınabilecek bir diğer eser olan *The Yellow Wallpaper* adlı öykü yazar Charlotte Perkins Gilman'a aittir. Gilman'ın *The Yellow Wallpaper* adlı öyküsünün otobiyografik özellikler taşıdığı iddia edilebilir. Gilman, eserini nasıl ve neden yazdığı sorusuna yanıt verdiği bir yazıda, 1887 yılında derin bir depresyon yaşadığını ve ülkenin tanınmış ruh hastalıkları uzmanlarından birine gittiğini belirtir. Gittiği uzman, ondan 'mümkün olduğunca evde kalmasını, günde sadece iki saatlik bir süreçte entelektüel faaliyetlerde bulunmasını ve asla kurşun ya da dolma kalemi eline almamasını' ister. Gilman üç ay bu şekilde yaşadığını fakat zihinsel sağlığının bu süreçte daha da bozulduğunu söyler ve uzmanın tavsiyelerine uygun yaşamı reddeder ve bu dönemde *The Yellow Wallpaper* adlı eserini yazar. Eseri yazmaktaki amacının insanları delirtmek değil, onları delirmekten kurtarmak olduğunu belirten yazar, bunda da başarılı olduğunu savunur (Gilman, 2011, s.265). *The Yellow Wallpaper* adlı öykü, yazıldıktan sonra uzun bir müddet okurların ilgisini çekmemiştir. Eserin yeniden fark edilir olması, Elaine Hedges'in öyküyü küçük bir edebi şaheser olarak nitelendirmesiyle gerçekleşmiştir. Eser, 20. yüzyıl feminizmiyle birlikte keşfedilmiş ve ilgi görmüştür (Shumaker, 1985, s.588-589).

Charlotte Perkins Gilman'ın yazdığı *The Yellow Wallpaper* adlı öykü, farklı okumalara açık bir metindir. Söz gelimi Greg Johnson eseri, gotik bir metin olarak nitelendirmektedir. Johnson'a göre Gilman kadın bir yazar olarak eril tahakkümdeki yazın kanonunu, Gotik unsurlarla aktararak bir alegori yapmıştır. Eserde bilindik gotik unsur ve temaların kullanıldığına değinen Johnson, tutsaklık ve isyan, yasaklanan arzı ve akıldışı korku, akıl sağlığını kaybeden kadın, yasaklanan ev ve otoriter erkek kahraman gibi içerikleri buna örnek olarak gösterir (Johnson, 1989, s.530). Bir başka eleştirmen Davison ise, Gilman'ın eserinin daha çok kadın gotiği (female gotic) olarak değerlendirilmesi gerektiğini savunur. Davison, kadın gotiğinin, geleneksel gotik edebi metinlerden farklı olarak genel anlamda kadının kadınlığına geçişine odaklanan ve yine kadının güncel ve ev odaklı yaşam biçimiyle, özellikle evlilik ve annelikle olan kararsız/müphem ilişkisine değinen bir tür olduğunu belirtmiştir (bkz. Davison, 2004, s.48). Kadın gotiği kavramı ilk olarak Ellen Moers tarafından 1976 yılındaki *Literary Women* adlı eserinde, kadının cinsellik ve çocuk doğurmakla ilgili korkularını referans alan tür olarak kullanmıştır (Moers, 1976, s.53). Kadın gotiği üzerine değerlendirmelerde bulunan araştırmacılar, kadınların korkularının ve arzularının farklı anlamları olduğunu belirtmişlerdir. Kadın gotiği anlatıları uyarıcı, ritüelvari, gezi-macera romanları olarak görülebilir ve bir kadının kadınlığını keşfetmeye ve evlilik öncesindeki duygusal durumuna odaklanır. Kadın gotiğinde nihai amaç, kadının evliliğe teşvik edilmesi değildir (Davison, 2004, s.50). Kadın gotiği, kadının kendi cinselliği ve kimliğiyle çatışması ve ruhsal katharsis yaşamasının anlatısıdır (Vincent, 1983, s.157). DeLamotte ise kadın gotiğinin, kadınların kendilerine ve kendi duyuşlarına tamamen yabancı olan yapılardan mustarip oluşunu anlattığına değinir. Ona göre kadına yabancı bu yapılar; ataerkil aile, ataerkil evlilik, erkek egemen sınıf, eğitim ve ekonomik sistemdir (DeLamotte, 1990, s.152). Eva Figes, kadın gotiğini 'evinden çıkmaya gönlü olmayan kadın'a odaklanan tür olarak tanımlar. Evin, gotik kurmacadaki rolüyle birlikte, kadın gotiğinde yeni anlamlar kazandığı savunulur. Kadın gotiğinde ev, erkek imtiyazının merkezi ve 'talihli' kadının erkek tarafından korunmasının, eril gücün, tehdit ve baskının mekânıdır (Figes, 1982, s.74). Kadın gotiğinde evlilik ve annelik gibi pozitif ideallerin karanlık tarafları keşfedilir ve ortaya çıkarılır. Gotik edebiyatın ana belirleyicilerinden olan dönüşüm, kadını, kendisine dayatılandan olmak istediğine doğru değiştirmeye odaklanır. Kadının ev hayatıyla ilgili deneyimleri karanlıkla ve hapishaneyle sunulur, evlilik gittikçe hapis hayatına doğru evrilir (Davison, 2004, s. 54-55).

Her iki eserde de otoriter koca figürleri işlenmiştir. Evlilik içindeki erkekler fiziksel görünüşleri ya da meslekleri nedeniyle kadınların önünde ve yine kadınların yönlendiricisi olarak çizilmişlerdir. *Bluebeart* adlı eserde erkeğin sahip olduğu ve korkutucu niteliğe sahip mavi sakal ve *The Yellow Wallpaper*'da erkeğin doktor olması, kadınlar üzerinde otorite kurmalarına zemin hazırlamıştır. *Bluebeard* adlı eserde erkeğin mavi bir sakala sahip olması metin açısından önemlidir. Mavi ve sakal kelimelerinin birlikte

FULL TEXTS BOOK

kullanımı çelişkili, karşıt anlamlı çağrışımlar da doğurmaktadır. Mavi, kutsal saflığın ve sonsuzluğun, aynı zamanda da felaketin, simyanın, gösteriş ve beyhudeliğin rengidir. Yine mavi renk soyluluk ve sebatkârlık, canavarlık ve dolandırıcılık, felaket ve kederle de açıklanmaktadır. Mavi, saflık, doğruluk, kutsallık, soyluluk, sonsuzluk anlamlarına gelirken, diğer yandan da saçmalık, anlamsızlık ve soğukluk (ölümün soğukluğu gibi) anlamlarını da çağrıştırmaktadır. Sakalsa erkeklik, güç, bilgelik ve itibar anlamlarına gelmektedir. Tanrılar, yarı-Tanrılar, azizler sakallıdır, sakalı olmayan bir büyücüye kimse itibar etmez. Fakat sakalın delilikle ilgili çağrışımları da söz konusudur. Bu yorumlar ışığında "mavi" ve "sakal" kelimelerinin birlikte kullanımı, pek çok metaforik okumaya açıktır. Bu okumalardan en yaygın olanı mavi sakalın soğukluk ve kötülük ibaresi olmasıdır. Diğer okuma biçimleriyse bilgelik ve sihirbazlık arasındaki bağıntıya vurgu yapmaktadır. Metinde bunun kanıtı Bluebeard'ın sahip olduğu ve ne kadar yıkanırsa yıkansın temizlenmeyen büyülü anahtardır. Bu anlamda Bluebeard soğuk mizaçlı, ölümü anımsatan bir büyücüdür demek yanlış olmayacaktır (Menninghaus, 1999:53-54). *The Yellow Wallpaper* adlı eserdeki koca ise doktordur, eserin yazıldığı 19. Yüzyıl özelinde düşünüldüğünde aydınlanmanın ve rasyonel aklın en önemli temsilcilerinden biridir. Tahakküm kuran aklın vücut bulmuş halidir. Lloyd'un da belirttiği gibi batı geleneğinde erkeğin rasyonel olanla, akılla ilişkilendirilmesi söz konusuyken, kadın rasyonel bilginin otoritesi altına alınan ve aşılan bir varlık olarak açıklanmıştır (Lloyd, 2015:23).

Kadının evlilik içindeki durumunu, maruz kaldığı fiziksel ve ruhsal şiddeti ele alan bu iki eser, hem konu hem de olay örgüsü açısından benzerlik taşımaktadır. Bu anlamda iki eserde de göze çarpan ilk unsur erkeklerin eşleri üzerindeki gücü ve ikna yetenekleridir. Bluebeard'da kadın eşinin zenginliği ve başlangıçtaki zarafeti nedeniyle korkutucu yüzünü bile görmezden gelecektir:

Everything went so well that the youngest daughter began to think that the beard of the master of the house was not so very blue, after all that he was, all in all, a very fine fellow (Perrault, 1984:34).

The Yellow Wallpaper adlı eserde, kocanın tahakkümü bilimsel bilgiye sahip olmasından kaynaklanmaktadır. Tanınmış ve saygın bir doktor olan eş, kadının rahatsızlık ve korkularını ciddiye almaz, kadın da başlangıçta eşinin haklı olduğunu düşünür:

If a physician of high standing, and one's own husband, assures friends and relatives that there is really nothing the matter with one but temporary nervous depression, -a slight hysterical tendency- what is one to do? (Gilman, 1997:1).

İki eserde en belirgin bir diğer unsur erkeklerin kısıtlayıcı tavır ve davranışlarıdır. Gerek *Bluebeard*'da ve gerekse *The Yellow Wallpaper* adlı eserde erkeklerin eşlerinin davranışlarını kontrol etmek adına ve kendi düşüncelerine göre eşlerinin yararına olacak şekilde tahakküm kurmak isterler. Bluebeard'da kadının girmesi yasaklanan odanın varlığı ve kocanın bu odaya girilmemesi gerektiği yönündeki vurgusu bunun açık bir tezahürüdür:

(...) But this little key, here, is the key of the room at the end of the long gallery on the ground floor; open everything, go everywhere, but I absolutely forbid you to go into that little room and, if you so much as open the door, I warn you that nothing will spare you from my wrath. (...) She promised to do as he told her (Perrault, 1984:34).

The Yellow Wallpaper adlı eserde de doktor kocanın çeşitli talimatlarla kadını kontrol altına almaya çalıştığı görülmektedir:

"I did write for a while in spite of them; but it does exhaust me a good deal – having to be so sly about it, or else meet with heavy opposition (Gilman, 1997:2).

"I have a schedule prescription for each hour in the day; he takes all care for me, and so I feel basely ungrateful not to value it more (Gilman, 1997:2)."

Yine metnin başka bir bölümünde doktor kocanın karısına yazı yazmayı yasaklamasından da bahsedilmektedir: *There comes John, I must put this away, -he hates to have me write a word* (Gilman, 1997:3).

FULL TEXTS BOOK

Eserlerdeki söz konusu yasaklar farklı okumalara ya da yorumlara açıktır. Bluebeard'ın eşine koyduğu yasaklar arkaik bir biçimde tabu formatı taşımaktadır. Öncelikli olarak Mavi Sakal'ın eşine koyduğu yasaklar bir amaç veya motivasyondan yoksundur. Freud'a göre tabudan doğan yasakların veya kısıtlamaların bir gerekçesi ve anlaşılır bir yanı yoktur. Tüm bu dayanaktan ve anlamdan yoksun olan kısıtlamalar, kısıtlanan kişi için açık ve görünürdür. Perrault'nun eserinde de Mavi Sakal'ın eşi için temelsiz yasaklama ya da kısıtlamalar apaçık ve kutsaldır. Tabular için 'bu ve şu yasaktır' ve nedeni bilinmez ve nedeni sorgulanamaz. *Bluebeard*'daki kısıtlamada da odaya girmenin ya da girmemenin sonunda bir bilgi, tatmin, maddi veya manevi bir kazanç yoktur. Mavi Sakal'ın karısı odanın içini gördüğü için değil, yasağı çiğneyip odanın kapısını açtığı için cezalandırılmıştır. Tabu mantığıyla düşünüldüğünde, kapının ardındaki sır bir anlam teşkil etmez. Masalda ilk ve son eşlerin odanın içinde gördükleri şeyler sorunu yaratmaz ama problemin ana nedeni tabu mantığı açısından aşikârdır; kapı ve anahtar, arkasında ne olduğu bakılmaksızın önemlidir (Menninghaus, 1999:61-62). Gilman'ın eserinde doktor kocanın eşine yazı yazmayı yasaklamasının altındaki dürtü ise daha farklıdır. Gilman, eserini geçirdiği bir ruhsal bunalımın tedavisi sürecinde yaşadıklarından hareketle kaleme almıştır. 1887 yılında geçirdiği bir buhranın neticesinde görüştüğü uzman ondan uzunca bir süre yazı yazmamasını istemiştir (Gilman, 2011:265). Eserdeki kocanın, Gilman'ın tedavi sürecindeki doktordan esinlenerek oluşturulduğu ve sağlık nedeniyle yazı yazmasının yasaklandığı düşünülebilir.

Eserlerdeki her iki kadın için de yaşadıkları yer bir anlamda hapishanedir. *Bluebeart* adlı eserde koca, eşine sadece kendi izin verdiği yerleri gezebileceğini söyleyerek onu sınırlandırmış, kadını tahditli bir bölgeye hapsetmiştir (Perrault, 1984:34). *The Yellow Wallpaper*'da ise, kadının yaşadığı odanın yapısı açık bir şekilde hapishaneye göndermede bulunmaktadır:

"It is a big, airy room, the whole floor nearly, with windows that look all ways, and air and sunshine gallerie. It was nursery first and then playground and gymnasium, I should judge: for the windows are barred for little children, and there are rings and things in the walls (Gilman, 1997:3).

Bu noktada her iki kadının da eve, bir diğer tabirle özel alana kapatıldığını söylemek mümkündür. *Bluebeard* adlı öyküde kadının ev dışına çıkması istenmezken, *The Yellow Wallpaper*'da kadın ancak kiraladıkları eski villanın bahçesinde gezinebilecektir.

İki eserde görülen bir diğer ortak nokta ise renklerin kullanımıdır. Yukarda da değinildiği gibi *Bluebeard* eserinde karakterin güç ve korku unsuru olarak değerlendirilebilecek mavi bir sakalı vardır. *The Yellow Wallpaper* adlı eserde de, esere adını veren sarı duvar kâğıdı belirleyicidir.

The color is repellant, almost revolting; a smouldering, unclean yellow, strangely faded by the slow-turning sunlight. (...) It is a dull yet lurid orange in some places, a sickly sulphur tint in others (Gilman, 1997:3).

God had also given him a blue beard, which made him look so ghostly that women fled at the sight of him (...) None of them had dared to call while the master was at home because his blue beard was so offensive (Perrault, 1984:33-34).

Eserlerde kadınların tutsaklığı meselesi kilitli oda ve duvar kâğıdı üzerinden aktarılmıştır. *Bluebeard* adlı eserde kadın, kendisinden önceki eşlerin cesetlerinin yer aldığı odayı görerek kendi sonuyla ve bir anlamda kuşatılmışlığıyla yüzleşmiştir. *The Yellow Wallpaper* adlı eserde ise, kadın yaşamakta olduğu odanın kopmuş ve yıpranmış sarı duvar kâğıdındaki desenleri, sınırlanmış ve duvardan çıkmak kurtulmak için mücadele eden kadınlar olarak görmektedir. Evi boşaltacakları günse kadın kendisini odaya kilitlemiş ve odanın duvar kâğıtlarını sökerek kadınları bir anlamda özgürlüklerine kavuşturmayı arzulamıştır. Eserlerin sonlarındaki bu eylemler ve bu eylemlerin neticesi de karşılaştırılabilir niteliktedir.

Why, there's John at the door! It is no use, young man, you can't open it! (...) How he does call and pound it! (...) 'John, dear' said I in the gentlest voice, 'the key is down by the front steps, under a plantain leaf! (Gilman, 1997:15).

FULL TEXTS BOOK

(...) You have opened the door of the forbidden room. Well, madame, now you have opened it, you may step straight inside it and take your place beside the ladies whow you have seen there! (Perrault, 1984: 37).

Kadınların yasakları çiğnemeleri, *Bluebeard*'da kilitli kalması gereken odanın kapısının açılması ve *The Yellow Wallpaper*'da kadının 'hayal' kurması ve yazı yazması gibi etmenler neticesinde eserlerin sonunda kocaları tarafından cezalandırılmalarına ya da kontrol altına alınmalarını gerektirmiştir. *Bluebeard*'da koca, karısını öldüreceğini ve gördüğü cesetlerin yanına koyacağını söylerken, *The Yellow Wallpaper* adlı eserde kocanın eşini daha ileri seviyede bir tedavi yöntemine maruz bırakacağı düşünülmektedir. *Bluebeard* adlı eserde kadın kocasının zulmünden kurtulabilmek için erkek kardeşlerine haber gönderir ve onların gelmesiyle kurtulmuştur. *The Yellow Wallpaper*'da ise kadın, eşini bir anlamda 'çiğneyerek' odadan çıkar. Eserlerin sonunda kadınların kurtuluşları ya da özgürlüklerini kavuşmaları aşağıdaki gibi aktarılmıştır:

They trust their swords through him and left him for dead. Bluebeard's wife was almost as overcome as her husband and did not have enough strength left to get to her feet and kiss her brothers (Perrault, 1984: 39).

I've got out at last, said I, 'in spite of you and Jane! And I've pulled off most of the paper, so you can't put me back! (...) Now why should that man have fainted? But he did, and right across my path by the Wall, so that I had to creep over him every time! (Gilman, 1997:15).

Görüldüğü üzere her iki metinde de karakterlerin evliliğin baskıcı yapısından en azından bir süreliğine de olsa kurtuldukları söylenebilir. *Bluebeard* adlı eserdeki kadın, kocasından kalan mirasın bir bölümünü kendisini kurtaran erkek kardeşlerine verir, başka bir adamla evlenir ve Mavi Sakal'dan kalan evde yaşamaya devam eder. *The Yellow Wallpaper* adlı eserde ise kadın, gördüğü manzara karşısında dehşete düşüp bayılan kocasının üzerinden tıpkı duvar kâğıdında gördüğü kadınlar gibi sürünerek geçer ve odadan çıkar.

SONUÇ

Kadının evlilik hayatındaki kuşatılmışlığı üzerine örüntülenen her iki eserde de, kadınlarına çeşitli açılardan sınırlar koyan iki otoriter erkeğin varlığı söz konusudur. *Bluebeard* eserindeki erkek, görünüşü ve tavırlarıyla korku uyandıran bir tiran olarak çizilmişken, *The Yellow Wallpaper* adlı eserdeki erkek, bir bilim insanı –doktor- olarak oluşturulmuş ve pozitif bilimlere uygun hareket eden bir yapıyla karakterize edilmiştir.

Eserlerde kadınların eşleri tarafından çeşitli gerekçelerle sınırlandırıldıkları, eşleri tarafından kontrol edildikleri görülmektedir. *Bluebeard* adlı eserde koca, adeta bir tiran edasıyla eşine herhangi bir gerekçesi olmayan ve bir anlamda uyulmamasını istediği yasaklar koymuş ve öldürdüğü kadınların cesetlerinin yer aldığı odayı açmamasını emretmiştir. Odayı açmaması yönündeki vurgu da bir anlamda ondan bu yasağı çiğnemesini ister gibi bir izlenim taşımaktadır. Söz konusu yasağı defalarca tekrarlar, kilitli odanın anahtarını verir çünkü yeni bir kurban arayışındadır.

The Yellow Wallpaper adlı eserde ise doktor olan John, eşinin hayal kurmamasını, düşünmemesini ve kesinlikle yazı yazmamasını isteyerek onu mental sağlığına kavuşturmayı amaçlar. Kadının duvar kâğıdında gördüğü ve duvardan çıkmak için bir nevi yardım ettiği kadınlar, John'a göre kadının vehimleridir ve ciddiye alınacak bir yanı yoktur. Kadının oda değiştirme isteğini de ciddiye almayan John için rasyonel aklın aydınlatmacı tavrına inanan, kadınları bu açıdan eksik ve tahakküm altında tutulması gereken varlıklar olarak gören bir dönem erkeğidir.

Eserlerde kullanılan renkler, evlerin yapıları gibi unsurlar büyük ölçüde özdeşlik göstermektedir. Çalışmada da gösterildiği gibi, hem *Bluebeard*'da hem de *The Yellow Wallpaper*'da kadın karakterler, kocaları tarafından ev içi ya da diğer bir tabirle özel alana hapsedilmişlerdir. Erkekler ise kamusal alana yönelik faaliyetlerini sürdürmektedirler. Söz gelimi *Bluebeard*'da Mavi Sakal işleri için şehir dışında

FULL TEXTS BOOK

çıkmışken, *The Yellow Wallpaper*'da doktor olan John eşini evde bırakarak başka kasaba ve köylerdeki hastaları ziyarete gitmiştir.

Yine eserlerde farklı manalar taşıyan renklerin kullanımı da göze çarpmaktadır. *Bluebeard* adlı eserde mavi renk, kötü, ölümcül olanı sembolize ederken, *The Yellow Wallpaper* adlı eserde duvar kâğıdının sarı rengi hastalığı imlemektedir. Bu noktada her iki yazarın da renkleri bilinçli bir şekilde kullandıkları düşünülmektedir.

Eserlerin sonları, yazarlar ve dönemler açısından farklı açılardan ele alınabilir. Perrault'nun eserinin sonunda kadın, erkek kardeşleri tarafından kurtarılmıştır. Bunun gerekçesini yazarın da bir erkek olması üzerinden okumak mümkündür. Ayrıca Perrault eserinin sonuna kendince ahlaki öğütler eklemiş ve bu öğütlere göre merak iyi bir dürtü değildir. Yine eserin sonundaki notlara göre *Bluebeard* adlı öykünün dönemin modern erkekleri için bir ölçüt kabul edilmemesi gerekir çünkü Perrault'ya göre modern kocalar 'Bluebeard'ın yarısı kadar bile zalim değillerdir. Perrault'nun eserinin sonuna eklediği notlar bile, eserin feminist bir inceleme açısından eleştirel bir yaklaşımla okunmasına sebebiyet vermek için yeterlidir.

Charlotte Perkins Gilman'ın *The Yellow Wallpaper* adlı eserinin sonu ise kadının kısa süreliğine de olsa kurtulmasını ve özgürleşmesini anlatır. Eserin sonunda kadın, bayılan kocasının üzerinden geçerek odadan çıkıp bahçeye doğru yol alır. Bu hareket aslında bir süre sonra başlayacak yeni kısıtlama ve tahakkümleri de anıştırmaktadır. John ölmemiş kısa süreli bir baygınlık geçirmiştir ve eser boyunca çizilen rasyonel yapısı nedeniyle eşini tekrar ve belki de daha yoğun bir tedavi programına tabi tutacaktır.

Eserlerin yazılışları arasındaki tarihsel fark, yazarlarının cinsiyeti ve dünya görüşü gibi unsurlar iki eserin ortak bir tipten hareketle farklı bir yaklaşım sergilemelerine neden olmuştur. Elbette Gilman'ın eserinin Perrault'nun yapma masalının bir yeniden yazımı olarak düşünülebilmesi mümkündür. Söz konusu yeniden yazımda Gilman kendi kimliğini, cinsiyetini ve düşüncesini eserine yansıtmıştır demek yerine olacaktır.

ABSTRACT
In recent years, the main goal of commercial vehicle manufacturers is to reduce the fuel consumption and emissions of the vehicle while maximizing the carrying capacity as much as possible. Due to its high carrying load, manufacturers generally aim to achieve high strength by using high-thickness steel S355. However, it can also achieve high strength by using ultra-high strength steel. In this study, the semi-trailer chassis was designed with the help of the Computer Aided Three-Dimensional Interactive (CATIA) program, and ultra-high strength steel and S355 steel materials were defined in ANSYS. Dual-phase steels, which have high strength and are known for their machinability and ease of forming, were used in the lightweighting process. The mechanical properties, stresses, and deformations of the materials were compared by applying a 30-ton load on the semi-trailer chassis. Since the geometry and loading have a symmetrical structure, the analysis model was modelled as symmetrical, that is, half, and nonlinear analysis was performed. In the results obtained, while stresses in the range of 235-470 MPa were detected on the I type section spacer of the semi-trailer chassis defined as S355 material, a stress value of 550 MPa was observed on the kingpin table region. In the ultra-high strength material chassis, stresses in the range of 240-400 MPa were observed in the I-type section spacer, and a stress of 455 MPa was found on the kingpin table region. Stress and deformation values under load in ultra-high strength steel are better than S355 material. In the analysis results obtained when the thickness of the I-type section in the longitudinal carriers was reduced, a 182 kg lightening was discovered in the chassis longitudinal carriers. The result of the weight analysis was defined in the VECTO program and carbon emissions and fuel savings were calculated. The 182 kg reduction in chassis weight corresponds to a 9% reduction in the entire chassis. It has been found that from the VECTO program, UHSS chassis provides fuel savings of 2.9% per 100 km and a reduction in carbon emissions of 3% per km.
Keywords: Semi Trailer Chassis, Ultra-High Strength Steel, Weight Reduction, Fuel Consumption, Emission.

INTRODUCTION
A semi-trailer chassis is known as the part that supports the body and load of the trailer. It is also called the chassis or undercarriage of a semi-trailer. In addition to being composed of many parts, chassis are made to carry the weight of the load and to withstand the conditions during transportation. Semi-trailers are elements designed to be pulled by a tractor or semi-truck, allowing goods to be transported to long distances.

The load capacity, stability, and overall performance of the trailer on the road are directly related to the design and general structure of the chassis. Manufacturability and cost efficiency, structural integrity, weight distribution, durability and fatigue resistance, load capacity, suspension and axle configuration, material selection, safety features, and regulatory compliance are critical factors taken into consideration in semi-trailer chassis design. When designing a semi-trailer chassis, it is critical to create a structure that can meet transport demands while adhering to industry standards and regulations. In all these

FULL TEXTS BOOK

parameters, the most important components when it comes to the chassis are the longitudinal beams (Talas, 2024).

According to research, the fact that 25% of the emissions in the world are made up of the logistics sector, 70% of the emission rate of the logistics sector is from road transportation, and 25% of the emissions from road transportation are from heavy vehicle trailer vehicles, has led manufacturers to seek different designs in terms of design (Continental, 2024). In this direction, manufacturers have focused on reducing empty vehicle weights and improving aerodynamic designs. The largest percentage of vehicle weight is made up of the chassis, therefore, by choosing materials, vehicle weight is reduced and therefore carbon emissions are reduced. At this point, S355J2 steel is generally preferred in various applications due to its strength and mechanical properties. Application areas include machinery, construction, shipbuilding, and automotive components. With its flexibility of use and durability, it is preferred in areas where flexible and strong materials are needed (Piping mart, 2024). Dual Phase 1180 steel is also automotive steel and is known for its high strength and excellent crash performance. It stands out in critical components in vehicles in safety applications in the automotive industry. These steels not only reduce vehicle weight with their high strength and deformation characteristics but also make the structure perfect in terms of safety. This type of steel is used in parts that require high energy absorption during collisions, such as columns, reinforcement panels, side impact beams, and areas in the vehicle where safety is important (Lin et al., 2012).

In previous studies on vehicle chassis, conclusions were generally reached by analysing the entire chassis. Semi-trailer chassis type analysis study is not common in the literature. In his study, Doğru (Doğru, 2019) performed topology optimization to reduce the weight of truck chassis exposed to various loads. It was determined that the non-optimized chassis showed a von Mises stress value of approximately 194 MPa when the weight was 2685 kg. After topology optimization, the weight decreased to approximately 2316 kg, while the von Mises stress value reached approximately 220 MPa. This indicates that the weight reduction in the truck chassis created with optimization is approximately 14%. Vijaykumar and Patel (Vijaykumar & Patel, 2012) examined the stress and deformation values in finite element analysis by analytical calculation on the chassis frame based on bending theory. They revealed the stress and deflection values of their existing chassis through finite element analysis in case of overload. For weight reduction, sensitivity analysis was carried out and design changes were made. In the sensitivity analysis, three cases were analyzed in which the thickness and height of the flange were optimized for weight reduction while keeping the section modulus and flange width constant. As a result, in three analyses, the weight in the third case decreased by approximately 7%, while the deformation and stress values decreased by approximately 11% and 12%, respectively. Galos and Sutcliffe (Galos & Sutcliffe, 2020) made a combination of structural optimization and material substitution on a light truck trailer. With the finite element model and material optimization they developed, a weight reduction of 1326 kW, or 67%, was observed in the chassis. It was statistically examined how the weight reduction was affected in two trailers with movable floors belonging to different companies. It has been stated that a 30% decrease in the curb weight of trailers causes an 11% decrease in the mass energy performance of trailers (Galos et al., 2015).

According to the prediction that fuel consumption and emissions will decrease if the vehicle weight decreases, it is stated that if the weight of the trucks decreases by approximately 300 kg, it will save 3000 litres of fuel per 200000 km. If it is assumed that trucks travel approximately 300000 km per year, it is stated in the report that 4500 litres of fuel can be saved annually for each truck (Bandivadekar, 2008). In this study, it is aimed to reduce the weight of the trailer by using light but high strength materials in trailer production, thus reducing fuel economy and emissions. Due to the symmetry of the geometry and loads, time was saved by choosing the semi-trailer model. The effects of S355J2 and DP1180 steel materials on weight reduction, stress, and deformation values in the semi-trailer chassis were examined.

MATERIAL

S355J2 and DP1180 materials were preferred in this study for semi-trailer chassis. S355 steel is the steel type generally chosen in engineering and various industrial fields due to its excellent strength, weldability and durability. The other used dual-phase 1180 steel is referred to as advanced high-strength steel, which is specially designed for its good formability and exceptional strength. Ultra-high strength DP 1180 steel meets the need for high performance and safety in various branches of the industry, especially in areas where high strength and light materials with good formability are required, such as the automotive industry. S355J2 and DP1180 are steel types that offer different combinations of strength, formability, and mechanical properties and are preferred for different applications. DP 1180 stands out as a type that provides exceptionally high strength while maintaining its formability while providing ease of production, especially in the automotive industry. (Talas, 2024). Table 1 indicates the characteristics of materials used in this paper.

Table 1. Characteristics of materials (Murata et al., 2017; Talas, 2024)

Materials	Density (kg/m^3)	Yield strength (MPa)	Elongation (%)	Tensile ultimate strength (MPa)	Young modulus (GPa)	Poisson ratio
S355J2	7850	355	22	520	200	0.3
DP1180	7850	980	10	1380	200	0.3

METHODOLOGY

In this work, the chassis model was analysed as a non-linear analysis with the help of the ANSYS static structural module. In the analysis model, the simplified chassis model was analysed with finite elements to be solved by numerical solution through the finite element method. These elements are components modelled as shells formed by hexagonal structural solution elements placed on them. Figure 1 shows the design image of the entire chassis.

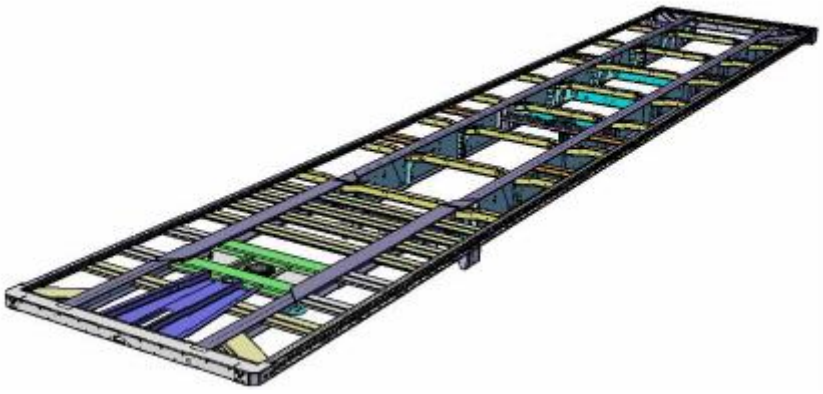

Figure 1. Chassis view

3D solid models were simplified with Space Claim Direct Modeler in ANSYS software and an analysis model was created. Since the geometry is symmetrical in all analyses, the same geometry divided in half was used. Figure 2 indicates the semitrailer chassis model analysed. The aim of the simplification process is to provide quick solutions by ignoring sharp corner chamfers, relatively small rounding, and fasteners such as bolts and nuts, which have no effect on the analysis, or parts that have a negligible effect. Thus, easier and fewer numerical solution elements will appear in the analysis (Talas, 2024).

FULL TEXTS BOOK

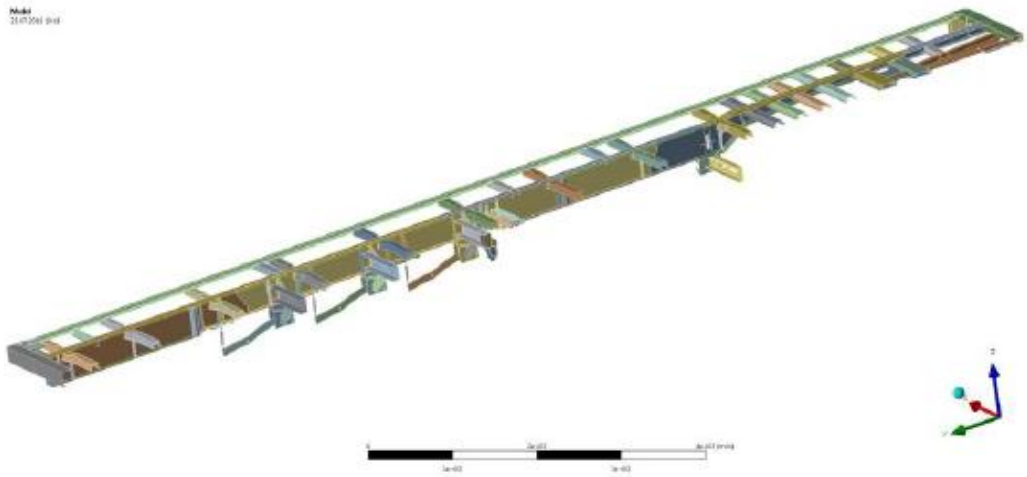

Figure 2. Analysed model

The meshed model of the semi-trailer chassis is given in Figure 3. After the mesh, a total of 1199753 node points and 1175570 elements were calculated. While the average element quality value was 0.94, the minimum skewness value was 0.13. These values are at an acceptable level in terms of the accuracy of the mesh results.

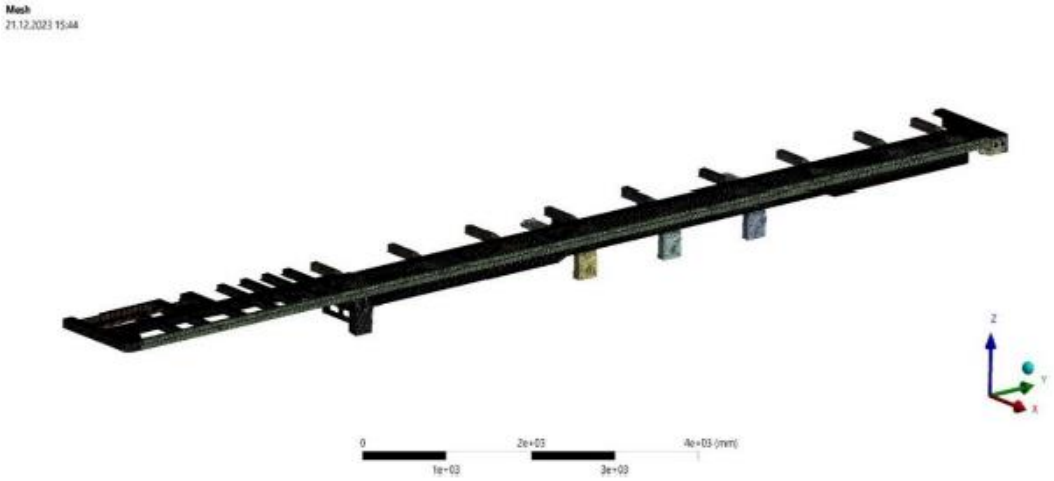

Figure 3. Mesh model of the chassis

Although the useful load that the trailer can carry is 30 tons, the chassis has a symmetrical structure, so half of the chassis was modelled and half of the useful load was analysed based on 15 tons of distributed force. Figure 4 displays the areas where force is applied on the model and their sizes. As shown in Figures 5, 6, and 7, the chassis was fixed at 4 different points. As seen in the figures, the 1st, 2nd, and 3rd axle bellows and the kingpin plate were preferred as fixed support areas.

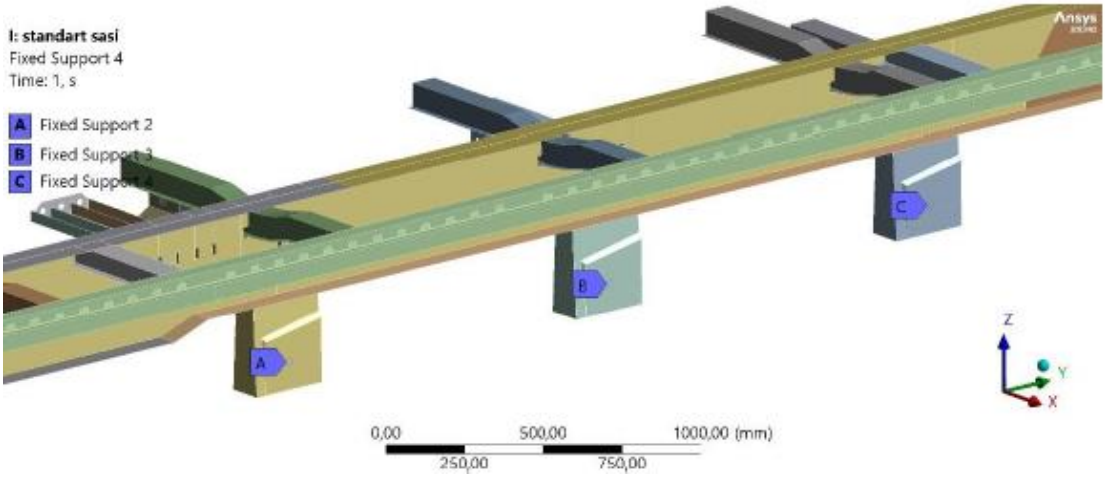

Figure 7. Fixed support region-3

The chassis longitudinal carrier consists of 3 welded parts as seen in Figure 8. The section thicknesses of the longitudinal carriers, called "I section", are for section 1, section 2, and section 3, respectively; 8 mm for the upper lath, 6 mm for the intermediate lath, 8 mm for the lower lath; 18 mm for the upper lath, 6 mm for the intermediate lath, 18 mm for the lower lath and 12 mm for the upper lath, 4 mm for the intermediate lath,13 mm for lower lath.

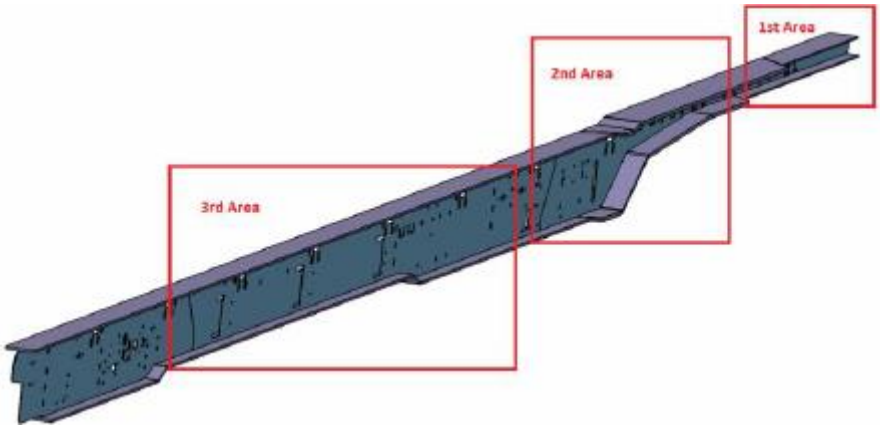

Figure 8. Longitudinal carrier

With the help of the ANSYS static structural module, 3 different analyses were carried out, where the chassis material was defined as S355J2 and DP1180, and the chassis material was defined as DP1180, optimizing the reduced section thickness in the longitudinal carrier. Design optimization was carried out on the chassis by reducing the longitudinal beam thickness of the chassis, in which DP1180 steel is defined, by 1 mm. The thicknesses reduced to in the 1st zone are 7 mm on the upper lath, 5 mm on the intermediate lath, and 7 mm on the lower lath, the thicknesses reduced to in the 2nd zone are 17 mm on the upper lath, 5 mm on the intermediate lath, and 17 mm on the lower lath, and the thickness in the 3rd region was reduced to 11 mm on the upper lath, 3 mm on the intermediate lath, and 12 mm on the lower lath.

CONCLUSION AND DISCUSSION

Figures 9 and 10 indicate the S355J2 material semi-trailer design analysis results. Figures 11 and 12 display the S355J2 material longitudinal carrier design analysis results. The 15-ton load applied to the analysed model caused a maximum stress of 1459 MPa at the kingpin plate point. The maximum stresses occurred at values below the yield point of the S355J2 material in the King-pin plate. As a result of the

FULL TEXTS BOOK

analysis, the deformation in the chassis was found to be 28.22 mm, and the maximum deformation in the longitudinal carrier was found to be 14.98 mm.

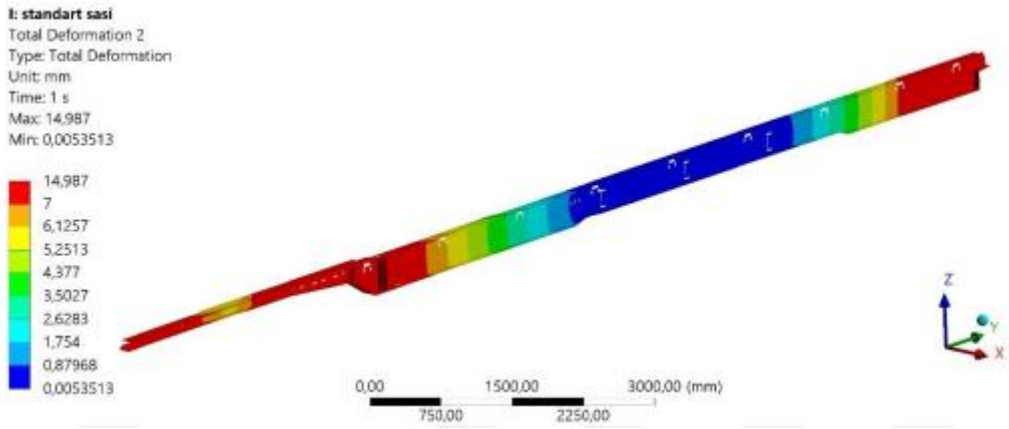

Figure 12. Total deformation value of longitudinal carrier with S355J2 material

Figures 13,14,15 and 16 show the DP1180 material semi-trailer design analysis results. Figures 17 and 18 represent the DP1180 material longitudinal carrier design analysis results. After applying 15 tons of load to the chassis defined as DP1180 steel, the maximum stress at the kingpin plate point was found to be 1275 MPa. It was concluded that no stress was observed in the internal structure of the material in the high stress region and that the stress was superficial. As seen in Figures 14,15,16, it was observed that the stresses in the transverse supports in the king pin section reached a point maximum value of 572 MPa in the sheet metal bending section. There is no difference in the form of the material according to the mechanical properties of the DP 1180 material in stress distribution.

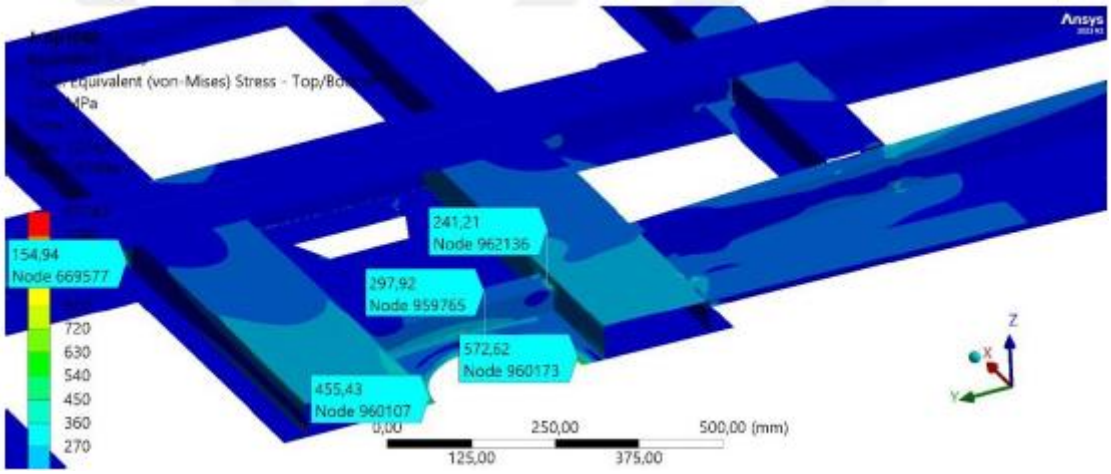

Figure 14. Detailed representation of equivalent stress value in design with DP1180 material-1

FULL TEXTS BOOK

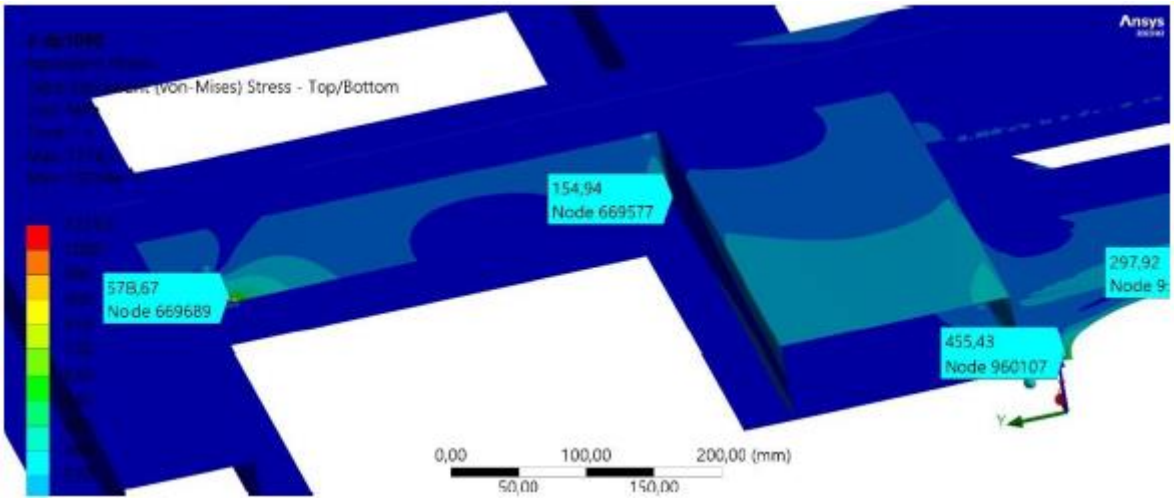

Figure 15. Detailed representation of equivalent stress value in design with DP1180 material-2

As can be seen from Figure 16, the stresses are in the range of 85-123 Mpa and are at a negligible level. These voltage values are lower than the S355J2 chassis design.

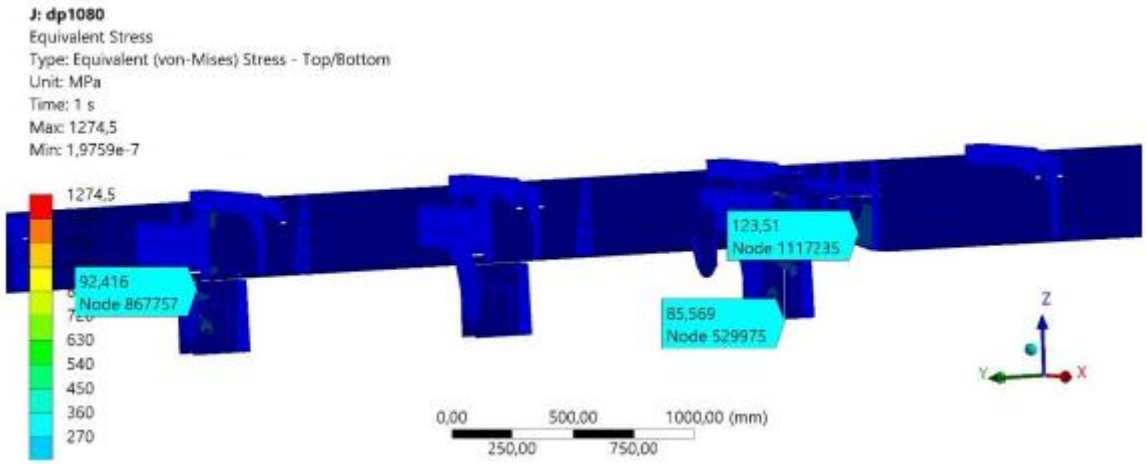

Figure 16. Detailed representation of equivalent stress value in design with DP1180 material-3

The stresses occurring in the longitudinal carrier are calculated in the range of approximately 100-173 MPa and can be said to be low stress values. The maximum deformation of the longitudinal carrier on the front cover was calculated as 24 mm.

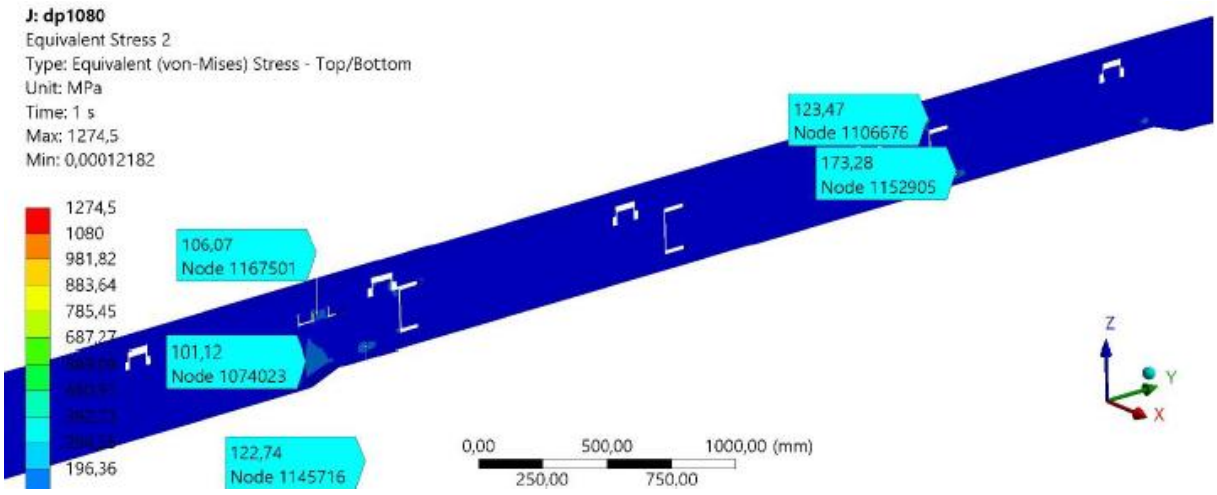

Figure 17. Equivalent stress value of longitudinal carrier with DP1180 material

FULL TEXTS BOOK

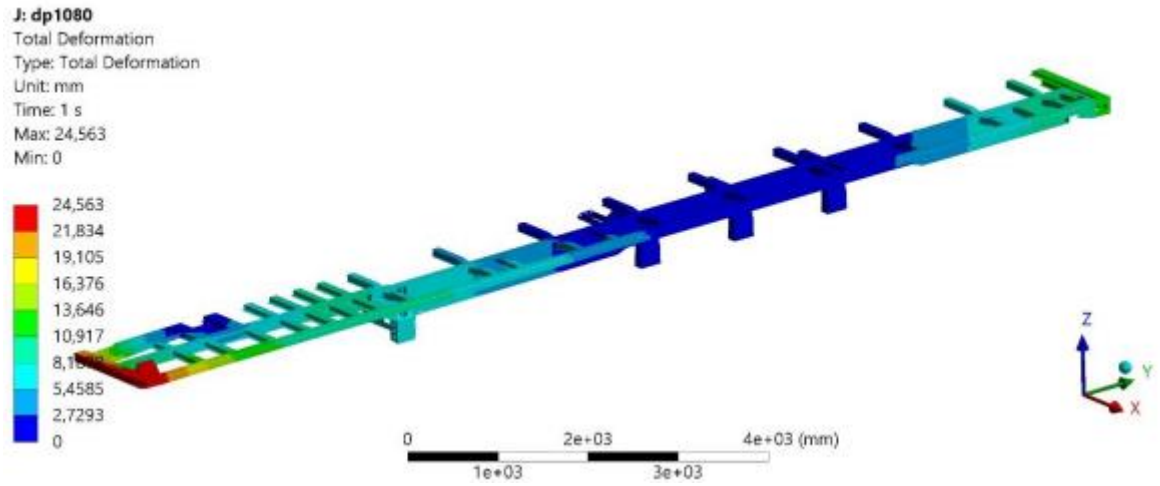

Figure 18. Total deformation value of longitudinal carrier with DP1180 material

Figure 19 and Figure 20 present the design results of optimized thicknesses in the chassis where DP1180 material is defined in semi-trailers. Figure 21 and Figure 22 reflect the design results of the optimized thickness of the longitudinal carrier in which the DP1180 material is defined. When the analysis results of the S355J2 material defined and DP1180 material defined chassis model analysis results are compared under the same conditions, similar values emerged in reducing the thickness of the I section in the chassis. With a load of 15 tons applied to the chassis model, the maximum stress at the kingpin plate point is 1720 MPa. While the stress values at the king pin points were found to be in the range of 248-575 MPa, the stresses at the axle beam connection points were found to be in the range of 100-136 MPa. These values are thought to be negligibly small compared to the mechanical properties of DP1180 steel. While the maximum deformation is 24 mm in the chassis, it is 13 mm in the longitudinal carrier on the front cover. The result of the analysis is similar to the one before optimization.

Figure 26. Results of VECTOR trailer program overall fuel consumption and CO_2 Emissions with a weight of 7018 kg

Reducing the thickness of the I section in the chassis by 1 mm led to the chassis weight falling from 1981 kg to 1799 kg, thus saving 9 percent in chassis weight. When the walking weight in a curtainsider vehicle decreases from 7200 kg to 7018 kg, it corresponds to 2.7 percent (2.7%) of the total mass. Considering that one trailer travels 200,000 km per year, a weight reduction of 182 kg provides 1600 litres of fuel savings in the trailer. This weight gain and fuel savings are in line with previous studies. Consumption and energy gain analyses made in the VECTO Trailer program show that fuel consumption in a trailer with a walking weight of 7200 kg is 27.6 lt/100 km, while fuel consumption in a 7018 kg trailer is calculated as 26.8 lt/100 km. It was also determined that carbon emissions decreased from 722 g/km to 702 g/km.

ABSTRACT
Congenital heart disease is an abnormal formation of the heart or large blood vessels that occurs during development in the womb. Among all congenital malformations, congenital heart disease stands out as the most prevalent and occurs in approximately 8-12 per 1000 live births. Approximately 1/4 of young individuals who are born with a heart condition (CHD) have critical CHD. In healthy newborns, less than 50% of critical congenital heart disease can be detected by routine examinations. Children with critical congenital heart disease are children who have to continue to live with poor prognosis and neurological disease after high costs, significant morbidity and mortality, multiple invasive interventions and prolonged intensive care treatment. Children with heart disease live with it for a long time, affecting both them and their parents. The follow-up and treatment process should be overseen by health professionals, notably pediatric nurses. Their role includes preparing the child and family for surgery, providing care, facilitating discharge, educating the family about the disease, and offering support. This study delves into what pediatric nurses need to know about congenital heart disease
Keywords: Congenital Heart Disease, paediatrics, nurse

1.INTRODUCTION

During fetal development, the heart or great vessels can undergo a malformation, resulting in a condition known as congenital heart disease (CHD) (1). This is the most prevalent congenital anomaly among newborns and holds significant implications for childhood health and well-being on a global scale., with morbidity and mortality ranging from 19% to 75% (2). People born with coronary artery disease are approximately 12 times more likely to die in the first year if they survive the neonatal period (3). Severe CHD are heart lesions that require intervention and/or surgery early in life. It is estimated that approximately 20-25% of CHD cases (i.e., 1 in 500 births) are critical CHD (4,5). (4.5). At least half of all heart abnormalities require surgery after delivery. According to the World Health Organization, it is the leading cause of early neonatal and prenatal death (6).Diagnosis is made in the first week in 40-50% of babies with heart disease, and 50-60% within the first month (7). In recent years, with the development of diagnostic and therapeutic methods, the mortality rate has gradually decreased and the life expectancy of children has increased (8,9). In addition to the clinical symptoms and complications that occur in children during this procedure, the quality of life related to the problems that arise should also be assessed. When assessing quality of life in patients with congenital heart disease, it is important to consider the physical, psychological, and social problems that may contribute to a decreased quality of life (10). In this text, it was aimed to investigate the prevalence, diagnosis and treatment of common congenital heart defects and the care of children with congenital heart disorder

1.1.Classification of CHD

CHD can be divided into cyanotic and cyanotic forms on examination according to clinical conditions. In recent years, coronary artery disease has been divided into severe and non-severe coronary artery disease according to echocardiographic findings (11). Acyanotic congenital heart disease includes aortic stenosis (AD), atrial septal defect (ASD), patent ductus arteriosus (PDA), pulmonary artery stenosis

FULL TEXTS BOOK

(PD), ventricular septal defect (VSD) and aortic infarction (AC). Cyanotic congenital heart disease includes transposition of the aorta (BAT), tetralogy of Fallot (TOF), tricuspid valve obstruction, total pulmonary venous return anomalies (TPVDA), single ventricle, Şimşek and Baysal (2019) examined the distribution of CHD in our country and found that the most common cyanotic heart diseases were VSD with 31.3%, ASD with 30.1% and TOF with 30.1%. The incidence of cyanotic heart disease is 3.8% (12).

1.2.Diagnosis and Treatment in Congenital Heart Diseases:

Congenital heart disease is diagnosed by ECG, Doppler echocardiography (ECHO) and cardiac catheterisation; without ECHO it is impossible to diagnose CHD such as ASD and provide guidance on necessary treatment, follow-up, angiography and emergency surgical intervention, It is particularly important for paediatric cardiologists to assess patients within the first 30 days of life. Paediatric cardiac catheterisation and angiography is a diagnostic procedure in which a flexible, long, thin catheter is passed through the femoral artery into the large vessels around the heart to look inside the heart. Pressure measurements and blood samples are taken from various heart chambers and the vessels around the heart to obtain detailed information about heart function. Contrast agents can be administered through a catheter into the heart and surrounding imaging structures. Cardiac catheterisation provides different treatments for different heart problems (14) and treatment plans for congenital heart disease are fully individualised. Different patients have different degrees and types of symptoms. It is therefore important that treatment is assessed by a specialist. The process starts with a physical examination, which determines the necessary treatment for the patient based on the tests performed by the doctor.

Table 1. Incidence of Congenital Heart Diseases (13).

Lesion	Frequency **(%)**
Ventricular Septal Defect	25-30
Atrial Septal Defect (Secundum type)	6-8
Patent Ductus Arteriosus	6-8
Aortic Coarctation	5-7
Tetralogy of Fallot	5-7
Pulmonary Stenosis	5-7
Aortic Stenosis	4-7
Corrected Transposition of the Great Artery	3-5
Hypoplastic Left Heart Syndrome	1-3
Total Pulmonary Venous Return Anomaly	1-2
Truncus Arteriosus	1-2
Tricuspid Atresia	1-2
Single Ventricle	1-2
Double Outlet Right Ventricle	1-2
Others	5-10

2.METHOD

The purpose of the study was to examine research on congenital heart defects and breastfeeding. In order to access the studies on this subject, Google Scholar (Academic), National Thesis Centre and pubmed were searched by typing the words 'congenital heart disease, paediatrics and nursing' between 2014 and December 2021. After the titles and abstracts were evaluated, the studies that were thought to be suitable for the purpose of this study were evaluated.

FULL TEXTS BOOK

3.RESULTS

In addition to providing care, nurses also perform a variety of roles in enhancing the quality of life for families and children with congenital heart disease. The primary responsibilities include getting the child and family ready for surgery, tending to them, getting them ready for discharge, teaching them about the illness and assisting them in coping, recognizing potential issues the family may face, and coming up with solutions (15). Follow-up after cardiac catheterisation or cardiac surgery should include not only medical aspects but also a multidisciplinary approach to the process to achieve good outcomes for the baby and parents. Paediatric nurses should monitor the infant's fluid intake and output, weight monitoring, skin colour and extremity temperature, as well as monitor the infant and frequently assess the heart rate and rhythm (16). Regarding infection, attention should be paid to dressing babies regularly according to aseptic technique, not leaving the dressings dirty after breastfeeding or breast physiotherapy, and using hypoallergenic plasters for application. The surgical site should be monitored in terms of swelling, redness, tenderness, temperature increase, malodour and discharge and care should be performed regularly (17). Nurses should ensure that the baby's nutrition is maintained. In doing so, care should be taken to give breast milk in small amounts, frequently and according to the age of the baby. Oxygen saturation should be monitored during feeding to support breastfeeding. The daily amount of food taken by the baby should be recorded and the daily weight should be monitored (18). Supporting mothers with skin-to-skin contact, hugging and breastfeeding practices by nurses has a positive effect on growth and development (19). Paediatric nurses should have a high level of ethical sensitivity in order to be able to recognise

Behavioral problems encountered when treating children in their care and to make ethical decisions to solve the problems. Care activities that parents should undertake at home after surgery include monitoring cardiopulmonary system functions, hygiene and wound care, maintaining nutrition and activity, maintaining interaction with the baby, correct administration of medications, careful monitoring of signs and symptoms requiring hospitalisation, and pain management. Nurses should educate families in this direction (20). Paediatric nurses should plan what will be applied in care, treatment, follow-up and emergency situations and should educate parents in this regard.

4.CONCLUSION

Effective management of these patients requires a rigorous approach to the physiology of heart disease and acquired., as well as the effects of mechanical ventilation, mechanical circulatory support and vasoactive drugs and a powerful body. Requires laboratory skills, accurate interpretation of hemodynamic and laboratory data, and knowledge of active testing. Participation in bedside examinations, communication skills, and careful care of invasive monitoring catheters and tubes.

ABSTRACT

Social inclusion is crucial for the well-being of people with autism. Research has identified access to education and employment as key drivers of social inclusion. However, participation rates in these domains remain low for people with autism. Assistive technology offers significant potential to improve inclusion, but its adoption has been limited due to various barriers. In 2020 the COST Action, a STEP with 134 members from around 23 countries started working on this ambitious project.

The COST Action, a-STEP, aims to address these challenges by building an interdisciplinary, intersectoral network spanning Europe and beyond. This network focuses on enhancing social inclusion and empowerment of individuals with autism and/or intellectual disability and their families by promoting the development and use of accessible and sustainable AT.

Over the past four years, a-STEP has made significant progress toward this goal through several initiatives by conducting comprehensive reviews of existing AT to identify effective tools and practices, engaging stakeholders to understand diverse perspectives and preferences related to AT, creating guidelines to promote best practices in AT applications within education and employment contexts, establishing an open-access platform containing information on AT best practices and emerging technologies, and nurturing the next generation of researchers and practitioners through training schools, workshops, and Short-Term Scientific Missions (STSMs).

This white paper seeks to examine the critical role of policy frameworks in the European Union in narrowing these gaps and proposes solutions and recommendations for the effective distribution of assistive technologies for the benefit of neuro-diverse people as part of COST Action, a-STEP activities. Key achievements include the identification and evaluation of existing AT, a better understanding of factors affecting AT use across different contexts, and the creation of a joint roadmap for the inclusion of stakeholders in AT design and deployment. Despite challenges posed by the COVID-19 pandemic, the network has successfully expanded, fostering interdisciplinary and intersectoral collaboration, and has actively disseminated knowledge through various channels, including conferences and publications. The ongoing work of a-STEP is set to continue addressing the unmet needs in AT adoption, promoting evidence-based practices, and ensuring the inclusion of individuals with autism in the research process. By leveraging interdisciplinary and intersectoral collaboration, a-STEP is dedicated to creating a sustainable impact on social inclusion and empowerment for this community.

For more information, visit the [a-STEP website] (https://www.a-step-action.eu).

Statement about language

The term "autistic people" has been criticized for influencing social attitudes and self-perceptions of autistic persons (Keating et al., 2023). Advocates feel that discussing their experiences and preferences is critical to inclusive conversation. The White Paper tries to incorporate the autistic community's

FULL TEXTS BOOK

preferred vocabulary into conversations about autism, using the term "autistic people" rather than "people with autism spectrum disorders." (Keating et al., 2023; Gillespie-Lynch et al., 2017; Bury et al., 2023). Despite evidence of these preferences, autistic individuals' language choices are frequently neglected in autism studies. The Statement on Language Use underlines the importance of inclusive language practices in autism research and beyond.

Introduction

Autism represents complex challenges for individuals, families, and communities across Europe and over the globe. This multifaced approach needs an integrated intervention to ensure the social inclusion and general well-being of autistic people. Specific autistic experiences and characteristics constitute a complex neurological condition characterized by diverse needs, rendering the development of universally adaptable product and service solutions challenging (Cañete & Peralta, 2022; Kapp, 2023). The prompt progress of digital technology over the past decades accentuated by the COVID-19 pandemic, the economic crises, and the insecurity afflicted by the war in Ukraine and Gaza has reshaped various aspects of life.

While digital innovations have intensified accessibility and communication (Varriale, et al., 2023), neuro-divers-people, especially those with autism, may face exclusion due to limited digital skills or inadequate access to technology, emphasizing the need for inclusive technological solutions and further research in this domain (Kapp, 2023; Akhunova & Okhunova, 2023). Autism has two basic manifestations: a) limiting and repetitive patterns of interests, behavior, or activities, and b) persistent challenges with communication and social engagement (Lord et al., 2020). Autistic people face particularly severe issues in social interaction, imagination, and communication, which have a profound impact on their everyday lives and general well-being. Their proclivity for social isolation and lack of interpersonal engagement exacerbate these problems (Varriale, et al., 2023). Furthermore, their lack of social awareness and reluctance to participate in social activities limit their ability to interact effectively with others, which is limited by rigidity and difficulty predicting reactions and reading emotional cues from others (Varriale, et al., 2023; Akhunova & Okhunova, 2023).

Autistic people according to the Strategy for the Rights of Persons with Disabilities 2021-2030 have the right to good working conditions, live independently, have equal opportunities, and fully participate in their communities (European Commission, 2021). The Commission President Ursula von der Leyen highlighted this commitment, stating, “Persons with disabilities have the right to have good conditions in the workplace, to live independently, to equal opportunities, to participate fully in the life of their community. All have a right to a life without barriers. And it is our obligation, as a community, to ensure their full participation in society, on an equal basis with others” (von der Leyen, 2020)

People with autism require equal access to education, as guaranteed by the fundamental human right, as well as artificial intelligence-powered assistive technologies that promote inclusive education and support diverse needs such as visual, hearing, communication, intellectual, cognitive, and motor impairments, while also addressing potential ethical issues (Zdravkova, 2022). Access to assistive technology is required for people with autism to live independently and participate fully in society (Varriale, et al., 2023; El-Salahi, Khaki, & Vohora, 2023). Many countries, particularly developing ones, experience access challenges due to a lack of available, low-cost, or adequate assistive technologies.

Access to information and communication technology (ICT) empowers autistic people, considerably improving their lives and contributing to fulfilling sustainable development goals; nonetheless, accessibility remains a challenge for many nations in Europe and beyond (National Council for Special Education, 2024). Prioritizing accessibility in ICTs through universal design principles that ensure equitable access for everybody, regardless of nation of origin is essential for empowerment and social inclusion of autistic people. International trade policies and agreements can also help ensure that assistive devices are affordable in developing countries (National Council for Special Education, 2024).

FULL TEXTS BOOK

This white paper seeks to examine the critical role of policy frameworks in the European Union in narrowing these gaps and proposes solutions and recommendations for the effective distribution of assistive technologies for the benefit of neuro-diverse people. Exploring the current challenges and opportunities that autistic people face in everyday life, as well as demonstrating how strategic policy interventions can promote broader adoption, affordability, and accessibility of assistive technologies tailored to autistic people's specific needs. Furthermore, it emphasizes the transformative impact of these technologies in empowering autistic individuals in numerous aspects of life, such as education, health care, employment, accessibility, independent living, and justice and law.

Through a comprehensive analysis of existing EU policies, reports, successful case studies, and recommendations for future policy development, this white paper aims to inform stakeholders—policymakers, educators, healthcare providers, technology developers, and advocacy groups—on effective strategies to enhance social inclusion and empower neuro-diverse individuals through assistive technology. By advocating for inclusive and supportive policy frameworks, we endeavor to create a more equitable and inclusive society where all individuals, regardless of their cognitive abilities, can thrive and contribute meaningfully.

Method

To investigate the role of policy frameworks in supporting the proper deployment of assistive technologies for the benefit of autistic people, the technique includes a thorough analysis that focuses on acquiring and analyzing a wide range of documents. Policy documents from the EU and other countries, such as regulations, guidelines, and reports, address current issues that autistic people experience, as well as proposals for using assistive technology to overcome them. Academic publications, reports, and studies investigating the influence of policy interventions on the deployment and use of assistive technology. Examples of good policy implementations or efforts to promote the integration of assistive technologies into educational, vocational, and community contexts for autistic persons. Documents created by advocacy organizations that outline challenges, solutions, and progress toward improved policy frameworks. The search terms included "autism," "assistive technology," "policy frameworks," "social inclusion," and "empowerment."

Existing challenges and barriers for autistic people's

The Disability and Development Report 2024, published six years before the 2030 Agenda deadline, indicates that individuals with disabilities are “left behind” (United Nations, Department of Economic and Social Affairs, 2024; United Nations. 2023, December 19; United Nations. 2023, August 24). Governments around the world have prioritized the rights of people with disabilities since the late twentieth century. Innovative social inclusion techniques are being developed to preserve their rights. This emphasis on disability as a human rights problem underscores the challenges that people with autism confront in education, employment, accessibility, healthcare, and independent living (United Nations, Department of Economic and Social Affairs, 2024). The European Parliament (European Parliament, 2023) voted on a resolution to address the issues that autistic people and their families experience. The resolution advocates for development in a variety of areas, including access to diagnosis, healthcare, education, employment, legal capability, lifetime support, culture, sports, training, research, and combatting violence and forced sterilization. It also emphasizes the importance of person-centered therapies and the proper implementation of the European Disability Card scheme. The resolution also advocates for establishing a European legal status for people with disabilities, allowing for mutual recognition and accreditation across all Member States.

To address these barriers, various facilities have been initiated in the last few years (IVRAP -project, 2023; European Parliament, 2023; National Council for Special Education, 2024; European Commission, 2021). However, several challenges still need to be considered to provide a complete facility to people with ASD.

FULL TEXTS BOOK

The addressed challenges are almost in all the areas, but with a greater impact are considered some of the areas, which will be the focus of the white paper. To start with the challenges for autistic learners in the EU, in the area of **education**. Studies and reports state limited and inadequate support as the main challenges for autistic people or others with neuro-diverse needs (Ahlers et al., 2023; European Commission, 2021; European Commission, Directorate-General for Employment, Social Affairs and Inclusion, 2021). The level of support for autistic learners in inclusive education across all levels is often limited and, when present this is frequently inadequate and doesn't match with the needs of the learners (Keville, Mills, & Ludlow, 2023). A lack of understanding of autistic learners' needs and what constitutes appropriate adapted support and reasonable accommodations in the education settings affect deeply the interaction of autistic people with mediators in the school context (Dignitem Foundation, 2021). Often the inflexible curriculum and the inadequate infrastructure cause difficulty in addressing the topics and lack the necessary flexibility to leverage the strengths of autistic learners. Another challenge in the school context is related to the insufficient vocational and lifelong learning opportunities that often affect the advancement in the development of professional competencies for autistic individuals (United Nations, 2023, August 24; European Commission, 2021; European Commission, Directorate-General for Employment, Social Affairs and Inclusion, 2021).

Another area of concern is **employment** disparities and decent work for autistic people (Women and Equalities Committee, 2024, May 21; Economy and Fair Work Committee, 2023, February 8)). Based on the data from the EU report (United Nations, Department of Economic and Social Affairs, 2024), only 27% of persons with disabilities are employed, compared to 56% of persons without disabilities (United Nations, Department of Economic and Social Affairs, 2024). The unemployment rate for people with disabilities is 10% higher than the 8% rate for persons without disabilities. The finding states that youth with disabilities are twice as likely as their non-disabled peers to be neither in employment, education, or training (United Nations, Department of Economic and Social Affairs, 2024; United Nations. 2023, December 19). Economic inequality is often related to lower wages and overrepresentation in the informal economy or self-employment of autistic people. The objective of the EU to close the employment gap by 2030 for persons with disabilities is to increase by at least 2 percentage points per year. Those objective needs workplace accessibility for the neuro-diverse needs of employers, including autistic people. Many workplaces are not accessible and lack reasonable accommodation measures and assistive technologies as mediators for the smooth integration of autistic people in the workplace. Based on the data the accessibility of employment agencies for wheelchair users improved to 62% in 2022, up from 56% in 2018 (United Nations, Department of Economic and Social Affairs, 2024).

Accessibility for autistic people to friendly use of many public spaces and community settings lacks the predictability and routine that autistic individuals require, like sudden changes, loud noises, or unpredictable events that can be overwhelming for them (United Nations, 2023, August 24; Women and Equalities Committee, 2024, May 21; United Nations, Department of Economic and Social Affairs, 2024). Activities and events often do not have clear structures or predictable routines, which can create anxiety and stress for autistic individuals. Co-occurring mental health conditions that autistic individuals can experience such as anxiety, depression, and sensory processing disorders, can exacerbate challenges related to accessibility. Also, mental health services are often not tailored to the unique needs of autistic individuals, leading to inadequate support. Many online systems, including websites and apps, are not designed with autistic users in mind, making them difficult to navigate. Information presented online is overwhelming for autistic people, especially if it is not organized clearly and concisely. Public spaces often have bright lights, loud noises, and strong smells that can cause sensory overload for autistic individuals. Buildings and facilities are frequently designed without consideration for the sensory and physical needs of autistic people. Autistic individuals struggle with interpreting social cues and engaging in typical social interactions. There is often a lack of understanding and acceptance from the broader

FULL TEXTS BOOK

community, leading to social isolation and stigmatization. Existing laws and policies are not sufficient to protect the rights and accessibility needs of autistic individuals. Even when protective laws exist, they are often not adequately enforced, leaving autistic individuals without necessary accommodations (United Nations, 2023, August 24).

The European Union confronts major obstacles in identifying, treating, and providing general **healthcare** to people with autism (United Nations, 2023, August 24; Women and Equalities Committee, 2024, May 21; United Nations, Department of Economic and Social Affairs, 2024). People with autism are 15 times more likely to have a bad perception of their health and 7 times less likely to have access to medical care. More than half of people in poor countries cannot afford healthcare due to high costs and transportation concerns. More than 10% of autistic people in wealthy countries do not have access to healthcare owing to expense, location, or long waiting lists. Public health programs, such as nutrition education campaigns and routine health screenings, frequently fail to reach autistic people (United Nations, Department of Economic and Social Affairs, 2024). These disparities are evident across different income levels of countries, with both poor and wealthy nations exhibiting barriers to healthcare for disabled individuals (Babalola *et al.*, 2024). Key challenges include insufficient screening programs, long wait times, inconsistent diagnostic guidelines, a shortage of qualified professionals, a lack of cross-border recognition of autism diagnoses, insufficient evidence-based interventions, inappropriate medication use, and unmet healthcare needs (United Nations, Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24; European Commission, 2021; European Commission, Directorate-General for Employment, Social Affairs and Inclusion, 2021). The absence of specialized healthcare settings and unmet general health needs highlights the larger issue of accessibility and inclusivity in healthcare for autistic people.

Autistic individuals face various challenges related to **independent living** which impact their quality of life and ability to live autonomously (United Nations, Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24; European Commission, 2021; European Commission, Directorate-General for Employment, Social Affairs and Inclusion, 2021). For autistic people individualized support is often limited or unavailable, which leads to autistic people not receiving the tailored assistance they need to thrive. For many autistic people, the available support may not be focused on achieving positive outcomes or personal goals, leading to a lack of progress and reduced independence. Community-based services that are so important for independent living, such as housing, employment support, and healthcare, are often either not available or not affordable (Department of Children, Equality, Disability, Integration and Youth, 2023. This shortage of services leads to increased dependence on institutional care, which may not provide the best quality of life or promote autonomy. Services that do exist are not flexible enough to accommodate the varying needs of autistic individuals, further hindering their ability to live independently. Autistic individuals often face societal and systemic barriers that limit their inclusion and ability to make decisions about their own lives. The transition from one life stage to another, such as from education to employment, is particularly challenging for autistic individuals because the support systems often do not adequately address these transitions, leaving individuals without the necessary resources and guidance, causing difficulties in finding and maintaining employment or engaging in meaningful adult activities, which are crucial for independent living.

There is a significant lack of services and support for autistic adults, particularly as they **age** across Europe and over. In the majority of the EU countries, older autistic people face unique challenges that are not well understood or addressed by existing support systems, leading to decreased quality of life and increased dependence on others (European Commission, Health & Consumer Protection Directorate-General; 2005, February; European Commission, Directorate-General for Employment, Social Affairs and Inclusion, 2021; United Nations, 2023, August 24; Council of Europe, Parliamentary Assembly, 2020, October 21).

FULL TEXTS BOOK

According to the United Nations (United Nations, Department of Economic and Social Affairs, 2024), in developing countries, **internet use** for persons with disabilities is 11 percentage points lower than for those without disabilities. To close this gap, internet access needs to increase by 1.2 percentage points annually until 2030. In Europe, people with disabilities are twice as likely to not afford a computer telephone, or television, with stagnant percentages since 2015. In least-developed countries, only 20% of persons with disabilities use the Internet, compared to the universal access target of 20% by 2020. The gap between women and men with disabilities exceeds 20 percentage points for internet use and mobile phone ownership. The majority of the top 1 million websites do not comply with international web content accessibility guidelines, particularly in Africa.

Addressing these challenges requires a comprehensive approach that includes policy changes, increased funding for support services, and the development of innovative tools and resources, and also an active engagement of the member states to build protocol and evaluation measures and monitoring strategies that are unified and obligatory for all. It is essential to prioritize the inclusion, autonomy, and well-being of autistic individuals to ensure they can lead independent and fulfilling lives.

Assistive Technology as a Proposed Solution for Social Inclusion of Autistic People

Assistive technology (AT) is a range of tools designed to assist autistic individuals in learning, communicating, and performing daily tasks. The resolution 76/195 of December 17, 2021, highlights the importance of financial inclusion in achieving sustainable development. It recognizes the transformative power of digital technologies in society, emphasizing their ability to advance the 2030 Agenda, promote social development, and assure access to excellent education, healthcare, decent work, affordable housing, social protection, and gender equality (United Nations, 2023, August 24).

These tools can range from simple picture boards and worry beads to sophisticated software, apps, and robots. AT can help with basic communication, reading, writing, math, time management, social skills, sensory challenges, safety, and daily living activities (Hookway, 2024). AT is divided into low-tech, mid-tech, and high-tech options (Rudy, 2023). Low-tech tools include weighted vests, sensory balls, and picture boards, while mid-tech include battery-operated sensory toys, visual timers, and social skills videos. High-tech AT includes digital technology, augmentative communication technology for non-verbal people, and robots designed to increase social skills in autistic people. Communication is an important part of AT because many autistic people are nonverbal or have limited language abilities. Low-tech solutions include picture boards and cards, but mid-tech apps provide augmentative communication and speech therapy. Speech therapy applications help to improve speech and language skills. AT also emphasizes learning and executive functioning, as 30% of autistic children have intellectual difficulties, 40% have ADHD, and 40% have anxiety issues. Low-tech alternatives include stress balls, anxiety beads, weighted vests, and visual reminders. Mid-range options include alarm clocks, visual timers, noise-canceling headphones, calculators, audiobooks, and videos. High-tech tools include mind-mapping software, speech-to-text software, and programs designed expressly for students with learning impairments.

Social skills and communication are crucial for autistic individuals, with various assistive technologies available to help them navigate complex social situations. Low-tech methods include social stories, social skills cards and games, mid-tech video modeling and apps, and high-tech tools like artificial intelligence and robots. These technologies help autistic individuals prepare for and manage new or complex situations, such as getting a haircut or starting a new school. High-tech tools, such as interactive artificial intelligence and robots, aim to create interactive experiences for autistic individuals, addressing their social-emotional needs and enhancing their overall social skills (Al-Hendawi *et al.*, 2023; European Parliamentary Research Service, 2018; United Nations, Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24).

FULL TEXTS BOOK

Numerous types of AT can be used to enhance the social inclusion of autistic people like speech-generating devices that produce speech for individuals who are non-verbal or have limited speech abilities (DYNSEO, 2024). Wearables, like smartwatches and fitness trackers, can help with communication, routine management, and safety. Smartphones and tablets offer numerous apps designed to aid communication, social skills, and learning. Social robots can help autistic individuals practice social interactions in a controlled environment. Virtual reality and augmented reality provide immersive environments for practicing social scenarios ((IVRAP- project, 2023). Eye tracking is devices that track eye movements, can help in understanding social cues, and can improve communication. Smart glasses equipped with AR to assist with social interaction by providing real-time social cues. Artificial intelligence can personalize learning and social interaction experiences. Global positioning systems (GPS) ensure the safety and independence of autistic individuals by tracking their location.

Assistive technology in education can help autistic people enhance their quality of life. (National Council for Special Education, 2024). Tools such as speech-generating devices can help nonverbal students communicate more effectively. Tablets and apps facilitate learning through interactive and individualized educational programs, while virtual reality offers immersive learning experiences and social skills training (Żammit, 2023; DYNSEO, 2024).

Employment companies can benefit from the usage of assistive technology in a variety of ways. Wearables and smartwatches can help autistic employers with time management and task reminders. AI-powered solutions can be used to provide individualized training and support in the workplace. Robots that provide job training for autistic persons in simulated situations can aid with their integration into the workplace (Iannone & Giansanti, 2023).

In healthcare, the usage of assistive technology can increase the quality of care and improve the overall experience for patients, caregivers, and healthcare professionals (United Nations, 2023, August 24; European Parliament, 2023). For patients for instance some of the tools developed as voice-controlled services (like Amazon Alexa or Google Assistant) help patients with limited mobility control their environment, such as adjusting the room temperature, turning on lights, or calling for help (Masina *et al.*, 2020). Smart beds equipped with sensors and automated controls can help monitor a patient's movement, adjust positions for comfort, and even alert caregivers if there's a problem. Wearable health monitors like fitness trackers and smartwatches (Masoumian Hosseini *et al.*, 2023) that monitor vital signs (heart rate, blood pressure) can provide real-time data to healthcare providers (Wirecutter, 2024). Telehealth platforms such as video conferencing tools enable remote consultations, reducing the need for travel and making healthcare more accessible. Electronic pill dispensers help autistic patients remember to take their medications on time and even dispense the correct dosage. Hearing aids and amplification devices which are with advanced features like noise cancellation and Bluetooth connectivity. Adaptive communication devices, like speech-generating devices or communication apps, can facilitate easier communication for autistic patients with speech impairments. Assistive technology in healthcare improves the quality of healthcare services and experiences for patients, caregivers, and professionals. Voice-controlled gadgets, smart beds, wearable health monitors, telehealth platforms, e-pill dispensers, hearing aids, adaptive communication devices, and smart home technologies are some examples (Warshawsky, 2024). Healthcare personnel rely on electronic health records, decision support systems, robotic surgery systems, patient monitoring systems, mobile health applications, virtual and augmented reality, assistive robotics, and clinical workflow automation tools (Greiwe & Nyenhuis, 2020). These technologies seek to make healthcare more inclusive, efficient, and helpful, thereby lowering errors and improving the overall experience for patients, caregivers, and health professionals.

Independent living is an important aspect of autonomy and empowerment which can be improved by assistive technology. Devices like Amazon Alexa, Google Assistant, or Apple Siri can help autistic people control various aspects of their home environment (lighting, temperature, appliances) through

FULL TEXTS BOOK

voice commands (Pfohl, & Tucker, 2023). Smart lighting systems can be programmed or controlled remotely, while smart thermostats adjust the temperature based on user preferences and habits of autistic people. Advanced home security systems include cameras, motion sensors, and alarms that can be monitored and controlled via smartphone apps, providing peace of mind and safety for autistic people and their families (Warshawsky, 2024).

Devices such as smartwatches or medical alert pendants with GPS tracking can monitor location and provide emergency alerts, especially for autistic people with cognitive impairments or those who are prone to wandering. Also, video calling apps and messaging services enable autistic users to stay connected with family and friends, reducing feelings of isolation.

Accessibility for autistic people using assistive technologies can improve their ability to interact with the world around them (Iannone & Giansanti, 2023). These technologies include smart glasses, which can analyze facial expressions and body language, provide real-time social cues, offer navigation assistance, and read text directly on the lens. Augmented reality helps understand environments, provides contextual information about social interactions, and enhances interactive learning and navigation in educational settings. Speech-to-text software can improve communication and accessibility in various settings, including educational, professional, and personal environments. It can provide real-time transcription, enable document creation, and integrate with other assistive technologies, enhancing overall accessibility and usability. With the use of these technologies, autistic people can gain greater independence, better navigate their environments, and improve communication and social interactions.

The integration of these technologies in various contexts when autistic individuals (European Parliamentary Research Service, 2018) need to interact with the environment can help to overcome various challenges and achieve greater independence and inclusion in society (Iannone & Giansanti, 2023).

A unified EU approach for social inclusion of autistic people

Assistive technology may serve as a "mediator" for the social inclusion and empowerment of people with autism (European Parliamentary Research Service, 2018). The European Parliament has advocated for the protection and inclusion of all autistic persons, encouraging Member States to make autism diagnosis more accessible, make reasonable concessions in healthcare, and promote autism-friendly policies in all areas (European Parliament, 2023; United Nations, Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24). They also urged for mandatory autism training in education, health, social, transportation, and justice sectors, as well as reforming guardianship structures and encouraging autistic workers to enter the workforce (United Nations, 2023, August 24; Buchanan & Hammersley, 2023). The resolution also called for funding and implementation of autism prevalence studies, awareness campaigns, and cross-sectoral national policy.

Autistic individuals may benefit greatly from digital tools that help them navigate social interactions and understand nonverbal cues such as body language and tone of voice (United Nations, Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24). In 2020, 69% of countries had a regulatory framework on ICT accessibility (United Nations, Department of Economic and Social Affairs, 2024).

Based on the Convention on the Rights of Persons with Disabilities and focusing on future directions for social inclusion of people with autism using assistive technology, some of the actions stated from the EU framework start to recognize and highlight the role of AT for social inclusion and empowerment of people with disabilities (European Parliamentary Research Service, 2018), some more late report and monitoring documents put an effort to the role of AT and how this can be a tool that needs to be more in focus (Dignitem Foundation, 2021; United Nations, 2023, December 19; United Nations; 2023, August 24; Department of Economic and Social Affairs, 2024; Güell Paule, 2024, April 11).

FULL TEXTS BOOK

To better address all of the issues that autistic persons confront in the EU and across borders, a uniform protocol of implementation, assessment, and evaluation should be considered obligatory for all EU countries.

According to the Convention on the Rights of Persons with Disabilities, to support education and lifelong learning (Article 24) EU countries need to invest in educational technologies that offer adaptive learning experiences tailored to the needs of autistic students, which include interactive learning platforms, virtual reality environments, and specialized educational software that support diverse learning styles. Obligatory training for educators on the use of assistive technologies and inclusive teaching practices, ensuring they are equipped to support autistic students effectively.

Promoting employment opportunities (Article 27) through the use of assistive technology to facilitate workplace inclusion, such as job coaching apps, sensory-friendly workspaces, and adaptive communication tools to support autistic employees. The EU should impose mandatory measures on state parties to establish platforms that provide resources and guidance for autistic people interested in self-employment or entrepreneurship, including access to assistive technology that helps business operations and management.

Enhancing Health Services Accessibility (Article 25) by developing and implementing assistive technologies that integrate health management systems, allowing autistic people to access personalized health information and services, using telehealth platforms with adaptive interfaces and health tracking devices that communicate real-time data to healthcare providers, ensuring equitable access to health services for all autistic people, especially important for those with speech impairments. Adaptive communication tools such as speech-to-text and text-to-speech applications can help facilitate consultations and medical interactions and make healthcare services more accessible and inclusive for autistic people. In line with (Article 26), expanding habilitation and rehabilitation services, EU countries need to increase financial support in the research and development of customizable assistive devices tailored to the specific needs of autistic people, such as wearable sensory regulation tools or augmented reality environments designed to improve social and vocational skills. The creation of digital platforms that offer peer support and mentoring through virtual communities or app-based systems, allows autistic people to connect with peers, share experiences, and access habilitation resources, which is an important aspect of mental health well-being.

Accessibility (Article 9) is another important topic addressed by the Convention on the Rights of Persons with Disabilities, which focuses on the development of smart home technologies and urban infrastructure designed to be accessible to people with autism, such as sensory-friendly public spaces and transportation systems equipped with assistive technologies for navigation and communication. Furthermore, some directives should encourage the creation of new technologies that are designed with accessibility in mind from the start. This includes developing digital material and services that are simple to navigate and use for people with autism, such as intuitive interfaces and customizable settings for sensory sensitivities.

Independent living and community inclusion (Article 19) necessitate the use of smart home devices that provide automated assistance with daily living activities, such as voice-controlled systems for home management or robotic assistants for personal care. Autistic people's autonomy can be enhanced by the construction of digital platforms that connect them to local community services such as in-home support, social activities, and recreational opportunities.

Recommendations

To improve the social inclusion and empowerment of autistic people across the EU behind is critical to effectively use assistive technology (Department of Economic and Social Affairs, 2024; United Nations, 2023, August 24; Güell Paule, 2024; European Commission, Digital Skills and Jobs Platform, 2024). The proposals below are guided by the Convention on the Rights of Persons with Disabilities, and

FULL TEXTS BOOK

provide a comprehensive framework for policymakers, EU member states, stakeholders, enterprises, and professionals.

Recommendations are directed to different stakeholders, according to their roles and opportunities to intervene, starting with the:

1- EU policies level

- Create and implement an EU-wide **directive mandating** the integration of AT into all sectors, particularly healthcare, education, work, and communal life.
- Increase EU **funding for research** and development of autism-specific assistive technology solutions.
- Encourage **cross-border collaboration** to innovate and exchange best practices.
- Implement **autism-friendly policies** in all public services, including health care, education, and transportation, to ensure accessibility and inclusion.

2- National Policies

- Educators, healthcare providers, law enforcement, and other public sector professions should be required to receive **autism awareness** and **AT training**.
- **Adopt legislation** requiring the public and private sectors to implement AT solutions and make fair adjustments for autistic people.

3- EU Member States

- **Develop standardized protocols** for implementing, assessing, and reviewing AT throughout all sectors to ensure consistency and effectiveness.
- **Increase funding** for **adaptable assistive equipment** and develop digital channels for peer help and mentoring.

4- Stakeholders

- Conduct **EU-wide initiatives** to **raise awareness** about autism and the benefits of AT, focusing on both the general public and specific sectors such as education and healthcare.
- **Encourage collaborations** between government agencies, non-governmental organizations (NGOs), technology businesses, and academic institutions to create and promote AT solutions.

5- Businesses

- **Incorporate accessibility** features into **product design** from the start, making digital documents and services easy to use for autistic people.
- **Provide incentives** for businesses to create and produce innovative AT solutions that address the requirements of autistic people.

Acknowledgments

Advancing Social Inclusion through Technology and EmPowerment (a-STEP), CA19104 is a COST action that starts in October 2020 and will end in October 2024, that aims to enhance social inclusion and empowerment for individuals with Autism and/or Intellectual Disabilities through interdisciplinary networks. Strategic actions include evaluating and developing novel assistive technology, creating a database of contemporary technologies, and promoting evidence-based guidelines.

This cost action, chaired by Dr. Geraldine Leader, includes a varied group of specialists from many countries and disciplines. With over 134 members across numerous working groups, from over 23 countries, a-STEP is a collaborative effort to promote autistic people's social inclusion through technical advancements. Working Group 5, directed by Prof. Cecilia Sik Lanyi from the Hungarian Research Network, is supporting the initiative to write this white paper. The COST Action is made up of professionals from Ireland, the United Kingdom, Latvia, Israel, Estonia, North Macedonia, Albania, the United States, Bosnia and Herzegovina, Austria, the Netherlands, Brazil, Bulgaria, Türkiye, Spain, Cyprus, Germany, Switzerland, Denmark, Romania, Slovenia, Belgium, Norway, Italy, Poland, Serbia, Greece, Croatia, Malta, France, Australia, and Portugal.

FULL TEXTS BOOK

This wide-ranging participation highlights the collaborative effort to enhance social inclusion and empower individuals with ASD/ID across Europe and beyond. Through these coordinated efforts, a-STEP seeks to address the challenges faced by autistic people and improve their quality of life by leveraging the potential of assistive technologies.

ÖZET
Bireylerde yaş almayla birlikte anatomik ve fizyolojik mekanizmalarda birtakım kayıplar görülmektedir. Bu kayıplar; her bireyde farklı hız ve sıklıkta değişiklik göstermektedir. Bu derlemenin amacı; geriatrik bireylerde ortaya çıkan nörokognitif değişiklikleri incelemektir. Yaşlanmayla birlikte görülen karakteristik özellikler arasında; vücudun homeostatik mekanizmalarının regülasyonunda azalma (termoregülasyon sisteminde bozukluk, baroreseptör duyarlılığında azalma), stres yanıtının bozulması, visseral sistemlerdeki rezerv kapasitelerinde azalma, adaptasyon yeteneğinde meydana gelen azalma (vestibüler etkilenimlerle kombine olarak görülebilen ortostatik hipotansiyon, ortam sıcaklığına uyum sağlayamama) gibi özellikler yer almaktadır. Yaşlılarda meydana gelen fizyolojik değişiklikler; bireylerin günlük yaşam aktivitelerini, çalışma hayatını, bağımlılık derecelerini, çevreye adaptasyonunu ve sosyal aktivitelerdeki iletişimini etkilemektedir. Bununla birlikte, yaş almaya bağlı olarak değişimlerin birçoğuna sadece yaşlılık sebep olmamaktadır. Sedanter yaşam tarzı, çevre koşulları ve stresli yaşam yaşlanmaya bağlı çevresel değişiklikler bu sebeplerden bazılarıdır. Yaşlılardaki patolojik değişimleri anlayabilmemiz için yaş alma ile birlikte görülen sürece hakim olmak gerekmektedir. Yaşlanma sürecinde vücut sistemlerinde, kas-iskelet yapısında, duyu sistemlerinde değişikliklerin ortaya çıkmasının yanı sıra geriatrik bireyler nörokognitif bilişsel süreçlerde de yavaşlamalar görülmektedir. Yaş almayla birlikte dikkat, algılama ve problem çözme yeteneğinde azalma, öğrenme, bilgi işleme, belleğe kayıt, hatırlama ve düşünme süreçlerinin hızında düşme, görsel-uzamsal beceri ve yürütücü işlevlerde bozulmalar görülür. Geriatrik bireylerle çalışan araştırmacıların diğer vücut sistemlerinin yanı sıra nörokognitif değişiklikleri de göz önünde bulundurması yaşlanma sürecini tam olarak yansıtabilmek açısından önemlidir.
Anahtar kelimeler: Geriatri, Fizyolojik Yaşlanma, Nörokognitif Süreç.

ABSTRACT
Several losses are observed in anatomical and physiological mechanisms in individuals with aging. These losses vary at different speeds and frequencies in each individual. The aim of this review is to examine the neurocognitive changes that occur in geriatric individuals. Among the characteristic features observed with aging are; decrease in the regulation of the body's homeostatic mechanisms (disorder in the thermoregulation system, decrease in baroreceptor sensitivity), deterioration of the stress response, decrease in reserve capacities in the visceral systems, decrease in adaptation ability (orthostatic hypotension that can be seen in combination with vestibular effects, inability to adapt to

FULL TEXTS BOOK

ambient temperature). Physiological changes that occur in the elderly; affect individuals' daily life activities, working life, dependency levels, adaptation to the environment and communication in social activities. However, many of the changes due to aging are not caused only by old age. Sedentary lifestyle, environmental conditions and stressful life, environmental changes due to aging are some of these reasons. In order to understand the pathological changes in the elderly, it is necessary to master the process that occurs with aging. In addition to the changes that occur in body systems, musculoskeletal structure, and sensory systems during the aging process, geriatric individuals also experience slowdowns in neurocognitive cognitive processes. With aging, there is a decrease in attention, perception, and problem-solving abilities, a decrease in the speed of learning, information processing, memory recording, recall, and thinking processes, and deterioration in visual-spatial skills and executive functions. It is important for researchers working with geriatric individuals to consider neurocognitive changes in addition to other body systems in order to fully reflect the aging process.
Keywords: Geriatrics, Physiological Aging, Neurocognitive Process.

GİRİŞ

Yaşlı sağlığı kapsamında çalışılan bir alan olan geriatri, yaşlanmanın fizyolojisi, yaşlı sağlığının korunması, ve yaşlılarda meydana gelen çeşitli problemlerle ilgilenen tıbbın özel bir dalıdır. Yaşlanma hali, yaşlı popülasyon ve yaşlılık geriatrinin tanımlamaları içerisinde yer almaktadır. Geriatri genel olarak yaşlı sağlığı ile ilgilenir (Çağaloğlu, H. 2022).

Günümüzde doğum oranlarındaki azalış ve ölüm oranlarındaki artış dünya nüfusunun negatif anlamda değişimler göstermesine sebep olmaktadır. İlerleyen yıllarda bu oranın 24 milyona ulaşabileceği tahmin edilmektedir (Çağaloğlu, H. 2022).

Yaşlanma Nedir ?

Uterus döngüsünden yaşamın son anına kadar devam eden süreçte ortaya çıkan herhangi bir rahatsızlık tanısıyla ilişkilendirilemeyen anatomik ve fizyolojik değişiklikler yaşlanma olarak tanımlanmaktadır (World Health Organization. 2015) .

Yaşlılık, yaşam süresinin; çocukluk, gençlik, yetişkinlik gibi olağan doğal ve zorunlu bir çağıdır. Kronolojik yaş: insanın içinde bulunduğu süreyi tanımlar, sosyal, biyolojik ve psikolojik faktörlerden, etkilerden farklıdır. Biyolojik yaş: biyolojik ve fizyolojik süreçlerde yaşlanmayla birlikte oluşabilen değişimleri tanımlar. Bu süreçler sosyo- kültürel faktörlerden, kişinin eğitim düzeyinden yaşam standartlarından etkilenir.

Dünya sağlık örgütü (DSÖ) söylemlerinde; dünya nüfusundaki yaşlılık oranının artmasıyla birlikte öncelikle demans, alzheimer gibi nörokognitif hastalıklarda artış görüldüğünü belirtmişlerdir.

Yaşlılık semptomlarındaki artışı etkileyen bazı faktörler bulunmaktadır. Bu faktörlerden bazıları; sigara kullanımı, sedanter hayat tarzı, bilinçsiz beslenme sonucunda meydana gelebilen obezite ve diyabet gibi gidişatı etkileyen olumsuz durumlardır (World Health Organization. 2015).

Yaşlanma süreci

Bireylerde yaş almayla birlikte anatomik ve fizyolojik mekanizmalarda birtakım kayıplar görülmektedir. Bu kayıplar; her bireyde farklı hız ve sıklıkta değişiklik göstermektedir. Yaşlanmayla birlikte görülen karakteristik özellikler arasında;

Vücudun homeostatik mekanizmalarının regülasyonunda azalma (Termoregülasyon sisteminde bozukluk, Baroreseptör duyarlılığında azalma), Stress yanıtının bozulması (Ateş, Anemi), Visseral sistemlerdeki rezerv kapasitelerinde azalma (Stress periyotlarında belirgin sıklık görülme durumu) ve Adaptasyon yeteneğinde meydana gelen azalma (Vestibüler etkilenimlerle kombine olarak görülebilen Ortostatik hipotansiyon, Ortam sıcaklığına uyum sağlayamama) gibi özellikler yer almaktadır.

İnsan zaman içinde yaş almaya bağlı olarak giderek artan kalıcı fonksiyon bozuklukları sebebiyle hastalıklara ve yaralanmalara açık hale gelmektedir (Kalyoncuo, S., & Tekinsoy Kartın, P. (2021).

FULL TEXTS BOOK

2010 yılında yayınlanan Birleşmiş Milletler (BM) raporuna göre; 65 yaş ve üzerindeki bireyler dünya nüfusunun yaklaşık %11'ini oluşturur. Ülkemizde ise; 2023 yılında %10.2 seviyelerinde seyretmektedir. Toplumun yaşlı oranın artması ve yaşam süresinin uzamasıyla, fonksiyonel kayıplarla birlikte sağlık hizmetlerine gereksinim de giderek artmaktadır. Fonksiyonel kayıpların en fazla görüldüğü yaşlı popülasyonu ise 85 yaş ve üzeri yaşlı bireylerdir (Ünlü, D., & Olgun, N. (2024). Bu derlemenin amacı; geriatrik bireylerde ortaya çıkan nörokognitif değişiklikleri incelemektir.

YAŞLANMANIN VÜCUT SİSTEMLERİNE ETKİSİ

Türkiye'de yürütülen çalışmaların sonucunda yaşlıların hipertansiyon, osteoartrit, kardiyak problemler, diyabet, osteoporoz gibi kronik hastalıklara sahip olduğu bildirilmiştir. Gerontologlar yaşlanma sürecini farklı kategorilere ayırmaktadırlar. Bu kategoriler arasında; kronolojik yaşlanma, biyolojik yaşlanma, psikolojik yaşlanma ve sosyal yaşlanma yer almaktadır. Kronolojik yaşlanma: Yaşlanma tanımını kişinin doğum tarihini temel alarak yapar. Biyolojik yaşlanma: Kalp, akciğer, dolaşım sistemi vb. organların fonksiyonel ve fiziksel açıdan farklılaşmalarından bahsedilir. Hücre sayısı yenilenmesi azalmakta bazı hücreler hiç yenilenmemektedir. Psikolojik yaşlanma: Duyu organlarının, öğrenme, hafıza, zekâ vb. beyinin algılama işlevlerinde kronolojik açıdan yaşın ilerlemesi ile görülmekte olan farklılaşmaya bakılır. Sosyal yaşlanma: Kişinin ailesi ve arkadaşlarıyla çalışma alanlarında, dini ve politik gruplardaki örgütlenmeler içerisinde üzerine düşen görevlerin değişmesi olarak açıklanır. (TOĞAÇAR, Ş., SEZER, S. Y., & DEMİR, M. B. (2022).

Yaşlanmayla birlikte insan vücudunun organlarında farklı derecelerde patolojik değişiklikler ortaya çıkacak ve bu da çeşitli hastalıklara neden olacaktır. (TOĞAÇAR, Ş., SEZER, S. Y., & DEMİR, M. B. (2022).

YAŞLILIKTA MEYDANA GELEN FİZYOLOJİK DEĞİŞİKLİKLER

Yaşlılık ile birlikte organların çalışmasındaki normal fizyolojik değişikliklerin bilinmesi hastalıklara bağlı ortaya çıkabilecek patolojilerin ayırt edilmesiyle tanı ve tedavi sürecinin planlanmasında kritik öneme sahip olmaktadır.

Yaşlılarda meydana gelen fizyolojik değişiklikler; bireylerin günlük yaşam aktivitelerini, çalışma hayatını, bağımlılık derecelerini, çevreye adaptasyonunu ve sosyal aktivitelerdeki iletişimini etkilemektedir. Bununla birlikte, yaş almaya bağlı olarak değişimlerin birçoğuna sadece yaşlılık sebep olmamaktadır. Sedanter yaşam tarzı, çevre koşulları ve stresli yaşam yaşlanmaya bağlı çevresel değişiklikler bu sebeplerden bazılarıdır. Yaşlılardaki patolojik değişimleri anlayabilmemiz için yaş alma ile birlikte görülen sürece hakim olmak gerekmektedir. Yaşlılık süreci, fonksiyonel kapasiteyle birlikte iyilik halini düzenleyen önemli ölçüde morfolojik-fizyolojik değişiklikleri etkileyen bir aşamadır. Bu süreçte yaş almayla birlikte maksimal efor sırasında ortaya çıkabilecek olan organ ve sistemlerin rezerv kapasitelerinde düşmeler görülebilir. Isı regülasyonu ve basınç sistemlerinin duyarlılığı ile ortaya çıkan internal homeostatik kontrol yeteneğinde azalma görülür. Çevresel değişikliklere uyma yeteneğinde azalmalar saptanır. Strese yanıt verme yeteneğinde azalma ortaya çıkar. Bu maddeler fizyolojik değişimlerin bazılarıdır. (World Health Organization. (2015). Tüm bu değişikliklerin ortak sonucu hastalık veya yaralanmaya duyarlılığının artmasıdır.

GENEL VÜCUT DEĞİŞİKLİKLERİ

Yaşın artmasıyla birlikte bazı vücut değişiklikleri görülebilir. Bu değişiklikler normal bir süreçtir. Boyun kısalması, omurgadaki dorsal kifoz, torakal kifoz ve göğüs çevre ölçümü değerleri azalmaktadır. Akciğer hacmi ve kapasitesi, impuls yanıtlarının hızı ve bazal metabolizma hızında da düşüşler görülmektedir. Yaşla birlikte cilt dokusu daha ince, daha elastik, kuru ve kırışık hale gelebilmektedir. Melanosit sayısındaki düşüşle beraber cilt ultraviyole (UV) ışığa karşı daha savunmasız hale gelir.

FULL TEXTS BOOK

Otonomik refleksler yavaşlar. Bundan dolayı; postüral hipotansiyon gelişimi meydana gelir, termoregülatör ısı değişikliklerine adaptasyon zorlaşır, hipotermi veya hipertermi risk oranı artar.

Yaşlı bireylerde servikal anterior tiltin artması, servikal omurgada ekstansiyon görülmesi, torasik kifoz belirginleşmeler ve lumbal lordoz açısında azalmalar görülebilmektedir. Üst ekstremitelerde ise; nötral dirsek açısının fleksiyon yönünde artış göstermesi, el bileklerinde ulnar deviasyona yönelim ve metakarpafalangeal, proksimal interfalangeal ve distal interfalangeal eklemlerde fleksiyon açısında artış ile birlikte skapular kanatlaşma, omuzların ekstansiyonu ve skapular protraksiyon pozisyonu görülebilmektedir.

Alt ekstremitede ise; kalça, dizlerin fleksiyonunda artış ve ayak bileği dorsifleksiyonunda azalma görülür. Dizlerde varus deformitesi gelişebilir. Femural anteversiyon açısındaki artış kalçaların valgus deformitesi ile sonuçlanır. Dizlerdeki fleksiyon sebebiyle vücudun ağırlık merkezi kalçaların önüne geçmektedir. Bunun sonucunda baston gibi yardımcı cihaz gereksinimi artmaktadır. Böylece yaşlı bireylerin; ayakta durma dengesi bozulmaktadır. (TOKGÖZ, G. (2022).

MUSKULOSKELETAL DEĞİŞİKLİKLER

Doku ve organ fonksiyonlarındaki ilerleyici düşmeler yaşlılığın başlıca özellikleridir ve kas-iskelet sistemi hastalığının önemli bir etkisini temsil eder. Yaşlı bireylerde; kronik kas-iskelet sistemi bozuklukları, fiziksel kırılganlık hareketliliğinin bozulmasına yol açan en yaygın durumlardır. Kas-iskelet sisteminin fizyolojik yaşlanması, sarkopeni, kemik kaybı veya osteoporoz olarak bildiğimiz kasın kuvvetinde azalma ve kas kütlesi kaybı ve kıkırdak veya osteoartritin (OA) etkilenmesiyle karakterize edilir. (Aydın, R., Genç, A., & Demirhan, B. (2023).

Yaşlanma ilerledikçe kas-iskelet sisteminde sıklıkla önemli fonksiyonel bozulmalar ortaya çıkar. Osteoartrit, osteoporoz ve sarkopeni yaşlanmayla ilişkilidir. Histiyositlerin yaşlanması bu hastalıkların gelişimini teşvik eder. (Aydın, R., Genç, A., & Demirhan, B. (2023). Kas kuvveti azalır. Kemiklerdeki kalsiyum azalır ve bunun sonucuda Kemik kütlesinde azalma görülür. Kırık riski artar. Düşme riski artar. Ve esneklik azalır.

Yetişkinlerde kas kütlesi vücut ağırlığının % 30'u kadardır, 75 yaşında ise vücut ağırlığının % 15'ine kadar azalmaktadır. Kas kuvvet kaybı 30 yaş sonrasında %10 ile %15 azalmaya başlar. Bu kayıp 55 yaşa kadar dikkat çekici değildir. 80 yaşından sonra kas kuvvetinde daha dramatik kayıplar görülür. Egzersiz yapmayanlarda 65 yaşından sonra % 20-40 maksimal kuvvet kaybı görülür. Yaş alma ile kasların tonus ve kontraksiyon yeteneği azalır. (Aydın, R., Genç, A., & Demirhan, B. (2023).

MERKEZİ VE PERİFERAL NÖROLOJİK DEĞİŞİKLİKLER

Yaşlanan beyin kütlesinde giderek azalmalar görülür. Serebral hemisferler, serebellum ve limbik sistem içerisinde yer alan birtakım anatomik yapılarda nörolojik kayıplar belirgindir. Bu kayıplar arasında hipokampüste meydana gelen değişimler ön planda yer almaktadır. Akson, dendrit ve sinaptik bağlantılarla sinir iletimini sağlayan yapıların hızında ve işleyişinde genel bir azalma görülebilir. İleri yaşlılıkta omurilik aksonlarının sayısında %37, sinir iletim hızında %10'luk azalmalar saptanmıştır. Bu değişiklikler sonucu reaksiyon hızı, harekete başlama ve bitirme süreleri gibi faktörler nöromusküler performansı etkilemektedir. Dolayısıyla periferal sinirlerde yaşlılık ile ortaya çıkan bu dejeneratif değişiklikleri; myelin kılıfta incelme, bu sebeple iletim hızının yavaşlaması ve reflekslerin kaybı takip eder. (Master's thesis, Fen Bilimleri Enstitüsü)

KARDİYORESPİRATUAR SİSTEM DEĞİŞİKLİKLERİ

Yaş almayla birlikte kalp atım sayısı, kalp atım hızı ve kardiyak output azalabilmektedir. Kalp duvar kalınlığı artmakta, damarlar elastikiyetini kaybetmektedir. Kalp çevresindeki yağ dokusu artmakta ve kalp kapakçıkları elastikiyetini kaybederek kalınlaşabilmektedir. Kardiyak sistemde meydana gelen bu değişimler; kalbin çalışma mekanizmasını etkileyerek, zamanla birlikte kronik kalp rahatsızlıklarına

FULL TEXTS BOOK

sebep olabilmektedir. Yaşlılarda koroner arter hastalığı, konjestif kalp yetmezliği, hipertansiyon, iskemik kalp hastalığı sık görülen kalp ve damar hastalıklarındandır. Yaşanan bu problemler sebebiyle dolaşım hızı yavaşlayarak farklılık gösterebilmekte, doku oksijenizasyonunda azalma, halsizlik, yorgunluk ve ödeme oluşumunu önlemeye karşı adaptasyon yeteneği zorlaşmaktadır. (Kalyoncuo, S. (2023). Yaş almayla birlikte, solunum kaslarında atrofi, diyaframda düzleşme, kostal kıkırdaklarda kalsifikasyon, göğüs kafesi boyutlarında değişim, toraksın elastikiyetini kaybetmesi gibi değişikliklerin ortaya çıkabilmesine sebep olmaktadır. Akciğer kapasitesindeki azalışa bağlı olarak metabolik gereksinime yanıt azalmakta, enfeksiyonel durum riskleri artmaktadır. Yaşın ilerlemesiyle birlikte oksijen alımı azalırken, buna bağlı egzersiz kapasitesinde azalma görülmektedir. Ayrıca solunum sistemini ilgilendiren kronik hastalıklara yol açabilmektedir. (Kaptan, G. & Dedeli, Ö. (2012).

DUYU DEĞİŞİMLERİ

Epidermis yaşlılık ile birlikte incelmekte ve epidermel hücrelerin regülasyon hızı azalmaktadır. Dokunma, ağrı ve basınç gibi duyularda değişimler görülmektedir.

Vestibüler sistemin işitme ve denge olmak üzere iki işlevi vardır. Yaşın ilerlemesiyle vestibülokohlear sistem değişim göstermekte ve bu yapıların fonksiyonlarında azalmalar görülebilmektedir. Yaşlanmayla birlikte korneanın saydamlığı ve elastikiyetinde değişiklikler olmakta ve lacrimalisin yapısında değişiklikler gözlenmektedir. Aynı zamanda lacrimal sıvı azalmaktadır. Pupillanın uyumu gecikebilmekte ve kornea refleksinde azalmalar meydana gelebilmektedir. Bu değişikliklerden dolayı görme problemleri oluşabilmekte ve göz enfeksiyonu riski artmaktadır.

Özellikle yaşlılarda koku ve tat reseptörlerinin azalmasıyla bireyler nörokognitif olarak etkilenmektedirler. Örneğin; koku duyusundaki azalmalar çevrelerinde oluşabilecek yangın, gaz kaçağı vb. problemleri de algılamalarında sınırlamalara yol açabilmektedir. (McIntyre, S., Nagi, S. S., McGlone, F., & Olausson, H. (2021).

ENDOKRİN SİSTEM VE İMMÜN SİSTEM DEĞİŞİKLİKLERİ

Yaşlılık sonucunda endokrin sistem birçok yönden değişime uğrayabilmektedir. Yaşlı kadın popülasyonda yaş almayla birlikte ilk olarak menapoz akla gelmektedir. Menapoz dönemi ortalama olarak 52 yaşında ortaya çıkmaktadır. Menopoz yaşını genetik ve çevresel faktörler etkileyebilmektedir. .Menopozun yaşam süresi ile doğru orantılı olduğu söylenmektedir. Yani yaşam süresi uzadıkça menapoza girme süresi uzar. Menapoz süreci boyunca östrojen düzeyleri azalmaktadır ve buna bağlı olarak vazomotor belirtiler, psikosomatik bozukluklar ve fiziksel değişimler görülebilmektedir. Erkeklerde endokrin sistem değişimleri 3. Dekat civarlarında daha sık görülebilmektedir. Literatürce; yaş aldıkça testosteron oranının azaldığı görülmüştür. Testosteronun azalması, hipogonadizm düzeylerine inmesi 60-70 yaşları bulmaktadır. Yaş aldıkça testosteron oranının azalmasının birden fazla nedeni vardır.Testislerde bulunan Leydig hücrelerinin testosteron üretiminde bozulmalar görülür. Bu bozulmalar; testesteron düzeyinin azalmasına sebebiyet verir. Ayrıca; hipotalamushipofiz eksenindeki görülen yetersizlikler yaşlı erkeklerin çoğunda sekonder hipogonadizm varlığını etkilemektedir . (Ağar, A. (2020).

NÖROKOGNİTİF DEĞİŞİMLER

Bilişsel süreçler kişilerin dil, düşünce ve zekâlarındaki değişiklikleri kapsamaktadır. Çarpım tablosunu ezberleme, takip edebilme, mimari bir projeyi tasarlama, bir tartışmada sağlam argümanlar oluşturabilme, kimlik numaramızı ezberleme, çılgınca alkışlanan bir sahne sanatçısı olmanın nasıl bir şey olacağını hayal etmek gibi işlevlerin hepsi bilişsel süreçleri içermektedir. Genetik faktörlerin de önemli bir etkisinin olduğu kognitif yeteneklerimiz, beyin dokusu ve sinaps yoğunluğunu arttıran öğrenme, çözme, eğitim gibi uyaranlarla artmaktadır. Böylece zamanla bilişsel yani kognitif bir birikim oluşur. Bu birikimin oluşumunda yüksek zihinsel yetenekler, akademik başarı, gelişmiş baş etme

FULL TEXTS BOOK

mekanizmaları ve sağlıklı yaşam gibi çok fazla faktör yer almaktadır. Yaşlılıkla birlikte ortaya çıkan bilişsel değişimler genel olarak gerileme ve kayıplar yönünde olup her kişide faklı düzeydedir. Ve her bireyde farklı bilişsel ve kognitif işlevlerde farklı oranlarda değişimler görülür. (Mohr, W. K. (2009). Yaşlanmayla birlikte etkilenen bilişsel süreçleri aşağıdaki gibi sıralayabiliriz:

Dikkat- Bellek – Algılama- Problem Çözme- Bilgi İşleme- Yürütücü İşlevler- Görsel-Uzamsal Beceri- Öğrenme- Düşünme- İşleme Hızı

Yaş almayla birlikte dikkat, algılama ve problem çözme yeteneğinde azalma, öğrenme, bilgi işleme, belleğe kayıt, hatırlama ve düşünme süreçlerinin hızında düşme, görsel-uzamsal beceri ve yürütücü işlevlerde bozulmalar görülür. Bununla birlikte yüksek kapasitedeki bilişsel birikimin, bilişsel işlevlerdeki bu yavaşlık ve kayıplara karşı koruyucu rol aldığı düşünülmektedir. Neyse ki ilerleyen süreye bağlı olarak bütün bu olumsuz yaşlanma değişimlerine karşın bireyin yaşam tecrübesinde ve entelektüel birikiminde artma gözlenmektedir. Yaşlılıkla birlikte kişinin zekâsında da değişimler görülmektedir (Mohr, W. K. (2009). Kısacası genel bilişsel kapasite olarak tanımlayabileceğimiz zekâ; yeni tecrübelere uyum sağlayarak bunlardan öğrenmeye yönelik çıkarımlar yapma becerisidir.

ÖZET

Fosil yakıtların hızla tükenmesi ve çevreye verdiği zararlar, yenilenebilir enerji kaynaklarına ve elektrikli araçların yaygınlaşmasına geçişi zorunlu kılmaktadır. Bu çalışma, Yalova Üniversitesi Merkez Kampüsü'ndeki binaların ve elektrikli araç şarj istasyonlarının enerji ihtiyaçlarını karşılamak için bir hibrit yenilenebilir enerji sistemi (HRES) tasarlamaktadır. HOMER Grid yazılımı kullanılarak, 8760 saatlik yük verisi, mevsimsel iklim değişkenleri ve şarj istasyonu kapasitelerini içeren simülasyonlar gerçekleştirilmiştir. Senaryo-1, optimal senaryo olarak öne çıkmış olup, 7.74 milyon $lık net bugünkü maliyeti, enerji başına 0.288 $ seviyelendirilmiş maliyeti ve 304,683 $ işletme ve bakım maliyetleri ile karakterize edilmiştir. Bu senaryo, enerjisinin %73'ünü yenilenebilir kaynaklardan elde etmekte ve 5.7 yıllık geri ödeme süresi öngörmektedir. Hibrit sistem, emisyonları önemli ölçüde azaltmış ve karbon dioksit için yıllık 387,653 kg, kükürt dioksit için 1,681 kg ve azot oksitler için 822 kg azalma sağlamıştır. Bu sonuçlar, üniversite kampüsleri gibi yüksek talep görülen ortamlarda yenilenebilir enerji sistemlerinin uygulanabilirliğini ve çevresel sürdürülebilirliğini göstermektedir.

Keywords: HOMER grid, Hibrit enerji sistemleri, Elektrikli araç şarj istasyonu, Tekno-ekonomik analiz, Enerji optimizasyonu.

ABSTRACT

The rapid depletion of fossil fuels and their environmental impacts necessitate a transition to renewable energy sources and the widespread adoption of electric vehicles. This study designs a hybrid renewable energy system (HRES) to meet the energy needs of buildings and electric vehicle charging stations at Yalova University Central Campus. Using HOMER Grid software, simulations incorporating 8760 hours of load data, seasonal climate variables, and charging station capacities were conducted. Scenario-1 emerged as the optimal scenario, characterized by a net present cost of $7.74 million, a levelized cost of energy of $0.288 per kWh, and operation and maintenance costs of $304,683. This scenario obtains 73% of its energy from renewable sources and has a projected payback period of 5.7 years. The hybrid system significantly reduces emissions, achieving annual reductions of 387,653 kg for carbon dioxide, 1,681 kg for sulfur dioxide, and 822 kg for nitrogen oxides. These results demonstrate the feasibility and environmental sustainability of implementing renewable energy systems in high-demand environments such as university campuses.

Keywords: HOMER Grid, Hybrid Energy Systems, Electric Vehicle Charging Station, Techno-Economic Analysis, Energy Optimization.

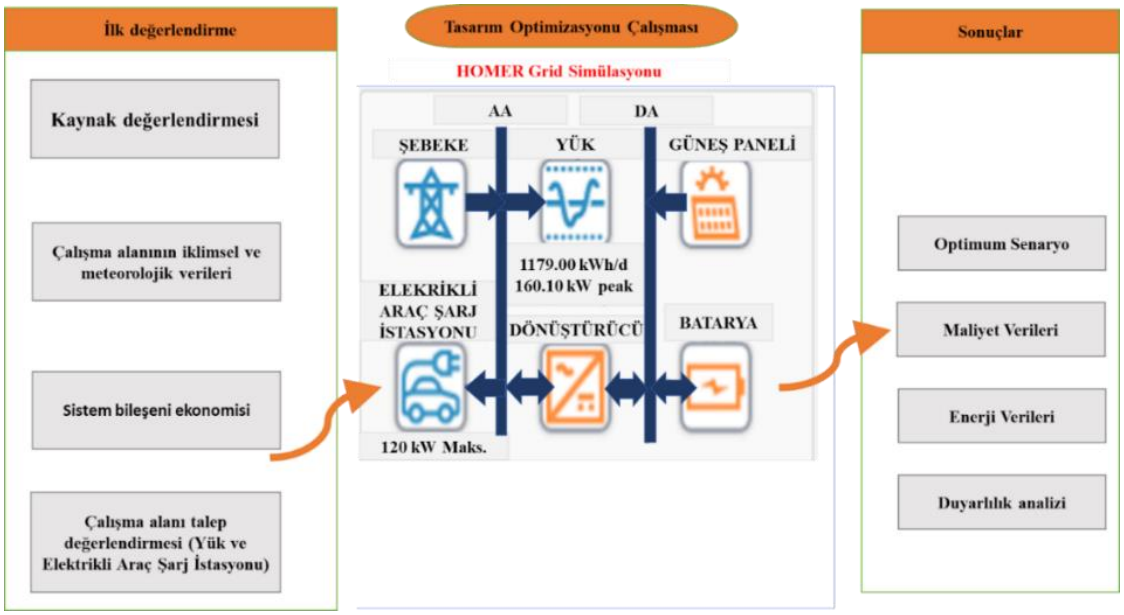
GİRİŞ

20. yüzyılda, içten yanmalı motor teknolojilerinin hızlı gelişimi ve karbon bazlı yakıtların yaygın kullanımı, otomobilleri ulaşım sektöründe en popüler araçlar haline getirdi (Leach ve ark. 2020). Ancak bu gelişme, atmosfere zararlı etkilerin artmasına yol açarak çevresel sorunlara neden oldu (Towoju ve Ishola, 2020). Fosil yakıtların doğaya verdiği zararları azaltma çabaları, yenilenebilir enerji teknolojilerine ve elektrikli araçlara yönelik geçişi hızlandırdı (Williams ve Blyth , 2022). Özellikle, elektrik ve elektronik alanlarındaki ilerlemeler, elektrikli araçların zararlı gazlar yaymadan ulaşım sektörüne hızla entegre olmalarını sağladı, çevre dostu ve ekonomik alternatifler sundu. Bu araçlar arasında elektrikli bisikletler, kaykaylar ve scooterlar bulunmaktadır. Küresel nüfusun artmasıyla bu

FULL TEXTS BOOK

teknolojilerin yaygınlaşması, küresel enerji tüketiminde de önemli artışlara yol açmaktadır (Hung ve Lim, 2019). Yine de, küresel elektrik üretiminin büyük bir kısmı fosil yakıtlardan sağlanmaktadır. Bu durum, yenilenebilir enerji kaynaklarını, örneğin rüzgar ve güneşi, elektrik enerjisine dönüştüren yeni uygulamaların gelişimini hızlandırmıştır. 2024 Şubat itibarıyla Türkiye'deki kurulu elektrik gücünün kaynaklara göre dağılımı şöyledir: %29.7 hidroelektrik, %23.3 doğal gaz, %20.3 kömür, %11.1 rüzgar, %11.5 güneş, %1.6 jeotermal ve %2.5 diğer kaynaklardan sağlanmaktadır (Güven ve Yücel, 2023). Yenilenebilir enerji kaynaklarının geliştirilmesi bu bağımlılığı azaltabilir ve ulusal ekonomiye önemli katkılarda bulunabilir.

Elektrikli araçların yaygınlaşması, aynı zamanda enerji depolama kapasitesiyle doğrudan ilgili başka bir meydan okumayı da beraberinde getirmiştir. Batarya teknolojilerindeki yavaş ilerleme, araçların menzil kapasitelerini sınırlamakta ve daha fazla şarj istasyonu kurulmasını gerektirmektedir. Bu konuda literatürde birçok çalışma bulunmaktadır. Örneğin, (Shafiq ve ark. 2023), Pakistan'da yenilenebilir enerji tabanlı bir ağa bağlı şarj istasyonları için teknik ve ekonomik değerlendirmeler yapmış, elektrikli araçların artan kullanımı ve yetersiz şarj olanaklarını ele almışlardır. Önerdikleri sistem, günlük şarj taleplerini karşılarken ağ yükünü ve enerji maliyetlerini azaltacak şekilde optimize edilmiştir. Başka bir çalışmada, Visakhapatnam'daki iş yerleri ve evler için uygun PV sistem kapasiteleri belirlenirken elektrikli araçların fotovoltaik panellerle şarj edilmesinin uygulanabilirliği araştırılmıştır (Sood ve ark. 2022).



Bu çalışmaların yanı sıra, (Solanki ve ark. 2023) elektrikli araç bataryalarını sürekli şarj etmek için güneş fotovoltaik dizileri ve batarya enerji depolama sistemlerini kullanmışlardır. Bu sistemler, bataryalar tamamen şarj olduğunda fazla enerjiyi şebekeye geri verebilir veya güneş PV dizisi yeterli güç üretmediğinde enerjiyi şebekeden çekebilir. Bu tasarım, elektrikli araçların güneş enerjisi kullanılarak daha sürdürülebilir bir şekilde şarj edilmesini sağlamaktadır. (Oladigbolu ve ark. 2023) yaptıkları çalışma, yenilenebilir enerji kaynaklarının entegrasyonu yoluyla elektrikli araç (EV) şarj istasyonları için temiz enerji sağlamayı amaçlayan bağımsız bir sistem üzerinde teknik ve ekonomik analizler içermektedir. Araştırma sonuçları, mevcut şebekeye ek yatırımlar yapmak yerine, optimize edilmiş bağımsız bir EV şarj istasyonu sisteminin daha maliyet etkin, sürdürülebilir ve çevreye duyarlı bir seçenek sunabileceğini ortaya koymaktadır. Bu bulgular, elektrikli araçların enerji altyapılarına entegrasyonu konusundaki karmaşık zorlukları ve bu konuda yapılan çalışmaların geniş kapsamlılığını vurgulamaktadır. Ayrıca, her çalışma yenilenebilir enerji kaynakları ile elektrikli araç şarj altyapısının bütünleştirilmesine yönelik değerli bilgiler sunarak bu alandaki bilgi birikimine katkıda bulunmaktadır. Bu çalışmada, farklı Hibrit Yenilenebilir Enerji Sistemleri (HRES) senaryolarının performansı HOMER Grid programı kullanılarak değerlendirilmiştir. Dört senaryo, yük talebini karşılamak üzere simüle edilmiş ve her senaryo ekonomik ve çevresel parametreler açısından karşılaştırılmıştır. Simülasyonlar, güneş panelleri, şebeke ve bataryaların entegrasyonunu içeren ve enerji ihtiyaçlarını karşılarken maliyet etkinliği ve çevresel sürdürülebilirlik sağlayan Senaryo 1'i en uygun çözüm olarak belirlemiştir. Diğer senaryolar, dizel jeneratörler, rüzgar türbinleri ve batarya depolama sistemleri gibi çeşitlendirilmiş enerji üretim bileşenlerini içermekte olup, enerji sistemlerinin karmaşıklığını ve gerçek dünya uygulamalarının çeşitliliğini ortaya koymaktadır. Özellikle birinci senaryo, en verimli ve çevre dostu çözüm olarak belirlenmiş, güneş panellerinin şebeke bağlantıları ve batarya depolama sistemleri ile optimize edilmiş kullanımını sağlamaktadır. İkinci senaryo, güneş panellerini ve rüzgar türbinlerini dizel jeneratörler ve bataryalarla birleştirirken, üçüncü senaryo, yenilenebilir enerji kaynaklarının genişletilmiş kullanımını temsil eden şebekeye dizel jeneratörlerin entegrasyonunu içermektedir. Bu kapsamlı analiz, sürdürülebilir enerji sistemlerinin geliştirilmesi için sağlam bir temel oluşturmakta ve yenilenebilir enerji teknolojilerinin elektrikli araç şarj altyapısıyla daha ileri entegrasyonu için stratejik bilgiler sağlamaktadır.

MATERYAL ve METOD

Bu çalışma, Yalova Üniversitesi Merkez Kampüsü'ndeki binaların ve elektrikli araç şarj istasyonlarının 2022 yılına ait enerji taleplerinin HOMER Grid programı aracılığıyla teknik ve ekonomik analizlerini içermektedir. Sistem, günlük ortalama 5966.0 kWh yük talebi ile kayıt altına alınmış ve pik yük talebi 1005.91 kW olarak tespit edilmiştir. Elektrikli araç şarj istasyonunun günlük yük talebi ise 258 kW olarak hesaplanmıştır. Çalışma, iklimsel parametrelerin dikkate alınmasını sağlamak amacıyla, Yalova bölgesine özgü 2022 yılı verilerini kapsamlı bir şekilde kullanmıştır; bunlar arasında sıcaklık, güneş ışınımı ve rüzgar hızı bilgileri Türkiye Meteoroloji Genel Müdürlüğünden elde edilmiştir. Analizin odak

FULL TEXTS BOOK

noktası, kampüs binalarının enerji gereksinimlerini karşılamak ve mevcut fazla enerjiyi şarj istasyonlarındaki kullanım için etkin bir biçimde yönlendirmek olmuştur. Sürecin metodolojik yaklaşımını ve aşamalarını betimleyen Şekil 1, bu bütünleşik enerji yönetimi stratejisinin görsel bir özetini sunmaktadır.

Şekil 1. Optimizasyon akış süreci

Fotovoltaik panel

Bir güneş paneli, genellikle silikon gibi yarı iletken malzemelerden yapılmış olan fotovoltaik hücrelerden oluşan bir cihazdır. Bu paneller, güneş ışığını emer ve fotovoltaik hücreler aracılığıyla doğru akım (DA) enerjisine dönüştürür. Tek başına birimler olarak çalışabilirler veya güneş enerjisi sistemlerinin bileşenleri olarak bir araya getirilebilirler (Güven ve ark. 2023). Konut, ticari ve büyük ölçekli güneş enerjisi istasyonlarında elektrik üretimi için kullanılan güneş panelleri, düşük karbon ayak izleri nedeniyle sürdürülebilir ve çevre dostu bir enerji kaynağıdır. 1 kW güneş paneli sistemi için kurulum ve yenileme maliyetleri yaklaşık olarak 550 $ olarak tahmin edilmekte, yıllık bakım gideri ise 10 $ ve tahmini ömrü 25 yıl olarak öngörülmektedir.

PV panelinin güç çıkışı, Denklem (1) ile matematiksel olarak açıklanabilir:

$$P_{PV} = Y_{PV}\, f_{PV} \left(\frac{G_T}{G_{T,STC}}\right)\left[1 + \propto_f (T_C - T_{C,STC})\right]$$

Belirtilen Denklem (1)'de, P_{PV} (W) terimi fotovoltaik sistemin mevcut çıkış gücünü ifade eder. Y_{PV} (W), PV sisteminin standart test koşulları (STC) altında standart çıkış gücü olarak tanımlanırken, f_{PV} (%), PV sistemine gerçek dünya koşullarını hesaba katmak için uygulanan ayarlama faktörüdür. G_T (W/m²), herhangi bir anda PV modülünü etkileyen güneş ışınımını temsil eder ve $G_{T,STC}$ (1000 W/m²), PV sistemi üzerindeki güneş ışınımını STC altında, 25°C sıcaklıkta varsayılan ışınımı ifade eder. PV modülünün sıcaklık katsayısı, $\propto_f$ (%/°C) olarak not edilir ve genellikle %0.3 ile %0.5 arasında değişir, bu da PV çıkışının sıcaklık değişimlerine olan hassasiyetini gösterir. T_C (°C), PV modülünün mevcut sıcaklığını, $T_{C,STC}$ (°C) ise PV modülünün STC altındaki sıcaklığını belirtir ve bu da 25°C olarak ayarlanmıştır (Güven ve Poyraz, 2021).

HOMER yazılımı, PV sisteminin performansı üzerindeki sıcaklık katsayısının [$\propto_f$ (%/°C)] etkisini göz ardı ettiğinde, alternatif bir hesaplama yöntemi kullanır. Bu yöntem, denklem (2) olarak adlandırılır ve sıcaklığın etkileri az olduğunda veya sıcaklık değişimlerinin kesin etkisi önemli olmadığında süreci basitleştirir (Mussard ve ark. 2023).

$$P_{PV} = Y_{PV}\, f_{PV} \left(\frac{G_T}{G_{T,STC}}\right)$$

(2)

FULL TEXTS BOOK

Dizel jenerator

Bir dizel jeneratör (DG), dizel yakıt kullanarak elektrik enerjisi üreten bir cihazdır. Dizel jeneratörler genellikle elektrik kesintileri sırasında, yerel şebeke erişimi olmayan alanlarda veya geçici enerji ihtiyaçları için kullanılır. Taşınabilir küçük jeneratörlerden büyük endüstriyel ölçekli ünitelere kadar çeşitlilik gösterirler ve genellikle elektrik arzının sürekli olmadığı yerlerde yedek güç kaynağı olarak kullanılırlar (Güven ve Yörükeren, 2022). Ancak, dizel jeneratörlerin yanma süreci nedeniyle zararlı emisyonlar üretebileceği ve dizel yakıt maliyetlerinin dalgalanabileceği göz önünde bulundurulmalıdır. Sistemde kullanılan dizel jeneratörün emisyon değerleri şu şekildedir: CO 16.5, yanmamış HC 0.72, partikül madde 0.1 g/L, NOx yakıt başına 15.5. Yakıtın kükürt içeriği %2.2'dir. Dizel yedek jeneratörden çıkan güç, yakıt tüketimine bağlıdır. Jeneratörün yakıt tüketimini modellemek için lineer bir denklem kullanılır.

$$F_{DG} = a_1 P_{DG} + a_0 P_{DGR} \quad (3)$$

Burada, F_{DG} jeneratörün yakıt tüketimidir (l/saat), a_0 yakıt kesme katsayısıdır (l/saat/kW), P_{DGR} jeneratörün kapasitesidir (kW), a_1 yakıt eğrisi eğimidir (l/saat/kW) ve P_{DG} güç çıkışıdır (kW) (Li ve ark. 2022).

Rüzgar Türbini

Bir rüzgar türbini, rüzgar enerjisini mekanik enerjiye ve sonrasında elektrik enerjisine dönüştüren bir cihazdır. Rüzgar tarafından üretilen kinetik enerjiyi kullanarak elektrik üretmek için yaygın olarak kullanılan yenilenebilir bir enerji kaynağıdır. Rüzgar türbinleri genellikle, rüzgar çiftlikleri olarak bilinen gruplar halinde kurulur. Bir rüzgar çiftliği, genellikle geniş bir alana enerji sağlamak üzere bir elektrik şebekesine bağlı olarak aynı bölgede yer alan birden fazla türbinden oluşur. Rüzgar enerjisi, temiz, yenilenebilir ve sürdürülebilir bir enerji kaynağıdır (Ion ve Marinescu, 2019). Rüzgar türbinleri, karbon emisyonlarını azaltmada ve enerji bağımsızlığını artırmada önemli bir rol oynar. Sistemde kullanılan 1 kW rüzgar türbini için kurulum ve yenileme maliyetleri 750 $, yıllık bakım maliyeti 10 $, ömrü 25 yıl ve türbin yüksekliği 17 metredir.

$$P = \frac{1}{2} p C_p A v_\omega^3 \quad (4)$$

Denklem 4, genellikle rüzgar hızı ile bir rüzgar türbininin elektrik çıkışı arasındaki ilişkiyi tanımlar. İlgili parametreler genellikle türbinin süpürme alanını (A), hava yoğunluğunu (p) ve rüzgar hızını (v) içerir. Bu faktörler birlikte, belirli bir tasarım ve çevresel koşullara bağlı olarak, bir rüzgar türbininin rüzgar enerjisini ne kadar verimli bir şekilde elektrik enerjisine dönüştürebileceğini belirler.

Batarya (BT)

Bir BT, kimyasal enerjiyi elektrik enerjisine dönüştüren ve depolayan bir cihazdır. Çeşitli boyutlar ve kapasitelerde, farklı uygulamalar için mevcuttur. Taşınabilir elektronikler, araçlar ve enerji depolama sistemlerini güçlendirmede, şarj ve deşarj döngüleri sırasında kimyasal reaksiyonlardan yararlanarak kritik bir rol oynarlar. Şarj sırasında, elektrik enerjisi BT içindeki kimyasal reaksiyonları başlatarak enerjiyi kimyasal bir formda depolar. Deşarj olurken, depolanan kimyasal enerji tekrar elektrik enerjisine dönüştürülerek çıkış sağlanır. Bataryalar, taşınabilir cihazların işlevselliğini artırır, elektrikli araçlara güç sağlar ve evlerde ve işletmelerde yenilenebilir enerji sistemlerinin verimliliğini artırarak elektrik enerjisinin erişilebilirliğini iyileştirir (Allouhi ve Rehman, 2023).

Bir BT bankasından çıkan güç, Denklem (5) kullanılarak tahmin edilir.

$$P_{out} = I\, V_{output} = V_0 I - R_0 I^2 \quad (5)$$

Bu formül, BT bankasının iç direncini (R_0) ve nominal voltajını (V_0) dikkate alarak çıkış gücü P_{out} hesaplar ve enerji depolama sistemlerinin performansını değerlendirmek için önemlidir.

BT'nin şarj durumu (SOC), Denklem (6) kullanılarak tahmin edilebilir.

$$SOC\ (t+\Delta t) = min\{SOC(t)(1-\delta) + \eta_{ch}(P_{gen} - P_L)\Delta t, SOC_{max}\} \quad (6)$$

Burada t mevcut zamanı, Δt zaman aralığını, δ kendiliğinden deşarj oranını, η_{ch} BT verimliliğini, P_L güç talebini ve SOC_{max} maksimum izin verilen SOC'yi temsil eder.

FULL TEXTS BOOK

Üretilen güç P_{gen} belirlemek için hem PV dizileri hem de DG sistemleri kullanılır:

$$P_{gen} = \begin{cases} \eta_{Inv} P_{PV} & yalnızca\ pv\ dizisi \\ \eta_{Inv} P_{PV} + P_{DG} & PV\ ve\ DG\ sistemleri. \end{cases} \quad (7)$$

Burada η_{Inv} inverter verimliliğini ifade eder. Bu hesaplama, enerji üretim sistemlerini entegre etmek ve optimize etmek için hayati öneme sahiptir.

Şarj süreci sırasında, BT tarafından kabul edilebilecek güç, şarj akımı sınırlaması $I_{bat,c}^{lim}$ tarafından kısıtlanmıştır. Bu matematiksel olarak denklem (8)'de yer almaktadır.

$$P_{gen} - P_L < P_{bat,c}^{lim} = I_{bat,c}^{lim} \times V_{bat} \quad (8)$$

Burada V_{bat} BT'nin terminal voltajını temsil eder. Bu sınırlamanın uygulanması, BT'nin bütünlüğünü korumak ve kapasitesi ve operasyonel sınırları doğrultusunda giriş enerjisini kısıtlayarak aşırı şarjı önlemek için hayati önem taşır (Rawa ve ark. 2024).

Sistemde kullanılan bataryanın teknik ve ekonomik özellikleri şu şekildedir: Nominal voltajı 48V, maksimum kapasitesi 417 ve nominal kapasitesi 1.2 Amper-saattir. Maksimum şarj ve deşarj akımı 105 A'dır ve çift yönlü verimlilik %75'tir. Bataryanın sermaye maliyeti 10,700 $, yenileme maliyeti 9,300 $ ve ömrü 25 yıldır.

Çift yönlü dönüştürücü

İnverter, doğru akımı (DA) alternatif akıma (AA) çeviren bir cihazdır. Birçok elektronik alet ve sistem doğru akım ile çalışmakta iken, evler, iş yerleri ve genel güç altyapıları genellikle alternatif akım kullanır. Bu bağlamda, inverterler DA'den AA'ye enerji dönüşümünde hayati bir role sahiptirler. Küçük ölçekli taşınabilir aletlerden başlayıp, geniş ölçekli güneş veya rüzgar enerjisi sistemlerine kadar geniş bir uygulama yelpazesinde inverter teknolojisinden yararlanılmaktadır. İnverterlerin fonksiyonları ve kullanım alanlarına bağlı olarak çeşitli türleri ve özellikleri mevcuttur. İnverterlerin temel işlevi, DA girişini verimli bir şekilde AA çıkışa dönüştürmektir; bu da enerji verimliliği konusunda kritik bir öneme sahiptir. Bazı inverter modelleri ise voltaj ve frekans ayarları gibi ek fonksiyonlara imkan tanımaktadır. Sistemde kullanılan inverterin kurulum ve yenileme maliyeti 300 $ olarak belirlenmiş, yıllık bakım maliyeti sıfır $ olarak hesaplanmış ve kullanım ömrü 15 yıl olarak öngörülmüştür. İnverter kapasitesi, Denklem (9) aracılığıyla belirlenmiştir.

$$P_{inv} = \frac{E_{L,max}}{\eta_{DC/AC}} \quad (9)$$

Denklem (9)'da, P_{inv} (W), güç inverterinin kapasitesini belirtir, $E_{L,max}$ (Wh) yükün zirve enerji talebini ifade eder ve $\eta_{DC/AC}$ ise DC'den AC'ye dönüşümün verimlilik oranını simgeler (Singh ve Kumar, 2023).

Elektrikli araç şarj istasyonu

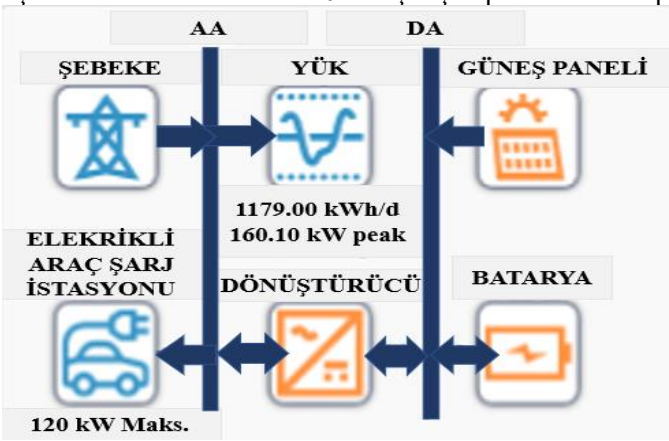
Elektrikli araç şarj istasyonları, sürdürülebilir ulaşımın önemli bir bileşeni olarak elektrikli araçların bataryalarını şarj etmeyi sağlayan altyapılardır. Bu istasyonlar, enerjiyi elektrikli araçlara aktararak bataryalarını doldurur ve böylece araçların kullanıma hazır hale getirilmesine imkan tanır. Genellikle evdeki standart prizler aracılığıyla gerçekleştirilen şarj işlemleri dışında, halka açık şarj istasyonları daha hızlı ve güvenli bir şarj süreci sunar. Bunlar tipik olarak şehir merkezlerinde, otopark alanlarında, alışveriş merkezlerinin yakınlarında, otoyol kenarlarında ve diğer kolay erişilebilir konumlarda yer almaktadır (Kumar ve ark. 2023).

Şarj istasyonlarının tasarımı, AA ve DA olmak üzere iki ana kategorideki farklı şarj teknolojilerine göre ayrılabilir. AA şarj noktaları daha düşük güç seviyelerinde çalışarak, genellikle ev ve iş yerlerindeki standart prizler aracılığıyla araçları tam olarak şarj etmek için uzun süreler gerektiren temel seviyedeki şarj hizmetini sağlar. DA şarj istasyonlarıysa, yüksek güç çıkışlarıyla araçları çok daha kısa sürede şarj etme kapasitesine sahip olup, bu durum özellikle yolda hızlı şarj ihtiyacı duyulduğunda büyük avantaj sunar (Singh ve Sharma, 2022). Her iki şarj istasyonu tipi de, çeşitli araç modelleriyle uyumluluk sağlamak için farklı konektör tipleri ve şarj standartlarına göre dizayn edilmiştir.

Tablo 1, Merkez Kampüsünde konumlandırılan şarj istasyonlarının teknik özelliklerini, güç çıkışını ve günlük kullanım sıklığını içermekte, Tablo 2 ise farklı elektrikli araç modellerinin—SUV'lar ve küçük elektrikli araçlar gibi—şarj istasyonlarındaki dağılımını ve şarj süreçlerini ayrıntılı olarak sunmaktadır.

FULL TEXTS BOOK

Bu bilgiler, elektrikli araçların yaygınlaşması sürecinde altyapı ihtiyaçlarının karşılanmasına ve kullanıcı deneyiminin iyileştirilmesine yönelik değerli veriler sağlamaktadır.



Tablo 1. Elektrikli araç şarj istasyonu teknik bilgileri

Şarj cihazı çıkış gücü (kW)	Şarj cihazı sayısı	Ölçekli Ort. Oturum/gün	Şarj cihazı yıllık yük profili (kWh/günlük ortalama.)
12	10	5	258

Tablo 2. Elektrikli araç tipleri

Araç tipi	Elektrikli araç nüfusu oranı(%)	Elektrikli araç başına maksimum şarj gücü(kW)	Ortalama şarj süresi (dk)
7SUV elektrikli araç	30	150	260
Küçük elektrikli araç	70	50	260

Şekil 2, dört farklı senaryo simülasyonundan en optimal sonuç olarak belirlenen Senaryo 1'in şematik temsilini göstermektedir. Elektrikli araç şarj istasyonu sistemine ait enerji akışını gösterirken, AA ve DA gücün entegrasyonu, zirve tüketimin etkisi ve güneş panelleri ile depolama bataryalarının dahil edilmesi detaylandırılmıştır. Sistem maksimum 120 kW çıkış kapasitesine sahiptir.

Şekil 2. Senaryo-1 mikroşebeke modeli

Enerji maliyet modellemesi

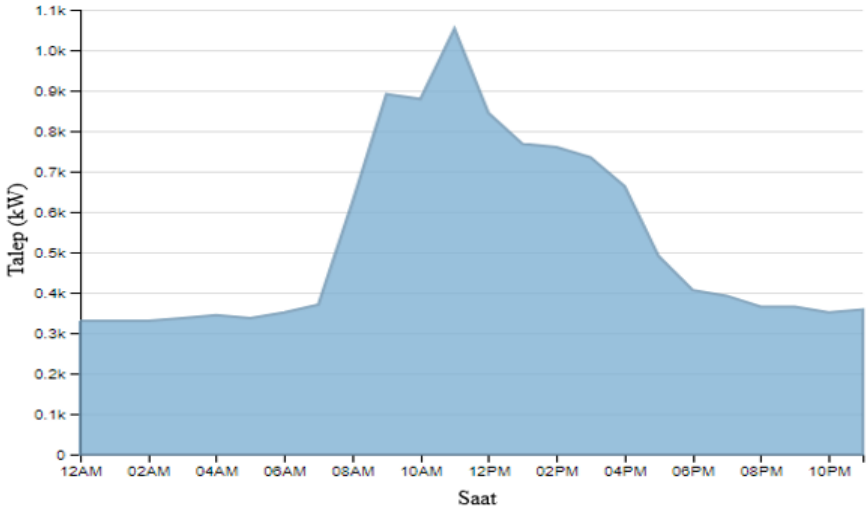
Enerji maliyeti, bir sistemin toplam yıllık enerji harcamasının AA ve DA yüklerinin toplamına bölünmesiyle hesaplanır ve bu ilişki matematiksel olarak denklem (10) ile ifade edilir. Bu denklem, enerji maliyetlerinin sistem içindeki AA ve DA yüklerine göre nasıl dağıtıldığını analiz ederek, enerji tüketimi üzerinden sistemin maliyet etkinliğini belirleme konusunda önemli bir metriktir (Seyed Alavi ve ark. 2023; Güven, 2017).

$$COST_{energy} = \frac{(COST_{yr,total})}{(DA_{load} + AA_{load})} \quad (10)$$

Bir sistemin enerji maliyeti, $COST_{energy}$, toplam yıllık maliyet olan $COST_{yr,total}$'in, sistemdeki AA ve DA yüklerinin toplamına, yani AA_{load} ve DA_{load}'a bölünmesiyle tanımlanır. Bu ilişki Denklem (10)'da açıkça ifade edilmiş olup, sistemin yıllık işletme maliyetine hem AA hem de DA güç tüketiminin farklı katkılarını dikkate alarak enerji birim maliyetini hesaplamak için net bir formül sağlar.

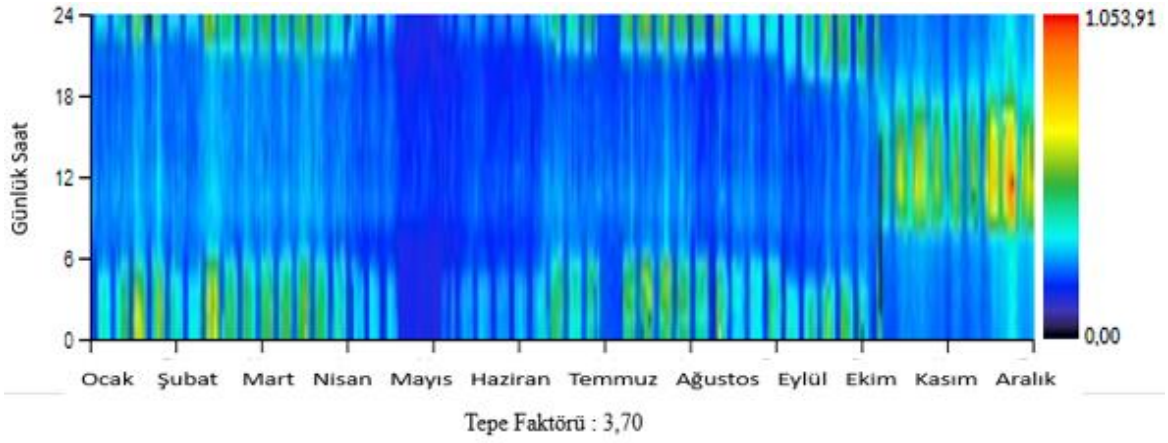
$$C_{year} = C_{re,fac}\,(i, R_{project_life}) \times C_{NPC,Total} \quad (11)$$

Bir sistemin proje ömrü boyunca net bugünkü maliyeti (NPC), denklem (11) ile ifade edilir. Burada C_{year}, yıllık maliyeti, sermaye geri kazanım faktörünü ($C_{re,fac}$) ve toplam NPC'yi ($C_{NPC,Total}$) içerir. Sermaye geri kazanım faktörü, indirim oranı (i) ve proje ömrü ($R_{project_life}$) işlevi olup, proje süresince eşdeğer yıllık maliyeti yansıtır (Yan ve ark. 2024; Güven ve Samy, 2022).



FULL TEXTS BOOK

Sermaye geri kazanım faktörü $C_{re,fac}$, bir yatırımın 'n' yıl boyunca 'i' faiz oranında geri kazanılması gereken yıllık ödemenin hesaplanmasında kullanılan finansal bir metriktir. Bu faktör, denklem (12) ile belirlenir ve sermaye maliyetini zaman içinde yansıtarak, gelecekteki ödemeler serisini tek bir mevcut değere dönüştürme sürecinde finansal analizlerin temel bir parçasıdır (Nasser ve Hassan, 2023).

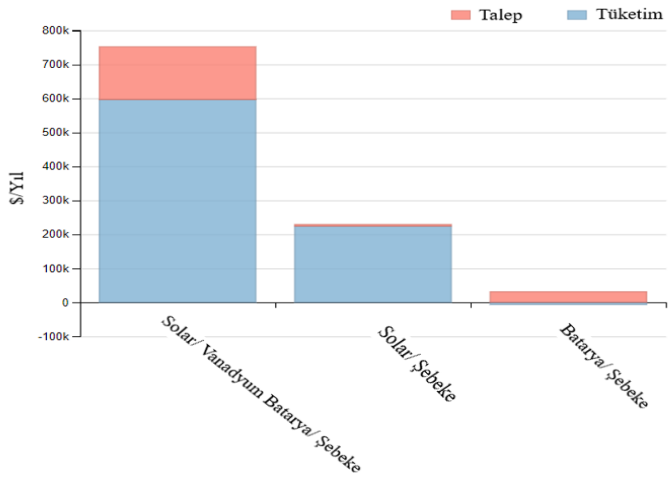


$$C_{re,fac}(i,n) = \frac{i(1+i)^n}{(1+i)^n - 1} \quad (12)$$

SONUÇLAR

Yalova Üniversitesi Merkez Kampüsü, hibrit enerji sisteminin kurulacağı yer olarak belirlenmiştir. Kampüsün ortalama elektrik tüketimi günlük olarak 6.127,3 kWh, aylık olarak 189,1 MWh ve yıllık olarak ise 2.269,3 MWh'dir. Yıl içindeki elektrik tüketimi zirvesi, 23 Aralık'ta 1.053,91 kW ile kaydedilmiştir. Ayrıca, Şekil 3'de gösterildiği üzere, en yüksek yük talebi 23 Aralık sabah saat 11:00 sıralarında 1.1 kW olarak ölçülmüştür. Sabah 7:30 ile öğlen 12:00 arasında yük talebinde bir artış gözlenmiş, öğlen 12:00'den akşam 6:00'ya kadar olan süreçte ise talep kademeli olarak azalmıştır. Bu veriler, kampüsün enerji kullanım dinamiklerini ve hibrit sistem için enerji ihtiyaçlarını belirlemede kritik öneme sahiptir.

Şekil 3. En yüksek talebin olduğu güne ait yük profili (23 aralık)



Şekil 4. Enerji tüketim modellerini gösteren ısı haritası

Şekil 4'ten de anlaşıldığı üzere, Ekim ayının ilk çeyreğinden başlayarak Aralık ayının sonuna kadar öğlen saatlerinde enerji tüketimi artmaktadır. Ayrıca, Mart ayının sonundan Haziran ayının başlarına kadar yük değerlerinin stabil olduğu gözlemlenmiştir. Bu dönemdeki yüksek ve düşük tüketim kalıpları, enerji yönetimi stratejilerinin planlanmasında önemli bir rol oynar. Ek olarak, tepe faktörü 3.70 olarak

FULL TEXTS BOOK

ölçülmüştür, bu da belirli zamanlarda maksimum talebin, ortalama talebe göre ne kadar yüksek olduğunu gösterir.

Şekil 5 incelendiğinde, Solar/Batarya/Şebeke kombinasyonunun yıllık talebinin 750 bin $ ve tüketiminin 600 bin $ olduğu görülmekte; bu da enerji fazlasının satıldığını gösteriyor. Solar/Şebeke durumunda yıllık talep 230 bin $ iken tüketim 225 bin $ olduğundan, yıllık yaklaşık 5 bin $lık bir enerji satışı yapıldığı anlaşılıyor. Batarya/Şebeke kombinasyonu için ise yıllık 25 bin $lık bir talep bulunmakta fakat tüketim gözlenmemekte. Bu durum, Solar/Batarya/Şebeke kombinasyonunun ekonomik açıdan en avantajlı seçenek olduğunu ortaya koymaktadır.

Şekil 5. Elektrik faturasında öngörülen yıllık tasarruflar

Tablo 3. Senaryo 1' e ait sistem önerilerinin karşılaştırması

Araç tipi	Temel durum	Solar/Vanadyum Batarya/ Şebeke (Senaryo 1)	Solar/Şebeke (Senaryo 1a)	Batarya/Şebeke (Senaryo 1b)

FULL TEXTS BOOK

Tablo 3, Senaryo 1'e ait sistem önerilerini üç ana başlık altında karşılaştırmaktadır: Maliyetler ve karlar, ekonomik parametreler ve çevresel etkiler. Temel durumda yıllık toplam kar sıfırken, Senaryo 1 için 718.797 $, Senaryo 1a için 214.790 $ ve Senaryo 1b için 23.818 $ olarak hesaplanmıştır. Yıllık enerji ücretleri Temel durumda 802.052 $ iken, Senaryo 1'de 205.607 $'a, Senaryo 1a'da 578.110 $'a ve Senaryo 1b'de 808.565 $'a düşmektedir. kWh başına seviyelendirilmiş enerji maliyeti Temel durum için 0,451 $, Senaryo 1 için 0,288 $, Senaryo 1a için 0,381 $ ve Senaryo 1b için 0,450 $dır. Maliyet/kar oranı Temel durum için belirtilmemişken, Senaryo 1'de %17.10, Senaryo 1a'da %32.12 ve Senaryo 1b'de %8.16 olarak belirlenmiştir. Bugünkü net maliyet, Temel durum için 12.103.740 $, Senaryo 1 için 7.737.383 $, Senaryo 1a için 10.239.420 $ ve Senaryo 1b için 12.073.160 $dır. Karbondioksit emisyonlarına bakıldığında, Temel durum yıllık 1.433,4 ton iken, Senaryo 1'de 387,7 ton/yıl, Senaryo 1a'da 1.079,8 ton/yıl ve Senaryo 1b'de 1.146,5 ton/yıl olarak kaydedilmiştir. Bu sonuçlara göre, maliyet ve çevre dostu yaklaşım açısından en optimum simülasyonun Senaryo 1 olduğu belirlenmiştir.

Tablo 4. Temel durum elektrik faturası

	Ocak	Şubat	Mart	Nisan	Mayıs	Haziran	Temmuz	Ağustos	Eylül	Ekim	Kasım	Aralık
Enerji masrafları ($)	68.9	65.3	76.1	56.3	43.9	52.5	63.7	69.0	60.0	66.7	80.2	98.5

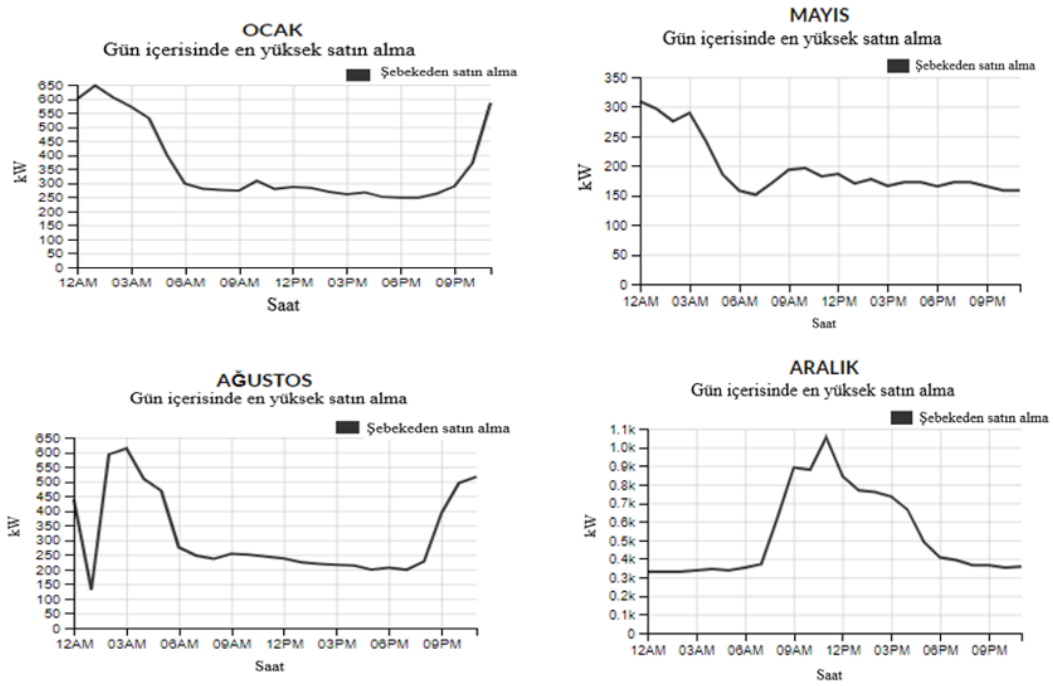
Aylık toplam ($)	88.3	85.2	94.3	70.6	52.8	68.1	80.9	87.4	79.9	85.4	100.1	130.1
Yıllık Toplam												$1.023.48



Tablo 4, bir yıllık dönem boyunca enerji masraflarını, tüketim miktarlarını, talep ücretlerini, en yüksek talep zamanlarını ve sabit ücretleri aylık bazda sunmaktadır. Ocak ayından Aralık ayına kadar enerji masrafları 68.9 $dan 98.5 $a değişirken, tüketim miktarları aynı dönemde 196.8 kWh'tan 267.7 kWh'a yükselmektedir. Satış sütunu boyunca herhangi bir kWh satışı yapılmamıştır. Talep ücretleri, aydan aya değişiklik göstererek 19.4 $dan 31.6 $a kadar çıkarken, en yüksek talep kW cinsinden 648'den Aralık ayında 1.054'e kadar yükselmiştir. Sabit ücretler ise her ay düzenli olarak 60 $ olarak sabitlenmiştir. Aylık toplam masraflar 88.3 $ ile başlayıp, yılın sonunda 130.1 $ 'a çıkmıştır. Yıllık toplamda ise masraflar 1.023,48 $ olarak hesaplanmıştır. Bu veriler, enerji tüketiminin yıl boyunca nasıl değiştiğini ve en yüksek talebin genellikle yıl sonuna doğru gerçekleştiğini göstermektedir.

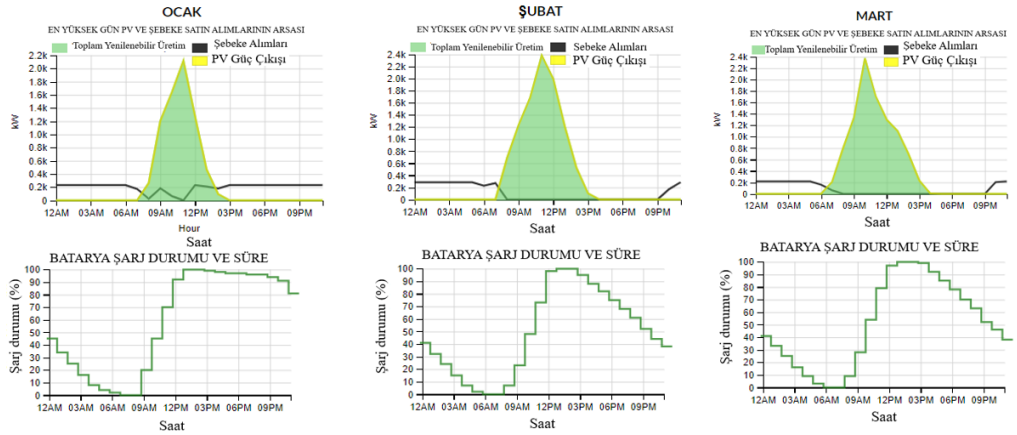
FULL TEXTS BOOK

Tablo 5. Aylık emisyon değerleri

Ay	Ocak	Şubat	Mart	Nisan	Mayıs	Haziran	Temmuz	Ağustos	Eylül	Ekim	Kasım	Aralık
Emisyon(ton/yıl)	124	118	138	101	78	94	115	126	109	121	139	169

Tablo 5, Ocak ayından Aralık ayına kadar olan dönemi kapsayarak aylık karbon emisyon miktarlarını ton/yıl cinsinden göstermektedir. Yılın ilk ayı olan Ocak'ta emisyon miktarı 124 ton ile başlarken, Şubat ayında bir miktar düşerek 118 tona inmiştir. Mart ayında 138 ton ile yılın ilk çeyreğindeki en yüksek emisyon değerine ulaşılmış, Nisan ve Mayıs aylarında bu miktar sırasıyla 101 ve 78 ton 'a gerilemiştir. Haziran ayında tekrar bir artış görülerek 94 ton olarak kaydedilmiş, Temmuz ve Ağustos aylarında emisyonlar 115 ve 126 ton olarak devam etmiştir. Eylül ayında 109 ton, Ekim'de 121 ton ve Kasım'da 139 ton ile yükseliş göstermiş, Aralık ayında ise yılın en yüksek karbon emisyonu 169 ton olarak tespit edilmiştir. Bu değerler, yıl boyunca emisyon miktarlarının mevsimsel etkiler ve diğer faktörler doğrultusunda nasıl değişiklik gösterdiğini ortaya koymaktadır.

Şekil 6. Gün içerisinde şebekeden satın alma



Şekil 6'da, gün içerisinde şebekeden satın alma grafiklerine göz attığımızda, Ocak ayında akşam 9 ile gece yarısı arasında bir artışın belirginleştiği görülmektedir. Gece yarısından sabah 6'ya kadar satın alma miktarları azalmakta, sabah 6'dan akşam 9'a kadar ise nispeten sabit kalmaktadır. Mayıs ayında, gece yarısından sabah 6'ya kadar olan düşüşün ardından sabah saatlerinden akşam 9'a kadar satın alma değerleri sabitlenmektedir. Ağustos ayında gece yarısından gece 2'ye kadar bir düşüş yaşandıktan sonra, gece 2'den 3'e kadar bir saat süren bir artış gözlemlenmekte ve bu artışın ardından sabah 6'ya kadar tekrar bir düşüş gerçekleşmekte, akşam 9'a dek sabit bir seyir izlenmektedir. Aralık ayında ise gece yarısı ile sabah 7 arası satın alma değerleri sabit durumdayken, sabah 7'den 11'e kadar artış belirginleşmekte ve sabah 11'den akşam 9'a kadar ise azalma eğilimi gözlemlenmektedir.

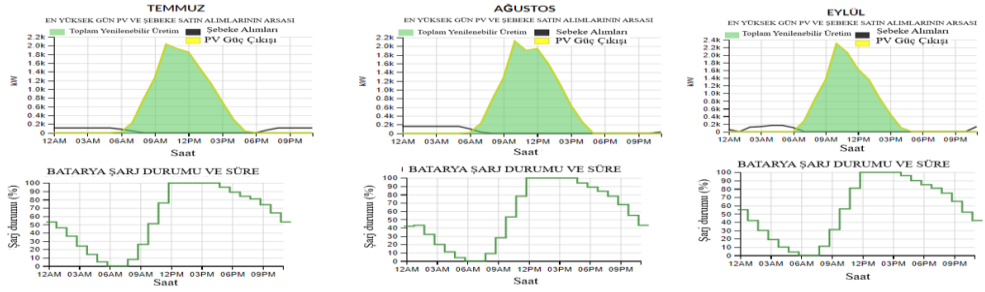
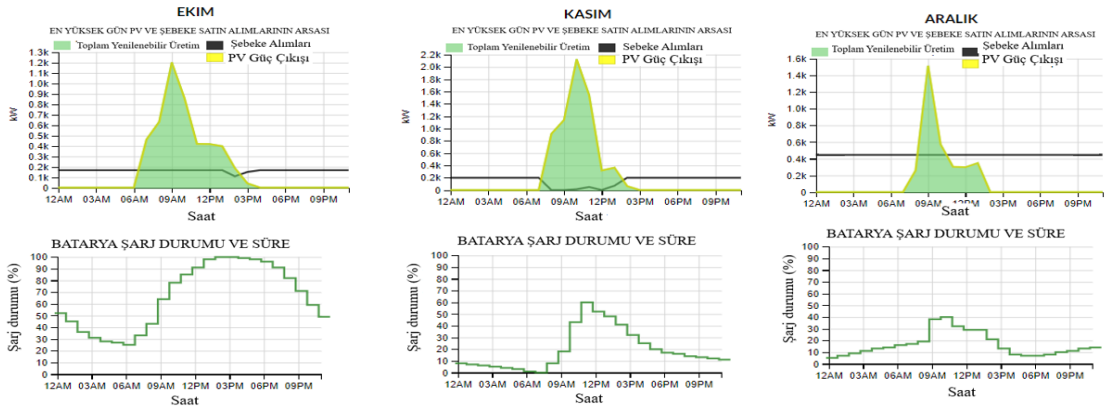
Yıllık toplam ($)	271.631											



Tablo 6 , bir yıl boyunca her ay için enerji masraflarını, tüketimi, satışı, talep ücretlerini, en yüksek talep değerlerini ve sabit ücretleri göstermektedir. Ocak ayında enerji masrafları 32.315 $ ile başlayıp Aralık ayında 61.864 $a çıkmıştır. Tüketim kWh cinsinden Ocak'ta 95.173 ile başlayıp Aralık'ta 182.945 kWh'a yükselmiştir. Satışlar aydan aya değişiklik göstermiş, en düşük 10 kWh Aralık'ta ve en yüksek 188 kWh Ağustos'ta kaydedilmiştir. Talep ücretleri Ocak'ta 6.942 $ iken, Aralık'ta 13.382 $a çıkmıştır. En yüksek talep Ocak'ta 231 kW iken Aralık'ta 446 kW'a yükselmiştir. Sabit ücretler her ay düzenli olarak 60 $ olarak belirlenmiştir. Aylık toplam masraflar Ocak'ta 39.317 $ ile başlayıp, yıl sonunda 75.306 $a yükselmiştir, bu da yıllık toplamın 271.631 $ olduğunu gösterir. Bu veriler, enerji tüketimi ve maliyetlerinin yıl boyunca nasıl dalgalanabileceğini gösteren önemli bir kaynaktır.

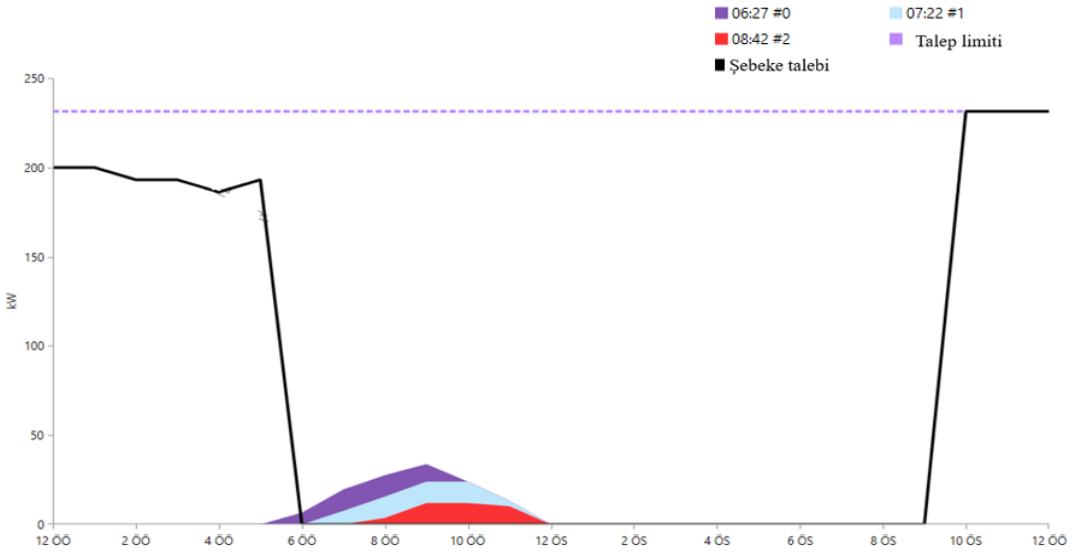


Şekil 7. Kış ayları üretim , tüketim ve batarya şarj durumu

Şekil 8. İlkbahar ayları üretim , tüketim ve batarya şarj durumu

Şekil 9. Yaz ayları üretim , tüketim ve batarya şarj durumu

Şekil 10. Sonbahar ayları üretim , tüketim ve batarya şarj durumu



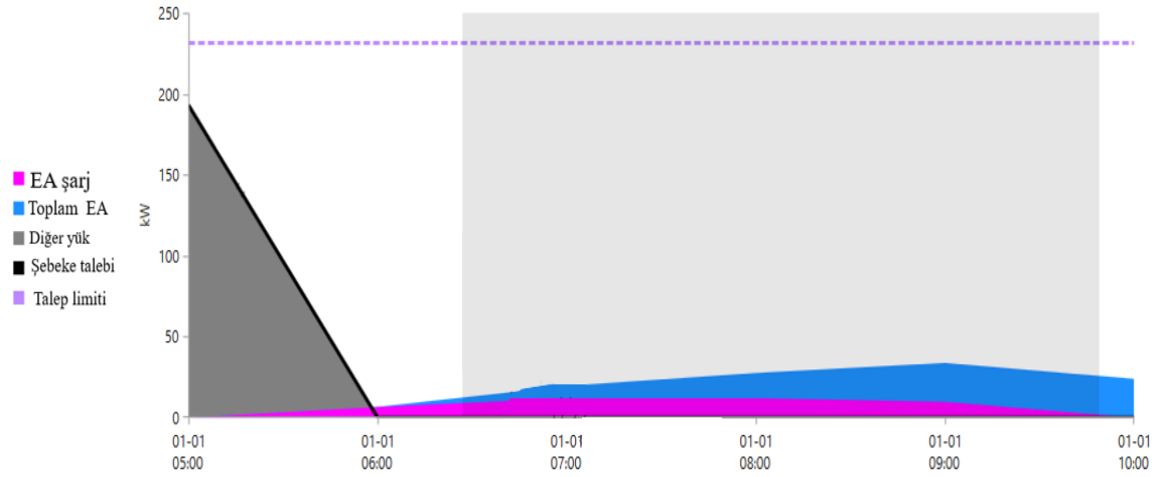
Şekil 7, Ocak, Şubat ve Mart aylarındaki güneş enerjisi üretimi ve batarya şarj durumları arasındaki farklılıkları aydınlatmaktadır. Ocak ayı verileri, güneş enerjisinin öğlen saatlerinde üretiminin pik yaptığını gösterirken, bu zirve Şubat ve Mart aylarında bir miktar azalma göstermiştir. Batarya şarj seviyeleri, güneşin varlığında önemli ölçüde artış gösterirken, şebeke enerjisi alımı da buna ters orantılı bir azalış sergilemiştir. Şubat ayında, öğleden sonraki saatlerde batarya şarjının maksimuma ulaştığı ve akabinde azaldığı gözlemlenirken, Mart ayında batarya şarj seviyelerinin daha erken saatlerde doruğa ulaşıp, gün içinde azaldığı belirginleşmiştir.

Şekil 8, Nisan, Mayıs ve Haziran aylarını kapsayan ilkbahar dönemine ait güneş enerjisi üretimi, şebeke alım-satımı ve batarya şarj durumunu saatlik verilerle karşılaştırmalı olarak sunmaktadır. Nisan ayında, güneş enerjisi üretimi öğlen saatlerinde 1.3 kW'a kadar yükselmiş ve bu üretimin batarya şarj düzeylerine pozitif bir etkisi olmuştur. Şebeke alım miktarları da, güneş enerjisi üretiminin düşük olduğu sabah ve akşam saatlerinde artış göstermiştir. Mayıs ayına gelindiğinde, güneş enerjisi üretiminin pik

FULL TEXTS BOOK

değerleri Nisan ayına göre bir artış göstererek yaklaşık 160 kW'a ulaşmıştır. Bu artışla birlikte batarya şarj düzeylerinin de daha yüksek olduğu ve öğlen saatlerinde %90'ın üzerine çıktığı gözlemlenmektedir. Bu, Mayıs ayında güneş ışığının artan süresi ve yoğunluğunun doğrudan etkisi olarak yorumlanabilir. Haziran ayında ise, güneş enerjisi üretimi daha da artarak öğlen saatlerinde yaklaşık 1.8 kW'a kadar yükselmiştir, bu durum batarya şarj seviyelerinin neredeyse tam kapasitede olduğunu gösterir. Bu, ilkbahar ayları boyunca artan güneş ışığının ve daha uzun gün ışığı saatlerinin etkilerini yansıtmaktadır. Batarya şarj durumunun gün içerisindeki yüksek oranları, enerjinin etkin bir şekilde depolandığını ve şebeke ihtiyacının azaldığını işaret etmektedir. Genel olarak, Şekil 8'in sağladığı veriler, ilkbahar ayları boyunca güneş enerjisi üretimindeki mevsimsel artışın, batarya depolama kapasitesi ve şebeke alım-satım stratejileri üzerindeki etkilerini gözler önüne sermektedir. Enerji üretimindeki bu mevsimsel artışlar, yenilenebilir enerji sistemlerinin tasarımı ve yönetimi için önemli çıkarımlar sunar ve daha uzun gün ışığı saatlerinin avantajlarından maksimum derecede yararlanılmasını sağlar.
Şekil 9'da Temmuz, Ağustos ve Eylül ayları için güneş enerjisi üretimi, tüketim ve batarya şarj durumları grafiklerle sunulmaktadır. Temmuz ayında, özellikle öğlen saatlerinde güneş enerjisi üretiminin doruğa ulaştığı ve bu üretimin batarya şarj seviyelerini yükselttiği gözlemlenmektedir. Ağustos ayında güneş enerjisi üretiminin daha da arttığı ve şebeke alımlarının azaldığı; Eylül ayında ise güneş enerjisi üretiminin azalmaya başladığı, fakat hala yüksek şarj seviyeleri sağladığı görülmektedir. Yaz aylarında güneşin pozisyonunun enerji üretimi üzerindeki etkisi net bir şekilde belirginleşirken, batarya şarj durumlarının gün boyu yüksek seviyelerde kaldığı ve şebeke ihtiyacının minimuma indiği dikkat çekiyor. Bu durum, enerji depolama sistemlerinin ve fotovoltaik panellerin yüksek verimliliğinin bir göstergesi olarak yorumlanabilir. Eylül ayına gelindiğinde ise güneş ışığının azalmasına rağmen, batarya şarj durumunun güçlü bir performans sergilediği gözlenmiştir. Bu üç ay arasında, güneş enerjisi üretiminin en yüksek seviyeye Ağustos ayında ulaştığı ve bu ayın aynı zamanda en düşük şebeke enerjisi tüketimine sahip olduğu anlaşılmakta. Temmuz ve Eylül aylarında da benzer bir eğilim olmakla birlikte, Eylül ayında üretimin azalmasına rağmen batarya şarjının yüksek kapasitede kalması enerji depolamanın önemini vurgulamaktadır.

Şekil 10, Ekim, Kasım ve Aralık aylarına ait güneş enerjisi üretimi, şebeke alım-satımı ve batarya şarj durumlarını saatlik bazda sergilemektedir. Ekim ayında, öğlen saatlerinde güneş enerjisi üretimi yaklaşık 1.3 kW'a ulaşarak zirve yaparken, Kasım ayında bu üretim yaklaşık 2.0 kW'a yükselmiştir. Aralık ayı itibarıyla, üretim 1.6 kW seviyelerine düşüş göstermiştir. Güneşin varlığında batarya şarj durumlarının Ekim ayında %80'lere kadar yükseldiği gözlemlenirken, Kasım ayında bu oran %90'a ulaşmış, Aralık ayında ise azalan gün ışığına rağmen %60'ın üzerinde kalmayı sürdürmüştür. Şebeke alımlarının günün erken ve geç saatlerinde arttığı göz önünde bulundurulduğunda, enerji depolama sistemlerinin gün içinde güneş enerjisinin yetersiz olduğu zamanlarda şebeke yükünü dengelemekteki rolü vurgulanmaktadır.

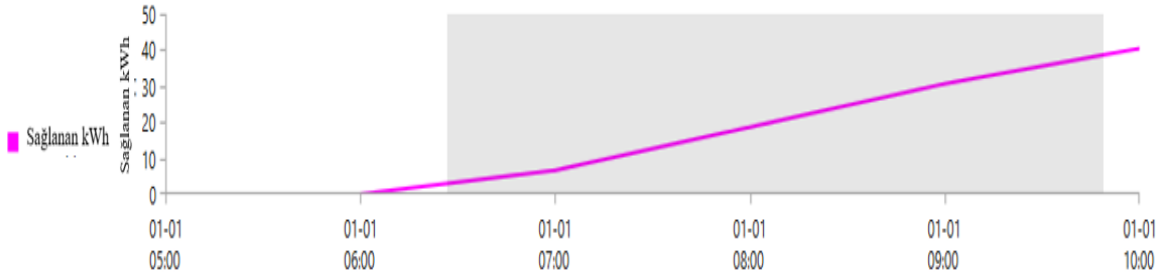


Şekil 11. 1 Ocak 2022 de şarj istasyonu günlük yük profili

FULL TEXTS BOOK

Şekil 11, 1 Ocak 2022 tarihine ait bir şarj istasyonunun günlük yük profilini göstermektedir. Grafikte saat dilimleri boyunca şarj edilen araç sayısını ve enerji kullanımını görebiliyoruz. Sabah 5:20'de başlayan şarj hizmeti, öğlen 11:45'e kadar devam etmiş ve sonrasında herhangi bir şarj aktivitesi kaydedilmemiştir. Enerji servisi, bu süre zarfında 125 kWh olarak ölçülmüş, bu da ortalama olarak her bir aracın yaklaşık 41.6 kWh enerji tükettiğini gösteriyor. Bu veri, şarj istasyonunun kapasitesi ve kullanım zamanlarının yanı sıra, elektrikli araç kullanıcılarının şarj alışkanlıkları hakkında önemli bilgiler sağlamaktadır. Şarj istasyonunun talep limitinin sabit bir şekilde 250 kW olarak ayarlandığı ve bu süre zarfında talebin asla bu limiti aşmadığı görülüyor. Ayrıca, renkli alanlar şarj edilen araçların enerji kullanım profilini, özellikle de en yoğun şarjın sabah erken saatlerde gerçekleştiğini vurgulamaktadır. Bu, genellikle araç sahiplerinin günlük işlerine başlamadan önce araçlarını şarj etmeyi tercih ettikleri anlamına gelebilir. Böyle bir grafik, bir şarj istasyonunun kapasitesinin ve hizmet saatlerinin ne şekilde planlanması gerektiği, zirve saatlerdeki talebin nasıl karşılanacağı ve olası gelecekteki genişletme ihtiyaçlarının öngörülmesi açısından önemli bilgiler sunmaktadır.

Şekil 12, 1 Ocak 2022 tarihinde şarj edilen küçük araçların şarj profili verilerini sunmaktadır. Sabah 5'te başlayan şarj işlemi, saat 6'ya kadar şebekeden sağlanan enerji ile gerçekleşmiştir, bu durum grafiğin koyu renkli alanıyla gösterilmiştir. Saat 6'dan itibaren ise enerji talebi, batarya depolama ve fotovoltaik panellerden gelen enerji ile karşılanmaya başlanmıştır, bu da grafiğin mor ve mavi renkli bölümleriyle temsil edilmiştir. Grafiğin genelinde, talep limitinin 240 kWh olarak belirlendiği ve bu limitin aşılmadığı görülüyor. Bu veriler, söz konusu tarihte küçük araçlar için tasarlanmış şarj istasyonunun enerji kullanım desenlerini ve şarj altyapısının saatlik dinamiklerini gösterir. Enerji kaynaklarının zaman içindeki kullanım dağılımı, şarj istasyonu operasyonlarının ve enerji yönetim stratejilerinin planlanması için önemli bilgiler sağlamaktadır. Bu bilgiler, enerji talebinin ve tedarik yöntemlerinin optimize edilmesine yardımcı olabilir ve özellikle enerji yoğun saatlerde şebeke yükünü hafifletmek için alternatif enerji kaynaklarının etkin kullanımını teşvik eder.

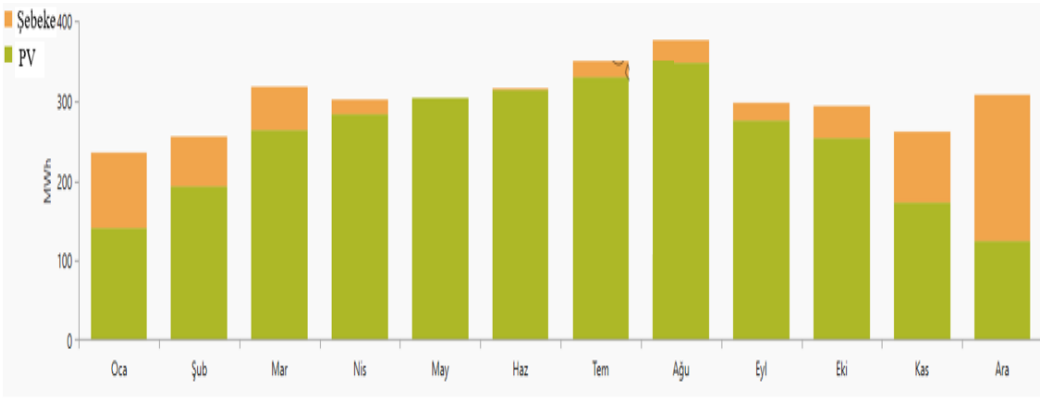


Şekil 12. 1 Ocak 2022'de şarj edilen küçük araç şarj profili

Şekil 13, 1 Ocak 2022 tarihinde küçük bir aracın şarj edilmesi sırasında sağlanan güç profilini lineer bir eğilim ile göstermektedir. Sabah 5'te sıfır kWh'tan başlayarak, saat 10'a kadar sürekli ve düzgün bir şekilde artan bir enerji sağlanışını gözlemlenmiştir. Saatlik enerji sağlanış miktarı, bu süreç boyunca lineer olarak artarak yaklaşık 50 kWh'e ulaşmaktadır. Bu grafik, şarj istasyonunun enerji sağlama kapasitesinin sabahın erken saatlerinden itibaren istikrarlı bir şekilde arttığını gösterir. Bu, potansiyel olarak aracın şarj durumunun düşük olduğu bir başlangıç noktasından, sabah saatlerinde artan bir şarj ihtiyacına cevap verme kapasitesini yansıtmaktadır. Grafikteki lineer artış, şarj altyapısının sabit bir enerji tedariki sağlama yeteneğini ve şarj süresince enerji çıktısının tutarlılığını belirtir. Bu tip bir grafik, şarj altyapılarının planlaması ve enerji tedarik stratejileri için önemlidir. Özellikle, elektrikli araç kullanıcılarının şarj alışkanlıklarını ve şarj talebinin gün içinde nasıl değiştiğini anlamak adına değerli

FULL TEXTS BOOK

bilgiler sunar. Ayrıca, şarj hizmetlerinin etkinliği ve güvenilirliği hakkında da içgörüler sağlar. Bu veriler, şarj istasyonları için enerji yönetimi ve talep tahminlerinde kullanılabilir ve daha geniş enerji ağının parçası olarak şarj altyapısının nasıl entegre edileceğine dair planlamalar yapılmasına yardımcı olur.



Şekil 13. 1 Ocak 2022'de küçük araç şarj için sağlanan güç profili

Tablo 7, elektrikli araç şarj istasyonu sistemine ait maliyet bileşenlerini detaylı bir şekilde sunmaktadır. Güneş panelleri (PV) için yapılan ilk yatırım 1.415.914,64 $ olup, ömür boyu süresince herhangi bir değiştirme maliyeti öngörülmemiş, bakım için ise toplam 334.894,07 $ harcanmıştır. Vanadyum batarya sistemi, 2.535.900,00 $'lık bir yatırım maliyeti ile bu tabloda en yüksek başlangıç yatırımına sahiptir ve yine herhangi bir değiştirme veya bakım maliyeti bulunmamaktadır. Konvertör bileşeni için 182.364,95 $ yatırım yapılmış, 67.620,61 $'lık bir değiştirme maliyeti ve -11.633,66 $'lık bir hurda değeri hesaplanmıştır. Şebeke maliyetleri ise, sadece bakım kalemi altında toplam 3.212.322,59 $ olarak rapor edilmiştir. Bütün bu maliyetler göz önünde bulundurulduğunda, sistem için toplamda 7.737.383,21 $'lık bir yatırım yapıldığı görülmektedir. Bu maliyetlerin toplamı, sistem bileşenlerinin uzun vadeli finansal planlaması için önemli bir göstergedir ve enerji altyapısının kurulumu ve sürdürülebilirliği açısından kritik öneme sahiptir. Bu veriler, sistem komponentlerinin başlangıç yatırımlarının yanı sıra, ömür boyu maliyetlerini ve potansiyel getirilerini de hesaba katarak, elektrikli araç şarj istasyonlarına yapılan yatırımların ekonomik analizinde kullanılabilir. Özellikle şebeke ile ilişkili yüksek bakım maliyetleri, enerji altyapı planlamasında stratejik kararlar alırken dikkatlice değerlendirilmesi gereken bir unsur olarak öne çıkmaktadır.

Tablo 7. Elektrikli araç şarj istasyonu

Komponentler	Yatırım maliyeti ($)	Değiştirme ($)	Bakım ($)	Yakıt ($)	Hurda ($)	Toplam ($)

FULL TEXTS BOOK

Şekil 14. Senaryo-1 aylara göre elektrik üretimi

Şekil 14, aylık enerji üretimini şebeke ve fotovoltaik paneller üzerinden sergileyerek, bu iki kaynağın zaman içerisindeki üretim profillerini açıkça ortaya koymaktadır. Şebeke kaynaklı elektrik tedariki, yılın tüm aylarında oldukça sabit bir seyir izlerken, PV panellerinden sağlanan enerji üretimi yaz aylarında belirgin bir artış göstermiştir. Bu durum, artan güneş ışığı süresinin ve yoğunluğunun fotovoltaik üretim kapasitesine etkisini yansıtır. Buna karşın, kış mevsimi yaklaştıkça PV panel verimliliğinin azaldığı, dolayısıyla şebeke elektriğine olan bağımlılığın arttığı gözlenir. Bu veriler, enerji üretim sistemlerinin planlanması ve ölçeklendirilmesi sırasında güneşin mevsimsel varyasyonlarının dikkate alınmasını zorunlu kılar. PV panellerden elde edilen enerjinin yılın farklı zamanlarında nasıl değişkenlik gösterdiğini anlamak, güneş ışığına bağlı enerji sistemlerinin etkin bir şekilde yönetilmesi için hayati önem taşır. Şebeke ve PV panelleri arasındaki enerji paylaşımı, sürdürülebilir ve dengeli bir enerji ağı oluşturulmasında stratejik bir rol oynar. Bu bilgiler, altyapı yatırımlarının planlanması ve yenilenebilir enerji kaynaklarının entegrasyon stratejilerinin geliştirilmesinde kullanılabilir.

Tablo 8. Elektrikli araç şarj istasyonu

Üretim	**kWh/yıl**	**%**
PV	3.000.846	83,0
Şebeke Alımları	613.376	17,0
Toplam	3.614.222	100
Tüketim	**kWh/yıl**	**%**
AA Birincil Yük	2.173.866	95,8
Şebeke Satışı	1.325	0,0584
Elektrikli Araç Şarj Cihazı	94.128	4,15
Total	2.269.319	100
Nicelik	**kWh/yıl**	**%**
Fazla Elektrik	882.842	24,4
Yenilenebilir Fraksiyon	73,0	%

Tablo 8, bir elektrikli araç şarj istasyonunun yıllık enerji üretim ve tüketimini, üretim kaynaklarına ve tüketim noktalarına göre ayrıntılı bir şekilde sunmaktadır. Üretilen toplam enerjinin %83'ü fotovoltaik panellerden gelirken, geri kalan %17'lik kısmı şebeke alımları ile karşılanmıştır. Üretilen toplam enerji miktarı 3.614.222 kWh olarak kaydedilmiştir. Tüketim tarafında, toplam enerji kullanımının büyük bir kısmı (%95,8) AA birincil yüke, yani şarj istasyonu dışındaki temel enerji tüketimine ayrılmıştır. Şebeke satışları, toplam tüketimin sadece %0,0584'ünü oluşturmuş ve elektrikli araç şarj cihazlarının kullanımı %4,15 ile tüketimin küçük bir bölümünü temsil etmiştir. Toplam tüketim 2.269.319 kWh olarak hesaplanmıştır. Bununla birlikte, toplam üretilen elektriğin 882.842 kWh'lik bir kısmı fazla elektrik olarak belirlenmiştir. Bu miktar, yıllık toplam üretimin %24,4'ünü oluşturmakta ve enerji yönetimi açısından önemli bir fazlalığı işaret etmektedir. Yenilenebilir fraksiyon yani enerji üretiminin

FULL TEXTS BOOK

yenilenebilir kaynaklardan sağlanan kısmı %73 olarak ifade edilmiş, bu da şarj istasyonunun enerji ihtiyacının büyük bir kısmının sürdürülebilir kaynaklardan karşılandığını göstermektedir.

SONUÇ

Bu çalışma, HOMER Grid yazılımı kullanarak, Yalova Üniversitesi Merkez Kampüsü'ndeki binaların enerji ihtiyaçlarını karşılamak üzere bir hibrit enerji sistemi tasarlamış ve bu sistemin ürettiği enerji fazlalığının elektrikli araç şarj istasyonlarında kullanımını da içerecek şekilde geniş bir uygulama alanına sahip olduğunu ortaya koymuştur. Analiz, Yalova'nın iklim özelliklerine ve 2022 yılı saatlik yük verilerine dayanarak yapılmıştır. İki temel unsur; enerji üretiminde yenilenebilir kaynakların etkin kullanımı ve enerji depolama çözümleri üzerine odaklanılmıştır.

Simüle edilen dört farklı senaryo arasından, teknik ve ekonomik veriler ışığında Senaryo-1 en optimum sonuçları sunmuştur. Bu senaryonun net bugünkü maliyeti 7,74 milyon $, seviyelendirilmiş enerji maliyeti ise kilovat saat başına 0,288 $ olarak hesaplanmıştır. İşletme ve bakım maliyetleri yıllık 304.683 $ olup, yenilenebilir enerji fraksiyonu %73 seviyesinde tespit edilmiştir. Sistem, 5,7 yıl içinde amorti edilebilecek bir yapıya sahiptir. Hibrit sistem, şebekeye bağlı olmasına rağmen yüksek oranda yenilenebilir enerji kullanımıyla öne çıkmaktadır. Emisyon değerleri açısından da sistemin çevresel sürdürülebilirliği dikkate değerdir; yıllık karbon dioksit emisyonu 387.653 kilogram, kükürt dioksit emisyonu 1.681 kilogram ve azot oksit emisyonu 822 kilogram olarak ölçülmüştür.

Hibrit sistemlerin tasarım ve entegrasyon süreçlerinde, bölgenin iklim şartları ve beklenen yük talebi gibi faktörlerin dikkatlice analiz edilmesi gerekmektedir. Elektrikli araç şarj istasyonlarının sisteme entegrasyonu sırasında, hedeflenen araç popülasyonunun doğru bir şekilde hesaplanması kritik önem taşımaktadır, çünkü araçların türüne bağlı olarak gereken şarj kapasitesinde değişkenlik gözlemlenebilir. Ayrıca, enerji fazlalığının depolanmasına olan ihtiyaç, hibrit sistemlerde önemli bir konudur ve sistem tasarımının bir başka kilit noktasını oluşturur. Teknik ve maliyet analizlerinin ardından hangi depolama teknolojisinin kullanılacağına dair stratejik kararlar alınmalıdır. Bu çalışma, yenilenebilir enerji kaynaklarının ve elektrikli araç şarj altyapısının entegrasyonu açısından stratejik planlama ve politika geliştirme konusunda kapsamlı bir rehber sunmaktadır.

ÖZET

Dünyada gerçekleşen nüfus artışı, endüstriyel ve teknolojik gelişmeler sonucunda yapı sektöründe meydana gelen dönüşüm hızlanmaktadır. Buna bağlı olarak doğal kaynaklar hızla tükenmekte; enerji tüketimi ve karbon gazı salımı gibi çevresel etkiler açığa çıkmaktadır. Yapılı çevrenin açığa çıkardığı bu etkilerin azaltılmasında sürdürülebilir yapı malzemelerinin kullanımı önem kazanmaktadır. Bu bağlamda çalışmada, ekolojik ve sürdürülebilir olma özelliklerine bağlı olarak kerpiç ve kerpiç konusunda yapılmış çalışmalar ele alınmıştır. Yerellik, kolay üretilebilme, enerji etkinliği, atık yönetiminde etkili olma ve ekonomik olma özellikleriyle ön plana çıkan kerpicin, yangına ve sese karşı dayanıklı olma gibi özellikleri de bulunmaktadır. Ancak bu özelliklere rağmen modern inşaat uygulamalarında kullanımının sınırlı olduğu görülmektedir. Düşük basınç dayanımı ve yüksek su geçirimliliği buna neden olarak gösterilebilmektedir. Kerpicin modern gereksinimlere uygun hale getirilerek yapı sektöründe yeniden kullanılmasının çevresel sürdürülebilirlik açısından önemli olduğu düşünülmektedir. Çalışmada, literatürde bulunan kerpiç ve iyileştirme yöntemleri ile ilgili çalışmalar incelenerek yeni nesil kerpiç malzemenin çevresel sürdürülebilirlik kriterleri bağlamında irdelenmesi amaçlanmıştır. Çalışma kapsamında incelenen çağdaş yapı örneklerinde katkı maddelerinin kullanımı ve sıkıştırma yöntemleriyle iyileştirme yapıldığı görülmüştür. Buna bağlı olarak yapılan literatür taramasında farklı katkıların kerpiç ile kimyasal stabilizasyonunu içeren çok sayıda deneysel çalışma olduğu tespit edilmiştir. Mevcut çalışmalar incelenerek kerpicin su geçirimliliği ve basınç dayanımına etkisine ek olarak, çevresel sürdürülebilirlik kriterlerine uygunluğu değerlendirilmiştir. Bu bağlamda çalışmada, yeni nesil kerpiç malzemelerin geri dönüştürülebilme potansiyeli, atık yönetimine katkısı, enerji verimliliği, ekosisteme ve insan sağlığına etkisi irdelenmiştir. İncelenen deneysel çalışmalar sonucunda kerpicin iyileştirilmesinde kullanılabilecek en uygun katkı maddelerinin mermer tozu, ayçiçeği sapı, alçı ve kireç olduğu tespit edilmiştir. Çimento, asfalt, uçucu kül, fosfoalçı, yüksek fırın cürufu, silis dumanı ve ferrokrom katkılarının ise belirli oranlarda su ve basınç dayanımını iyileştirmesine rağmen insan sağlığı ve ekosisteme olumsuz etkilerinin önemsenmesi gerektiği belirlenmiştir. Bu çalışmanın yeni nesil kerpiç malzemelerin çevresel sürdürülebilirlik kriterlerine uygunluğunun incelenmesi yönüyle önemli olduğu ve gelecekte yapılacak çalışmalara referans olabileceği düşünülmektedir.

Anahtar Kelimeler: Yeni Nesil Kerpiç, Katkı Maddesi, Çevresel Sürdürülebilirlik, Kerpiç Duvar, Kerpicin İyileştirilmesi.

ABSTRACT

As a result of population growth and industrial and technological developments in the world, the transformation in the construction sector is accelerating. Accordingly, natural resources are rapidly depleting; environmental impacts such as energy consumption and carbon gas emissions occur. The use of sustainable building materials is gaining importance in reducing these impacts caused by the built

FULL TEXTS BOOK

environment. In this context, in the study, studies on adobe and adobe, depending on their ecological and sustainable features, were discussed. Adobe, which stands out with its locality, easy production, energy efficiency, being effective in waste management and being economical, also has features such as being resistant to fire and sound. However, despite these features, its use in modern construction applications appears to be limited. Low compressive strength and high water permeability can be shown as the reason for this. It is thought that reusing adobe in the construction industry by adapting it to modern requirements is important for environmental sustainability. In the study, it was aimed to examine the adobe improvement methods found in the literature and to offer suggestions for new generation adobe walls and to determine the compliance of these methods with environmental sustainability criteria. It was observed that improvements were made through the use of additives and compression methods in the contemporary building examples examined within the scope of the study. Accordingly, in the literature review, it was determined that there are many experimental studies involving the chemical stabilization of different additives with adobe. Existing studies were examined and in addition to the effect of adobe on water permeability and compressive strength, its compliance with environmental sustainability criteria was evaluated. In this context, the recyclability potential of new generation adobe materials, their contribution to waste management, energy efficiency, and their effects on the ecosystem and human health were examined. As a result of the experimental studies examined, it was determined that the most suitable additives that can be used in the improvement of adobe are marble dust, sunflower stalk, plaster and lime. It has been determined that although cement, asphalt, fly ash, phosphogypsum, blast furnace slag, silica fume and ferrochrome additives improve water and pressure resistance to certain extent, their negative effects on human health and ecosystem should be taken into consideration. It is thought that this study is important in terms of examining the compliance of new generation adobe materials with environmental sustainability criteria and can be a reference for future studies.

Keywords: New Generation Adobe, Additive, Environmental Sustainability, Adobe Wall, Improvement of Adobe.

GİRİŞ

Tarih boyunca insanın en temel gereksinimlerinden birinin barınma ihtiyacı olduğu bilinmektedir. Göçebe bir yaşam süren insanlar ilk olarak ağaç kovukları ve mağaraları barınma ihtiyacını gidermek amacıyla kullanmıştır. Neolitik dönemde tarımsal faaliyetlere bağlı olarak yerleşik yaşama geçişle birlikte insanlar evlerini inşa etmeye başlamıştır [1]. Evler inşa edilirken kolay erişilebilir ve doğal yapı malzemelerine ihtiyaç duyulmuştur. Doğada var olan toprak, taş ve ağaç bu ihtiyacı karşılamak için kullanılmıştır. Toprak, evlerin inşasında kullanılan malzemelerin başında gelmekte olup; geçmişten günümüze izler taşıyan bir kültür oluşturmuştur [2]. Toprağın kullanımı ekonomik, sağlıklı ve doğayı koruma açısından faydalı olduğu için binlerce yıldır tercih edilmektedir. Toprak, su ve bağlayıcı katkı malzemeleri ile harmanlanarak kerpiç malzemeyi oluşturmaktadır. Kerpiç, toprağın farklı biçimlerde kullanılmasına olanak sağlamaktadır.

Doğada kendiliğinden var olan toprağın sürdürülebilirlik ve ekoloji bağlamında çok sayıda faydası bulunmasına rağmen modern inşaat uygulamalarında kerpiç kullanımının az olması çalışmanın çıkış noktası olarak ele alınmıştır. Bu bağlamda kerpicin iyileştirilmesi konusunda yapılan çalışmalar ele alınarak, yeni nesil kerpiç malzemelerin çevresel sürdürülebilirlik kriterleri bağlamında irdelenmesi amaçlanmıştır. Çalışma kapsamında kerpiç üretimi, özellikleri, yeni nesil kerpiç yapı örnekleri ve yapılan iyileştirme yöntemleri incelenmiştir.

Tarihsel süreçte kerpiç karışımları incelendiğinde, farklı medeniyetlerde kerpicin kullanıldığı, yerin iklimsel özellikleri ve malzeme erişilebilirliğine göre iyileştirme çalışmaları yapıldığı görülmüştür. Deneysel çalışmalar sonucunda elde edilen katkılı kerpice geçmişin izlerinde rastlanmaktadır. Bu çalışmada geçmişten günümüze ön plana çıkan iyileştirme çalışmaları kronolojik olarak belirtilmekte

FULL TEXTS BOOK

olup; Türkiye'de 1960 sonrası gerçekleştirilen ve farklı katkı maddesi kullanılan çalışmalar irdelenmiştir. Literatür taramasından elde edilen veriler doğrultusunda katkı maddesi ilavesiyle iyileştirilen yeni yapı malzemesinin çevresel etkisi irdelenmiştir. Yeni nesil kerpiç kullanımında söz konusu etkilere göre öneriler sunulmuştur. Geçmişten günümüze ulaşan bu malzemenin iyileştirilmesi ve yapı sektörüne yeniden kazandırılması gerekli görülmektedir.

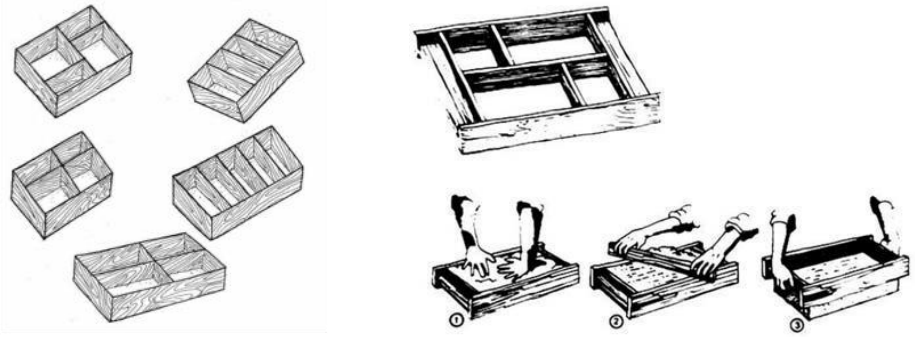
KERPİÇ ÜRETİMİ, İYİLEŞTİRİLMESİ VE ÇEVRESEL SÜRDÜRÜLEBİLİRLİK

Kerpicin eski çağlardan beri varlığı arkeolojik çalışmalar sonucunda belirlenmiştir. Kerpiç kullanımının Mezopotamya, Anadolu, İran ve Akdeniz havzasında yoğunlaştığı yapılan çalışmalar sonucunda açığa çıkmıştır [3]. Geçmişe ait yapı örnekleri incelendiğinde yığma, hımış veya karma tipte kerpiç kullanımı görülmektedir. Hitit, Asur, Sümer, Mısır ve Antik Yunan mimarisinde kerpiç kullanımına sıklıkla rastlanmaktadır [4]. Erişilebilir, kolay üretilebilen ve ekonomik olma özelliklerinden dolayı geçmişten günümüze dünyanın birçok bölgesinde kerpiç yapılar görmek mümkün olabilmektedir. Anadolu'da ise Çatalhöyük, Aşıklıhöyük, Hacılar, Acemhöyük, Kültepe ve Yassıhöyük gibi birçok bölgede yapılan kazı çalışmaları sonucunda kerpiç malzemenin yapıda kullanımı tespit edilmiştir [5] (Resim 1).

Resim 1. Çatalhöyük kazı çalışmalarında çıkarılan duvarlar [6]

Kerpiç Tanımı ve Üretim Yöntemleri

Kerpiç; killi ve elverişli toprağa saman veya bitkisel liflerin karıştırılarak suyla yoğurulması sonucunda elde edilen harcın kalıplara dökülmesi ve güneşte kurutulmasıyla elde edilen yapı malzemesidir [7]. Geçmişten günümüze kerpiç, efektif kullanımını sağlamak ve dayanımını arttırmak amacıyla birçok katkı maddesiyle harmanlanarak üretilmiştir. Kerpiç üretiminin yapıldığı coğrafyaya göre saman, bitki sapları, kum, alçı, kireç, odun külü ve tuz gibi malzemeler ilk aşamada katkı maddesi olarak kullanılmıştır [8]. Kerpicin zaman içerisinde belirli ölçülerde üretilmesiyle "modüler yapı malzemesi" kavramı ilk kez kullanılmaya başlamıştır [9].



Türkiye'de kerpiç blokların üretimi, sınıflandırılması, özellikleri ve deneylerini içeren TS 2515 standardı bulunmaktadır. Kerpicin yapılarda yığma sistem, kerpiç dolgulu ahşap karkas sistem (hımış) ve karma yapım sistemi şeklinde kullanımları mevcuttur. Kerpicin duvar yapı malzemesi olarak kullanılması ise zaman içerisinde gelişen farklı tekniklerle mümkün olabilmektedir. Kerpiç duvarlar; geleneksel tuğla örgüsü yöntemi, dövme (tokmaklama) yöntemi, ahşap taşıyıcılı ve kerpiç dolgulu yöntem, omurgalı kerpiç yöntemi ve püskürtme yöntemi ile üretilebilmektedir. Geleneksel tuğla örgüsü üretim yöntemi Anadolu'da en sık rastlanan yöntem olarak karşımıza çıkmaktadır.

Geleneksel Tuğla Örgüsü Tekniği

Geleneksel tuğla örgüsü yönteminde kerpiç blok üretim süreci harcın hazırlanması, fermantasyon süreci, kalıplama işleminin yapılması, kurutma ve depolama işlemlerini içermektedir. Kerpiç harcında 2/3 oranında kil ve kum; 1/3 oranında saman ve su bulunmaktadır. Kumun kile oranı da kendi içerisinde 1/3 (2 kil ve 1 kum) olarak ayrılmaktadır [4]. Harç suyunun kontrollü ölçülerde eklenmesi gerekmekte

FULL TEXTS BOOK

olup az veya çok su ekleme durumunda kerpiç blokta rötre ve çatlaklar meydana gelebilmektedir. Fermantasyon sürecinden sonra harç Resim 2'de örneği verilen ahşap kalıplara dökülerek blok haline getirilmektedir.

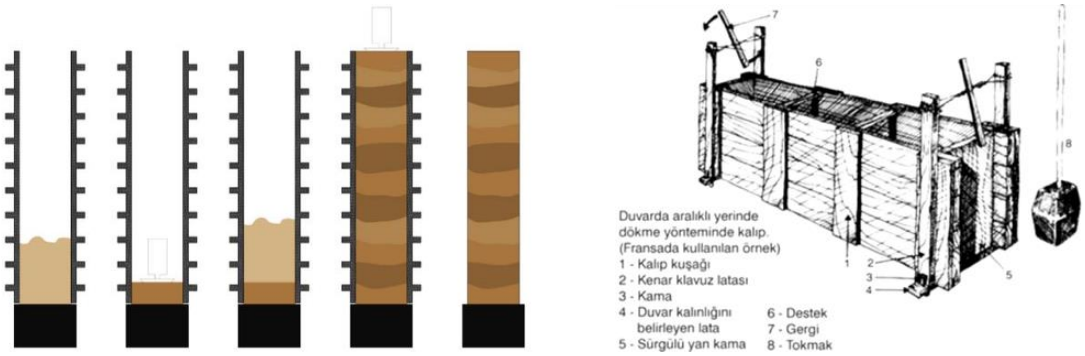
Resim 2. Anadolu'da kullanılan kerpiç kalıpları ve kerpiç blok üretim aşamaları [10]

Harcın ahşap kalıplara doldurulduğunda boşluk kalmayacak şekilde sıkıştırılması ve kalıba vurulması geçirimsiz bir blok oluşturmak için önemlidir. Kerpiç harcı blok haline getirme işlemine "kerpiç kesme işlemi" adı verilmektedir [2]. Kerpiç kalıplarının ölçüleri bölgesel olarak farklılık göstermesinin yanı sıra; Türkiye'de en sık kullanılan kalıp ölçüleri Tablo 1'de verilmektedir. Kalıp ölçülerinde büyük olanlar ana ve küçük olanlar kuzu olarak adlandırılmaktadır [8].

Tablo 1. Kerpiç blok kalıp ölçüleri [7 numaralı kaynaktan düzenlenmiştir].

Sınıf	Boyut (cm)	Hacim (m^3)	Yaklaşık ağırlık (kg)
I	12×19×40	0.0091	10-12 (kuzu)
II	12×30×40	0.0144	15-25 (ana)
III	12×18×30	0.0065	7-11 (kuzu)
IV	12×25×30	0.009	10-15 (ana)

Kalıptan çıkarılan kerpiç bloklar Resim 3'te görüldüğü gibi güneşte kurumaya bırakılmaktadır. Kurutma sürecinde bloklarda çatlak oluşumunun önlenmesi için ot ve saman gibi malzemelerle üstleri örtülmeli veya hafif bir kum tabakası serpilerek koruyucu tabaka oluşturulmalıdır [11]. Üretim işlemi tamamlanan kerpiç bloklar duvar örgüsünde kullanıma hazır hale gelmektedir.



Resim 3. Kerpiç blok üretiminde kurutma ve depolama işlemi [11, 12]

FULL TEXTS BOOK

Dövme (Tokmaklama) Tekniği

Dökme tekniği olarak da bilinen bu kerpiç duvar üretim tekniğinde duvar kalınlığına bağlı olarak özel ahşap kalıplar hazırlanmaktadır. Ahşap kalıpların taşıma ve montaj kolaylığı açısından 75 cm'den fazla olmaması, kalıp kalınlığının 3-4 cm olması ve emprenye edilmiş olması gerekmektedir [2]. Kerpiç harcının ahşap kalıpların içine dökülmesi ve tokmakla dövülerek sıkıştırılmasıyla üretilmektedir. Dövme kerpiç duvarların geleneksel üretiminde tokmaklama işlemi elle yapılırken; günümüzde elektronik ve pnömatik sıkıştırma ile insan gücünü azaltan uygulamalar bulunmaktadır [13] (Resim 4).

Resim 4. Dövme (tokmaklama) işlemi [14] ve ahşap kalıp elemanları [10]

Ahşap Taşıyıcılı ve Kerpiç Dolgulu Üretim Tekniği

Ahşap taşıyıcılı ve kerpiç dolgulu duvar üretim tekniğinde ise duvarı sağlamlaştırmak amacıyla ahşap dikmeler kullanılmaktadır. Hımış olarak da bilinen yapım sistemi, ahşap karkas sistemin kerpiç bloklar ve dökme kerpiç ile doldurulmasından oluşmaktadır. Düşey eksende ahşap dikmeler, yatayda ise taban ve kirişlemelerle yapı yükü zemine aktarılmaktadır. Duvar uygulaması tamamlandıktan sonra yüzeye sıva uygulaması iklim ve tercihe bağlı olarak değişebilmektedir [2]. Uygulama esnasında yapının su vb. etkenlerden korunmasını sağlamak amacıyla Resim 5'te görüldüğü gibi beton veya taş döşek yapılabilmektedir. Geleneksel yapılarda sıklıkla rastlanan taş döşekler derin temelli yapılarda iki veya üç sıra taşla oluşturulmakta olup duvarda oluşabilecek rötre ve çatlakları önlemektedir [5].

Resim 5. Ahşap taşıyıcı kerpiç duvarlı konut örneği ve taş döşek uygulaması [15, 16]

Omurgalı Kerpiç Üretim Tekniği

Omurgalı kerpiç üretimi dövme tekniğiyle benzerlik göstermektedir. Dövme sistemden farklı olarak kalıbın içerisine tokmaklamayı önlemeyecek şekilde yatay ve düşey ahşap çubuklar yerleştirilmektedir [2]. Ayrı bir omurgaya sahip olan bu sistemde ahşap kalıplara kerpiç harç dökme işlemi aynı şekilde gerçekleştirilmesine karşın bu teknikte daha yoğun kıvamda harç kullanılması gerekmektedir [5]. Dövme tekniğinde olduğu gibi kalıplardaki harç dövülerek sıkıştırılmalıdır. Kerpiç içerisine gömülen

FULL TEXTS BOOK

ahşap omurga ile yapının dayanımı sağlanmaktadır [17]. Geleneksel Anadolu evlerinde sıklıkla kullanılan bu yapım sistemi çatlak oluşumunu önleyebilmektedir.

Püskürtme Tekniği

Püskürtme kerpiç duvar üretim tekniğinde dövme sistemdeki gibi kalıp sistemi gerekmektedir. Beton teknolojisindeki püskürtme cihazları kullanıldığı için kerpiç harcın kıvamı cihaz basıncına göre ayarlanmaktadır [18]. İç duvarlarda kullanımı daha uygun olarak görülen üretim tekniğinde sıkıştırma işlemine gerek duyulmamaktadır. Püskürtme tekniği genellikle taşıyıcı olmayan kerpiç duvarlarda uygulanmaktadır [11].

Kerpiç Malzemenin Özellikleri ve İyileştirme Yöntemleri

İnsanların yaşamını sürdürdüğü yapılar; fiziksel çevresi, tasarımı, kullanılan yapı malzemeleri ve doğaya yaklaşım bağlamında olumlu ve olumsuz etkiler sunmaktadır. Yapı malzemesi olarak kerpicin kullanımı da insanı, doğal çevreyi ve ekonomiyi etkilemektedir. Kerpicin olumlu özellikleri şu şekilde sıralanabilmektedir [10,19]:

- Ekolojik bir malzeme olması
- Sürdürülebilir olması
- Yerel malzeme, erişilebilir ve az maliyetli olması
- Pasif iklimlendirmeye elverişli olması
- Atık bırakmama özelliğinin olması
- Üretiminin kolay olması
- Enerji gereksiniminin az olması
- Yangına karşı dayanıklı olması
- Ses yalıtımı sağlaması

Kerpiç malzemenin birçok olumlu özelliği olsa da olumsuz özellikleri de bulunmaktadır. Topraktan yapılan bu malzeme belirli durumlarda yetersiz kalmakta ve performansı azalmaktadır. Olumsuz özellikleri şu şekilde belirtilebilir [10,19]:

- Su ve neme karşı dayanıksız olması
- Yanlış üretim ve bakım ile depreme dayanıksız hale gelmesi
- Basınç ve çekme dayanımının düşük olması
- Bitkisel katkıların çürümesi, mantar ve bakteri oluşumuna zemin hazırlaması

Kerpicin olumsuz etkilerini gidermek ve malzemenin kullanımını yaygınlaştırmak amacıyla pek çok çalışma yürütülmüştür. Eski çağlardan beri kerpice farklı katkı maddeleri eklenerek veya farklı yöntemlerle iyileştirme işlemi yapılmıştır. Günümüzde de olumsuz özellikleri iyileştirilmeye çalışılmakta olup olumlu özelliklerinden yararlanma yaklaşımı devam etmektedir. Kerpicin iyileştirilmesi mekanik, fiziksel ve kimyasal olarak gerçekleşebilmektedir. Mekanik iyileştirme, toprağın sıkıştırılması sonucu yoğunluk değişimiyle sağlanmaktadır. Fiziksel iyileştirme, karışımdaki malzeme oranına bağlı olarak toprağın granülometrisinin değişimiyle gerçekleşmektedir [20]. Organik bitki liflerinin kerpice ilavesi de fiziksel iyileştirme uygulamalarından biridir. Kimyasal iyileştirme ise toprağa çeşitli kimyasal katkı maddelerinin ilave edilmesiyle gerçekleşmektedir.

Yeni Nesil Kerpiç Yapı Örnekleri

Günümüzde gelişen teknoloji ve ortaya çıkan ihtiyaçlarla birlikte kerpiç duvar üretiminde geleneksel ve yeni nesil yöntemler birlikte uygulanmaktadır. Doğal bir malzeme olan kerpicin yapı malzemesi olarak kullanımında yer, işlev, iklim ve çevre parametreleri ele alınmaktadır. Geleneksel yöntemlerin bu parametrelere uygun geliştirilmesi sonucunda yeni nesil kerpiç malzeme ve üretim tekniği belirlenmektedir. Kerpiç malzemenin iyileştirilmesinde genellikle kimyasal katkılar; geliştirilmiş üretim

FULL TEXTS BOOK

tekniğinde ise dövme tekniğinden faydalanarak sıkıştırma yöntemi uygulanmaktadır. Bu bağlamda sıkıştırılmış toprak (Rammed earth) ve katkı malzemeleriyle iyileştirilmiş yeni nesil yapı örnekleri incelenmiştir.

Ricola Bitki Merkezi

Herzog & de Meuron Architects iş birliğiyle 2014 yılında İsviçre'de inşa edilen Ricola Bitki Merkezi'nin dış duvarlarında kerpiç kullanılmıştır [21]. Betonarme taşıyıcı sistem ve prefabrike sıkıştırılmış toprak bloklardan oluşan duvarlar işleve uygun ve doğal malzeme kullanımı açısından çevreye duyarlıdır. Ricola Bitki Merkezi'nin dış duvarlarında kullanılan sıkıştırılmış toprak blokların üretimi basınca karşı dayanıklılığı artırmak amacıyla uygulanmıştır. Söz konusu mekanik iyileştirmeye ek olarak toprağa kimyasal katkı maddeleri de eklenmiştir. Volkanik tüf ve kireç katkısıyla kerpiç iyileştirilmiştir [22]. Resim 6'da blokların üretim ve uygulama aşamaları görülmektedir. Kerpiç blokların arasına mukavemeti artırmak amacıyla ince bir kum, puzolan veya kireç tabakası serilmektedir [21].

Resim 6. Ricola Bitki Merkezi cephe görünüşü ve inşa aşaması [22]

Caldera Evi

Caldera Evi, yerel malzemeler ve usta-zanaat ilişkisini önemseyen DUST ekibi tarafından tasarlanmıştır [23]. 2015 yılında ABD'de inşa edilen evde biyoçeşitlilik ve doğal çevreye referans verecek şekilde toprak malzeme kullanılmıştır. Toz haline getirilmiş hafif kırmızı cüruf, çimento ve su karışımının yerel toprağa karıştırılmasıyla duvar harcı elde edilmiştir [23]. Harç kalıplara dökülerek sıkıştırılmış ve sonrasında kurutma işlemi uygulanmıştır. Sıkıştırılmış katkılı bloklardan oluşan yapıda ısı yalıtımı ve konfor sağlanmıştır [24]. Hem kimyasal ilaveler hem de sıkıştırma işlemiyle iyileştirilen kerpiç yapıda kullanıma uygun hale gelmiştir.

Resim 7. Caldera Evi cephe görünüşü ve iç mekân görünüşü [23]

Nk'Mip Çölü Kültür Merkezi

Dialog Design tarafından 2007 yılında Kanada'da inşa edilen yapı, yaban hayatı koruma ve sosyal hizmet desteği amacıyla kurulmuştur [25]. Sürdürülebilir, yerel ve erişilebilir toprak malzemenin etkili kullanıldığı örneklerden biri olarak bilinmektedir.

Yapının duvarlarında çimento ve mineral katkılı toprak kullanılmıştır [25]. Üretilen harç kalıplara dökülerek sıkıştırılmış ve duvar katmanlarını oluşturmuştur. Proje ekibi tarafından katmanların 100 tona kadar ağırlık taşıdığı ve -30 ile 40 derece aralığında kullanılabildiği belirtilmektedir [26]. Yapı duvarlarında toprak kullanımı ısıl konfor ve enerji verimliliği açısından faydalıdır.

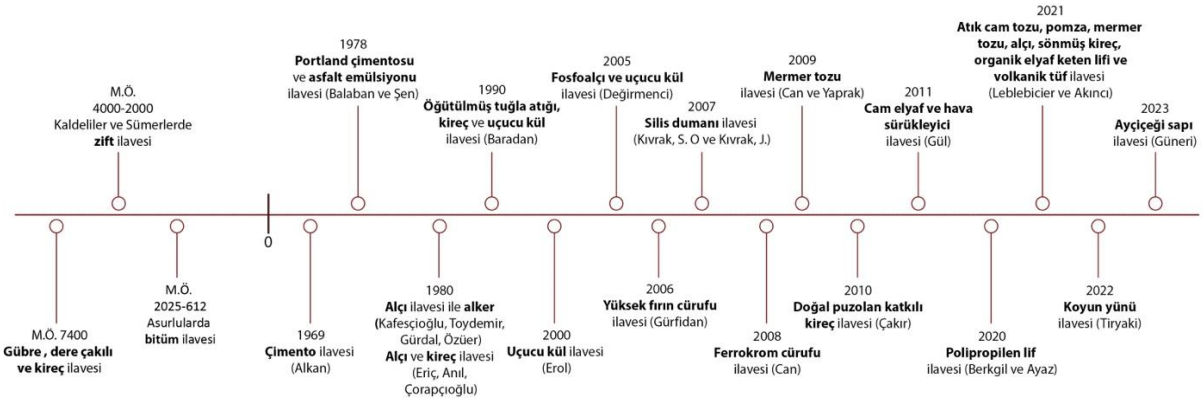
Resim 8. Nk'Mip Çölü Kültür Merkezi cephe görünüşü ve sıkıştırılmış toprak duvar [26]

Yapı Malzemelerinde Çevresel Sürdürülebilirlik

Endüstri Devrimi doğal kaynaklarının tüketiminin artması, hızlı sanayileşme, aşırı tüketim, artan kirlilik ve nüfus artışını beraberinde getirmiştir [27]. Yaşamın her alanında kolay erişilebilen ve ekonomik fosil enerji kaynaklarına yönelimle doğaya karşı bilinçsiz bir tüketim gerçekleşmektedir. Biyolojik çeşitliliğin azalması, sera gazı salımının artması ve atık yönetiminin sağlanamaması süreç içerisinde doğal çevreye zarar vermiştir [28]. Sürdürülebilirlik kavramı, ilk olarak 1980'lerde söz konusu zararların önlenmesi ve gelecek nesillere sağlıklı bir çevre bırakılması amacıyla ortaya çıkmıştır. Çok sayıda tanımı bulunmakta olup en kapsamlı ve en sık kullanılan tanımı 1987 Bruntland Komisyonu tarafından yapılan tanım olarak bilinmektedir [29]. Bu tanıma göre sürdürülebilirlik, insan ihtiyaçlarının gelecekteki nesillerin yaşamsal ihtiyaçlarını riske atmadan karşılanabilmesi olarak belirtilmektedir [30]. Sürdürülebilirlik yaklaşımı temelde ekolojinin korunması ve döngünün sağlanması esaslarına dayanmaktadır. Hızla tükenen kaynaklar yerine; yenilenebilen, doğa dostu, ekonomik ve sağlıklı ürünlerin kullanımının faydalı olduğu önerilmektedir. Sürdürülebilirlik kavramı çevresel, sosyal ve ekonomik olarak sınıflandırılmaktadır. Çevresel sürdürülebilirlik, doğal kaynak kullanımıyla çevreye verilen zararın en aza indirilmesini amaçlamaktadır. Sosyal sürdürülebilirlik, toplumun her kesimine eşit olanaklar ve yarar sağlamakla ilişkilendirilmektedir. Ekonomik boyutta sürdürülebilirlik ise, ülkelerin kalkınması ve ürün üretiminin sürekli olarak sağlanmasıyla gerçekleşebilmektedir. Artan enerji ihtiyacı günümüz ve gelecek için alternatif enerji kaynaklarının kullanımını kaçınılmaz hale getirirken; kullanılan kaynakların sürdürülebilir olması gerektiği düşünülmektedir.

Yapıların inşa öncesi, inşa ve kullanım sürecinde enerji kaynaklarının korunumu ve artan çevre kirliliğinin azaltılması noktasında sürdürülebilir yapı malzemeleri ön plana çıkmaktadır. Söz konusu yapı malzemelerinin kullanımı yapının yaşam döngüsü boyunca doğal dengeyi korumaktadır. Sürdürülebilir yapı malzemesi; olabilecek en az miktarda enerji tüketen, ortaya çıkardığı atıklarla ekolojik dengeyi bozmayan, hammaddenin temin edilmesi, işlenmesi ve bakımında doğal çevreye zarar vermeyen malzemeler olarak tanımlanabilmektedir [31]. Çevreye duyarlı ve doğal yapı malzemelerinin özellikleri şu şekilde sıralanabilmektedir [32]:

- Geri dönüştürülebilme özelliğiyle işlevini tamamladıktan sonra doğada kaybolması



FULL TEXTS BOOK

- Enerji verimliliği sağlaması
- Atıkların ve kirleticilerin minimum düzeyde olması
- Ekosistem dengesini bozmaması
- İnsan sağlığını olumsuz etkilememesi

Kerpiç; ekolojik yönü, atık bırakmaması, kolay erişilebilir yerel bir malzeme olması, üretim kolaylığı, enerji gereksiniminin az olması, yangına karşı dayanıklılığı, ses yalıtımı sağlaması ve pasif iklimlendirmeye elverişli olmasıyla çevresel sürdürülebilirlik parametrelerini sağlamaktadır. Bu özellikleriyle günümüzde sık kullanılmama sebebi ise öncelikli olarak su ve basınca karşı dayanıklı olmamasıyla açıklanabilmektedir. Kerpicin su direnci ve basınç dayanımı iyileştirildiğinde inşaat uygulamalarında kullanımının artacağı öngörülmektedir. Çevreye ve insan sağlığına duyarlı yapı malzemeleri ön plana çıkarken kerpicin doğaya uyumu ve olumlu yönlerinin göz ardı edilmemesi gerektiği düşünülmektedir.

MATERYAL VE METOT

Tarihsel süreçte kerpicin kimyasal yöntemlerle iyileştirilmesi farklı katkı maddeleriyle gerçekleşmiştir. Bu bağlamda, kerpicin katkı maddeleri ilave edilerek iyileştirilmesini inceleyen çalışmalar literatür taramasıyla belirlenmiştir. M.Ö. 7400 yıllarında kerpice gübre, dere çakılı ve kireç ilavesi yapılmış olduğu tespit edilmiştir. [33]. M.Ö. 4000-2000 yıllarında Kaldeliler ve Sümerler zift ilavesi ile kerpicin su dayanımını iyileştirmiştir [34]. Dış sıva malzemesi olarak kullanılan ziftli kerpiç ile mukavemeti arttırmak amaçlanmıştır. Kafesçioğlu'na göre M.Ö. 2025-612 yıllarında Asurluların bitüm ilavesiyle malzemenin olumsuz özelliklerini iklimsel koşullara uygun hale getirdiği belirlenmiştir [1]. Toprağın eski çağlardan beri deneysel çalışmalarla günümüze ulaştığı görülmektedir. 1960 yılı sonrasında kerpiç iyileştirme çalışmaları hız kazanmış olup literatürde çok sayıda çalışmaya ulaşılmaktadır. Bu çalışmada, 1960 yılı sonrası Türkiye'de yapılan kerpiç iyileştirme çalışmaları incelenmiş ve Şekil 1'de kronolojik olarak gösterilmiştir.

Şekil 1. Kerpiç iyileştirme çalışmalarının kronolojik gösterimi

YENİ NESİL KERPİÇ MALZEMELERİN ÇEVRESEL SÜRDÜRÜLEBİLİRLİK BAĞLAMINDA İNCELENMESİ

Günümüzde kerpiç harcına farklı katkı maddeleri eklenmesiyle yeni nesil kerpiç malzeme elde etmek amacıyla deneysel çalışmalar yapılmaktadır. Literatür taramasında ele alınan iyileştirme çalışmaları araştırmanın bu bölümünde detaylı olarak irdelenmiştir. Çalışmalarda atık maddeler veya inşaat sektöründe katkı olarak kullanılan malzemelerin yoğun kullanımı tespit edilmiştir. İlave edilen katkıların kerpicin olumsuz yönlerinin iyileştirilmesinin yanı sıra, çevresel sürdürülebilirlik özelliklerine etkisi araştırılmıştır. 1969-2023 yılları arasında yapılan toplam 17 deneysel çalışmanın yöntem ve sonuçları incelenmiştir. Yapılarda kerpiç kullanımının azalmasına neden olan ölçütler

FULL TEXTS BOOK

çalışmaların yöntemini oluşturmaktadır. Bu doğrultuda su ve basınç dayanım ölçütleri ön plana çıkmaktadır. Katkılı yeni nesil kerpiç üretiminde su ve basınç dayanımının katkısız kerpice oranla yüksek olduğu ve çevresel sürdürülebilirlik kriterlerini koruyan malzemeler araştırılmıştır. İncelenen çalışmalar geri dönüştürülebilme, atık yönetimi, enerji verimliliği, insan sağlığına olumsuz etki ve ekosisteme olumsuz etki başlıklarıyla değerlendirilmiştir.

Alkan (1969), kerpicin suya karşı direncini ve basınç dayanımını artırmak amacıyla çimento, kireç, çimento ve kireç, bitüm emülsiyonu ve saman katkılı numuneler hazırlamıştır. Deneyler sonucunda kerpiç toprağına 1/10 ve 1/18 oranlarında çimento ilavesinin su direnci ve basınç dayanımını artırdığı tespit edilmiştir [35].

Balaban ve Şen (1978), kerpicin olumsuz özelliklerinden su ve basınç dayanımının düşük olmasını problem olarak ele almıştır. Portland çimentosu ve emülsiye asfalt ilavesiyle deneyler yapmışlardır. Çimento ve asfalt katkılı kerpicin katkısız kerpice oranla su ve basınca dayanıklı hale geldiği tespit edilmiştir. Katkılı kerpiç sıkıştırılırsa da dayanıklılık oranında artış olacağı vurgulanmıştır [36]. Çimento ve asfalt, çevresel sürdürülebilirlik bağlamında ele alındığında geri dönüştürülebilme ve enerji verimliliğine katkı sağlamaktadır. Bunun yanı sıra çimentonun yoğun CO2 emisyonu oluşturan insan sağlığı ve çevreye zararlı bir malzeme olduğu belirtilmektedir [37].

Kafesçioğlu, Toydemir, Gürdal ve Özüer (1980) ise katkısız toprak, alçı katkılı toprak, kireç katkılı toprak ve alçı ve kireç katkılı toprak olmak üzere 4 karışımdan toplamda 530 numune üretmiştir. Numunelerin toprak türleri ve kalıp boyutları farklılık göstermektedir. Elde edilen numunelere fiziksel ve mekanik dayanıklılık testleri uygulanmıştır. Fiziksel deneylerde birim ağırlık, ultrases, boyut ve rötre, ısıl genleşme değerleri hesaplanmıştır. Mekanik deneylerde ise basınç, çekme ve su (yağmurlama) dayanımı ölçülmüştür. Deneyler sonucunda alçı katkılı kerpicin katkısız kerpice oranla daha az rötre yaptığı ve birim ağırlıkta azalma olduğu tespit edilmiştir. Bu bağlamda alçılı kerpiçte (alker) porozite artmış ve malzeme suya dayanıklı hale gelmiştir. Basınç ve çekme dayanımları artmıştır. Kerpiç daha rijit ve mukavemetli hale gelmiştir. Kireç katkılı kerpiçte ise basınç dayanımı azaltmakta olup su ve neme karşı duyarlılık azalmaktadır [38].

Eriç, Anıl ve Çorapçıoğlu (1980), geleneksel yöntemlerle hazırlanan kerpicin suda dağılma ve basınç dayanım performanslarını iyileştirmek amacıyla alçı ve kireç katkılarını kullanmıştır. Kerpiç blokların hazırlanmasında alçı katkısı ve sıva olarak kireç katkısını kullanmıştır. %15 alçı katkılı kerpiç blok ve %15 kireç katkılı kerpiç sıvası uygulamasının su ve basınç dayanımını artırdığı sonucuna varılmıştır. Ek olarak kullanılan bitkisel katkıların iyileştirme sağlamadığı belirtilmektedir. Kerpiç blokların sıkıştırılarak rijitlik ve basınç dayanımının artırılması önerilmektedir [39]. Alçı geri dönüştürülebilme özelliğine sahip, insan ve ekosisteme olumsuz etkisi bulunmayan bir malzemedir [40]. Herhangi bir üretim atığı olmadığı için çevresel sürdürülebilirlik parametrelerinde atık yönetimine olumlu bir etkileri bulunmamaktadır. Kireç de alçıyla bu ölçütlerde eşleşmektedir. Yapılan deneylerde kerpiç katkısı olarak kullanılan alçı ve kerpiç yapının kullanım sürecinde enerji etkinliği sağlayacağı düşünülmektedir.

Baradan (1990), Anadolu'da sıklıkla kullanılan Horasan harcından (pişmiş toprak, kireç ve sudan oluşan harç) esinlenmiştir. Tuğla ve kiremit atıkları, kireç ve uçucu kül kerpice karıştırılarak numuneler hazırlanmıştır. Çalışmada katkılı malzemenin basınç dayanımı araştırılmış olup su dayanıklılık testi yapılmamıştır. Tuğla ve kiremit atığı, kireç ve termik santral atığı olan uçucu kül ilavesiyle kerpicin mukavemeti artmaktadır. Katkılı malzemenin basınca daha dayanıklı olduğu sonucuna varılmıştır [41].

Erol (2000) ise katkısız, uçucu kül, çimento ve saman katkılı kerpiçler hazırlanarak suda dağılma ve basınç dayanıklılık deneyleri yapmıştır. Uçucu kül katkılı kerpiç malzemenin katkısız, çimento ve saman katkılı kerpice oranla suya daha dayanıklı olduğu belirlenmiştir. Basınç dayanıklılık testinde de uçucu kül daha iyi sonuçlar vermektedir [42].

Değirmenci (2005), gübre fabrikası atığı olan fosfoalçı ve termik santral atığı olan uçucu kül kullanmıştır. Karışımlar hazırlanırken kireç ilavesi de yapılmıştır. Kuru karışım ağırlığının %10'u oranında sönmüş kireç, %20 oranında uçucu kül ve fosfoalçı/toprak oranları 0.25 ile 2.50 aralığında

FULL TEXTS BOOK

ilave edilmiştir. Numunelerden 3'er adet hazırlanmış olup kuru ve ıslak olarak basınç dayanımı testi yapılmıştır. Su dayanımını ölçmek amacıyla da laboratuvarda ve devamında kendiliğinden kurumaya bırakılan numunelere kılcal geçirimlilik testi uygulanmıştır. Deneyler sonucunda kurutulan ve suda bekletilen katkılı numuneler fosfoalçı/toprak oranı 1.25 olduğunda en iyi sonucu vermiştir. 24 saat suda bekletilen katkılı kerpicin katkısız kerpice göre basınca daha dayanıklı olduğu belirtilmiştir. Kılcal geçirimlilik testinde ise su dayanımının azaldığı gözlemlenmiştir. İklim koşullarına göre fosfoalçı oranı azaltılarak olumsuz sonuçların önlenebileceği belirtilmektedir. Uçucu kül ve fosfoalçı, üretim aşamasını tamamlayan fabrikalar tarafından atık madde olarak doğaya bırakılmakta veya depolanmaktadır. Doğal çevreye bırakılan uçucu kül ve fosfoalçının, yağmur sularıyla toprağa sızması durumunda ekosistem olumsuz etkilenmektedir. Bu maddelerin kerpice ilave edilmesi atık yönetimi bakımından fayda sağlamaktadır [43]. Solunum yoluyla insan sağlığını olumsuz etkileyen bu maddelerin kerpiç katkısı olarak kullanımı yapının enerji verimliliğini artırmaktadır.

Gürfidan (2006), 9 farklı karışımın basınç ve su emme dayanımını hesaplamıştır. Alker şahit numune olarak alınmıştır. Alker ve toprak karışımlarına %10, %20, %30 ve %50 oranlarında yüksek fırın cürufu ilavesi ile 8 karışım oluşturulmuştur. Alker ve %30 YFC ilavesi basınç dayanımında en iyi sonucu; su dayanımında ise 2. en iyi sonucu vermiştir. Su dayanımında toprak ve %50 YFC en verimli karışımdır [44].

Kıvrak S.O. ve Kıvrak J. (2007), katkısız kerpiç harcını şahit numune alarak %5, %10,%15,%20 ve %25 silis dumanı katkılı numuneler hazırlamışlardır. Numunelerin basınç dayanımları incelenmiştir. Çalışmada su dayanıklılık testi yapılmamıştır. Karışımların her birinde şahit numuneye oranla basınç dayanımı artmıştır. %10 silis dumanı katkılı karışımda basınç dayanımının en yüksek seviyeye ulaştığı belirtilmiştir [45].

Can (2008), katkısız kerpiç harcını şahit numune alarak %5, %10 ve %15 oranında ferrokrom cürufu katkılı numuneler hazırlamıştır. Hazırlanan karışımların basınç dayanımları ve suda dağılma oranları test edilmiştir. Hazırlanan numunelerin tamamında su ve basınç dayanımı artmış olup %10 ferrokrom katkılı kerpiç en iyi davranışı göstermiştir [46].

Yüksek fırın cürufu, demir üretimi esnasında fırınlarda demir filizi, kok ve kireç gibi ürünlerin eritilmesi sonucunda cevherden ayrılan atık maddelerdir [47]. Ferrokrom cürufunun da tıpkı YFC gibi demir-çelik üretiminde açığa çıkan atık ürün olduğu bilinmektedir. Silis dumanı veya mikrosilika, silisyum metali ve ferrosilisyum alaşımlarının üretiminde açığa çıkan ince taneli bir tozdur [48]. Deneylerde kullanılan bu katkı maddeleri çevresel sürdürülebilirlik bağlamında incelendiğinde; atık yönetimi ve enerji bakımından faydalı, zor olsa da geri dönüştürülebilir olduğu belirlenmiştir. Ağır metal içeren bu atık ürünlerin kerpiç katkısı olarak kullanımının insan sağlığı ve ekosisteme olumsuz etkileri olacağı düşünülmektedir.

Can ve Yaprak (2009), mermer tozu katkısız toprak şahit numune alınarak %5, %10, %15, %20 ve %25 oranlarında mermer tozu katkılı toprak karışımlarını hazırlamıştır. Çalışmada birim ağırlık, şişme, ultrases, büzülme, basınç dayanımı, çekme dayanımı, çamurlaşma ve kılcallık testleri yapılmıştır. Yapılan testler sonucunda mermer tozu arttıkça karışımın su dayanımı artmıştır. En iyi değer %25 mermer tozu katkılı kerpiçte ölçülmüştür. Basınç dayanımı ise %20 oranına kadar artış göstermekte olup %25 mermer tozu ilavesiyle azalmaya başlamıştır. Birim ağırlık %20 oranında en yüksek değere; rötre %25 oranında en düşük değere; çamurlaşma %20 oranında en dayanıklı değere; şişme %15 oranında en düşük değere; ultrases geçiş hızı %20 oranında en yüksek değere ulaşmıştır [49]. Mermer üretim fabrikalarında açığa çıkan atık mermer tozunun kerpiç katkısı olarak kullanımı çevresel sürdürülebilirlik kriterlerinde olumlu sonuçlar vermektedir. Geri dönüştürülebilme, atık kullanımı, enerji etkinliği sağlaması, insan ve çevreye zarar vermemesi mermer tozunun kerpiç katkısında kullanılabileceğini göstermektedir.

Çakır (2010), kerpiç iyileştirilmesinde doğal puzolan katkılı kireç kullanmıştır. Kerpicin yapı malzemesi veya sıva olarak kullanımı incelenmiş olup; sıva olarak kullanımına uygun harçlar hazırlanmıştır. Kireç

FULL TEXTS BOOK

ve puzolan oranları sabit; kum ve toprak oranları değişecek şekilde 5 adet karışım hazırlanmıştır. S1, S2, S3, S4 ve S5 olarak adlandırılan numunelerden S1 şahit numune olarak belirlenmiştir. S1'de toprak bulunmamakta olup S5'e doğru toprak oranı artmakta ve kum oranı azalmaktadır. Numunelerle fiziksel (birim hacim kütlesi, özgül kütle, doluluk-boşluk oranları, kılcal su emme deneyi, buhar geçirgenliği, atmosfer basıncında su emme deneyi) ve mekanik (eğilmede çekme dayanımı, basınç dayanımı ve ultra ses hızı testi) deneyler yapılmıştır. Fiziksel ve mekanik deneyler sonucunda çoğu ölçütte iyileşme mevcuttur. Doğal puzolan katkılı kerpicin hazırlanan 5 karışımda basınç dayanımını artırdığı gözlemlenmiştir. Kum ve toprak oranına göre dayanım sonuçları değişkenlik göstermektedir. Basınç dayanımı kum oranı arttıkça iyileşmektedir. Kılcal su emme deneyinde ise S1 numunesi en iyi sonucu vermiştir. Sonuç olarak, doğal puzolan katkının su dayanıklılığını azalttığı söylenebilir. Doğal puzolan, çoğunluklu volkanik tüf kökenli olan ve kendi başına bağlayıcı olmayan silis veya alüminli ürünler olarak tanımlanmaktadır [50]. Yapılan deneysel çalışmada doğal puzolanlar kireçle bağlanmış olup kerpice ilave edilmiştir. Doğal puzolan kerpici iyileştirse de insan ve ekosisteme olumsuz etkileri olduğu belirlenmiştir.

Gül (2011), cam lifi katkısı içermeyen karışım ele alınarak toprak ağırlığının %0,2 ve %0,5 oranında cam elyaf ilavesi yapılan 2 karışımı incelemiştir. Hava sürükleyici katkı ise ilk şahit numunede bulunmamakta olup su miktarının 2. karışımda %50 ve 3. karışımda %100 oranında eklenmiştir. Böylelikle 3 karışım için 9 farklı numune oluşmuştur. Numuneler 28 ve 56. günde incelenerek basınç ve suya dayanımları ölçülmüştür. Cam elyaf ve hava sürükleyici madde ayrı ayrı kullanıldığında da birlikte kullanıldığında da basınç ve su dayanımında artış gözlemlenmiştir. Hava sürükleyici katkılı kerpiç 72 saat suda bekletilmesine rağmen dağılma gerçekleşmediği tespit edilmiştir. Katkısız karışımın gevrek, katkılı karışımların ise sünek davranış gösterdiği tespit edilmiştir [51].

Berkgil ve Ayaz (2020), katkısız toprağı şahit numune alarak, % 0,5, %1 ve %1,5 oranlarında polipropilen lif ilavesi yapmıştır. Polipropilen lifler 6 mm, 12 mm ve 19 mm olacak şekilde 3 farklı boyda kullanılmıştır. Katkısız kerpiçle birlikte toplam 10 numune kullanılmıştır. Numunelerde hacim kaybı, birim hacim ağırlığı, basınç dayanımı ve eğilme hasar yükleri incelenmiştir. Çalışmada su dayanıklılık testi yapılmamıştır. Deneyler sonucunda katkı oranı ve lif boyu arttıkça hacim kaybı ve birim hacim ağırlığının azaldığı tespit edilmiştir. Basınç dayanımı ve eğilme hasar yükleri ise artmıştır. Basınç dayanımının artmasının sebebi, PP liflerinin yanal deformasyonu azaltması ile tahribatı geciktirmesi olarak belirtilmiştir [52].

Cam elyaf ve polipropilen lifler, organik olmayan ve herhangi bir ürünün üretimi esnasında açığa çıkmayan maddelerdir. Kerpice katkıları incelendiğinde benzer özellik göstermekte olan bu lifler, özellikle ısı yalıtımıyla enerji verimliliği sağlamaktadır [51]. İnsan ve çevreye olumsuz bir etkisi bulunmamaktadır.

Leblebicier ve Akıncı (2021) ise atık cam tozu, pomza, mermer tozu, alçı, sönmüş kireç, organik elyaf keten lifi ve volkanik tüf olmak üzere çok sayıda atık malzemeyle deneyler yapmıştır. Her katkı malzemesi için farklı yüzdelik oranlarda 3'er numune hazırlanmıştır. Toplamda 18 numune basınç dayanımı, ultrasonik ses dalgaları hızı ve termal iletkenlik değeri deneyleri yapılmıştır. Çalışmada su dayanım ölçümü yapılmamıştır. Basınç dayanımı ve ultrasonik ses dalgaları hızı deneyinde en iyi sonucu organik elyaf keten lifi katkılı kerpiç vermiştir. Isı iletkenlik katsayısı en düşük katkı malzemesinin ise volkanik tüf olduğu belirlenmiştir [53]. Atık malzemelerin kullanıldığı deneysel çalışma sonucunda çıkan ürünlerin çevresel sürdürülebilirlik parametrelerine uygunluğu belirlenmiştir. Katkı olarak kullanılan maddelerin çoğunun geri dönüştürülebilme, atık yönetimi ve enerji verimliliği bakımından faydalı olduğu; insan ve ekosisteme herhangi bir olumsuz etkisi bulunmadığı tespit edilmiştir.

Tiryaki (2022), kerpiç karışımına toprağın %10'u oranında alçı ilavesi yapmıştır. Şahit numune olarak alçılı karışım alınmıştır. Numuneler saman oranının %3, %6, %9 ve %12 oranında koyun yünü katkısıyla hazırlanmıştır. Katkı maddesinin kendi içerisinde performansı değerlendirilirken aynı

FULL TEXTS BOOK

zamanda saman ilave edilmeyen (toprak, toprağın %10'u oranında alçı, su ve cam elyaftan oluşan numuneyle karşılaştırma yapılmıştır. Basınç dayanımı, ses ve radyasyon geçirimlilik deneyleri numunelere uygulanmıştır. Bu çalışmada su dayanım ölçümü yapılmamıştır. Koyun yünü katkılı kerpicin hem katkısız hem de cam elyaf katkılı kerpice oranla eğilme, basınç, ultra ses hızı ve radyasyon geçirimliliğinde daha iyi sonuç verdiği sonucuna varılmıştır [54]. Koyun yünü, cam elyaf ve polipropilen lif katkılarıyla benzer özellikler göstermektedir. İnsan ve çevreye herhangi olumsuz etkisi bulunmayan koyun yünü, geri dönüştürülebilme özelliğiyle liflerden farklı davranış göstermektedir. Bağlayıcı alçıyla birlikte kerpiç katkısında kullanılması enerji verimliliğini artırmaktadır.

Güneri (2023) ise [55] katkısız toprağı şahit numune alarak kerpiç karışımına kütlece %0,25, %0,5, %0,75, %1 ve %1,25 oranlarında ayçiçeği sapı ilavesiyle deneyler gerçekleştirmiştir. Numuneler 28 ve 56. günde incelenerek birim hacim kütle, basınç dayanımı, su etkisiyle dağılma, eğilme dayanımı, ultrases geçiş hızı deneyleri ve SEM analizi yapılmıştır. Ayçiçeği sapı ilavesinin artmasıyla numunelerin kuru birim hacim kütlesinde azalma gerçekleşmiştir. En yüksek basınç dayanımı %0,5 ayçiçeği sapı içeren numunede elde edilmiştir. En yüksek eğilme dayanımı ve ultrases geçiş hızı %0,5 oranında olduğu 56 günlük numuneden elde edilmiştir. Su dayanıklılığı açısından %1,25 ayçiçeği sapı ilavesi en iyi sonuçları vermiştir. SEM analizinde tespit edilen liflerin pürüzlü yapısının toprakla oluşturduğu kohezyon sayesinde kerpiç numunelerin basınç ve gerilme dayanımı artmıştır.

Kerpiç katkı çalışmaları su direnci, basınç dayanımı ve çevresel sürdürülebilirlik kriterleriyle Tablo 2'de değerlendirilmiştir. Değerlendirme sonuçlarının geri dönüştürülebilme (+), atık yönetimine etki (+), enerji verimliliğine etki (+), ekosisteme olumsuz etki (-) ve insan sağlığına olumsuz etki (-) şeklinde olması ideal sonucu göstermektedir.

Tablo 2. Kerpiç iyileştirme çalışmalarının çevresel sürdürülebilirlik kriterlerine göre değerlendirilmesi

Kerpiç iyileştirme çalışmasının								
				Çevresel Sürdürülebilirlik Kriterleri

SONUÇ VE ÖNERİLER

Geçmişten günümüze evlerini inşa eden insanlar yerel, ekonomik ve erişilebilir bir malzeme olan toprağı kullanmışlardır. Toprak kullanımı mimaride kerpiç yapı kimliğiyle yüzyıllardır var olmuştur. Bu çalışmada kerpiç, kerpiç duvar üretim yöntemleri, yeni nesil kerpiç yapı örnekleri ve iyileştirme yöntemleri incelenmiştir. Literatür taramasından elde edilen iyileştirme yöntemleri çevresel sürdürülebilirlik bağlamında değerlendirilmiştir. Doğada kendiliğinden var olan, ekolojik ve sürdürülebilir bir malzeme olan kerpicin günümüzde kullanılmama nedenleri, iyileştirme çalışmaları ve iyileştirmeden sonra sürdürülebilirliğe uygunluğu araştırılmıştır.

Kerpicin insana, çevreye ve yapı sektörüne potansiyel birçok faydası olmasına rağmen yeterli düzeyde kullanılmaması iyileştirme çalışmalarını değerli kılmaktadır. Çalışmada belirtildiği gibi, kerpiç üç farklı yolla iyileştirilebilmektedir. Kimyasal, fiziksel ve mekanik iyileştirmeyle kerpicin günümüz modern inşaat uygulamalarına entegre olacağı düşünülmektedir. Geleneksel kerpiç malzemenin iyileştirilmesiyle yeni nesil kerpiç üretimleri ele alınmıştır. İncelenen yeni nesil kerpiç yapı örnekleri, katkılı ve sıkıştırılmış (Rammed earth) kerpiç bloklarla duvar üretiminin mümkün olduğunu göstermektedir. Bu bağlamda çalışmada, 1960 yılı sonrasını ele alan katkıların günümüzde ve gelecekte kullanımı sorgulanmıştır. Türkiye'de yapılan 17 adet deneysel kerpiç iyileştirme çalışması ele alınarak değerlendirme yapılmıştır. Deneysel çalışmalar kerpicin olumsuz olarak nitelendirilen özelliklerinden su ve basınç dayanıksızlığını iyileştirmeye odaklanmaktadır. Kerpiç harcının su geçirimliliğini azaltma ve basınç dayanımını artırmak amacıyla yapılan katkı çalışmaları çoğunlukla farklı oranlarda katkı ilavesiyle olumlu sonuçlar vermiştir. Bununla birlikte ilave edilen katkıların, kerpiç malzemenin çevresel sürdürülebilirliğine etkisi sorgulanmıştır.

Sürdürülebilirlik ekonomik, çevresel ve sosyal olmak üzere üç boyuttan oluşmakta olup bu çalışmada çevresel boyutu ele alınmıştır. Kerpiç katkı çalışmaları çevresel sürdürülebilirlik kapsamında geri dönüştürülebilme, atık yönetimi, enerji verimliliği, insan sağlığına ve ekosisteme olumsuz etki başlıklarıyla değerlendirilmiştir. Literatür taraması sonucunda elde edilen veriler şu şekilde özetlenebilir:

- Mermer tozu ve ayçiçeği sapı hem su ve basınç dayanıklılığı artırması hem de çevresel sürdürülebilirlik kriterlerine uygun olması yönüyle kullanımı önerilmektedir.
- Atık cam tozu, pomza, organik keten lifi ve koyun yünü katkıları da kriterlere uygun olmasına karşın; su geçirimlilik testi yapılmadığı için net bir öneri sunulamamaktadır.
- Alçı ve kireç ilaveleri talep edilen sürdürülebilirlik ölçütlerinin tamamını sağlamakta olup yalnızca atık yönetiminde etkisi bulunmamaktadır. Bu bağlamda alçı ve kireç de yeni kerpiç harçlarında kullanılabileceği düşünülmektedir.

FULL TEXTS BOOK

- Doğal puzolan katkılı kireç ilavesinde basınç dayanımı iyileşirken; su dayanımında azalma tespit edilmiştir. Geri dönüştürülemeyen doğal puzolan katkısı önerilmemekte olup; az yağış alan iklim bölgelerinde kullanılabileceği düşünülmektedir.
- Cam elyaf su ve basınç dayanımını artırırken; polipropilen basınç dayanımını artırmış ve su direnç testleri yapılmamıştır. Bu iki ürün ekosisteme doğrudan zarar vermemektedir. Uzun vadede geri dönüştürülebilme özelliğinin olmaması ve atık yönetimine katkı sağlamaması nedeniyle kerpice katkıları önerilmemektedir.
- Çimento ve asfalt ilavesi CO_2 emisyonunu artırmakta olup atık yönetimine olumlu etkisi bulunmamaktadır. İnsan sağlığı ve ekosistemi olumsuz etkileyen bu maddelerin kullanımı uygun görülmemektedir.
- Uçucu kül, fosfoalçı, yüksek fırın cürufu, silis dumanı ve ferrokrom cürufu ise, kerpiç malzemenin su ve basınç dayanıklılığının iyileştirmesine katkı sağlamasına karşın; insan sağlığı ve ekosisteme olumsuz etkileri bulunmaktadır. Solunum yoluyla insan sağlığını ve yer altı sularına sızıntı yoluyla ekosistemi olumsuz etkileyen bu atıkların yeni nesil kerpiç duvarlarda kullanımı önerilmemektedir.

Kerpiç malzemenin kullanımı ve iyileştirilmesi konusunda sunulan öneriler dikkate alınarak kerpiç duvarlar/yapılar üretilebilir. Bu çalışmanın yeni nesil kerpiç malzemelerin çevresel sürdürülebilirlik kriterlerine uygunluğunun incelenmesi yönüyle önemli olduğu ve gelecekte yapılacak çalışmalara referans olabileceği düşünülmektedir.

FEASIBILITY AND OPTIMIZATION OF HYBRID ENERGY SYSTEMS IN THE SAKARYA–KARASU REGION: A CASE STUDY

Asst. Prof. Dr. Aykut Fatih Güven,
Yalova University, Faculty of Engineering,
Necat Uzuner
Yalova University, Faculty of Engineering,

ABSTRACT

Energy resources have been a critical research area throughout human history. Since the industrial revolution, the economic advantages and advanced production technologies of fossil fuels have increased their utilization. However, the limited lifespan and environmental impact of fossil fuels have significantly heightened interest in renewable energy sources. This study examines the potential for meeting the electrical and thermal needs of 462 households and 1848 residents in the Sakarya Karasu district with an off-grid hybrid energy system. Using the energy demands of the residences and the region's meteorological data, a hybrid energy system model integrated with solar and wind energy was developed using HOMER Pro software. The model is complemented by a diesel generator to ensure energy continuity. The cost analysis determined that the system's installation cost was $2,303,319.44, with an operational cost of $415,969.60 and a total net present cost of $10,358,090.00. The unit energy cost was calculated as $0.327/kWh. Sensitivity analyses highlight the economic and environmental benefits of hybrid energy systems in terms of effective battery utilization, waste heat recovery from generators, and optimized system costs. This study presents significant findings on the feasibility of implementing hybrid energy systems in off-grid areas and their potential to reduce dependence on fossil fuels.

Keywords: Techno-Economic Analysis, Hybrid Energy Systems, Renewable Energy, HOMER Pro Software, Energy Optimization.

INTRODUCTION

Energy resources have been a fundamental subject of research since ancient times. With the Industrial Revolution, the demand for energy increased rapidly, pushing the use of fossil fuels to its peak. Today, the majority of energy needs are met by fossil fuels such as coal, oil, and natural gas. However, the oil crisis of the late 20th century shook confidence in fossil fuels and spurred interest in renewable energy sources (Güven & Poyraz, 2017).

Renewable energy sources play a critical role in sustainable energy production. Sources such as solar, wind, hydroelectric, biomass, and geothermal energy have low environmental impacts and are not at risk of depletion. However, the intermittent and variable nature of these sources poses challenges in terms of ensuring the continuity of energy production (Kaldellis, Kondili & Filios, 2006). Hybrid energy systems have been developed to overcome these challenges. Hybrid energy systems combine multiple renewable energy sources. For example, the limited availability of solar energy during daylight hours and the inconsistency of wind can complicate their independent use. However, high-capacity storage systems can be used to store energy when production is not possible (Khalil et al., 2022).

Turkey has significant potential for renewable energy sources, particularly solar and wind energy. The average annual sunshine hour is 2,640 hours, equivalent to a daily average of 7.2 hours. Turkey's wind energy potential is estimated to be approximately 48 GW. This potential can meet a substantial portion of Turkey's energy needs and reduce its dependence on fossil fuels (İller Bankası, 2024).

The HOMER (Hybrid Optimization Model for Electric Renewables) software is widely used for designing and optimizing hybrid energy systems. HOMER Pro simulates various configurations of renewable energy systems, considering factors such as cost, efficiency, and environmental impact. This

FULL TEXTS BOOK

software not only performs technical and economic analyses but also conducts sensitivity analyses to identify critical factors affecting system performance. These capabilities make HOMER Pro a valuable tool for researchers and engineers (Güven & Mete, 2021).

Recent HOMER Pro studies have highlighted the effectiveness and economic advantages of hybrid energy systems. For instance, Chowdhury et al. (2023) designed a hybrid energy system that integrates solar and wind energy in a rural area of South Korea, emphasizing the system's cost-effectiveness and reliability. In their 2022 study, Güven and Mete designed and compared various hybrid energy systems. The scenarios included grid connections, solar panels, wind turbines, diesel and biogas generators, fuel cells, electrolyzer, hydrogen tanks, batteries, and converters. The most cost-effective and environmentally friendly system was the grid-connected Solar Panel/Wind Turbine/Biogas Generator/Battery hybrid, with a net present cost of $176 million, a unit energy cost of $0.0301, and 100% renewable energy production.

In another study, Prasad and Natarajan (2006) explored the cost-effectiveness of a hybrid solar and biomass energy system in a rural area of India. Rehman (2021) identified wind/solar-PV, wind/solar-PV/diesel, and solar-PV/diesel combinations as the most effective combinations for supplementing Saudi Arabia’s energy portfolio, with average energy costs of $0.458, $0.355, and $0.349 per kWh, respectively. Diaf et al. (2008) conducted a cost analysis of a hybrid energy system supported by solar and wind energy in Algeria and evaluated the system performance using HOMER Pro.

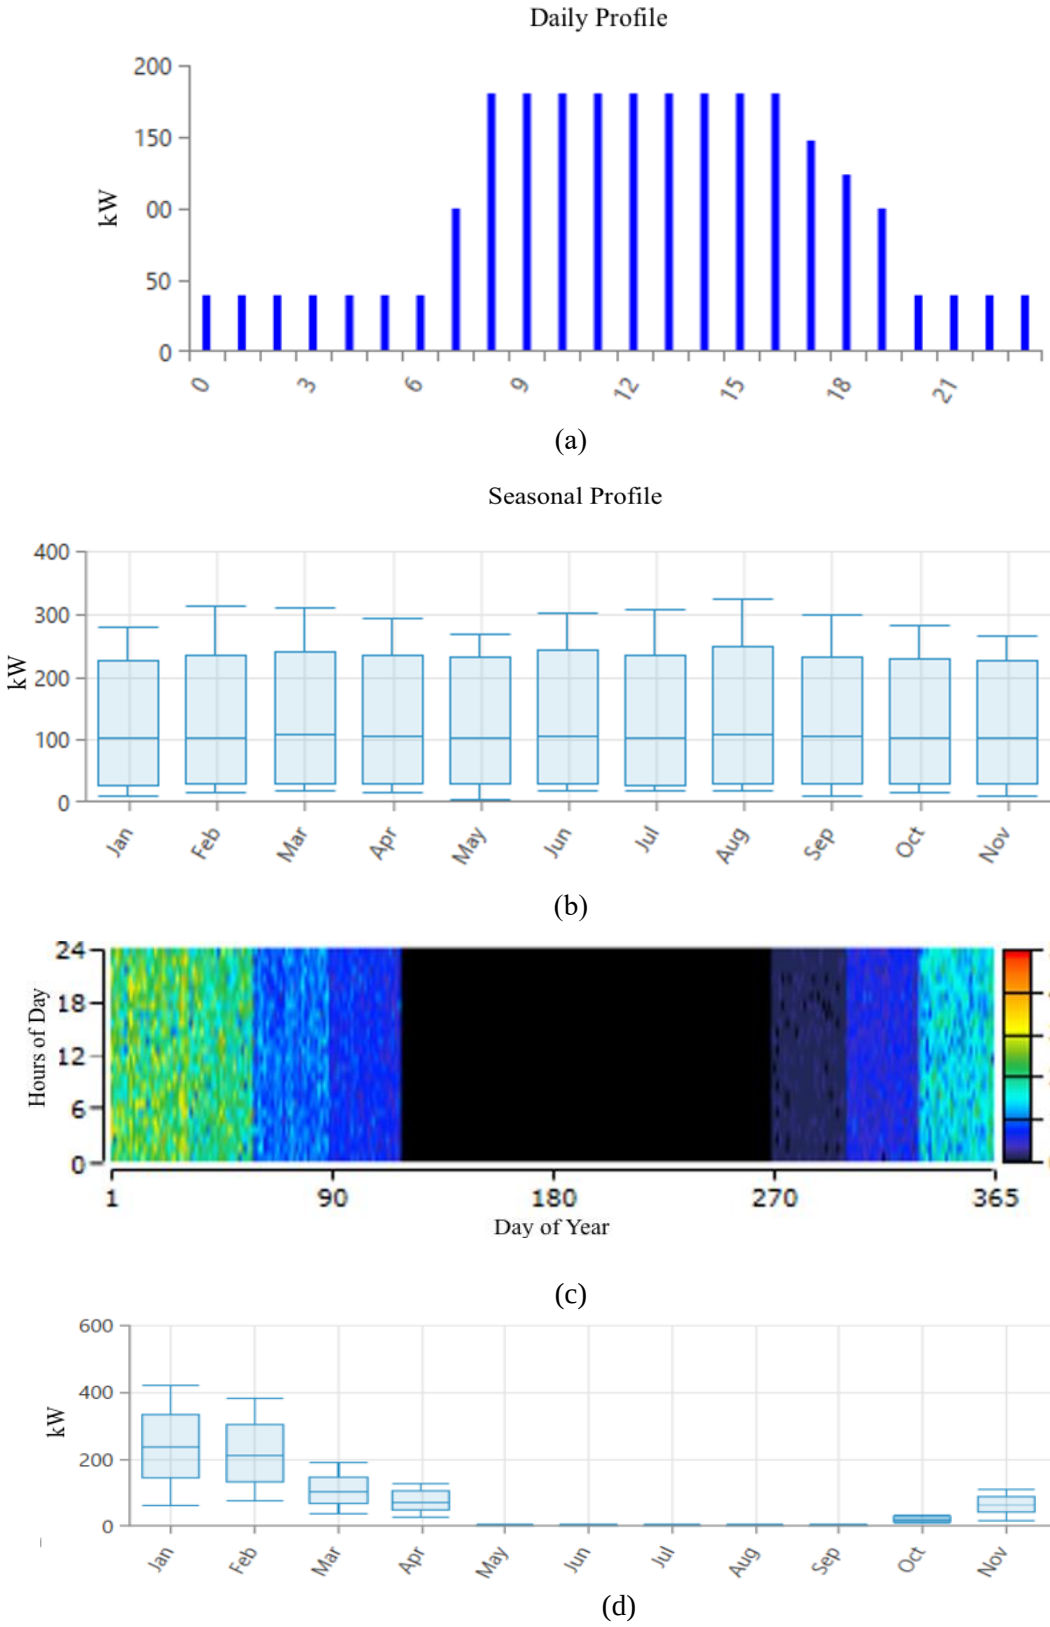
This study examines the potential of meeting the electrical and thermal needs of a community of 462 households and 1,848 people in the Karasu district of Sakarya using an off-grid hybrid energy system. Based on the energy demands of households and the meteorological data of the region, a hybrid energy system model integrating solar and wind energy was created using HOMER Pro software. The model was supplemented with a diesel generator to ensure energy continuity. After conducting cost analyses of the created system, sensitivity analyses were performed by considering parameters such as the activation of the generator at different operational loads, utilization of waste heat from the generator in a cogeneration system, increasing the height of the wind turbine tower, and changes in diesel prices. The effects of thermal load control and battery usage on the system were investigated both economically and technically. After reviewing all optimizations and sensitivity analyses, potential cost reductions were evaluated.

MATERIALS AND METHODS

The initial implementation of this study was performed in the Karasu district of Sakarya province, Turkey (41°6.8' N 30°40.6' E). The research was conducted in a community consisting of 462 households and a total of 1848 people. According to studies by TEİAŞ, the average daily electricity consumption of a four-person household is approximately 8 kWh. Therefore, the total daily electricity needs of 462 households are calculated to be 3696 kWh. The electricity consumption profile tended to be higher in the evening hours, and the predefined community load profile (Figure 1(a)) in HOMER Pro software was used in this study. The total daily electricity consumption was 3696 kWh, with a peak power consumption of 473.83 kW observed during the day (Figure 1(b)). The system is designed not only to meet the electrical load requirements but also to address the thermal load needs of households. The average heat loss per square meter is determined to be 13.761 kWh, and assuming an average house size of 100 square meters, the annual heat loss per house is calculated to be 1376.1 kWh. For a community of 462 households, the annual total thermal energy requirement was found to be 635761.58 kWh. The thermal load requirement varies seasonally, with the majority occurring in winter. The thermal load profile shown in Figure 1(c) and Figure 1 (d) was accordingly integrated into the system. The thermal load requirements are 27.18% in January, 17.85% in December, 24.70% in February, 11.75% in March, 7.43% in November, 8.70% in April, and 2.39% in October, with no thermal load requirements for the remaining months. HOMER Pro software was used for the analysis and optimization of both the electrical and thermal load profiles, with the load data detailed on an hourly

FULL TEXTS BOOK

basis throughout the year. These profiles play a critical role in system design and performance evaluation (Güven & Yörükeren, 2022).



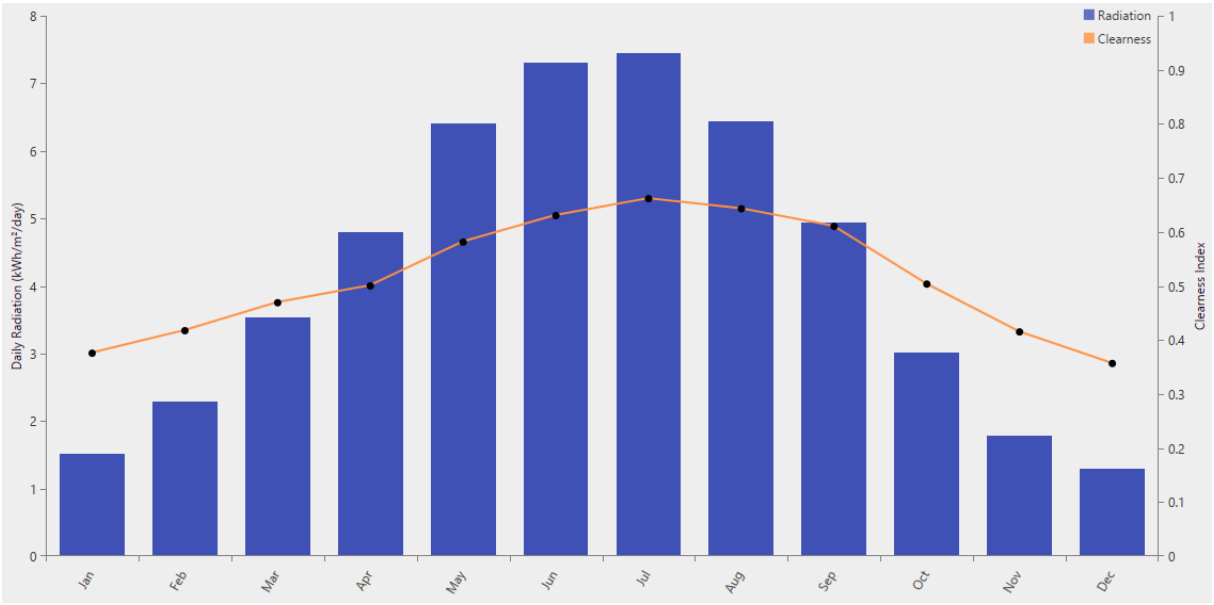


Figure 1. Load profiles (a) hourly (b)montly (c) thermal load (d) monthly distribution of thermal load requirement.

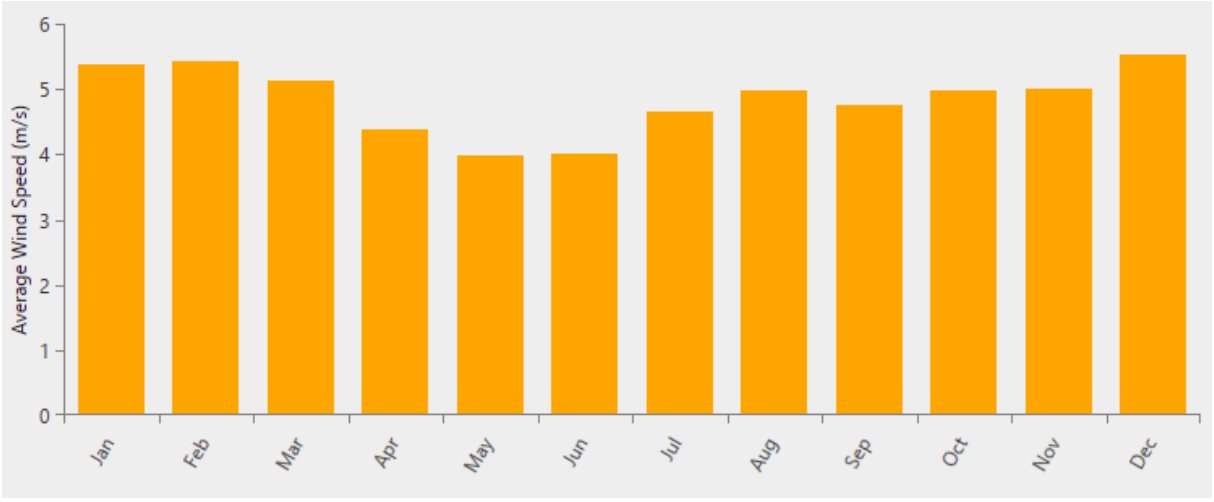
FULL TEXTS BOOK

The potential for solar panels to generate electricity from solar energy is directly proportional to the meteorological conditions of the region (Güven & Hatipoğlu, 2022). The solar energy data for the region were integrated into HOMER Pro software from NASA's database. These data were obtained from measurements taken over 22 years, from July 1983 to July 2024, and averaged. According to Figure 2 (a) , the region's solar energy potential increases during the summer months and decreases during the winter months, with an annual average daily solar energy potential of 4.23 kWh/m².



Given the high investment costs of wind turbines, the wind speed profile of a region is crucial for their deployment. The wind speed profile for the region was also obtained from NASA's database, which showed an average wind speed of 4.85 m/s. These wind speed data were based on 29 years of measurements taken at a height of 50 m from January 1983 to January 2024. The region's wind speed profile is illustrated in Figure 2 (b). It is evident that wind energy can serve as a complementary source during winter when solar energy is insufficient, and the synergistic effect of these two energy sources makes them among the most commonly used energy sources in hybrid systems.

Another important meteorological parameter for the region was temperature, which was also obtained from NASA's database. These data represent the average of 29 years of measurements taken between January 1983 and January 2024. As shown in Figure 2 (c), the temperature profile is higher during summer than during winter. The average temperature over the 29-year measurement period was 13.93°C.

Hybrid energy system components

Diesel Generator

According to previous research, the cost of diesel generators typically ranges from $250 to $500 per kW. For the diesel generator used in this project, a cost of $400/kW was considered. The price of diesel generators generally decreases inversely with capacity, meaning that generators with larger capacities have lower costs per kW. The fuel consumption and efficiency curves of the generators used in the hybrid energy system are presented in Figures 3(a) and (b). It can be seen that operating the generator close to its rated capacity improves efficiency and reduces the consumption of fuel per kW. In this study, the price of diesel fuel is assumed to be $1.27 per liter.

Figure 3. Diesel generator profiles: (a) fuel consumption (b) efficiency

(a) (b)

Here, to model the fuel consumption of the generator, a linear Equation (1) is used:

$$F_{DG} = a_1 P_{DG} + a_0 P_{DGR} \quad (1)$$

In this equation, F_{DG} represents the fuel consumption of the generator (in liters per hour, a_0 is the fuel cut-off coefficient (in liters per hour per kilowatt, P_{DGR} is the capacity of the generator in kilowatts, a_1 is the slope of the fuel curve (in liters per hour per kilowatt, and P_{DG} is the power output in kilowatts (Güven & Yücel, 2023).

Wind Turbine

One of the most suitable systems for reducing unit energy costs is the wind turbine system. However, due to high installation costs, low-capacity wind power systems are not economically viable (Nasser & Hassan, 2024). According to previous research, the installation cost of a wind turbine system is approximately $2000 per kW. The wind turbine used in the system has a capacity of 10 kW and an installation cost of $20,000. In addition to the installation cost, the replacement cost is $20,000, and the annual maintenance cost is $300. The power–speed curves for the respective wind turbines are shown in Figure 4.

FULL TEXTS BOOK

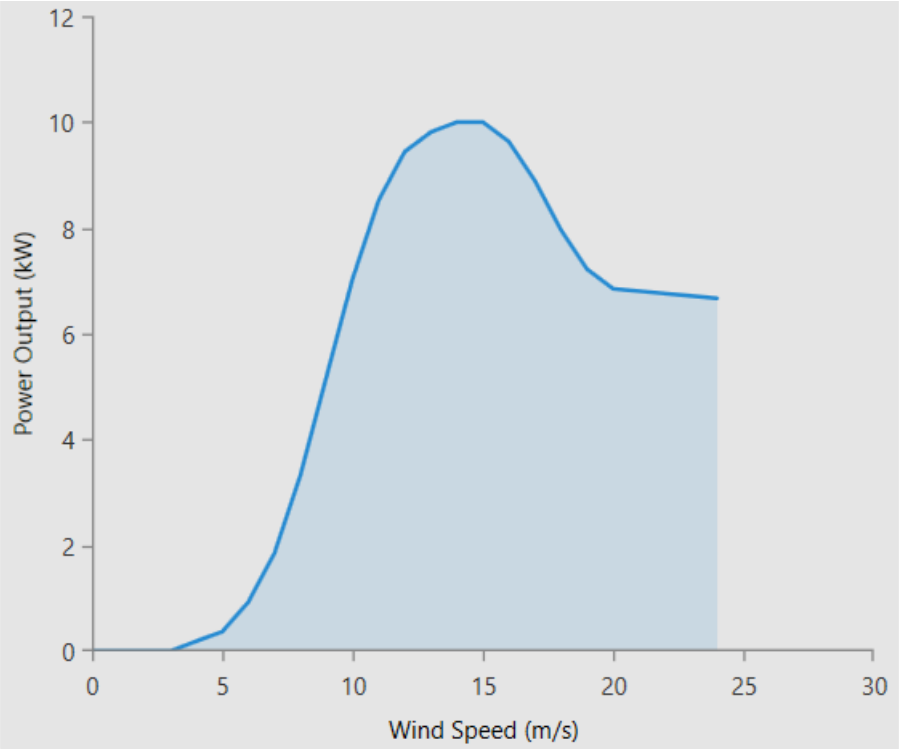

Figure 4. Power–speed curve of the wind turbine

$$P = \frac{1}{2} p C_p A v_\omega^3 \quad (2)$$

Equation (2) generally describes the relationship between the wind speed and the electrical output of a wind turbine. The relevant parameters typically include the swept area (A), air density (p), and wind speed (v). These factors together determine how efficiently a wind turbine can convert wind energy into electrical energy, depending on the specific design and environmental conditions (Güven et al., 2023).

Photovoltaic Panel

Solar panels are used to directly generate electrical energy from sunlight without the need for any moving mechanisms. Solar energy is one of the most important renewable energy sources capable of significantly meeting global energy demand. The panel used in the system is one of the integrated panels in HOMER Pro software, focusing on the critical parameter of cost per watt (Mussard et al., 2023). Currently, solar panel prices are around 35 cents per watt, with installation costs for solar panel systems typically around $1500/kW and replacement costs also approximately $1500/kW. The annual repair and maintenance cost was $20, which was used as a reference in the calculations.

The power output of a PV panel can be mathematically described by Equation (3):

$$P_{PV} = Y_{PV} f_{PV} \left(\frac{G_T}{G_{T,STC}}\right) \left[1 + \alpha_f (T_C - T_{C,STC})\right] \quad (3)$$

In Equation (3), P_{PV} (W) represents the current power output of the photovoltaic system. Y_{PV} (W) is the standard output power of the PV system under standard test conditions (STC), while f_{PV} (%) is the adjustment factor applied to account for real-life conditions affecting the PV system. G_T (W/m²) represents the solar irradiance incident on the PV module at any given moment, and $G_{T,STC}$ (1000 W/m²) represents the assumed irradiance under the STC at 25°C. The temperature coefficient of the PV module, α_f (%/°C), typically ranges from 0.3% to 0.5%, indicating the sensitivity of the PV output to temperature changes. T_C (°C) denotes the current temperature of the PV module, while $T_{C,STC}$ (°C)

FULL TEXTS BOOK

refers to the temperature of the PV module under the STC, which was set to 25°C (Güven and Poyraz, 2021).

When HOMER Pro software ignores the impact of the temperature coefficient [$\propto_f$ (%/°C)] on PV system performance, an alternative calculation method is used. This method, referred to as Equation (4), simplifies the process when the effects of temperature are minimal or when the precise impact of temperature variations is not significant (Güven, 2023a).

$$P_{PV} = Y_{PV}\, f_{PV} \left(\frac{G_T}{G_{T\,STC}}\right) \quad (4)$$

Batarya (BT)

In HOMER Pro software, battery modeling involves several key equations that describe the performance and behavior of a battery system. The primary equations used for battery modeling include the state of charge (SOC), charge and discharge efficiency, and the depth of discharge (DOD).

The system utilizes lithium-ion batteries with a capacity of 1 kWh each, and the cost is $350 per kWh. Similarly, the replacement cost is approximately $350 per kWh. The annual repair and maintenance cost is $25. The discharge depth, which significantly affects the number of battery cycles, was assumed to be 80%.

State of Charge (SOC)

SOC of a battery at any time t is given by Equation (5).

$$\mathrm{SOC(t)} = \mathrm{SOC(t-1)} + \left(\frac{P_{in}(t) - P_{out}(t}{C_{Bat}}\right) \quad (5)$$

Where $\mathrm{SOC(t)}$ is the state of charge at time t, $\mathrm{SOC(t-1)}$ is the state of charge at the previous time step, $P_{in}(t)$ is the power input to the battery at time t (charging), $P_{out}(t)$ is the power output from the battery at time t (discharging), and C_{Bat} is the capacity of the battery (Güven, 2023b).

Charge and Discharge Efficiency

The efficiency of the battery during charging (η_{charge}) and discharging ($\eta_{discharge}$) affects the net energy stored and retrieved by the battery:

$$E_{stored} = P_{in} \times \eta_{charge} \quad (6)$$

$$E_{retrieved} = P_{out} \times \eta_{discharge} \quad (7)$$

where E_{stored} is the effective energy stored in the battery and $E_{retrieved}$ is the effective energy retrieved from the battery.

Depth of Discharge (DOD)

The depth of discharge (DOD) represents the fraction of the battery capacity that has been used and is calculated as Equation (8):

$$DOD = 1 - SOC \quad (8)$$

Battery Life Cycle

The battery life cycle depends on the DOD and the number of charge–discharge cycles:

FULL TEXTS BOOK

$$L_{Battery} = \frac{N_{cycles}}{DOD}$$
(9)

Where $L_{Battery}$ is the battery life in terms of the number of cycles, and N_{cycles} is the total number of charge–discharge cycles that the battery can undergo. These equations collectively describe the behavior of the battery system in HOMER Pro, allowing for the simulation and optimization of battery performance within energy systems.

Bidirectional Converter

An inverter converts direct current (DC) to alternating current (AC). Although many electronic devices and systems operate on DCs, homes, businesses, and general power infrastructures typically use ACs. In this context, inverters play a crucial role in the conversion of energy from DC to AC. Inverter technology is used in a wide range of applications, from small-scale portable devices to large-scale solar and wind energy systems. Depending on their functions and areas of use, various types and features of inverters are available. The primary function of the inverters is to efficiently convert the DC input to the AC output, which is critical for achieving high energy efficiency. Some inverter models also provide additional functions such as voltage and frequency adjustments (Güven & Poyraz, 2021). In this system, the installation and replacement costs of the inverter are set at $300, with an annual maintenance cost of zero dollars and a projected lifespan of 15 years. The inverter capacity is then determined by Equation (10):

$$P_{inv} = \frac{E_{L,max}}{\eta_{DC/AC}} \quad (10)$$

In Equation (10), P_{inv} (W) represents the capacity of the power inverter, $E_{L,max}$ (Wh) denotes the peak energy demand of the load, and $\eta_{DC/AC}$ signifies the efficiency rate of the conversion from DC to AC (Singh and Kumar, 2023).

Thermal Load Controller

A thermal load controller (TLC) establishes a connection between a thermal load system and an electrical load system. Excess energy produced in the electrical system is transferred to the thermal load bus, preventing excessive energy use for heating. The cost per kW of the thermal load controller was calculated based on the $200 specified in HOMER Pro.

Boiler

HOMER pro software uses a boiler system to meet thermal loads and consumes diesel fuel as its energy source. The efficiency of the boiler used in the system was set at 85%.

Economic Analysis Inputs

The HOMER Pro software uses the annual real interest rate to calculate cost. The real interest rate is determined using the current interest rate and the inflation rate. The annual real interest rate is calculated using Equation (11):

$$i = (i' - f)/(1 + f)\ (1)$$
(11)

Where i represents the annual real interest rate, f is the annual inflation rate, and i' is the current interest rate. In this study, the current interest rate is assumed to be 42.50%, and the inflation rate is 39.61%. From these values, the real interest rate was found to be 2.07%.

FULL TEXTS BOOK

HOMER Pro simulation of Hybrid Renewable Energy System and Results

HOMER Pro is reliable software widely used for the sizing and optimizing of multiple energy sources, and it is also known as a hybrid optimization program. The software assists in performing a preliminary feasibility test for various RE configurations of different sizes and sensitivity analysis for different configurations of the desired energy systems. The software was developed by the US National Renewable Energy Laboratory (NREL) for grid-connected and off-grid applications. It runs on a Windows platform and is programed in C++ (Güven & Mengi, 2023).

Designing and configuring a microgrid involves a critical decision-making task in terms of component size, component design, and selection of a suitable location. The inflation rate, interest rate, and other technical specifications of the selected components are necessary for the cost assessment of these hybrid energy systems. Regarding decision-making, there are many options, depending on technology and the availability of energy sources.

HOMER Pro integrates optimization and sensitivity algorithms, thus simplifying the evaluation process. The optimal simulations adhere strictly to user-specified constraints, thereby minimizing the NPC value. Beyond performing energy balance assessments, HOMER Pro filters out infeasible designs and highlights viable configurations that guide users toward determining an ideal system blueprint. Moreover, this simulation rigorously examines a system's technical viability, ensuring that it addresses both electrical and thermal demands within the set constraints. The proposed platform also delves into the system's NPC, factoring in costs related to installation and ongoing maintenance. Spanning a full year or 8760 hours, HOMER Pro's simulation yields results in a structured table, supplemented with illustrative graphs and charts. These visualizations delineate technical and economic metrics, elucidate the techno-economic dynamics, and permit comparisons among hybrid energy system designs. The output is export ready for deeper analysis. The core elements of optimization include decision parameters such as PV dimensions, wind turbine count, battery numbers, and converter capacity; inclusion of renewable resources such as PV arrays and wind turbines; generator magnitude; and dispatch blueprint dictating operational strategies.

Figure 5 presents a concise schematic of the hybrid renewable energy systems, and Figure 6 presents a comprehensive flowchart detailing each phase of the HOMER Pro simulation process. The designed microgrid, as shown in Figure 5, is intended to meet both the electrical and thermal load requirements.

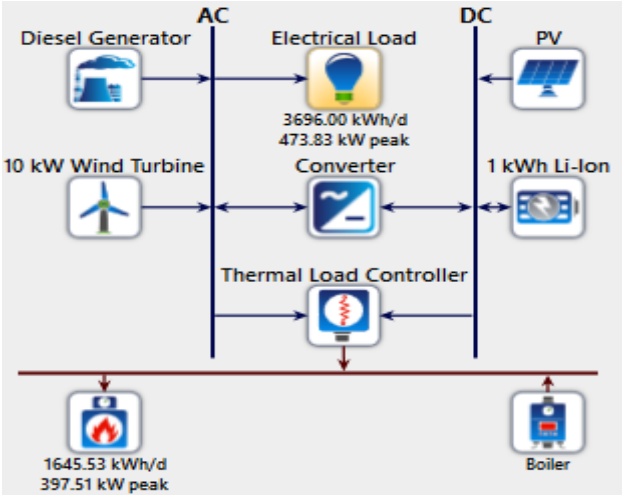

Figure 5. A schematic of the hybrid renewable energy system configuration was created using HOMER Pro software.

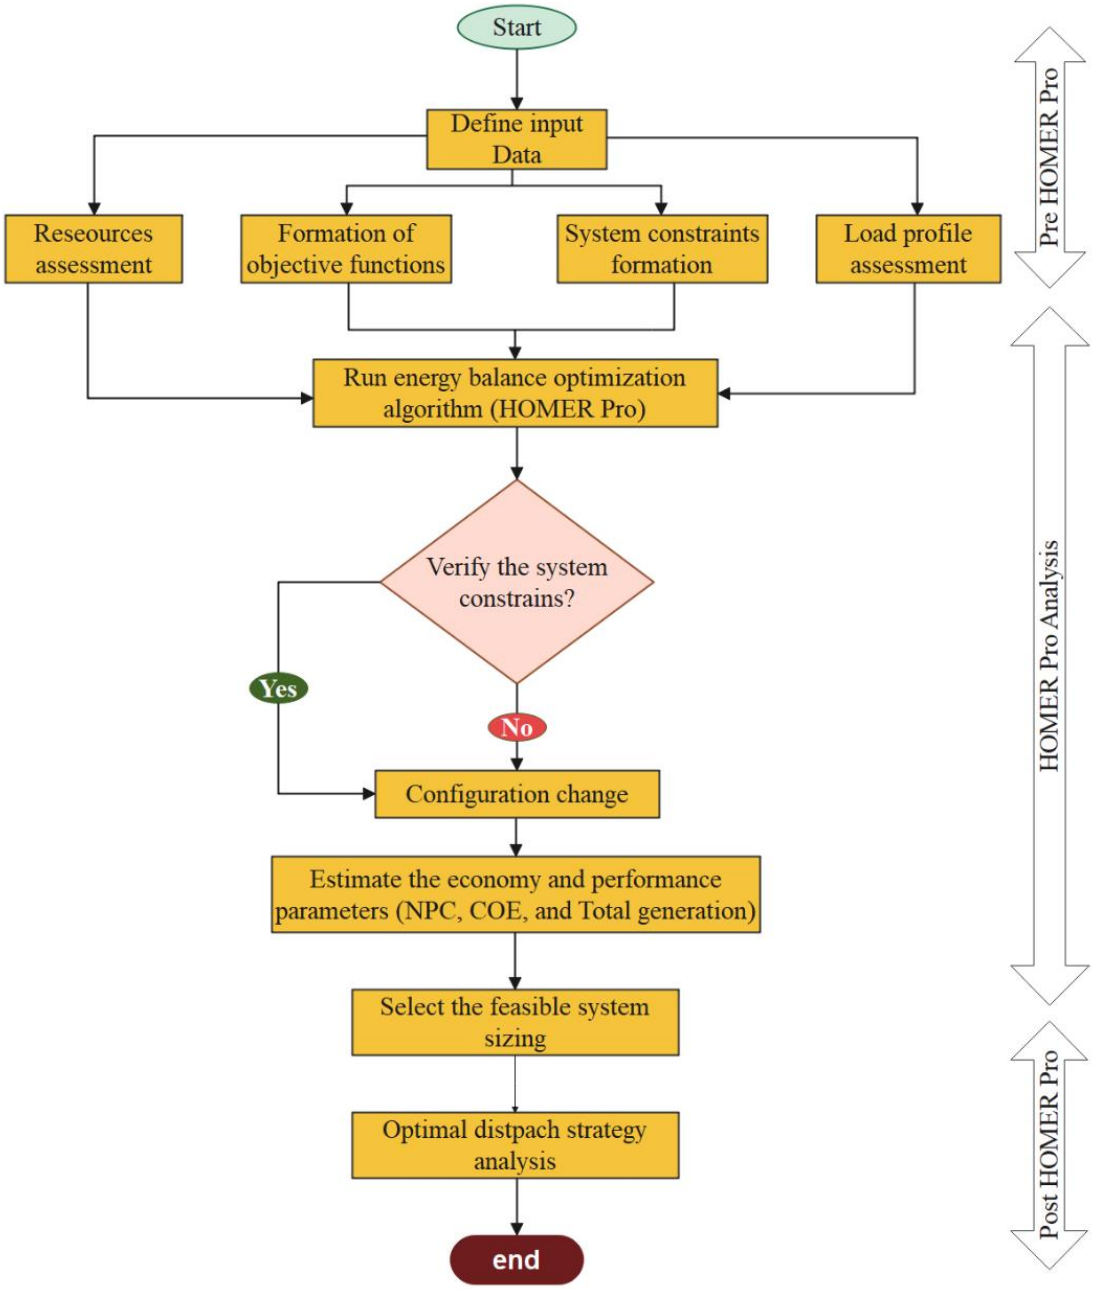

Figure 6. HOMER Pro optimization flow diagram.

RESULTS AND DISCUSSION

The simulations have led to the development of several potential systems that can be implemented in the region. Table 1 lists the results obtained by the four most suitable systems. The analyses utilized the region's meteorological data, with the diesel price assumed to be $1.27 per liter and the wind turbine height set at 24 meters. It was assumed that the generator only produced electricity with a generator startup load of 25%, and the scenarios considered constant system loads.

The simulation results show that the designed systems can effectively meet both the electrical and thermal load demands of the region. The comparison of different systems highlights the trade-offs between various configurations in terms of cost, efficiency, and sustainability. By analyzing these factors, it becomes evident that optimizing the balance between renewable and conventional energy sources is crucial for achieving both economic and environmental benefits.

FULL TEXTS BOOK

The results indicate that incorporating renewable energy sources, such as wind turbines and solar panels, significantly reduces the dependency on diesel generators, leading to lower operational costs and reduced carbon emissions. The inclusion of a thermal load controller further enhances system efficiency by utilizing excess electrical energy for heating, thereby minimizing energy wastage.

Moreover, the economic analysis underscores the importance of considering both installation and maintenance costs along with real interest rates to accurately evaluate the financial viability of the proposed systems. The calculated real interest rate of 2.07%, based on current interest and inflation rates, provides a realistic perspective on long-term investment and saving potential.

Table 1. Simulation results obtained using HOMER Pro.

PV panel (kW)	594	625	0	0
Wind Turbine (kW)	6	0	13	0
Diesel Generator (kW)	530	530	530	530
Battery(kW)	2,340	2,156	417	1,109
Thermal Load Controller (kW)	100	100	100	100
Converter(kW)	416	597	267	144
Dispatch	LF	LF	CC	CC
Net present cost (NPC) ($)	$11.4M	$11.7M	$13.4M	$14.6M
Cost of Energy (COE) ($)	$0.37	$0.38	$0.45	$0.49
Operating costs ($/yr)	$475,418	$494,206	$655,995.00	$717,724.00
Initial Capital ($)	$2.19M	$2.10M	$717,953.00	$663,435.00
Ren Fraction (REF) (%)	42	36.9	0	0
Total fuel consumption (L/yr)	217,538	231,127	384,431	426,834

The simulation was conducted under specified parameters to identify the most suitable systems for the region. The optimal unit energy cost was found to be $0.369. In the first system, the configuration included a 594-kW solar panel, a 6-kW wind turbine, a 530-kW diesel generator, a 2340-kWh battery storage system, a 100-kW thermal load controller, and a 416-kW converter. In the second system, a wind turbine was omitted, which increased the solar panel capacity to 625 kW, decreased the battery storage system to 2156 kWh, and reduced the renewable energy factor from 39.7% to 36.9%.

The removal of wind turbines had significant impacts: it prevented the generation of electricity during winter periods when solar panels are less effective, increased the operational load on the generator, and consequently raised fuel consumption from 217,358 to 231,127 liters. The primary disadvantage of wind turbines is their high installation costs, which increase the initial investment. However, it also contributes to reducing the emission values, as detailed in Table 2.

Table 2. Emission values of the optimization result.

Value	**Emission (kg/year)**
CO2	605302
CO	2618
Unburned Hydrocarbons	114
Particulate Matter	15,9
SO2	1488
NOx	2459

FULL TEXTS BOOK

A slight increase in the system's investment could facilitate the installation of a more environmentally friendly setup, reducing emissions while maintaining the same energy cost. Such enhancements should be considered in all systems to promote a sustainable world.

Impact of the Thermal Load Controller on the System

The thermal load controller significantly contributes to the system by recovering the excess electricity produced, thereby reducing the boiler's production and significantly lowering harmful gas emissions. As the primary power producers, photovoltaic panels generate excess energy during summer. However, during winter, the increased thermal load demand cannot be met by the excess energy produced by photovoltaic panels, as this excess energy cannot be utilized by the thermal load controller. To optimize the system's efficiency, it is recommended that the excess energy produced between May and October be utilized in various cooling systems. This could lead to a significant reduction in cooling energy consumption during summer. Figure 7 illustrates the surplus electricity produced and the thermal load demand throughout the year.

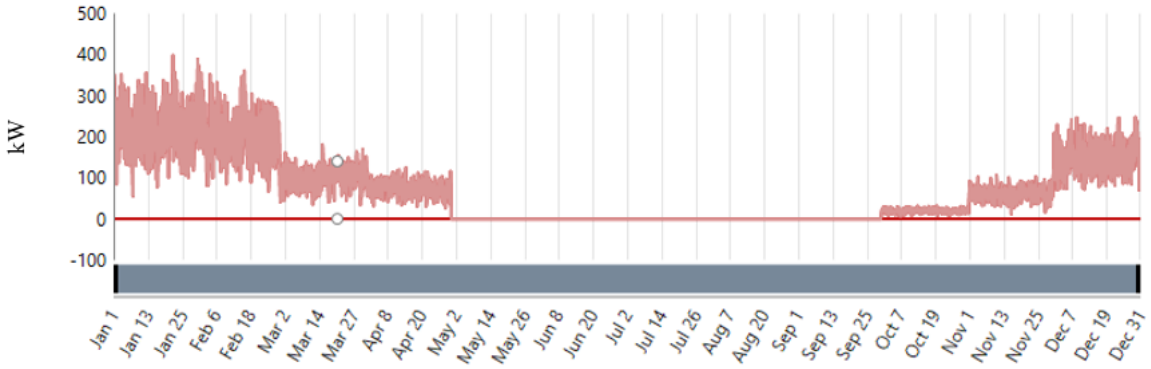

Figure 7. Surplus electricity produced and thermal load demand throughout the year.

Effects of Generator Performance Under Various Load Conditions

The simulation analysis performed the generator performance under different load conditions, which were categorized into three scenarios: 25%, 50%, and 75% load capacities. The analysis, conducted under scenarios of potential diesel price increases, showed that the unit energy cost could drop to $0.334/kWh if the generator operates at loads exceeding 75%. These results indicate that the generator's continuous high-efficiency operation results in lower fuel consumption and more cost-effective energy production. When operating at all load levels, the generator operated at an average capacity of 530 kW, consumed 161,885 L of fuel annually, and produced 587,032 kWh of electricity at an efficiency of 33.9%. However, when operating at a minimum of 75% capacity, the generator achieved an average capacity of 398 kW and an efficiency of 39.1%, indicating lower fuel consumption and higher electricity production. If diesel prices exceed $1.47 per liter, incorporating a wind turbine into the system is recommended.

Utilization of Generator Waste Heat

Generators generate significant heat loss during electricity generation, which can be harnessed through a cogeneration system to add an additional energy source to the system. The cogeneration system recovers the heat produced by the generator for use during thermal loads, thereby enhancing the energy efficiency. By increasing the heat recovery rate of the generator to 15%, the simulations indicate that the boiler fuel consumption can be reduced by 8,000 L annually. This also led to significant reductions in CO_2 and SO_2 emissions. The decreased fuel consumption also reduced the unit energy cost to $0.369. The impact of the generator's heat recovery rate on the unit energy cost and fuel consumption is illustrated in Figure 8.

FULL TEXTS BOOK

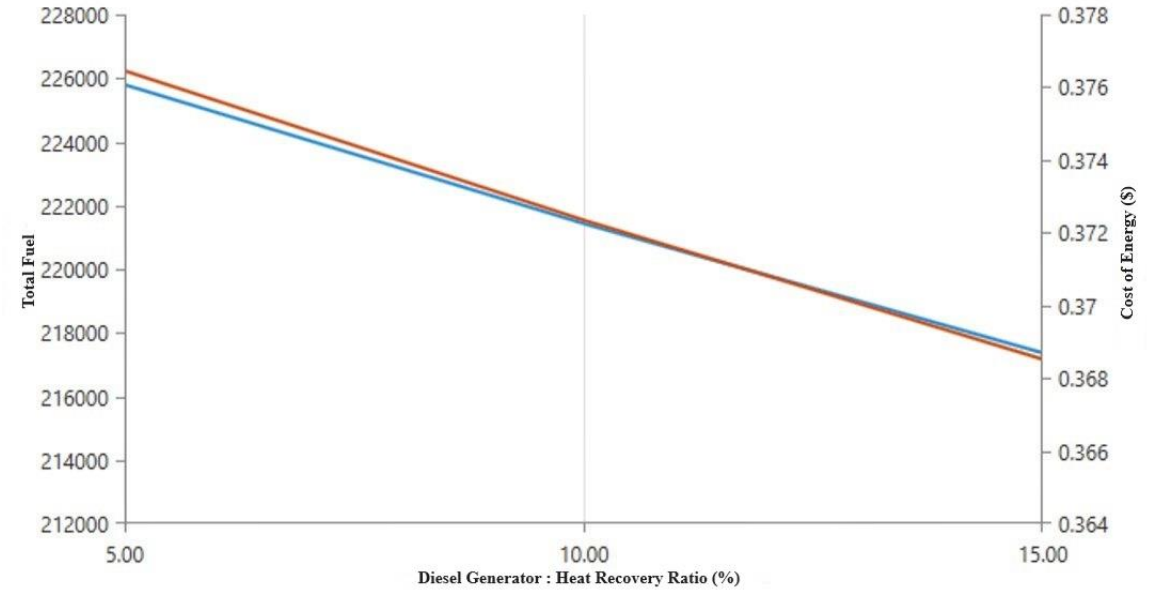

Figure 8. The impact of the generator's heat recovery rate on the unit energy cost and fuel consumption.

Impact of Solar Radiation on the solar system

The simulations conducted for the hybrid system in a region of Turkey with significant solar and wind potential demonstrate that the economic and technical parameters are optimized for local conditions. Sensitivity analyses were performed to understand potential changes if the same system were deployed in regions with higher solar radiation levels.

The analyses revealed that as the average daily solar radiation increases, solar panels operate more efficiently, producing more electricity with fewer panels. This improvement results in a reduction of the unit energy cost to as low as $0.350/kWh. Additionally, increased radiation during winter months allows the thermal load controller to utilize excess electricity more effectively, contributing more to the thermal load, reducing boiler operating times, lowering fuel consumption, and decreasing emission levels.

The analyses also indicated an increase in the renewable energy ratio within the system, reaching 43.4%. This increase signifies a reduction in the generator's efficiency, an enhancement in the solar panel's efficiency, and consequently, a reduction in the emission of harmful gases into the atmosphere. These sensitivity analyses provide crucial information for adapting system designs to different climatic conditions. A more detailed examination of these results is presented in Figure 9.

By leveraging higher solar radiation levels, the system can achieve better performance, lower operational costs, and reduce environmental impact. This adaptability is essential for optimizing hybrid energy systems across various geographic and climatic regions, contributing to a more sustainable energy future.

FULL TEXTS BOOK

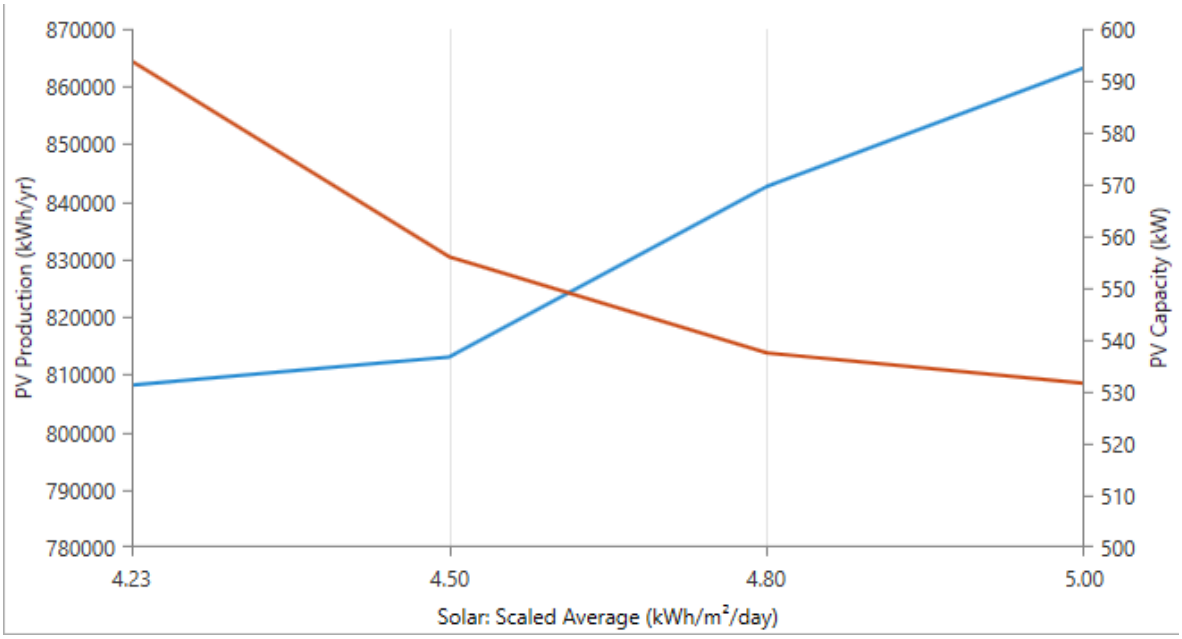

Figure 9. Impact of solar radiation on the production and capacity of PVs.

Impact of Average Wind Speed on the System

Simulations were conducted to examine the changes in system parameters if the hybrid system was installed in a region with higher wind potential. The analysis considered different average wind speeds (4 m/s, 4.85 m/s, and 5 m/s), yielding the following results:

When the average wind speed exceeds 4.85 m/s, the active use of wind turbines reduces the unit energy cost, which can increase to $0.379 under constant tower height and diesel price. The renewable energy production ratio decreases to 36.9%. Because wind speed is more consistent than solar radiation, the energy obtained from wind turbines remains more stable throughout the year. The thermal load controller can use the excess electricity from wind turbines during winter, thereby reducing the generator's electricity production and the boiler's thermal energy generation, leading to significant reductions in the emission rates.

These analyses indicate that optimizing the system based on wind energy potential can increase the unit energy cost and decrease the renewable energy ratio. The impact of wind speed and tower height on the proposed system and the energy cost change are shown in Figure 10.

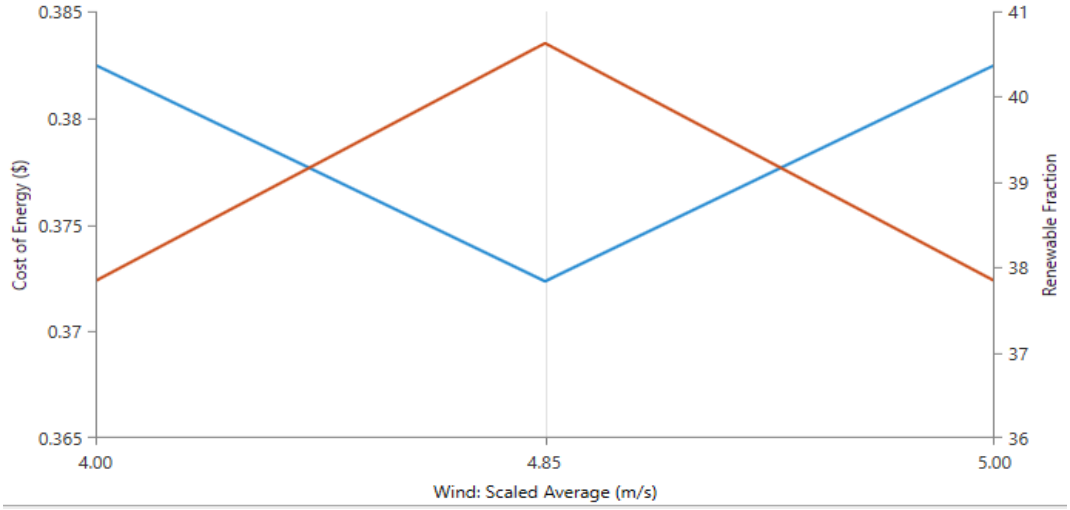

Figure 10. Impact of wind speed on energy cost and renewable fraction.

FULL TEXTS BOOK

Figure 10 illustrates the relationship between the average wind speed (m/s) and the cost of energy ($) and the renewable fraction (%). As the wind speed increases, the cost of energy initially decreases but then increases slightly, whereas the renewable fraction follows an inverse trend. This indicates the complex interplay between wind turbine efficiency, energy cost, and the proportion of renewable energy in the system.

Evaluation of All Optimization and Sensitivity Analyses

The optimization and sensitivity analyses determined the necessary characteristics for the system to operate at maximum efficiency as follows:

1. Effective Use of Batteries: Efficient battery utilization ensures that energy storage systems operate effectively. This allows energy generated from solar panels or other renewable sources to be stored and used when needed.
2. Operating the Generator at a Minimum of 75% Capacity: Running the generator at a minimum of 75% capacity ensures continuous and efficient electricity production. This contributes to the generator's efficiency and helps to maintain a low unit energy cost.
3. Utilization of generator waste heat: The waste heat from the generator provides a form of cogeneration, enhancing energy efficiency. This involves using waste heat to meet thermal load requirements, thereby reducing energy costs.
4. Use of Thermal Load Controller (TLC): The TLC connects the electrical load system to the thermal load system. This ensures that excess energy is utilized by the thermal load, thereby preventing energy waste.
5. Meeting Heating Needs with a Boiler System: The boiler system meets the thermal load requirements. This allows the system to address both electricity and heating needs.

When all these parameters are integrated into the system, the unit energy cost can be reduced to $0.327. A significant portion of electricity generation is provided by solar panels, and the effective use of generator waste heat and thermal load controllers enhances system efficiency while reducing environmental impacts.

During the summer months, the system relies heavily on solar panels for electricity generation, indicating that generators are used minimally during these periods. Excess electricity produced in summer can be stored in batteries or used directly.

It is observed that fuel consumption is higher during winter. This suggests that during periods when solar panel production is lower and thermal load demand is higher, the generator and boiler are used more frequently.

The annual fuel consumption is illustrated in Figures 11 and 12. These figures show the monthly fuel consumption, highlighting how it changes according to the system’s energy demand. This information is crucial for effective energy management and system optimization.

FULL TEXTS BOOK

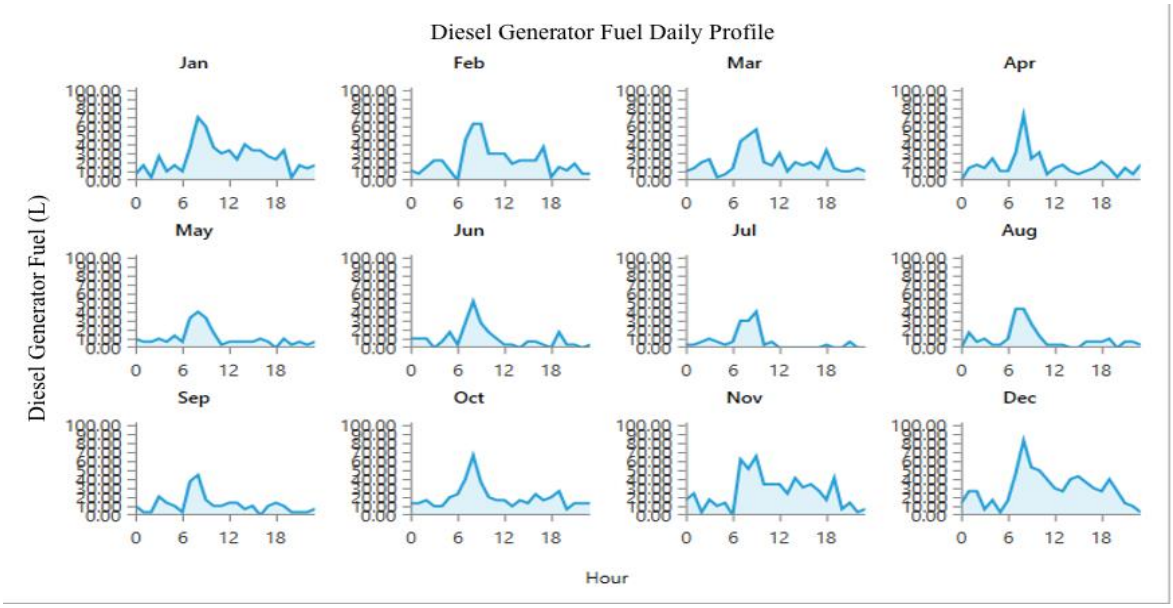

Figure 11. Diesel generator fuel daily profile.

This set of graphs shows the daily fuel consumption of the diesel generator for each month. This shows variations in fuel usage throughout the day and across different months, indicating higher consumption during winter months.

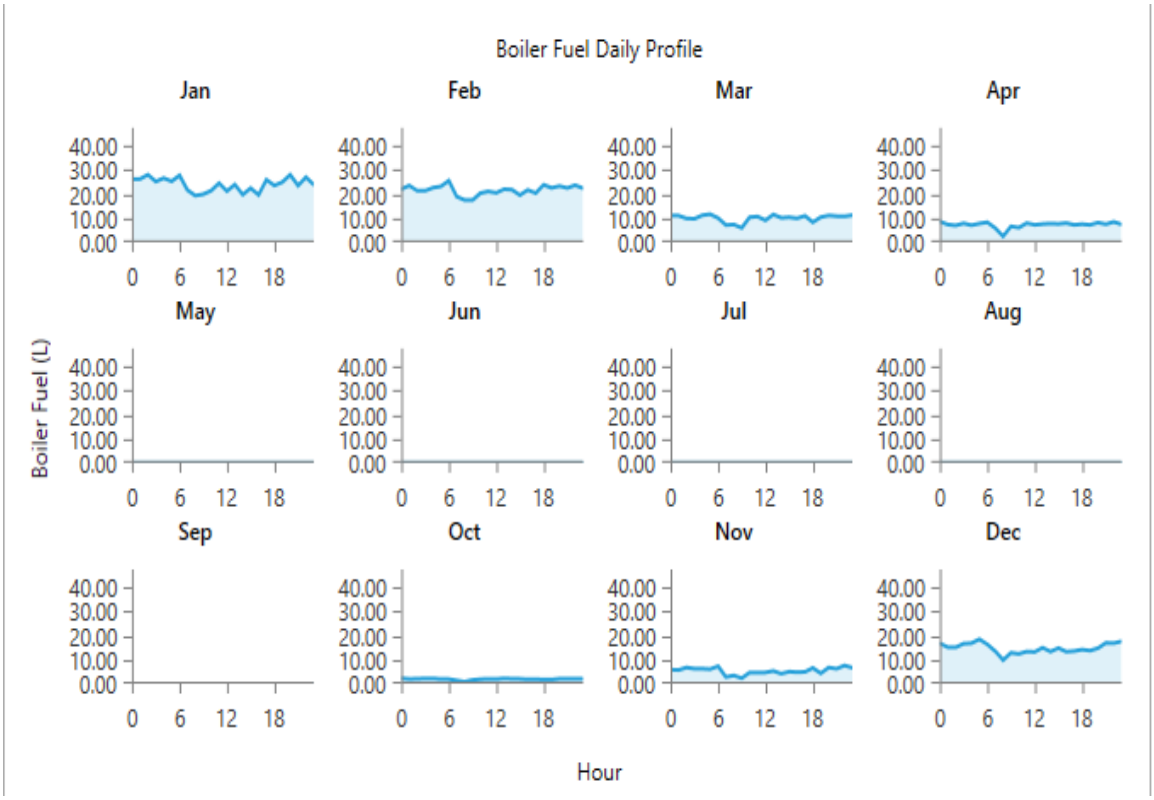

Figure 12. Boiler fuel daily profile.

This set of graphs illustrates the daily fuel consumption of the boiler for each month. The data reveal that boilers are used more during winter months, reflecting the increased thermal load demand during these periods.

By analyzing these figures, one can understand the system's fuel consumption patterns and identify opportunities for optimization and efficiency improvements.

The graph in Figure 13 illustrates how the unit energy cost of the system is affected by variations in average solar radiation and wind speed across Turkey. The analysis results indicate the following:

FULL TEXTS BOOK

- Wind Speed: In regions where the wind speed reaches 5 m/s, the unit energy cost increases to $0.379/kWh due to the use of wind turbines. This suggests that adding wind turbines in areas with moderate wind speeds does not necessarily reduce costs but can, in fact, increase them.
- Solar Radiation: In regions where solar radiation levels reach 5 kWh/m²/day, the unit energy cost decreases to $0.350/kWh. This highlights the efficiency of solar panels in high-radiation areas, leading to lower energy costs.

These results demonstrate that the varying solar and wind conditions across different geographic regions in Turkey can significantly impact energy costs. This highlights the need for an optimal system design that is tailored to these local conditions. The analysis shows that contrary to expectations, integrating wind turbines in regions with not significantly high wind speeds can increase the cost rather than decrease it.

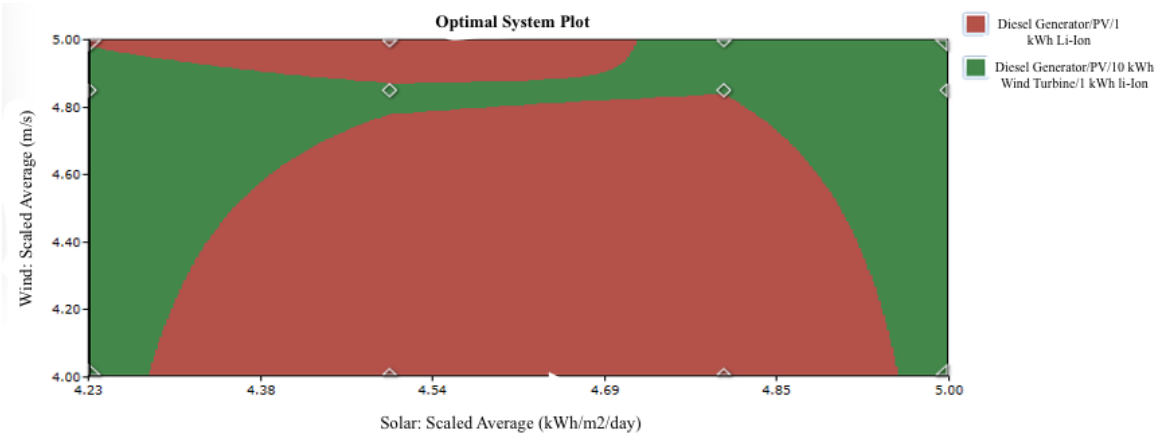

Figure 13. Optimal system type based on solar radiation and wind speed.

This graph illustrates the optimal system configuration for varying average solar radiation (kWh/m²/day) and wind speed (m/s) in Turkey. Regions with higher solar radiation benefit more from photovoltaic (PV) systems, resulting in lower energy costs, whereas regions with moderate wind speeds do not significantly benefit from adding wind turbines, potentially increasing the unit energy cost.

ConcluSION

This study analyzes hybrid systems capable of operating independently from the grid using the HOMER Pro program in regions where the electrical grid is either inaccessible or unreliable. The key findings of the analysis are as follows:

- Effective Use of Batteries in Hybrid Systems: This analysis determined the necessity of effectively utilizing batteries in hybrid systems. Efficient energy storage management allows the system to meet the electricity demand by storing energy produced from solar or wind sources for later use.
- Utilization of Generator Waste Heat: Reclaiming waste heat from generators positively contributes to system efficiency and energy costs. By using this waste heat to meet thermal loads, the system can benefit from energy savings and emission reductions.
- Cost Analysis: The system's installation cost was $2,303,319.44, with operational costs of $415,969.60 and a total net present cost of $10,358,090.00. The unit energy cost was found to decrease to $0.327/kWh, indicating that hybrid energy systems can achieve more economical energy prices than individual investments.

The results of the analysis suggest that hybrid systems can meet both electricity and heating needs more cost effectively over a 25-year period. This study demonstrates that hybrid energy systems that integrate renewable energy sources and energy storage systems offer economic and environmental benefits in off-grid areas. With technological advancements, the adoption of such systems is expected to become more widespread, and costs will decrease.

FULL TEXTS BOOK

These findings highlight the potential of hybrid energy systems to provide sustainable and efficient solutions for energy production in remote and off-grid locations. By leveraging renewable energy sources and optimizing energy storage and waste heat recovery, these systems can play a crucial role in reducing the dependency on fossil fuels, lowering emissions, and promoting a greener future.

FULL TEXTS BOOK

A RARE CAUSE OF CHRONIC COUGH: TRACHEOCELE

Uzm.Dr.Fatma Selen Ala Çıtlak
Samsun, Çarşamba Devlet Hastanesi

INTRODUCTION

Tracheocele is a herniation of the tracheal mucous membrane and is very rarely reported in the literature. It may be congenital defect or an acquiredlesion. Factors such as trauma, high pressure injuries, prolonged tracheostomies, obstructive tracheal diseases, recurrent infections causing obstruction and dilatation of the ducts of the mucous glands of the trachea play a role in the etiology.
Here we report a rare case found during computed tomography scanning for persistent cough.

CASE REPORT

A 32-year- old male patient was admitted to theemergency service with persistent cough and sputum. The paitent had no comorbidities and no history exposure. On physical examination, he had diffuse rhonchi and computerized thorax CT was ordered by the internal medicine department when his complaints did not resolve. She was referred to chest diseases by internal medicine.Thorax CT scan revealed a tracheocele in the right superior posterior lateral part of the trachea (Figure 1). There was no obstructive or restrictive deterioration in lung function tests. The patient was consulted to thoracic surgery because he was young. Bronchoscopy was planned by thorasic surger on after the dyspnea complaints regressed.Inhaler treatment was arrenged. At thefollow-up visit ,his cough was still present but this rhonchi had regressed. Bronchoscopy was performed by thoracic surgery. No tracheoesophageal fistula formation was observed and surgery was not considered.

DISCUSSION

Tracheoceles are air-filled cyst formations arising from the trachea and are extremely rare. It is usually detected by spontaneous cervicothorasic evaluation(1). The incidence of tracheocele is 2.4% (2). They usually present with chronic cough. Mostly right paratracheal (97.1%) and rarely left (2.9%) (3). Tracheocele is a sac consisiting only of respiratory epithelium , while tracheal diverticilum has cartilage content ,mucous glands and smooth muscle. (4)The etiology includes blunt chest trauma, chronic bronchopulmonary pathology,tracheotomy complication. Botti et al. Demonstared the presence of tracheosele in two brothers and showed that the etiology may be qualitative(5).
As in our case, they usually present with chronic cough, but hoarseneness, hemoptysis and dysphagia may be observed due to upper laryngeal nerve compression (6). Treatment options include observation, surgical resection and endoscopic treatments .Since it is a are condition, there are no spesicific gudielines. Conservative treatment include santibiotics,mucolytics ,broncodilators and pulmonary rehabilition.Accordimng to Lin et al. Surgical treatment is indicated only in the symptomatic congenital form, its benefit in theacquired form uncertain(7).

CONCLUSION

In our case, conservative approach was used, surgery was not considered and patient was followed up closely.

MANAGEMENT ACCOUNTING IN THE HOSPITALITY SECTOR: OPERATING STATEMENTS AND FINANCIAL STATEMENTS

Əsədova Günay Cahangir qızı

https://orcid.org/0009-0003-9844-1786

ABSTRACT
In this chapter, we review management accounting research in the hospitality sector, focusing on hotels and the ancillary activities. Hospitality management accounting is concerned with providing specialized internal information to managers who are responsible for directing and controlling operations within the hospitality industry. Decision makers need accurate information to the best decisions and Management accounting provides such information.
Keywords: Management Accounting, Hospitality Industry, Uniform System of Accounts for Hotels, Hotel accounting

Tourism and Hospitality continue to be one of the most critical sectors for economic development all over the world, and particularly in Azerbaijan. Tourism has a positive impact on the country's production volume, average gross income, and employment rate. Its role in economic development is indisputable. Azerbaijan has more than its nine 'climate zones' and oil industry to boast about at the moment. Hotel development is booming as the market begins to appreciate the economic upside offered by tourism. Of course, this in turn requires an in-depth research of management accounting in the hospitality industry.

Management accounting can aid companies in the hospitality industry to manage their resource spend. Managers can also make more informed business decisions by using the quantitative information derived from management accounting.

Hotel accounting is part of accounting practice in hospitality industry. Unlike conventional corporate accounting where one set of financial statement is used, in hotel accounting financial reports are made from various department before "consolidated statements" are made for the hotel. The main financial statements are no different from other accounting reports: (i) balance sheet, (ii) profit and loss, and (iii) statement of cash flow. These 3 statements are generated for the various department and evaluated department-by-department. [4]

The Uniform System of Accounts for the Lodging Industry, better known as the USALI, is the basis for accounting and benchmarking comparability in the lodging industry. The primary purpose of the Uniform System of Accounts for the Lodging Industry is to provide operating statements that are formatted to provide hotel owners, managers, and other interested parties with information and data that is pertinent to the unique operating environment of the lodging industry. The first edition was titled the Uniform System of Accounts for Hotels and was published in 1926 by the Hotel Association of New York City [4]. It represented the first successful organized effort to establish a uniform responsibility accounting system for the lodging industry and one of the first such efforts in any industry. In the first place, USALI has established itself in the accounting practice worldwide as a preferred model of information system for the purposes of financial accounting in big hotels and hotel chains in Europe and USA[4], as the system brings about greater comparability and consistency in preparing the internal and financial statements. The unification and standardization achieved by USALI is a prerequisite for its usage as a basis for cost control and income control at the hotel group level [4].

The statement of operations summarizes a company's revenues and expenses over the entire reporting period. The statement of operations is also known as a profit and loss (P&L) statement, statement of earnings, income statement, or statement of income. The Summary Operating Statements are divided

FULL TEXTS BOOK

into sections: Operating Revenue, Departmental Expenses, Undistributed Operating Expenses, Management Fees, Non-Operating Income and Expenses, and either Replacement Reserve or Interest, Depreciation, and Amortization and Income Taxes. The Uniform System includes only four revenue categories. The first two categories, Rooms and Food and Beverage, report the results of those departments. Operating revenue from any other department included in property operations – for example, a golf course, spa, laundry, or parking – is included in Other Operated Departments. The fourth revenue category is Miscellaneous Income, which includes such items as space rental, commissions, and interest income. There are three categories of departmental expenses, each of which relates to an operated department revenue category. In the schedules that accompany the Summary Operating Statements, departmental expenses are separated into as many as four groups: Cost of Sales, Cost of Other Revenue, Labor Costs and Related Expenses, and Other Expenses. Total Departmental Expenses is the sum of the amounts for all categories of departmental expenses. Total Departmental Profit is calculated by subtracting Total Departmental Expenses from Total Operating Revenue. The Total Departmental Profit percentage is calculated by dividing the amount of Total Departmental Profit by Total Operating Revenue. The Undistributed Operating Expenses section reports expenses that are considered applicable to the entire property. The Undistributed Operating Expenses are separated into five categories: Administrative and General, Information and Telecommunications Systems, Sales and Marketing, Property Operation and Maintenance, and Utilities. Gross Operating Profit is calculated by subtracting Total Undistributed Expenses from Total Departmental Profit. The Gross Operating Profit percentage is calculated by dividing the amount of Gross Operating Profit by Total Operating Revenue. Management Fees represents the cost for management services performed by a management company to operate the property as a whole. Income Before Non-Operating Income and Expenses is calculated by subtracting Management fees from Gross Operating Profit. The items included under Non-operating Income and Expenses include non-operating Income, Rent, Property and Other Taxes, Insurance, and Other non-operating expenses. Total Non-Operating Income and Expenses is the sum of the amounts shown for Rent, Property and Other Taxes, Insurance, and Other non-operating expenses offset by the non-operating Income amount. Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) is determined by subtracting the Total Non-operating Income and expenses. Many management contracts, loan agreements, and owners specify the establishment of a reserve to accumulate the funds required for future replacement of furniture, fixtures, and equipment. These funds may also provide for certain capital improvements and the replacement of existing assets such as the major building systems. Replacement Reserve indicates the amount set aside for the period covered by the Summary Operating Statement, whether or not the reserve is actually funded. EBITDA Less Replacement Reserve is determined by subtracting Replacement Reserve from EBITDA. To reconcile the Net Income presented on the Summary Operating Statement to the Net Income presented on the Statement of Income, expenses typically paid by the owner are deducted from EBITDA[2]. These expenses include Interest, Depreciation, Amortization, and Income Taxes. Total Interest, Depreciation and Amortization is deducted from EBITDA to calculate Income Before Income Taxes. Income Taxes are then deducted from Income Before Income Taxes to calculate Net Income [3]. All revenues and expenses should be shown as a percentage of total operating revenue, except departmental expenses, which should be shown as a percentage of their respective departmental revenue.

A complete set of financial statements includes a Balance Sheet, a Statement of Income, a Statement of Comprehensive Income, a Statement of Owner's Equiity, a Statement of Cash Flows, and Notes to the Financial Statements that amplify the information presented in the basic statements. The Balance Sheet reflects the financial position of the business by detailing the assets, liabilities, and owner's equity as of a given date. The Statement of Income presents revenues and expenses associated with operations over a given period. The Statement of Comprehensive Income presents non-owner transactions that affect an entity's equity. The Statement of Owner's Equity summarizes transactions, including owner's

FULL TEXTS BOOK

transactions, affecting equity over a given period[3]. The Statement of Cash Flows presents information about the operating, investing, and financing activities that affected cash over a given period. It should be noted that the financial statements discussed have been developed following accounting principles generally accepted in the United States of America.

Accurate Financial statements are important because they contain significant information about a company's financial health. Financial statements help companies make informed decisions since they highlight which areas of the company provide the best ROI (return on investment)[3]. Shareholders need financial statements to evaluate their equity investments and help them make informed decisions as to how to vote on corporate matters. This tool acts as a metric for profitability by showing the amount of profit companies generate with a shareholder's investment. Employees use Financial Statements for assessing the company's profitability and its consequence on their future remuneration and job security.

ANNOTASİYA:

Bu məqalədə biz mehmanxanalara və yardımçı fəaliyyətlərə diqqət yetirməklə qonaqpərvərlik sektorunda idarəetmə uçotu tədqiqatlarını nəzərdən keçiririk. Qonaqpərvərlik idarəçiliyi mühasibatlığı qonaqpərvərlik sənayesi daxilində əməliyyatları idarə etmək və nəzarət etmək üçün məsul olan menecerlərə xüsusi daxili məlumatların verilməsi ilə məşğul olur. Qərar verənlər ən yaxşı qərarlar üçün dəqiq məlumata ehtiyac duyurlar və İdarəetmə uçotu belə məlumatları təmin edir.

ABSTRACT
Paget's disease of bone is a chronic disease of the skeleton. In healthy bone, a process called remodeling removes old pieces of bone and replaces them with new, fresh bone. Paget's disease causes this process to shift out of balance, resulting in new bone that is abnormally shaped, weak, and brittle. Paget's disease most often affects older people, occurring in approximately 2 to 3% of the population over the age of 55.Many patients with Paget's disease have no symptoms at all and are unaware they have the disease until X-rays are taken for some other reason. When bone pain and other symptoms are present, they can be related to the disease itself or to complications that arise from the disease - such as arthritis, bone deformity, and fractures.
Keywords: Paget bone disease, Diagnosis, Treatment, Endocrine system

Paget's disease of bone is a chronic disease of the skeleton. In healthy bone, a process called remodeling removes old pieces of bone and replaces them with new, fresh bone. Paget's disease causes this process to shift out of balance, resulting in new bone that is abnormally shaped, weak, and brittle. Paget's disease most often affects older people, occurring in approximately 2 to 3% of the population over the age of 55.Many patients with Paget's disease have no symptoms at all and are unaware they have the disease until X-rays are taken for some other reason. When bone pain and other symptoms are present, they can be related to the disease itself or to complications that arise from the disease - such as arthritis, bone deformity, and fractures (Miao XY, Wang XL, Lyu ZH.,2021).

In most cases, treatment for Paget's disease involves taking medications to help slow or stop the progress of the disease.

For patients who have complications, surgery may be needed to realign deformed bones or to help fractures heal (Cronin O , Subedi D ,Forsyth L , et al .2020).

Paget's disease can affect any bone in the skeleton. It appears most often in the spine, pelvis, long bones of the limbs, and skull. It can be present in just one bone or in several bones. It can affect the entire bone or just part of it.In normal bone, a process called remodeling takes place every day. Bone is absorbed and then reformed in response to the normal stresses on the skeleton. More specifically:

Cells of the bone called osteoclasts absorb bone.

Cells of the bone called osteoblasts make new bone.

FULL TEXTS BOOK

In Paget's disease, osteoclasts are more active than osteoblasts. This means that there is more bone absorption than normal. The osteoblasts try to keep up by making new bone, but they overreact and make excess bone that is abnormally large, deformed, and fits together haphazardly.Normal bone has a tight overlapping structure, like a well-constructed brick wall. Bone afflicted by Paget's disease has an irregular mosaic pattern, as though the bricks were just dumped in place. The end result is bones that are large and dense, but weak and brittle. The bone is prone to fractures, bowing, and deformities (Mantovani G, Fagotti A, Franchi M.,2019).

Cause: The cause of Paget's disease is not known, but doctors have identified a number of risk factors that make someone more likely to develop the disease. These include: Genetics. Paget's disease tends to run in families. In as many as 25 to 40% of cases, another relative will also have the disease (Cronin O , Subedi D ,Forsyth L , et al .2020).

Age. Paget's disease occurs only rarely in people under the age of 40. It is more common as people age.Ancestry. It is more common in people of Anglo-Saxon descent and those who live in certain geographic areas, such as the United States, England, Australia, New Zealand, and Western Europe. It is not common in Scandinavia, China, Japan, or India.Environmental factors. Some studies suggest that certain environmental exposures may play a role in the development of Paget's disease. This has not been proven definitively, however.While there are no known ways to prevent Paget's disease from occurring, eating a healthy diet with sufficient calcium and vitamin D, and getting regular exercise, are important components in maintaining skeletal health and joint mobility (Gennari L, Rendina D, Merlotti D.,2022).

Symptoms: Many people with Paget's disease do not have any symptoms at all. The disease is often first discovered when X-rays are taken for another reason or when routine blood work indicates an elevated blood serum alkaline phosphatase level.In patients who do have symptoms, bone pain is the most common complaint. This pain can be related to active Paget's disease or to its complications, which include:

Fractures due to brittle bone.Deformity of bone, including bowing of the affected bone.Advanced arthritis in joints near the affected bone.Compression on neighboring nerves from enlarged bones, leading to a loss of sensation or movement (Adams C, Banks KP.,2023).

Other Symptoms: Symptoms can also arise from the effect of the disease on calcium levels in the blood stream. When Paget's disease is active in several bones, overactive osteoclasts may release enough calcium from the bone as they break it down to cause an elevated calcium level in the blood. This rare complication can lead to a number of symptoms, including:Fatigue,Weakness,Loss of appetite.Abdominal pain,Constipation.

Very rarely, Paget's disease can progress to a type of bone cancer called Paget's sarcoma. When this occurs, symptoms may include severe and unrelenting pain in the area affected by Paget's disease. Paget's sarcoma occurs in only about 1 percent of patients with Paget's disease. These patients are usually over the age of 70. This type of malignant bone tumor is very aggressive and has a poor prognosis. None of the medical treatments for Paget's disease are known to lower the risk for the development of Paget's sarcoma (Miao XY, Wang XL, Lyu ZH.,2021).

Diagnosis and Tests: In many cases, Paget's disease is discovered incidentally, when X-rays are taken or bloodwork is performed for some other reason. If this occurs, your doctor will perform a physical examination and order a number of tests to confirm the diagnosis (Mantovani G, Fagotti A.,2019).

X-rays. X-rays provide images of dense structures, such as bone. Paget's disease can usually be diagnosed by looking at an X-ray. A bone affected by Paget's usually appears larger and denser than a normal bone. It may also have a deformed shape (Choi YJ, Sohn YB, Chung YS.,2022).

In the very early stages of Paget's disease, when there is just overactive absorption of bone occurring, it can look like there is a hole in the bone. Later in the disease process, this darker area

FULL TEXTS BOOK

can take the shape of a V, with denser, thicker bone following behind it.Laboratory tests. A blood test called serum alkaline phosphatase may also be used to help confirm the diagnosis. In patients with Paget's disease, alkaline phosphatase levels are usually quite elevated - a reflection of the high bone turnover rate.Paget's disease can also be detected with urine tests that show rapid bone turnover (Mantovani G, Fagotti A.,2019).

Bone scan. A bone scan may be used to help determine which bones are affected. During this test, a very small amount of radioactive dye is injected into a vein. A special camera is then used to detect areas of the skeleton with an increased uptake of the radioactive material. These hot spots indicate areas where there is more bone turnover than normal. Paget's disease almost always looks hot on a bone scan, except when the condition has been present for a long time and has burned out (Adams C, Banks KP.,2023).

Biopsy. A biopsy is sometimes necessary to confirm the diagnosis of Paget's disease or to rule out other conditions.In a biopsy, a small sample of the affected bone is removed and examined under a microscope. The procedure can be performed under local anesthesia with a needle or as a small open operation (Panuccio VA, Tripepi R.,2020).

Management and Treatment: There is no cure for Paget's disease and no way to reverse its effects on bone. Treatment focuses on relieving symptoms and preventing future complications.If you do not have pain or other symptoms, no treatment is required. Your doctor may recommend simply monitoring your condition with regular office visits and periodic X-rays to watch for changes in the affected bone and to ensure that complications do not develop (Gennari L, Rendina D, Merlotti D.,2022).

If symptoms do occur, your doctor may recommend one or more nonsurgical treatments.

Nonsteroidal anti-inflammatory drugs (NSAIDs). Medications such as ibuprofen, naproxen, and aspirin can help relieve mild bone pain that arises from Paget's disease or from arthritis that may be associated with the disease.

Assistive devices. If your pelvis or leg is affected by the disease, using a cane can help relieve pain by decreasing the forces going through the bone. Using a cane can also help prevent falls, so there is less risk of fracture in the bone — a common complication of Paget's disease.

Wearing a brace can help relieve pain by preventing malalignment of the affected bones (Choi YJ, Sohn YB, Chung YS.,2022).

Bisphosphonate medications. When bone pain is more significant, medications called bisphosphonates are the treatment of choice. These drugs block osteoclasts and can be very effective in treating Paget's disease (McLaughlin MB, Awosika AO.,2023).

There are several types of bisphosphonates. Some are given by mouth (orally) and others are given as an injection (intravenously). Your doctor will talk with you about which type is best for you and how long you will need to take it.

During treatment with bisphosphonates, your doctor will perform blood tests periodically to check your alkaline phosphatase level. A falling alkaline phosphatase level and improvement in bone pain are indications that treatment is working (McLaughlin MB, Awosika AO.,2023).

Surgical Treatment: In some cases, surgery may be needed to treat the complications of Paget's disease, including:Bone fractures.Malalignment or deformity of bone.Severe arthritis. The surgical procedures used to treat fractures, malalignment, or arthritis in patients with Paget's disease are similar to those used to treat similar conditions in people with normal bone (Mantovani G, Fagotti A, Franchi M.,2019).

These procedures may include:

Internal fixation. This procedure can be used to treat fractures in bone affected by the disease. In internal fixation, bone fragments are first repositioned into their normal alignment, then held in place with screws, wires, pins, or metal plates attached to the outside of the bone.

FULL TEXTS BOOK

Osteotomy. An osteotomy can help relieve pain and restore alignment to weight-bearing joints that are affected by Paget's disease, especially the knee and hip. During the procedure, your doctor will remove a wedge of bone near the damaged joint in order to shift weight onto a healthier part of the joint.

Total joint replacement. In this procedure, parts of an arthritic or damaged joint are removed and replaced with a metal, plastic or ceramic device called a prosthesis. The prosthesis is designed to replicate the movement of a normal, healthy joint (Lillemon JN, Nardos R, Kaul MP.,2019).

Surgery may also be needed if an enlarged bone begins to compress nerves, especially in the spine or skull. In the rare case of Paget's sarcoma, surgery is almost always used to try to remove the tumor entirely. Chemotherapy and radiation therapy may also be used.

Because Paget's disease increases the blood supply to bones, your doctor may recommend taking bisphosphonates for a period of time before surgery to help reduce potential blood loss.Bones affected by Paget's disease may take longer to heal than normal bones. A longer period of rehabilitation may also be necessary (Kərimova R.C., Ağayeva A.H.,Abıyev H.Ə., Cəfərova Z.İ.,2023).

It's important that people with Paget's disease eat a good diet with enough calcium and vitamin D. Your doctor will check whether you have a calcium or vitamin D deficiency and may suggest supplements.

Calcium: The best sources of calcium are: dairy products such as milk, cheese, yogurt – low-fat ones are best,calcium-enriched varieties of milks made from soya, rice or oats,fish that are eaten with the bones (such as sardines).A daily intake of 1,000 milligrams (mg) of calcium should be enough, possibly with added vitamin D if you're over 60. Skimmed and semi-skimmed milk contain more calcium than full-fat milk. If you don't eat many dairy products or calcium-enriched substitutes, then you may need a calcium supplement. We recommend that you discuss this with your doctor or a dietitian (Panuccio VA, Tripepi R.,2020).

Vitamin D: Vitamin D is needed for the body to absorb and process calcium.Vitamin D is sometimes called the sunshine vitamin because it's produced by the body when the skin is exposed to sunlight. A slight lack (deficiency) of vitamin D is quite common in winter. Vitamin D can also be obtained from the diet (especially from oily fish) or from supplements such as fish oil. Oils made from the whole fish are best as fish liver oils often contain a lot of vitamin A, which can be harmful if you take too much (Lillemon JN, Nardos R, Kaul MP.,2019).

If you're worried about a lack of vitamin D, speak to your doctor about whether a vitamin D supplement would be right for you, especially if:you are over 60,you don't expose your skin to the sun very often,you have dark skin, which reduces the amount of vitamin D you can absorb from sunlight (McLaughlin MB, Awosika AO.,2023).

ABSTRACT
Sickle cell disease (SCD) is the most common inherited blood disorder that affects your red blood cells. In SCD, a protein called hemoglobin, located within red blood cells, is abnormal. Hemoglobin is important. It's the molecule that carries oxygen in your blood and throughout your body.Normal red blood cells are round and flexible. This allows them to move easily through small blood vessels (capillaries) in your body to deliver oxygen to your organs and tissues. In SCD, there's an abnormal form of hemoglobin called hemoglobin S. This changes the shape of the red blood cell to a crescent shape and causes red blood cells to become rigid, lack flexibility and stick together.
Keywords: Genetic disease,Deformation of oxygen-carrying blood cells,Sickle cell anemia

Sickle cell disease (SCD) is the most common inherited blood disorder that affects your red blood cells. In SCD, a protein called hemoglobin, located within red blood cells, is abnormal. Hemoglobin is important. It's the molecule that carries oxygen in your blood and throughout your body.Normal red blood cells are round and flexible. This allows them to move easily through small blood vessels (capillaries) in your body to deliver oxygen to your organs and tissues. In SCD, there's an abnormal form of hemoglobin called hemoglobin S. This changes the shape of the red blood cell to a crescent shape and causes red blood cells to become rigid, lack flexibility and stick together (Gilpin-Macfoy F, Perilla MJ.,2023).

This can block blood flow, preventing oxygen from getting to the vital organs and tissues throughout your body. It can lead to serious complications including pain, infections, and organ damage and failure. Additionally, sickle-shaped cells don't last as long as normal-shaped red blood cells, causing a constant shortage of red blood cells and leading to anemia. Sickle cell disease is a lifelong condition. But there are treatment options that can reduce your symptoms and prolong your life.There are several types of sickle cell disease. The different types depend on the genes a person inherits from their parents (Mohamed Jiffry MZ, Hassan R.,2023).

Hemoglobin SS (HbSS): HbSS is a severe form, affecting 65% of people who have SCD. People with this form inherited one gene encoded with hemoglobin S from each parent. Most or all of your hemoglobin is abnormal, causing chronic anemia (Hajjaj OI, Cserti-Gazdewich C.,2023).

FULL TEXTS BOOK

Hemoglobin SC (HbSC): HbSC is a mild to moderate form that affects about 25% of people with the disease. People with this form inherited a hemoglobin S gene from one parent. They inherited another abnormal type hemoglobin C -from their other parent (Kərimova R.C.,Hüseynzadə X.R.,2023).

Hemoglobin (HbS) beta thalassemia: People with this form inherited a hemoglobin S gene from one parent. They inherited an abnormal type called beta thalassemia from their other parent. There are two subtypes:"Plus" (HbS beta +): This subtype affects about 8% of people with SCD and tends to be more mild."Zero" (HbS beta 0): This subtype affects about 2% of people with SCD and is more severe, similar to hemoglobin SS disease. There are other, more rare forms, including hemoglobin SD (HbSD), hemoglobin SE (HbSE) and hemoglobin SO (HbSO). People with one of these forms inherited one hemoglobin S gene and one gene that encodes with another abnormal gene (D, E or O).Sickle cell disease is an umbrella term for the many different types of sickle cell disorders. Healthcare providers reserve the term "sickle cell anemia" for the types of SCD that cause the most severe anemia. These types are hemoglobin SS and hemoglobin beta zero thalassemia (Beeman CM, Abrams MA.,2023).

Sickle cell trait vs. Disease: People who have sickle cell trait inherited a hemoglobin S gene from only one parent. They inherited a normal gene from their other parent. People with sickle cell trait typically don't have any symptoms of sickle cell disease. But ongoing research may show that these people may have symptoms. They can pass on the abnormal gene to their own children.Rarely, severe dehydration and intense physical activity can lead to serious health issues in people with sickle cell trait.

Symptoms and Causes: A genetic mutation in the HBB gene causes sickle cell disease. The HBB gene is responsible for making a part of the hemoglobin. People with SCD received two mutated HBB genes coded for abnormal hemoglobin - one from each parent.People inherit SCD in an autosomal recessive manner. This means each parent of a child with SCD carries one copy of the mutated gene, but they typically don't show signs and symptoms of the condition.

Certain groups of people are more likely to develop SCD, including: People of African descent, including African Americans.Hispanic Americans from South America and Central America.People of Mediterranean, Middle Eastern, Indian and Asian descent (Gilpin-Macfoy F, Perilla MJ.,2023).

Sickle cell disease symptoms begin to show when a child is about 5 to 6 months old. Signs and symptoms of SCD vary from person to person. Some people have mild symptoms, while others develop more serious complications. Sickle cell disease symptoms include:

Frequent pain episodes: Anemia, causing fatigue, paleness and weakness.Jaundice (yellowing of their skin and the whites of their eyes).Painful swelling of their hands and feet (Hajjaj OI, Cserti-Gazdewich C.,2023).

Sickle cell disease can affect many parts of your body. Some of the effects are acute (they start suddenly) and some are chronic (they last for a long time). Sickle cell complications begin early and continue throughout your life.

Pain:Pain is the most common complication of sickle cell disease. Sickled cells passing through blood vessels can get stuck and block blood flow, which causes pain. You may have an acute pain crisis, which is also called a sickle cell crisis, vaso-occlusive crisis (VOC) or vaso-occlusive episode (VOE). These pain crises may be mild or severe and can start suddenly and last for any length of time. Pain crises most often affect your chest, back, legs and arms. You might also have chronic pain, which is when pain lasts longer than six months (Beeman CM, Abrams MA.,2023).

Anemia:Red blood cells die early with sickle cell disease, which can lead to anemia. Anemia occurs when you don't have enough healthy red blood cells to carry oxygen throughout your body. Anemia can cause severe fatigue, along with jaundice, irritability, dizziness and lightheadedness (Slomski A.,2022).

Acute chest syndrome:Acute chest syndrome is a life-threatening medical emergency. It can cause lung injury, difficulty breathing and low oxygen to the rest of your body. This complication of SCD occurs when sickled cells block blood and oxygen from reaching your lungs.

FULL TEXTS BOOK

Blood clots: Sickled cells make it more likely for blood to clot. This increases your chances of developing a blood clot in a deep vein (deep vein thrombosis, or DVT). A DVT can break off and travel to your lungs (pulmonary embolism, or PE).

Stroke: When sickled cells get stuck in a blood vessel, it blocks blood flow to your brain. This makes it harder for your brain to get the oxygen it needs to work correctly. This can lead to a stroke. About 10% of people with SCD will have a symptomatic (clinical) stroke. Strokes are most common in people with sickle cell anemia (Slomski A.,2022).

Vision problems:Sickled cells can block blood flow in the blood vessels in your eyes. This blockage occurs most often in the retina of your eye. You may not have any symptoms and then suddenly have vision loss, which can lead to permanent blindness.

Priapism:Sickled cells in your penis can cause a persistent, painful erection (priapism). In addition to causing pain, priapism can cause permanent damage and erectile dysfunction. A prolonged priapism (lasting longer than four hours) is a medical emergency.

Organ damage and failure: People with sickle cell disease are at risk for problems related to their heart, lung, kidneys and other organs. This is because blood and oxygen aren't reaching them. SCD can lead to multi-organ failure.Many people with sickle cell disease have healthy pregnancies, but the risks are higher. SCD can increase the risk of high blood pressure, blood clots, miscarriage, low birth weight and premature birth (Mohamed Jiffry MZ, Hassan R.,2023).

Diagnosis and Tests: In the United States, hospitals test all babies for sickle cell disease as part of routine newborn screenings. This test pricks your baby's heel to get a sample of their blood. It checks for various other conditions, as well. Your healthcare provider can also diagnose sickle cell disease before your baby is born using prenatal testing.These tests include chorionic villus sampling and amniocentesis (Houwing ME, de Pagter PJ.,2019).

Management and Treatment: A bone marrow transplant (stem cell transplant) can cure sickle cell disease. The transplant requires a donor who's a healthy, genetic match, such as a sibling. In this procedure, you receive healthy marrow from the donor. However, only about 18% of people with SCD have a compatible donor. In addition, there are risks and complications involved with a transplant. Your healthcare provider will discuss these issues with you.Sickle cell disease treatment includes medications, transfusions, blood and marrow transplant and gene therapy. Sickle cell disease treatment may begin with antibiotics. Newborns with severe SCD will receive antibiotics twice a day until they're 5 years old to prevent infection (Christian J, Lanzkron S, Naik RP.,2022).

Other sickle cell disease medications:

Voxelotor: Voxelotor can prevent red blood cells from sickling and binding together. It may reduce the destruction of some red blood cells, which improves blood flow to your organs and lowers your risk for anemia (Ebert EP, Escobar JD, Costello AA.,2023).

Crizanlizumab: This medicine helps prevent sickled red blood cells from sticking to your blood vessel walls. This can improve blood flow and reduce inflammation and pain crises.

Hydroxyurea: Hydroxyurea can reduce or prevent several complications of SCD. This includes frequent pain crises, acute chest syndrome and severe anemia (Hajjaj OI, Cserti-Gazdewich C.,2023).

L-glutamine: This medication is a pain reliever that can help reduce the number of pain crises you have. Other pain medication options include nonsteroidal anti-inflammatory drugs (NSAIDs) and opiates.

Transfusions:Acute transfusions: Acute blood transfusions can help treat complications that cause severe anemia. Your provider may also use an acute transfusion to treat crises. This includes strokes, acute chest syndrome and organ failure.

Red blood cell transfusions: Red blood cell transfusions can help increase the number of red blood cells in your body and provide normal, non-sickled red blood cells (Houwing ME, de Pagter PJ.,2019).

A stem cell transplant can cure SCD. Sometimes called blood or marrow transplant, SCT requires a donor who's a good match, like a sibling, and ongoing studies are looking to optimize the transplant

FULL TEXTS BOOK

from alternative donors, such as birthing parents or siblings who only half-matched. Your healthcare provider will discuss the risks and benefits of this treatment in your specific case (Hajjaj OI, Cserti-Gazdewich C.,2023).

Gene therapy:Researchers are currently testing gene therapy to treat SCD. This calls for correcting an abnormal hemoglobin gene or putting a normal hemoglobin gene into a person's stem cells. There's promising early data and the hope is that gene therapy might one day be a routine treatment for SCD (Christian J, Lanzkron S, Naik RP.,2022).

First aid: Sickle cell disease can cause many different life-threatening complications. If the patient experiences any of the following complications, call or go to the nearest emergency room:

Severe pain.Symptoms of severe anemia, including fatigue, dizziness and shortness of breath.A temperature of 38.5 degrees Celsius.Vision problems.Difficulty breathing.Erection lasting for four or more hours.Symptoms of acute chest syndrome, including chest pain, coughing and fever.Symptoms of stroke, including sudden weakness, numbness on one side of your body and confusion (Kərimova R.C.,Hüseynzadə X.R.,2023).

Sickle cell disease is a lifelong condition. While there's a cure available, stem cell transplants aren't always available and come with many risks. However, early diagnosis and treatment can help reduce your symptoms and chances of complications. With ongoing care, you can go on to lead a full, active life (Ebert EP, Escobar JD, Costello AA.,2023).

ABSTRACT
In this study, bioremediation which is a relatively new environmental engineering technology for the reduction of the level of pollution was agued as a green and environmentally friendly alternative to remedying waste waters to control water pollution was the reason for this study. This field of engineering science has undergone more Intense investigation in recent time. Considering how the new waves of technology, industrialisation and urbanisation release numerous toxic compounds into natural water bodies, polluting both freshwater resources as well as marine water. This remediation process is focused on destroying, containing or immobilizing toxic waste materials present in the water sources. Several remediation processes and techniques have been proposed for efficient wastewater treatment, however most of them presenting some limitations, such as poor capacity, the generation of waste products, incomplete mineralisation and a high operating cost. The bioremediation of waste waters is divided into two broad categories: *In-situ* and *Ex-situ* treatment and it is highlighted that the remediation technology is preferred because it can be done either ways. Both methods have significant advantages and disadvantages. The bioremediation process for different waste waters is discussed in this paper as the preferred method since it is cost effective and also environmentally friendly where the limitations accrued to the other forms of remediation procedure do not apply.
KEYWORDS: Bioremediation, Contamination, Microorganisms, Pollution, Treatment, Waste water

INTRODUCTION
Technological and industrial advancement over the past centuries has led to record levels of pollution that now pose a serious threat to man and the environment. The generation and disposal of waste materials from several activities such as mining, chemical production, pharmaceuticals, agricultural practices, petrochemicals etc., have therefore continued to challenge scientists to come up with better and effective methods of dealing with such waste. The population explosions in the world together with developmental activities that come with it have resulted in an increase in the area of water pollution. The need to come up with tangible and viable solutions to water pollution problems has become more urgent and necessary than ever before. This is important due to the degradation and decadence of the environment that the improper and inappropriate disposal of these wastes would cause. Some wastes are released into aquatic bodies which ultimately find their way into other ecosystems and eventually human beings. For example, the improper or inadequate treatment of sewage effluent that is released into aquatic media will negatively impact on users and aquatic organisms (Mohammed, 2009). Rivers are among the most important sources of freshwater on the planet, and this is the main reason why river pollution needs serious attention worldwide. Water scarcity around the world makes the need to solve water pollution issues to be urgent. The availability and supply of clean water is a major concern throughout the whole world and is a challenge for most developing countries as a result of high cost of setting up and maintaining standard water treatment plants.

FULL TEXTS BOOK

In South Africa, water is recognized as a crucial element in the battle against poverty, the cornerstone of prosperity, and a limiting factor to growth. The National Water Act 36 of 1998 recognizes that basic human and environmental needs should be met and that the use of water in all aspects must be sustainable. According to Igbinosa and Okoh (2009), water quality data on fresh water in South Africa are scarce, there is also very little information available on the extent of water pollution in the country. Various surface and groundwater problems, however, are identified such as salinization, nitrate and fluoride pollution. Salinity or total dissolved inorganic compounds is a result of effluent discharges from waste water treatment plants, surface runoff, industrial processes, irrigation practices etc. Excess amounts of nitrate and nutrients in these waste waters leads to eutrophication, algal growth and overall deterioration of water sources and structure and function of aquatic ecosystems. Other water quality components of concern in South Africa's river catchments include microbial quality, sedimentation and silt, acidification, trace elements, oxygen consumption compounds and thermal pollution (National State of the Environment Report – South Africa, 1999; Wakelin *et al.*, 2008; Devlin and Broadie, 2023).

Most of South Africa's metropolitan areas are located on the watersheds of river catchments. The rivers draining away from these watersheds have the dual burden of providing water supplies and transporting waste material. Thus, the dams located downstream of urban and metropolitan areas have become progressively more contaminated during recent decades (Oberholster and Ashton, 2008). The Jukskei River in Gauteng, is surrounded by industrial areas, agricultural activities, water treatment plants, densely populated urban areas and informal settlements of Alexandra Township. Each of these activities deposits its wastes in the river. This has led to the steady increase of the level of pollution in the river and a significant decrease of water quality. This study is dedicated to the investigation of the effectiveness of bioremediation of wastewater to reduce water pollution in water bodies such as in Jukskei River. Global remediation strategies, even in South Africa have focussed heavily on physical and chemical properties (Bhadbhade, and Kanneker, 2002; Khungwayo, 2022). Even though these technologies are generally effective, the facilities are typically expensive to construct, its operation requires a high level of training, involves the use of hazardous chemicals and results in high volumes of waste. Although these methods have been historically applied with success, the scope for improvement using actively growing bacteria is vast, and this has been applied successfully worldwide (van Heerden *et al*., 2009).

Bioremediation is a technology that utilizes the metabolic potential of microorganisms to clean up contaminated environments by using microorganisms and fungi (Watatanabe, 2001; Anyasi and Atagana, 2022). It is a process used worldwide to treat contaminated sites, water sources and soil if there is a spillage of a contaminant in the soil. Bioremediation is the use of living organisms, primarily microorganisms to degrade environmental contaminants into less toxic forms (Van Heerden *et al*., 2009). This study seeks to investigate the effectiveness of bioremediation of waste water in water bodies, using Jukskei River, Gauteng, South Africa as a point of reference. Bioremediation strategies are often more beneficial than traditional strategies because it can be implemented *in situ* (directly at the site of the contaminant with no need to transport the contaminated material) (Anyasi et al., 2023).

BACKGROUND/RATIONALE

Pollution of rivers is a global challenge that has existed for a very long time. A river is polluted when it is either directly or indirectly altered due to human activity resulting in the modification of ecological systems to an extent that harm occurs to the resident aquatic life or humans (Lloyd, 1992; Ellis, 2005). Jukskei River in Gauteng is the river under study in this research. Campbell (1996) observed that there is a very high amount of pollution in most rivers such as the River under study. The pollution of this river has been going on for a long time and many strategies that have been prescribed have either not worked or have not been implemented correctly for various reasons (Campbell, 1996; Huizenga and Harmse, 2005; van Veelum, 2002). Observations are that the pollution in the river is at unacceptable

FULL TEXTS BOOK

levels and it has been getting worse by the day. Neswiswi, 2014). Water quality problems of the Jukskei River, especially high bacterial load, are related to urbanisation (van Veelum, 2002; Bart and Qayoom, 2021).

According to South African Department of Water Affairs and Forestry, Water Research Commission and City of Johannesburg, since Jukskei River is just adjacent to an informal settlement, the major sources of pollution come from human and animal waste and other waste resulting from human activities, bringing about large amounts of nutrients such as nitrogen, phosphorus, metals and other pathogens that are oxygen demanding pollutants (Cillie and Coombs, 2009). Most of the rivers that flow through urban areas are under pressure partly due to large and dense population that depend on the products and services the river provides (Ashton and Haasbroek, 2002; Buta et al., 2023). Jukskei river has not been spared, as it also flows through urban areas. (Matowanyika, 2010). This has put a huge strain on the environment as the informal settlements near and around Jukskei River either do not have proper sanitation services or the ones that are available cannot sustain the whole population, consequently, sewage and various forms of pollution end up draining into the river. The Alexandra Town Council has however, set up rudimentary facilities like stand in pipes, and portable toilets which are serviced on a daily basis but many people in the Sjwetla informal settlement situated right next to the banks of Jukskei River discard their waste and litter directly into the river (Sithole, 1991). Urban runoff from overflowing portable toilets, burst sewage pipes, backyard businesses, car washes and domestic sources are major sources of pollution of Jukskei River.

Wimberley (1992) report on Alexandra Township pollution clearly showed that the greatest impact on the Jukskei River was the increased concentration of nutrient and oxygen depletion because of the discharge of organic material with a high oxygen demand. It is evident that since most of the pollution from the township area is organic in nature, this has a direct negative impact on the aquatic life of all living organisms in Jukskei River. High nutrient concentration in the Jukskei River has been blamed for the eutrophication of the Hartbeespoort Dam as the Jukskei is a major tributary of the dam (Thornton and Ashton, 1989). One of the ways to spot water pollution is the observation of dead aquatic organisms like fish floating on the surface of the water and water that has an abnormal colour or bad smell (Goel, 1996). The measurement of levels of water pollution can be done in many different ways: physical, chemical and biological. Sampling for biological testing involves collection of plants and/or animals from the water body (Malmqvist, 2002). Depending on the type of assessment, organisms may be identified for bio survey, and returned to water body or maybe dissected for bioassays to determine toxicity. Physical parameters of water pollution can be detected using remote sensing techniques. Chemical pollution can be assessed using chromatography or similar techniques. It is against this background therefore that there is a need to undertake this research to assess the effectiveness of bioremediation of wastewater from Jukskei River.

Water is the livelihood of all life so if it is polluted, reduces its quality and as a result may lead to destruction of habitats, reduction and loss of biodiversity. Other effects of water pollution include loss of aesthetic value and/or appeal; as a result, rivers end up being perceived as less useful to residential areas through which they pass. Irrigation, livestock watering become less suitable and the river becomes less suitable for aquatic biota. It is also a legal obligation in terms of the National Water Act (Act number 36 of 1998) to prevent pollution and degradation of water sources such as the Jukskei River from occurring or continuing to recur. Local authorities need to be cognisant of such problems and associated effects so that remedial action and measures are put in place. The advantage of using bioremediation of wastewater in Jukskei River is that the technique is based on cleaning up contaminated sites by enhancing the natural process of biodegradation that occur in nature, hence it is less expensive and preserves the environment as opposed to alternative solutions. The material being treated through bioremediation generally does not have to be transported elsewhere, in other words, it is done in-situ. This research is of great importance because it will assist in making informed assessments on the

FULL TEXTS BOOK

effectiveness of bioremediation as a technique to be used in polluted rivers to reduce levels of pollution and to increase water quality. This will then allow its wider application to different water bodies that are polluted. It is highly probable that pollution of rivers will continue as long as human beings continue production at industries, agriculture and domestic activities. It is therefore important to have sustainable methods to reduce levels of pollution and restore water quality for the betterment of the livelihood of man and the ecosystem.

LITERATURE REVIEW

Bioremediation of wastewater is one of the prescribed methods to reduce pollution in rivers and other water bodies. It involves the degradation of organic contaminants, heavy metals, oil in the soil or water by the action of cultured microorganisms selected for their ability to metabolize the contaminants. Bioremediation uses biological agents such as bacteria or plants, to remove or neutralize contaminants, in polluted water or soil (Cummings SP, 2010; Ayinlara and Babalola, 2023). Bioremediation is a technology that utilizes the metabolic potential of microorganisms to clean up contaminated environments by using microorganisms such as bacteria and fungi (Anyasi and Atagana, 2023). Bioremediation is the use of living organisms to reduce or eliminate environmental hazards resulting from accumulation of toxic or hazardous waste (Gibson and Sayler, 1992). These two authors have a similar concept of what bioremediation is, as they emphasise on the use of living organisms to clean up contaminated environments. Bioremediation is the use of living organisms, primarily microorganisms to degrade environmental contaminants into less toxic forms. This technique is advantageous because it is a “green” method as it is environment friendly and it is generally considered cost effective. High levels of pollution in the river upset the balance in the aquatic ecosystems of water bodies therefore, it is essential to reduce the levels of pollution and the use of bioremediation is seen to be the most preferred from a sustainability point of view. Bioremediation produces a very small quantity of sludge therefore the problem of disposal of sludge is not an issue as opposed to other methods (Sanchez, 2015).

There are three types of bioremediation; they include biostimulation, bioaugmentation and intrinsic bioremediation. Biostimulation is when nutrients are released into the soil where there is need to remove contaminants. In this study, bioremediation of wastewater is selected ahead of physical and chemical techniques because of its impact on the environment and also the cost of the technique. Biological treatment methods are cheaper than chemical or physical treatment methods (Ayinlara and Babalola, 2023). The microbes grow very quickly and are able to remove the contaminants efficiently. Bioaugumentation is done when there are some special places where contaminants need to be removed e.g. municipal wastewater, however, the method is not very effective since it becomes difficult to control the growth of microbes as they may grow out of control. Intrinsic bioremediation is also called natural attenuation (Anyasi *et al*., 2022). It is usually used for soil or water that is contaminated with oil for example in underground tanks and pipes. This approach deals with stimulation of indigenous or naturally occurring microbial population by feeding them with nutrients and oxygen to increase their metabolic activity. The approach entails the introduction of certain microorganisms to the site of contamination. Sometimes the conditions are not suitable, in which case engineered systems have to be introduced to that particular site. Engineered in situ bioremediation accelerate the degradation process by enhancing the physio-chemical conditions to encourage the growth of microorganisms.

Initially, bioremediation was thought to be a difficult technique because it is carried out in the natural environment which contains diverse and uncharacterised organisms. During that time, the isolated, characterised microorganisms were thought to have a minor contribution on bioremediation. It was however noted that information on microbial population relevant to bioremediation was accumulating rapidly with the aid of molecular ecology approaches. In bioremediation, pure and acclimated mixed cultures of microorganisms are used for the removal of toxic metals from liquid wastes, which can result in detoxification and safe environmental discharge (Majumder *et al*., 2014). Bioremediation as an

FULL TEXTS BOOK

environmentally friendly process, takes advantage of a remarkable capacity by microorganisms to degrade or transform pollutants into secondary compounds that are compatible with the equilibrium of the local ecosystem. It was further noted that modern molecular techniques, including genomics, have identified unexpected microbial key players for nutrient removal and sludge bulking and/or foaming, and provided a number of insights into diversity, functions and niche differentiations of the predominantly uncultivated organisms.

A survey of the composition of industrial effluents showed that wastewaters from textile industry contain high concentration of Na_2SO_4 or NaCl (Gratia *et al*., 2009). Among more than 1 000 isolates collected in various cold environments the strain Anthrobacter psychrolalactophilus has been selected for its ability to grow exoenzymes at low temperature, its non-halophilic character and its growth versatility on various media (Gratia *et al*., 2009). The non-pathogenic strain, Anthrobacter psychrolalactophilus, displays a strong resistance to desiccation at room temperature and is suitable for freeze-dried bacterial starters. It was noted that when grown in synthetic wastewater at 10^oC, the strain induces a complete clarification of the turbid medium and effectively hydrolyses proteins to improve the bioremediability of organic compounds in wastewater. In a separate but similar study, it was discovered that the activity profile of the biocatalyst against pH, salts, temperature and target substrates, lactose operon 1 appears to be a good candidate for application in acid dye bath treatment (Trovaslet *et al*., 2007). A bacterium, *Pseudomonas lubricans*, isolated from heavy metal laden industrial wastewater has been shown to tolerate multiple heavy metals (Rehman *et al*., 2010). This investigation was to find ways of isolating and characterizing arsenic resistant bacterium from a contaminated environment using oxidize arsenite. In an assessment of the ability for its exploitation in metal detoxification and environmental bioremediation, this bacterium was used. It also shows the importance of this bacterium in bioremediation of industrial effluents because of its high level of tolerance for heavy metals. Its resistance to heavy metals was also verified. It was then tested for its ability to oxidize arsenite. The study also noted that *P. lubricans* was also resistant to other heavy metals for example cadmium, chromium, copper, mercury and nickel at different concentrations (Bala *et al*., 2022).

The water treatment potential of latex of *Calotropis procera* on domestic and industrial wastewater has shown that it has good coagulant and clarifying properties because it reduced the turbidity, colour, odour, pH, microbial load and total coliforms of all highly turbid samples (Okonko and Shittu, 2007). Samples of water were collected from different locations in the state of Lagos, Abeokuta and Ogun States of Nigeria and were treated with latex. The results obtained after using latex were compared to those using already known and established coagulants like *Moringa oleifera*, *Jatropha curcas*, FeCl3 and alum. The results using latex were significantly better in terms of pH, turbidity, odour and microbial load than those using the other methods. It can therefore be concluded that the biological treatment (bioremediation) could be the most cost effective method to prevent water pollution. This method can be recommended as one of the methods due to its low cost and simplicity. It is further evidence that the process of bioremediation is indeed a potentially effective option for the treatment of water even for domestic use.

Oil wastes either from petroleum or vegetable origin are considered as serious types of hazardous pollutants when they find their way into aquatic environments, since they are highly toxic to aquatic organisms and completely damages the ecology of beach areas (El-Bestaway and El Masry, 2004). This tells the environmentalist that emission of such oils has to be prevented but if and when it cannot be prevented, an immediate solution has to be identified and implemented. In a study to find out which bacterial strains were capable of biodegrading vegetable oil and grease using a sand biofilm. *Pseudomonas diminuta* were among the eight bacterial strains isolated from vegetable grease and oil contaminated industrial waste, four of which were able to degrade oil and grease. These were identified and investigated for oil and grease degradation either individually or in combinations. *P. diminuta*, produced the highest degenerative activity and was used in later studies of biofilm sand filter system for

FULL TEXTS BOOK

vegetable grease removal. The conclusions of this study indicated that a sand biofilm system was efficient in treating oily polluted wastewater of vegetable origin on the basis of bacterial isolates being used.

During a research on decontamination of wastewater, Margesin (2001) illustrated that waste water from a garage and a car wash with anionic surfactants and fuel oil hydrocarbons can be degraded using indigenous microorganisms. The indigenous microorganisms degraded both contaminants effectively after bio stimulation by an organic nutrient supply. After about 35 days, both contaminants were seen to have been reduced to near zero concentrations. In a study also to investigate the factors that promote bioremediation, Lei (2010) suggested that bacteria that were used in the bioremediation processes in sites that were contaminated can actually be grown anaerobically and can be used in the elimination of mixtures containing substances like benzene, toluene, ethylbenzene and xylenes (BTEX), total petroleum hydrocarbons (TPH), and trichloro ethane (TCE). The bioremediation of waste water containing phenol was done by Kaneka, (2008) who proposed the use of alkaliphilic bacteria. Based on its high solubility, phenol naturally becomes a major pollutant in the water bodies where waste from industries is deposited. Since the phenol bearing industrial waste water is alkaline, an alkaliphilic bacteria was isolated from sediments off an alkaline lake in Lorna. Alkaliphilic strains including *Bacillus cereus*, *Citrobacter freundii*, *Athrobacter specie*, were capable of removing phenol from waste water arising from industries manufacturing methyl violet and cunane-phenol. It was noted that the alkaliphilic bacteria studied, managed to remove 100% of the phenol from the industrial waste waters within 48 hours of incubation under shaking culture conditions at ambient temperature of around 28^{o}C. Monocrotophos, (MCP), an organophosphorus insecticide, is widely used to control insects on crops (Sekar, 2008). A comprehensive investigation on comparison of phytoremediation and bioremediation for altrazine from waste water contaminated with toxic pesticides was carried out (Sekar, 2008). This study made a profound discovery which turned out to be methods of degrading pollutants of agricultural origin. Altrazine, which is one of the major components of insecticides and herbicides, was used as a sample contaminant to be removed using each of the two methods. The results indicated that degradation of altrazine by phytoremediation was only 23% compared to 80% of bioremediation. This makes bioremediation method better preferred than the conventional methods. The Jukskei River is also found to contain pollutants from industries for example metals. The classic difficulty with the removal of metal ions is the fact that they do not precipitate out as hydroxides by simple pH adjustment. Moreover, these conventional methods are fast becoming inadequate to address current stringent regulatory effluent limits. Most of the methods are too costly to be implemented and have adverse effects to the environment (Ahluwalia and Goyal, 2007; Bala *et a*l., 2023). As a result, alternative cost-effective technologies and techniques should be implemented. The use of biological materials, including living and non-living microorganisms, to remove and recover toxic or precious metals from industrial wastewaters has received attention over the years due to good performance, availability and low cost of raw materials, (Benaissa and Elouchdi, 2007; Anyasi *et al*., 2023).

Water comprises 70% of the Earth's surface making it one of the most valuable natural resource (Krantz, 2011). Of this, about 97.5% is salt water and only about 2.5% is fresh water (Sandi & Darrin, 2012). This means that water is a fundamental element to all forms of life for various functions such as drinking, cleaning, as a reproductive medium, as habitat for aquatic organisms and for irrigation purposes (Ninhoskinson, 2011). Water makes up 50 to 90% of the body weight of most living organisms. It is also essential as a transport mechanism and for metabolic processes of most living organism (Sandi & Darrin, 2012). Pollution in rivers is a global problem that has existed for a very long time. This challenge has been a concern for environmentalists, and policy makers. It has always been considered that the global water crisis was the problem of water scarcity, but currently there is recognition that water quality is a major component of the problem (Zhulidov *et al*., 2001; Lorenzo *et al*., 2019).

FULL TEXTS BOOK

Water research in South Africa involves a variety of government departments' statutory bodies, industries and universities (Cillie & Coombs, 1979). Previous studies involving analysis of water quality in the South African aquatic systems have involved physio-chemical and microbial assessment (Lin *et al*., 2004; Mthembu, 2004; Anyasi *et al*., 2022). Bio-monitoring is another valuable assessment tool that is receiving increased use in water quality monitoring programmes of all types (Kennish, 1992). This involves the use of biological response to assess changes in the rivers. Indicators and indicator species and communities such as fish and algae are used for this purpose. This type of analysis assesses water quality from a pollution and human health perspective. Microbial assessment involves quantification of Escherichia coli (E coli) form of bacteria and provides an indication of the degree of faecal contamination and the presence of pathogenic organisms. This is very important in the context of water portability and safety. Water pollution is a major problem in the global context. It has been suggested that it is the leading cause of deaths and diseases worldwide (Pink, 2006). Many of South Africa's water sources have become polluted due to effluent discharge, sewage effluents, mine and agricultural activities (Walmsley et al, 1999). The term effluent is described by the Water Services Act of 1997 as human excreta, domestic sludge, domestic wastewater, grey water or wastewater resulting from commercial or industrial use. Human excreta from informal settlements for example Sjetlwa and domestic waste from Alexandra Township are the major contributors of domestic waste (Anyasi *et al*., 2022).

Domestic waste is defined as consisting of 90% of wastewater by volume that arises from domestic and commercial activities and premises and may include sewage, household waste from bathing, washing and toilets, (DWA, 2009). Most rivers that flow through urban areas are under pressure partly due to the large and dense human populations that depend on the products and services that these rivers provide. (Ashton and Haasbroek, 2002). Surface water quality problems are not unique to Jukskei River only, in fact, most South African Rivers that flow through informal settlements experience similar problems (Van Nierkerk, 2000). One main reason for the concern of contamination is the use of surface waters as recipients for wastewater. Most effluents from cities and industrial plants end up in rivers, streams or lakes (Rodriguez-Mozaz, 2004). Eutrophication, salination, sedimentation and microbial contamination are all symptoms of polluted water sources which require increasingly sophisticated technologies to render the available water fit for downstream use (Roux and Oelofse, 2010; Buta *et al*., 2023). Pollution of rivers, lakes, aquifers from domestic and industrial wastewater discharge, mining runoff and agrochemicals is now a growing threat to water resources in most countries in Southern Africa. The quality of water supplies in Southern Africa Development Committee (SADC) region, once taken for granted, is becoming the focus of major concern. Due to increasing urbanisation in the SADC region, experts say that most of the cities have not been able to develop basic utilities for water and environmental services (solid waste disposal systems, sewage treatment and agricultural pollution control) to keep pace with rapid population growth (Cillie and Coombs, 2009; Bhat and Qayoom, 2021). Anthropogenic activities are a major contributor to river pollution. A study by Ncube (2014) evaluates that the introduction of pollutants into the Vaal River could be as a result of a number of natural processes, but mainly by the influence of human activities within the catchment area. Vaal River is one of the largest rivers in South Africa and it is experiencing pollution in the same trend as any other river whose catchment area is influenced by human activities. Water is an important substance for man and the environment and in its different phases makes about 70% of the earth. According to the US Geographical Survey, only 3% of the world's water is fresh water, 68% of which is found in icecaps and glaciers, 30% is found as ground water. Only 0, 3% of fresh water is found in lakes, rivers and swamps. This makes water for human beings and other organisms very limited, hence should be protected. Data collected by Global Environment Monitoring system project indicated that about 10% of all rivers monitored may be considered polluted as they have a biological oxygen demand (BOD) more than 6, 5 mg/l (UNEP/WHO, 1998).

FULL TEXTS BOOK

In countries where potable water is in short supply such as South Africa, the presence of toxic metals such as lead, arsenic, cadmium and mercury in the environment is a cause for concern due to their health implications (Awofolu *et al*., 2005). As a result, efforts should be made to prevent and continually find ways of removing these toxicants from the aqueous media (Mohammed, 2009). An efficient and cost effective method needs to be discovered for the removal of contaminants/pollutants since their presence in water systems can affect the health of aquatic ecosystems and indirectly, man (Nicholas, 2005). Water quality is a parameter frequently used to determine levels of pollution. The higher the level of water pollution, the lower the quality of the water. Water quality is used to describe the chemical (phosphates and nutrients), physical (temperature, pH, conductivity and biological (bacteria, viruses, and parasites) components of water. Changes in water quality are used as indicators to establish the degree of pollution. Unmanaged human activities can cause deterioration of surface and groundwater quality (State of the Environment Report for Mogale City Local Municipality, 2011). Water quality can be changed or affected by both natural processes and human activities which lead to the pollution of water bodies (DWA, 2011). The measurement and evaluation of water quality in Jukskei River will be essential in assessment of the effectiveness of bioremediation of wastewater.

DISCUSSION ON THE REASON FOR THE STUDY

According to a study by the Water Research Commission (WRC), the state of most of South Africa's rivers continues to deteriorate (Sapa, 2009). There are clear indications from the relatively scanty water quality monitoring data available that water quality of most rivers in South Africa has deteriorated over the past 20 years (Oberholster, 2010). The WRC revealed at the Implementing Environmental Water Allocation (IEWA) conference in Port Elizabeth that some rivers in South Africa showed a huge deterioration in water quality (Sapa, 2009). South Africa is facing a water supply crisis caused by a combination of low rainfall, high evaporation rates, an expanding economy, which means more pollution and a growing population whose geographical demands for water do not conform to the distribution of exploitable water supplies. The water quality of these resources has also declined due to increased pollution caused by industry, urbanisation, afforestation, mining, agriculture and power generation (Ashton et al., 2008). Exacerbating factors are South Africa's outdated and inadequate water treatment and sewage treatment plant infrastructure and unskilled operators (Rietveld et al., 2009; Snyman et al., 2006). Water pollution is increasing in Jukskei River due to anthropogenic activities like farming, industrial activities, domestic activities and other commercial activities like informal businesses for example car washes and caravan food outlets along the river and its catchment. This pollution is a threat to biodiversity in Jukskei River and its tributaries. Owing to the catchment's position and associated land use activities, urbanisation, agriculture and industrial activities taking place along its boundaries, Jukskei River has gradually deteriorated in terms of its water quality and hydrological conditions. The river, which was once regarded as an asset to its immediate surroundings has become a liability.

CONCLUSION

Being that the aim of this study is to determine how the bioremediation technique can be employed to treat contaminated wastewater and prevent pollution in this rivers, and since environmental issues are similar worldwide, especially in developing countries, this study seeks to attempt to provide solutions on how waste treatment alternatives can be employed to provide environmental protection at a cost effective and environmental friendly procedure. It is imperative that the presence of pollutants in Jukskei River is contained using bioremediation. Literature has it that the pollutants in this water body threaten the livelihood of organisms in around the ecosystem of this river as well as human. Why bioremediation? Because it is safer for the environment that is being cleaned up, since natural organisms from the environment are used, therefore there are no unnatural products generated from the process. It

FULL TEXTS BOOK

is also cost effective because the organisms used are readily available in the environment. As the demand for water increases in line with human population pressure and economic development activities, river ecosystems will continue to deteriorate unless they are managed in a sustainable way. The exponential increase in the world population, the growing sophistication of its needs and activities for the maintenance of present day life style and the process of industrialization have not only resulted in vastly increased pressure and depletion of water resource but they have also caused generation of enormous quantities of waste (Fuggle and Rabie, 1992). Although some parts have higher rainfall than others, the average rainfall of 450 mm per annum is far below the global average of 860 mm per year. Thus, the reality is that South Africa has relatively little water available and several factors such as climate change, water pollution and international obligations, limit the amount of water that we have at our disposal (Oelofse and Strydom, 2010). It is against this background that solutions need to be found for treatment of wastewater from different anthropogenic activities that eventually find its way to water bodies. Such wastewater cannot be allowed to continue to pollute rivers for the sake of human beings that rely on river and which exist interdependently, for the protection of biodiversity in aquatic systems dam water for use, for the environment which sustains and supports various organisms and for the aesthetic value of water bodies as part of sustainable use of natural resources.

ABSTRACT

Disasters, whether natural or human-induced, pose significant threats to human lives, property, and infrastructure. This study examines the effectiveness of search and rescue (SAR) dogs in locating survivors during disasters, with a focus on the experiences in Serbia, Croatia, and Slovenia. The primary goals are to evaluate training protocols, operational challenges, success rates, and the overall impact of SAR dogs in disaster scenarios. The findings indicate that SAR dogs greatly enhance the efficiency of disaster response operations. Their superior sense of smell, agility, and ability to manoeuvre through complex terrains make them crucial for quickly locating survivors. However, the performance of SAR dogs is affected by various factors, including the quality of their training, environmental conditions, and the coordination between handlers and dogs. The research highlights several challenges encountered by SAR dogs, such as extreme weather conditions, hazardous terrains, fatigue, and psychological stress. Additionally, limited resources and inconsistent training standards can hinder their effectiveness. The study underscores the importance of standardized training protocols, increased resource allocation, and better coordination among SAR teams. By addressing these challenges, the efficiency of SAR dogs can be further optimized, resulting in more effective disaster responses and higher survival rates. SAR dogs play an essential role in disaster management in Serbia, Croatia, and Slovenia. Ongoing investment in their training and welfare, along with improved operational protocols, will ensure their crucial contribution to saving lives during disasters. This study contributes to a broader understanding of the effectiveness of SAR dogs and provides practical recommendations for enhancing disaster response strategies.

Keywords: search and rescue dogs; natural disasters; disaster response; survivor; Serbia; Croatia; Slovenia; effectiveness; training standards; deployment protocols.

1. Introduction

Disasters, whether natural or human-induced, pose severe threats to human lives, property, and infrastructure (Cvetković, 2023a; Cvetković, Nikolić, & Lukić, 2024; Cvetković, Tanasić, et al., 2023; Cvetković & Šišović, 2023, 2024; Nikolić, Cvetković, & Ivanov, 2023). Also, disasters present profound threats to human lives, property, and the environment, causing widespread loss and disruption in communities across the globe (Cvetković, Čvorović, & Beriša, 2023; Cvetković et al., 2022; Cvetković, Nikolić, & Ivanov, 2023; Cvetković & Planić, 2022; Cvetković, Romanić, & Beriša, 2023; Cvetković et al., 2021; Phillips, 2014). These catastrophic events can be natural, like earthquakes, floods, hurricanes, and volcanic eruptions, or human-made, such as industrial accidents, terrorist attacks, and armed conflicts. Regardless of their origin, disasters often strike without warning, creating chaos and an immediate need for a rapid and effective response (Hasan & Sultana, 2024; Molnár, 2024; Starosta, 2023; Sudar, Cvetković, & Ivanov, 2024).

The initial hours and days after a disaster are critical for rescuing survivors and delivering emergency aid to the injured (Islam, 2023; Marceta & Jurišic, 2024; Ulal & Karmakar, 2023). In these circumstances, search and rescue teams are indispensable, utilizing various methods and technologies

FULL TEXTS BOOK

to find and free individuals trapped in debris or stranded by floods and other disasters. Prompt and efficient actions can be the difference between life and death for many victims (Cvetković, 2023b; El-Mougher, Abu Sharekh, Abu Ali, & Zuhud, 2023; Phillips, 2014; Sergey & Gennadiy, 2022; Shibru, Operea, Omondi, & Gichaba, 2022).

Nevertheless, conducting search and rescue operations is fraught with numerous challenges, including adverse weather, inaccessible terrain, limited resources, and logistical hurdles. Despite these obstacles, the international community is continually striving to improve disaster response capabilities through training, the advancement of new technologies, and enhanced cooperation among nations and organizations. Consequently, studying the effectiveness of different search and rescue methods and tools, including the deployment of specially trained dogs, is crucial for advancing disaster response and boosting the survival rates of those affected. By understanding and overcoming the challenges in these operations, we can help build more resilient communities equipped to handle future disasters more effectively (Ice, Dufour, & Stevens, 2015).

In such critical times, effective rescue operations become essential to minimize casualties and mitigate the impact of these events (Cvetković & Jovanović, 2021). Search and rescue (SAR) dogs play a crucial role in these operations, thanks to their extraordinary detection and search capabilities. Their exceptional sense of smell, agility, and speed enable them to locate survivors trapped under debris or in inaccessible areas where human rescuers might struggle to reach (Grandjean, 2007). In disaster response scenarios, the swift identification and rescue of survivors is crucial. Among the various methods employed, search and rescue (SAR) dogs are particularly notable for their exceptional ability to detect human scent, navigate through difficult terrains, and perform under conditions that might impede human rescuers. These canine heroes are indispensable assets in disaster situations, greatly improving the efficiency and success rates of rescue missions (Fischer et al., 2020).

SAR dogs represent a highly specialized and invaluable group of working dogs trained for diverse search and rescue missions. Their training equips them to locate survivors under rubble, in wilderness areas, or other challenging environments, making them indispensable during disasters. These dogs are distinguished not only by their rigorous training but also by their innate abilities, including a keen sense of smell, agility, and endurance. Historically, SAR dogs have demonstrated their worth as loyal and brave assistants, often risking their lives to save humans (Gerbec, 2010). The global effectiveness of SAR dogs in disaster response is well-documented, with numerous case studies highlighting their significant contributions. This research centres on the effectiveness of SAR dogs in Serbia, Croatia, and Slovenia—countries that have faced a variety of natural and human-made disasters over the years. The distinct geographical and socio-political landscapes of these regions provide a rich context for examining how SAR dogs are integrated into their disaster management systems (Kovačević & Petrović, 2018).

The training and preparation of SAR dogs are vital to their effectiveness. These dogs undergo rigorous training from a young age to refine their natural abilities and acquire new skills tailored for search and rescue missions. Their training includes exposure to diverse environments, scents, and simulated disaster scenarios, ensuring they are well-prepared for actual operations. Psychological resilience is also a key focus, as SAR dogs must remain calm and focused amidst the chaos of disaster scenes (Moehlmann & Otto, 2017). Training SAR dogs begins at an early age, with basic commands and behaviours. As they mature, their training becomes more specialized and challenging, incorporating simulations of real-life disaster scenarios.

Trained SAR dogs can identify human scents under layers of concrete, earth, and other materials, making them essential members of rescue teams (Otto et al., 2019). Additionally, the psychological readiness of SAR dogs is crucial. They must remain calm and focused in chaotic and stressful situations, achieved through continuous training and positive reinforcement methods. This readiness is also ensured by rigorous selection processes, focusing on both genetics and early behavioural traits (Otto et al., 2019).

FULL TEXTS BOOK

However, the successful deployment of SAR dogs depends not only on the dogs but also on their handlers. The relationship between a SAR dog and its handler is symbiotic, requiring coordination, communication, and trust for effective operations. This study examines these dynamics, underscoring the necessity of comprehensive training programs that encompass both technical skills and the handler-dog relationship (Bryson et al., 2019). Despite their heroic contributions, SAR dogs and their handlers face numerous challenges. Field conditions can be extremely harsh, including working in earthquake rubble, flooded areas, or mountainous regions with avalanches. These dogs are exposed to physical injuries, stress, and exhaustion, necessitating meticulous care and support from their handlers and veterinary teams (Jones et al., 2004).

In Serbia, Croatia, and Slovenia, the operational environment presents unique challenges and opportunities for SAR teams. These countries have developed specific protocols and standards for using SAR dogs, shaped by their respective legal and organizational frameworks. By analyzing these protocols and the experiences of SAR teams in recent disasters, this study aims to provide insights into best practices and areas for improvement (Mlađan & Cvetković, 2020). Recent disaster case studies in these countries offer valuable lessons on the deployment and effectiveness of SAR dogs. The responses to the 2014 Balkans floods and the 2020 Zagreb earthquake, for instance, highlighted both the successes and the challenges faced by SAR teams. These events emphasized the importance of continuous training, sufficient resources, and international cooperation in enhancing the capabilities of SAR dogs (Mijalković & Cvetković, 2013).

This study provides a comprehensive theoretical and conceptual framework for understanding the role and significance of SAR dogs, international standards, and the legal frameworks governing their use. It also examines the organization of rescue services with dogs in Serbia, Slovenia, and Croatia. The research focuses on the conditions under which SAR dogs operate during disasters, the obstacles they encounter, and the cultural differences in the perception and treatment of dogs within rescue operations. A detailed case study is presented on the use of SAR dogs following the earthquake in Turkey, highlighting the rescue operations involving SAR teams from Serbia, Slovenia, and Croatia. This case study provides specific examples of the challenges faced by these dogs and their handlers and evaluates the effectiveness of their deployment in life-saving efforts post-disaster. The findings underscore the significant role SAR dogs play in disaster scenarios.

2. Background and Significance of Search and Rescue Dogs in Disaster Response

Rescue dogs, also known as search and rescue (SAR) dogs, are specially trained canines whose main function is to assist in locating missing or trapped individuals during disasters. Their exceptional sense of smell, agility, and rigorous training render them invaluable in situations where human capabilities are limited. SAR dogs are trained not only to find survivors but also to perform specialized tasks tailored to the nature of the emergency. Fischer et al. (2020) emphasize that SAR dogs significantly enhance the efficiency of rescue missions worldwide due to their unique abilities and comprehensive training. According to Milojević (2023), a rescue dog can be of noble (pedigree) or mixed breed origin. These dogs are registered as vital assets by state or private legal entities, and trained for specific tasks within these entities' operational scope. Generally referred to as "service dogs," they are integral to various rescue missions (Milojević, 2023). Milojević's definition further explains that rescue dogs can also be privately owned, provided they are specially trained under clearly defined legal frameworks and within specific time intervals. When privately owned rescue dogs are deployed, both the owner and the trainer authorized by the owner must be involved (Milojević, 2023).

In literature, rescue dogs are mainly categorized based on their purpose into three primary groups (Milojević, 2023): a) dogs that search by following a known or unknown track; b) dogs that search above or below the ground surface; c) dogs that perform searches on the water surface.

FULL TEXTS BOOK

Additionally, there are sledge dogs and draft dogs used for transportation in snow or difficult terrains. These dogs can transport injured individuals, essential search and rescue equipment, medical supplies, and even deceased bodies, ensuring a dignified burial. Consequently, they are also considered a type of rescue dog (Milojević, 2023). These three primary categories of SAR dogs are defined based on their training methods for locating individuals. Tracking dogs can work on a leash or off-leash, keeping their noses close to the ground, following the exact trail left by the missing person. They primarily respond to specific ground scents, detecting items like clothing or places where the person stayed (Jones et al., 2004).

Air-scenting dogs, on the other hand, can work effectively in areas shared with other rescue teams. Operating typically off-leash, these dogs can cover large areas quickly and are trained to detect the scent of living people, deceased individuals, or body parts. Air-scenting dogs do not require a scent item from the missing person, making them more flexible than tracking dogs (Jones et al., 2004). Once these dogs identify a human scent, they follow it to its source, quickly recognizing when they lose the scent and changing direction until they return to the point of highest scent concentration. The handler usually searches the area in a grid pattern against the wind. Besides search and rescue missions, air-scenting techniques are also used by police dogs to locate explosives, drugs, or crime scene evidence (Jones et al., 2004).

Water search dogs conduct searches while riding in boats, from the shore, or while swimming. On boats, the dog and handler typically position themselves at the bow. Upon detecting a victim's scent, the dog signals the handler by lowering its nose into the water or displaying anxious behaviour such as scratching the boat, biting the water, whining, barking, or jumping into the water to get closer to the scent source. If the boat moves away from the scent, the dog will shift from one side of the boat to the other, trying to "catch" the scent. If no scent is detected during the boat ride, the dog remains calm (Hardy, 1992).

Rescue dogs have a rich history, dating back to the 17th century when monks in Switzerland used Saint Bernard dogs to locate travellers lost in snowstorms. Known for their strong build and keen sense of smell, these dogs were the precursors to modern SAR dogs. Over time, the role of rescue dogs has evolved significantly, encompassing various breeds and specialized training techniques tailored to different disaster scenarios (Mantrailing, 2022). Modern SAR dogs undergo extensive training from a young age, starting with basic obedience and progressing to advanced search techniques. Otto et al. (2019) note that SAR training includes exposure to a wide range of environments, scents, and simulated disaster scenarios to ensure they are well-prepared for actual operations. This rigorous training helps dogs develop the necessary skills and psychological resilience to remain calm and focused amidst the chaos of disaster scenes.

The success of SAR operations relies heavily on the symbiotic relationship between the dog and its handler. Effective communication, coordination, and trust are essential for successful operations. Bryson et al. (2019) stress the importance of comprehensive training programs that cover both technical skills and the handler-dog relationship, highlighting the necessity of a cohesive partnership for optimal performance in rescue missions. Despite their heroic contributions, SAR dogs and their handlers face numerous challenges. Harsh field conditions, such as earthquake rubble, flooded areas, or mountainous regions with avalanches, can expose these dogs to physical injuries, stress, and exhaustion. Therefore, meticulous care and support from handlers and veterinary teams are crucial to maintaining the dogs' well-being and effectiveness (Jones et al., 2004).

In Serbia, Croatia, and Slovenia, SAR teams operate under specific protocols and standards shaped by their respective legal and organizational frameworks. Analyzing these protocols and the experiences of SAR teams in recent disasters provides valuable insights into best practices and areas for improvement. Case studies, such as the responses to the 2014 Balkans floods and the 2020 Zagreb earthquake, highlight both the successes and challenges faced by SAR teams, underscoring the importance of continuous training, sufficient resources, and international cooperation to enhance the capabilities of SAR dogs.

FULL TEXTS BOOK

3. Historical Overview of the Use of Search and Rescue Dogs

For millennia, dogs have been indispensable partners to humans, assisting in various tasks. In the 17th century, monks at the Hospice of the Great St. Bernard in Switzerland bred a specific dog breed, now known as the St. Bernard, to locate human tracks buried under snow. Numerous accounts document these dogs guiding lost individuals through the snow to the safety of the monastery (Mantrailing, 2022). One of the most renowned St. Bernards, Barry, served at the hospice from 1800 to 1812 and is credited with saving forty lives. In 1812, Barry was moved to a monastery in Bern, Switzerland's capital, where he died in 1814. His preserved body is currently on display at the Natural History Museum in Bern (Gerritsen & Haak, 2014).

The Industrial Revolution brought significant societal changes, leading to new roles for dogs. Military campaigns further advanced dog training. Around 1885, the German (Prussian) army began utilizing dogs as pack animals for transporting ammunition and supplies and as guards for military installations. Jean Bungartz, a German animal painter, writer, and book illustrator, developed training programs for dogs to locate wounded soldiers. In 1890, he founded the "Deutschen Verein für Sanitätshunde" (German Association for Medical Dogs), training dogs for war voluntarily, with the army covering the costs while private individuals conducted the training (Mantrailing, 2022).

In 1903, Bern's chief of staff, Berdez, published "Anleitung zur Dressur und Verwendung des Sanitätshundes" ("How to Train and Use Medical Dogs"), with illustrations by Bungartz (Mantrailing, 2022). Despite these advancements, early 20th-century economic hardships and limited understanding of dogs' potential hindered widespread support. By 1911, the war ministry had abandoned the use of dogs. However, World War I saw a resurgence in the use of medical dogs. Initially, only a few were employed, but as the war continued, their numbers increased to over 4,000. These dogs were privately owned or recruited from breeders. During World War I, over 30,000 dogs were used, with only 10% returning to their owners (Mantrailing, 2022). Training techniques evolved, and interest in preserving medical dogs persisted. Public perception of dogs in Germany improved, with civilians primarily supporting their popularity, though training remained under military jurisdiction (Mantrailing, 2022).

Heroic stories of dogs during World War I and II represent some of the earliest organized search and rescue teams involving dogs. Military, ambulance, and Red Cross dogs were used on battlefields to locate the wounded and deliver first aid (Jones et al., 2004). In 1940, Ferdinand Schmütz began systematically training dogs for avalanche search and rescue. During World War II, the use of dogs increased significantly, with over 200,000 dogs in service across all fronts, 25,000 of whom died on the German front. The demand for military dogs was so high that pets were requisitioned for service (Mantrailing, 2022). Two types of dogs were in use at the time: those using air scent to locate wounded soldiers and avalanche dogs. In the final years of World War II, rubble search dogs were also trained. The development of these dogs began when dogs repeatedly found people under the rubble of bombed houses by chance. With the help of just four dogs, over 35 people were found alive (Mantrailing, 2022). After World War II, the concept of rubble search dogs spread from England, and efforts were made to properly train these dogs. In Switzerland, work with disaster dog teams began in 1968. In 1972, the "Schweizerische Verein für Katastrophenhunde" (Swiss Association for Disaster Dogs) published a training guide. Public awareness of the importance of these dogs grew, especially after earthquakes in Italy in 1967, Romania in 1977, and Algeria in 1980, significantly increasing their use and trust (Mantrailing, 2022). However, in Germany, scepticism towards dogs led to more investments in technology. Civilians again took responsibility for training search and rescue dogs (Mantrailing, 2022). Disaster protection responsibilities were assigned to individual states, with search and rescue teams assisting, including fire departments and privately formed teams. The "Bundesverband für das Rettungshundewesen e.V." (Federal Association for Rescue Dogs) now acts as a regulatory body (Mantrailing, 2022).

FULL TEXTS BOOK

In the former Yugoslavia, the first avalanche rescue seminar was organized in 1952 by the police, mountain rescue service, and alpine enthusiasts in the village of Tamarje, Slovenia. Similar efforts followed for rubble search dogs, with the first seminar in 1977 during the construction of a highway near Vrhnika, organized by the Slovenian Kennel Club, police, and mountain enthusiasts (Vasiljević, 2023). In the 1980s, Serbia made pioneering attempts at working with avalanche dogs. Ilija Latinović, a physical education professor from Kikinda, initiated these efforts on Šar Mountain. Sixteen years later, Serbia had its first rubble and avalanche rescue dog. In 2009, the Ministry of Defense created an internal program, and in 2010, the Ministry of Interior, in collaboration with France, established a rescue dog department, training ten dogs. The Rescue Dog Training Association in Niš started its program in 2013, and in 2019, the Water Rescue Association prepared its first water rescue dog. By 2023, the Mountain Rescue Service had its first five certified dogs (Vasiljević, 2023).

4. Comparative Analysis of Search and Rescue Dog Operations in Natural Disasters: Case Studies from Serbia, Croatia, and Slovenia

4.1. Organization and Deployment of Search and Rescue Dogs in Serbia

National teams for the training and utilization of rescue dogs in Serbia operate under the auspices of the Ministry of Defense and the Ministry of Internal Affairs. Civilian associations such as the Rescue Dog Training Association in Niš, the Water Rescue Association, the Mountain Rescue Service, the Club for Training Sporting and Service Dogs in Belgrade, and various individuals also play crucial roles in this field. The Dog Training Center, a division of the Ministry of Defense, offers specialized training for veterinary services and advanced courses for experts, covering training, retraining, breeding, and healthcare for defence system dogs. Located at the "Prince Mihailo" barracks in Niš, the centre comprises command, logistics, a training company, and a breeding and reproduction unit. Its primary responsibilities include training and professional development for veterinary staff, soldiers, non-commissioned officers, civilians, and international trainees, along with organizing veterinary service courses. The centre also extends its services to entities outside the Serbian Armed Forces and the Ministry of Defense (see further and more at https://www.vs.rs/sr_cyr/jedinice/vojska-srbije/komanda-za-obuku/centar-za-obuku-pasa).

The Center conducts various specialized professional courses, including:

a) Training handlers and guard service dogs: Focuses on the fundamental tasks of guarding and securing facilities or territories.

b) Retraining guard service dogs and their handlers: Emphasizes retraining dogs to respond appropriately in specific situations, such as aggressive behaviour towards intruders.

c) Training handlers and protective service dogs: Prepares dogs and handlers for protection and security tasks.

d) Retraining protective service dogs and their handlers: Specializes in retraining dogs for high-risk scenarios.

e) Training handlers and dogs for special actions: Prepares dogs and handlers for specialized tasks such as locating missing persons or detecting hazardous substances.

f) Training handlers and dogs for rubble and avalanche searches: Essential for rescue missions in debris or snow avalanche scenarios.

g) Tracking service dogs and their handlers: Trains dogs and handlers for tracking and locating specific targets.

h) Retraining tracking service dogs and their handlers: Focuses on refining the responses of tracking dogs in unpredictable or risky situations.

i) Training handlers and dogs for mine and explosive detection: Critical for identifying and marking mines or explosive materials.

FULL TEXTS BOOK

j) Retraining dogs for mine and explosive detection: Specializes in dogs' reactions when encountering dangerous materials.

k) Training handlers and dogs for detecting psychoactive substances: Vital for the detection of drugs or other psychoactive substances.

l) Retraining dogs for detecting psychoactive substances: Focuses on refining dogs' quick and precise reactions in specific contexts.

These courses comprehensively cover the essential aspects of training dogs for specialized rescue and search missions, equipping them for various scenarios to protect and save lives or detect hazardous materials. The Dog Training Center was established in September 2020 from the Dog Handlers Training Company and the Breeding and Training Company of the Logistics Training Center, continuing the tradition of the 40th Center for Training Dog Handlers and Dogs of the SFRY Ministry of Defense, founded on October 21, 1957 (https://www.vs.rs/sr_cyr/jedinice/vojska-srbije).

The Ministry of Internal Affairs houses the Sector for Emergency Situations, which includes the Administration for Fire and Rescue Units and Civil Protection. This Administration ensures timely and lawful oversight of fire and rescue units, including those of legal entities and volunteer fire brigades. It also coordinates their efforts during major emergencies, directly impacting regional units' effectiveness in improving fire and rescue operations. Key tasks include organizing and coordinating fire and rescue units, equipping them with necessary materials and technology, enhancing emergency response readiness, managing activities during significant emergencies, drafting laws and regulations, supervising volunteer fire societies, and educating, equipping, and training civil protection units, alongside destroying explosive remnants of war (http://prezentacije.mup.gov.rs/).

Fire and Rescue Units (FRU) are the first to respond to emergencies, aiming to save lives and protect health, property, and the environment. They collaborate with other relevant entities to mitigate emergency consequences. Emergency Management Administrations in Belgrade, Niš, Novi Sad, and Kragujevac feature fire and rescue brigades, while Departments for Emergency Situations have fire and rescue battalions. Since 2017, efforts have been ongoing to select, train, equip, and recruit new members. Specialized teams for water rescue and rubble rescue operate within the FRU, and firefighters receive special training for technical interventions in traffic and hazardous material incidents. FRUs work with other Ministry of Internal Affairs units (Helicopter Unit, Gendarmerie, Special Anti-Terrorist Unit), other ministries, the Serbian Armed Forces, and services during joint emergency actions. They also provide international assistance during natural disasters and other accidents outside Serbia, adhering to international agreements (http://prezentacije.mup.gov.rs/).

Within the Administration, the Specialist Team for Rubble Rescue and the Center for Dog Handler Training, equipped with trained rescue dogs, play pivotal roles. They are responsible for managing dog handlers, maintaining the health and training of service dogs, and conducting daily training for various tasks. Handlers are stationed in Novi Sad, Belgrade, Kragujevac, Niš, and Valjevo, with some training taking place in Moldova and Turkey. These teams also collaborate effectively with the Slovenian Civil Protection and their instructor (Vasiljević, 2013).

A notable member of this specialist team is Zigi, a Belgian Shepherd Malinois, who participated with the Serbian team in Turkey, searching for survivors in the rubble following the devastating earthquake in February 2023, saving two lives. Zigi has completed basic obedience and rescue training and has participated in international exercises in Ljubljana in 2017 and 2019, as well as searches for missing persons at the "Technical-Overhaul Institute" in Kragujevac. He has been actively involved in numerous open space searches for missing persons in areas like Zaječar, Niš, and Valjevo. Zigi is under the care of his handler, Mili Radojević, a firefighter-rescuer and member of the Specialist Team for Rubble Rescue (MUP RS, 2023).

The Mountain Rescue Service (MRS) of Serbia conducts searches for missing persons, frequently involving lost hikers. The MRS team studies the terrain, develops strategies, and searches the area,

FULL TEXTS BOOK

providing medical assistance and ensuring the safe return of the missing. Since early 2014, MRS dog handlers and rescue dogs have been actively participating in rescue missions. MRS dogs undergo training that typically spans around two years, after which the handler and dog must pass an exam to demonstrate their readiness for the most challenging tasks. MRS has several dogs that have completed this training and have participated with their handlers in various rescue missions (https://www.gss.rs/predstavljamo-nove-clanove-gss-a).

In February 2024, a training session for avalanche search and rescue dogs was held on Kopaonik, in collaboration with the Club for Sporting and Service Dogs Belgrade. This session included MRS dogs and other dogs trained in Serbia, now internationally licensed for forest searches, enhancing Serbia's capability with dogs trained and licensed for avalanche rescues (Tanjug, 2024).

The training and utilization of rescue dogs in Serbia are relatively recent and still developing. Significant investment is required in training handlers and dogs and increasing their numbers, particularly by the state. The growing enthusiasm from the civilian sector, with individuals joining organizations, undergoing training, obtaining licenses with their dogs, and participating in various operations, is a positive development. An increase in the number of trained handlers and rescue dogs for various conditions and circumstances is anticipated in the future.

4.2. Protocols and Training Standards for Search and Rescue Dogs in Croatia

The Croatian Mountain Rescue Service (HGSS) operates as a national, voluntary, professional, humanitarian, and non-partisan organization recognized for its public significance. Its primary goals are to prevent accidents, conduct rescue operations, and provide initial medical assistance in mountainous and other inaccessible terrains, as well as in emergencies requiring specialized knowledge and technical rescue equipment, all aimed at preserving human life, health, and property (Croatian Mountain Rescue Service, 2024). HGSS encompasses mountain rescuers who cover the entire territory of Croatia. The operation of HGSS is governed by the Civil Protection Act and the Croatian Mountain Rescue Service Act, enacted by the Croatian Parliament on June 30, 2006 (Croatian Mountain Rescue Service, 2024).

HGSS collaborates with various governmental bodies, local self-governments, institutions, the Croatian Armed Forces, health and social institutions, the Croatian Mountaineering Association, and other legal and natural persons in fields such as culture, sports, tourism, nature protection, traffic, and the environment. Additionally, it works closely with public institutions and relevant authorities to protect and preserve mountain nature and the environment. HGSS's activities also extend to urban areas and non-mountainous regions, including operations in high-rise buildings, tunnels, pipes, traffic accidents, and at sea, as well as during extreme sports events like paragliding, mountain biking, and rafting. Besides rescue operations and providing first aid in remote areas, HGSS emphasizes education and prevention to avoid accidents, particularly in mountaineering (Croatian Mountain Rescue Service, 2024).

HGSS currently has 68 active search teams with dogs. Thirty-six of these teams are licensed and trained for searches in non-urban areas, while the others are in training. Dogs entering HGSS undergo long-term training and can start the licensing process at eighteen months old, which lasts an entire day. Before licensing, they must pass obedience and socialization exams. HGSS has advanced significantly in standardizing its K9 rescue teams. Internal protocols for accessing, testing, and licensing these teams include numerous rules for their use. Among these protocols is the "Regulation on Licensing HGSS Search Teams," which outlines exercises such as marking, handling and direction, abseiling, path searching, open terrain searching, inaccessible terrain searching, persistence, conditioning, and independence in work. Another important document is the "Regulation for Mantrailing Exams," which involves finding and tracking human trails (Croatian Mountain Rescue Service, 2024).

The establishment of search dog teams in Croatian firefighting began in 2010 when Zoran Laslavić, a member of DVD Opatija, in collaboration with JVP Opatija and the Firefighting Association of Primorje-Gorski Kotar County, started training a Belgian Malinois for search purposes. After the training, Zoran and his dog "Ginger Runningwild - Rain" joined JVP Opatija, marking the beginning of

FULL TEXTS BOOK

the use of search dogs in firefighting. Following Opatija, other units joined the project, including JVP Zadar, JVP Osijek, DVD Kras Šapjane, JVP Čakovec, DVD Lipovljani, DVD Karlovac, JVP Split, DVD Halubjan, DVD Plamen Višnjan, JVP Dubrovačko Primorje, JVP Mljet, JVP Pula, DVD Čačinci, DVD Slatina, DVD Omiš, and DVD Sunger. Today, around 23 firefighting K-9 teams operate in Croatia, ensuring that the entire country is covered within an hour's reach of the nearest K-9 team (K9 Vatrogasci, n.d.).

Firefighting K-9 teams are licensed for various tasks, including (K9 vatrogasci, n.d.): a) searching for missing persons under rubble; b) searching for missing persons in nature; c) searching for missing persons in avalanches; d) helicopter-assisted activities. In addition to their basic training at the Firefighting K-9 Training Center in Šapjane, these teams participate in specialized training sessions covering various rescue segments, with the most recent being helicopter training (K9 vatrogasci, n.d.).

The Croatian Association for Search Dog Training (HUOPP) was founded on June 14, 2004, though its members began their first rescue efforts in the summer of 1999 at an international summer camp for rescue dogs in Slovenia. In 2005, HUOPP became a member of the International Search Dog Organization (IRO), and from April of the same year, HUOPP members became active participants in specialist civil protection units for rubble rescue (https://www.huopp.hr/o-nama/).

Search dog handlers must master various skills, and their exams consist of theoretical and practical parts, including (https://www.huopp.hr/o-nama/): a) hazards in rubble; b) hazards in mountains; c) orientation and topography; d) basic techniques of mountaineering and speleology; e) first aid for humans; f) first aid for dogs. In 2009, HUOPP established the Rijeka Search Dog Group, followed by the Zagreb Search Dog Group in 2011. Today, HUOPP has a total of 16 members in Zagreb and Rijeka (https://www.huopp.hr/o-nama/).

4.3. Effectiveness and Challenges in Using Search and Rescue Dogs in Slovenia

The Rescue Dog Unit of Slovenia, known as Enota reševalnih psov Slovenije (ERPS), functions within the Commission for Rescue Dogs under the Slovenian Cynological Association. Comprising 18 units within various cynological societies, ERPS includes organizations such as KD Ljubljana, KD Šmarna Gora, KD Krim, KD Storžič, KD Naklo, KD Žiri, KD Tolmin, KD Nova Gorica, KD Obala, KŠP Prečna-Novo Mesto, K9 Dog Lovers Club, KD Brežice, KD Zagorje, KD RP Celje, KD Zg. Savinjske Doline, KD Kamnik, KD Izvinite, and KD Logatec. These units consist of handlers and dogs trained to rescue victims from rubble, and avalanches, and to search for missing persons in various terrains. Depending on their performance in tests and exams, these handlers and rescue dogs are allocated to Regional Units, the Missing Persons Search Group (SIP), and the National Intervention Unit (MERP), which is qualified for large-scale disaster interventions both domestically and internationally. This unit is also part of the MUSAR (Middle Urban Search and Rescue) team within the Administration of the Republic of Slovenia for Protection and Rescue (URSZR) (Gerbec, 2010).

ERPS organizes numerous events for its members as part of its annual training. At the beginning of each year, seminars for beginners are held, offering both theoretical and practical knowledge crucial for rescue dog handlers. Additionally, the Rescue Dog Commission conducts a five-day winter and summer training annually, focusing on avalanche rescue in winter and rubble and field searches in summer. Further training and education take place at the Police Training Center in Gotenica and the Educational Center for Protection and Rescue in Ig, along with regular joint exercises for all units and international training sessions (Gerbec, 2010).

The Association of Rescue Dog Handlers' Associations and Clubs of Slovenia, or Zveza društev in klubov vodnikov reševalnih psov Slovenije, was established in November 1995 to unite clubs and societies primarily focused on training handlers and dogs for rescue tasks. That same year, the founding associations left the Rescue Dog Unit of Slovenia and the Slovenian Cynological Association. The founding assembly saw the inclusion of the Association of Rescue Dog Handlers of Slovenia, the Rescue Dog Handlers' Club of Kranj, and the Rescue Dog Handlers' Club of Postojna. Later, in 1999, the

FULL TEXTS BOOK

Cynological Society for Rescue Dogs of Maribor joined, followed by the Burja Koper Rescue Dog Society in 2008 (Gerbec, 2010).

The Association collaborates with various individuals and organizations, such as Civil Protection and the Mountain Rescue Service of Slovenia, municipalities, regions, and the state. Members have participated in numerous domestic and international rescue operations and successfully competed in national and international competitions and trials. Knowledge level tests are conducted by domestic judges, and the exams are aligned with the difficulty of international IPO exams. Organizational, professional, and financial matters are managed by the Board of Directors, comprising representatives of member associations and the president, while the Expert Commission oversees the coordination, workflow, annual training programs, and proficiency testing for handlers and dogs (Gerbec, 2010).

The Association of Rescue Dog Handlers of Slovenia (Društvo vodnikov reševalnih psov Slovenije) is a voluntary, amateur organization founded in 1994, focusing on amateurism and humanitarian activities. The association has over fifty handler-rescue dog pairs trained to search for missing persons in natural settings, buried under rubble, and in avalanches. They have participated in international rescue missions, assisting earthquakes in Egypt, Turkey (twice), and Sumatra in 2009. The association's involvement in the IPO organization, particularly through its vice president Dr. Dušan Nećak, has helped achieve one of its goals of integrating its expertise and high professional training into international rescue activities (Gerbec, 2010).

The Rescue Dog Handlers' Club of Postojna (Klub vodnikov reševalnih psov Postojna) is a voluntary association that trains handlers and rescue dogs. Covering municipalities such as Bloke, Cerknica, Divača, Hrpelje-Kozina, Ilirska Bistrica, Komen, Loška Dolina, Pivka, Postojna, and Sežana, the club assists around 74,000 residents but also operates beyond their territory if necessary. They cooperate with various organizations needing their assistance, such as firefighters, police, and the Mountain Rescue Service. Due to the specific terrain, they also train their dogs to search in caves, aiding cave rescue teams (Gerbec, 2010).

Founded in 1997, the Cynological Society for Rescue Dogs of Maribor (Kinološko društvo za reševalne pse Maribor) focuses on training rescue dogs. They have trained several handlers and rescue dogs equipped with theoretical knowledge about mountain hazards, rubble, veterinary first aid, first aid for injured persons, radio communication, field orientation, rope techniques, and dog psychology. The society collaborates with the Municipality of Maribor and the Protection and Rescue Service, extending their work to the municipalities of Podravje, Prekmurje, and Koroška. The Cynological Society for Rescue Dogs of Maribor is a co-founder of the Rescue Society Organizations of Slovenia for international aid and was granted humanitarian organization status by the Ministry of Health of the Republic of Slovenia in 2010. The association is also verified by the Organization for the Coordination of Humanitarian Assistance in Case of Natural Disasters at the United Nations (Gerbec, 2010).

The Burja Rescue Dog Society (Društvo za reševalne pse Burja), founded in August 2008, is dedicated to saving human lives. To stay current with rescue dog training developments, they regularly participate in competitions, exercises, and seminars domestically and internationally. Despite being a young association, they have many experienced members involved in Slovenia's protection and rescue system and the international IPO unit. Among their ranks is a world champion from 2008 and a world vice-champion from 2009, the dog Kan, who works closely with Roman Starman, the president of the Burja Rescue Dog Society (Gerbec, 2010).

The Mountain Rescue Service (Gorska reševalna služba) of Slovenia has a history dating back to 1912, with the primary mission of voluntarily assisting people in mountain accidents and difficult-to-access terrains. Operating throughout Slovenia, the Mountain Rescue Service is an association of independent, voluntary, non-profit mountain rescue societies and mountaineering societies with registered rescue activities. They perform humanitarian tasks of public importance: protection, rescue, and assistance in mountain environments and during natural and other disasters when safety, health, and lives are at risk.

FULL TEXTS BOOK

The Mountain Rescue Service's operations are geographically divided into 17 regions in Slovenia. They conduct rescue, preventive, and other actions and activities according to their rules and regulations. Members join as trainee mountain rescuers and can specialize further upon obtaining their mountain rescuer license, including becoming rescue dog handlers (Gerbec, 2010).

Significant advancements have been made in training rescue dogs within the Mountain Rescue Service of Slovenia. Handlers now purposefully select future rescue dogs from puppyhood, ensuring consistent training from an early age. The handler and dog go through all training phases together, both in winter avalanches and summer missing person courses. After completing their training, they are placed on an alert list following a two-day annual test. Rescue pairs on the alert list participate in all rescue operations in their home Mountain Rescue Service station's area. They also assist other stations when needed, although the team leader on the ground is always from the home station. This is especially common in avalanche rescue operations, which are often prolonged and physically and mentally demanding (Gerbec, 2010).

The organization of rescue dog handlers within the Administration of the Republic of Slovenia for Protection and Rescue (URSZR), an agency under the Ministry of Defense, focuses on developing national protection programs against natural and other disasters, proposing research and development projects, preparing risk and hazard analyses, and implementing preventive measures in emergency prevention, as well as rescue and assistance in emergencies. URSZR includes rescue dog handlers in its protection, rescue, and assistance forces, which comprise units and services of associations and other non-governmental organizations, companies, institutions, and other organizations, civil protection units, services, and authorities, police, and the Slovenian army (Gerbec, 2010).

The Rapid Intervention Unit MUSAR (Enota za hitre intervencije MUSAR) was established in 2001 by order of the Minister of Defense, defining its organization and equipment criteria. The unit was created following bilateral mutual assistance agreements, particularly with neighbouring countries, to provide aid both domestically and internationally. MUSAR participates in international humanitarian and rescue operations within the frameworks of the UN, NATO, EU, and other international organizations. EHI (state rapid intervention rescue unit) is designed for particularly demanding rescue interventions, requiring rapid action during earthquakes, floods, landslides, and other large-scale disasters. EHI comprises 221 members from state units, civil protection services, and other protection, rescue, and assistance forces under state jurisdiction or co-financed by the state (URSZR, 2009).

The Technical Rescue Squad is a subunit of EHI, including the Mechanized Rescue Platoon, the Technical Search Department, the Dog Search Team, and MUSAR. This team encompasses all units performing search and rescue operations for buried and missing persons using dogs and technical means, as well as rescuing and caring for found persons. The Dog Search Team conducts protection, rescue, and assistance tasks independently or with other EHI units, performing search and rescue for buried victims of natural and other disasters, assisting survivors, and locating missing persons in major disasters. The team includes three administration members and two dog search units, each with a commander and nine rescue dog handlers, totalling 23 members. Members who pass the international exam join the MUSAR unit after a preliminary exam (URSZR, 2009).

The MUSAR platoon is organized, equipped, and trained to independently conduct search and rescue operations for large-scale natural disaster victims abroad. It operates within the EU Civil Protection Mechanism and follows the guidelines and methodology of the UN International Search and Rescue Advisory Group. The unit includes seven rescue dog handlers. Organizationally, the MUSAR platoon consists of a search group, a rescue group, a medical care group, and a logistics support group. The search team comprises 12 members, including the leader (a member of the EHI Dog Search Unit), four geophonists (from the EHI Technical Search Department), and seven rescue dog handlers (from the EHI Dog Search Unit) (URSZR, 2009).

FULL TEXTS BOOK

The MUSAR platoon has a total of 47 members. The core group consists of operational firefighters with additional technical rescue skills, while other groups or members from different EHI units join the MUSAR platoon. The platoon must be capable of performing its tasks in smaller formations when transportation limitations prevent the entire unit from operating abroad (URSZR, 2009).

The State Intervention Unit (Državna intervencijska enota - MERP) requires handlers to pass exams outlined in the Regulations for Testing Knowledge and Skills of Rescue Dogs and Handlers of the Slovenian Rescue Dog Unit for Rubble (IRP-R). Handlers must have passed all six handler exams and be of legal age. When applying for testing, handlers must submit a written statement of voluntary participation in MERP as civil defence members in Slovenia's protection and rescue system. The regulations specify that trial searches cover larger areas (500 to 2000 square meters), with markers buried up to 1.5 meters deep. Various distractors may be used, and dogs must not wear collars or leashes for safety reasons. Searches during trials occur both day and night, lasting up to 36 hours with a maximum of seven searches. Light usage is permitted at night, and a maximum of three searches can be conducted consecutively, with a minimum 20-minute rest between searches. Each search lasts 20 minutes, with a maximum of 14 markers allowed, and one search area may have no hidden marker (Gerbec, 2010).

In addition to searching, each participant must pass tests in rope techniques, providing first aid to the injured dogs, physical fitness for handlers, and using a handheld radio. Successful rescue pairs based on these results are placed in the state intervention unit MERP, with their placement valid for one year (Gerbec, 2010).

5. Challenges and Limitations Faced by Search and Rescue Dogs During Operations in Disasters

We are witnessing rapid technological advancements that significantly enhance our quality of life and accelerate progress in fields like science and medicine. Yet, despite these modern marvels, human ingenuity alone remains insufficient for finding loved ones trapped under debris. In contrast, a well-trained search and rescue (SAR) dog can effectively perform this critical task. During earthquakes, snow avalanches, or when individuals are lost in forests, SAR dogs prove to be invaluable partners in rescue missions. The term "partner" is used intentionally, as the dog is as vital as the handler for a successful rescue operation. Both must work in harmony and understand each other (Gerbec, 2010).

When the handler's excellent skills and the dog's consistent, systematic training are combined with loyalty and genuine friendship, they form a coordinated, efficient, and indispensable human-animal team. This partnership remains irreplaceable in rescue missions, even amidst numerous modern technological achievements (Gerbec, 2010). Dogs have the ability to detect scent particles at a ratio of 1 to 1,000,000,000,000 (one trillion), compared to traditional analytical instruments that can detect at a ratio of only 1 to 1,000,000,000 (one billion) (Otto et al., 2019). For decades, SAR dogs have been successfully used to search for missing persons or individuals buried in avalanches or rubble. Despite the development of technical detectors, SAR dogs remain irreplaceable due to their unparalleled speed and efficiency in locating missing persons in inaccessible terrains (Schneider et al., 2005).

SAR dogs are often selected from working lines renowned for their strong olfactory abilities and tireless work ethic, driven by rewards such as toys or food (Otto et al., 2019). These dogs use their keen sense of smell during searches and are trained to identify specific scents, which are combinations of various chemicals. For example, hunting dogs learn to identify the scents of specific animals, drug detection dogs identify the scent of narcotics, and SAR dogs are trained to recognize and pinpoint human scents (Jones et al., 2004). Numerous instances underscore the importance of SAR dogs during disasters. Notable examples include the devastating earthquake in the Avellino region of southern Italy in November 1980 and the Mexico City earthquake in September 1985, where more than 200 people were rescued from the rubble thanks to the efforts of SAR dogs (Gerritsen & Haak, 2014). Globally, the

FULL TEXTS BOOK

critical role of well-trained SAR dogs is widely acknowledged. Experiences from past rescue operations consistently highlight the necessity of a well-trained dog and its handler for successful rescues.

Search and rescue dogs face a myriad of challenges in the field that can affect their performance and safety. Below are some key factors:

a) Environmental conditions (extreme weather conditions such as heavy rain, snow, high temperatures, or strong winds can hinder the dogs' ability to scent and navigate effectively);
b) Hazardous terrain (debris, sharp objects and unstable surfaces can pose physical dangers to the dogs, increasing the risk of injury);
c) Contaminated areas (exposure to hazardous materials, chemicals, and biological contaminants can affect the dogs' health and impair their performance);
d) Fatigue and exhaustion (extended hours of work without adequate rest can lead to physical and mental exhaustion, reducing the dogs' efficiency and effectiveness);
e) Distractions (the presence of other animals, loud noises, and chaotic environments can distract the dogs and make it difficult for them to focus on their search tasks);
f) Psychological stress (the high-stress environment of disaster scenes can cause anxiety and stress in dogs, impacting their ability to perform);
g) Limited access to resources (in remote or heavily damaged areas, there may be limited access to food, water, and medical care for the dogs, affecting their overall well-being and performance);
h) Communication challenges (difficulties in communication between the dogs and their handlers due to noise, distance, or obstacles can impede the effectiveness of search operations);
i) Training limitations (differences in training methods and the level of preparedness among search and rescue teams can affect the dogs' ability to perform optimally in various disaster scenarios);
j) Health issues (pre-existing health conditions or injuries sustained during operations can limit a dog's ability to participate in search and rescue missions effectively);
k) Time sensitivity (the urgency of locating survivors quickly can place immense pressure on the dogs and their handlers, sometimes leading to rushed or less thorough searches);
l) Adaptation to different scents (in multi-disaster scenarios or areas with diverse human populations, the dogs may need time to adapt to different scents, potentially delaying search operations);
m) Navigational difficulties (in complex structures or densely populated areas, dogs may face challenges in navigating through narrow passages, collapsed buildings, or other obstacles)
n) Interference from untrained animals (stray animals or pets in the disaster area may interfere with the search dogs' work, causing confusion and delays);
o) Limited deployment time (the physical and mental limits of the dogs require frequent rotation and rest periods, which can reduce the overall time available for search operations).

6. Conclusion and Recommendations

The assessment of search and rescue (SAR) dogs' effectiveness in locating survivors during disasters in Serbia, Croatia, and Slovenia highlights the crucial role these expertly trained canines play in disaster response. The study reveals that SAR dogs are invaluable due to their exceptional sense of smell, agility, and ability to navigate difficult terrains, which significantly boost the efficiency and success rates of rescue missions. Key factors impacting the effectiveness of SAR dogs include the quality of their training, environmental conditions during operations, and the coordination between handlers and dogs. The research identifies several challenges that SAR dogs encounter, such as extreme weather, hazardous terrain, fatigue, psychological stress, and limited resources. Addressing these issues is vital for optimizing the performance and well-being of SAR dogs.

The study underscores the necessity for standardized training protocols, sufficient investment in resources, and improved coordination among SAR teams. Ongoing training and support for both dogs and handlers are essential to maintaining high-performance levels during rescue missions. Additionally,

FULL TEXTS BOOK

the research points to the importance of international cooperation and the exchange of best practices to refine SAR dog deployment strategies. In summary, SAR dogs are an indispensable part of disaster response teams in Serbia, Croatia, and Slovenia. Their ability to swiftly and effectively locate survivors makes them a critical asset in saving lives during disasters. Continued investment in training, resources, and international collaboration will ensure that SAR dogs remain at the forefront of effective disaster management, thereby enhancing the resilience of communities and their capacity to respond to future disasters.

To further enhance the effectiveness of SAR dogs in disaster response, the study proposes several key recommendations:

a) It is essential to develop and implement standardized training protocols across all SAR teams. This ensures consistent, high-quality training for both SAR dogs and their handlers. Regular drills, exposure to various environments, and advanced training techniques tailored to specific disaster scenarios should be included.

b) More resources should be allocated for the training, care, and deployment of SAR dogs. This includes funding specialized training facilities, veterinary care, and the acquisition of necessary equipment.

c) Improving coordination and communication among SAR teams, both domestically and internationally, is crucial. Establishing clear communication channels and collaborative frameworks will facilitate better resource sharing and more efficient deployment of SAR dogs during disasters.

d) Providing psychological support and ensuring the welfare of SAR dogs and their handlers is vital. Addressing the mental and physical health of both dogs and handlers helps maintain high-performance levels and ensures long-term effectiveness.

e) Raising public awareness about the role and importance of SAR dogs in disaster response is important. Educational campaigns can help garner support and funding for SAR programs and foster a greater appreciation for these canine heroes.

f) Ongoing research and development in SAR dog training and deployment should be encouraged. Innovations in training methods, scent detection technologies, and health monitoring can further enhance the capabilities of SAR dogs.

g) Strengthening international collaboration and sharing best practices among countries is essential. Participation in international training exercises, conferences, and knowledge exchange programs will contribute to the continuous improvement of SAR dog deployment strategies.

SAR dogs are a crucial part of disaster response teams in Serbia, Croatia, and Slovenia. Their remarkable ability to swiftly and efficiently locate survivors makes them indispensable for saving lives during emergencies. Ensuring continued investment in their training, and resources, and fostering international collaboration will keep SAR dogs at the cutting edge of effective disaster management. This, in turn, will enhance the resilience of communities and their preparedness for future disasters. Implementing the recommendations from this study will not only boost the effectiveness of SAR dogs but also contribute significantly to the overall improvement of disaster response strategies in the region.

Author Contributions: V.M.C. conceived the original idea for this study and developed the study design. V.M.C. and N.M. contributed to the dissemination, while V.M.C. analyzed and interpreted the data. V.M.C. drafted the introduction, V.M.C. and N.M. drafted the discussion, and V.M.C. and N.M. composed the conclusions. V.M.C. and N.M. critically reviewed the data analysis and contributed to revising and finalizing the manuscript. Both authors have read and agreed to the published version of the manuscript.

Funding: This research was funded by the Scientific–Professional Society for Disaster Risk Management, Belgrade (https://upravljanje-rizicima.com/, accessed on 5 July 2024) and the International Institute for Disaster Research (https://idr.edu.rs/, accessed on 5 July 2024), Belgrade, Serbia.

ABSTRACT

This study critically explores the legislative frameworks and national regulations of Serbia, Croatia, and Slovenia concerning the engagement, training, and responsibilities of search and rescue dogs and their handlers.. The goal is to offer a thorough understanding of how these dogs and their handlers are engaged, trained, and managed in each country. By carefully analyzing the legal foundations, the study aims to clarify the rights, duties, and responsibilities of all parties involved, ensuring that search and rescue dog deployments are conducted within a structured and lawful framework. Such an understanding is crucial for improving disaster management and ensuring a coordinated response to various emergencies. The findings reveal that although each country has strong legal provisions for deploying search and rescue dogs, there are significant differences in the detail and scope of these regulations. Slovenia is notable for its detailed guidelines, regular evaluations, and licensing processes, setting a high standard. Croatia benefits from strong institutional support and active international collaboration, which greatly enhances its disaster response capabilities. On the other hand, Serbia, despite having a solid foundational framework, could improve by better coordinating with non-governmental organizations and aligning more closely with international standards. Key areas for improvement include harmonizing standards, enhancing training programs, increasing public awareness, better resource allocation, and adopting new technologies. By addressing these issues, Serbia, Croatia, and Slovenia can further strengthen their legal and institutional frameworks, ensuring their search and rescue teams are better prepared for disasters. This study emphasizes the need for continuous improvement through collaboration, standardization, and innovation to maximize the effectiveness of search and rescue operations involving dogs.

Keywords: search and rescue dogs; disasters; disaster response; survivor; legal framework; organizational framework; Serbia; Croatia; Slovenia.

1. Introduction

Disasters are extreme events that have a severe negative impact on people, property, and the environment (Cvetković, 2020, 2022; Cvetković, Romanić, & Beriša, 2023; Cvetković, 2023; El-Mougher, Abu Sharekh, Abu Ali, & Zuhud, 2023; Rajani, Tuhin, & Rina, 2023; Starosta, 2023; Ulal & Karmakar, 2023). They can be natural, such as earthquakes, floods, hurricanes, volcanic eruptions, and droughts, or they can be caused by human actions, such as industrial accidents, nuclear incidents, war conflicts, and terrorist attacks (Cvetković & Šišović, 2024). During these disasters, people face loss of life, injuries, psychological trauma, and loss of property (Baruh, Dey, & Dutta, 2023; Chakma, 2023; Cvetković & Jelena Planić, 2022; Dukiya & Adelete, 2022; El-Mougher et al., 2023; Faicel, 2022; Hossen, Nawaz, & Kabir, 2022; Mohammed & Maysaa, 2022; Ulal & Karmakar, 2023). Such situations often lead to population displacement, food and water shortages, disruptions of communication and energy networks, and serious economic consequences (Al-Ramlawi, El-Mougher, & Al-Agha, 2020; Chakma, Hossain, Islam, Hasnat, & Kabir, 2020; Cvetkovic & Martinović, 2020; Cvetkovic, 2019;

FULL TEXTS BOOK

Hussaini, 2020; Kaur, 2020; Olawuni, Olowoporoku, & Daramola, 2020; Thennavan, Ganapathy, Chandrasekaran, & Rajawat, 2020). Damage to infrastructure further complicates rescue and recovery efforts.

Protection and rescue tactics in the event of disasters encompass a range of activities aimed at risk reduction, rapid response, and long-term recovery (Cvetković, Nikolić, & Lukić, 2024; Cvetković & Šišović, 2024; Cvetković, 2024; Grozdanić, Cvetković, Lukić, & Ivanov, 2024; Sudar, Cvetković, & Ivanov, 2024). Prevention and preparedness include activities focused on reducing disaster risk through urban planning, building more resilient structures, educating the population, establishing early warning systems, and conducting emergency drills (Cvetković, Čvorović, & Beriša, 2023; Cvetković & Grbić, 2021; Cvetković & Jelena Planić, 2022; Cvetković, Tanasić, Ocal, et al., 2023; Cvetković & Šišović, 2023; Nikolić, Cvetković, & Ivanov, 2023; Oral, Yenel, Oral, Aydin, & Tuncay, 2015; Yang et al., 2015). The response involves the rapid mobilization of rescue teams, providing emergency medical assistance, evacuating endangered residents, securing temporary shelters, and distributing essential supplies such as food and water. Effective response requires well-coordinated efforts from various services and organizations.

Recovery involves long-term activities focused on rebuilding infrastructure, providing psychological assistance to survivors, revitalizing the economy, and strengthening social resilience (Cvetković, Tanasić, Živković-Šulović, & Milojević, 2023; Cvetković et al., 2021; Tanasić & Cvetković, 2024). The recovery process often takes years and requires significant investment and international aid. The goal of mitigation is to reduce the impact of future disasters by developing and implementing policies that will decrease community vulnerability. This includes improving building standards, enhancing natural barriers, and promoting sustainable practices.

Effective disaster protection and rescue requires a comprehensive approach that includes preparation, rapid response, adequate recovery, and continuous efforts to reduce risk. International cooperation, the exchange of knowledge and resources, as well as continuous education and training, are key to enhancing disaster response capacities and protecting lives and property (Tanasić & Cvetković, 2024).

Search and rescue dogs are invaluable assets in disaster response scenarios due to their specialized training and innate abilities (Cvetković & Miljković, 2024). These dogs are uniquely skilled at finding survivors in difficult conditions such as rubble, wilderness, and other disaster-affected areas. Their extraordinary sense of smell, agility, speed, and endurance make them indispensable during emergencies. Historically, they have shown unwavering loyalty and courage, often risking their lives to save humans (Gerbec, 2010). Training for search and rescue dogs starts when they are young, focusing initially on basic obedience and fundamental skills. As they mature, their training becomes more complex, incorporating real-life scenario simulations to prepare them for actual disasters. This rigorous training enables them to detect human scents beneath layers of concrete, earth, and other materials, making them crucial members of rescue teams (Otto et al., 2019).

Furthermore, the psychological readiness of these dogs is crucial. They need to remain calm and focused amid chaos and stress, achieved through continuous training and positive reinforcement. The selection process is stringent, starting with prenatal selection of breeding pairs with ideal genetics and followed by early-age assessments to identify dogs with the right characteristics and instincts (Otto et al., 2019). However, search and rescue dogs and their handlers face significant challenges. Working conditions can be extremely tough, such as navigating through earthquake debris, flooded areas, or avalanche-prone mountainous regions. These conditions expose the dogs to physical injuries, stress, and fatigue, requiring careful attention and support from their handlers and veterinary teams to maintain their health and effectiveness (Jones et al., 2004).

After extensive deliberations and discussions, all nations associated with the International Canine Federation (FCI) and all members of the International Rescue Dog Organization (IRO) adopted the FCI-IRO International Standards for Testing Rescue Dogs. Following the establishment of international

FULL TEXTS BOOK

standards for search and rescue dog testing known as "IPO-R" (Internationale Prüfungsordnung für Rettungshunde-Prüfungen) in 1993, we now have globally recognized and official exams for search and rescue dogs (FCI & IRO, 2019). The name IPO-R, derived from the German term "Internationale Prüfungsordnung für Rettungshunde-Prüfungen," translates to "International Regulations for Testing Rescue Dogs" (FCI & IRO, 2012). These standards enable handlers to collaborate using uniform testing programs, facilitating comparisons of training methodologies across different countries. This harmonization aims to elevate the training quality of search and rescue dogs to an optimal international level (FCI & IRO, 2012). Developed collaboratively by the "FCI/IRO" Commission, these standards received approval from both the "FCI" Executive Committee and the "IRO" General Assembly (FCI & IRO, 2019).

These internationally recognized standards serve as a foundational framework for organizations dedicated to the training and deployment of search and rescue dogs. The readiness tests for these dogs are governed by national and international organizations responsible for their deployment, and they aim to qualify individual dogs for further specialized training. Successfully passing these tests validates the dog's training and readiness to achieve search and rescue dog status in specific disciplines (FCI & IRO, 2019). The readiness and suitability of a dog for specific rescue missions are assessed and certified exclusively by the deploying organization. In such cases, additional criteria may be imposed, including regular re-evaluation through specific tests, completion of alpine training courses, adherence to age restrictions, endurance assessments, equipment regulations, and other relevant requirements (FCI & IRO, 2012).

Testing can be conducted year-round, except under circumstances where the safety and health of participants and animals cannot be assured. For major events, such as national and world championships or large-scale tests, there are technical limitations regarding the number of participants and the scheduling of exams (FCI & IRO, 2019). Rescue dog tests can be performed in individual phases, such as conducting tracking tests separately from obedience tests across all disciplines and levels. In such cases, only one phase is evaluated at a time. Results from these single-phase tests are recorded in the results book with corresponding scores and remarks, indicating that only one phase has been completed. Full evaluation and certification are granted only after successful completion of all required phases, such as both tracking and obedience (FCI & IRO, 2019). There are also specific IRO conditions that both the handler and the dog must meet to be eligible for testing (FCI & IRO, 2019): the handler must apply for the exam within the specified timeframe; the handler must be adequately equipped and properly trained for the specific exam discipline; the handler must report to the responsible judge before the first exercise and after the last one; each handler is required to complete all phases of the test, even if the minimum points for passing a particular phase have not been achieved; in cases of illness, injury, or other justified reasons, the handler must inform the test coordinator if they need to withdraw from the test; failure to do so will result in disqualification; all participants must adhere to regulations concerning animal welfare, safety, and environmental protection as stipulated by the host country; any use of force is strictly prohibited throughout the event. any form of rough or excessive force against the dog will be subject to sanctions.

The conditions that the dog must meet to take the exam (FCI & IRO, 2019) include: minimum age for testing: level "V" - preliminary testing - 15 months, level "A" - test - 18 months, level "B" - test - 20 months; a dog that cannot be identified with a microchip will not be allowed to participate in the exam; dogs of all sizes, breeds, and pedigrees are eligible to participate in search and rescue dog exams; a dog is permitted to participate in no more than two exams during a single event; a dog that fails an exam may retake it after a mandatory waiting period of 5 days; a dog may be disqualified for inappropriate behavior, such as aggression towards strangers or other dogs, or abandoning its handler or working area; the judge will allow the handler up to three opportunities to recall their dog and bring it under control. Failure to do so will result in exclusion from the exam.

FULL TEXTS BOOK

Given the vital role of search and rescue dogs, examining the legal and organizational frameworks that govern their deployment and training is essential. This study focuses on the legislative frameworks and national regulations in Serbia, Croatia, and Slovenia. By comparing these countries, we aim to understand how search and rescue dogs are integrated into national disaster response systems. The goal is to identify strengths and areas for improvement in each country's approach, ensuring these canine units operate within a structured and lawful framework, thereby enhancing their effectiveness in disaster management operations. This analysis is crucial for policymakers, trainers, and rescue teams, as it offers insights into best practices and legal standards that can be adopted or adapted to improve the deployment of search and rescue dogs in emergencies.

2. Comprehensive Legal Framework for the Deployment of Search and Rescue Dogs in Serbia, Slovenia, and Croatia

The legal framework governing the use of search and rescue dogs is crucial for ensuring a coordinated and effective response during emergencies and disasters. This section provides an in-depth analysis of the legal provisions regulating the deployment and utilization of search and rescue dogs in Serbia, Croatia, and Slovenia. Understanding these legal frameworks is essential to facilitate a harmonized and efficient response to various disasters. Additionally, identifying potential weaknesses in these regulations is key to making informed recommendations and implementing improvements to enhance future disaster response efforts. Furthermore, this section underscores the importance of well-defined legal guidelines governing the operations of search and rescue dogs. Such guidelines ensure that the dogs are deployed appropriately and ethically and provide a clear outline of the handlers' roles and responsibilities. By examining these aspects in detail, we can identify areas where the legal framework may need strengthening or updating.

Through this detailed exploration, we aim to generate valuable insights for policymakers and practitioners regarding best practices and legal standards for optimizing the use of search and rescue dogs in disaster scenarios. This knowledge base will be instrumental in formulating constructive recommendations and identifying potential areas for legislative improvement, thereby enhancing the overall capacity and readiness of disaster response systems. Ultimately, by comprehensively understanding and improving the legal frameworks surrounding the use of search and rescue dogs, we can significantly contribute to more effective and efficient disaster response strategies, ensuring that these invaluable animals are utilized to their fullest potential in times of crisis.

2.1. Comprehensive Legal Framework for Deploying Search and Rescue Dogs in the Republic of Serbia

The Constitution of the Republic of Serbia ("Official Gazette of RS", No. 98/2006 and 115/2021), as the nation's supreme legal document, states in Article 25 that "human life is inviolable" (Constitution of the Republic of Serbia, 2021). This fundamental principle means that every person whose life is in danger has an essential right to be rescued and protected. The National Security Strategy of the Republic of Serbia ("Official Gazette of RS", No. 94/2019) identifies natural disasters and technical-technological accidents as significant risks and threats to national security. When such events occur, rescue teams are mobilized to address the consequences and safeguard human lives through coordinated and effective response efforts (National Security Strategy, 2019).

The Law on Disaster Risk Reduction and Emergency Management ("Official Gazette of RS", No. 87/2018) in Article 11 explains that disaster risk reduction includes various measures like "mitigating harmful consequences... enhancing readiness for response and ensuring an efficient reaction" (LDRREM, 2018). Furthermore, Article 13 of this law specifies the components of the disaster risk reduction and emergency management system, which includes fire and rescue services, police, the Serbian Army, Mountain Rescue Service, citizens, citizen associations, and other organizations crucial

FULL TEXTS BOOK

to the system's development and functionality. This article also emphasizes that service/search and rescue dogs are an integral part of the disaster risk reduction and emergency management framework (LDRREM, 2018). Article 33 of this law recognizes the Red Cross of Serbia, the Mountain Rescue Service, and the Firefighting Association of Serbia as entities of special significance. These organizations support competent state authorities in their duties. When members of humanitarian organizations and associations participate in protection and rescue operations, they are granted civil protection member status (LDRREM, 2018).

Regarding the care of endangered and affected individuals, including searching for missing persons, Article 62 states that the responsible emergency management headquarters oversees care until the conditions are met for the competent state authority to assume responsibility. The Red Cross of Serbia, associations, and citizens collaborate in these care tasks, enabling the engagement of rescue teams or individuals with specially trained dogs for locating missing persons (LDRREM, 2018). Besides that, article 69 lists the rescue of individuals buried in the rubble as one of the critical actions for saving people from collapsed structures (LDRREM, 2018). Article 70 addresses protection and rescue from floods and accidents on water and underwater, while Article 71 regulates the organization and implementation of rescue operations in inaccessible terrains, such as mountain rescues, snow avalanche rescues, cave rescues, and similar scenarios. The Mountain Rescue Service, including a dog-assisted rescue team, participates in these operations upon the request of the competent service (LDRREM, 2018).

The Animal Welfare Law ("Official Gazette of RS", No. 41/2009) defines a service animal as an animal trained and used for duties by certain state authorities, including service dogs and horses. Articles 10 and 11 elaborate on all aspects of animal training (Animal Welfare Law, 2009).

The Law on Police of the Republic of Serbia ("Official Gazette of RS", No. 6/2016, 24/2018, and 87/2018), Article 116, specifies the conditions under which a service dog can be deployed as a means of coercion. This law states that a service dog may be used when conditions for the use of physical force, a service baton, or firearms are met, and when necessary to restore disrupted public order and peace. The use of a service dog involves releasing the dog onto a person or using it to block passages, with or without a protective muzzle, and on or off the leash (Law on Police, 2018).

The Regulation on Special and Specific Police Units ("Official Gazette of RS", No. 47/2018, and others) in Article 16 mentions the inclusion of service dogs as part of the special equipment within the Special Anti-Terrorist Unit (SAJ). Article 31 lists the special equipment of the Gendarmerie, which includes equipment for police dogs and their handlers. Chapter 7, Article 55, states that the police brigade has a specialized unit responsible for the reproduction, breeding, selection, preliminary training, and training of service dogs, as well as the training of handlers and trainers of service dogs (Regulation, 2024).

2.1. Comprehensive Legal Framework for Deploying Search and Rescue Dogs in Slovenia

The Constitution of the Republic of Slovenia ("Official Gazette of RS", No. 33/91-I, 42/97 – UZS68, 66/00 – UZ80, 24/03 – UZ3a, 47, 68, 69/04 – UZ14, 69/04 – UZ43, 69/04 – UZ50, 68/06 – UZ121,140,143, 47/13 – UZ148, 47/13 – UZ90,97,99, 75/16 – UZ70a in 92/21 – UZ62a), explicitly states in Article 17 that "human life is inviolable." Additionally, Article 35 guarantees the inviolability of an individual's physical and mental integrity, underlining the nation's commitment to protecting its citizens (Constitution of the Republic of Slovenia, 2021).

Complementing these constitutional protections, the Police Tasks and Powers Act of the Republic of Slovenia ("Official Gazette of RS", No. 66/09 – official consolidated text, 22/10, 26/11 – Constitutional Court decision, 58/11 – ZDT-1, 40/12 – ZUJF, 96/12 – ZPIZ-2, 15/13 – ZNPPol and 15/13 – ZODPol), Article 86, regulates the use of police dogs by law enforcement officers. These dogs are trained to physically apprehend or bite individuals when the use of force is justified, ensuring law enforcement can maintain order and safety (ZPOL, 2013).

FULL TEXTS BOOK

The Police Canine Training Section in Slovenia is tasked with several key responsibilities, ensuring that both dogs and their handlers are prepared for diverse operational needs (ZPOL, 2013): providing comprehensive training programs for police dog handlers and dogs for both general and special purposes; breeding and raising police dogs to maintain a robust and capable force; conducting field operations such as locating blood traces, other biological evidence, corpses, and determining the causes of fires; ensuring the well-being of the police dogs through proper care and medical attention; providing healthcare not only for police dogs but also for those belonging to the Ministry of Justice and the Tax Administration of Slovenia; adhering to the guidelines outlined in the Instructions on Training, Use, and Care of Police Dogs and the Regulations on the Acquisition and Management of Police Dogs.

General-purpose police dogs are employed for tracking, searching for individuals and objects, free searching, defence, building inspections, forest and natural terrain inspections, and working without a muzzle, enhancing the police force's operational capabilities (ZPOL, 2013). Special-purpose dogs, on the other hand, are meticulously trained to detect illegal drugs, explosives, weapons, gunpowder traces, shells, blood, other biological traces, corpses, causes of fires, and tobacco products. They play a crucial role in inspecting terrain, vehicles, buildings, and luggage (ZPOL, 2013).

The Protection Against Natural and Other Disasters Act of the Republic of Slovenia, Article 21, acknowledges the importance of volunteer organizations, including kennel clubs, search and rescue dog handlers' associations, and the Mountain Rescue Service. These civil sector associations are integral to search and rescue operations, emphasizing community involvement in disaster response (ZPOL, 2012). Moreover, the Animal Protection Act (Zakon o zaščiti živali (ZZZIV), "Official Gazette of RS", No. 38/13 – official consolidated text, 21/18 – ZNOrg, 92/20, 159/21, and 109/23) addresses various issues related to dogs, including ownership, breeding and sale, transportation, mandatory training, and proper care. This comprehensive approach ensures that the welfare of dogs is maintained, whether they are pets or service animals.

Further elaborating on the organizational structure, the Regulation on the Organization, Equipment, and Training of Forces for Protection, Rescue, and Assistance ("Official Gazette of RS", No. 92/07, 54/09, 23/11, 27/16), Article 28, specifies that rescue teams with dogs are organized by the Kennel Club of Slovenia and the Association of Rescue Dog Handlers of Slovenia. These teams are strategically distributed across regions, ready to respond to emergencies. Their tasks include searching for missing persons, rescuing survivors in collapsed structures, and providing necessary assistance. Notably, the activities of these organizations are co-funded by the Administration of the Republic of Slovenia for Protection and Rescue, ensuring they have the necessary resources and equipment (Uredbo, 2016). Article 25 of this regulation outlines the responsibilities of the Mountain Rescue Service of Slovenia, including avalanche victim rescue using specially trained dogs. This specialized training is crucial for effective response in mountainous terrains (Uredbo, 2016). Additionally, the Regulation on the Implementation of Protection, Rescue, and Assistance with the Use of Aircraft, Articles 10 and 11, includes canine rescue teams in aerial rescue operations, highlighting the versatility and importance of search and rescue dogs in various scenarios (Uredbo o izvajanju zaščite, reševanja in pomoči z uporabo zrakoplovov, "Official Gazette of RS", No. 46/98, 42/05, 21/16).

Also, article 5 of the Rules on Record-Keeping, Allocation, and Summoning of Civil Defense Members and Other Protection, Rescue, and Assistance Forces mandates that the administration maintain detailed records of Civil Protection members, professionals, and volunteers by local jurisdiction. This includes the critical role of search and rescue dog handlers, ensuring that all personnel are accounted for and efficiently mobilized in emergencies (Pravilnik o evidenci, razporejanju in pozivanju pripadnikov Civilne zaščite ter drugih sil za zaščito, reševanje in pomoč, "Official Gazette of RS", No. 51/06 and 113/05).

Similarly, the Rules on Notification and Reporting in the Protection Against Natural and Other Disasters System, Article 11, require commanders to report on searches for missing persons or other police-led

FULL TEXTS BOOK

interventions. This includes operations involving various units, services, and operational formations, such as search and rescue dog handlers, ensuring comprehensive and coordinated reporting (Pravilnika o obveščanju in poročanju v sistemu varstva pred naravnimi in drugimi nesrečami obsega, "Official Gazette of RS", No. 42/12).

Lastly, the statute of the Sports Kennel Club "Logatec" highlights its commitment to protection, rescue, and assistance in natural and other disasters. The club focuses on training search and rescue dogs, organizing seminars, lectures, travel, and training events related to search and rescue dog training. It also maintains close relationships with the Administration for Protection and Rescue, the Ministry of Defense, the Mountain Rescue Service of Slovenia, internal affairs bodies, and other rescue organizations, both domestically and internationally. This network ensures a robust and well-coordinated response capability (Statut Športno kinološko društvo Logatec, 2015).

2.1. Comprehensive Legal Framework for Deploying Search and Rescue Dogs in Croatia

The Constitution of the Republic of Croatia (NN 56/90, 135/97, 08/98, 113/00, 124/00, 28/01, 41/01, 55/01, 76/10, 85/10, 05/14) guarantees the right to life for every individual in Article 21, underscoring the state's commitment to safeguarding its citizens. This assurance means that in the event of a disaster, a coordinated rescue mission will be launched to protect and preserve human lives (Ustav RH, 2014). Expanding on this commitment, the Law on the Civil Protection System (NN 82/15, 118/18, 31/20, 20/21, 114/22) explicitly recognizes "canine activities" as vital to the civil protection system. This highlights the importance of incorporating specialized canine units into disaster response strategies. Furthermore, Article 63 of this law outlines the participation of civil protection operational forces in international activities, which includes deploying rescue dogs as key components of rescue teams (Zakon o sustavu civilne zaštite, 2022).

Animal Protection Act, article 5 of the (NN 102/17, 32/19) addresses prohibited actions to ensure animal welfare, explicitly mentioning protections for sporting and service dogs. This legislation underscores the ethical treatment and protection of animals in service roles, ensuring they are not subjected to abuse or neglect (Zakon o zaštiti životinja, 2019). In Croatia, the Croatian Kennel Club's Committee for Rescue Dog Work has established comprehensive regulations for the operation of rescue dogs. These regulations initially issued in 2005 and most recently amended in late 2021, provide a structured approach to training and deploying rescue dogs.

The "Regulation on the Organization of Courses, Exams, and Competitions for the Work of Rescue Dogs and Exams for Rescue Dog Handlers" (Pravilnik o organizaciji tečajeva, ispita i natjecanja za rad spasilačkih pasa i ispita za vodiče spasilačkih pasa, 2016) details the methods and conditions for training, conducting exams, and attaining the status of an active rescue dog handler. It specifies the organization of classes, exams, and competitions, and provides thorough guidelines for evaluating the competencies of dogs and handlers (HKS, 2016). Additionally, the "Regulation on the Work of the Committee for Rescue Dog Work" (Pravilnik o radu Povjerenstva za rad spasilačkih pasa, 2016) governs the structure, jurisdiction, and operational procedures of the Croatian Kennel Club's Rescue Dog Work Department, ensuring systematic and efficient management of rescue dog activities (HKS, 2016).

The "Regulation on Professional Staff for Rescue Dog Work" (Pravilnik o stručnim kadrovima za rad spasilačkih pasa, 2016) addresses the qualifications and responsibilities of professional staff involved in rescue dog operations. This includes active handlers, instructors, and FCI/IRO judges, setting standards for their roles and training requirements (HKS, 2016). The International Canine Federation (FCI) Commission for Working Sports Dogs developed the "FCI Regulation for Conducting International Exams for Working Sports Dogs and International Exam for Tracking Dogs," adopted by the FCI in 2018 and effective from January 1, 2019. The Croatian Kennel Club's Sports Dog Working Department translated this document into Croatian, enhancing the development and improvement of working sports

FULL TEXTS BOOK

cynology in Croatia. This regulation aims to assess dogs' capabilities for specific tasks and enhance their health and working abilities, ensuring a high standard of performance and welfare (HKS, 2020).

The Statute of the Croatian Kennel Club addresses several issues related to rescue and working dogs, providing a comprehensive framework that supports their activities. Article 12 states that organizing work exams for rescue dogs is among the Club's activities. Article 23, item 2, highlights the establishment of specialized associations for dog training to develop and expand cynological culture and activities. Finally, Article 51 indicates that the Executive Board appoints a committee for rescue dogs as part of its expert committees, ensuring dedicated oversight and development of rescue dog activities (HKS, 2015). Furthermore, Article 15 of the Statute of the Croatian Mountain Rescue Service (HGSS) specifies that "associates" include HGSS members who, after completing the basic course, undergo specialist training of interest to HGSS. This includes dog handlers for search and rescue, emphasizing the critical role of specialized training in enhancing rescue operations (HGSS, 2018).

On December 8, 2023, the Firefighting Association of the Republic of Croatia, under Article 5 of the Firefighting Act (NN 125/19, 114/22, 125/19, 155/23), adopted the Program for Training and Testing the Operational Capabilities of Firefighting Rescue Teams with Dogs. This program ensures the readiness of both professional and volunteer firefighters, along with search dogs, for interventions requiring search and rescue operations due to building collapses, landslides, and technical assistance in non-urban areas (HVZ, 2023).

The program outlines the conditions for enrollment, participant categories, duration, and implementation methods. It also specifies the personnel and technical requirements, final testing procedures, and competencies acquired upon completion, ensuring a comprehensive approach to training and operational readiness (HVZ, 2023).

6. Comparative Analysis of the Normative and Institutional Frameworks for Search and Rescue Dogs in Serbia, Slovenia, and Croatia

The analysis reveals that the normative and institutional frameworks for search and rescue dogs in Serbia, Slovenia, and Croatia share significant similarities while also displaying differences stemming from each country's unique approach to protection and rescue operations. Slovenia is noted for its comprehensive normative framework and high training standards, while Croatia benefits from robust institutional support and active international collaboration. Serbia, though it has a solid foundation, could enhance its capabilities by improving cooperation with the non-governmental sector and adopting international standards.

Comparing these systems offers valuable insights for all countries aiming to strengthen their rescue capacities: a) regulations and laws governing the work of search and rescue dogs are clearly defined in all three countries. However, the level of detail varies, with Slovenia having the most comprehensive framework that includes regular evaluations and licensing; b) central state institutions provide strong institutional support across all three nations. Croatia and Slovenia distinguish themselves with high training standards and regular exercises, whereas Serbia has potential for improvement through better engagement with the non-governmental sector; c) participation in international exercises and experience exchanges enhances the capabilities of search and rescue dog teams. Slovenia and Croatia are particularly active in this regard; d) standardization of equipment and operational protocols is highly developed in Slovenia and Croatia, ensuring consistency and efficiency. Serbia could benefit from aligning its standards with international norms; e) financial support is crucial for maintaining effective rescue teams. While Croatia and Slovenia have stable funding through state budgets and international funds, Serbia needs to enhance its financial resources by engaging more with the private sector and seeking international donations; f) training programs are well-established in all three countries, but they differ in approach and frequency. Croatia and Slovenia conduct regular national and international exercises, while Serbia could improve by increasing the number of specialized training

FULL TEXTS BOOK

sessions; g) Slovenia and Croatia have developed volunteer networks and include them in exercises and operations. Serbia could enhance volunteer engagement through better-organized programs and support; h) the adoption of new technologies, such as drones and advanced communication tools, can significantly improve rescue operations. Slovenia and Croatia have started implementing these technologies, while Serbia should intensify its efforts in this area; i) providing psychological support for rescuers, including dog handlers, is essential for maintaining their mental health and operational efficiency. Slovenia and Croatia include psychological support in their programs, and Serbia could further develop these services; j) regular evaluation and monitoring of rescue teams and their dogs are crucial for continuous improvement. Slovenia has detailed evaluation procedures, whereas Serbia and Croatia could benefit from introducing additional metrics and regular assessments; k) raising public awareness about the role of search and rescue dogs helps garner support and understanding for their work. Slovenia and Croatia conduct public awareness campaigns, and Serbia could enhance its efforts through media campaigns and educational programs; l) effective integration of search and rescue dogs into local communities boosts operational efficiency. Croatia and Slovenia have successful integration programs, while Serbia could improve by fostering stronger connections with local authorities and communities; m) ensuring legal protection for search and rescue dog handlers and the dogs themselves is vital for their safety and well-being. Slovenia and Croatia have established legal frameworks for this purpose, and Serbia could enhance this aspect by enacting specific laws and regulations; n) flexibility in deploying search and rescue dogs across different scenarios, such as urban disasters, natural disasters, and searches for missing persons, increases their utility. Slovenia and Croatia have developed diverse training modules for various situations, while Serbia could broaden its training scope; o) regular exchange of best practices and lessons learned among countries can significantly enhance rescue team capacities. Slovenia and Croatia actively participate in regional and international forums for experience sharing, and Serbia could benefit from increasing its involvement in these activities to improve its practices and standards.

While each country has made significant strides in utilizing search and rescue dogs, continuous improvement through collaboration, standardization, and innovation is essential for maximizing their effectiveness in rescue operations.

6. Recommendations

Based on the comparative analysis of the normative and institutional frameworks for search and rescue dogs in Serbia, Slovenia, and Croatia, several recommendations can be made to enhance the legal regulation and effectiveness of these operations across all three countries. First, the harmonization of standards is crucial. Slovenia should continue to lead by example with its detailed normative frameworks and regular updates to maintain alignment with international standards. Croatia can improve by enhancing the specificity of its existing laws and regulations to match Slovenia's comprehensive evaluations and licensing processes. Serbia should prioritize aligning its national laws with international standards, such as the FCI-IRO International Standards for Testing Rescue Dogs, and implement regular evaluations to ensure high training standards.

Institutional support and coordination are also essential. Slovenia and Croatia should maintain strong institutional backing through central state institutions, emphasizing high training standards and regular exercises. Serbia can improve by fostering better cooperation with non-governmental organizations (NGOs) and enhancing coordination between state and local agencies involved in disaster response. International collaboration should be strengthened in all countries by participating in international exercises and exchange programs to enhance the capabilities of search and rescue dog teams. Active involvement in regional and international forums can facilitate the sharing of best practices and lessons learned.

FULL TEXTS BOOK

Standardization of equipment and protocols is necessary for consistency and efficiency in rescue operations. Serbia should align its equipment standards and operational protocols with those of Slovenia and Croatia to improve interoperability during joint international missions. Financial support and resource allocation are crucial for maintaining effective rescue teams. Croatia and Slovenia should continue to secure stable funding through state budgets and international funds, ensuring sustained operational readiness. Serbia needs to increase its financial resources by engaging more with the private sector and seeking international donations, establishing dedicated funding channels for continuous training and equipment upgrades.

Training programs must be robust and current. Croatia and Slovenia should maintain regular national and international exercises, while Serbia should increase the frequency and specialization of its training sessions to enhance continuous education for handlers and dogs. Volunteer engagement is vital for effective operations. Serbia should develop structured volunteer programs, providing volunteers with regular training and including them in exercises and operations. The adoption of new technologies, such as drones and advanced communication tools, should be intensified across all countries, ensuring teams are trained in their use to maximize effectiveness.

Psychological support services for rescuers, including dog handlers, are essential for maintaining mental health and operational efficiency. Serbia should develop comprehensive psychological support services, learning from the models established by Slovenia and Croatia. Public awareness campaigns about the role of search and rescue dogs should be enhanced, particularly in Serbia, through media campaigns and educational programs to foster public support and understanding of their critical work. Community integration of search and rescue dogs should be improved in Serbia by building stronger connections with local authorities and community groups, increasing operational efficiency and community support.

Legal protection for search and rescue dog handlers and the dogs themselves is vital for their safety and well-being. Serbia should enact specific laws and regulations to protect their rights and ensure comprehensive coverage for all aspects of their work. Flexibility in deploying search and rescue dogs across various scenarios, such as urban disasters, natural disasters, and searches for missing persons, should be increased in Serbia by broadening training programs to cover a wider range of situations. Finally, a culture of continuous improvement should be fostered in all countries through regular reviews and updates of legal frameworks to incorporate best practices and new insights, enhancing collaboration, standardization, and innovation.

7. Conclusion

This comparative analysis of the normative and institutional frameworks for search and rescue dogs in Serbia, Slovenia, and Croatia reveals both common strengths and distinct national approaches. Slovenia is distinguished by its comprehensive legal framework and stringent training standards, ensuring a high level of preparedness and operational efficiency. Croatia benefits from strong institutional support and active international collaboration, which enhances its disaster response capabilities. Serbia, while having a solid foundational framework, stands to gain significantly from increased cooperation with non-governmental organizations and the adoption of international standards.

Key findings indicate that all three countries have well-defined regulations governing the use of search and rescue dogs, yet the specificity and comprehensiveness of these regulations vary. Slovenia leads in detailed normative guidelines, regular evaluations, and licensing processes, setting a benchmark for others to follow. Croatia's robust institutional framework supports continuous training and active international engagement, while Serbia could enhance its system through better resource allocation and standardized procedures. Financial support remains crucial for maintaining effective rescue operations. Stable funding sources in Croatia and Slovenia contrast with Serbia's need for improved financial strategies, including engaging the private sector and seeking international donations.

FULL TEXTS BOOK

Additionally, the adoption of new technologies, such as drones and advanced communication tools, is essential for modernizing rescue operations across all three nations. The importance of psychological support for rescuers, public awareness campaigns, and effective community integration are emphasized as critical components of a successful search and rescue framework. Legal protections for handlers and dogs, flexibility in deployment scenarios, and regular exchange of best practices are also vital for enhancing the overall capacity and readiness of rescue teams.

While each country has made significant strides in utilizing search and rescue dogs, continuous improvement through collaboration, standardization, and innovation is essential. By adopting these recommendations, Serbia, Slovenia, and Croatia can further enhance their legal and institutional frameworks, ensuring their search and rescue teams are optimally prepared to respond to any disaster.

Author Contributions: V.M.C. conceived the original idea for this study and developed the study design. V.M.C. and N.M. contributed to the dissemination, while V.M.C. analyzed and interpreted the data. V.M.C. drafted the introduction, V.M.C. and N.M. drafted the discussion, and V.M.C. and N.M. composed the conclusions. V.M.C. and N.M. critically reviewed the data analysis and contributed to revising and finalizing the manuscript. Both authors have read and agreed to the published version of the manuscript.

ABSTRACT
After the work of Alkire on multidimensional poverty, literature exhibit a paradigm shift in the methodological approach of investigating poverty in the society. A shift from only income- economic approach to a social approach that encapsulates a wider livelihood dimensions- education, health, standard of living has taken a lead in the literature of poverty. Consequently, in view of this methodological gap in the study area, this research on multidimensional poverty status of rural households was undertaken to serve as one-stop solution to the engine growth of rural economy. Using a multi-stage sampling technique, a total of 120 households is selected and information elicitation was done by the use of well-structured questionnaire complemented with interview schedule in the year 2022. Besides, the collected information was synthesized with the aid of both descriptive and inferential statistics. Empirically, the study area is populated by an economic viable and healthy labour force, literate, agrarian and technologically exposed, globally integrated and had a viable social capital pool. However, the rural population is characterized by a vulnerable household size, credit paucity, gender stereotype, and cultivation of uneconomic holdings. Furthermore, multidimensional poverty is riffed in the study area and the rural populace suffered deprivation in at least two dimensions. Besides, vulnerability to poverty owes unsustainable large household size and lackluster towards livelihood enhancement innovative measures. Moreover, an advisory service is the major driving force that regulates the intensity of multidimensional poverty intensity in the study area. Nevertheless, self-help, social, religious and medical measures were the poverty coping strategies adopted in the study area. Therefore, the study calls for gender mainstreaming so as to arrest poverty vicious cycle among the women folk; and, provision of augmenting assets in order to enable these rural poor overcome distress sale that owes to uneconomic scale of operation.
Keywords: Poverty; Multidimensional; Livelihood; Households; Rural Area; Nigeria

Introduction

The experience of poverty, in accordance with Sadiq (2015a) and Sadiq *et al*.(2018a), extends beyond not having enough money- lack of income. As a result, there is a lack of knowledge, a loss of influence, and little to no control over fundamental life choices. Poverty occurs from the lack of necessary assets and possibilities to which every person is entitled, in addition to when a set of fundamental necessities are not provided (Sadiq, 2015b; Sadiq *et al*., 2018b). Globally, over several government and population, poverty has remained the long-time standing reproach. In 2019, the National Bureau of Statistics and the World Bank International Labour Organization both claim that this reprehensible situation is to blame for the high rate of illiteracy that exists among people worldwide, particularly women (Ndimele, 2022). Due to its complexity, it has grown difficult to resolve and has proven harmful to both human life and the natural world (Aluko and Mbada, 2020; Bello *et al*., 2022).

FULL TEXTS BOOK

Approximately 413.3 million people lived in extreme poverty on the African continent in 2015 (Osabohiene *et al*., 2021), with Sub-Saharan Africa having the greatest rate of hunger-related deaths. Sub-Saharan Africa's (SSA) pervasive poverty contributes to the region's underdeveloped infrastructure. According to Muhammad and Sidique (2019); Osabohien *et al*. (2021) and other sources, the population's higher growth rate has led to rising unemployment, particularly among young people, which is thought to be one of the main reasons of poverty among Africans, particularly Nigerians. Furthermore, because of the worsening effects of poverty and hunger, the majority of the population is now without hope. More than 70% of the disposable earnings of poor households is used to meet food needs, but at least 31.5 percent of children under the age of five are underweight (Roser and Ritchie, 2019; Sulaimon, 2022).

The vast agricultural richness of Nigeria offers tremendous potential for growth for the broader economy as well as the rural sector. Rising poverty is still a significant problem in the nation, despite its abundant natural resources (Sadiq *et al*., 2018a; Oyewunmi and Obayelu, 2023). Despite having a wealth of natural resources and human capital, Nigeria's staggering poverty rate has earned it the moniker "the poverty capital of the world," with approximately 100 million of its citizens living in conditions of extreme destitution (Jaiyeola and Bayat, 2019; Jaiyeola and Bayat, 2020; Adeyonu *et al*., 2022). The fact that a significant portion of the country's population live in destitution in a nation with plenty of natural resources, a robust oil industry, and a growing agricultural sector is highly upsetting (Sadiq *et al*., 2018a; Abubakar, 2022).

Rural individuals are more likely than urban ones to experience poverty and to remain there for a longer period of time (Kyzyma, 2019; Ashagidigbi *et al*., 2020; Gambo *et al*., 2022). Rural residents continue to experience extreme poverty and deep deprivation, which is frequently made worse by violent conflicts & a high risk of catastrophes (Cuaresma *et al*., 2018; Aminu *et al*., 2022). Women in particular continue to suffer the most from this situation. According to reports, the proportion of Nigerians experiencing hunger has increased from around 29 percent as of 2000 to a staggering 33 percent in 2010, suggesting that this increase may be the cause of the failure to meet the 2015 target of 14.5 percent of the population falling below the hunger level. Additionally, according to Sadiq *et al*.(2018b), 40% of households across the nation's geopolitical regions are food insecure. In the year 2022, it cascaded to seventy percent (NBS, 2022), thus concomitantly blurring the possibility of halving poverty by 2030 as envisaged by SDGs. It should be mentioned that the population of India is seven times more than that of Nigeria (Farrell and Nijkamp, 2019). According to Khan and Cheri (2016), among Nigeria's six geopolitical zones, the North-eastern area has the highest death rate, the largest percentage of males without a high school certificate, and second to Northwest with highest percentage of females without an educational attainment.

Additionally, poor health and low education contribute to the cycle of poverty, according to Sadiq (2015a&b); Sadiq and Sani (2022). When cheaper, more delectable items are imported, local farmers also lack motivation to produce locally grown food. As a result, local farmers are forced to lower their prices, thus lowered their income. The result is a drop in farm production the next year, which keeps the poverty cycle in motion. Age, sex, education, health, asset ownership, and other household variables are heavily weighted in the available research on the factors that determine poverty. These are regarded as opportunities and capacities for a certain household, or, to put it another way, to seize the human and material capital that establishes how vulnerable a normal household might be. According to the aforementioned, understanding the factors that contribute to rural poverty are essential for establishing policies that aim to reduce it as well as for understanding its causes.

According to a study on the impact of human capital & capacities on rural destitution in Nigeria, there are considerable geographic disparities in the likelihood that a household will become impoverished. This was revealed by the impact of local factors on rural poverty. Regardless of whether a rural household is working on a farm or not, human capital has a lowering impact on the likelihood that they

FULL TEXTS BOOK

will be poor. Considering how long a remote area of Kaduna State has existed, additional infrastructure development is anticipated. However, the area's poor infrastructure is a major concern for economic growth as it affects productivity and lowers farm households' potential for realizing their potential, which results in poor productivity in agriculture, low levels of income, a decline in standard of living, and an elevated prevalence of poverty among rural residents.

In Nigeria, the majority of agricultural production happens in rural areas where, ironically, poverty is most prevalent and severe. This study is designed to investigate the pattern & drivers of poverty among farming families in Kaduna State, in the North Western area of Nigeria. Poverty is a significant restraining factor for farming households. To the best of our knowledge, the literature review revealed little to no documented evidence of a multidimensional approach to poverty in the study area, despite convincing arguments that poverty is multifaceted as opposed to unidimensional, which is the main motivation beneath the conceptualization of this research. In summary, the literature evaluation on poverty in the studied area has knowledge, empirical, methodological, and population research gaps. Therefore, this study aims to close the knowledge gap with persuading facts and data.

In lieu of the foregoing, this research aimed to address the challenge posed by multidimensional poverty-a social matrix in the study area. The broad objective of the research centered on the multidimensional poverty correlates of rural households in Nigeria's Kaduna State. The specific objectives were to: describe the socio-economic characteristics of the households in the study area; determine the multidimensional poverty status of the households in the study area; determine the factors responsible for households' vulnerability to multidimensional poverty; determine the driving force of households' multidimensional poverty correlates; and, determine the poverty coping strategies adopted by households in the study area.

Research Methodology

The state is situated in the high plains of northern Nigeria. Besides, in the Nigeria's north, it is located in the Northwest geopolitical zone. The Kaduna state can be found between latitude 38'58" N & 25'36" equatorial north and longitude 22'14" E and 7 32'00" equatorial east. The state is situated alongside the Kaduna River, an important Niger River tributary. The state is traversed by the Kaduna River, a branch of the Niger River. It originates on the Jos Plateau in Vom, 18 miles (29 kilometers) southwest of Jos town, and flows northwest until a bend 22 miles (35 kilometers) northeastern of Kaduna town. Prior to finishing its 340-mile (550-kilometer) discharge to the Niger River at Mureji (opposite Pategi), it takes a southwesterly and southerly route. Although its lower half has carved out some gorges, including the 2-mile (3-kilometer) granite ravine at Shiroro, above its entrance into the expansive Niger floodplains, the majority of its route is in broad savanna woodland. Short, dispersed trees, shrubs, and grasses make up the Sudan Savannah type of vegetation cover. Although there is a sizable amount of clay present, the soil is primarily loamy to sandy. There are seven states that border the state.

The state is rated third in terms of population (about 9, 231, 390 at a 3% annual growth rate), and fourth in terms of total land area (46,053 km^2). As of 2021, the state's per capita GDP and GDP at purchasing power parity (PPP) were $2,905 and $27.88 billion, respectively. The human development index (HDI) was also 0.511 according to http://kdsg.gov.ng/. Rocks can be found in Kogoro Hill and Zaria and during the rainy season, many communities are vulnerable to seasonal flooding. Kaduna experiences two seasons: a dry season that is hot as well as partly cloudy, and a wet season that is hot, muggy, and gloomy. Over the year, the ambient temperature seldom descends beneath 50 °F or soars beyond 102 °F, typically fluctuating around 55 °F & 95 °F.

Using a multi-stage sampling technique, a total of 120 rural households constituted the sample size for the study. Conveniently, given the characteristic similarity of the rural areas in the state, one Local Government Area viz. Kachia was selected. Subsequently, in view of population density and agrarian activities, six (6) out of twelve (12) wards/taluks were purposively chosen. The chosen wards/taluks

FULL TEXTS BOOK

were Gumel, Kachia, Awon, Ankwa, Sabon-Sarki and Kurmin-Musa. Afterwards, two (2) villages were randomly chosen from each of the selected wards/taluks. Thereafter, from each of the selected villages, ten (10) households were randomly chosen in a freelance, thus given total households of 120. Furthermore, a well-structured questionnaire complemented with interview schedule was the instrument used for data elicitation and the data were collected during the year 2022. Analytically, in descending order, the study objectives were achieved using descriptive statistics, Alkire's multidimensional poverty index, Heckman's model, decision tree regression and exploratory factor analysis.

Model specification

1. Multidimensional poverty index (MPI): The MPI is a composite indicator of poverty that accounts for both the distribution of deprived areas and their prevalence (Table 1). The various indexes involved in MPI measurement are presented below (Sadiq and Sani, 2022):

Multidimensional headcount ratio (H): Is the proportion of persons who have been classified as multidimensionally poor, i.e. those who fall below the poverty line, and is expressed as:

$H = \frac{q(k)}{n}$ …… (1)

The number (or headcount) of multidimensionally poor persons according to parameter k is *q(k)*.

$(q(k) = \sum_{i=1}^{n} p_k(x_i, z))$ ……..(2)

The average deprivation share across the poor is defined as the intensity of poverty A, often known as the breadth of poverty. This is presented as:

$A = \sum_{i=1}^{q} c_i(k)/q(k)$ ……(3)

The percentage of the *d* indicators in which the average multidimensionally poor person is deprived is the intensity of poverty.

The measure M_0 is the so-called adjusted headcount ratio when α = 0. M_0 refers to the headcount ratio of multidimensional poverty H, poverty incidence, multiplied by poverty intensity A:

$M_0 = HA$ …… (11)

When$\alpha = 1$, the measureM_1, adjusted poverty gap, defined as the weighted average of indicator-specific poverty gaps is used. M_1 can be calculated as the product of H, A, and the average poverty gap among the poor G.

$M_1 = HAG$……(4)

$G = \sum_{i=1}^{n}\sum_{j=1}^{d} g_{ij}^{1}(k)/\sum_{i=1}^{n}\sum_{j=1}^{d} g_{ij}^{0}(k)$ ……(5)

Finally, when $\alpha = 2$, the adjusted squared poverty gap is calculated as the weighted average of the indicator-specific squared poverty gaps. M_2 can be calculated as the product of H, A, and the average squared poverty gap among the poor S, i.e. the severity of poverty.

$M_2 = HAS$ ……(6)

$S = \sum_{i=1}^{n}\sum_{j=1}^{d} g_{ij}^{2}(k)/\sum_{i=1}^{n}\sum_{j=1}^{d} g_{ij}^{0}(k)$……(7)

Seth and Alkire (2014) as reported by Sadiq and Sani (2022) suggested an additively decomposable inequality measure that is a positive multiple of "variance" and has within-group and between-group components. The inequality measure I^q employs the vector of deprivation scores of the *q* impoverished people $c_i(k)$ to quantify inequality among the poor at the national or sub-national level.

$I^q = \frac{\tilde{\beta}}{q}\sum_{i=1}^{q}[c_i(k) - A]^2$ ……(8)

To calculate the measure of inequality, the difference between each poor person's deprivation score and average intensity is squared, then the squared distances are added together and multiplied by a constant $\tilde{\beta}$. We set $\tilde{\beta}$ =1/25 since the poor's deprivation ratings vary from 1/5 to 1. This is the greatest permissible number for the inequality gauge, guaranteeing that the inequality gauge is constrained between zero and one, given the spectrum of deprivation scores. Nevertheless, a lower degree of poverty or a decline in

FULL TEXTS BOOK

poverty does not necessarily mean that every region or demographic categories have experienced an equal reduction in poverty (Sadiq and Sani, 2022).

Table 1: Dimensions and indicators of multidimensional poverty construct

Dimension	Indicator	Deprivation cut-off	Weigh t
Education	Year of schooling	No one has completed five years of schooling	1/12
	Child school enrolment	No school age child (1-6years) is attending school	1/12
Health	Health care services	No access to health care service	1/18
	Morbidity	Suffers illness	1/18
	Child mortality	Any case of a child within age 1-5 that is dead	1/18
Living standard	Electricity	No access to electricity	1/24
	Drinking water	No access to safe drinking water	1/24
	Light asset	Didn't own more than one of the following assets: radio, television, telephone, bicycle, scooter or refrigerator	1/24
	Heavy asset	Didn't own a car or truck	1/24
Environment	Sanitation	Household has no access to good toilet or improve but share with other household	1/18
	Housing	House floor made with mud, dung, clay	1/18
	Cooking fuel	Use firewood, dung, charcoal as fuel	1/18
Social connection	Autonomy	Household decision making on the use of income is not participatory	1/12
	Social capital	Member of household is not a member of cooperative	1/12
Empowerment	Social challenge	Problem of domestic violence	1/24
	Political instability	Problem of social/political unrest	1/24
	Self-defense	Problem of personal security	1/24
	Social safety net	Didn't trust government social investment prrogramme (E.g. farmers/traders monie)	1/24

2. Heckman's model: The model is composed of two dependent variables- decision (equation 10) and outcome (equation 11) variables (Sadiq *et al*., 2021; Sadiq and Sani, 2023). As a result, the model was chosen because it has the ability to adjust for sample selection bias. As presented by Sadiq et al.(2021) the model is as follow:

$Y_i = f(X_1, X_2, X_3 \ldots\ldots\ldots\ldots\ldots\ldots X_n)$ …….. (9)

$Y_{it} = \beta_0 + \beta X_{it} + \varepsilon_i$ …….. (10)

$Y_i^* = \alpha + X\beta + \gamma IMR + \varepsilon_i$…….. (11)

$Y_i^* = \alpha + X_1\beta_1 + X_2\beta_2 + X_3\beta_3 + \cdots . + X_n\beta_n + \gamma IMR + \varepsilon_i$…… (12)

Where,Y_{it} = MPI status (non-poor =0, poor = 1); Y_i* = latent observation of i[th] processor (index); $X_1 - X_n$= Explanatory variables; IMR= Inverse Mill's ratio; β_0 = Intercept;β_{1-n} = regression coefficients;

FULL TEXTS BOOK

γ= Lambda; and, ε_t = Stochastic. Predictor variables- age (years); gender (male =1, otherwise = 0); marital status (married =1, otherwise=0); education (years); farming experience (years); farm size (hectare); annual income (₦); extension contact (yes= 1, otherwise =0); membership of association (yes=1, otherwise=0); sickness (yes =1, otherwise = 0); household size (HHS) (numbers); co-operative membership (yes= 1, otherwise = 0); credit access (yes =1, otherwise =0); and, mobile phone (yes =1, otherwise =0).

Results and Discussion

Socio-economic Characteristics of Rural Households

A perusal of Table 2 shows that the study area is populated by an economic active labour force (42 years), thus a stimulus that should enable them to strive for a sustainable livelihood. Besides, given that majority of the households have education beyond first school leaving certificate (10 years) coupled with adequate farming experience (30.8 years), the rural households are expected to be rational in taking up sustainable livelihood enterprise that should ease them from the vicious cycle of poverty. Besides, the study area has a healthy labour force as evident by majority (73.3%) who reported no case of ill-health during the last production season. In other words, there is less challenge of morbidity as empirically established in the study area. This is a testimony that government and non-governmental efforts in containing killer diseases- malaria, typhoid, cholera, and meningitis have yielded positive result, thus enhancing labour productivity. However, most of the households maintained a large household size, with the tendency of a household being vulnerable to poverty except if it is composed of able-bodied men with income remittance. Besides, in the absence of augmenting assets- livestock rearing, light machinery equipment and agro-enterprise, hardly can the tiny and uneconomic holdings (2.23 hectares) maintained by most of the households contain poverty in the study. Further, gender is skewed towards the male given that gender stereotype phenomenon will not permit a woman to take the position of a primary household when she has a living husband. Therefore, given the cultural affinity on gender stereotype, women households are likely to be constrained with access to productive assets, thus easing their vulnerability to vicious cycle of poverty. Though, credit facilities is very poor (78.3%) in the study but the households have the opportunity of exploring the social capital as an economic buffer against poverty due to the engagement of majority (73.3%) in co-operative organizations. Also, most of the households have the opportunity of innovative technological and marketing tools that will buffer their livelihood given the adequate extension /advisory services among the majority (66.7%). Nevertheless, majority of the households have family responsibility to carter for, globally integrated-use mobile phone devices, relied on personal savings as income source; and take to farming and off-farm as major and minor occupations respectively.

Multidimensional Poverty Status of Households

The empirical evidence of the multidimensional poverty in the study area showed that at the threshold poverty point of 33%- deprived of two poverty dimensions out of six dimensions, 74.88% of the studied population are multidimensional poor (Table 3). Further, at the severe poverty level of 50%- deprived of three dimensions out of the six dimensions, a total of 41.63% of the study population are multidimensional poor. Moreover, at both the threshold and severe poverty levels, the poor on the average are being deprived of at least three dimensions as justified by the poverty intensity percentages of 53.02 and 60.36% respectively. Besides, 39.70 and 25.12% respectively are severely poor at the poverty threshold and severity points as indicated by the index of adjusted poverty. In other words, the

FULL TEXTS BOOK

share proportions of the total potential deprivation suffered by the poor in the society are 39.70 and 25.12% at the poverty threshold and severity levels respectively.

Furthermore, at the poverty threshold and severity points respectively, the index of the adjusted poverty gap shows that 35.18 and 16.50% of the poor are sensitive to both the number of deprivation they faced and the depth of the deprivation. Thus, if a person becomes more deprived in a particular indicator, the adjusted poverty gap will increase. Contrarily, if the shortfall from the deprivation cut-off in any of the indicators is reduced, then poverty plummets even if the person remains poor. In addition, at the poverty threshold and severity levels respectively, the index of adjusted poverty severity reveals that 17.37 and 6.79% of the poor to be sensitivity to number of deprivations they experienced, deprivation depth and deprivation inequality among them. Moreover, contribution-wise, at lower and higher poverty levels respectively, it was observed that the poor suffered more deprivation in the environment vis-à-vis 32.49 and 37.54%; then followed by empowerment - 21.94 and 22.26% (Figure 1). However, deprivation in education has the least contribution to the multidimensional poverty at both lower and higher poverty levels vis-à-vis 5.82 and 2.42% respectively. Therefore, it can be inferred that majority of the households in the study area are experiencing multidimensional poverty and are at least deprived in not less than three livelihood dimensions. Nevertheless, environmental, empowerment and standard of living dimensions need proactive intervention so as to minimizing the corrosive effect of poverty in the study area.

Determinants of Multidimensional Poverty Intensity

Using the maximum likelihood Heckit, the covariates that influenced multidimensional poverty (MP) in the study area were determined (Table 4). The Wald Chi^2 being within the plausible margin of 10% probability level indicates that the chosen model is best fit for the specified equation. Besides, the equations are independent as evident by the plausibility of the LR Chi^2 at 10% degree of freedom. More so, the non-significant of the Mill's inverse ratio at 10% error gap entails that there is no problem of sample selection bias in the use of non-zero MP index; thus, the outcome model is important in discerning the covariates that determine the intensity of the MP. Nevertheless, the covariates in the outcome model have no case of inter-dependence as evident by their respective variance inflation factors (VIF) that are within the plausible threshold value of 10.0. Thus, holding on to the above diagnostic tests, it can be adjudged that the captured parameters can be used for prediction with accuracy, certainty and consistency.

The empirical evidence showed that the rural households' multidimensional poverty status is influenced by age, education, farming experience, farm size and household size; whereas, the MP intensity is subject to credit access as evident by their respective parameter estimates that are within the plausible margin of 10% error gap. Age decreases the probability of a household being multidimensional poor as evident by the negative significant of its respective coefficient. *Ceteris paribus*, increase in labour productivity which inturn stimulates income stream positively, has the tendency to enable youthful-to-middle aged households to escape the vicious cycle of poverty. However, at the peak age point- old age, this is most unlikely due to decline in labour productivity except households that are composed of able-bodied men despite having an old aged household head. Therefore, by marginal implication, a unit increase in age will decrease the probability of a rural household not to be multidimensional poor by 7.5%. Literacy decreases the probability of a household being multidimensional poor as evident by the negative significant of its respective coefficient. Literacy will enable rural households to engage in pluractivity so as to boast their income stream, thus decrease their vulnerability to poverty. Therefore, the marginal implication of a unit increase in educational achievement will decrease the tendency of a rural household to be non-multidimensional poor by 8.5%. Farm size decreases the likelihood of a household being multidimensional poor significantly. The negative relationship of the farm size suggests that economies of scale and crop diversification effects of larger farms reduce households' vulnerability to multidimensional poverty. Conversely, small-scale farmers are more exposed to multidimensional poverty owing to their deficiency in economic capital base, diseconomies of scale and marketed surplus. Thus, the marginal implication of a unit increase in a farm size will decrease the chances of a rural household to be non-multidimensional poor by 29.40%. Contrary to a prior expectation, farming experience increases the likelihood of a household to be multidimensional poor. Complacency due to previous failed innovation will affects future innovative technologies, marketing and business innovations, thus exposing households with adequate years of farming experience to multidimensional poverty. Therefore, the marginal implication of a unit increase in farming experience will increase the chances of a rural household to be multidimensional poor by 6.5%. Household size increases the probability of a household to be multidimensional poverty. The negative relationship of household size coefficient suggests that large households composed mainly of women and children will surely affect income stream due to incursion of high expenditure on food and medics; and little or no income remittance by the multiple hands from external sources, thus makes them susceptible to multidimensional poverty. Therefore, the probability of a large household being multidimensional poor for a unit increase in household size against a small household will be 14.94%. Furthermore, empirically, it was deduced that access to credit decreases intensity of multidimensional poverty significantly because credit will offer households the means to venture expansion. The inverse relationship of access to credit suggests that households that lack credit facilities are at the mercy of poor business going concern due to lack of additional business investment, thus vulnerable to multidimensional poverty. Therefore, the marginal and elasticity implications of decrease in the multidimensional poverty intensity of rural households with credit facilities against those with none will be 5.89 and 2.57% respectively.

Correlates of Multidimensional Poverty Intensity of Households

The model summary of the tree regression model indicated that only five out of fifteen selected predictors made significant contribution in determining intensity of multidimensional poverty, thus the automatic exclusion/ dropping of the remaining predictors (Figure 2). These significant variables are household size, farming experience, income sources, credit access and extension contact. Besides, the tree model is a simple one as it has 11 nodes, 6 terminal nodes and truncated at 3 depths. The decision rules are designed in the root (node 0), branch (nodes: 1, 2, 4 and 5) and the leaf (nodes: 3, 6, 7, 8, 9 and 10) views. Empirically, household size is the best predictor of multidimensional poverty intensity and it divides the households into two groups viz. large household size (>=7) (node 1) and merged small-medium household sizes (<= 6) (node 2). The results showed that large households will have poverty intensity of 30.9% against their counterparts (small-medium households) that will have MP intensity of 11.9%. Further, farming experience and income sources respectively happened to be the best predictors of MP intensity of large (node 1) and small-medium households (node 2). Based on farming experience, two groups were identified: households with farming experience between the ranges of 10-29 years (node 3) will have MP intensity of 53.8% while those with farming experience above 29 years (node 4) will have MP intensity of 24.7%. For the households with farming experience between 10-29 years, farming experience is the only best predictor of their MP intensity. On the basis of income sources, two groups were identified: households with personal savings as an income source (node 5) will have an MP intensity of 18.10% while those with merged inheritance and friends/relatives as income sources (node 6) will have MP intensity of 2.8%. For the households with merged inheritance and friends/relative income sources, income source is the only best predictor of their MP intensity. The MP intensity of node 5 was determined by credit access and on that basis two groups were identified: for households with no credit facilities (node 7), their MP intensity will be 29.8% while the MP intensity of

FULL TEXTS BOOK

households with credit access (node 8) will be 9.3%. The households in node 5 had extension contact to be the determinant factor of their MP intensity and it split the group into two viz. those with contact and none. For households with extension contact, their MP intensity will be 11.90% while those with no extension contact will have MP intensity of 30.0%. Nevertheless, the accuracy of the prediction based on the risk estimate of 0.061 indicates that the MP intensity prediction of 6.10% of the sampled population is wrong; i.e., the risk of misclassifying a household's MP intensity is approximately 6.10%. Thus, it can be inferred that 93.90% of the households' MP intensity were accurately predicted.

Risk estimate = 0.061 (0.007)

Poverty Coping Strategies of Rural Households

The results of the varimax rotation identified four interpretable poverty coping strategies adopted by the rural households as evident by their respective Eigen values that exceeded unity (Table 5). Besides, the R-matrix has a common factor and it's not an identity matrix as indicated by the Kaiser-Meyer-Olkin (KMO) value of 0.773 and the plausibility of Bartlett's test of Sphericity at 1% probability level, respectively. In addition, he KMO value is within the acceptable recommended threshold posited by Keiser (1974); Field (2005); Sadiq *et al*.(2017); Sadiq *et al*.(2018a&b). Further, each factor has an internal consistency in its factor loadings as evident by their respective Cronbach's Alpha test of reliability that is not less than the acceptable margin of 0.70. In social science, Nunnally (1978); Nunnally and Bernstein (1994); Prunomo and Lee (2010); Sadiq *et al*.(2017); Sadiq *et al*.(2018a&b) cited a threshold not less than 0.70 to be satisfactory. The empirical evidence showed the cumulative variance of the extracted four factors to be 60.85: wherein, the variances of factors 1, 2, 3 and 4 respectively are 28.60, 15.23, 9.81 and 7.20%.

For the extracted factors, factors loadings with absolute value less than 0.40 were dropped as rightly done by Bagheri and Fami (2016); Sadiq *et al*.(2017) and Sadiq et al.(2018a&b). Besides, in labeling a factor with two loadings, only the higher factor was considered (Sadiq et al., 2018a&b). The extracted factors adopted as poverty coping strategies by the households are labeled self-help measure, social measure, religious measure and medical measure. Factor 1, labeled self-help measure, showed rural households concern on the use of reduced frequency of eating, eat less preferred food, food purchase on credit, and seeking food assistance from friends/relatives as coping strategies against poverty. Factor 2, labeled social measure, showed rural households concern on the use of alms begging; fasting and praying; and, government social safety net as coping strategies against poverty. Factor 3, labeled religious measure, showed rural households concern on the use of aids from religious organization as a coping strategy against poverty. Factor 4, labeled medical measure, showed rural households concern on the adoption of family planning as a coping strategy against poverty.

Table 5: Coping strategies adopted by the rural households

Strategies	**F1**	**F2**	**F3**	**F4**
Reducing the frequency of eating per day	0.803

Conclusions and Recommendations

In lieu of the findings, it was hedged that the labour force of the rural population is not only production but also mentally and physically fit for any given economic task; agrarian and technological exposed, thus capable of simulating innovative challenges; globally integrated; and, possessed a potential social capital asset. Unfortunately, the rural populace is challenged with unsustainable household size, credit facility deficit, uneconomic holdings and gender stereotype. Furthermore, it was inferred that multidimensional poverty has subtly infiltrated the rural populace as households suffered deprivation in at least two livelihood dimensions. Besides, unsustainable large household size and lackluster towards livelihood enhancement innovative measures were the significant chasm of susceptibility to multidimensional poverty. However, the intensity of multidimensional poverty revolves round extension service provision in the study area. As coping strategies against poverty, measures viz. self-help, social, religious and medical were adopted in the study area. Consequently, the study recommends the need for gender mainstreaming as a measure to mitigate poverty vicious cycle among the women; and, provision of augmenting assets so as to complement the productivity of households' business turnover ratio.

ABSTRACT
Management of the economy in the conditions of respecting the protection of the natural environment can be connected with the existence of quality primary health care for the population. It is of great importance because the population is the carrier of economic activity in a large number of cases, even for many years. Observing the management of the economy and the primary health care of the population as the bearer of economic activities is of great importance for the functioning of the real economy. Factors that influence such an observation are the improvement and promotion of health care, the preservation of the health of the population, but also continuous cooperation with the economy of an economy. Such observation goes in the direction of team observation of all activities at the social level, but also within the interdisciplinary approach to this issue. The development of the primary health care of the population depends on other segments of society in addition to health (education, social protection, ecology, economy, etc.) and social activities (education, economic development, economy, management, etc.), which the authors pointed out in this study highlighting the connection of all the stated factors that should work in harmony in order to achieve socio-economic action.
Key words: approach, health care, youth, health.

1. INTRODUCTION

Observing the management of the economy and the primary health care of the population as a carrier of economic activities is of great importance for the functioning of the real economy, with the note that special attention must be paid to the development of socio-economic and economic relations in an economy, especially if it is an economy that wants to is rapidly developing [1-14].

There are numerous factors that can influence such an observation, such as the improvement and promotion of health care, the preservation of the health of the population, but also the continuous cooperation with the economy of an economy, however, those responsible for planning should always take into account the strength of the economy, its impact on the tertiary sector, that is, on the health system of one economy [15-22].

Such observation goes in the direction of team observation of all activities at the social level, but also within the interdisciplinary approach, which is included in the framework of the functioning of health and economic development, the health of the population as a carrier of future economic activities [23-30].

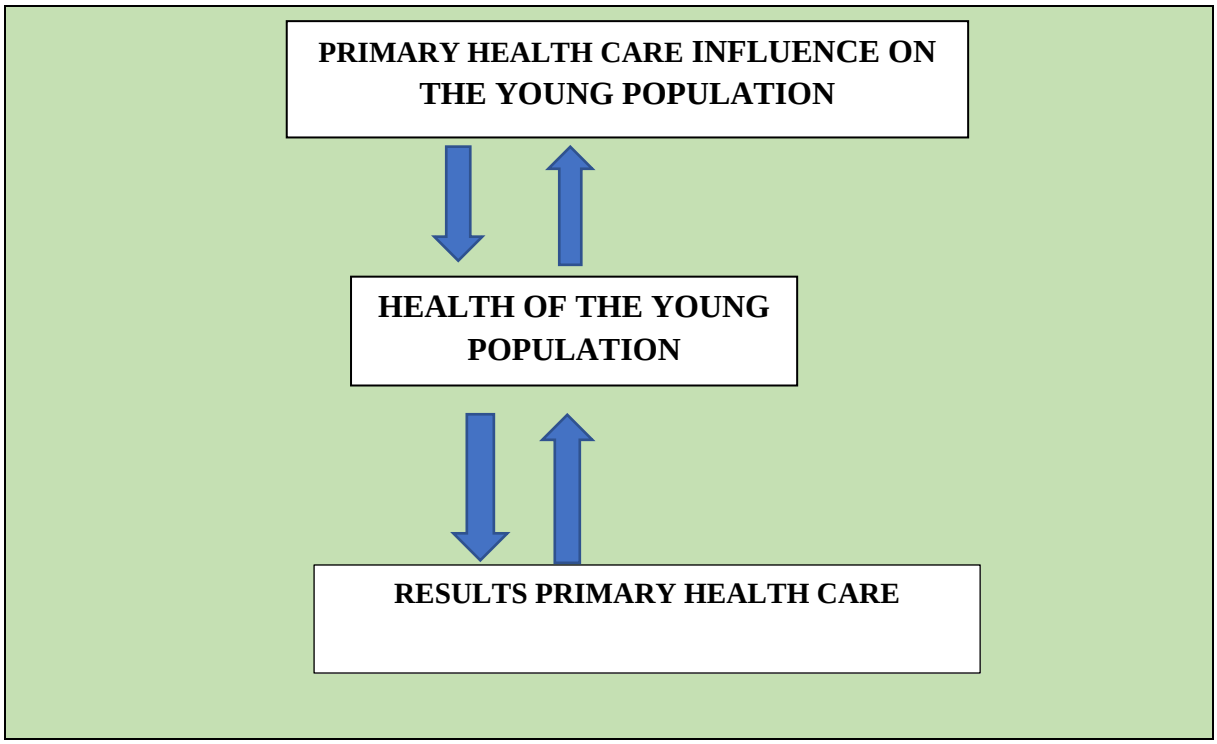

Figure 3: results primary health care

CONCLUSION

Development and flow of primary health care has a strong impact on the health of the general population in a country. This is important for the functioning of numerous legal entities in the country, especially one that strives for strong progress and development, which is impossible to achieve without a healthy population. In addition, the paper highlights the importance of interdisciplinary observation of this issue as well as the inter-sector connection of numerous subjects so that the result is positive in terms of improving the health of the general population, which the authors have highlighted in this paper and shown in figures 1-3, where the highlighting of the results is dominated such activities.

ABSTRACT
Primary health care as the basis of economisation between the economy and health care is a very important form of organizing economic activities. Such observation is aimed at finding the conditions for improving the health and working capacity of the broad population, which is of great importance if it is viewed in terms of environmental protection as one of the important factors of economic management.Primary health care as the basis of economizing between the economy and health, and all with the aim of improving the health and working capacity of the general population, should be interpreted as the basis of numerous activities in a country that wants to have a healthy working-age population that will be able to develop the country in the coming period. Activities on this plan are building a system of health care for workers, health care for students, health care for dental medicine, health care for geriatrics, and health care for skin and lung diseases of the general population, all with the aim of optimizing overall health as a category that is necessary for the normal development of economic activities.
Key words: approach, health care, youth, health.

3. INTRODUCTION

Primary health care should be seen as the basis of economy between the economy and healthcare, all with the aim of improving the health and working ability of the general population, which was emphasized by numerous authors in their works [1-15].
The goal of every economy is to have a healthy working-age population that will be able to develop the country in the coming period, because only a healthy working-age population can contribute to the economic and any other progress of the country [16-21].
Activities on this plan are the construction of a system of health care for workers, health care for students, health care for dental medicine, health care for geriatrics, and health care for skin and lung diseases of the general population, all with the aim of optimizing the overall health of the general population, which is observed in categories from young to the category of the population that is about to retire, and all within the radon capable population of a country [22-30].

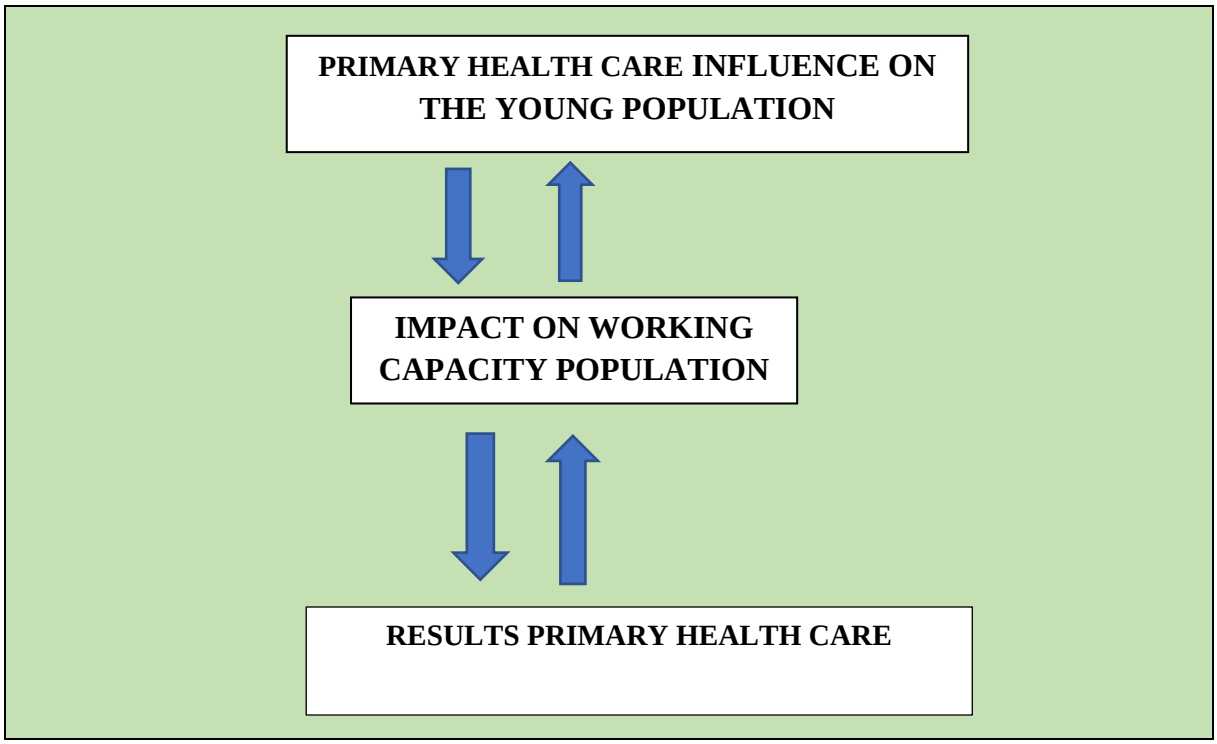

Figure 3: results primary health care and impact on working capacity population.

CONCLUSION

The paper highlights the importance of the impact of primary health care on the working-age population of an economy. This is the primary goal of any normal and realistic economy that wants to have real development. This is presented in Figures 1-3. Primary health care as the basis of economy between the economy and healthcare is the key to creating a healthy working-age population, all with the aim of improving the health and working ability of the general population, because that is the only way to establish a working-age working population, which is the result of such activities that have inter-sectoral impact, social and economic, that is, the impact on the general health of the working-age population.

AZERBAİJAN'S ENERGY RESOURCES AND REGIONAL DEVELOPMENT: THE ROLE OF OIL AND GAS

Tehran Masimov
BARTIN UNIVERSITY, Regional Development Economics Interdisciplinary Master's Program with Thesis
Student Number 20619825024
Dr. Lecturer Member Mehmet Akif PEÇE
Advisor

ABSTRACT
This thesis examines the relationship between Azerbaijan's economy, which is based on energy resources, and regional development. By investigating the challenges and successes encountered by countries with energy resources like Azerbaijan in their regional development processes, it helps us better understand the impact of energy policies on regional economies. The aim of this thesis is to thoroughly examine the impact of Azerbaijan's energy resources, especially oil and natural gas, on regional development. In this context, the goal is to evaluate the contribution of energy resources to regional economies and to contribute to the development of regional development strategies. The objectives of the thesis can be summarized as the analysis of Azerbaijan's energy resources, the impacts of oil and natural gas on regional development, the evaluation of energy policies, the identification of successful/unsuccessful projects, and the development of recommendations for sustainable energy use. The original value of this thesis lies in its detailed examination of the relationship between Azerbaijan's energy resources and regional development, and its contribution to the broader literature on energy policies and regional development. Additionally, by presenting Azerbaijan's experiences as an example for other countries with energy resources, it holds international significance. The thesis aims to deeply investigate the impacts of Azerbaijan's energy resources on regional development using quantitative and qualitative research methods such as literature review, statistical data analysis, fieldwork, and comparative analysis.
Keywords: Energy Policies, Regional Development, Oil and Natural Gas, Azerbaijan Economy, Sustainable Energy Use

Introduction

This thesis examines the impact of Azerbaijan's energy resources, particularly oil and natural gas, on regional development. The study aims to analyze the economic and social development effects of these resources and the variations across different regions. The literature review is based on existing knowledge. Aliyev and Akgün (2019) highlight the contribution of oil agreements during Azerbaijan's economic independence process in the 1990s and the development of Baku and Absheron. Muradov (2012) compares the strategies of Germany and Azerbaijan, addressing economic development and regional inequalities. Gunton (2009) examines the role of natural resources in regional development, noting that while natural resources provide economic advantages, they pose risks if mismanaged. Sevinç (2011) evaluates the effectiveness of regional development policies in Turkey, finding that regional inequalities persist and lack of local participation creates problems. Akpınar (2013) explores the transition in Turkey's regional development policies from central authorities to local economic actors.

This thesis aims to conduct an in-depth examination of the impact of Azerbaijan's rich energy resources, especially oil and gas, on regional development. The study's purpose is to understand the role of oil and gas in regional development processes and to closely examine their effects on economic growth, social development, and regional inequalities. The objectives of the thesis include analyzing the history and current state of Azerbaijan's energy sector, investigating the impact of oil and gas on economic growth

FULL TEXTS BOOK

and regional development disparities, evaluating how oil and gas revenues affect regional inequalities, and determining the impact of energy resources on regional development policies and strategies. These objectives aim to understand the impact of Azerbaijan's energy resources on regional development and contribute to shaping future energy policies.

This thesis is designed as a research study that systematically examines the impact of Azerbaijan's energy resources, oil and gas, on regional development. The main methods of the study are document analysis, data collection, and comparative analysis. Document analysis will comprehensively review existing written sources related to energy policies, regional development theories, and Azerbaijan's energy sector based on the literature review. The data collection process will include data on Azerbaijan's energy production, economic indicators, and regional development, gathered from reliable sources. Comparative analysis aims to identify similarities, differences, and success factors by comparing Azerbaijan's energy policies and regional development strategies with international examples. This methodology aims to provide a comprehensive, knowledge-based, and critical assessment of the research.

Conceptual Framework

General Assessment of Azerbaijan's Economy and the Role of Oil in the National Economy

Since gaining independence, Azerbaijan has made significant progress in its economy compared to other countries. The presence of rich energy resources serves as one of the catalysts attracting foreign investors to the sector, thereby promoting economic growth. Economic development in Azerbaijan continues within a stable macroeconomic environment. Currently, the results of socio-economic progress in the Republic of Azerbaijan indicate that the economy is functioning steadily and showing improvements in most macroeconomic indicators. The implementation of complex structural changes in the economy and the adoption of extensive measures to enhance the competitiveness of domestic production have positively influenced the overall quality of socio-economic development.

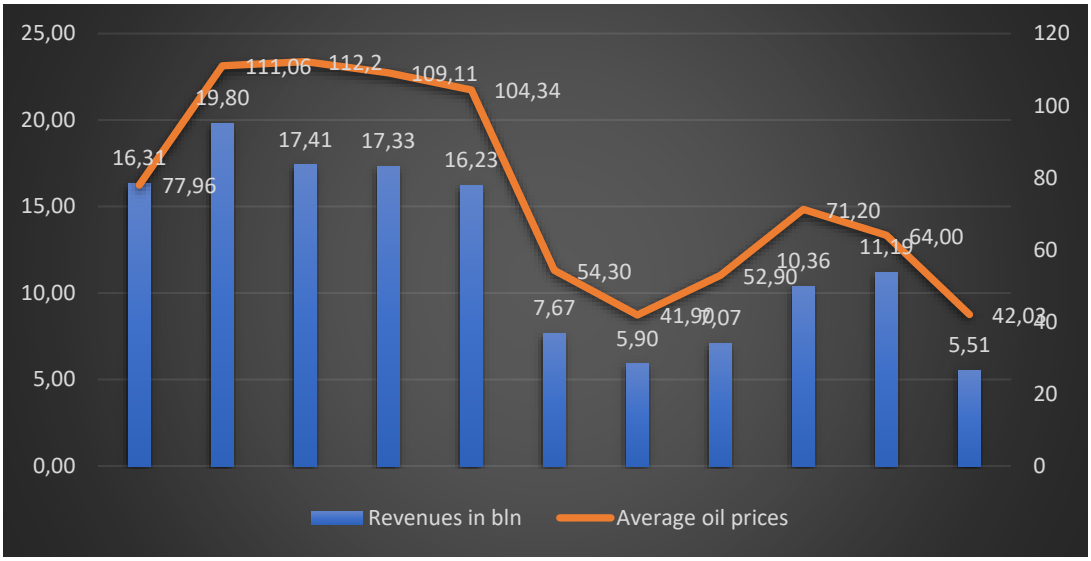
Macroeconomic Indicators of Azerbaijan (2014-2021)

Between 2014 and 2021, Azerbaijan experienced significant changes in its macroeconomic indicators. GDP increased from 59,014.1 million manats in 2014 to 93,203.2 million manats in 2021. Population income rose from 39,472.2 million manats to 57,206.8 million manats. The average nominal monthly wages increased from 444.5 manats to 732.1 manats. Despite fluctuations, state budget revenues rose from 22,508.9 million manats in 2018 to 26,631.7 million manats in 2021, while expenditures reached 27,422.4 million manats from 18,709.0 million manats. The public's savings in banks generally increased, rising from 7,188.4 million manats to 9,241.5 million manats. Investments peaked at 25,877.0 million manats in 2018, then fell but reached 25,313.8 million manats in 2021. The current account balance, which had a surplus of 10,430.5 million USD in 2014, recorded a deficit of 227.6 million USD in 2020, and a surplus of 8,291.6 million USD in 2021.



The agricultural sector plays a crucial role by contributing to food security, job creation, and economic growth. Farming and livestock support rural development, reduce unemployment, and alleviate poverty. Agricultural reforms and privatization policies have led to increases in various agricultural products. Agriculture is divided into two main categories: crop production and livestock.

The industrial sector supports economic growth, job opportunities, and technological advancement. Industrial reforms that began in 2004 contributed to the sector's growth by directing oil and gas revenues into industry. Entrepreneurship and the private sector have been supported in Azerbaijan, with a significant portion of the country's GDP coming from the private sector.

Before independence, Azerbaijan made progress in various economic sectors, including agriculture and services. However, post-independence economic collapse occurred due to factors such as trade slowdowns, the cessation of financial support from Moscow, and the transition to a market-oriented economy, causing GDP to decline until 1996. The conflict with Armenia also worsened the economic situation, leading to the displacement of nearly one million people.

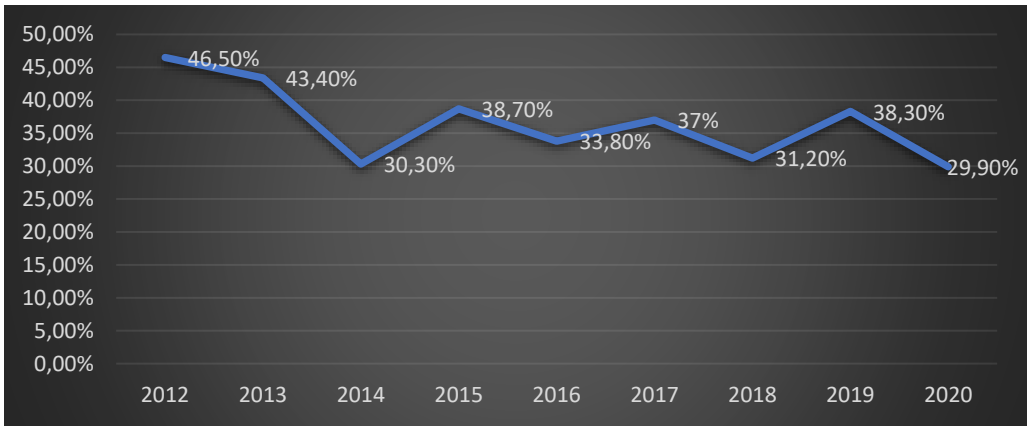
Table 1. Oil revenues (in billions of US dollars) and average oil sales price (in US dollars)

Source: State Statistics Committee of the Republic of Azerbaijan, https://www.oilfund.az/

Brent crude oil prices peaked at $112.2 per barrel in 2013 but fell to $54.3 in 2015 and further to $45.13 in January 2015. The impact of this decline on the Azerbaijani manat became apparent after February 2015. By 2016, oil prices had dropped to $41.90, and the exchange rate of the manat rose to 1.55 USD. Since 2014, global oil prices have fallen due to oversupply and decreasing demand, affecting oil exporters like Azerbaijan. The fluctuations in oil prices led to a depreciation of the manat. The State Oil Fund of Azerbaijan (SOFAZ) plays a crucial role in mitigating these effects. The increase in the exchange rate in 2016 reflects the connection between oil prices and the manat.

Table 2. Exchange rate dynamics of the Azerbaijani manat, USD/manat



Source: State Statistics Committee of the Republic of Azerbaijan, https://www.stat.gov.az/

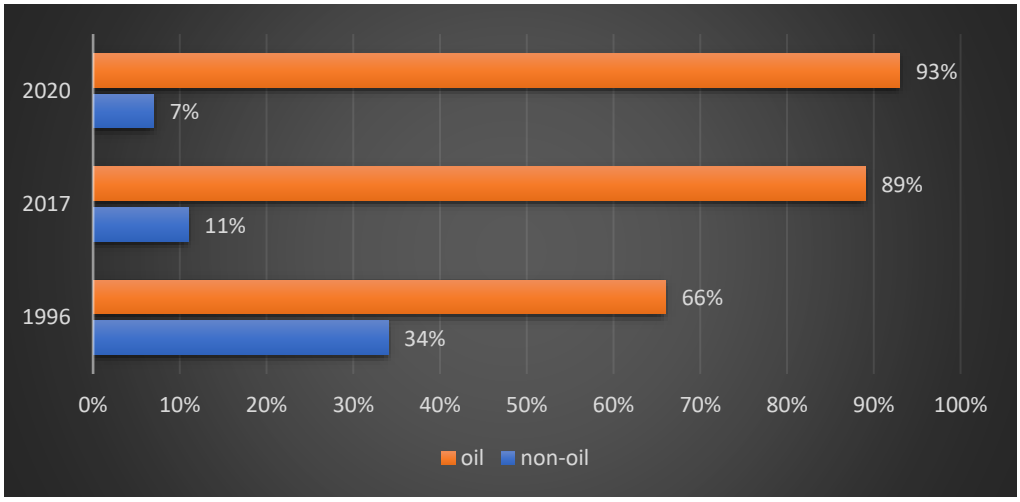
The decline in oil prices in 2016 affected the exchange rate of the manat in February 2017, and 1 manat became equal to 1.92 US dollars. The manat then stabilized against the US dollar at 1.70. SOFAZ supervised these measures to ensure exchange rate stability. GDP per capita in 2020 was 7,262.8 manats, down 5% compared to 2019. The IMF estimated GDP per capita in 2020 at US$14,430.9, indicating a decline of 5.4%. Nominal incomes of the population decreased by 1.8%, reaching 55,726.1 million manats, and per capita income decreased by 2.5%, reaching 5,587.6 million manats. However, the

FULL TEXTS BOOK

average monthly nominal wage increased by 11.4% to 707.3 manats. Non-oil sector spurred economic growth, accounting for 70.1% of GDP.

Table 4. Share of the oil sector in GDP

Source: State Statistics Committee of the Republic of Azerbaijan, https://www.oilfund.az/



In 2020, oil revenues played a critical role in ensuring the country's fiscal stability. Specifically, transfers from the State Oil Fund of Azerbaijan (SOFAZ) to the state accounted for 12.2 billion manats, which was 49.4% of total state budget revenues. These transfer payments were not dependent on fluctuations in crude oil prices, underscoring their importance in maintaining a balanced budget. During the same period, state budget revenues were recorded at 24.6817 billion manats, while expenditures amounted to 26.4163 billion manats. Consequently, the state budget experienced a deficit equivalent to -2.4% of GDP. It is essential to note that the state budget deficit represents the difference between government revenues and expenditures, indicating that expenditures exceeded available revenues in 2020.

Azerbaijan's state budget expenditures are directed toward various key sectors and areas. Among these are defense and security expenditures, which prioritize the nation's protection and security. Additionally, there are expenditures for industry, construction, and investments aimed at promoting economic growth and development. Agriculture, forestry, and fisheries expenditures support activities in these fields, while transportation, road, and communication expenses are allocated to strengthen the country's infrastructure and connectivity. Municipal services and related expenses serve public services and utilities. The budgets of state authorities and local self-governance offices, as well as expenditures for the judiciary, security forces, and judicial offices, also fall within this scope. Social expenditures aim to improve the population's well-being and cover areas such as social welfare, education, health, and culture, prioritizing the provision of essential services and support to citizens. Lastly, the budget includes expenses related to media and sports, recognizing the importance of media outlets and sporting events in society.

In 1996, non-oil products accounted for 34% of Azerbaijan's exports, while oil products constituted 66%. By 2017, non-oil exports had decreased threefold, with oil products rising to 89%. In 2020, due to the pandemic, non-oil exports fell to 7%, while oil exports increased to 93%. This situation highlights the dependence on oil and underscores the need to diversify the economy (SSCAR, 2020).

Policy Challenges in Azerbaijan

Azerbaijan's over-reliance on oil and natural gas resources is one of the greatest policy challenges for its economy. The oil and gas markets are constantly fluctuating, with prices changing due to geopolitical tensions, supply-demand dynamics, and other factors. These fluctuations pose risks to Azerbaijan's fiscal stability and economic performance. Therefore, investing in and diversifying non-oil sectors is crucial. Diversification can reduce sensitivity to oil price fluctuations and contribute to economic growth. In this direction, it is necessary to invest in non-oil sectors and promote innovation and entrepreneurship. Additionally, cooperation between technology and academia is important as it can foster innovation and increase the competitiveness of non-oil sectors.

The government can support the agricultural sector by providing access to credit, promoting modern agricultural techniques, and facilitating market connections. Investments aimed at increasing the competitiveness of the manufacturing sector can facilitate the export of non-oil products. Investments are also necessary for the development of tourism, including the promotion of cultural heritage and natural attractions and the simplification of visa procedures. Another important factor accompanying economic growth is the inadequate institutional structure. There are concerns regarding transparency, accountability, and the rule of law. Therefore, strengthening institutional structures and combating corruption is essential. Well-functioning institutions build confidence among domestic and international investors and encourage long-term investment.

Azerbaijan should undertake reforms in public administration, the judiciary, and anti-corruption measures. Simplifying administrative processes and digitizing services can increase transparency. Ensuring an independent and impartial judiciary system is also important. These steps can help ensure Azerbaijan's long-term economic stability by promoting economic diversity and improving the business environment.

Main Oil and Gas Agreements and Energy Balance

We will address the issue of transporting oil, the most important type of hydrocarbon from Azerbaijan, to its consumption destination. Pipelines are one of the most profitable means used for this purpose. In 1997, the first oil crossing the Azerbaijan-Russia border reached the Black Sea via the Baku-Grozny-Novorossisk Line. This line aimed to transport oil to a point where Russia could set oil prices. As part of efforts to transport Azerbaijan's oil to the global market, the Baku-Supsa Oil Pipeline, signed in 1995, became operational in 1999, was closed in 2006, but reopened in 2008. The Baku-Tbilisi-Ceyhan Oil Pipeline facilitated the transport of Azerbaijan's oil to the Mediterranean. This project made Turkey an important transit country for energy. The Baku-Ceyhan Pipeline starts from Baku, reaches Turkey via

FULL TEXTS BOOK

Georgia, and then reaches Ceyhan. This 1726 km long pipeline is a result of cooperation between Azerbaijan, Georgia, and Turkey. Oil is reliably transported through this pipeline with diameters of 42 inches and 34 inches, and a design pressure of 100 bars. The shareholders of the Baku-Tbilisi-Ceyhan Pipeline include BP Exploration (Caspian Sea) Ltd., SOCAR, Unocal BTC Pipeline Ltd., Statoil BTC Caspian Ltd., TPAO, ENI, TOTAL, Itochu Oil Exploration (Azerbaijan) Inc., INPEX, Conocophillips, and Delta-Hess (BTC) Ltd. The pipelines are at the heart of an energy corridor connecting the Caspian Sea to the Mediterranean, aiming to reduce dependence on the Middle East and strengthen the U.S. influence in this region.

Impact of Oil Revenues and Public Expenditures on the State Budget

Oil and gas sector tax revenues are crucial and form the main source of income for the budget in Azerbaijan. However, this highlights the budget's dependence on oil revenues. Managing oil revenues includes efforts to reduce the state budget's dependency on the oil sector. The State Oil Fund of Azerbaijan (SOFAZ) collects oil revenues and transfers them directly to the state. Additionally, taxes collected from companies operating in the oil sector are a significant source of income. While the proportion of tax revenues from the oil sector to total tax revenues varies, it is generally high. However, fluctuations in oil prices can affect these revenues. The changes in state budget expenditures before and after the oil boom reflect the budget's dependency on oil revenues. Especially in the post-boom period, budget expenditures increased rapidly.

The use of different energy sources in Azerbaijan plays a critical role in determining the dynamics of the country's energy sector and energy policies. This section will present a comparative analysis by examining the use of various energy sources available in Azerbaijan. This analysis aims to understand Azerbaijan's strategies for meeting energy needs and to shed light on the process of shaping future energy policies.

Table 9 shows in detail the energy balance of Azerbaijan in thousand tons of oil equivalent between 2015 and 2022. This table includes various components of the country such as energy production, imports, exports, international shelters and stock changes. First, it is important to consider the balance of the table between production and consumption. The increases in production show that the country's energy production capacity is generally increasing steadily. However, differences between imports and exports may affect Azerbaijan's energy trade balance. In particular, a decrease in export figures may indicate changes in the country's foreign trade balance. Additionally, factors such as international refuges and stock changes should also be taken into account. These factors can affect the country's energy policies as well as its international relations. For example, changes in international havens may reflect Azerbaijan's role and relations in energy markets. At the bottom of the table there are details about the final energy consumption. This section includes data on energy consumption of industry, transportation, agriculture and other sectors. This data is important for understanding the impacts of different sectors on energy use.

Table 10. Production of energy products, (Thousand tons of oil equivalent)

	2015	**2016**	**2017**	**2018**	**2019**	**2020**	**2021**	**2022**

The table shows Azerbaijan's production of energy products between 2015-2022. While crude oil production decreased, natural gas production increased. Among petroleum-derived products, the production of car gasoline generally increased, while diesel fuel was stable. Electricity production has increased, especially the amount of electricity obtained from renewable sources has increased every year.

Table 11. Total energy supply

Table 11 shows Azerbaijan's energy supply for 2015-2022 in detail. There are changes in crude oil and natural gas production: While crude oil decreased, natural gas increased. In renewable energy, solar and wind energy production increased. Among petroleum derivatives, while there is an increase in car gasoline, there are decreases in some products. Azerbaijan's energy portfolio and consumption trends vary on a seasonal and resource basis.

Method

One method used in the thesis studies involves a qualitative approach to evaluate the impact of Azerbaijan's oil industry on regional development. This method involves conducting an in-depth analysis to understand the regional economic, social and environmental impacts of the industry using previous studies, reports and similar sources. Previous studies and reports provide information in this field by examining the impacts of Azerbaijan's oil industry on regional development. Based on these data, researchers use qualitative analysis techniques to evaluate the oil industry's contribution to regional economic growth, employment, infrastructure development, and other impacts on society.

Qualitative methods include a variety of techniques to understand individuals' experiences, attitudes, and perceptions. These techniques include focus groups, interviews, and content analysis. Researchers conduct in-depth analysis of the views and experiences of local people, businesses and public institutions in the region about the impacts of the oil industry. These interviews and analyzes provide an important perspective for understanding the oil industry's impacts on regional development. Qualitative methods can also be used to examine social and environmental changes in the region. Researchers can use these methods to understand the impact of the oil industry on social dynamics and environmental impacts on local society. For example, they may address issues such as the oil industry's impact on water resources or transformations in the local economy.

Regional Inequalities and Resource Allocation

An important condition for sustainable and balanced development in the country is to ensure the same level of overall social and economic development of the country, its population and the impact of all its regions. The territory of Azerbaijan seems to be divided into two different regions according to the level of social-economic development and economic potential: In the first region, the city of Baku, which constitutes only 7% of the country's total area and where up to 30% of the population lives, and the Absheron peninsula, which has approximately 75% of the economic potential. -80 of them were

FULL TEXTS BOOK

collected. In the other region, economic activity is lower in the regions that cover 93% of the remaining area of the country and 70% of the population, only 20-25% of the country's economy is shaped.

In 2019, the total production volume across the country was 88.9 billion manats. Most of this production fell on Baku and Absheron. For example, the amount produced in Baku accounts for 68.9%, while the shares in the remaining regions are lower. This inequality also causes differences in per capita income and basic services between regions. For example, per capita income in Baku is quite high compared to other regions.

This inequality in the regional development of the country is based on many factors such as economic-geographical location, natural conditions and resources, settlement level of the population, area and land structure. While State Programs address these differences in terms of regional development, measures such as land and agricultural reforms have also been taken. However, factors such as the problems experienced in occupied regions and the centralization of the economy pose significant challenges for regional development.

In order to solve these inequalities, regional development strategies and investments need to be distributed in a balanced manner. Additionally, attracting business and domestic and foreign investors and strengthening state-private sector cooperation can play an important role in reducing differences between regions. However, more effort and coordination is required for this process to be successful.

Regional development in the context of the main directions of the strategic road map for the development perspective of the country's economy

Sustainable, competitive and diversified development of the country's regions is one of the priority regional policies of the state. The long-term economic policy initiated by Heydar Aliyev has created favorable conditions for macroeconomic stability and continuous development. This policy has led to the emergence of a large entrepreneurial class and an increased role of the private sector in economic and social development. Significant successes have been achieved in the integration of the country into the international economic system, and economic reforms have been developed with modern approaches compatible with international economic challenges. However, new economic conditions and international processes show that the decline in oil revenues and the complex macroeconomic environment have a negative impact on the country's development. Responding to these challenges and minimizing the impact of the oil crisis are key priorities. In addition, a comprehensive assessment of the current economic situation and the development of an economic development strategy suitable for the post-oil era are priorities to ensure the continuity of economic and regional policies and reforms. The adopted Strategic Road Maps will create conditions for sustainable economic development of the country. These roadmaps will strengthen the country's position in the international economic environment with goals such as attracting investment, creating a competitive environment, providing access to international markets and developing human capital in response to international economic challenges.

In order to improve the economic environment in the regions, small and medium-sized entrepreneurship should be encouraged in the post-oil era. The development of small and medium-sized entrepreneurship is important to increase its impact in the national economy, expand access to global markets and increase the efficiency of the labor market. To achieve these goals, strategic steps should be taken such as developing the normative-legal framework, increasing access to financial resources and creating cooperation environments. Additionally, new policies and regulations need to be implemented for the development of the agricultural sector in the regions. Accelerating the production and processing of agricultural products will lead to new developments in the socio-economic life of the regions and contribute to their continuous development.

State programs on regional socio-economic development, their features and results

The government's regional socio-economic development policies may differ in several ways:

FULL TEXTS BOOK

Equalization of Regional Development Policy: This policy aims to eliminate or balance inequalities between regions. In Azerbaijan, socio-economic development programs for the mentioned regions fall into this category.

Focused Development Policy: This policy focuses on priority development of certain regions. For example, Gabala and Khachmaz regions have been highlighted for tourism development. Steps have also been taken towards its transformation into industrial hubs through the creation of industrial zones, for example, the establishment of industrial zones in Masalli, Sabirabad and Neftchala.

Synergy Policy: This policy aims to synchronize development and promote cooperation and coordination between regions.

Differentiated Policy: This policy envisages the establishment of special economic zones or clusters in different regions.

Changing Existing Administrative Mechanisms: More effective mechanisms need to be created to eliminate socio-economic inequality between regions and ensure balanced development. The establishment of regional clusters stands out as an effective mechanism based on global experience.

For the success of these policy approaches, a cluster approach in which businesses, suppliers, industries and supporting institutions specialized in specific geographical regions work collaboratively is important. State programs and strategies implemented in Azerbaijan in recent years have focused on eliminating inequality between regions and ensuring balanced development.

Results

This comprehensive research, conducted in the context of Azerbaijan's energy resources and regional development, examines in detail the effects of the country's energy sector on regional development. It is emphasized that the oil and gas industry, with its economic potential concentrated especially in the city of Baku and the Absheron peninsula, accentuates regional inequalities in the country and causes imbalances in resource allocation. This thesis reveals the economic and social differences between Azerbaijan's territories, making it clear that economic concentration, especially in the city of Baku and the Absheron peninsula, leaves other regions behind. This situation shows that the overall development of the country must be sustainable and balanced.

In the section where the impacts of the oil and gas industry are examined, the differences in production, income distribution and basic capital investments between different economic regions of the country are analyzed in detail. In this context, the advantages of economic activity in the Baku-Absheron region compared to other regions are emphasized.

In addition, it is revealed that differences between regions in per capita gross domestic product, population income and other economic indicators are an important determinant in terms of socio-economic development levels. This analysis particularly reveals the dramatic gap between the city of Baku and other regions. The research evaluates in detail the differences experienced by the country's various economic regions in terms of energy, industry, banking and basic capital investments and provides numerical data showing the inequalities between these regions. These data reveal how great an economic weight the Baku-Absheron region has, especially when compared to other regions.

In addition, another important point emphasized by the thesis is that Azerbaijan's successes in the energy sector are achieved by the implementation of strategic state programs for regional development and economic growth. It is stated that the "Socio-Economic Development State Programs of the Regions of the Republic of Azerbaijan" between 2004 and 2013 and subsequent programs caused significant increases in the general economic indicators of the country. These programs aim to focus on non-oil sectors and reduce inequalities between regions, particularly by balancing the effects of the oil-based economy.

As a result, this thesis on Azerbaijan's energy resources and regional development reveals that the country's achievements in the energy sector and the strategic state programs implemented accordingly play an important role in regional development and economic growth. However, more efforts are

required to eliminate the inequalities created by the oil-based economy and ensure sustainable development.

ABSTRACT

The leaf extracts of *Heliotropium indicum* obtained by sequential extraction method in hexane, ethyl acetate, methanol and water were screened for insecticidal activity on the weevils of rice, sorghum, maize and cowpea at different extract concentrations of 0.01 g/ml, 0.02 g/ml, 0.04 g/ml and 0.08 g/ml and exposure time of 24-96 h. This cage experiment was performed in triplicate and the number of dead weevils were counted and recorded each day for four days. Following phytochemical analysis of the extracts, a toxicology study was conducted on the extracts using Wistar rats. The serum liver and kidney function tests were carried out through enzyme function tests after repeated administration of the extracts. The parameter assessed were the biochemical, hematological, and histopathological functions. The control group had serum ALT, AST and ALP levels of 39.6, 93.55, and 93.55 IU/L, whereas, group 2 had 47.07, 112.17, and 34.13 IU/L enzyme levels, respectively. Moreover, the group 3 enzyme levels were 31.99, 107.57, and 23.34 IU/L, while the fourth group had 36.00, 101.48, and 35.15 IU/L, respectively. Renal function tests revealed that the serum creatinine level was 0.43 mg/dL, whereas; the uric acid and BUN urea levels were 0.14 µmol/L and 0.23 µmol/L, respectively. Similarly, compared with those of the control group, the haematological test of the rat groups showed consistent leukocyte and reticulocyte levels. The liver and kidney were assayed by histopathology, and the results showed no noticeable alteration in the architectural integrity of the investigated tissues, except for minor lesions in the livers of group 2 rats. The study established the scientific rationale for the use of *Heliotropium indicum* as safe biopesticides to control stored grain insect pests.

Keywords: *Heliotropium indicum*;Insecticidal; Haematological; Histopathological

Introductıon

Plants often enhance their survival by possessing toxic properties that protect them from predators. Such toxicity has led to research on the biochemistry and physiology of numerous plant species, which have revealed active ingredients with potential clinical applications. Many of the over 200,000 known plant species use toxins as a defense mechanism against natural enemies in different parts such as leaves, stems or roots. However, these same toxic components can pose risks to human health affecting various systems like skin, lungs, liver, kidneys ,bladder, bone, neurology and cardiovascular system. A particular example is *Heliotropium indicum* L., a plant belonging to Boraginaceae family commonly referred by other names among Nigerian communities such as "Agogo igun" for Yoruba people while Hausa community called it "Kalkashin korama". Studies have been conducted on leaf extracts from *H.indicum* on insect pests of stored grains and also analyzing its toxic effects on Wistar rat kidney and liver. This plant is widely distributed tropical & non-tropical herbaceous flora (Jose and Adesina,2014). The plant has been reported by Sarkar *et al*., (2021) and Chunthorng-Orn *et al*.,(2016) as having a long traditional use for various ailments, such as bone fractures, wounds, fevers, eye infections, menstrual irregularities, nerve disorders and kidney problems. *Heliotropium indicum* hails from certain areas of Africa and multiple tropical Asian nations. It is a perennial or annual herb according to Rahman *et al*., (2011) reaching 15 to 50 cm high when it grows. *H.indicum* L. contains various chemical compounds including pyrrolizidine alkaloids, tannins, saponins, indicacine-N-oxide and heliotrine. These alkaloids give the plant anti-inflammatory, antibacterial properties that could potentially aid in wound healing or stimulate menstruation if taken over several days. The use of *H.indicum* extracts has been known to treat a range of conditions including abscesses, skin lesions and ulcers; it has also shown notable antitumor efficacy without causing liver damage when indole-N-oxide is present. However there have been instances where hepatotoxicity was observed among people with leukemia despite no apparent cause for its toxicity (Rahman *et al*., 2011; Ashidi and Lawal, 2017). Thus, this study investigates the

FULL TEXTS BOOK

insecticidal and toxicological effects from the leaf extracts of Heliotropium indicum for controling insect pests of stored grains

Objectives:
The objectives of this study were to:
i. Extract bioactive constituents from the leaf of *H.indicum*,
ii. Determine the insecticidal activity of the leaf extracts on weevils of stored grains
iii. Conduct biochemical, hematological and histopathological tests on the rats tissues upon administration of the leaf extracts of *Heliotropium indicum*

Materials and methods
To remove dust and foreign materials, the freshly collected leaves were washed under running tap water before being drained on shelves in a well-ventilated shaded area for two weeks to prevent degradation of volatile compounds. Following this, they were pounded with mortar and pestle into a coarse powder which was stored separately in an airtight polythene bag prior to solvent extraction.

Preparation of crude extracts
Following the method of Ncube et al., (2008) with slight modification, about 416 g coarse powder of *H.indicum* was mixed with 1248 mL n-hexane (1:3 w/v) in a stopper glass container for 72 h while occasionally shaking it. Subsequently, it was decanted and filtered through Whatman No.4 filter paper. After that, the damp solid hexane residue left was air-dried resulting in 408 g. The process was repeated for ethyl acetate, methanol and water to obtain their respective crude extracts (Goselle *et al*.,.2017)

Phytochemical Screening
The crude leaf extracts of *H.indicum* L., were subjected to phytochemical screening using the methods outlined in Marjoka *et al*.,(2016) and Samatha *et al*., (2012) to detect the presence of secondary such as alkaloids, saponins, flavonoids, steroids, terpenoids ,cardiac glycosides tannins and phenols.

Insect culturing procedures
The grain weevils were cultured on their substrates: rice, sorghum, maize and cowpea by first cleaning the substrates and disinfected them in a deep freezer before being taken out to equilibrate. Ten pairs of adult *Sitophilus species* and *Callosobruchus maculatus* were then introduced into kilner jars containing 20 g of each substrate which was held tightly with muslin clothes on raised platforms within trays filled with oil covering their entire surface. The cultures were kept separate in insect cages for offspring emergence while regular recycling was done to ensure sufficient supply of insects at mean temperature/relative humidity levels.

Insecticidal activity test
The method of Asawalam et al., (2006)., was used for the determination of mortality. About twenty grams (20 g) of clean uninfected grains were weighed into a l L kilner jar. Then, an aliquot of 0.01 g/mL, 0.02 g/mL, 0.04 g/mL and 0.08 g/mL of hexane, ethyl acetate and methanol leaf extracts of *H. indicum* were measured with the aid of a micropipette and mixed with the 20 g of clean substrates inside the kilner jars. The mixture was thoroughly mixed together by gently shaking the kilner jars. The jars were left open for 40 mins to allow the solvents to evaporate. Thereafter, ten copulating pairs (10 males:10 females) of less than 4 days-old adult *S. oryzae, S.granarius. S.zeamais*, and *C. maculatus* were introduced to each of the kilner jars and covered with muslin clothes. Each treatment was replicated three (3) times, and data on percentage adult mortality was obtained after 24 - 96 h post-treatment.

$$\% \text{ mortality} = \frac{\text{Number of dead insect}}{\text{Total insect infestation}} \times 100 \quad (1)$$

Animal Diet and Administration of Extracts
Twenty Wistar rats (n=20) were acclimatized for a week by feeding them with a standard rat diet and tap water before the commencement of the experiment. They were housed in plastic cages with good ventilation and were randomly separated into four groups of five rats each: group 1 as the control, group 2 received hexane extract, group 3 received ethyl acetate extract and group 4 received methanol extract.

FULL TEXTS BOOK

The animal procedures were approved by NILAR (National Institute of Laboratory Animal Resources)(US), Committee on Care, Use of Laboratory Animals, and National Institutes of Health (US). Division of Research Resources (1985). Guide for the Care and Use of Laboratory Animals,National Academics, 87 in accordance with the guidelines of the Animal Research Report of In Vivo Experiments (ARRIVE) guidelines for use of Experimental Animals. Group1 continued on their normal everyday rat diet, while groups 2 - 4 had both regular food and water along with measured amounts of respective extracts every three days for twenty-one days until completion, while monitoring weight changes weekly throughout this period.

Animal treatments and experimental design

During the experiment, *H. indicum* extracts were administered orally to rats in groups 2, 3, and 4 for duration of twenty-one days in various concentrations (100 mg/kg body weight up to161 mg/kg body weight). The toxicological effects were monitored through analyses on blood samples as well as liver and kidney tissue. Haematological, and biochemical analyses were conducted along with histopathology that aimed at analyzing the levels of toxicity between these three distinct extract groups used during administration, while control group received the vehicle (DMSO) over the course of this period after which all animals involved in this study were sacrificed for analysis.

Physiological parameters

Throughout the study, various physiological parameters were measured on a weekly basis, including weight of the rats in each group. Additionally, behavioral and physical characteristics such as food and water intake patterns, sleep quality and frequency of cuddling or running around were monitored to identify any deviations from normal rat behavior- along with observations regarding coat appearance or fecal condition for assessing cleanliness levels overall.

Animal sample collection for analysis

Before being sacrificed, every animal was given a thorough dose of chloroform in order to make them fully anesthetized. To expose the posterior vene cava and internal organs, laparotomy was promptly performed on each deceased rats. Roughly eight samples were then obtained for analysis of histopathological and biochemical parameters; this involved removing liver and kidney tissues that underwent 10% formalin preservation specifically for such testing purposes.

Biochemical function tests

The measurement of serum enzyme activity was conducted using readily available kits, in accordance with the manufacturer's instructions. Assessments for liver function included determining the levels of serum alanine aminotransaminase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP); while parameters such as creatinine, uric acid and urea levels were used to measure renal function

Haematological tests

In accordance with OECD 423 and 407 test guidelines, the protocols for this investigation adhered to the Guidelines for Care and Use of Laboratory Chemicals. The experiment utilized male Wistar rats (*Rattus norvegicus*) totaling twenty in number. To determine hematological parameters including red blood cell (RBC) count, white blood cell (WBC) count, hemoglobin concentration (HB), packed cell volume (PCV), capillary tube microhematocrit method was used to measure PCV whereas RBCs and WBCs were manually counted using a modified Neubauer counting chamber. Shali's procedure evaluated HB levels, while manual differential counts using Leishman stain assessed leukocytes types such as eosinophils, basophils lymphocytes monocytes neutrophils which were then categorized based on percentage rates under microscopic observation.

Histopathological examinations

After harvesting, the livers and kidneys of rats were immersed in 10% formalin for two days to fix them. An automatic tissue processor was employed to embed the samples within paraffin wax after dehydrating using an ethanol gradient (70%, 80%, 90%, and 100%) with each step lasting for 90 mins. Xylene cleansing procedures were repeated twice over a period of two hours (2 h) before infiltration by

FULL TEXTS BOOK

paraffin wax which also took about four hours (4 h) total duration. Rotary microtome was used to cut sections measuring five micrometers apart from one another, while utilizing Hematoxylin & Eosin staining as described by Oduah *et al*., (2010), followed by subsequent imaging under light microscopy equipped with a camera in line with the guidance of Suresh et al., (2020).

Statistical analysis

The information collected underwent statistical analysis through SPSS one-way analysis of variance (ANOVA) for triplicate measurements, with significance being evaluated at a level of P≤0.05. The mean±SEM was utilized to determine significant variances between the control group and three experimental groups in various results such as cumulative weight performance.

Cummulative Weight

The rats' average body weight was measured over a period of 28 days as depicted in Fig.i. The cumulative weight was calculated by subtracting the initial arrival weight from their final pre-sacrifice weight following an overnight fast, and dividing by two.

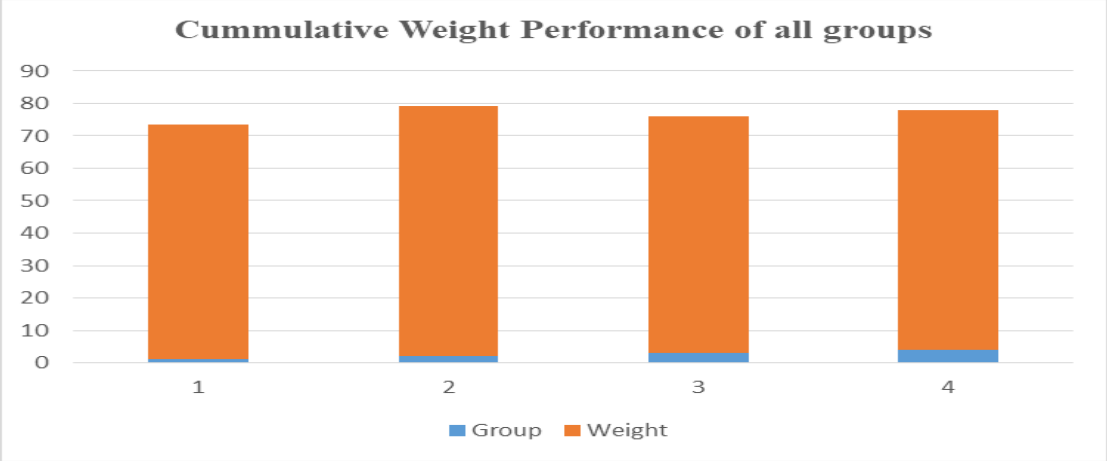

Fig. i: Cumulative weight performance of rats administered leaf extracts of *Heliotropium indicum*

Biochemical functions

Figures ii-iv demonstrate the acute toxicity of *H.indicum* L leaf extracts on Wistar rats, as determined through a cage experiment (measured in IU/L).

Discussion

Phytochemical analysis

Table i illustrates that *H.indicum* leaf extracts contain various phytochemicals including alkaloids, tannins, saponins, cardiac glycosides, terpenoids and phenols. These types of chemicals are known to cause toxic effects in plants. The plant has been traditionally used for wound healing purposes in folk medicine due to the presence of compounds like tannins which have shown wound-healing properties (Shoge *et al*., 2011).

Insecticidal activity

The leaf extracts of *H.indicum* L., exhibit insecticidal activities and can serve as biopesticides for controlling stored grain pests. Table ii displays the mortality percentage of *Sitophilus oryzae* after being exposed to different extract concentrations, with hexane causing a 36% mortality rate, while ethyl acetate and methanol caused higher rates at 50.3% and 63.3%, respectively, after exposure for 96 h at a concentration of 0 .08 g/ml; however, the lowest mortality rate was observed in hexane-exposed insects measured 24 h postexposure (1.7%). Similarly observed is that Table iii illustrates how Sorghum weevils respond differently when given various doses: Hexane induces just about 30% mortality on it, but both Ethyl acetate's and methanol's caused around 43-90 % mortality levels within tested insects and within 24 – 96 h postexposure. Table vi revealed that hexane extract at 0.08 g/ml inflicted 71.7% mortality on *Sitophilus zeamai s*(maize weevil) 96 h postexposure.; whereas at the same concentration and exposure time, ethyl acetate and methanol extracts caused 90% and 96.7% mortality on maize weevil and the lowest mortality of 1.7% was caused by hexane extract. Also, Table v showed that hexane extract caused 66.7% mortality on *Callosobruchus maculatus* (cowpea weevil) at 0.08 g/ml 96 h post exposure, while ethyl acetate and methanol extract caused 93.3%, and 96.7%, respectively at the same concentration and exposure time. But hexane and ethyl acetate caused the least mortality of 1.7 % at 0.01 g/ml and 0.02 g/ml 24 h post exposure.

The result thus far showed that ethyl acetate and methanol extracts had a high degree of insecticidal activities similar to cypermethrin. The ability of these extracts to cause mortality can be attributed to contact effect of the extracts on the weevils. Lajide *et al.,* (1998) had also reported the effectiveness of some plant powders in controlling *Sitophilus zeamais* by using insect adult mortality. *H.indicum* extracts caused high mortality to *Sitophilus zeamais* and *C. maculatus* suggesting that all the extracts have toxic effects on the insects. Cypermethrin has been very effective in controlling adult *S. zeamais* and *C. maculatus* which agrees with Asawalam *et a*l., (2006) who reported 100% mortality to *Sitophilus zeamais* when treated with Cypermethrin stored maize. *H.indicum* may have been potent because of the presence of toxic substances which may have disrupted the normal respiratory activities of the weevils; resulting in asphyxiation and subsequent death. Results obtained from this study demonstrated active potentials of this plant product as plant-derived insecticides against stored grains' weevils, and provide a scientific rationale for the use of this botanical as alternative to synthetic insecticides in post harvest protection of stored grains

Cumulative weight

Figure (i) shows the rats' weight performance, which increased cumulatively across all groups. However, no notable statistical difference ($P \leq 0.05$) was observed between the experimental groups that received *H.indicum* extracts and the control group. As time passed with repeated extract administrations, an increase in animal weight occurred within each group.

FULL TEXTS BOOK

Biochemical functions

The ALT, AST, and ALP enzyme biomarkers were utilized to track the soundness and harm of liver construction by a serum called "ALT". These techniques are useful in diagnosing clinical instances of liver toxicity (Andreu et al., .1998) Fig.(ii-iv) showed the impact of *H.indicum* extracts on serum alanine amino transferase (ALT), aspartate amino transferase (AST), alkaline phosphatase (ALP) levels. The ALT levels of the control group, shown in Fig. ii, were 39.6±3.23 IU/L while groups 2-4 had ALT levels of 47.07±3.89, 31.99±0.75 and 36.00±0.51. There was no significant difference (P≤0.05) between any experimental group's ALT levels compared to that of a control sample, though the rats administered with hexane extract displayed an elevated but insignificant increase above normal range. In terms of mean values across all samples tested - including both controls and those from experimental groups, there was no much variation observed.

The serum AST levels in the three test groups were compared with those in the control group. Fig. iii shows that the serum AST level in the control group was 93.55±1.77, while groups 2, 3 and 4 had AST levels of 112.17±0.99, 107.57±0.57, and 101.48±0.69 IU/L, respectively. The administration of the extracts of *H.indicum* leaves did not significantly ($p< 0.05$) increase the AST levels compared with those in the control group, although a slight increase in the AST level was observed in group 2 compared with that in the control group. However, there was no significant difference in the AST levels between the experimental groups and the control group.

In Fig.(iv), the average levels of ALP enzymes in three groups of rats are displayed and compared to those in a control group. The serum concentration for ALP was 31.66±0.16 IU/L among the control group, while groups 2,3, and 4 had concentrations of 34.13±0.45 IU/L, 23..34±0.75 IU /L , and 35.15±0.11 IU/L, respectively. A minor decrease was observed (P≤0.05) within group 3 rats given ethyl acetate extract. However, no significant difference existed between the three groups and control group at (P≤0.05).

The liver, kidney, red blood cells (RBCs), pancreas and biliary ducts of the heart are the primary sources for these enzymes. To diagnose whether injuries have occurred in organs like the liver or kidneys, serum AST and ALT levels are taken into account. Studies have shown that when body tissue is damaged, it leads to an increased release of alanine transaminase (ALT) and aspartate transferase (AST) into bloodstream resulting in higher serum enzyme count directly correlating with greater tissue damage (Ammari *et al*., 2023). The ALP test can determine if bile ducts blockage has happened, while also checking for disorders tied to bone condition or any kind of internal harm inflicted on one's liver. Increased amounts of ALP is observed to circulate around the plasma once their organ tissues experience some form of trauma, such as bile-duct obstruction in the intrahepatic cholestasis level due to infestation from infiltrative diseases related, specifically linked back mainly towards those located inside the livers themselves(Ammari *et al*., 2023).

Kidney function

Table v showed the parameters utilized in determining renal function. In the Table, the mean creatinine level for the control group is 43.9±0.01 µmo/L, while group 2 had mean level of 42.4±0.00 µmo/L, group 3 had a value of 44.6±0.01 µmo/L, and group 4 had 43.8±0.00 µmo/L; and no notable significant difference was observed between the three groups compared to the control group. Creatine phosphate produces creatinine that is then excreted by kidneys via blood circulation. An upsurge in bloodstream's level of creatinine indicates abnormal kidney functionality as nearly two percent (2%) creatine is converted into creatinine everyday (Harita *et al*., 2009).

Table v also showed the uric acid levels for groups 2, 3, 4 and the control group. It can be observed that the mean uric acid level for group 2, 3 and 4 are 0.14±0.00 µmol/L, 0.11±0.00 µmol/L and 0.14±0.00 µmol/L in comparison to the control group with a level of about 0.12±0.00 µmol/L The findings indicated that there was no significant difference in uric acid levels within the experimental groups compared to the control (P≤0.05). It is important to note that elevated circulating serum uric acid has been linked closely with renal disease as well as hypertension (Harita *et al*., 2009).

Also, Table v revealed the mean urea level of 22.3±0.00 mg/dL for group 2, while group 3 and group 4 had mean urea level of 24.4±0.00 mg/dL, 23.1±0.00 mg/dl. On the other hand, the control group urea level was 23.1±0.00 mg/dL. Urea is transported from liver cells through arteries towards renal tissues

FULL TEXTS BOOK

where they are then filtered respectively by the kidney.It can be observed from Table v that the urea levels of the test rats were similar to those in the control group.

A recent study in Japan has discovered that men have a higher chance of developing type-2 diabetes due to their lower blood serum creatinine levels. Therefore, it would be intriguing to investigate the detrimental consequences of administering *Heliotropium indicum* L extracts on male Wistar rat's liver and kidney muscles by analyzing specific serum enzyme biomarkers such as alanine aminotransaminase (ALT), aspartate aminotransferase (AST), alkaline phosphatase (ALP) along with creatinine.

The kidneys play a crucial role in removing waste substances like urea and toxins from the blood, which are then expelled as urine. In cases where kidney issues are suspected, medical professionals may examine creatinine levels along with urea nitrogen levels during blood tests. Moreover, healthy kidneys also purge uric acid and creatinine through urinary secretion to keep the body free of additional wastes. However, high concentrations of these three compounds within the bloodstream can imply potential renal damage (Harita *et al*., 2009).

White Blood Cell Counts

Table vii displays the WBC counts of rats administered extracts of *H.indicum* leaves. Group 2 had a count of 7.54±1.20 x10^9/L, while groups 3 and 4 administered with ethyl acetate and methanol extract were found to have higher counts of 9.36±0.84x10^9/L , and10.32±1.06 x $l0^9$/L, compared to those in the control group that received only the vehicle (8.l6±l.33x$l0^9$/L). These results imply normal WBC counts exhibited by all animals following administration of the plant extracts. It can also be observed that the WBC components of the experimental rat groups: eosinophils, basophils, monocytes and lymphocytes showed similar trend and are consistent with the counts in the control group with no significant difference at (P≤0.05) level of significance. Meanwhile, the Cleveland Clinic reports had it that a low WBC count occurs when there is fewer neutrophils than normal which indicates a compromise of the immune system arising from insufficient white blood cells needed for immune function against infections or inflammatory agents.

The Red Blood Cell Count (RBC)

Table viii displays the percentages of red blood cells (RBCs) in experimental rats. The control group had a percentage RBC count of 6.66±0.27, while groups 2, 3 and 4 showed counts of 7.26±0.24, 6.86±0.37 and 6.44±0.32, respectively. The available data in Table viii shows that compared to the control group at significance level (P≤0.05), there were no significant differences across all three experimental groups regarding their RBC levels. It is worthy of note that low RCB counts may result from infection or medical conditions characterized by anaemia as indicated by Cleveland Clinic research findings. Elevated RBC results could suggest other underlying health issues. In this study report however, the measured RBC account for each of the three (3) test groups was consistent compared with the normal control group. Other important metrics such as haemoglobin concentration (Hb), mean corpuscular volume (MCV), mean corpuscular haemoglobin (MCH), and mean corpuscular haemoglobin concentration (MCHC) did not vary significantly beyond statistical levels at (P≤ 0.05) observed among the experimental groups and the control group.

Histopathological findings

After analyzing the liver and kidney tissues of the experimental rats, it was found that administering *H.indicum* L., leaf extracts (as depicted in Plates i-ii) did not affect their structural integrity. The results demonstrated that all three groups receiving leaf extracts had consistent architectural integrity with the control group's organs. Additionally, when comparing microscopic analysis data from each group to controls', accumulated extract percentages showed no significant impact on any examined animal population.

Conclusion and Recommendations

The findings from this study revealed that *Heliotropium indicum* L leaf ethyl acetate and methanol extracts can serve as effective biopesticides at 0.08 g/ml, presenting a safer option to synthetic insecticides against stored grain weevils. The research also showed that there is no significant difference in ALT levels for all the rat groups administered the leaf extracts of *Heliotropium indicum* compared with the control group (P≤0.05). This evidence shows that this plant can be used as plant-based

FULL TEXTS BOOK

pesticides while indicating their potential benefits over conventional alternatives on a dosage-dependent basis; thus producing scientific grounds supporting this approach.

Recommendations

The study proposes utilizing this plant in a dose-dependent manner. For those consuming it as an herbal remedy for ailments, it is advised to consume minimal quantities to avoid potential harm to their organs. This is because excessive ingestion of the plant may lead to elevated levels of serum liver biomarker enzymes and alter the structural integrity of the liver tissue.

Conflict of interest

No conflicts of interest are claimed by the authors in this research paper, and proper citation was given to all relevant sources. This work is an extract derived from the lead author's original PhD thesis.

ABSTRACT

Background- Air-borne Fungal contamination in Laboratories and Hospitals is becoming a serious problem worldwide and the Characterization of such contaminants offers hope for treating some Hospital and Laboratory Acquired Infections (LAI). Therefore, there is need to determine the fungal contamination sources, isolate and identify the contaminants when performing standard microbiological manipulations in the Microbiology laboratories of Joseph Sarwuan Tarka University, Makurdi.

Methods-The open plate technique was employed while sampling the different microbiology laboratories of JOSTUM. Potato Dextrose Agar (PDA) supplemented with chloramphenicol to inhibit the growth of bacteria was used for the enumeration of fungal concentrations in the laboratories... Media- filled petri dishes were exposed to the air for about (20) minutes. The exposed plates were later transported to the general purpose laboratory (B40) and the plates were afterwards incubated at room temperature (30 ± 2^0c) for about (3-4) days after which the observed fungal growths were sub-cultured and identified microscopically.

Results: The air-borne fungal isolates were identified and enumerated at various exposure points in the five (5) microbiology laboratories of Joseph Sarwuan Tarka University, Makurdi (JOSTUM), using cultural and morphological characterization.

A total of nine (9) fungal isolates were obtained from the indoor environments of the (5) microbiology laboratories, which were represented by 8 genera, with two species of *Aspergillus*. The isolated fungal organisms included; *Aspergillus niger, Aspergillus flavus, Mucor spp, Neurospora spp, Penicillium spp, Rhizopus spp, Cephalosporium spp, Alternaria spp* and *Cladosporium spp*.

Conclusion: The study reveals that a great deal of harmful and pathogenic air-borne fungi are present both in the indoor and outdoor environments of the microbiology laboratories of JOSTUM. The quality of air which we breathe must be pure and free from any kind of harmful pathogens. The indoor and outdoor environments must be kept clean always in order to check these pathogens in the air.

Keywords: Air Mycoflora, characterization, isolates, Potato Dextrose Agar (PDA), air quality

1. Introduction

Air mycoflora is the study of fungi of the atmospheric origin (Wikipedia, 2021). Though fungi inhabit the atmosphere, they represent only but an allochthonous population of the air microbes since no microbe is ultimately a native of the atmosphere. They are either transported by terrestrial or aquatic activities and become deposited in the air which originally never constituted their habitation. On the other hand, the study of microscopic harmful fungi found in the air we breathe is referred to as aeromycoflora (Syeda *et al.*, 2017).

FULL TEXTS BOOK

Fungi are multicellular, achlorophyllous, heterotrophic, eukaryotic and spore bearing microorganisms surrounded by a well-defined cell wall made up of chitin with or without cellulose along with many other complex organic molecules (Illondu *et al.*, 2016). Fungi consist of an enormous group of organisms; about 90,000 fungi species have been described, although some estimate the true number of species to be about 1.5 million (Joanne *et al.,*2017).

Fungi are unique organisms due to their morphological, physiological and genetic features. They are able to colonize all matrices (soil, water and air) in natural environment in which they play key role in maintaining the ecosystem's equilibrium (Hussain *et al.,* 2014). Fungi secrete enzymes which breakdown solid materials to soluble compounds for absorption through their outer walls. They vary greatly in their ability to utilize different types of substrates. Although; some species that are obligate parasites are only able to utilize substrates from living host tissue (Cullings *et al.*, 2010). Examples include*; Amblyospora, Encephalitozoon,Enterocytozoon and Nosema*, all of which belong to the sub-class micosporidia.

Air serves as a transport or dispersal medium for fungi and other microorganisms. They occur in relatively small number in air when compared with soil or water and constitute the dominant group of air microflora scattered everywhere in both outdoor and indoor environments.

Many common infections in both human and animals can spread by airborne transmission (Shams-Ghahfarokhi *et al.,* 2014). Airborne transmission increases the opportunity of human exposure to pathogenic mycoflora during breathing the polluted air or contamination of food and water (Durugbo *et al.,* 2012; Fernstrom & Goldblatt, 2013; Martinez-Herrera *et al.,* 2016). Airborne fungi are the most important part of human pathogens which cause several human health problems such as allergic, contagious, infectious, and respiratory diseases (Gots *et al.,* 2003).

2. Materials and Methods

2.1 Air Sample Collection

The microbiological samples were collected from (5) microbiology laboratories of Joseph Sarwuan Tarka University, Makurdi using the exposed prepared plate techniques.

Preparation of Potato Dextrose Agar (PDA)

A 39g of the powdered potato dextrose agar was weighed into 1L conical flask and thoroughly suspended in distilled water. It was sterilized in an autoclave at 121^0C, for 15 minutes. The autoclaved media was placed to cool to about 40^0C after which a little quantity of sterile antibiotic (chloramphenicol) was added in other to make it selective against bacteria, the mixture was poured into the petri dishes under sterile conditions.

Identification of fungal strains

The colonial features of the fungal colonies were studied as well as the morphological features of the fungi were studied using compound microscope. The determination of the morphological structures of fungi was carried out after being mounted in lacto-phenol cotton blue covered with cover slip. The fungal types were analyzed for each day with the isolates being identified based on morphological and microscopic characteristics using standard mycological texts and manuals (Kidd *et al.,* 2016).

Identification of pure colonies using morphological characteristics

The fungal isolates were identified using cultural characters, morphology and by examining spore arrangements (Barnett and Hunter, 1972) after observing under a microscope.

Data Analysis

Isolation of pure cultures was carried out based on morphological differences where colony form, elevation, pigmentation and size were the distinguishing factors for fungi contaminants. Data on incidences of fungal contamination were transformed using square root method.

The occurrence frequency and relative abundance were computed depending on colony forming unit (CFU) of fungal species, genera or a fungi group to show the exposure risk of collected fungi as described by (Chan *et al.,* 2008).

FULL TEXTS BOOK

3. Results

The air-borne fungal isolates were identified and enumerated at various exposure points in the five (5) microbiology laboratories of Joseph Sarwuan Tarka University, Makurdi (JOSTUM), using cultural and morphological characterization.

A total of nine (9) fungal isolates were obtained from the indoor environments of the (5) microbiology laboratories, which were represented by 8 genera, with two species of *Aspergillus*. The isolated fungal organisms included; *Aspergillus niger, Aspergillus flavus, Mucor spp, Neurospora spp, Penicillium spp, Rhizopus spp, Cephalosporium spp, Alternaria spp* and *Cladosporium spp*.

The different sizes of the microbiology laboratories are represented in the table 1.0. The table gives a description as to the sizes of the laboratories, with the New Biology Laboratory being the biggest and the Research Biology Laboratory being the smallest in size.

The number of colonies / plate counts which represent the mean of duplicate plates at every exposure points in the laboratories are shown in the table 2.0. The table reveals that the new biology laboratory (NBL) had the highest number of colony counts (29) with the least counts gotten from the research biology laboratory (RBL) (8), whereas, the entomology/ epidemiology lab (B41), the general purpose lab (B40) and the biochemistry lab (B10) had the colony counts of (21), (19) and (12) respectively.

Table 3.0 enumerates the population of air-borne fungal isolates of the different microbiology laboratories of JOSTUM per cubic metre of the coliform forming units. The new biology lab had the highest air-borne fungal contamination with the total of (7.3×10^2 Cfu/m^3) whereas the least contamination was recorded in the research biology laboratory (2.0×10^2 Cfu/m^3), (B40). (B41) and (B10) had the counts of (4.8×10^2Cfu/m^3), (5.3×10^2 Cfu/m^3) and (3.0×10^2 Cfu/m^3) respectively.

Table 4.0 presents the different fungal isolates with their corresponding frequencies of occurrence in (%). *Aspergillus flavus* and *Cladosporium spp* were the most isolated with the frequency of occurrence (19.05%) each, while *Neurospora*, *Penicillium* and *Rhizopus* had the least occurrence frequency (4.76%) each, whereas *Mucor spp*, *Cephalosporium* and *Alternaria*, had the counts of (14.29%) each.

Table 5.0 gives a representation of the cultural and morphological characterization of the air-borne fungi that were isolated from the microbiology laboratories of JOSTUM.

Table 1.0 Measurements of the various Microbiology laboratories of JOSTUM in cubic metre

Laboratory	Size (m^3)
B10	980.68
B40	983.89
B41	515.68
NBL	2795.63
RBL	488.86

Table 2.0 Air-borne fungal counts at various exposure points in five microbiology laboratories of JOSTUM

Exposure points	No of colonies/plate				
	B10	B40	B41	NBL	RBL
Front entrance	3	2	3	8	3
Back entrance	2	2	3	2	1

TABLE 3: Cultural and morphological characterization of air-borne fungi isolated from five Microbiology laboratory of JOSTUM

Fungal Isolate	Media	Growth	Front view	Back view	Hyphae	Conidiophore/sporangiophore
Aspergillus niger	PDA	Rapid	White turning to Yellow and then Dark-brown	reddish	septate	erect branching
Aspergillus flavus	PDA	Moderate	yellow becoming dark yellow	gold green	septate	upright terminating in globose swelling
Mucor spp	PDA	Rapid	Cottony white becoming dark-grey		non septate no stolon or Rhizoid	erect forming terminal globose swelling
Neurospora spp	PDA	Rapid	whitish to brown		septate	ovate
Penicillium spp	PDA	Moderate green		yellow	septate	branched
Rhizopus spp	PDA	Rapid	Cottony white becoming dark grey	whitish	non septate No stolon or rhizoid	sporangiophore arise
Cephalosporium spp	PDA	Slow	Whitish becoming rose colour		septate	clear
Alternaria spp	PDA	Rapid	olivaceous green	black	septate	branched
Cladosporium spp	PDA	Slow	grey-green	black	septate	branched

Discussion

Air-borne fungi usually spread their spores in the ambient air. Qualitative knowledge of the spread of these fungi in our laboratories is of great importance to avoid several respiratory diseases such as asthma and rhinitis that can occur in humans (Menezs *et al.,* 2004). It is therefore, important to evaluate the quality of the air whether indoor or outdoor in the laboratory environments. The number and type of airborne fungi can be used to determine the degree of cleanliness of the laboratories. This study revealed that a great deal of fungal species is found in the microbiology laboratories of JOSTUM.

The most dominant fungal genera in the findings were *Aspergillus* and *Cladosporium* (19.05%) each, due to the ability of their spores to easily spread in various aerobic environments (Asan *et al.,* 2003). In particular, *Aspergillus* is characterized by production of small spores which are a widespread in air environment of tropical regions (Rosas *et al.,* 1992). However, previous study suggested that fungal spores spread from outdoor to indoor environment through staff, students, visitors and ventilation systems (Kiasat *et al.,* 2017).

High occurrence frequency of *Mucor spp*, *Alternaria* and *Cephalosporium* (14.29%) each, were also recorded in the laboratory fungi population. This indicates that potential infections of respiratory allergy may occur due to inhalation spores of *Mucor* and *Alternaria* (Bush and Prochnau, 2004; Menezs *et al.,* 2004). Conversely, low occurrence frequency was also observed in *Neurospora spp, Penicillium spp and Rhizopus spp*. The variation witnessed in the concentrations of the fungal isolates in the different microbiology laboratories could be attributed to the fact that the new biology laboratory (NBL) being the biggest in size (2795.63m^3) tends to habour more of the fungal spores as compared to the other laboratories. Conversely, the research biology laboratory (RBL) being the smallest (488.86m^3) had the least of contamination. This could be inferred that the laboratory size can affect the concentration of air-borne fungi. Similarly, this variation could be as a result of the fact that more persons often enter the new biology laboratory as compared to the other laboratories. The findings agree with the work of (Shafiq *et al.,* 2019) on the "prevalence of fungal contamination in some biology laboratories"

However, *Aspergillus, Penicillium and Alternaria*, which were called allergenic fungi, can colonize in indoor environments thereby increasing fungi exposure levels. Human exposure to fungal aeroallergens due to increase asthma severity (Gabriel *et al.,* 2016).

It was further observed that the front and the back windows as points of exposure had more of the fungal contamination while the centre as point of exposure had the least of contamination

The results of this study are comparable with previous studies (Asan *et al.,* 2003; Kumari *et al.,* 2016; Shelton *et al.,* 2002) which isolated similar fungi in indoor environment. In other words, fungi species isolated here are endemic to indoor environments.

Conclusion

The study reveals that a great deal of harmful and pathogenic air-borne fungi are present both in the indoor and outdoor environments of the microbiology laboratories of JOSTUM. The quality of air which we breathe must be pure and free from any kind of harmful pathogens. The indoor and outdoor environments must be kept clean always in order to check these pathogens in the air. The indoor environment must be cleaned, properly ventilated and kept dry using dehumidifiers. Most importantly is that we maintain personal hygiene not only for ourselves but also for the safety of others. Fungal propagules are microscopic and produced in large quantities and disperse very easily and quickly. They are contagious and human pathogenic fungi are more dangerous and show immediate skin and lung infections upon slightest contact or inhalation. Air conditioners and other gadgets must be cleaned from time to time to check the pathogens. Harmless disinfectants vapours can be sprayed and fumigation also helps in cleaning the air around us from these pathogens. The outdoor environment must be cleaned regularly and garbage disposed properly and on time. Ultimately, sense of cleanliness of personal and environmental hygiene would greatly engender good air-quality around us thereby limiting the exposure risks of fungal contaminations.

Recommendations

The consequences of air contamination with fungi indicate that much is to be done in identifying and managing air quality deficiencies and seeing that the microbiology laboratories of JOSTUM and it outdoor environments are contaminated by fungal spores, and owing to health challenges of these fungal spores, it is therefore recommended that the sampled laboratories and by extension, other non-microbiological laboratories of the university should be sanitized and fumigated periodically. To further reduce fungal growth, the environment must be kept clean.

Lastly, I strongly recommend that more related researches should be carried out periodically for possible discovery of new fungal genera associated with indoor environments of the laboratories. Conclusively, the researcher regrettably admits that the research couldn't utterly meet its intended objectives due to the short duration required for the completion of the work and as such, further recommends for a more intensive approach subsequently to enable the exploration of more fungal genera of the microbiology laboratory of JOSTUM.

ÖZET

Kompozit malzemeler neredeyse her alanda giderek daha fazla trend haline gelmiştir. Bunun birçok nedeni olup kompozitlerin özelliklerinin karşılaştırılabilir olması, endüstrilerde kullanılan geleneksel malzemelerden daha iyi olması, yüksek mukavemet/ağırlık oranı, hafiflik gibi temel sebepler başta gelmektedir. Kompozit sektöründe büyük miktarlarda polimer bazlı sentetik elyafların kullanımı, yüksek maliyetlerine rağmen bertaraf sorunlarıyla sonuçlanmıştır. Endüstriyel atıkların her geçen gün yüksek miktarlarda ortaya çıkması sorunu daha da büyütmektedir. Son yıllarda, doğal elyafın olağanüstü mukavemete, düşük yoğunluğa sahip olması nedeniyle birçok araştırma doğal elyaf kompozitlerine odaklanmıştır. Jüt, iyi stabiliteye sahip, düşük maliyetli, geri dönüştürülebilir, düşük yoğunluk, çevre dostu, düşük maliyet, biyolojik olarak parçalanabilen doğal bir elyaftır. Jüt elyaf genellikle tekstil sektöründe halı, kilim, çuval, halat gibi ürünlerde tercih edilmektedir. Karbon ve cam fiberle karşılaştırılabilir özelliklere sahip olup daha ucuzdur. Jüt, doğal olarak oluşan ve biyolojik olarak parçalanabilen elyaftır. Mukavemet, ısı iletkenliği ve satın alınabilirlik önemli hususlar olduğunda jüt lifi sentetik elyaflar için mükemmel bir alternatiftir. Ayrıca jüt lifleri çevresel olarak sürdürülebilir. Jüt elyaf takviyeli kompozitler günümüzde önemli bir çalışma alanıdır.

Bu çalışmada doğal elyaf grubundan olan jüt elyaf atıkları değerlendirilerek kompozit elde edilmiştir. Matris malzemesi olarak doymamış polyester reçinesi kullanılmıştır. Metil etil keton peroksit sertleştirici olarak kullanılmıştır. Atık jüt elyaf öncelikle 2 mm boyutlarda kesilerek kullanılmıştır. Teflon kalıba açık döküm yöntemiyle ağırlıkça %1, 2 ve 3 oranlarında jüt elyaf içeren kompozit numuneler hazırlanmıştır. Numunelerin Izod darbe, çekme, sertlik gibi mekanik özellikleri incelenmiş, ayrıca kırık yüzeylerden SEM görüntüleri alınmıştır. Sonuç olarak jüt elyaf ilavesinin mekanik özellikleri kayda değer şekilde artırdığı ve kompozit uygulamalarında 2 mm boyutlarında takviye edici olarak kullanılabileceği tespit edilmiştir.

ABSTRACT

Composite materials have become increasingly trendy in almost every field. There are many reasons for this, the main reasons being that the properties of composites are comparable, being better than traditional materials used in industries, high strength/weight ratio, and lightness. The use of large amounts of polymer-based synthetic fibers in the composite industry has resulted in disposal problems despite their high costs. The emergence of industrial waste in large quantities every day further exacerbates the problem. In recent years, much research has focused on natural fiber composites because natural fiber has extraordinary strength, low density. Jute is a low-cost, recyclable, low density, environmentally friendly, low cost, biodegradable natural fiber with good stability. Jute fiber is

FULL TEXTS BOOK

generally preferred in the textile industry for products such as carpets, rugs, sacks and ropes. It has properties comparable to carbon and glass fiber and is cheaper. Jute is a naturally occurring and biodegradable fiber. Jute fiber is an excellent alternative to synthetic fibers when strength, thermal conductivity and affordability are important considerations. Additionally, jute fibers are environmentally sustainable. Jute fiber reinforced composites are an important field of study today.

In this study, jute fiber waste, which is a natural fiber group, was evaluated and a composite was obtained. Unsaturated polyester resin was used as matrix material. Methyl ethyl ketone peroxide was used as a hardener. Waste jute fiber was primarily used by cutting it into 2 mm dimensions. Composite samples containing 1, 2 and 3% jute fiber by weight were prepared by open casting method in Teflon mold. Mechanical properties of the samples such as Izod impact, tensile and hardness were examined, and SEM images were taken from the broken surfaces. As a result, it has been determined that the addition of jute fiber significantly increases the mechanical properties and can be used as a reinforce in composite applications in sizes of 2 mm.

GİRİŞ

Jüt elyaf, jüt bitkisinin (Corchorus spp.) kabuğundan elde edilen doğal bir liftir. Jüt, ekonomik olarak önemli bir lif bitkisi olup, pamuktan sonra dünyanın en önemli ikinci doğal elyafıdır. Jüt bitkisi, tropikal iklim koşullarında iyi gelişir. Bangladeş dünyanın en büyük jüt üreticisidir ve toplam dünya üretiminin yaklaşık %50'sini karşılar. Bangladeş'ten sonra en büyük jüt üreticisi ülkeler Hindistan ve Çin'dir. Dünya jüt üretimi yıldan yıla değişiklik gösterebilir. Ancak, genel olarak dünya jüt üretimi yılda 3-4 milyon ton civarındadır. Bangladeş ve Hindistan, bu üretimin büyük kısmını sağlar (Arabacı, 2009; Atav, 2001).

Jüt elyaf birçok kullanım alanı vardır. Tekstil ve ambalaj sektöründe çuvallar, çantalar, halılar, kilimler ve döşemelik kumaşlar gibi ürünlerde kullanılır. Özellikle tarım ürünlerinin ambalajlanmasında yaygın olarak kullanılır. Jüt ipleri ve fileleri, tarımda ve bahçecilikte, toprak erozyonunu önlemek için jüt geotekstil ürünlerde, dekoratif ürünler, el sanatları ve hediyelik eşyalar yapımında, Biyolojik olarak parçalanabilir olması nedeniyle çevre dostu ambalaj ve izolasyon malzemesi olarak kullanılır. Jüt, kaliteli kâğıt üretimi için de kullanılır. Jüt elyaf, ısı ve ses yalıtımı özelliklerine sahiptir ve bu nedenle izolasyon malzemesi olarak kullanılabilir (Özdemir & Genç, 2019; Sharma 2024; Özes 2016; Prabhuram et. al. 2023).

Jüt, çevre dostu bir ürün olması, biyolojik olarak parçalanabilirliği ve geri dönüştürülebilirliği ile modern dünyada sürdürülebilirlik açısından önemli bir yere sahiptir. Jüt elyafın kimyasal yapısı, esas olarak selülozdan oluşur, ancak diğer bileşenler de bulunur. Jüt elyafın kimyasal bileşimi olarak selüloz, hemiselüloz, lignin, pektin, mumlar, su ve diğer maddelerden oluşur Taşgın & Kandemir, 2023; Robson et. al. 2024).

Selüloz, %60-70 oranında yapıda mevcut olup jüt elyafın ana yapısal bileşenidir ve bitkilerin hücre duvarlarını oluşturur. Selüloz, jüt elyafın mekanik dayanıklılığını ve esnekliğini sağlar. Hemiselüloz, %15-20 oranında olup bitki hücre duvarlarının destekleyici bir bileşenidir ve selüloz lifleri arasında bir bağlayıcı olarak işlev görür. Hemiselüloz, jüt elyafın su emme kapasitesini artırır. Lignin, %12-15 oranındadır, bitki hücre duvarlarını sertleştiren ve güçlendiren bir polimerdir. Jüt elyafının sertliğini ve dayanıklılığını artırır. Pektin, bitki hücrelerinin arasındaki boşlukları dolduran ve suyu tutmaya yardımcı olan bir polisakkarittir. Mumlar, jüt elyafının yüzeyinde su geçirmez bir tabaka oluşturur. İki yapı da yaklaşık %0.2-1 oranındadır. Su, jüt elyafın %10-12'sini oluşturabilir. Ayrıca, küçük miktarlarda proteinler, yağlar, mineral maddeler ve diğer organik bileşikler de bulunabilir (Ahmed et. al. 2022; Madhavi et. al. 2020)

Jüt Elyafı, Selüloz ve lignin bileşenleri sayesinde jüt elyaf, mekanik olarak dayanıklı ve sert bir yapıya sahiptir. Selüloz ve hemiselüloz içeriği, elyafın esnekliğini ve uzama kapasitesini sağlar. Hemiselüloz ve pektin, jüt elyafının su emme kapasitesini artırır, bu da elyafın nem tutma yeteneğini artırır. Doğal bileşenlerinden dolayı jüt elyaf, biyolojik olarak parçalanabilir ve çevre dostudur (Öktem & Yıldırım, 2020; Karacor & Özcanlı 2022; Mutlu, 2011; Bilgili et. al. 2018).

FULL TEXTS BOOK

Jüt elyafının bu kimyasal yapısı, onun çeşitli endüstriyel ve ticari uygulamalarda yaygın olarak kullanılmasını sağlar. Bunun neticesinde ise çok miktarda atık jüt elyaf ortaya çıkmaktadır. Bu çalışmada ise atık jüt elyaflar 2 mm boyutlarında kesilmiş olarak polyester matris içinde takviye edici olarak kullanılmıştır. Jüt elyaf kompozitlerde kullanımı ile alakalı çok sayıda çalışma vardır ancak atık kısa jütlerin kompozitlerde kullanımı ile alakalı literatür çalışması sınırlıdır. Hazırlanan numunelerin mekanik özellikleri ve kırık yüzey morfolojisi incelenerek kompozit malzemelerde kullanılabilirliği değerlendirilmiştir.

DENEYSEL ÇALIŞMA

Malzemeler

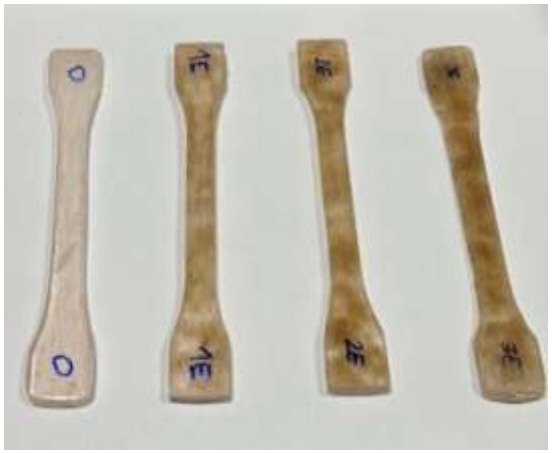
Bu çalışmada genel amaçlı kompozit uygulamaları için geliştirilmiş polyester reçine kullanılmıştır. Uygun vizkozitesi ile elyafları kolayca ıslatabilmekte, düşük hacimsel çekmesi, mekanik özellikleri ise iyidir. Polyester reçine içerisinde kobalt naftalat hızlandırıcı bulunmaktadır. Reçine sertleştiricisi olarak metiletilketonperoksit, (MEK-Peroksit) kullanılmıştır. MEK-Peroksit, polyester ve vinilester gibi reçineler için kullanılan sertleştiricidir (Kartal & Güneş, 2024; Kartal & Uzunyol, 2024).

Numunelerin Hazırlanması

Numuneler, kısa jüt elyaf ve doymamış polyester reçinesinin bir kombinasyonudur. Atık jüt elyaf 2 mm boyutlarında kesilerek farklı oranlarda polyestere ilave edilerek kompozit numuneler elde edilmiştir. Teflon kalıpta açık döküm yöntemi kullanılarak polyester reçinesine ilave edilmiştir. Katkı oranı %1 oranında başlayarak (%1, 2 ve 3) her bir oranda kompozit numuneler hazırlanmış ve doyuma ulaşmıştır. Polyester matris içerisinde 2 mm boyutundaki jüt elyaf doyum oranı %3 olarak tespit edilmiştir. %4 dökümde ıslatma problemi sebebiyle numune hazırlanamamıştır.

Şekil 1. Jüt elyaf kesilme öncesi ve sonrası görüntüleri

Tablo 1. Kompozit numunede elyaf, reçine ve sertleştirici oranları



Elyaf Oranı, (ağırlıkça, %)	Reçine Oranı	Sertleştirici oranı
0	100	1,5
1	100	1,5
2	100	1,5
3	100	1,5

FULL TEXTS BOOK

Kompozit numunelerin çekme deneyi, ISO 527 standardına göre 5 mm/dk çekme hızında, çentiksiz darbe deneyi 5,4 J Izod çekici kullnılarak yapılmıştır. Sertlik testi Shore D test cihazında, kırık yüzeylerin SEM görüntüsü Marmara Üniversitesi Nanoteknoloji ve Biyomalzemeler Uygulama ve Araştırma Merkezi Laboratuvarında gerçekleştirilmiştir.

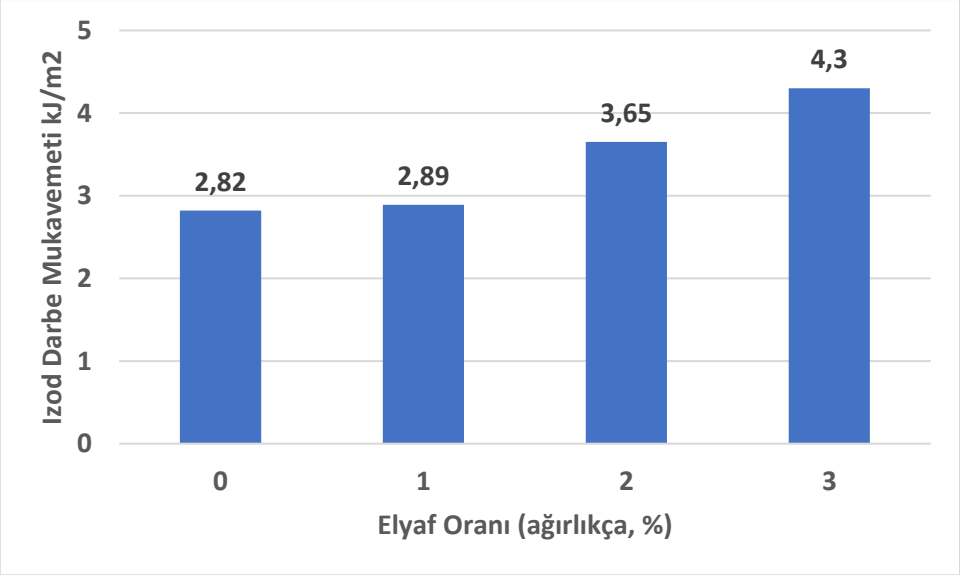
BULGULAR VE TARTIŞMA

Bu çalışmada, atık jüt elyaf takviyeli kompozit üretilmiş ve mekanik özellikleri incelenmiştir. Matris malzemesi olarak kompozit dünyasında en yaygın kullanımını olan genel amaçlı doymamış polyester reçinesi kullanılmıştır. Elyaf olarak farklı sektörlerde yoğun olarak kullanılan jüt elyaf atıkları tercih edilmiştir. Böylece çevreye duyarlı bir kompozit üretimi hedeflenmiştir. Çekme testi için hazırlanan kompozit numunelerin görüntüsü şekil 2'de verilmiştir. Şekil 2'den de anlaşıldığı gibi renksiz olan reçineye elyaf ilavesiyle elyafın kendi rengi geçmiştir. Elyaf oranı arttıkça renk daha da koyulaşmıştır.

Şekil 2. Numunelerin görüntüsü

Elyaf takviyeli kompozitlerin çekme mukavemeti, matrise ilave edilen elyaf yapısına, boyutuna ve oranına bağlı olarak değişkenlik göstermektedir. Ayrıca kompozitte ara yüzey özellikleri de çok önemlidir. Kompozitlerde elyaf kullanımı çok yaygın olup mekanik özellikleri arttırmakta olduğu bilinen bir gerçektir. Ancak kompozitlerde kullanılan elyaf oranının bir üst sınır değeri vardır.

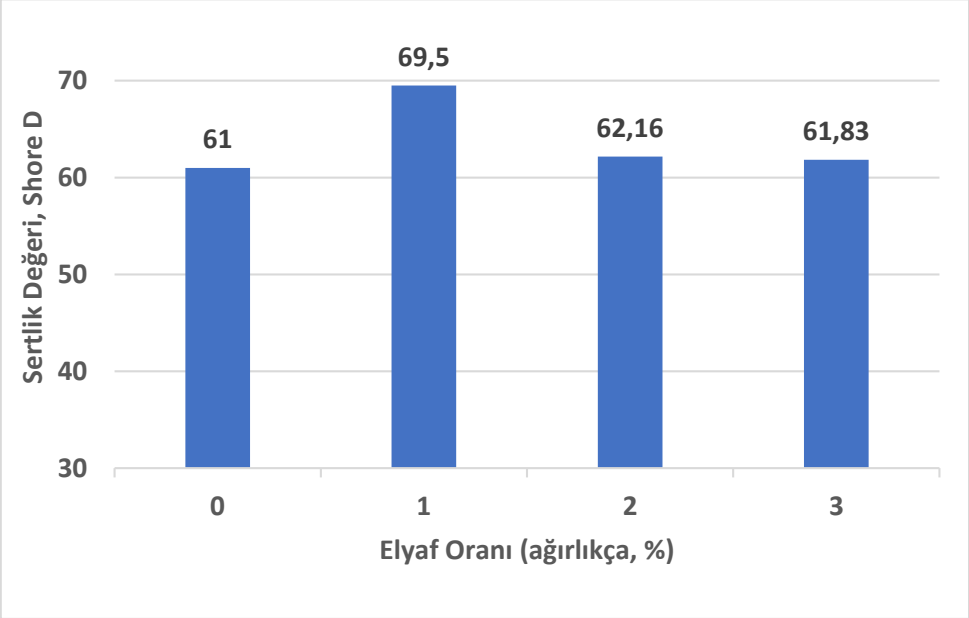
Numunelerin çekme mukavemeti, E modülü ve % uzama değerleri tablo 2'de verilmiştir. Bu çalışmada elyaf miktarının artmasıyla numunelerin çekme mukavemeti saf polyestere göre artmıştır. Ağırlıkça %1 elyaf ilavesiyle bile %10 oranında çekme mukavemeti artmıştır. Elyaf oranı %3 olduğunda ise çekme mukavemeti %17 oranında artmıştır. Bu artış elyafla reçine arasında iyi bir ara yüzey bağı gerçekleştiğini göstermektedir. Elyaf boyu kısa da olsa elyaf oranı arttıkça çekme mukavemetinin artmasına neden olduğu yapılan birçok çalışmada belirtilmektedir (Kartal et. al 2019)



Tablo 2. Numunelerin çekme testi sonuçları

Elyaf Oranı (ağırlıkça, %)	Çekme Mukavemeti (MPa)	Elastisite Modülü (MPa)	Uzama (%)
0	38.2	5450	0.54
1	42.1	6650	0.28
2	44.5	6850	0.41
3	44.7	6820	0.38

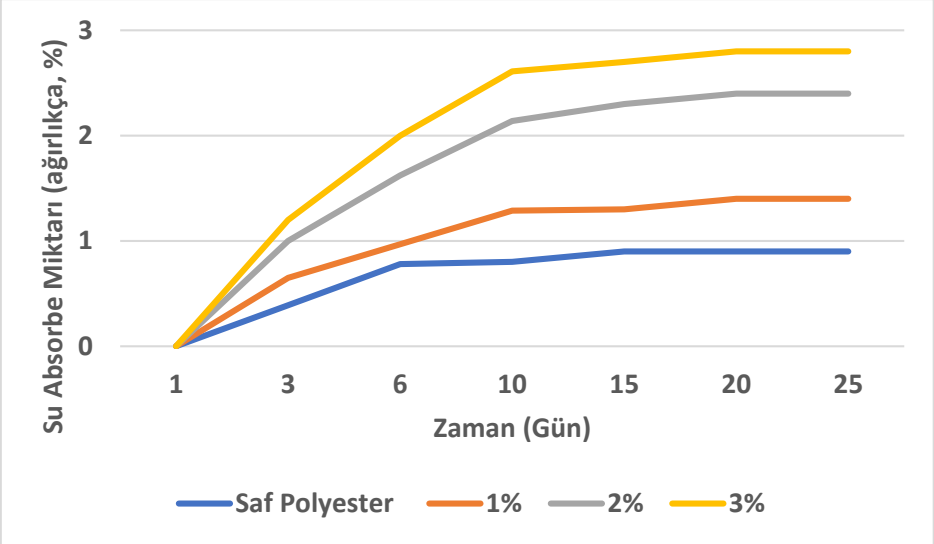
Şekil 3'de jüt elyaf oranına bağlı olarak numunelerin Izod darbe mukavemeti özellikleri verilmiştir. Kompozit numunelerin darbe mukavemeti elyaf malzemesinin özellikleri, dağılım, matris malzemesi ile etkileşimi, kompozit üretim tekniği gibi birçok duruma bağlı olarak değişebilir. Uzun lifler veya büyük



FULL TEXTS BOOK

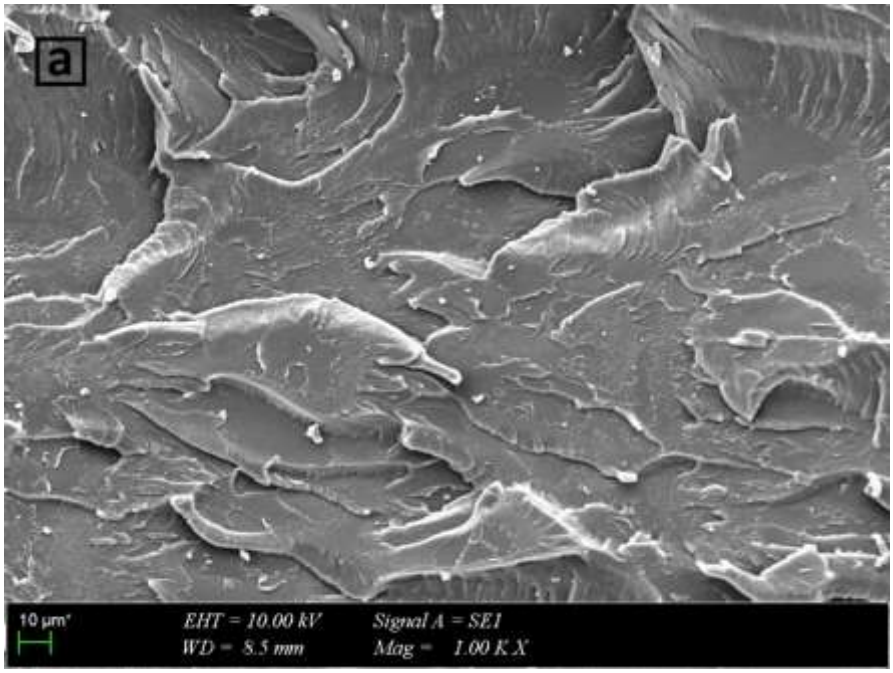
partiküller genellikle daha iyi bir darbe mukavemeti sağlar çünkü enerjiyi dağıtmaya ve emmeye daha fazla fırsat verirler (Kartal & Selimoğlu 2023). Bu çalışmada jüt elyaf oranı artması ile kompozitin darbe direncinde bir miktar artış gözlemlenmiştir. Jüt elyaf 2 mm uzunluğunda olmasına rağmen %3 oranında ilave ile kompozitin darbe mukavemeti %52 oranında artış göstermiştir.

Şekil 3. Numunelerin Izod darbe mukavemeti



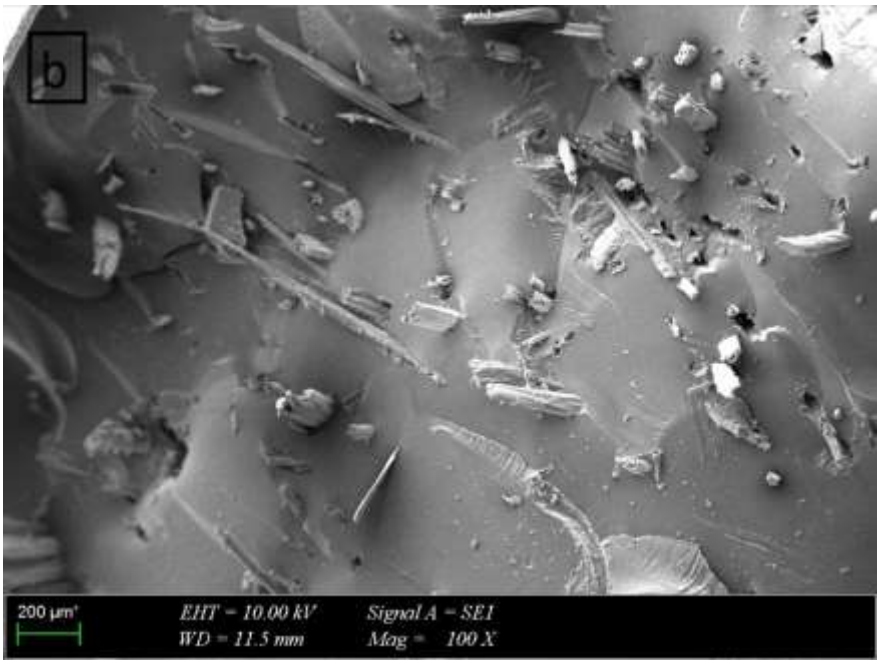
Şekil 4'de jüt elyaf dolgu oranına bağlı olarak numunelerin sertlik özellikleri verilmiştir. Kompozit malzemelerde fiber elyaf boyutu ve yapıya sağlayacağı sertlik özellikleri arasında karmaşık bir ilişki vardır. Genel olarak, büyük boyutlara sahip ve yüksek yoğunluklu elyaflar daha yüksek bir sertlik elde edilmesine sebep olabilir. Ancak malzeme tipine, dağılımına ve diğer faktörlere bağlı olarak değişiklik gösterebilir. En yüksek sertlik değeri %1 elyaflı numunede elde edilmiş, sonrasında sertlik değerleri azalmıştır. %1 jüt elyafı ile %14 oranında sertlik değerinde artış tespit edilmiştir. En düşük sertlik değeri saf polyesterde elde edilmiştir.

Şekil 4. Numunelerin Shore D sertlik testi değerleri



Numunelerin su emme özellikleri şekil 5'te verilmiştir. Saf polyester numunesinin su emme miktarı en az seviyededir. Jüt elyaf miktarı arttıkça su absorpsiyon oranı da artmıştır. Jüt elyaf doyum oranı olan %3'lük numunede yaklaşık ağırlıkça %2,8 su emme gözlemlenmiştir. Selüloz esaslı yapılarda, hidrofilik olan yapıların varlığı hızlı su emme oranını açıklamaktadır (Mohammed, 2015).

FULL TEXTS BOOK



Şekil 5. Elyaf oranına bağlı olarak numunelerin su emme özellikleri

Numunelerin kırılma yüzeylerinin SEM görüntüleri Şekil 5a ve 5b'de verilmiştir. Saf polyesterin kırık yüzey görüntüsünden gevrek bir kırılma ile kırıldığı anlaşılmaktadır. %2 elyaf katkılı numenin kırık yüzey görüntüsünde (5b) jüt elyaflar görülmektedir. Resimden de anlaşılacağı gibi iyi bir yapışma olduğu görülmektedir. Görüntüdeki elyafların görünen boyutu 600 mikrona kadar çıkabildiği, görünmeyen kısmın da polyester içinde kaldığı anlaşılmaktadır. Bu çalışmadaki benzer gözlemler farklı çalışmalarda da rapor edilmiştir (Kartal & Özcan, 2023).

Şekil 6. Numunelerin kırık yüzey SEM görüntüleri a) Saf polyester b) %2 jüt elyaflı numune

SONUÇLAR

Yeşil kompozitlerde doğal elyafların kullanımı ile olumlu çevre etkisi, yenilenebilir kaynakların kullanımı, biyobozunurluk, enerji tasarrufu gibi birçok avantaj sunmaktadır. Ancak kompozitlerde kullanılan elyafların bir üst limiti vardır. Bu çalışmada yaklaşık 2 mm boyutlarındaki jüt elyafın doymamış polyester reçine içindeki üst kullanım limiti ağırlıkça % 3 olarak tespit edilmiştir.

Bu çalışmada elyaf miktarı % 3 olarak kullanılmasıyla bile saf polyestere göre çekme mukavemeti %17 oranında, Izod darbe mukavemeti %52 oranında, sertlik değeri ise kısmen artmıştır. Bu artış elyafla reçine arasında iyi bir ara yüzey bağı gerçekleştiğini söylenebilir.

Atık doğal elyaflar sentetik elyafların yerine kullanılması ile hem ülkeye hem de çevreye daha büyük fayda sağlayacağı bir gerçektir. Bu nedenle geleneksel sentetik elyaflar yerine doğal elyafların kullanımı daha çok teşvik edilmelidir.

ABSTRACT

The global demand for sustainable and biodegradable materials has driven the development of natural fiber/filler-containing polymer composites. Fillers are frequently used in green composites to improve mechanical properties and reduce cost. Organic fillers used in such composites are materials such as wood sawdust and walnut shell, which are generally obtained from natural resources and minimize environmental impacts. While fillers play an important role in improving the performance and properties of green composites, they also contribute to reducing the overall production cost by reducing the amount of polymer.

In this study, hazelnut shell was used as organic filler material. First, hazelnut shells were ground in a mechanical grinder and sieved in the size range of 1-400 microns. Polyester was added to the matrix at certain rates, starting from 5%. The saturation rate for filler addition was determined as 20%. Mechanical properties of the samples such as tensile test, Izod impact test, hardness test were examined, and SEM images were taken from the broken surfaces. Additionally, since the filling structure is cellulose-based, a water absorption test was also performed. With the addition of hazelnut shells to polyester, tensile strength decreased and hardness and impact resistance partially increased. At the end of the study, it was evaluated that hazelnut shells can be used as a filler in polyester matrix composites.

Key words: Polyester, hazelnut filler, mechanical properties, composite

ÖZET

Sürdürülebilir ve biyolojik olarak parçalanabilen malzemelere yönelik küresel talep, doğal elyaf/dolgu içerikli polimer kompozitlerin geliştirilmesine yön vermiştir. Mekanik özellikleri geliştirmek ve maliyeti azaltmak için yeşil kompozitlerde dolgu maddeleri sıklıkla kullanılmaktadır. Bu tür kompozitlerde kullanılan organik dolgular, genellikle doğal kaynaklardan elde edilen ve çevresel etkileri minimize eden ağaç talaşı, ceviz kabuğu gibi malzemelerdir. Dolgu maddeleri, yeşil kompozitlerin performansını ve özelliklerini iyileştirmede önemli bir rol oynarken aynı zamanda polimer miktarını azaltarak genel üretim maliyetinin azaltılmasına da katkıda bulunurlar.

Bu çalışmada organik dolgu malzemesi olarak fındıkkabuğu kullanılmıştır. Önce fındıkkabuğu mekanik öğütücüde öğütülmüş ve 1-400 mikron boyut aralığında elenmiştir. %5 oranından başlayarak belli oranlarda polyester matrise ilave edilmiştir. Dolgu ilavesi için %20 doyum oranı olarak tespit edilmiştir. Numunelere çekme testi, Izod darbe testi, sertlik testi gibi mekanik özellikleri incelenmiş, kırık yüzeylerden SEM görüntüsü alınmıştır. Ayrıca dolgu yapısı selüloz esaslı olduğu için su emme testi de yapılmıştır. Fındıkkabuğunun polyestere ilavesiyle çekme mukavemeti azalmış, sertlik ve darbe direnci kısmen artırmıştır. Çalışma sonunda fındıkkabuğunun polyester matrisli kompozitlerde dolgu olarak kullanılabileceği değerlendirilmiştir.

Anahtar kelimeler: Polyester, fındıkkabuğu dolgusu, mekanik özellikler, kompozit

FULL TEXTS BOOK

GİRİŞ

Fındık dünyada sert kabuklu meyveler içinde gerek üretim gerekse tüketim bakımından bademden sonra ikinci sırada yer almaktadır. Fındık özellikle çikolata, şekerleme gibi sektörlerde gıda sanayinin temel hammaddelerindendir. İnsan sağlığı ve beslenmesinde çok önemli bir yere sahip olduğu için yoğun olarak tüketilmektedir (Demircan, 2009; Cengiz ve ark., 2021; Arun ve ark., 2020).

Uluslararası ölçekte fındık üreten ülkeler Türkiye, İtalya, ABD ve Azerbaycan'dır. Ülkemiz fındık üretiminde dünya lideri olup Dünya Gıda ve Tarım Örgütü verilerine göre toplam üretimin %60'ından fazlasını karşılamaktadır. Dünyada fındık üretimi son yıllarda ortalama 1,2 milyon ton olarak gerçekleşmektedir. Ülkemiz fındık rekoltesi yıllara göre önemli dalgalanmalar olsa da yaklaşık 700 bin civarındadır (Tarım Bakanlığı, 2024; Barczewski ve ark., 2019).

Fındık cinsine göre değişse de dış kabuk ağırlığı toplam ağırlığın yaklaşık %50-55'i kadardır. Yani fındığın yarısı sert kabuktan oluşmaktadır. Dünyada her yıl binlerce ton sert fındık kabuk atığı oluşmaktadır. Ülkemizde yaklaşık olarak 350 bin ton fındıkkabuğu ortaya çıkmaktadır. Fındıkkabuğu ülkemizde yüksek kalorili bir yakacak olarak kullanılmaktadır. Yakıt ve yakacak sektörü haricinde fındıkkabuğu birçok farklı kullanım alanı da vardır. Fındıkkabuklarının kaba dokusu, ince bir toz haline getirildiğinde onları doğal eksfoliant olarak ölü cilt hücrelerini çıkarmaya ve cildin görünümünü iyileştirmeye yardımcı olmak için yüz maskelerinde kullanılabilirler. Fındıkkabukları, renk üretebilen doğal pigmentler olan tanenler içerdiğinden kumaşlar ve diğer malzemeler için doğal boyalar oluşturmak için kullanılabilir (Ceraulo ve ark., 2022; Çağlar ve ark., 2022; Arun ve ark., 2020).

Dünyadaki doğal kaynakların hızla azalması, çevresel kaygılar gibi birçok sebeple sürdürülebilir ve geri dönüştürülebilir ürünlerin üretilmesi, günümüz endüstrisinin üzerinde çokça durduğu bir husustur. Son yıllarda, düşük çevresel etki, geri dönüştürülebilir özellik içermesi ve işleme kolaylığı gibi nedenlerle polimerik kompozitlerin üretiminde tarım endüstrisi atıklarından elde edilen doğal maddelerin kullanılmasıyla ilgili çok sayıda çalışma yapılmaktadır. Kompozit sektöründe yeşil kompozitler olarak isimlendirilen bu çevreci çalışmalar, daha çok sürdürülebilir kaynaklardan gelen polimer ve takviye malzemelerinin kullanımı üzerine yoğunlaşmıştır. Yeşil kompozitler, ahşap, kenaf, kenevir, keten, jüt, ceviz kabuğu, ananas yaprağı, buğday sapı, mısır püskülü, fıstık-badem kabukları gibi doğal elyaf ve/veya dolgu içerir (Sayın ve arkadaşları, 2016; Kartal ve Şengör, 2023; Demirer ve arkadaşları, 2018).

Karadeniz bölgesinde yaygın olarak bulunan fındıkkabuğu genellikle yakacak malzemesi olarak kullanılır ve katma değeri olan bir çıktıya dönüştürülmez. Fındıkkabuğu karakteristik rengiyle nispeten sert selülozik yapıya sahiptir. Dolayısı ile polimer içinde dolgu olarak kullanılması uygun olan tarımsal atıklardan biridir. Doğal dolgular, düşük maliyetleri, düşük yoğunlukları ve bulunabilirlikleri nedeniyle giderek daha fazla araştırılmaktadır. Ekolojik farkındalığın artması, sentetik elyaflara olan talebin artması nedeniyle, doğal dolgu/elyaf içeren kompozitler potansiyel bir alternatiftir (Çelik ve arkadaşları, 2021; Barbu ve arkadaşları, 2020; Cherkashina ve arkadaşları, 2023).

Bu çalışmada fındıkkabuğu polyester reçinesi içerisinde dolgu olarak kullanılmıştır. Mekanik öğütücü yardımıyla belirli boyutlara getirilen fındıkkabuğu partikülleri belli oranlarda polyester reçinesine ilave edilerek çekme, darbe, sertlik gibi mekanik özellikleri incelenmiştir. Kırık yüzeylerden SEM görüntüleri alınmış ve organik dolgu içermesi sebebiyle su emme testi de yapılmıştır.

MALZEME VE METOT

Malzemeler

Bu çalışmada kompozit reçine olarak genel amaçlı polyester reçinesi kullanılmıştır. Polyester Reçine, genel amaçlı kompozit uygulamaları için kullanılan orta reaktiviteli polyester reçinesidir. Uygun vizkozitesi sayesinde elyafları ve dolguları kolay ve iyi ıslatır. Hacimsel çekmesi düşüktür. Yüksek mekanik değerlere sahiptir (Kartal ve Güneş 2024; Kartal ve Uzunyol, 2024). Ayrıca içerisinde %6 kobalt naftalat hızlandırıcı bulunmaktadır. Polyester reçinesi için sertleştirici olarak Metil Etil Keton Peroksit, (MEK-Peroksit) kullanılmıştır.

Numunelerin Hazırlanması

Kompozit numuneler, fındıkkabuğu ve polyester reçinesinin bir kombinasyonu olup fındıkkabuğu mekanik öğütücüde öğütülerek farklı oranlarda polyestere ilave edilmiş ve kompozit numuneler elde

FULL TEXTS BOOK

edilmiştir. Öğütülen fındıkkabuğu 1-400 mikron aralığındadır. Daha büyük ve kaba olan partiküller kullanılmamıştır. Fındıkkabuğu içindeki yumuşak bölgeler de dolgu içinde kalmış, kabuk bütün olarak öğütülmüştür. Kompozit numuneler Teflon kalıpta açık döküm yöntemi ile polyester reçinesine ağırlıkça % 5-10-15-20 oranlarında kompozit numuneler hazırlanmıştır. % 20 oranı dolgu doyum noktası olduğu tespit edilince daha yüksek oranda dolgu kullanılmamıştır.

Fındıkkabuğu Oranı, (ağırlıkça, %)	Reçine Oranı	Sertleştirici Oranı
0	100	1,5
5	100	1,5
10	100	1,5
15	100	1,5
20	100	1,5

Tablo 1. Kompozit numune karışım oranları

Çekme testi, Zwick marka Z010 üniversal tip çekme test cihazında ISO 527 standardına göre 5mm/dk hızda, Izod darbe deneyi numuneleri çentiksiz olup Zwick marka B5113.30 darbe test cihazında 5.4 J çekiç ile, sertlik testi ölçümleri Shore D test cihazında icra edilmiştir. SEM analizi Marmara Üniversitesi Nanoteknoloji ve Biyomalzemeler Uygulama ve Araştırma Merkezi Laboratuvarında bulunan Polaron SC marka cihaz ile gerçekleştirilmiştir.

BULGULAR VE TARTIŞMA

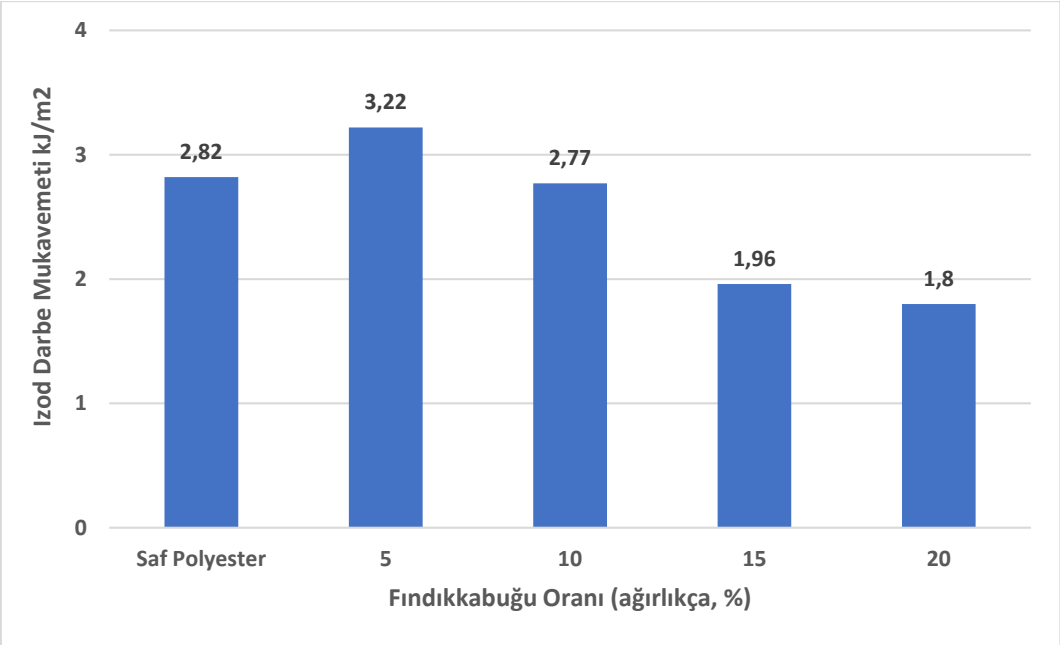
Bu çalışmada, fındıkkabuğu dolgulu termoset esaslı kompozit üretimi yapılmış ve mekanik özellikleri incelenmiştir. Çalışmada doğal dolgu olarak ülkemizde bol miktarda bulunan fındıkkabuğu kullanılmış ve çevreye duyarlı bir kompozit üretimi hedeflenmiştir. Matris malzemesi olarak kompozit endüstrisinde çok yaygın olarak kullanılan genel amaçlı doymamış polyester reçinesi kullanılmıştır. Şekil 1'de çekme testi için hazırlanan numunelerin fiziksel görüntüleri verilmiştir.

Numunelerin çekme mukavemeti, E modülü ve % uzama değerleri Tablo 2'de verilmiştir. Partikül dolgulu kompozitlerin çekme mukavemeti, matrise ilave edilen partikül yapısına, boyutuna ve oranına bağlı olarak değişkenlik göstermektedir. Ayrıca parçacık ve matris arasındaki ara yüzey özellikleri de önemlidir. Kompozitlerde dolgu kullanımı çok yaygın olup dolgu kullanım ana amacı maliyeti düşürmektir. Ancak kullanılan bazı dolgu maddeleri oran ve boyutlarına bağlı olarak polimerin mekanik özelliklerini zayıflatabilmekte, sertliğini ise artırabilmektedir. Bununla beraber kompozitlerde kullanılan organik veya inorganik dolgu oranının bir üst sınır değeri vardır.

Şekil 1. Çekme testi numuneleri

FULL TEXTS BOOK

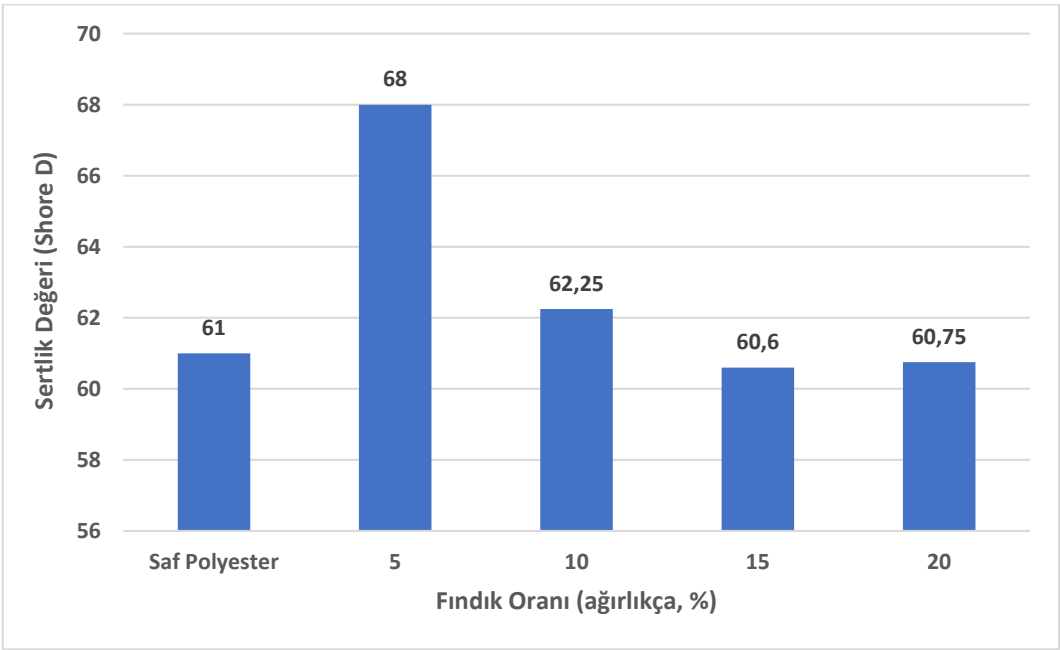
Bu çalışmada dolgu maddesi miktarının artmasıyla numunelerin çekme mukavemeti saf polyestere göre azalmıştır. Bunun nedeni fındıkkabuğu dolgu boyutu dağılımının geniş bir aralıkta olması olabilir. Bir başka olası neden ise fındıkkabuğu içindeki yumuşak bölgelerin varlığıdır. Yine kompoziti sıkı bir şekilde bağlayan polyester reçine yüzdesinin azalmasıyla beraber polimer matris ile dolgu içeriği arasındaki zayıf ara yüzey bağının kompozitin çekme mukavemetini azaltmıştır. Matristeki organik dolgu miktarı arttıkça topaklanma eğiliminin çekme mukavemetinin azalmasına neden olduğu yapılan birçok çalışmada belirtilmektedir (Khan ve arkadaşları, 2021; Lette ve arkadaşları, 2018; Huda ve arkadaşları, 2006).



Tablo 2. Fındıkkabuğu dolgu oranına bağlı olarak numunelerin çekme testi sonuçları

Dolgu oranı, Ağırlıkça %	**Çekme Mukavemeti (MPa)**	**Elastisite Modülü (MPa)**	**% Uzama**
Saf Polyester	38,2	5450	0,54
5	29,5	5610	0,46
10	28,5	5450	0,42
15	28,1	5830	0,37
20	27,2	6150	0,35

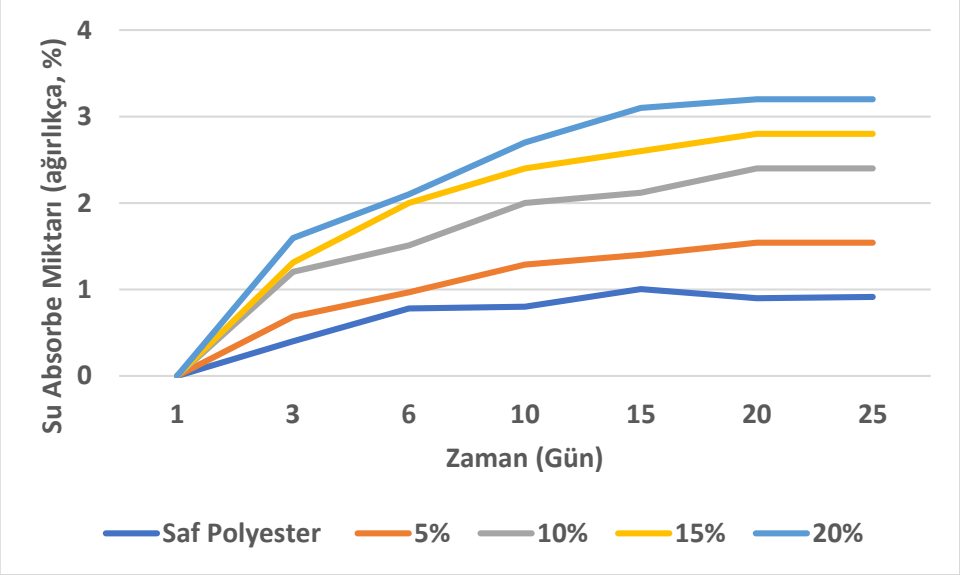
Şekil 2'de fındıkkabuğu dolgu oranına bağlı olarak numunelerin Izod darbe mukavemeti özellikleri verilmiştir. Kompozit numunelerin darbe mukavemeti dolgu malzemesinin özellikleri, dolguların dağılım ve yoğunluğunu, matris malzemesi ile etkileşimi, kompozit üretim tekniği, dolgu maddesinin etkilendiği çevresel faktörler gibi birçok duruma bağlı olarak değişebilir. Organik dolgu malzemeleri, genellikle lif veya partikül halinde olabilir. Uzun lifler veya büyük partiküller genellikle daha iyi bir darbe mukavemeti sağlar çünkü enerjiyi dağıtmaya ve emmeye daha fazla fırsat verirler. Ancak, bu ilişki her zaman doğru değildir ve bazı durumlarda büyük dolgu boyutları istenmeyen sonuçlara neden olabilir. Yine dolgu malzemesinin yapıda homojen bir şekilde dağıtılması ve uygun bir yoğunlukta olması darbe mukavemetini yine olumlu etkiler.



Bu çalışmada fındıkkabuğu oranı artması ile kompozitin darbe direncinde bir miktar artış gözlemlenmiştir. % 10 dolgu oranı ve sonrası ise darbe mukavemeti saf polyesterin darbe mukavemeti değerinin altına düşmüştür. Doyum oranına ulaştığı %20 dolgulu numunede ise en düşük değer tespit edilmiştir. Numunelerde dolgu boyutunun 1-400 mikron boyut aralığında olması darbe mukavemetine olumlu tesir ettiği, ancak % 10 ve sonrası polimer matris ile dolgu içeriği arasındaki zayıf ara yüzey bağı oluşması ve dolgu miktarı arttıkça topaklanma eğilimi darbe mukavemetini düşürdüğü düşünülmektedir.

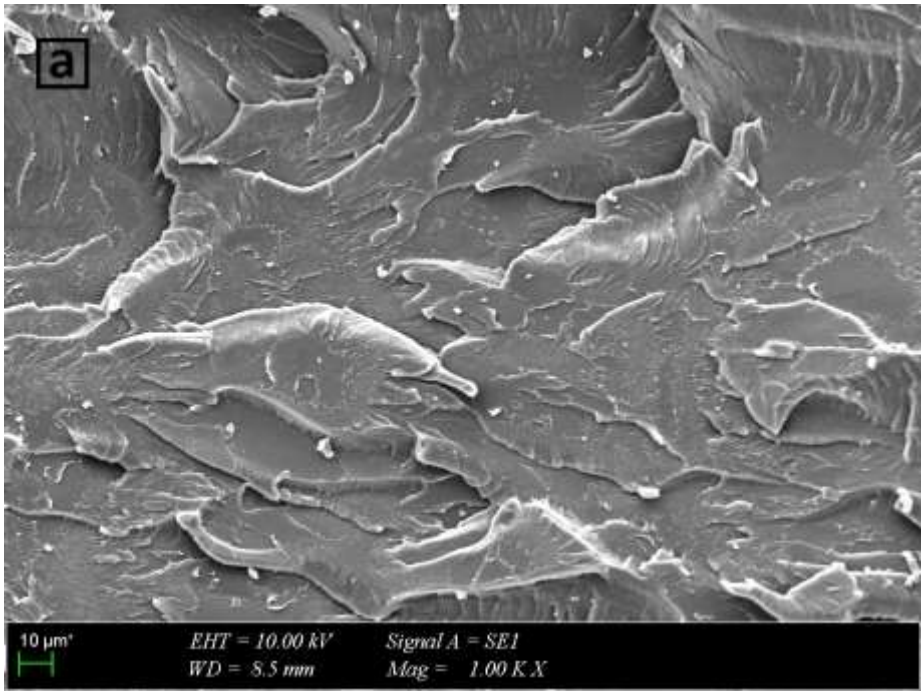
FULL TEXTS BOOK

Şekil 2. Dolgu oranına bağlı olarak numunelerin Izod darbe mukavemeti özellikleri



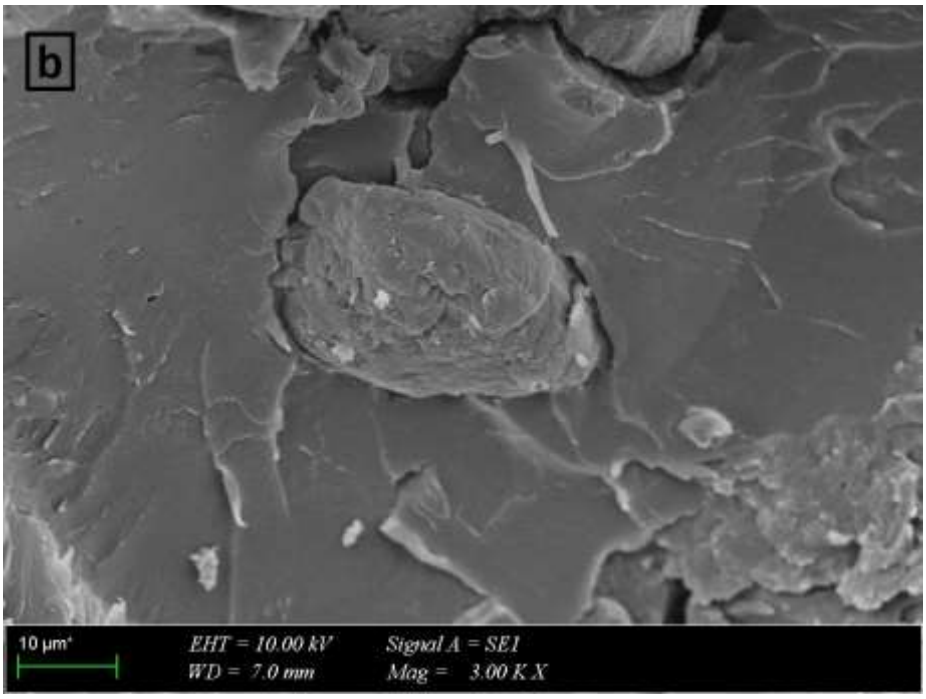
Şekil 3'te fındıkkabuğu dolgu oranına bağlı olarak numunelerin sertlik özellikleri verilmiştir. Kompozit malzemelerde organik esaslı dolgunun boyutu ve yapıya sağlayacağı sertlik özellikleri arasında karmaşık bir ilişki ortaya çıkar. Genel olarak, büyük boyutlara sahip dolgu malzemeleri ve yüksek yoğunluklu dolgular daha yüksek bir sertlik düzeyine katkıda bulunabilir, ancak malzeme tipine, dağılımına ve diğer faktörlere bağlı olarak değişiklik gösterebilir. Organik dolgu malzemelerinin kompozit malzemeyle birleştirilme süreci, sertlik özelliklerini etkileyebilir. Kompozit numune hazırlama aşamasında kullanılan presleme işlemleri, kompozit malzemenin homojenliğini ve dolayısıyla sertliğini etkileyebilir. Yâda açık döküm yapıldığında yoğunluk farkı sebebiyle dolgular dibe çökebilir. Yine organik dolgu malzemeleri nem, sıcaklık veya kimyasal etkileşimler dolgu malzemesinin özelliklerini ve dolayısıyla sertlik özelliklerini etkileyebilir. En yüksek sertlik değeri %5 dolgulu numunede elde edilmiş, sonrasında sertlik değerleri azalmıştır.

Şekil 3. Dolgu oranına bağlı olarak numunelerin sertlik özellikleri



FULL TEXTS BOOK

Numunelerin su emme özellikleri şekil 4'te verilmiştir. Saf polyesterin su emme miktarı minimum seviyede tespit edilmiştir. Fındıkkabuğu dolgu miktarı arttıkça su emme oranı artmıştır. Fındıkkabuğu dolgu doyum oranı olan %20'de yaklaşık %3,2 su emme gözlemlenmiştir. Selüloz esaslı yapılarda, doğası gereği hidrofilik olan doğal dolguların varlığı, yüksek nem içeriğini ve hızlı su emme oranını açıklamaktadır (Mohammed, 2015).



Şekil 4. Dolgu oranına bağlı olarak numunelerin su emme özellikleri

Numunelerin kırılma yüzeylerinin SEM görüntüleri Şekil 5a ve 5b'de verilmiştir. Saf polyesterin kırık yüzey görüntüsünden de (5a) anlaşıldığı üzere gevrek bir kırılma gözlemlenmiştir. %10 fındıkkabuğu dolgulu numenin kırık yüzey görüntüsünde (5b) fındıkkabuğu parçacığı görülmektedir. Resimden de anlaşılacağı gibi iyi bir yapışma olduğu söylenebilir. Görüntüdeki partikülün görünen boyutu 35-40 mikron civarında olduğu, görünmeyen kısmın da polyester içinde kaldığı anlaşılmaktadır. Bu çalışmadaki benzer gözlemler farklı çalışmalarda da rapor edilmiştir (Kartal, Naycı ve Demirer, 2019).

FULL TEXTS BOOK

Şekil 5. Kırık yüzeylerden SEM görüntüleri a) Saf polyester b) %10 fındıkkabuğu dolgulu numune

Numunelerin fiziki görüntüleri şekil 1'de görüldüğü gibi fındıkkabuğu ilavesi ile kabuğun kendi doğal rengi kompozite de geçmiştir. Saf polyester reçinesi renksiz ve şeffaftır. % 5 dolgu oranında hafif bir renk tonu varken dolgu oranı arttıkça renk tonu da koyulaşmıştır. Buradan da anlaşılacağı üzere fındıkkabuğu dolgusu kompozitlerde renklendirici olarak da kullanılabilir olduğu görülmüştür.

SONUÇLAR

Doğal dolgu maddelerinin yeşil kompozitlerde yaygın olarak kullanılmakta olup çevreye olumlu etki sunması, yenilenebilir kaynakların kullanımı, geri dönüşüm olanaklarının artırılması, biyobozunurluk, enerji tasarrufu gibi birçok avantaj sağlamaktadır. Ayrıca doğal dolgu maddeleri kompozit içinde polimer miktarını azaltarak kompozit malzemenin maliyetini önemli ölçüde düşürmektedir. Ancak polimerde kullanılan dolguların bir üst limiti söz konusudur. Bu çalışmada 1-400 mikron boyut aralığındaki fındıkkabuğunun polyesterde üst kullanım limiti ağırlıkça %20 olarak tespit edilmiştir.

Kompozit numunelerin en yüksek değerleri çekme mukavemetinde dolgusuz saf polyesterde, Elastisite modülünde %20 dolgu içerikli numunede, Izod darbe testinde %5 dolgulu numunede, sertlik testinde ise %5 dolgulu numunede tespit edilmiştir. Fındıkkabuğunun kendi doğal rengi kompozit matrise de geçtiği için renklendirici olarak ta kullanılabileceği değerlendirilmiştir.

Sentetik elyaflarla kıyaslandığında doğal dolgular oldukça ucuzdur. Bu nedenle, geleneksel sentetik dolgularla maliyetleri düşürmek yerine, gelecekte sentetik elyafın değiştirilmesini teşvik etmek için bu gibi çevre dostu dolguların kullanılması hem ülkeye hem de çevreye fayda sağlayabilir.

EVALUATION OF MALWARE DETECTION METHODS AND EMERGING THREATS IN CYBERSECURITY

Nida Akdogan

Ostim Technical University, Software Engineering

Dr. Osman AKIN

Ostim Technical University, Artificial Intelligence Engineering

ABSTRACT

Malicious software, also known as malware, consists of codes or programs that disrupt or impede the operation of endpoint devices. The primary objectives of those who create these software are usually to encrypt files for ransom or to make a profit by selling the acquired data. Malware can manifest in various forms, such as phishing emails, infected files, software or system vulnerabilities, or contaminated USB drives. Due to the complex nature of malware, its detection presents certain challenges. For instance, rootkits can remain hidden in systems for extended periods, causing damage without detection, while others utilize polymorphic and metamorphic techniques to alter their codes with each infection, thereby evading detection systems. Despite various proposed methods to combat these threats, there is an ongoing increase in malware attacks. The continual evolution and growing complexity of malware threats have become a prominent reality. Recent research in 2023 has revealed a significant global increase in the number of malware attacks, with ransomware attacks showing a 20% increase compared to previous years. Moreover, cybersecurity firms detect an average of 350,000 new malware samples daily, clearly indicating the rapid development and spread of malware. This study presents a comparative analysis of malicious software and their detection methods. It also examines the challenges in detecting malware and the newly suggested diverse methods for protection. This research aims to highlight the new trends in malware and to create awareness for protection against them.

Keywords: Malware, Malware Detection, Ransomware, Rootkit, Cybersecurity Trends, AI and Cybersecurity, Ransomware Attacks

INTRODUCTION

In today's world, malicious software is defined as codes that disrupt or impair the functioning of endpoint devices. The detection of malicious software, which involves identifying and preventing these harmful programs, is a crucial aspect of computer security. This malevolent software, infiltrated into computer networks and individual devices by attackers, often activate without the users' knowledge, interfering with or disrupting the normal operations of the devices. The importance of malware detection in cybersecurity cannot be overlooked as it serves to protect computer systems from potential data loss, vulnerabilities, and unauthorized access by identifying and mitigating threats (Vasani et al., 2023). The diversity of malware significantly increases the complexity of the cybersecurity landscape today.

Ransomware encrypts critical data and demands ransom, often targeting critical infrastructures such as government agencies and the health sector. Trojans sneak into computers without users' awareness and engage in harmful activities. Viruses spread by infecting files, damaging systems in the process. Worms can self-propagate, causing widespread damage across networks. Spyware covertly collects users' personal data, leading to privacy breaches. Adware displays unwanted or harmful advertisements to users, while botnets orchestrate coordinated attacks using many infected devices. Rootkits deeply embedded in the system become hard to detect. This variety necessitates the continuous re-evaluation and enhancement of cybersecurity strategies.

The primary reason behind the effectiveness and danger of malicious software lies in its complex nature. This complexity makes it increasingly challenging for traditional security systems to effectively detect such software. Modern malicious software employs various methods to hide itself, prevent detection,

FULL TEXTS BOOK

and bypass defense mechanisms. For example, some use polymorphic and metamorphic techniques to change their code with each infection, thereby evading signature-based detection systems. Others use encrypted or stealth communication channels to deceive security tools that analyze network traffic. Additionally, malicious software can detect sandbox environments and behave harmlessly within them, thereby nullifying analysis and detection efforts. Advanced malware like rootkits, for instance, can remain hidden in a system for extended periods, posing a significant threat. Rootkits work by intercepting or altering system calls, making them hard to detect by regular security scans and antivirus programs. This necessitates continual updates to security systems, though it may not always be possible to detect and prevent such software with current technologies.

The complexity of malicious software forces cybersecurity experts to continually adapt to new threats and update existing defense strategies. New types of malwares, frequently changing tactics, and advanced concealment methods require security researchers and solution providers to constantly innovate and develop proactive approaches. The management of security systems and the detection of threats require extensive technical knowledge and continuously updated skills. However, the lack of adequate training and experience in this field can make it difficult to correctly identify vulnerabilities and implement effective measures. The development of artificial intelligence (AI) and machine learning (ML) techniques has a dual effect in the field of cybersecurity. While these technologies offer new opportunities for attack detection and prevention, they also complicate the methods of attack developed by malicious individuals. AI-powered attacks can bypass traditional security systems, rendering them ineffective. Malware has become one of the favorite tools of cybercriminals, and the increasing skill and intelligence of attackers make these threats more dangerous and unpredictable. The rapid change and development of technology continuously create new challenges in cybersecurity. New technologies and applications also bring new security vulnerabilities.

In recent years, there has been a particular focus in cybersecurity on the rise of ransomware threats and the damages they cause in critical areas such as industrial systems, healthcare organizations, and government networks. For example, reports indicate that in the United Kingdom, losses from online banking fraud reached 174.4 million British Pounds in 2015, a 23% increase compared to 2013 (Saeed et al., 2023). According to Verizon's 2023 Data Breach Investigations Report, 24% of all breaches were caused by ransomware attacks (Verizon, 2023). According to the 2023 report by VirusTotal, over 3 billion samples were analyzed between January 2021 and May 2023. The report highlights the presence of various software embedded in legitimate installation packages, such as ISO files, and points out the distribution of malicious software like CryptoNotepad across platforms including Windows, Telegram, and AnyDesk. The report also notes that these files are sometimes distributed as highly compressed email attachments, underscoring the diverse methods employed for their dissemination (VirusTotal, 2023). Coalition's 2023 report states that 19% of cyber insurance claims were related to ransomware, with an average loss amount exceeding $365,000 (Coalition, 2023). Unit 42's report indicates that the average ransomware demand is $650,000, but actual payments fall 46% below this amount (Unit 42, 2023). Research by ReversingLabs shows that the number of malicious packages discovered in open-source package managers has increased by 1300% in recent years (ReversingLabs, 2023). These statistics demonstrate that cyber threats continue to rise despite AI-based countermeasures and that challenges in this field are increasingly growing.

To date, scientists in this field have conducted various literature reviews and surveys to thoroughly examine cybersecurity studies. These studies have typically focused on specific aspects of cybersecurity. For instance, some have explored the Internet of Things (IoT) (George et al., 2017), while others have delved into the detailed detection of malicious software (Bensaoud, et al., 2024; Ling et al., 2023; Amira et al., 2023). Additionally, there is a significant number of review articles related to artificial intelligence studies (Gaber et al., 2024; Houy, N. 2014; Cen et al., 2024; Maniriho et al., 2024; Gopinath & Sethuraman, 2023; Begovic et al., 2023). Alongside this, there are research and surveys on mobile-based malware (Maniriho et al., 2024; Deldar & Abadi 2023). Despite these detailed studies, a feature-based comparative presentation of malicious software and detection methods has not been provided in any study. To eliminate this gap, we offer an evaluation of malicious software and detection methods based on features.

FULL TEXTS BOOK

This research provides an in-depth analysis of malware detection methods and elucidates their similarities and differences through a comparative approach. It also highlights the new trends and strategies in cyber-attacks. Despite effective measures, it emphasizes that cyber-attacks continue to increase. It has been discovered that malicious software continuously changes and improves its methods of hiding, monitoring, and transforming. In addition, malware has been compared based on various characteristics such as concealment methods, types and speeds of propagation, recent trends in spread, detection difficulties, and detection methods. Comparative data are presented in a table for easy comparison of malicious software.

The research also extensively examines signature-based, behavior-based, machine learning-based, and hybrid detection methods, evaluating their advantages and limitations. The comparative assessment of these methods demonstrates that there is no one-size-fits-all solution for malware detection. These findings are significant for cybersecurity practices and underscore the importance of keeping up with the latest malware detection techniques to protect computer systems.

In addition to these evaluations and comparisons, the study has thoroughly investigated the challenges in detecting malware, advanced concealment methods, and detection deficiencies. It also highlights attacks conducted using AI and ML, increasing security challenges faced by IoT devices, cybersecurity threats in cloud technologies, phishing and social engineering techniques, security vulnerabilities related to advanced cryptography, and concerns about data breaches and personal privacy as new cybersecurity threats.

Another key focus of the research is to raise awareness in the field of cybersecurity and educate users about these threats. In this context, current security measures and defense strategies are discussed with the aim of enhancing cybersecurity awareness.

In Chapter 2 of the study, a literature review introduces malicious software and its types, including detection methods for each. This chapter also compares malware and detection methods. Chapter 3 discusses new trends and future strategies. In the conclusion, the research findings are summarized, and recommendations for future studies are provided.

BACKGROUND AND RELATED WORKS

Malicious Software Types

Malicious software, or malware, consists of various harmful programs designed to infiltrate computers or networks without the user's permission, causing damage (Figure 1). Computer viruses are malicious programs that replicate themselves without the user's knowledge and spread by attaching themselves to other programs or operating system files. They corrupt files, delete data, or consume system resources, reducing the computer's performance. Detection of computer viruses typically involves signature-based scans and heuristic analyses. Signature-based scans detect malware by using the digital "signatures" of known viruses. This method is effective against common and recognized viruses but has limited effectiveness against new or modified viruses. Heuristic analyses are used to detect unknown viruses by analyzing software behavior and code structure to identify potentially harmful activities that deviate from the norm.

Worms are malicious software that independently spread over networks. They propagate themselves through email, messaging programs, or exploiting network vulnerabilities. Worms slow down systems by congesting network traffic, steal important information, or download other malware. Worm detection typically involves network traffic analysis and behavioral analysis techniques, which is created by worms on the network. Behavioral analysis observes unusual behaviors of worms in computer systems. For example, behaviors like file copying, accessing network ports, or constant network connectivity of a worm are identified through this analysis method.

FULL TEXTS BOOK

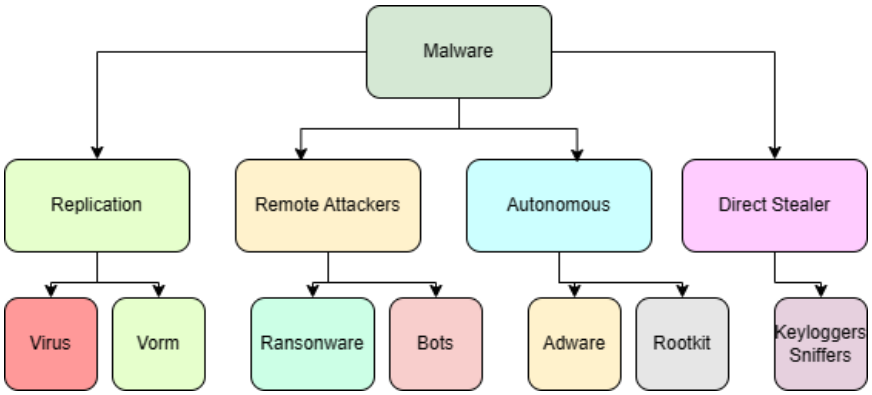

Figure 1. Classification main malware types

Detection of viruses and worms involves traditional methods like signature-based scans and network traffic analyses, as well as machine learning and AI-based algorithms (Souri & Hosseini, 2018).

Trojan Horses hide within seemingly legitimate software to gain the user's trust. Once activated by the user, they initiate their harmful functions, such as creating backdoors, making unauthorized changes in the system, or stealing sensitive data. Trojans are often distributed through email attachments, fake software updates, or malicious websites. As intrusion methods into computer networks, they exploit security vulnerabilities, weak passwords, or users' susceptibility to social engineering tactics. Detection of this type relies on advanced behavioral analysis and anomaly detection systems, as traditional antivirus software often overlooks the camouflage capabilities of Trojans.

Spyware collects personal and sensitive information by monitoring users' internet activities. This information is used for advertising purposes or sold to more malicious individuals. Spyware often installs itself without the user's knowledge and exhibits privacy-violating behaviors. In their study, Egele et al. (2007) mentioned that spyware covertly monitors users' behaviors, recording their web browsing habits and stealing passwords. Detection of spyware typically involves monitoring the internet activities of users and identifying unusual changes in the system. Additionally, advanced software that analyzes user behavior and identifies abnormal activities uncovers the covert operations of spyware.

Ransomware encrypts users' files or systems, blocking access and demanding a ransom to decrypt. This type of software can cause serious damage in corporate networks and lead to data loss. Ransomware spreads by exploiting security vulnerabilities or through malicious email attachments. The attack infrastructure of ransomware is complex, including social engineering tactics, initial attack vectors via email, weakly secured websites, and malicious software known as 'Exploit Kits.' These kits scan the victim's computer for vulnerabilities and attempt to load ransomware (O'Kane et al., 2018). Detection of ransomware involves systems that monitor suspicious file behaviors and encryption activities. These detection methods help in early identification of ransomware. Additionally, email filtering and web security solutions provide proactive defense by blocking the propagation routes of ransomware.

Botnets are networks created by controlling numerous infected computers. These networks are used for sending spam, conducting DDoS attacks, or engaging in other malicious activities. Botnets often operate in the background without the user's knowledge. Infected devices usually join botnets due to outdated software or weak security measures. Botnet detection involves network traffic analysis and monitoring of abnormal network activities. These detection methods track the communication of botnets with their command-and-control servers and analyze the activities of infected devices on the network. Considering the different configurations of IRC and P2P-based botnets, specialized strategies are developed for these types' more distributed and hard-to-detect structures.

Rootkits are types of malicious software that stealthily infiltrate computer systems and take control of normal operating systems or security measures. These advanced malware infiltrate operating system kernels or other critical system components using methods that make detection difficult. Rootkits are ideal for monitoring, controlling, and stealing data, making them extremely dangerous. It is difficult to detect by using antivirus programs and other security tools. This software uses various techniques to

FULL TEXTS BOOK

hide themselves, including kernel-level hooking, API hooking, and direct kernel object manipulation. These techniques allow rootkits to overshadow normal activities in the system and bypass security mechanisms.

As a result of our detailed literature and report review, we compared the malware and created Table 1. While doing this, we took 14 features into consideration. We determined these features by averaging the results we obtained from different studies. Thanks to these features we chose, we were able to fully compare malware based on their features. These features generally present a comparative view of the fundamental characteristics of malicious software, such as their propagation methods, affected platforms and targets, and details specific detection methods and prevention strategies for each type.

Table 1. Comparison and characteristics of different types of malwares

Feature / Malware Type	**Virus**	**Worm**	**Trojan**	**Spyware**	**Ransomware**	**Botnets**	**Rootkits**
Self-Replicating	Yes	Yes	No	No	Partially	Yes	No
Evasion	Partially	Yes	Yes	Yes	Yes	Yes	Very Strong

Advanced Threat Detection	Limited	Yes	Yes	Yes	Yes	Yes	Very Strong

Malware Detection Methods

Malware detection is critical for computer security and is performed using various methods. These include behavior-based, signature-based, machine learning-based, and hybrid detection methods.

Signature-Based Detection Method

Signature-based detection protects systems by scanning for specific malware using predefined signatures and is widely used by popular antivirus and malware scanners (Figure.2.). It is one of the most employed detection techniques in cybersecurity (Gaber et al., 2024). This technique identifies known malware by analyzing their unique characteristics or "fingerprints." However, this method has its limitations. According to Souri and Hosseini (2018), signature-based detection is only effective

FULL TEXTS BOOK

against previously identified threats and therefore struggles to detect new or unknown types of malwares (Souri & Hosseini, 2018).

As noted by Akhtar and Feng (2022), susceptibility to the infiltration of polymorphic malware stems from these types of malware's ability to change their appearance and evade signature detection; however, reverse engineering and static analysis methods support signature-based detection by decompiling malware binary files and discovering harmful patterns and signatures within the code. In the study by Abiola and Marhusin (2018), the dependency on maintaining an up-to-date signature database and how this can lead to resource intensity and coverage gaps was mentioned.

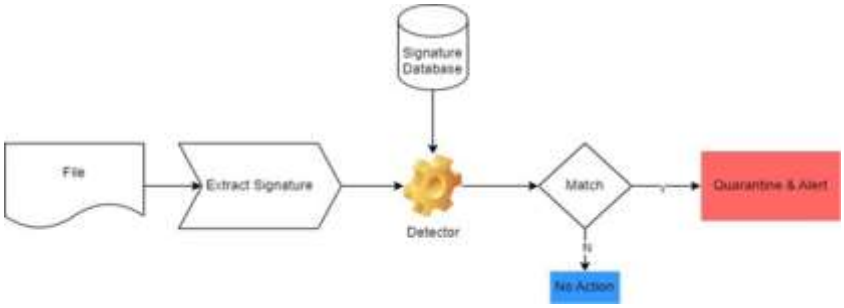

Figure 2. Signature-Based Malware Detection Flow Diagram

In response to these challenges, various implementations of signature-based detection methods have been developed in the field of cybersecurity. Applications in network-based architectures classify the security level for ransomware detection and prevention by analyzing incoming and outgoing traffic. According to the systematic literature review by Maniriho et al. (2024), while this approach can be effective in detecting new or improved malware variants, reducing the dependency on frequent signature updates in the field of Windows malware detection remains a significant research topic.

In their research, Prabath et al. (2023) explore alternative and more sophisticated detection methods to increase the effectiveness of malware identification; these methods can effectively identify known malware and take appropriate action to prevent potential damage.

Behavior-Based Detection Methods

Behavior-Based Detection focuses on analyzing the behavior of software or applications to identify malicious activities, as opposed to relying on signature-based techniques. Behavioral detection methods effectively identify malware actions and interactions even in the face of evasion attempts by signature-based detection and create a strong defense tool when combined with other strategies. It is fundamentally based on monitoring system activities and behaviors during runtime. This method can effectively detect previously unknown or zero-day malware that does not yet have a known signature, offering a significant advantage over the limitations of traditional signature-based detection methods (Souri & Hosseini, 2018). Behavioral detection methods, as demonstrated in the 2024 study by Azeem et al., provide a high accuracy rate of 97.39% in malware detection using wrap-based techniques. According to Vasani et al. (2023), platforms like VirusTotal consolidate multiple antivirus engines and malware analysis tools to provide a comprehensive overview of the behavior of submitted files.

Machine Learning-Based Detection Methods

Machine learning-based detection methods have garnered significant interest in the field of cybersecurity for malware detection. These approaches use modern machine learning algorithms to distinguish between malicious and benign files and often provide a high level of accuracy. The machine learning workflow involves feature extraction, model training, and evaluation steps in malware detection and classification, and various techniques used in this field prove the effectiveness of algorithms with high detection rates. These methods are employed for the identification and mitigation of various types of malwares, including Trojans, ransomware, crypto miners, worms, and botnets. The 2024 literature review by Gaber et al. (2024) highlights the importance of adaptation to cyber threats and detection of zero-day vulnerabilities and unknown threats using AI and machine learning-based detection techniques.

FULL TEXTS BOOK

A classification of malware detection techniques has been developed through a systematic literature review, providing a detailed classification of machine learning methods for malware detection (Mohammed., 2021).

Hybrid Detection Methods

Hybrid detection methods in cybersecurity combine multiple techniques to detect and combat various types of malwares (Figure.3). These methods have become increasingly important, especially due to the rising complexity and sophistication of advanced malware programs, such as Trojans, ransomware, crypto miners, worms, and botnets (Gaber et al., 2024). Hybrid detection systems offer effective solutions against the complex nature of these software types that can encrypt, hijack, and leak data. An example of a hybrid detection system is the combination of API Call Graphs (ACGs) with byte-level image analysis. This approach presents a unique and effective way to detect malware (Rimon et al., 2022). The 2023 study by Yang et al. shows that improved hybrid detection methods combining multiple techniques allow for more accurate identification of malware (Yang et al., 2023).

According to Maseno et al. (2022), hybrid detection systems have increased the ability to identify new and emerging threats due to their capacity to adapt to and learn from various data sources and inputs. However, hybrid systems also face challenges. Damodaran et al. (2022) point out that an increase in false positives can occur if the various detection methods used in hybrid detection systems do not complement each other sufficiently or fail to identify certain malware characteristics. Therefore, a careful balance in the design of these systems is crucial.

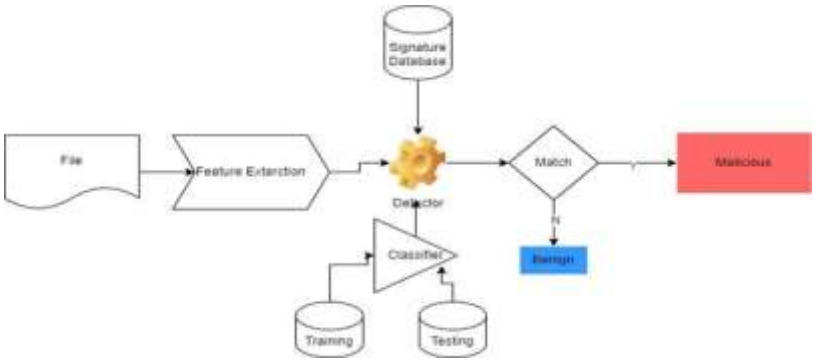

Figure 3. Hybrid Detection Malware Detection Workflow Diagram

The development of hybrid detection tools continues to aid in the fight against the ever-evolving cyber threats. For example, a research study focuses on word2vec-based transfer learning and multi-modal image representation to present innovative approaches for malware detection. These innovative approaches provide valuable insights for the cybersecurity community by offering new ways to characterize and detect malware (Azem et al., 2024). Hybrid detection tools enhance the accuracy and efficacy of cybersecurity defense strategies by leveraging the strengths of various detection techniques.

Challenges in Malware Detection

Malware detection is an ever-evolving and complex battle within the field of cybersecurity, hence the development of many different techniques. These techniques work on experimental scenarios to identify and classify malware. Windows specifically uses methodologies like feature selection from deep learning and log data to detect peculiar behavior patterns associated with malware designed for its operating system (Alraizza et al., 2023). Quickly and accurately detecting threats also brings a set of challenges. One of the main challenges in this area is the behavior of some legitimate software that mimics malware. This can lead to an increase in false-positive results in detection processes. For example, some security software may exhibit behavior similar to malware during normal activities, which can lead to false alarms by security systems (Azem et al., 2024).

Another challenge is the resource consumption of security systems in the face of ever-increasing data volumes and complex cyber threats. The necessity of continuous monitoring of system activities increases resource consumption, especially in large and complex network structures. This poses a serious problem for institutions with limited resources. Fortunately, tools like Google Rapid Response

FULL TEXTS BOOK

(GRR) help overcome these challenges by providing scalable and extensible solutions to analyze the behavior of malware in systems (Vasani et al., 2023).

Today's continuous evolution of malware and the emergence of new threats increase the need for resources. Windows emphasizes the importance of high computational resource requirements, especially for processing large datasets and training complex models in malware detection. Current statistics show that security threats are ever-present, and significant challenges still exist in protecting computer systems (Azem et al., 2024).

Advanced Evasion Techniques and Detection Deficiencies

Malware is increasingly utilizing more sophisticated methods of hiding, monitoring, and transforming. These include polymorphic and metamorphic techniques, rootkit usage, and complex network traffic obfuscation tactics. Polymorphic and metamorphic malware constantly change their code to evade standard signature-based security systems. Polymorphic software alters its structure with each infection, not giving a fixed signature. Metamorphic software rewrites its own code, displaying an entirely different structure with each infection. Rootkits embed deeply into operating systems or applications, allowing them to hide from current antivirus programs or other security applications. Complex network traffic obfuscation tactics deceive network-based detection systems by making malware traffic appear as normal network activity. This advanced evasion, monitoring, and transforming methods create challenges in malware detection, requiring security professionals to continually develop new strategies.

Challenges Brought Using AI and ML

AI and ML have been increasingly used in malware detection and classification in recent years, offering significant advantages in speed, accuracy, and flexibility over traditional methods (Gaber et al., 2024). Among ML-based methods are techniques such as K-Nearest Neighbors, decision trees, and random forests (Azem et al., 2024). ML approaches are effective in large malware datasets and often outperform traditional methods. The use of deep learning and AI requires cybersecurity professionals to better understand complex threats and re-evaluate traditional detection methods. Additionally, the increasing use of generative AI techniques brings new attack vectors, such as fake data injection, while defense strategies against these complex threats involve challenges (Dhoni & Kumar, 2023). Cybersecurity professionals can enhance their abilities to combat an increasing variety of cyber threats by incorporating AI and machine learning technologies into malware detection strategies.

AI and ML hold significant potential in the field of cybersecurity. However, realizing this potential brings its own significant challenges. AI and ML-based systems typically offer high accuracy rates in identifying malware. Still, they require extensive and diversified datasets for effective training. Collecting, processing, and labeling comprehensive datasets require significant time and resource investment, and maintaining the currency and representativeness of these datasets requires ongoing effort. Another challenge for AI and ML models is their susceptibility to manipulation by malicious actors. Attackers can deceive the system with misleading or poisonous data during the model's learning process.

Such attacks lead to false positives or negatives, resulting in security vulnerabilities and dangerous false alarm rates. Continuous testing, updating, and enhancing the security of AI and ML systems are also essential. These technologies must be continuously improved and updated to adapt to the ever-changing nature of malware and new types of threats. This process means a continuous effort in research and development, especially in the field of cybersecurity. Effective use of AI and ML systems requires expert knowledge and skills. The complexity and technical difficulties of these systems present a barrier for institutions without sufficient technical expertise. Additionally, the lack of transparency in how these systems work opens questions about the understanding and reliability of decision-making processes. Lastly, AI and ML-based detection systems can lead to privacy violations and misuse while processing user data, necessitating careful attention to data protection and user privacy issues.

Evaluation of Malware Detection Methods

Creating specific criteria for evaluation is very important to effectively assess malware detection methods. Malware programs have evolved into various complex and sophisticated variants, such as ransomware, Trojans, crypto miners, worms, and botnets, each with different characteristics and

FULL TEXTS BOOK

challenges (Gaber et al., 2024). Therefore, factors such as detection accuracy, false-positive rates, scalability, and adaptability to new threats must be considered in the evaluation process. Comparative evaluation, as presented in Table 2, emphasizes the effectiveness and need for adaptation of malware detection techniques against the constantly evolving cyber threat environment. It also underscores the need for ongoing innovation and development to stay ahead of potential threats. Despite significant advancements in malware detection methods, there are still natural limitations in current techniques that need to be addressed.

Table 2. Comparison of Different Malware Detection Methods

Features	Signature-Based	Behavior-Based	Machine Learning Based	Hybrid
Known Detections	Each malware has its unique signature.	Identifies malware by monitoring software behavior.	Machine learning can detect hidden patterns of malware.	Combines static and dynamic analyses, particularly effective for detecting packed files.
New Detections	**Low** new malware detection can be time-consuming.	**Medium** new malware behaviors might not conform to known harmful patterns.	**High** capable of detecting new malware with continuous learning and evolving ability.	**High** accurately and quickly detects new and packed malware.
Zero-Day Vulnerabilities	**Very Low** new attack vectors may not be detectable with this method.	**Medium** has the potential to detect zero-day vulnerabilities.	**High** trainable models can detect new and unknown threats.	**High** combination of static and dynamic analyses is effective in detecting zero-day threats.
Sensitivity to Polymorphic Malware	**High** can evade detection with signature changes.	**Medium** can detect in some cases with behavioral changes.	**Low** effectively classifies polymorphic malware.	**High** various analysis techniques are used to detect polymorphic threats.
Need for Continuous Updates	**High** signatures need to be constantly updated for new malware.	**Medium** behavioral patterns of new malware may need continuous updates.	**Low** the model can be updated with training datasets.	**Medium** static and dynamic analyses need updates, but automated learning processes are also present.
Effectiveness Against Evolving Threats	**Low** often unable to detect new and unknown malware.	**High** dynamic and adaptable structure makes it effective against new threats.	**Very High** flexible and adaptable structure allows for continuous improvement against new threats.	**Very High** combination of static and dynamic analyses offers effective solutions against evolving threats.
Compatibility with ML/AI	**Low** typically relies on a static and limited database.	**Medium** has potential for integration with machine learning.	**Very High** utilizes the latest technologies in ML and AI techniques.	**Very High** achieves high accuracy rates using various ML algorithms.

As highlighted by Ranveer and Hiray (2015), despite many efforts to enhance the capability of detection methods, the lack of analysis on the current trends of malware threats leads to potential gaps in knowledge and protection. Furthermore, as malware continues to evolve and become more complex, detection techniques must constantly adapt to stay ahead of potential threats (Aboaoja et al., 2022). False positives and negatives can pose significant challenges to the accuracy and reliability of malware detection methods.

NEW TRENDS AND THREATS IN CYBERSECURITY

The rapid development of technology in recent years has led to the emergence of new trends and threats in cybersecurity. The increasing integration of the Internet and the evolution of digital technologies compel cybersecurity professionals to continually develop new strategies.

FULL TEXTS BOOK

The rise of AI and ML, the growing use of IoT devices, advancements in cloud technologies, increases in phishing and social engineering tactics, next-generation cryptography, growing data breaches, and privacy concerns are among the significant developments in this sector. Cybersecurity threats today include attacks conducted using AI and machine learning, increased security challenges faced by IoT devices, cybersecurity dangers in cloud technologies, phishing and social engineering techniques, security vulnerabilities related to advanced cryptography, and data leaks and privacy concerns. These topics are subsequently examined in detail.

AI and Machine Learning-Based Attacks

AI and ML present both opportunities and challenges in the field of cybersecurity. As per the report by The Economist Intelligence Unit (EIU), AI and ML can offer powerful tools to detect, prevent, and respond to cyber-attacks more easily. For example, MasterCard uses AI and ML for Decision Intelligence, a security platform that can identify fraud behaviors more readily than human observers (The Economist Intelligence Unit 2021).

However, AI and ML can also be misused by cybercriminals. The latest report by ENISA emphasizes that AI and ML provide cyber attackers with the ability to conduct faster, more scalable, and more effective attacks than traditional methods. AI and ML enable cybercriminals to use natural language generation (NLG) or deepfake technologies to create fake emails, websites, or social media accounts (European Union Agency for Cybersecurity, 2023).

Cybersecurity applications of AI and ML can vary from sector to sector. Some industries acknowledge that AI and ML can be more critical and sensitive in terms of cybersecurity. For example, industrial control systems (ICS) can use AI and ML to manage vital infrastructures like energy, transportation, or healthcare. These systems can be vulnerable to cyber-attacks, and the consequences of such attacks can be severe in terms of physical, financial, or human life. Therefore, cybersecurity applications for AI and ML must consider sectoral characteristics, standards, and regulations (Cozzupoli AND Salomon, 2024).

IoT Security

The Internet of Things represents a network of uniquely identifiable connected devices capable of processing and communicating data without or with human intervention. A possible future scenario for IoT is predicted as follows: When 50 billion devices are connected to the Internet, and if 1.1% of them (approximately 55 million devices) are hacked and remotely controlled, each device could generate attack traffic equivalent to gigabit Ethernet. This "zombie army," when used for DDoS attacks, could allow attackers to generate 4.47 to 81.8 trillion frames per second or 55 petabits. This could exceed the defense capacity of any single service provider and create a difference of 183333 to 1 when compared to the fastest network interface ever built (300Gbps). This information provides significant insight into the security of IoT devices and the scale of potential cyber threats, highlighting the importance of security measures in this area (George et al., 2017).

Cloud-Based Cyber Threats

Cloud-based cyber threats refer to malicious attacks and security vulnerabilities targeting cloud computing infrastructure. These threats can result in serious risks such as data breaches, identity theft, and service disruptions. According to the "Global Threat Report 2024," cyber-attacks in the cloud environment saw a 75% increase in 2023 compared to 2022. This increase indicates a 110% rise in cloud-aware attack cases and a 60% increase in cloud-agnostic cases. Cloud awareness refers to the ability of threat actors to compromise cloud resources and use those resources' cloud-specific features for their purposes. Particularly, eCrime actors are highly active in targeting cloud environments, with 84% of cloud-aware attacks being conducted by such actors (Crowdstrike Report, 2024).

Phishing and Social Engineering

Phishing is a common cybercrime method where attackers impersonate trustworthy organizations like banks or online service providers to deceive individuals into disclosing sensitive information such as passwords or credit card numbers. This deception is often carried out through fake emails or websites that closely resemble the real ones. Attackers can use the stolen information for malicious purposes like identity theft or financial fraud. Phishing attacks pose a significant threat to individuals and

FULL TEXTS BOOK

organizations, hence the importance of recognizing phishing indicators such as suspicious email requests or unusual website URLs. Social engineering involves tactics to extract sensitive information by deceiving or manipulating people. This can be done through phishing emails, fake websites, phone scams, and false identities. Social engineering attacks bypass technical security measures by exploiting human factors (Dave et al., 2023).

Supply Chain Attack

An attack on an organization's IT systems via third-party suppliers or service providers. These attacks often occur through software updates or other IT services and can cause widespread damage. ENISA's report delves into the increasing frequency and complexity of supply chain attacks. The report notes that 8 supply chain attacks were reported in 2020 (33%) and 16 attacks from the beginning of 2021 to July (66%) (ENISA REPORT 2021). Gartner's 2023 Supply Chain Risk Management Survey Report states that 63% of participants experienced a supply chain attack in the past year, highlighting the importance of measures businesses need to take. These measures include implementing a software supply chain security program, selecting trusted vendors, updating software, educating employees, using software composition analysis tools, and developing plans to respond to attacks (Gartner Report, 2023).

Next-Generation Cryptography Threats

Next-generation cryptography threats involve more sophisticated and effective attacks compared to traditional encryption methods; they focus particularly on algorithms that could be decrypted by quantum computers. These dangers could profoundly affect existing cryptographic infrastructures and herald a new era in information security. Considering the importance of cryptography in cybersecurity, it's foreseeable that innovations in this field could create new security vulnerabilities and threats. The State of Security 2023 report draws attention to the increase in data breaches and privacy concerns with the rising use of cloud-based systems. While cloud technologies facilitate data storage and processing, they also have the potential to create new risks and security vulnerabilities (Tripwire Report, 2023).

These topics present complex challenges that require continuous updates to cybersecurity strategies. In the coming years, more innovations and developments are anticipated in these areas. It is vital for cybersecurity professionals to adapt to these new threats and counter them effectively.

Ransomware and Advanced Attack Tactics

Ransomware is a type of malware that encrypts victims' files to block access, particularly damaging critical infrastructures such as government institutions, the healthcare sector, and industrial systems. Rehman et al. (2024) have conducted comprehensive literature reviews on detection methods and tools to mitigate potential attacks against this increasing threat. In recent years, these types of cyberattacks have become more common and complex, leading to numerous high-profile incidents worldwide. According to Cybersecurity Ventures' 2021 report, there was an estimated ransomware attack every 11 seconds in 2021, a significant increase from every 14 seconds in 2019. Wardle's 2023 blog post provides an analysis of new malware families identified last year, noting an increase of over 50% compared to 2022 (Wardle ,2023). These reviews offer critical findings on the use of artificial intelligence (AI) in malware detection and the challenges in this area (Gaber et al., 2024). In addition to ransomware, various types of cyber threats that require detection and mitigation are present.

Polymorphic and Metamorphic Malware

Polymorphic and metamorphic malware possess advanced evasion capabilities by constantly changing themselves. The ongoing evolution of cyber threats has made these types of malware a significant challenge for hackers and malicious actors, complicating the battle with classic security measures.

Metamorphic malware resists traditional signature-based detection techniques and continually renews itself to circumvent these techniques. This type of malware complicates detection by subjecting each of its copies to a unique encryption or transformation process, appearing in different forms each time (Skoudis & Zeltser, 2003). Polymorphic malware undergoes a transformation process that ensures each copy is unique, making it difficult to be detected with a fixed signature (Zhang et al., 2007). These ever-changing structures aim to overcome traditional security measures and push cybersecurity experts to develop new detection and defense strategies (Christodorescu et al., 2007).

FULL TEXTS BOOK

In the future, the rapid evolution and development of metamorphic and polymorphic malware will continually challenge cybersecurity professionals to be prepared for new threats. Potential future threats of this type of malware include becoming smarter and more adaptive using advanced technologies like AI and ML (Alrzini & Pennington, 2020). The proliferation of IoT devices increases the potential for these types of malwares to infiltrate and harm extensive network (Faisal et al., 2022). Consequently, future threats from this type of malware increase the necessity for continuous development of innovative and effective defense strategies in cybersecurity.

Future Cybersecurity Strategies and Countermeasures

Future cybersecurity strategies will focus on dynamically adapting to increasing cyber threats. These strategies will include the integration of advanced technologies like AI and ML, thereby contributing to the development of adaptive, learning-capable security systems. Additionally, the importance of the human factor in cybersecurity will increase, with more emphasis on security training, raising employee awareness, and constantly updated security protocols. With the rising use of internet-connected devices, IoT security will play a central role in future cybersecurity strategies.

Security strategies will also encompass increasing international collaboration in the formulation and implementation of cybersecurity policies. These approaches will provide a more effective fight against the international nature of cyber threats and contribute significantly to the development of global cybersecurity standards.

Directions for future malware detection research include developing and improving machine learning techniques to enhance the effectiveness of detecting and mitigating cyber threats (Gaber et al., 2024). The accuracy and reliability of the data used for training and evaluating machine learning algorithms are critical for the success of these algorithms, hence data quality will be a significant focus for security challenges like malware detection (Saeed et al., 2023). Recent literature reviews indicate that with the increasing complexity of digital transformation processes, there is a growing necessity for cybersecurity experts to adopt machine learning methods to identify malicious software (Alasmary et al., 2019).

Future cybersecurity strategies will face various challenges. AI-assisted attacks will pose a significant threat with faster and more sophisticated methods (Miller & Brown, 2018). Weak security measures in IoT devices may offer a broad target for attackers, increasing the risk of cyberattacks (Wardle ,2024). Cryptocurrencies and blockchain technology can encourage cybercrimes by providing anonymity and untraceability (Guembe et al., 2022). Industrial Control Systems and Smart Grids have become significant targets that could lead to serious consequences due to security vulnerabilities (Cozzupoli, and Salomon 2024).. This diversity demonstrates the need for continuous development and adaptation of cybersecurity strategies.

As a recently popular technology, AI and ML algorithms can effectively process large volumes of data, aiding network defenders in cybersecurity by identifying real threats. Reinforcement learning also enables AI to learn from positive and negative feedback in a manner like how humans learn from experience, thus optimizing future decisions. This technique reduces alert fatigue for security analysts and enables proactive defense by effectively managing cyber threats. Reinforcement learning, characterized by reward and punishment mechanisms, continually improves systems and plays a crucial role in proactively preventing complex threats such as phishing and botnet attacks. As interest in quantum computing and advanced cryptography grows, these technologies strengthen security infrastructure and lead the development of new defense strategies.

CONCLUSION AND RECOMMENDATIONS

This literature review emphasizes the vital role of malware detection in protecting computer systems from malicious attacks and as a fundamental component of cybersecurity. Methods of malware detection have been thoroughly examined and compared to highlight similarities and differences. In addition, trends in cyberattacks and future strategies have been specified. Research and assessment have shown that despite effective measures being taken, cyber-attacks continue to increase. It has also been revealed that malware increasingly uses more specific methods of hiding, monitoring, and transforming. Additionally, malware has been compared based on characteristics such as methods of concealment,

FULL TEXTS BOOK

types and speeds of propagation, recent spreading trends, detection challenges, and detection methods. Comparative data have been presented in a table format to facilitate easy comparison of malware.

The research also provides a comprehensive overview of malware detection methods, including signature-based, behavior-based, machine learning-based, and hybrid detection approaches. The advantages and disadvantages of each method have been discussed in detail, highlighting that the effectiveness of these methods varies depending on the type of malware being detected. The comparative assessment of these methods shows that there is no one-size-fits-all solution for malware detection. These findings present important implications for cybersecurity practices and emphasize the significant importance of following the most up-to-date malware detection techniques in protecting computer systems.

In addition to this assessment and comparison, new cybersecurity threats have been identified, including attacks using AI and ML, increased security challenges faced by IoT devices, cybersecurity dangers in cloud technologies, phishing and social engineering techniques, security vulnerabilities related to advanced cryptography, and concerns over data breaches and personal privacy.

Future research should focus on developing more advanced and effective malware detection methods to adapt to the constantly changing nature of cyber threats. The integration of AI and ML technologies can significantly enhance detection capabilities and contribute to more dynamic and flexible security solutions. Furthermore, the importance of the human factor and training in cybersecurity should not be overlooked. Educating employees and raising their awareness can create a proactive line of defense against cyber threats.

This study serves as a guide for developing more effective and innovative solutions to the challenges in cybersecurity and provides a foundation that will contribute to the development of effective strategies to combat current and future challenges in the field of cybersecurity.

ABSTRACT

During Portugal's Fascist Regime, housing policies aimed to enhance living conditions for the lower classes inadvertently led to social segregation and urban fragmentation. The Casas Económicas, categorized by residents' incomes, created a hierarchy among housing complexes with stringent selection criteria based on moral conduct, age, and family earnings. Inspired by modern ideals like the Athens Charter, these initiatives failed to integrate new housing into existing urban landscapes, fracturing community life and isolating residents. In Porto, the Casas Económicas were primarily erected on the outskirts, segregating the working class from the city center.

In the 1940s and 1950s, the Municipal Council replaced deteriorating "ilhas" with collective housing to improve health and living conditions. Despite these efforts, social segregation persisted, and community bonds struggled to form. The shift from individual homes to collective housing, influenced by the Athens Charter and state criticism, resulted in neighborhoods lacking continuity and integration into the urban fabric, exacerbating social discontinuity and public space deterioration. Residents often found themselves displaced to peripheral areas, distanced from their social networks. Following the regime's fall, the Serviço de Apoio Ambulatório Local (SAAL) emerged, prioritizing community involvement in neighborhood transformations and decentralizing housing initiatives. Despite its pioneering intent to ensure decent housing as a constitutional right and promote autonomous project management, SAAL faced delays, opposition, and project stagnation.

Post-April 25th Revolution, Portugal shifted toward participatory housing policies, notably the Programa Especial de Realojamento (PER), focusing on rehousing families in precarious conditions. While contributing to new housing and social integration, PER often disrupted neighborhood networks and hindered new social relationships by relocating populations from central areas to the periphery.Over decades, Portuguese housing policies have reflected a struggle between modernization needs and political-economic constraints. From Estado Novo's Casas Económicas maintaining social order through strict beneficiary control to post-revolution attempts at democratizing housing access, initiatives profoundly influenced urban and social structures.

In essence, Portugal's housing policy evolution reveals a gradual transition from control and repression to endeavors for greater inclusion and community participation. Despite challenges in implementation and balancing modernity with preserving social networks, the quest for equitable housing remains central.

Keywords: Housing Policies, Segregation, State Control, Community Participation, Urban Discontinuity, Democratic Transition.

FULL TEXTS BOOK

Introduction

In our exploration of urban dynamics in Portugal, we've navigated through a complex tapestry of interconnected themes: urban sustainability, crime dynamics, urban planning challenges, and the evolution of housing policies. These facets converge to offer a nuanced understanding of urban life,

illuminating persistent challenges alongside evolving strategies aimed at enhancing living standards in cities. Our journey began with an examination of urban sustainability, rooted in principles of social justice, economic viability, and environmental stewardship. We explored how these pillars intersect with issues of crime spatialization, social inequality, and economic marginalization, particularly prominent in urban centers like Porto.

Delving into Portugal's post-25th of April Revolution history, we scrutinized the trajectory and impact of housing policies. This included an analysis of social housing initiatives, their effectiveness, and their response to economic downturns, such as those experienced from 2008 to 2012. These crises starkly affected housing availability and affordability, prompting critical reflections on policy responses and their broader implications for urban development. Central to our discussion were the visionary proposals of Eduardo Vilaça for overhauling Portugal's national housing policy. His recommendations emphasized urgent reforms in rental markets, comprehensive housing rehabilitation efforts, institutional restructuring for enhanced efficacy, and strategic fiscal adjustments. These measures aim not only to address immediate housing challenges but also to foster sustainable urban growth, social cohesion, and equitable housing access.

Moreover, we analyzed the recent "More Housing" strategy introduced by the Portuguese government in 2023. This holistic approach targets housing issues by bolstering supply, streamlining regulations, expanding rental opportunities, curbing speculation, and providing robust support systems for vulnerable populations. These discussions collectively paint a panoramic view of the intricate dynamics shaping urban environments in Portugal. They underscore ongoing efforts to navigate complex challenges, improve housing conditions, promote inclusive urban development, and ensure cities thrive as equitable and sustainable spaces for all residents.

Furthermore, we addressed the paradox inherent in the term "social housing," highlighting its implication as a separate category rather than an integral part of urban life. Post-Revolution stagnation in social housing policies until 2013, exacerbated by the 2008-2012 Portuguese crisis, underscored severe cuts to housing funding and public income, leaving many in precarious living conditions and devoid of hope for improvement or ability to meet housing payments, resulting in eviction. Consequently, despite housing improvement efforts, poor living conditions persist among a significant portion of the population.

The current perception of social housing neighborhoods as 'architectural megalomania' underscores a focus on high-rise structures aimed at accommodating as many families as possible, isolating social relations and reinforcing their segregation, thus hindering societal unity goals. As such, segregation affects not only relationships between residents and society but also reflects the socio-cultural stance of marginalized populations, hindering their full societal participation due to social and economic vulnerabilities. The advent of new ideals for social housing aims to demystify these spaces as precarious, broadening the concept beyond housing primarily for impoverished residents distant from their social networks. Therefore, architectural rehabilitation seeks to improve physical conditions and reshape original environmental concepts and ideologies.

Results

Housing in Portugal before the 80s

During the 19th century, Porto, Portugal underwent profound changes in its urban fabric and housing conditions, particularly impacting the working class. Before the emergence of the "islands," the city's historic center was rife with overcrowded and unsanitary dwellings known as "Casas de Malta" and "Colmeias Humanas." These precarious structures were built under harsh conditions, characterized by cramped living spaces and a lack of basic sanitation, which contributed to the spread of diseases and deteriorating health among residents. Government neglect and real estate speculation exacerbated these dire circumstances.

The "islands" emerged as a housing alternative for the working class, offering rudimentary living conditions albeit under challenging circumstances. These clusters of houses, often constructed from substandard materials, lacked essential amenities such as proper sewage systems and clean water supply. Nevertheless, for many workers, the "islands" provided a semblance of shelter amidst difficult

FULL TEXTS BOOK

conditions. As industrialization and population growth reshaped Porto's social dynamics, the working class increasingly inhabited these areas and older districts, while the bourgeoisie relocated to the peripheries.

This shift was accompanied by heightened risks of contagious diseases and exacerbated living conditions, with island residents facing low wages and high rents, perpetuating their socio-economic vulnerability. The stigma associated with the working class further impeded efforts to improve their living standards, perpetuating perceptions of them as second-class citizens.During the Estado Novo regime in Portugal, the Casas Económicas initiative emerged as a key effort to address housing challenges for the lower classes. These affordable housing units were intended to offer basic accommodations to low-income families, categorized from A to D based on income thresholds. However, the stringent selection criteria underscored the regime's authoritarian approach to social control and hierarchy maintenance within these housing complexes.

Despite aiming to alleviate housing issues, Casas Económicas often lacked adequate infrastructure and urban planning, reinforcing socio-economic segregation and inhibiting integration into urban life. Disparities in rent prices across different categories further exacerbated inequalities within these housing developments.

Following the April 25, 1974 Revolution, which ended the Estado Novo dictatorship, Portugal faced severe housing shortages. The establishment of the Serviço de Apoio Ambulatório Local (SAAL) under the Housing Development Fund marked a significant departure from previous policies. SAAL prioritized community participation and local autonomy in housing projects, aiming to empower poorly housed populations through self-management and neighborhood revitalization efforts.

In Porto, SAAL initiatives included the redevelopment of housing "islands," although they encountered criticism and logistical challenges. Nonetheless, SAAL succeeded in initiating the construction of thousands of new housing units nationwide, representing a crucial step towards ensuring decent housing for all Portuguese citizens.

Urban Sustainability since the 80s

The concept of urban sustainability arises from the need for effective functioning of urban spaces, addressing both urban criminology, which studies crime incidence, and urban planning, which aims to improve urban space organization. Cities cannot simply eliminate problematic issues; they must be resolved collaboratively to avoid postponing solutions.

Voula Vega identifies three pillars of urban sustainability: social justice, sustainable economy, and environmental preservation, all crucial for maintaining urban environmental capital. Vega argues that urban security is a critical indicator of the number of inhabitants feeling insecure, reflecting the percentage of the population significantly affected by this concern. Studies by Brantingham & Brantingham explore how crime is spatially distributed in cities and how residents interact with these phenomena. In Portugal, there was an increase in crime in the 1980s following a slight rise between 1974 and 1980, due to decreased police control characteristic of the Estado Novo regime when crime rates were low. With the regime's fall, there was a significant rise in crime. This shows that urban security requires continuous improvement policies, and any decline may be linked to the inadequacy of these policies, increasing crime levels and challenging urban planning.

After the fall of the dictatorial regime and subsequent modernization since the mid-1980s, new consumption demands exacerbated social inequalities, increasing crime propensity among lower classes facing new livelihood challenges. The introduction of hard drugs into the community, brought by returnees from colonies, also contributed to the social and economic alienation of the lower classes. The central areas of Porto, including "ilhas" (old city blocks) and economic neighborhoods, face significant challenges related to social inequality, marginalization, and crime, requiring specific policies to promote social inclusion and improve living conditions. Urban desertification and the formation of social peripheries exacerbate these problems, diminishing informal social control mechanisms and creating new crime opportunities.

The response to these new urban realities should include policies that strengthen social cohesion and combat segregation, rather than simply promoting the privatization of public space. It is essential to seek

FULL TEXTS BOOK

solutions that promote social and economic inclusion, address the roots of inequalities, and strengthen the city's capacity to defend against these growing challenges.

Housing improvement policies until today

Since 1988, the Portuguese government has been implementing various measures aimed at addressing marginalization, crime, and housing deterioration. These efforts include housing programs providing low-rent accommodations, urban rehabilitation of degraded neighborhoods in both central and peripheral areas of Porto, and enhancements to public spaces. Additionally, community interventions have been established to foster relationships between local authorities, non-governmental organizations, and residents of impoverished neighborhoods. These initiatives aim to promote social cohesion, improve security in crime-affected areas, and prevent criminal activities through measures such as increased police patrols and the creation of recreational and sports facilities for youth. Moreover, educational projects and social integration activities are supported to further strengthen community bonds.

Despite these efforts, these policies have proven inadequate in meeting the growing needs of the population at large. This dissertation critically examines their impact on social issues and housing accessibility, particularly focusing on the current situation in Portugal. It assesses the condition of social housing built during the fascist era and under initiatives like SAAL, questioning whether these homes are sufficient to accommodate Porto's population. During the 2008-2012 crisis, housing permits saw a significant decline due to reduced financing, resulting in many homes remaining unfinished. This period marked one of Portugal's largest housing downturns, with only partial recovery achieved in recent years.

Emerging issues such as gentrification, short-term rentals, and tourism impacts have further exacerbated the situation, driving housing prices to unaffordable levels. By 2016, Portugal experienced a housing market peak with a 66% increase in sales since 2011. In response, the government introduced the "Uma Nova Geração de Políticas de Habitação" through Resolution of the Council of Ministers No. 50-A/2018. This initiative aims to provide housing solutions for families in severe need, ensure housing access for those unable to secure it through the market, promote rehabilitation as the primary building intervention, and foster social and territorial inclusion.

Subsequently, based on the findings of the "National Survey of Housing Relocation Needs," conducted in collaboration with municipalities and local authorities, institutional measures were implemented to ensure housing access for all. These measures include programs like "1st Right," which supports housing rights by replacing PER with financial aid for needy families through municipalities. Other programs, such as "Porta de Entrada" and the Affordable Rent Program, provide temporary accommodation and tax benefits to support vulnerable families.

Despite these efforts, the latest INE Census of 2021 revealed that Portugal's housing stock comprised 5,970,677 residential units, with a substantial number of vacant homes. This underutilization highlights the potential to accommodate more residents despite the housing shortage.

In outlining urgent measures for a national housing policy, Eduardo Vilaça emphasizes comprehensive reforms to address Portugal's housing challenges effectively, such as a gradual liberalization of rental markets. This approach allows for rent adjustments while ensuring that families unable to afford increases receive necessary subsidies. Secondly, Vilaça underscores the importance of rehabilitating and upgrading the existing housing stock. He proposes leveraging current programs to set a robust example in public housing and launching successive awareness campaigns to highlight the importance of housing quality and accessibility. Thirdly, efficient management of both central and local public housing stocks is crucial. Vilaça recommends implementing flexible structures that not only promote personal and social development among residents but also ensure responsible usage of public housing resources.

Moreover, he calls for the allocation of government land specifically for the construction of Controlled Cost Housing (H.C.C.). This initiative aims to counteract land speculation through targeted fiscal measures in urban areas and to provide affordable housing options to a broader segment of the population.

In terms of legislative reforms, Vilaça proposes an overhaul of H.C.C. regulations to better align housing offerings with varying beneficiary needs and current economic conditions. This adjustment seeks to enhance the effectiveness and inclusivity of housing policies nationwide.

FULL TEXTS BOOK

Additionally, Vilaça emphasizes the need to develop new housing models that cater to evolving family structures and temporary living situations. These models should be adaptable and responsive to the dynamic housing demands of the population. Fiscal policies related to the housing sector also require revision according to Vilaça. He suggests updating property values and determining tax deductions based on household composition and income to facilitate broader access to housing opportunities. To strengthen the housing sector's institutional framework, Vilaça recommends restructuring housing-related institutions. This includes redefining roles and fostering closer collaboration with other entities sharing thematic interests in housing policy. Lastly, Vilaça underscores the importance of advancing research and study efforts on housing issues. He advocates for increased engagement with academic and intellectual communities to generate informed insights and innovative solutions to current housing challenges.

In 2023, the Portuguese government launched the "More Housing" strategy to comprehensively tackle housing issues. This initiative focuses on increasing housing supply, streamlining licensing processes, expanding the rental market, combating speculation, and providing robust support to families in need. By addressing these critical areas, the strategy aims to foster a more inclusive and sustainable housing environment across Portugal. In 2023, the government launched the "More Housing" strategy, aiming to address housing challenges comprehensively through measures focused on increasing supply, streamlining licensing processes, expanding the rental market, combating speculation, and supporting families. External factors significantly influence housing policies and realities, necessitating continuous adaptation by architects to align with evolving ideologies and campaigns. Housing remains a critical issue in Portugal, with historical and contemporary challenges revealing significant gaps in addressing the housing needs of vulnerable populations in Porto and beyond.

Conclusion

In conclusion, our exploration across the spectrum of urban sustainability, housing policies, and societal dynamics in Portugal reveals a complex narrative shaped by historical legacies, economic fluctuations, and evolving societal needs. We have traversed through foundational principles of urban sustainability, examining how they intersect with challenges such as crime spatialization, social inequality, and economic marginalization, particularly evident in urban centers like Porto.

Portugal's housing policies post the April 25th Revolution have navigated through various phases, from initial strides in social housing to the stagnation observed in the late 20th century and the setbacks during the economic crisis of 2008-2012. These periods have underscored the critical need for responsive policies that ensure access to adequate housing while fostering inclusive urban development. The visionary proposals articulated by Eduardo Vilaça highlight urgent reforms necessary for a comprehensive national housing policy. These include liberalizing rental markets gradually, undertaking extensive housing rehabilitation, restructuring housing institutions for enhanced effectiveness, and implementing strategic fiscal measures to combat land speculation and ensure affordability.

Furthermore, the recent "More Housing" strategy introduced in 2023 marks a proactive step towards addressing housing challenges holistically. By prioritizing increased housing supply, streamlined licensing processes, expanded rental market opportunities, and robust support for vulnerable populations, Portugal aims to alleviate housing insecurity and enhance living standards across diverse communities. However, amidst these efforts, challenges persist, particularly concerning the perception and integration of social housing within broader urban landscapes. The characterization of social housing neighborhoods as isolated or stigmatized underscores deeper societal divisions that require nuanced interventions and inclusive approaches to promote social cohesion and equity.

Looking forward, sustainable urban development in Portugal necessitates ongoing collaboration, innovative policy frameworks, and adaptive strategies that prioritize environmental stewardship, economic resilience, and social inclusivity. By learning from past experiences and leveraging collective insights, Portugal can chart a path towards vibrant, inclusive cities where all residents have equitable access to housing and opportunities for thriving urban life. In essence, our exploration has illuminated both the complexities and the potential for positive transformation in urban environments. It underscores the imperative of holistic approaches and concerted efforts to realize the vision of sustainable, equitable

FULL TEXTS BOOK

cities in Portugal and beyond, where urban spaces serve as dynamic hubs of diversity, opportunity, and collective well-being.

BEING A WOMAN SOCIAL WORKER IN PSYCHOSOCIAL SUPPORT PRACTICES IN KAHRAMANMARAŞ EARTHQUAKE

Doç. Dr. Hande Albayrak

Kocaeli Üniversitesi, Sağlık Bilimleri Fakültesi

Arş.Gör. Dr. Görkem Kelebek Küçükarslan

Sivas Cumhuriyet Üniversitesi, Edebiyat Fakültesi

ABSTRACT

The earthquakes of 7.7 and 7.6 magnitude that occurred very close to the surface in Pazarcık and Elbistan districts of Kahramanmaraş province on 6 February 2023 affected 11 provinces in Turkey and were described as the disaster of the century. Professionals such as social workers, psychologists, psychological counsellors, etc. within the psychosocial support teams provided support to the people affected by the disaster in these 11 provinces under difficult conditions. Due to the fact that the devastation in the provinces affected a very large area and the employees were also disaster victims, professionals from provinces outside the earthquake zone were assigned to replace those working in the field of psychosocial support in the provinces. The majority of the assigned professionals were subjected to rotation and stayed in tents and containers due to the small number of intact buildings and security concerns. As it is known, the position of the employees in experiencing traumatic experiences in disaster situations is also pointed out. In the Kahramanmaraş earthquake, psychosocial support workers worked under very difficult conditions due to the intensity of both the direct experience of the earthquake and the intensity of the testimonies. Therefore, it is very important to reveal the experiences of psychosocial support teams. However, being a female worker in the earthquake brings with it very different requirements and difficulties than being a male worker. In this process, a gender-sensitive approach should be used from the assignment of employees to their needs in the field. In this study, based on the shared experiences of social workers who took part in the disaster support process in Kahramanmaraş earthquake, the process experienced by women social workers was addressed with a gender-sensitive approach. At this point, it is seen that mostly single women took part in psychosocial support activities instead of married women with children. In the field, it was highlighted that women have difficulties such as menstruation, risk of vaginal infection, inability to self-care, feeling insecure, and that they have to struggle with gender stereotypes and inequality due to the density of male employees in managerial positions. It was also revealed that women are much more sensitive to the development of gender-sensitive interventions. Based on these difficulties, needs and experiences, the study will be concluded by making recommendations on the process of working with a gender-sensitive approach in the arrangements within psychosocial support teams.

Keywords: Disaster, Psychosocial support, Social worker, Gender sensitive approach.

GİRİŞ

Afetlerin toplumsal cinsiyete duyarlı bir yaklaşımla ele alınması 1990'lı yıllara dayanmaktadır. Birleşmiş Milletler (BM) düzeyinde yürütülen bu çalışmalar hukuki ve politika açısından belgelere ancak 2000 yılında yansımıştır. Bu belgelerden 2015'te Japonya'nın Sendai kentinde geçekleştirilen Üçüncü BM Dünya Afet Riskinin Azaltılması Konferansı'nda kabul edilen 2015-2030 Sendai Afet Riskini Azaltma Çerçevesi önemli bir konumdadır. Bu belgede alınan tüm kararlarda, toplumun afet karşısında zarar görebilirliğinin azaltılması, afet yönetimi süreçlerinin tüm aşamalarında öncelikle de kadınların katılımının arttırılması hedefi öne çıkmaktadır (Uygur, 2023). Türkiye bu çerçeve kapsamında afete müdahalenin tüm aşamalarında kadınların katılımını hedeflemiş bulunmaktadır. Ancak Türkiye'de afete müdahale sürecine ilişkin düzenlemelerde toplumsal cinsiyete duyarlı bir anlayış bulunmamaktadır. Erbaydar, İnal ve Kaya (2018) afet mevzuatının toplumsal cinsiyet açısından incelenmesi başlıklı çalışmalarında Türkiye'de afet konusunda 17 mevzuatı incelemişlerdir. Bu

FULL TEXTS BOOK

çalışmada Türkiye'de afetle ilgili yasal düzenlemelerde toplumsal cinsiyet bakış açısının yer almadığını ve toplumsal cinsiyet açısından nötr bir dile yer verildiği sonucuna ulaşmışlardır. Ancak politika çalışmalarında durum farklıdır. Örneğin Afet ve Acil Durum Yönetimi Başkanlığı (AFAD)'nın Ulusal Deprem Stratejisi Eylem Planı (2012-2023)'na bakıldığında kadınları da içerecek şekilde farklı demografik grupların dikkate alınması ve afete müdahale süreçlerinde etkili olan toplumdaki farklı güç dinamikleri ve toplumsal cinsiyet rollerinin üzerinde durulması gerektiği vurgulanmıştır. Eylem planındaki riskli birey grupları için özel düzenleme sağlanması stratejisi kapsamında Aile ve Sosyal Hizmetler Bakanlığı (ASHB), il özel idareleri ve sivil toplum kuruluşları ile birlikte çalışılması gerektiği ve bu gruplarla ulusal düzeyde bir toplantı yapılması planlanmıştır. Bu strateji kapsamında şu paragrafa yer verilmiştir. "Toplumun önemli çoğunluğunu oluşturan kadınlar, çocuklar, yaşlılar ve engelliler özelinde her bir grubun ayrı ayrı dikkate alınacağı çalışmaların yapılması ve bu çalışmaların sonuçlarının da afet yönetimi sisteminin içine dâhil edilmesi gerekmektedir. Afetlerle baş edebilme kapasitesinin artırılması ve zarar görebilirliğin azaltılması; kişilerin ve sosyal grupların sosyal bağları, güç ilişkileri, bilgi ve yetenekleri, toplumsal cinsiyet rolleri, sağlık ve ekonomik gelişmişlik düzeyleri ve yerleşimlerinin birer fonksiyonudur. Bu süreçlerde kadınların, çocukların, yaşlıların ve engellilerin zayıf konumları da zarar görebilirliklerini artırıcı bir etken olarak yer almaktadır" (AFAD, 2012-2023). Dolayısıyla bu belgede görüleceği üzere toplumsal cinsiyete duyarlı bir müdahale süreci yürütülmesinde çalışanların cinsiyet açısından dağılımı, çalışanların zarar görebilirliğinin azaltılması, kadınların afetin her aşamasında ve alınan kararlarda yer almalarının sağlanması önemli bir stratejidir.

Kahramanmaraş depreminde psikososyal destek çalışanları hem depremin doğrudan yaşanması hem de tanıklıkların yoğunluğu nedeniyle çok zor koşullar altında çalışmışlardır. Ancak depremde kadın çalışan olmak, erkek çalışan olmaktan çok farklı gereklilikleri ve zorlukları da beraberinde getirmiştir. Bu süreçte çalışanların görevlendirilmesinden sahadaki ihtiyaçlarına kadar toplumsal cinsiyete duyarlı bir yaklaşım kullanılması önemlidir. Çalışma 6 Şubat 2023 tarihinde Kahramanmaraş ilinin Pazarcık ve Elbistan ilçelerinde gerçekleşen Türkiye'de 11 ili etkileyen ve yüzyılın felaketi olarak nitelendirilen depremlere müdahale sürecinde yer alan psikososyal destek ekipleri bünyesindeki Gaziantep ve Hatay illerindeki kadın sosyal hizmet uzmanlarının deneyimlerinden ve katılımcı gözlem çalışmasından yola çıkarak planlanmıştır. Çalışmada ilgili literatürdeki çalışmalardan yola çıkılarak kadın sosyal hizmet uzmanlarının yaşadığı süreç toplumsal cinsiyete duyarlı bir yaklaşımla ele alınmıştır.

AFETLERDE PSİKOSOSYAL DESTEK SÜRECİNDE KADIN SOSYAL HİZMET UZMANLARI VE TOPLUMSAL CİNSİYETE DUYARLI YAKLAŞIM

Afetlerin toplumsal cinsiyete duyarlı bir yaklaşımla ele alınmasında çalışanların rolü, hem afetten etkilenen gruplara yönelik çalışmaları hem de birer afetten etkilenenler sınıflanmasında yer almaları ve dolayısıyla kendilerinin toplumsal cinsiyetlerinin çalışmaya etkisi olması sebebiyle çok önemlidir. DSM-5 afet durumlarında travmatik yaşantıların 4 farklı biçimde deneyimleneceğine yer vermiştir. Çalışanlar bu sınıflandırmada dördüncü sırada mesleği nedeniyle bu travmatik yaşam olaylarına maruz kalanlar olarak ifade edilmektedir (American Psychological Association [APA], 2013). Çalışanların zor koşullar altında çalışmaları ve maruz kalınan travmatik olaylar nedeniyle psikolojik zorlanma ve stres yaşaması riskine karşın koruyucu ve destekleyici olarak gereksinimlerinin toplumsal cinsiyete duyarlı bir yaklaşımla ele alınması gereklidir.

Çalışanlar afete müdahale sürecinde afetten etkilenen kişilerle aynı ortamı paylaşmaktadırlar. Dolayısıyla bu ortamda çalışmak birçok zorluğu beraberinde getirmektedir. Bu zorluklar, çalışanların güvenliğini tehdit eden çalışma ortamı, uzun çalışma saatleri (Albayrak, 2023), lojistik sorunlar (molalar için vardiya programlarında zaman eksikliği gibi), kaynak eksikliği (yiyecek ve tıbbi malzeme gibi), öz bakım için barınma tesislerindeki eksiklikler (çalışanlar için uyku, barınma, hijyen, kişisel alan açısından uygun ve yeterli imkanların olmaması gibi), çalışanın afete müdahale konusunda eğitim eksikliği (Parker ve ark., 2005, akt. Quevillon ve ark., 2016), bulaşıcı hastalıklar, sanitasyon endişeleri (Quevillon ve ark., 2016), bürokratik engeller, koordinasyon eksikliği gibi mesleki konularla ilgili stres kaynakları, zorlu hava koşulları, müdahale sürecinde oluşan tehlikeli durumlar gibi çevresel stres kaynaklarına dair zorluklar, algılanan sosyal destek (Öztan ve Şavur, 2019), çalışanın geride bıraktığı ailesi ile ilişkileri, ailenin psikolojik, ekonomik, çocuk bakımı, günlük yaşam gibi açılardan çalışanın yokluğuna hazırlanmasındaki zorluklar (Young ve ark., 2006; Öztan ve Şavur, 2019), yaş, toplumsal cinsiyet gibi demografik özellikler, başa çıkma tarzı, geçmiş travmatik yaşam gibi durumları içeren

FULL TEXTS BOOK

bireysel faktörlerin yarattığı zorluklar (Dass-Brailsford, 2010; Klein ve Westphal, 2011), yapısal eksiklikler, değişen liderlik, ödül eksikliği ve doğrudan felaketle ilgili travmatik olayların yaşanması (Dass-Brailsford, 2010) olarak tanımlanabilir. Ayrıca IASC (2017) "afetlerde yardım çalışanlarının pek çoğunun yetersiz idari ve örgütsel desteğe sahip olduğunu ve en büyük stres etkeni olarak da bu durumu gösterildiğini" belirtmiştir. Tüm bu zorlukların tespitinde ve giderilmesine yönelik çalışmalarda toplumsal cinsiyete duyarlı bir bakış açısı izlenmelidir.

Birer afetten etkilenenler gibi çalışanların kaynak ve ihtiyaçlarının tespiti ve bu ihtiyaçlarının giderilmesine yönelik çalışmalar yapılması gereklidir. Afete müdahale sürecinde örgütlerin süpervizyon desteği sunması, paylaşım toplantıları organize etmesi, bireysel ve grup görüşmeleri düzenlemesi, bilgilendirme yapması, çalışanların ihtiyaçlarının, sorunlarının ve stres kaynaklarının belirlenmesine yönelik çalışmalar, bu ihtiyaç, sorun ve stres kaynaklarının ortadan kaldırılması yönünde girişimlerde bulunması ve sosyal etkinlikler düzenlemesi gibi çalışmalar yapması çalışanın desteklenmesinde önemli çalışmalardır (Öztan ve Şavur, 2019).

Tüm bu çalışmalar sırasında cinsiyete özgü ihtiyaçları tanımlamak ve önceliklendirmek gereklidir. Görevlendirme öncesi profesyonellerin ihtiyaçlarının toplumsal cinsiyete özgü olarak dikkate alınması önemlidir. Örneğin Kahramanmaraş depremi sonrasında Gaziantep ve Hatay illerinde psikososyal destek sağlayan profesyonellerle yaptığımız deneyim paylaşımı ve katılımcı gözlem çalışmasında özellikle evli ve çocuklu kişiler arasında erkeklerin sahada görev almalarında evlilikleri ve çocuklarının görev almalarını çok fazla etkilemediği, evli ve çocuklu kadınlar yerine daha çok bekâr kadınların psikososyal destek çalışmalarında yer aldığı görülmüştür. Literatürde çalışanın geride bıraktığı ailesi ile ilişkilerin organizasyonun ailenin psikolojik, ekonomik, çocuk bakımı, günlük yaşam gibi açılardan çalışanın yokluğuna hazırlanmasının önemli olduğu belirtilmektedir (Young ve ark., 2006; Öztan ve Şavur, 2019). Toplumsal cinsiyete eşitsizlikler sebebiyle çocuk bakımı çoğunlukla annelerden sorulduğu için çocuğu olan kadınların sahada görev almaları zorlaşmaktadır. Aynı zamanda literatürde yaş, medeni durum, toplumsal cinsiyet gibi demografik özellikler (Dass-Brailsford, 2010; Klein ve Westphal, 2011) afetten etkilenme konusunda zorluklarla karşılaşılmasında risk olarak ifade edilmektedir. Örneğin Kleim ve Westphal (2011) çalışmasında genç yaşta olma, bekar olma gibi kişisel faktörlerin afete müdahale çalışmasından sonra travma sonrası stres bozukluğu ile ilişkili olduğunu bildirmiştir.

Afete müdahale sırasında profesyonellerin ihtiyaçlarının toplumsal cinsiyete özgü olarak dikkate alınmasında ise birçok farklı durumun bir arada düşünülmesi gereklidir. Örneğin ilk olarak etkilenenlerin yanı sıra çalışanların da geçici barınma alanlarının gündelik yaşam pratiklerinin düzenlenmesinde, içme suyuna, çamaşırhane, tuvalet ve duş, elektrik gibi kaynaklara güvenilir olarak erişiminin sağlanması ve mahremiyetin sağlanmış olması çok önemlidir. Örneğin Kahramanmaraş depremi sonrasında Gaziantep ve Hatay illerinde psikososyal destek sağlayan profesyonellerle yaptığımız deneyim paylaşımı ve katılımcı gözlem çalışmasında sahada kadınlar için tuvalet ihtiyacının karşılanmasında hijyenden kaynaklı sorunlar olduğu, vajinal enfeksiyon yaşadıkları, regl dönemlerinde fiziksel zorlukların mobil haldeki çalışmalarda zorluklar yarattığı, öz bakımlarını yapamadıkları, mahremiyetin sağlanması ve kendini güvensiz hissetme gibi zorluklar yaşadıkları ortaya çıkmıştır. Bu zorluklardan hijyen sorununun giderilmesinde kadın sosyal hizmet uzmanları temiz tuvalet bulana kadar tuvaletini tutma, daha az sıvı tüketme, tuvaleti temizleme gibi yollar bulmuşlardır. Regl dönemlerinde ekip liderlerinin mobil ekiplerde görevlendirmemeye çalıştıkları ifade edilmiştir. Mahremiyeti sağlama ve güvende hissedebilme için kadın sosyal hizmet uzmanlarının diğer meslektaşları ile birlikte hareket etme yolunu seçtikleri ortaya çıkmıştır. UN Women (2023)'ın çalışmalarında geçici yerleşim yerlerindeki fiziksel ortamın kadınların ve kız çocuklarının ihtiyaçlarına uygun olmadığı; yeterince aydınlatmanın olmadığı, kadınların sosyalleşebileceği ortak alanların yeterli olmadığı vurgulanmaktadır. Bu durum aynı zamanda cinsel şiddet sorununa da işaret etmektedir: "Barınma ve sanitasyon tesislerinin mahremiyeti ve güvenliği ile ilgili endişeler ve ortaya çıkan cinsel şiddet sorunu, depremde değerlendirilen 120 bölgenin 42'sinde rapor edilmiştir" (UN Women, 2023). Yıldız ve diğ.'nin (2023) belirttiği gibi geçici barınma alanlarında güvende hissetmeme ve mahremiyetin olmaması kadınların psikolojik stresini artırmaktadır. Tüm bu riskler, hem afetten etkilenenler için hem de kadın çalışanların bu zorluklarını ve gereksinimlerini gidermeye yönelik düzenlemeler yapılmasının önemine dikkat çekmektedir.

FULL TEXTS BOOK

Afete müdahale sürecinin yürütülmesinde idari yapılanma, koordinasyon, değişen liderlik ve örgütsel destek konusu toplumsal cinsiyete duyarlı çalışmaların planlanması ve yürütülmesinde önemli bir konumdadır. Birimlerin çalışmalarının planlanmasında ve niteliğinin nasıl olduğunda hem il düzeyinde hem de yerel düzeyde yöneticiler ve ekip liderlerinin tutumu ve yaklaşımı belirleyicidir. Örneğin Kahramanmaraş depremi sonrasında Gaziantep ve Hatay illerinde psikososyal destek sağlayan profesyonellerle yaptığımız deneyim paylaşımı ve katılımcı gözlem çalışmasında kadın çalışanlar, birçok yerde yönetici pozisyonundaki erkek çalışanların yoğunluğu nedeniyle toplumsal cinsiyet kalıp yargıları ve eşitsizlikle mücadele etmek zorunda kaldıkları vurgulamışlardır. Alınan kararlarda ve afet yönetiminin tüm aşamalarında kadın çalışanların katılımı 2015-2030 Sendai Afet Riskini Azaltma Çerçevesi'nin hedeflerinden biridir. Ancak çalışmamız sırasında bu noktada kadın çalışanların üstün bir çaba göstererek seslerini duyurmak için öne çıkmaya çalıştıkları öne çıkmıştır. Örneğin bir kadın sosyal hizmet uzmanı, afete müdahale sırasında yöneticileri tarafından depoda gece nöbet tutma ve araç kullanma konusunda kadın çalışanlardan bir beklentinin olmadığını, kadınlara nöbet için uygunluklarının ya da şöförlüklerinin olup olmadığının dahi sorulmadığını, kendilerinin bu konuda "ben de yapabilirim" diyerek öne çıkmaları gerektiğini belirtmiştir. Bu çabalarının sonucunda yöneticilerinden aldıkları geribildirimlerde toplumsal cinsiyet kalıp yargılarını yıkıldığını belirttikleri ortaya çıkmıştır. Bir başka kadın sosyal hizmet uzmanı ise afete müdahale sürecinde sahadaki bazı kolluk güçlerinin psikososyal destek ekipleri içerisinde yer alan kadın çalışanlara yönelik yaklaşımlarından duyduğu rahatsızlığı dile getirmiştir. Bir kolluk görevlisinin kadın sosyal hizmet uzmanını çalışma yerinde sık sık ziyaret ettiği, telefon numarasını istediğini belirtmiştir. Kadın sosyal hizmet uzmanının bunu ekip lideriyle paylaşmasının ardından kolluk görevlisine bu konuda uyarı yapılmasının sağlandığı belirtilmiştir. Bu noktada yöneticilerin ve ekip liderlerinin tutum ve yaklaşımlarının önemi bir kez daha ortaya çıkmaktadır.

Afete müdahale sürecinde toplumsal cinsiyete duyarlı bir yaklaşım izlenmesinde bir diğer alan müdahale ekiplerinin cinsiyete göre dağılımının nasıl olduğudur. Kahramanmaraş depremi sonrasında Gaziantep ve Hatay illerinde psikososyal destek sağlayan profesyonellerle yaptığımız deneyim paylaşımında ve katılımcı gözlem çalışmasında ekip liderlerinin bu konuda hassas oldukları öne çıkmıştır. Bu hassasiyetin gelişmesinde özellikle psikolojik ilk yardım, psikososyal destek ve ihtiyaç tespiti gibi çalışmalarda afetten etkilenenlerle çalışmalar sırasında farklı cinsiyetten profesyonellerin hassas konuların derinlikle ele alınmasında zorlandıklarına dair profesyonellerin geribildirimleri etkili olmuştur. Çalışmamızda kadınların toplumsal cinsiyete duyarlı müdahalelerin geliştirilmesi konusunda çok daha hassas oldukları ortaya çıkmıştır. Toplumsal cinsiyete duyarlı olmayan müdahalelerin, etkilenen nüfusun büyük bir kısmına özellikle de en kırılgan olanlar olarak kadın ve kız çocuklarına ulaşılamaması veya onların özel ihtiyaçlarına yeterince yanıt verilememesi anlamına geldiği için daha az etkilidir (Avrupa Komisyonu, 2013). Yapılan literatür çalışmalarına bakıldığında Kahramanmaraş depreminde etkilenen illerde boşanma, nafaka ve velayet davaları, kadına yönelik şiddet aile mahkemeleri önündeki en yaygın davalar arasında olduğu belirtilmektedir. Ayrıca etkilenen illerden beşindeki (Adana, Diyarbakır, Gaziantep, Malatya ve Şanlıurfa) ceza mahkemeleri, bölgelerindeki diğer illerle karşılaştırıldığında daha yüksek oranlarda cinsel saldırı, cinsel taciz ve çocuklara yönelik cinsel istismar davasını karara bağlamaktadır. (UN Women, Nisan 2023). Bunun yanı sıra deprem bölgelerindeki STK'ler giderek artan sayıda toplumsal cinsiyete dayalı şiddet ve taciz bildirimlerinde bulunmaktadırlar (UN Women, 2023). Dolayısıyla toplumsal cinsiyete duyarlı, kadının beyanını esas alan güçlendirici uygulamaların etkilenen kadınlarının katılımının sağlanarak planlanması önemlidir. Bu noktada Türkiye Psikiyatri Derneği (TPD) (2024) Kadın ve Ruh Sağlığı Çalışma Birimi'nin çalışmasında da belirtildiği gibi psikososyal destek ve sağlık hizmetleri sunumunun toplumsal ve kültürel yapıya uygunluğu ve niteliği konusunda etkilenen kadınlardan geri bildirim alınması gereklidir. Kadınların afete müdahle, rehabilitasyon ve toparlanma, önleme ve risk azaltma, hazırlık aşamalarının hepsinde katılımının sağlanması, planlama ve karar alma süreçlerine dahil edilmesi gereklidir (TPD, 2024). Açımuz (2021)'un da belirttiği üzere kadınların katılımının sağlandığı afet planlama süreçlerinin etkinliği daha yüksektir. Bu süreçte sosyal hizmet uzmanlarının kadınları katılımları konusunda desteklemesi, danışmanlık, güçlendirme ve savunuculuk çalışmaları önemli bir yerde durmaktadır.

Toplumsal cinsiyete duyarlı bir afete müdahale sürecinin geliştirilmesi için bazı standartların belirlenmesi gereklidir. Örneğin Oxfam acil durumlarda toplumsal cinsiyet için asgari standartlar (2013) geliştirmiştir. Bu asgari standartları insani yardım hazırlık ve müdahale programlamasında toplumsal

FULL TEXTS BOOK

cinsiyet eşitliğini teşvik etmek için tutarlı bir yaklaşım sağlamak amacıyla Oxfam personeli için geliştirilmiştir. Bu standartlar diğer örgütler için de örnek alınmalıdır.

Belirtilen asgari standartlar dört temayı kapsamaktadır (OXFAM, 2013):

- Kurum içi uygulamalar yoluyla toplumsal cinsiyet eşitliğinin teşvik edilmesi: Bu, toplumsal cinsiyet eşitliğinin teşvik edilmesi için uygun kaynak tahsisinin sağlanmasını; cinsel taciz karşıtı İnsan Kaynakları politikaları da dahil olmak üzere yeterli kurumsal politika ve mekanizmaları; toplumsal cinsiyet eşitliğinin teşvik edilmesi için üst yönetimin hesap verebilirliğinin sağlanmasını; personel, ortak ve üst yönetim eğitimlerinin ve yansımalarının sağlanmasını içerir.

- Proje döngüsü boyunca toplumsal cinsiyet analizi: Bu, acil durum planlamasına dahil edilecek toplumsal cinsiyet analizini; cinsiyet ve yaşa göre ayrıştırılmış verilerin toplanmasını; istişare yoluyla kültürel olarak uygun toplumsal cinsiyete duyarlı programların tasarlanmasını; programlamanın toplumsal cinsiyetle ilgili sürdürülebilir kalkınma ile ilişkilendirilmesini kapsar.

- Katılım, saygınlık ve güçlendirme: Proje döngüsü boyunca anlamlı katılıma eşit ve güvenli erişim sağlamak; program tasarımında kadınların ve kız çocuklarının güçlendirilmesini istişare yoluyla aktif olarak teşvik edilmesini; ve acil durumlarda kadın ve kız çocuklarının haklarını düzeltme çalışmalarında erkekleri ve erkek çocukları müttefik haline getirmeyi içerir.

- Toplumsal cinsiyete dayalı şiddetin ele alınması ve cinsel sömürü ve istismarın önlenmesi: Katılımcılar için güvenli programlama sağlamak için müdahalelerin uygulanması ve izlenmesini; mümkün olan yerlerde, topluluklar ve yerel yetkililerle toplumsal cinsiyete duyarlı politikalar ve uygulamalar için savunuculuk yapılmasını; ve yararlanıcıların personel ve ortaklar tarafından cinsel sömürü ve istismardan korunmasını içerir (OXFAM, 2013).

SONUÇ VE TARTIŞMA

Bu çalışmada afete müdahale sürecinde kadın sosyal hizmet uzmanlarının toplumsal cinsiyete duyarlı bir yaklaşımla eşitsiz koşulları, gereksinimleri, zorlukları, hassasiyetleri, fırsatları ve yapabilirlikleri ele alınmıştır. Tüm bunlar çalışmada afete müdahale aşamaları kapsamında ele alınmıştır. Kadın sosyal hizmet uzmanlarının afet sahasına görevlendirme aşamasında toplumsal cinsiyet eşitsizliğinin ev içi alana yansıması olarak günlük yaşam gereksinimlerinin giderilmesinin ve çocuk bakımının kadının sorumluluğunda olması etkili olmaktadır. Bunun bir sonucu olarak afete müdahale sürecinde görev alan kadın sosyal hizmet uzmanlarının daha çok bekar ya da çocuksuz olduğu görülmüştür. Görevlendirme sonrasında ise genç, bekar kadın sosyal hizmet uzmanlarının destek sistemlerinin yetersiz olması durumunda travma sonrası stres bozukluğu riski daha yüksektir.

Afete müdahale sırasında ise kadın sosyal hizmet uzmanlarının zorlukları özellikle hijyenden sorunlarına bağlı olarak tuvalet ihtiyacının karşılanmasında vajinal enfeksiyon riski ile karşılaşılması, regl dönemlerinde fiziksel zorlukların mobil haldeki çalışmalarda zorluklar yaratması, öz bakım ihmali sebebiyle kendini iyi hissedememe, toplu yaşam alanlarında mahremiyet açısından güvende hissedememe, afet sahasında görev yapan diğer personeller tarafından rahatsızlık verilmesi olarak sıralanabilir. Afete müdahale sürecindeki bir diğer zorluk ise birçok yerde yönetici pozisyonundaki erkek çalışanların yoğunluğu nedeniyle toplumsal cinsiyet kalıp yargıları ve eşitsizlikle mücadele etmek zorunda kalmalarıdır. Bu noktada kadın sosyal hizmet uzmanlarının üstün bir çaba göstererek bu kalıp yargıların değişmesini sağladıkları ortaya çıkmıştır. Tüm bu zorlukların çözülmesinde hem kadın sosyal hizmet uzmanlarının kendi çabaları hem diğer kadın meslektaşlarının desteği hem de duyarlı ekip liderlerinin desteği ile bir kısım zorlukların çözülebildiği görülmüştür. Albayrak (2023) ekip içerisindeki çalışana destekleyici uygulamaların, tüm psikososyal müdahalelerin daha etkin şekilde ve uzun vadede gerekli olduğu kadar sürdürülebilmesi için önemli olduğunu vurgulamıştır. Ayrıca çalışana destek sürecinin hem afetten etkilenenlerin daha iyi hizmet alabilmesi hem de yeni bir uzun süreli desteğe ihtiyaç duyacak grubun oluşmasını engellemek anlamına geldiğini belirtmiştir.

Afete müdahale ekiplerinin cinsiyete dağılımına dikkat edilmesi, etkilenen gruplarla toplumsal cinsiyete duyarlı bir çalışma yürütülmesi için çok önemlidir. Halihazırda afetlerde geçici barınma alanlarında toplumsal cinsiyete dayalı şiddet, taciz, cinsel saldırı, istismar, aile içi çatışmalar, boşanma gibi sorunların görülme sıklığı artmaktadır. Bu yüzden çalışmalarda toplumsal cinsiyete duyarlı bir müdahale ile gereksinimlerin ve zorlukların anlaşılması, danışmanlık, güçlendirme ve savunuculuk gibi

FULL TEXTS BOOK

çalışmaların yanı sıra tüm bu çalışmalarda afetten etkilenen kadınların katılımının planlanması gereklidir. Çalışmada kadın sosyal hizmet uzmanlarının bu konuda hassas oldukları ortaya çıkmıştır.

Afete müdahale süreçlerinde toplumsal cinsiyetin ana akımlaştırılması gereklidir. Oxfam toplumsal cinsiyetin ana akımlaştırılmasını "tüm çalışmaların ve bu çalışmaları yürütme biçiminin, kadın ve erkekler arasındaki güç dengesini dönüştürme yoluyla toplumsal cinsiyet eşitliğine katkıda bulunması gerektiği" anlayışı ile ifade etmiştir. Bu anlayış içerisinde kadınların desteklenme hedeflerinde; kadınların kaynaklara daha fazla erişiminin ve kaynaklar üzerinde kontrolünün sağlanması, karar alma süreçlerine daha güçlü katılım ve liderlik pozisyonlarının sağlanması, kalıplaşmış toplumsal cinsiyet rollerine karşı çıkılması ve kadınların yeniden üretme yükünün azaltılması ve cinsiyet temelli şiddetten korunması yer almaktadır. Oxfam, buna ilişkin program yönetimi ve çalışma sisteminin yapılanması açısından ise toplumsal cinsiyet bilincini yansıtmasını ve bunu güçlendirmesini önemsemektedir. Örneğin program yönetimi ve çalışma sisteminin yapılanması açısından kadın ve erkeklerin farklı endişe ve önceliklerinin dikkate alınması, risk belirleme, hedef oluşturma, planlama, bütçeleme, paydaşların seçimi, performans yönetimi, personel alımı, eğitimi, ücreti ve cinsiyet dengesi gibi teknik konular, örgütlenme kültürüne, personel yaklaşımları ve ögrenme sistemleri gibi kültürel konuları, uygulama, gözetim ve değerlendirme süreçlerini kapsayan bütüncül döngüyü şekillendirmesini sağlamak esastır (Ciampi ve diğ., 2020). Dolayısıyla Oxfam'ın bu önerdiği tüm aşamalar toplumsal cinsiyete duyarlı bir afete müdahale süreci içerisinde çalışanların belirlenmesi, ekiplerin oluşturulması, çalışmanın planlanması gibi aşamalarda dikkate alınması gereken noktalardır. Toplumsal cinsiyete duyarlı afete müdahale sürecinin gerçekleştirilmesi için bütüncül olarak afete müdahale edenler, yöneticiler ve afetten etkilenenler gibi tüm tarafların katılımının sağlandığı çalışmaların ve bu konuda daha fazla sayıda araştırmanın yapılması önerilmektedir.
